X films on your computer

Feature films are to be turned into computer games by a new software company which will release its first game in the summer.

And some will be based on X-rated films, said the 29-year-old boss of Palace Software, Pete Stone.

He has been with Video Palace, the big Oxford Street video and computer software store, for two years. Palace Software is part of the Palace group, including Palace Video, which distributes to about 6,000 video shops, and film makers Palace Pictures.

This means that the new company has access to the non-theatrical rights of many major films — and talks are going on with other film companies too.

Mr Stone would not name the films on which he is planning to base games.

But Palace Video distributes horror titles like *The Evil Dead*,
Continued on page 5

Micros and the future

Eleven out of every 100 families now use a home computer — and this time next year it will be one in five.

Then the rise will slow down, according to Peter Stoddart, whose company has just published a report on home computers and software.

Next year, he said, a quarter of households would have a micro, rising to half in 1990.

At the time researchers questioned 2,000 families in January, the six leading models accounted for 87 per cent of all computers in use — see table.

And Mr Stoddart expects the dominance of these manufacturers to increase, unless their rivals can come up with better products.

The report says that the ownership of computers has grown from an insignificant one per cent in 1979. Last year 1.19m people bought micros — 40 per cent of them in the two pre-Christmas months.

Ownership was higher than

X films

From front page

Basket Case and The Honey-moon Killers. Its comedies include That Sinking Feeling and Loose Connections — made by Bill Forsyth, who produced Local Hero and Gregory's Girl — and The Rutles and Whoops Apocalypse.

Others include the X-rated science fiction film Alphaville, An Unsuitable Job for a Woman, Diva, Merry Christmas Mr Lawrence — starring David Bowie and Tom Conti — The Moon in the Gutter, with Natassia Kinski, Fitzcarraldo, Pixote and Mephisto.

Its catalogue also has music video tapes and instructional and documentary releases.

Among them: Steve Davis on snooker, Jackie Genova on exercising, a cartoon video for children and four titles by Andy Warhol.

Mr Stone, who at present has two full-time programmers, said: "At present it looks like our first game will be based on a film. But until we know for certain that we've got a good game in the bag I don't want to commit myself."

Would he convert X-rated films into games?

He said: "Certainly not sex films. But half the Top 10 in the West End are X rated. We are talking about two different things. Take a shooting scene. That may make it an X-certificate film, but in computer games it's standard.

"I would not put out anything that would upset parents. I would not want to end up with X-rated games. Our games will be no more X-rated than any other computer games on the market."

Mr Stone sees Palace Software operating in two areas: in-house programs, in the early stages based on films, and publishers of software from freelance programmers.

He believes, however, that the days of the schoolboy programmer working at home are nearly over — unless he is a full-timer with a lot of talent — and that future software will be produced by teams.

He also believes that his company is well placed with its links with video and experience of marketing and distribution, for which a separate team is being set up.

A number of video rental shops were now selling computer software, although many had a lot to learn about the market.

Palace Software, 275 Pentonville Rd, London N1 9NL

From front page

average in households where the "male head of household" was aged 15-24 or 35-54.

The report says: "Commodore's market share has increased from 12 to about 22 per cent while Sinclair's has dropped marginally from 58 to 49 per cent.

"The BBC model B doubled its market share from five to 10 per cent, but Dragon must be disappointed that they failed to increase their share from five per cent in January 1983."

The report, by Gowling Marketing Service, says the sale of software by mail order appears to be declining a that less than 15 per cent was bought in this way.

Last year computer users bought about 11.3m items of software — about five per user — and of these 70 per cent were arcade and adventure games and educational packages amounted to 23 per cent.

In 1984 Gowling predicts that sales could reach 12.6m with the games percentage rising to 74 per cent.

This year should also see "exciting" opportunities for makers of peripherals, says the report. It comments: "While it is difficult to estimate the value of this market, it is likely that micro users will spend at least the equivalent of the cost of the original machine on peripheral equipment — see table.

Under the heading of sales forecasts for 1984, Gowling says: "The major constraint facing this industry is the size of the total market available to it."

Most micros are owned by families with children and the total number of these in the U.K. was 32.9 per cent, or about 6.5m. Just over half were aged 10-16.

So sales potential could be less than for video recorders and it could be expected to peak before that of videos.

Other factors included price. As prices came down demand would obviously increase, but growth for more expensive computers — like the BBC model B and the Commodore 64 — suggested the market was becoming more discriminating. The relatively high price of these machines could dampen demand.

Another factor was the growth in the second-hand market.

The report, Microcomputer End-User Research, costs £75.

You could be on our pages

We welcome programs, articles and tips from our readers.

PROGRAMS must always be sent on cassette. Listings are helpful, but not necessary. Check carefully that they are bug-free. Include details of what your program does, how it works, variables you have used and hints on conversion.

ARTICLES on using home computers should be no longer than 2,000 words. Don't worry about your writing ability — just try to keep to the style in HCW. Articles most likely to be published will help our readers made better use of their micros by giving useful ideas, possibly with programming examples. We will convert any sketched illustrations into finished artwork.

TIPS are short articles, and brief programming routines which we can put together with others. Your hints can aid other computer users.

Competitive rates are paid.

Keep a copy of your submissions and include an SAE if you want them returned. Label everything clearly and give a daytime and home phone number if you can.

Paul Liptrot, Home Computing Weekly, No.1 Golden Square, London W1R 3AB

Parlez-vous French?

Tansoft has just announced Language Masterclass, the first computerised Link-Word foreign language learning system. Claimed to provide the ability to communicate in the learned language in less than 12 hours, Masterclass is aimed at students and British business men travelling abroad.

It is based on the Link Word method developed by Mike Runeberg whereby you link foreign words with similar sounding English words.

Supplied with a program cassette containing a 400 word vocabulary and a grammar tutor, a spoken vocabulary pronunciation cassette and instruction manual, Masterclass costs £12.95 for the Oric 1 and Atmos.

Tansoft Ltd, Units 1 and 2, Cambridge Technopark, Newmarket Road, Cambridge.

QL program — already!

Joe the Lion says it is the first with a range of programs for the Sinclair QL.

Spectrum Emulator comes on a Sinclair microdrive cartridge and allows you to load Spectrum machine code programs into the QL. Price: approx £25.

This high price is due to the fact that Microdrive cartridges can only be obtained from Sinclair and that the QL has no cassette port so this has to be provided as well. A similar emulator is also planned for the BBC micro.

Joe the Lion, 213/215 Market Street, Hyde, Cheshire SK14 1HF

40 winks with Optima

Latest games to come out of Optima include Bedbug and Omega Probe, both for the BBC computer.

Bedbug is a totally original game — you have to get to sleep. Preventing you is a horde of fleas and bed bugs which you have to combat, armed with only your false teeth and a jam buttie. Omega Probe is more civilised — you have to survive a space mission.

Optima Software, 36 St Peters Gate, Stockport SK1 1HL

A handful of Shards

Shards has launched six new games. For the Dragon 32 is The Mystery of the Java Star — a four-part educational adventure will puzzles, mysteries and information; Shaper, sound utility; and North Sea Oil — a real-life simulation.

For the BBC Model B there is Laser Letters, an educational word game; and Pettigrew's Diary, the BBC version of Shards' Dragon adventure. Empire is an Electron version of the Dragon strategy game. Prices: £5.75-£9.95.

Shards Software, 189 Eton Road, Ilford, Essex IG1 2UQ

Cosmic Cable

Latest programs to be announced by Cable Software are Cosmic Bounce and Nursery Nightmare, both for the CBM 64 at £8.75 each.

Cable Software, PSL Marketing, Cape House, 52 Limbury Road, Luton, Beds LU3 2PL

Roaring to my dream of wealth

I rolled down the window of my super-blown red racer and turned to view the glistening array of lights and gauges ahead of me. My fuel tank: full. I reach down and fumble for the ignition key. One turn and the massive engine thunders into life, the hypnotic whirr of the exhaust, the rumble from the engine. I knew they would make me easy prey for the deadly Black Turbos.

I turn and a gruesome sight awaits my eyes — a Black Turbo, its exhausts spitting out power. The glowing suns fire their lethal rays which dazzle and sparkle on the Turbo's shiny body shell. A movement catches my eye. The driver, in his leather suit, winks at me and with devilish grace he lowers his visor. Our engines roar and we exchange glances. It is time.

I slam my foot down, almost through the floor. My head is jolted back and the wheeled monster is let loose. Immediately the Turbo snarls to life and makes straight for me. I grasp the cold, sweaty wheel and turn with all my might. He's still behind me. I glance at the control display and a sparkling catches my eye. I press the appropriate button and a cloud of black smoke billows out of my exhaust.

Despite my fear I manage a snigger, but it is cut short by a piercing screech. Again I glance down and wipe my visor.

My scanner shows a small, insignificant point flashing on and off. This small point represents a million dollars, or, if not collected, eight years imprisonment in the much-feared Doomsday Lair. The thought of the lair sends an icy shiver up my spine, so I cool down the speed and punch co-ordinates into the onboard computer.

It is time to relax and I sink into the padded leather seat. Victory is within a kilometre's journey. I dream of the wealth that is mine. Soon the mighty machine draws to a halt. I reach for the door handle and step out into this hostile environment. It's there! The idol of my dreams. The great Cup of Ultimate. I climb over the golden sand dune and hold its glistening handles.

With dreams in my mind I read the fabled inscription on the side: "TranzAm loading instructions. Connect the ear socket on your Spectrum to the..."

**Pi-Balled
£6**

Automata, 27 Highland Rd, Portsmouth PO4 9DA

Another Automata winner! An extremely addictive Pyramid of Pi game using the Spectrum potential to its fullest, as well as machine code — with the added speed this gives where needed.

The program, compatible with the Kempston joystick, introduces the characters on the two loading screens, the second animated to include flashing stars of David. Is Burt, the star, Jewish, perhaps?

There are blocks on the side of the pyramid, which change colour to match that shown top right, as Burt moves across the side. The two Ball brothers, Bobby and Billy, try to prevent Burt doing so, assisted by one occasionally

changing into Sid Snake and by Pixel Prince Col who changes the blocks back to the original colour. Burt is helped by Pixel Prince Jas changing blocks to the new colour and by a magic flying disc that allows him to lure Sid off the pyramid.

Scoring is neon-lit at top left, above jumping Burts showing how many lives are left, and is added to by moves, completed pyramids and by leading Sid astray. Unfortunately, I have not, as yet, completed all the 66 possible screens... but there is time yet!

**The Snowman
£6.95**

Quicksilva, 13 Palmerston Rd, Southampton SO1 1LL

There can be very few people who haven't built, or at least helped to build a snowman. That's what this game, based on a charming book by Raymond Briggs, is all about — building a snowman and dressing it up.

First of the four stages is the actual building by picking up randomly-placed piles of snow and taking them to the site. Although classed as baddies, I found the gas flames enchanting little things, in spite of the fact that they melt your snow. You have to find the ultimate weapon against them — an ice lolly.

Remembering that prizes make points, you have to gather up all

the goodies you find. One false step and you are floating gently downwards to a thoughtfully provided bed, dead of course.

Other stages require you to collect items to complete your snowman. I'm not going to tell you about that — I don't want to spoil it for you.

A slight bug may frustrate, but not stop, your play: at certain points left or right keypresses don't respond. It's the same for joystick as well, I'm afraid. However, this won't stop anyone under 110 enjoying this delightful game.

**Zaxxon
£5.50**

Starzone, 74 Wallingford Rd, Shillingford, Oxon

A semi-3D version of the arcade game Scramble. I say semi-3D as only the bottom and left wall of the tunnel are displayed as it scrolls from top right to bottom left.

The idea is that you have to fly your plane low enough to make strikes on the fuel dumps, radar installations, rockets and planes, but then climb fast enough to avoid the cross walls of varying heights that are forever coming towards you. All this, plus dodging the ground-to-air missiles that are launched at you, makes for a difficult and tense game — especially as the 3D effect makes it very difficult to judge

your exact position relative to the missiles and the gaps in the wall. The shadow of your plane helps — if you can keep your eye on it as well as everything else!

Good use is made of the Spectrum's graphics and sound capability. The only slightly disappointing thing about the game was that the scroll is by character squares, not pixels, making the action rather jerky. But still, a small price to pay for an original angle on an old favourite.

Spectrum games, all given the
once-over by our reviewers**

**3D Star Wars
£5**

CCI, Units 2, 3 & 4, Shire Hill Industrial Estate, Saffron Waldon BC11 3AQ

Written with Return of the Jedi in mind, you are cast as Luke Clear-thinker (!) and — surprise, surprise — you take on the entire rebel fleet single-handed! Fortunately you have at your command one of the most up-to-date starfighters, equipped with long- and short-range scanners.

The damage status meter tells you the condition of the ship, and direction indicators show which way you are travelling. Warning neons indicate when the rebels are attacking and there is a large "aliens left" display. Fast and slow travelling proton bombs are available to blast these un-desirables.

There are 10 sets of 18 aliens to be destroyed, all different in shape and power. The graphic display make this a truly three-dimensional mind-blowing game. There are meteorite storms which really do appear to be coming at you. Your proton bombs do seem to be travelling off into the distance. The program uses 700 defined graphics as well as good sound effects.

Instructions are in the program but appear on screen rather ponderously due to a rather involved teletype-style format. There is a hall of fame, joystick option, and a hold/start facility.

	C.B.
instructions	80%
playability	90%
graphics	100%
value for money	90%

**Laser Zone
£6.95**

Quicksilva, 13 Palmerston Rd, Southampton SO1 1LL

An unfortunate combination of paper and ink makes reading what's on the screen rather difficult. However, by studying the inlay, you can determine what is supposed to be happening. You have a choice of keyboard, or joystick, individual or team play.

The object is to destroy waves of aliens by manipulating two cannons. One lies at the bottom of the screen, and the other at the right. By using a combination of keys the cannon can be made to fire diagonally, as well as at right angles. This diagonal cross fire could destroy your own cannon, of course, so careful positioning is needed. If any aliens do manage

to land on your plane they will march towards you and can only be destroyed by an electro bolt. You start with three of these bolts, and can collect up to four more. Later assault waves bring "pods", which you cannot destroy. They have a disturbing habit of suddenly exploding, and will destroy your cannons if they are in the path of any fragments.

I found the combination of keys tiring, and got the impression that the action didn't match my efforts on the keyboard. Altogether a disappointing experience.

RICHARD SHEPHERD SOFTWARE

ELM HOUSE, 23-25 ELM SHOTT LANE, CIPPENHAM, SLOUGH, BERKS.

Your chance to hit the jackpot... with no coin slot to feed

Playing the fruit machine in my local almost always left me with little in my pocket but air.

I started thinking that feeding an innocent-looking, but greedy, slot with all the change I could lay hands on was no better than cleaning my shoes.

So I sat at home thinking, and cleaning my shoes due to a lack of money.

I decided that with me being a computer fanatic — as well as a good shoe cleaner — I was going to write my own fruit machine program for my Dragon 32.

This took a little longer to write than I thought — like two weeks longer. But the result, I feel, was worth the wait.

I tried to keep as close to the original as possible in the way that it gambles, nudges and so on.

All the features of the game are given below.

Payments

Two matching fruit in columns one and two	20p
Three matching fruit pay:	
cherries	30p
lemons	50p
apples	50p
plums	70p
pears	100p
bars and melons	£2 jackpot

When you run the program it will spin the first go for you but the rest is up to you and is controlled as follows:

Start

To start the reels spinning just press the space bar. Pressing Q before spinning the reels will give you a money check.

Holds

When the computer decides to give you the chance to hold any of the three columns the three rectangles below the columns will flash red and sound will be heard from your TV. The hold buttons are 1, 2 and 3, respective to each column, and the zero key will cancel holds.

Auto hold

If you are given two holds consecutively then the computer will automatically hold the column/s from the last hold unless changed or cancelled.

We reckon this is one of the best fruit machine games for any computer. It was written for the Dragon 32 by a contributor who likes to be known as just Klarzy. All the features of a real machine are included

Gamble and collect

When a winning line appears the computer will go to the test screen on which is a list of all possible wins. Arrows will point to the amount you have won, the amount you could win by pressing the enter key and the amount you would collect if you lost the gamble. To collect just press the space bar. The computer will call you a coward and return you to the fruit machine.

Nudges

When the computer offers nudges a line will flash up and down on the left of the machine and emit sound. You then press the space bar to collect them. You will be given five nudges and the line shows the number left at any stage.

The program uses PMODE 3 and makes the most of the Dragon's colours and graphics. I reckon it's as good as all the commercial programs I've played. Even so, I've left room for improvement, such as random nudges and so on.

P.S. I don't spend money on fruit machines any more. I don't know whether this is because of the program or because my girlfriend has become my bank manager...

Hints on conversion

Plum's Up uses standard Microsoft BASIC so it will work on the Tandy Colour Computer if the keyboard PEEKs are changed.

It will adapt to most other computers if the graphics are altered.

1070 places middle fruit into WDS
1090 takes 10p from current account
1120 checks if winning line, if so goes to win routine
1130 get nudge routine
1140 sets RH to random number (1-5) used for holding routine
1160 GOTO hold routine
1170 money check if asked for
1180-1200 start routine
1210-1390 winning routine which determines how much won, if jackpot goes to jackpot routine
1400-1740 gamble and collect routines. Adds winnings to account and sends you to jackpot routine if you reach £2
1750-1840 jackpot routine
1860-1870 back to start routine
1880-2670 drawing routine for fruit
2680-2760 routine to put 20 fruits to each column in correct order
2770-2850 routine to put fruit on screen
2860-2910 data for 3 by 20 columns of fruit
2920-3110 draw fruit machine
3120 determines whether to give hold. If yes, then hold routine
3130-3170 restore all hold variables and go back to hold routine
3180-3330 hold routine
3340-3350 decide whether to give nudges
3360-3440 routine to inform user that nudges are given
3450-3500 display number of nudges left
3510-3580 gets user's move for nudge and sends it to relevant column
3590 check if winning line. If so, then winning routine
3600-3640 goes back to beginning of nudge routine if any left, else goes to start routine
3659-3720 money check routine

REVENGE

OF THE MUTANT CAMELS

At last the long awaited sequel to Attack of the Mutant Camels is available. You are controlling a ninety foot high, neutronium shielded, lazer spitting death camel; leading a rebellion against your evil Zzyaxian overlords. The game features beautiful smooth scrolling graphics and no less than 42 different attack waves, more than any game in video history. The challenge of play will last for months as you battle to see what's on the next wave.

£7.50

Lamasoft

AWESOME GAMES SOFTWARE

49 MOUNT PLEASANT,
TADLEY, HANTS. RG26 6BN.
TELEPHONE: TADLEY (07356) 4478

At last, the first joystick that puts the firing button where it should have been in the first place.

THE TOP AMERICAN JOYSTICK IS NOW AVAILABLE IN THE U.K. . . .

TRIGA COMMAND

IS HERE!

Extra responsive action

Trigger Fire Button

Diamond Cut 'Arcade' Style Grip

Extra long 4 ft Cord

Rubber Suction Cups for One Hand Operation

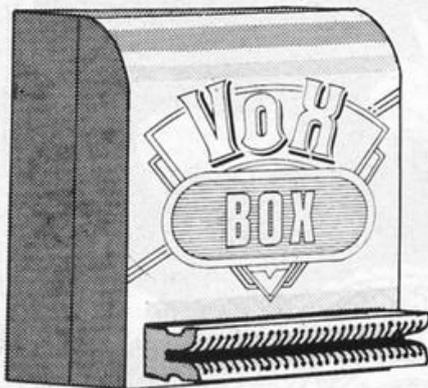

To fit your **SPECTRUM** ONLY **£19.99** + £1.50 P + P

- Including Interface to plug straight into the Spectrum.
- The first Joystick to give you "Arcade" feel and control.
- "Jet Style" heavy duty, diamond cut grip.
- Fire Trigger placed under your index finger . . . the finger with the fastest reflex action.
- Self centring, 360° action.
- Compatible with most of the latest Software including:

- | | | | | | | | |

Missile Control BBC £9.95

Gemini, 18a Littleham Rd, Exmouth, Devon

Another version of the classic Missile Command, but a very good one. It's loud and flashy, using the BBC's graphics excellently and giving a very attractive and exciting game. Play is hectic and can be controlled by keyboard or joystick with options for up to four players. The game features three missile bases, six cities, bombers and smart missiles with bonus cities for every 5,000 points. High scores are recorded but no table is given; you are simply told your position.

Although the programmer has tried hard to imitate the arcade original and to stretch the graphics to their limits I found

one or two of the displays too harsh on the eyes. And I would have liked an option to switch off the deafening sound. I disliked the way it plays Congratulations if you score enough to have your score recorded. I suppose there may be someone who likes the tune!

The best version I have played at a price obviously chosen to match Acornsoft's equivalent. It would be nice, however, if someone could improve on the theme rather than producing yet another version. N.W.

Rat Splat 48K Oric £7.95

Tansoft, Units 1 & 2, Cambridge Techno-Park, Newmarket Road, Cambridge

You'll need a strong stomach to play this. And a peg for your nose might come in useful. The action is set in rat infested sewers into which you descend and set stinking cheese bait. Rats come squeaking and swarming in from all sides and you have to splat them with your hammer.

However there are two problems. Firstly there is a monster who has befriended the rats and attempts to defend them. Secondly the stench of the cheese builds up and eventually will overcome you. You can beat off the monster with an aerosol can but you have to work fast and

splat enough rats before you faint.

The action is pretty furious and requires skilful keyboard operation. One feature I liked was the facility to allow you to select any control keys. Good sound effects were backed up by a nicely prepared, colourful display. There is only one basic screen display but different levels can be reached where bonus cheeses are set.

If you think you can face up to the revolting rodents and like a good up-and-down ladder chase, Rat Splat is the game for you. P.S.W.

See-Saw Scramble Atari £9.99

Romik, 272 Argyll Ave, Slough, Berks

Paddle deflectors moved horizontally by joystick are provided at the top and bottom of screen in this one- or two-player game.

The paddles are used to deflect ricocheting discs toward a force-field composed of white hash characters. This runs horizontally across screen centre and is bound on either side of its length by dotted lines.

If a player succeeds in propelling his disc through a gap in the dotted line, he will score points for every hash the disc obliterates inside the force-field.

A section is coloured blue; should the disc make contact with that part a whirling blade will be released. If destroyed by using your paddle cannon, bonus points will result.

There are four levels of difficulty, mostly related to speed. Five lives are allowed. See-Saw Scramble takes us back to the era of paddle games. A brave if somewhat unlikely move. The graphics are rather limited. Nevertheless, the game can be fun for two to play. But only just. T.A.

Arcade action star- rated

Five new arcade-style games for a selection of micros are put through their paces

Chuckie Egg Dragon 32 £7.90

A & F, Unit 8, Canal Side Industrial Estate, Woodbine St, Rochdale

Generally it's true that games converted for another computer are never as good as the original. Many are just quick conversions which get the program just running on the new computer without giving any thought to fully using the capabilities of the new computer. Thankfully, in this case, it is not true. A & F has produced an excellent, at least as good variant, of its Spectrum arcade game.

You must rescue the dozen eggs around the screen climbing up and down ladders, jumping gaps

and hitching rides on the lifts. This must all be done while keeping clear of the hens and watching your time. If you take too long the duck will be let out of the cage and your hopes of success ruined.

I managed six full screens of action, all different in layout though the principle remains the same. The seventh seems well nigh impossible.

Despite the lack of variety, the game features quality graphics, multi-player options and you can redefine the keys. Altogether, a most enjoyable game. C.G.

Eagle Empire 32K BBC £7.95

Alligata, 178 West St, Sheffield S1 4ET

Another version of the birds-flying-at-you-while-you-try-to-shoot-them game and, to be truthful, I'm getting rather tired of them. This one features three screens. The first is the swarm; the second, eggs and eagles — which carry on flying even after you have shot both wings off — and the third is the master alien. You have left/right, fire and shield keys.

The game has plenty of action and good graphics, but there are no real surprises. One major criticism is about the ordering of screens and levels. This is fully

explained on the inlay, but is illogical. It seems that only allowing a single shot on the screen at a time makes a game more difficult than allowing any number of them. But here the order is reversed so you have first to survive an attack with only one shot at a time then the next screen allows you several. It may be that this is done for a reason. If so, please explain it to me. If not, then it is both illogical and undesirable. D.C.

COMPETITION

Your comrades are held captive behind enemy lines... and they are relying on you and your Jetcopter to bring them to safety.

That's the challenge in Blue Thunder, from Richard Wilcox Software, which runs on the 48K Spectrum and any Atari. And you could win the game in this week's spot the difference competition.

We've got £1,000-worth to give away.

The Spectrum version costs £5.95 and the version for the Atari is £9.95. So there will be between 100 and 168 winners, depending on how many users of each computer are among the winners.

Richard Wilcox is named after its 15-year-old proprietor, a fifth-former who wrote Blue Thunder with a friend, Trevor Perks, 16.

Richard is, however, being helped by his brother Steve, a computer retailer, and father Brian, who runs a business software company.

His aim, he says, is to produce a small number of high quality games each year. A Commodore 64 version of Blue Thunder is due out in April.

As he is studying for 'O'-levels, the next title will be in early autumn — after the summer holidays.

Blue Thunder, written in 100 per cent machine code, challenges you to pilot your Jetcopter through electronic storms, ground- and sea-based missiles, armoured barrage balloons and deadly jet fighters. Your only defence is a set of hyper-phase lasers.

And, as if that wasn't enough, you must destroy an unstable nuclear reactor before you can rescue your captive comrades.

There are five different missions, on-screen scoring and a high-score feature. Blue Thunder works with keyboard or joystick.

Win... and face the challenge of Blue Thunder from Richard Wilcox Software

How to enter

Study the two cartoons below and try to find all the differences.

Mark the differences on cartoon B by circling them with a ballpoint pen and then fill in your name, full address, the words Spectrum or Atari, depending on which computer you have got, and give the number of differences you found.

Seal the marked drawing and the coupon in an envelope and write clearly on the back of the envelope the number of differences you found.

Post your entry to Richard Wilcox Software competition, Home Computing Weekly, No. 1 Golden Square, London W1R 3AB.

Entries close at first post on Friday March 23.

You may enter as many times as you wish, but all entries must be on the official coupon and cartoon; copies will not be accepted.

The winners will be the senders of the first 100-168 correct entries opened until the value of prizes equals £1,000. In judging no distinction will be made between the owners of the two computers.

The solution and the names of the winners will appear in Home Computing Weekly and the prizes will arrive from Richard Wilcox Software within 28 days of the publication of that issue.

Important: please follow these guidelines carefully. Incomplete entries cannot be accepted.

The rules

Closing date is Friday March 23, 1984.

Correct entries will be drawn at random, regardless of computer named, until the value of the prizes equals approximately £1,000. The number of prizes awarded will be between 100 and 168.

Entries must be fully completed — including the number of differences written on the back of the envelope — and on the official coupon and cartoon, not copies.

Entries will not be accepted from employees of Argus Specialist Publications, Richard Wilcox Software and Alabaster Passmore & Sons. This restriction also applies to employees' families and agents of the companies.

Complete clearly: if you are a winner this will act as a label for your prize. Post to Richard Wilcox Software Competition, Home Computing Weekly, No. 1 Golden Square, London W1R 3AB. Closing date March 23. Follow carefully the How to enter section.

How it works

- 140 protects the machine code from NEW, which is a quick way of getting rid of the BASIC loader
- 150-840 moves the DRAW, PLOT and PIXEL-ADD sub-routines from ROM to RAM
- 900-940 alters the sub-routines as necessary
- 1000-1040 transfers the pseudo screen to the real screen
- 2000-2040 tests to see that all the DATA has been correctly POKEd
- 4000-6000 demo program. Delete before using program above for your own DRAWings

Type in and RUN my program for the 48K Spectrum. Nothing will happen for about a minute and the demonstration routine will produce a smoothly rotating pyramid.

And you can draw many other shapes and animate them.

The program is a variation of the DRAW command. However, instead of DRAWing lines on the visible screen, it DRAWs them on an invisible pseudo screen, located higher up in memory.

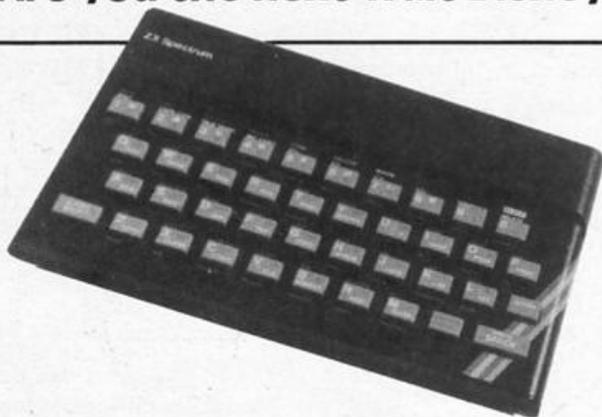

When as many lines as are desired have been DRAWn on this pseudo screen, it is then copied to the real screen more or less instantaneously.

A new set of lines — a different picture, perhaps a new frame in an animation sequence — can then be computed invisibly and displayed when ready.

It works by copying various subroutines from ROM into RAM where they are altered to

Invisible screen to make moving pictures easier

Create your own on-screen animation with Ian McDonald's program for the 48K Spectrum. Are you the next Walt Disney?

fool the computer into thinking that the screen RAM starts at decimal 56382 instead of 16384.

Here's how to use it.

When lines 140-2040 have been entered and RUN successfully, delete all the now unnecessary BASIC, either line-by-line or by typing NEW.

You have to know the co-ordinates of each end of the line you want to DRAW.

You can only DRAW straight lines — circles and arcs aren't possible.

For each line six POKEs are necessary. To draw a line from (a,b) to (c,d) type:

- POKE 65011,a
- POKE 65015,b
- POKE 65017,ABS(c-a)
- POKE 65018,ABS(d-b)
- POKE 65020,SGN(c-a)
- POKE 65021,SGN(d-b)

ABS is on key G and SGN is on key F.

RANDOMISE USR 65000 will DRAW the line on the pseudo screen. Nothing will appear on the real screen until you enter RANDOMISE USR 64900.

You can store as many lines as you like on the pseudo screen.

Hints on conversion

Restricted to the Spectrum because it uses the Spectrum ROM. Would probably fit on a 16K Spectrum, but many of the machine code jumps would need recalculating. Tricky. And the pseudo screen uses up 6K of RAM.

Out of this world...

...or are they earth-bound?
Five arcade-style space games
are put through their paces

Liberator Spectrum £5.95

Lyversoft, 66 Lime St, Liverpool L1 1JN

You command a gunsight on a spacecraft and the objective is to amass points by shooting down priate craft when they attack.

Following an attractively laid-out instruction sequence, the screen represents the view through the crosswires of the sight and you simply try to line up the centre with the attacking forces and blast away. Really that's all there is to the game. The aliens loom up quite convincingly "3D" style and if you miss them they never miss you.

I found the control key chosen

W,X,A,D and S for up,down, left, right and fire to be so close together as to make their use very awkward and there is no joystick option referred to by Lyversoft. A correction to the inlay card instructions is needed as these give the wrong firing button. The screen instructions are correct, however.

Not a game to stretch the imagination, though if you want to develop manual dexterity you may like the game. One I shall quickly forget.

Space Raiders Dragon 32 £8

Microdeal, 41 Truro Rd, St Austell, Cornwall PL25 5JE

Destroy the aliens which descend from the top of the screen. They attack in a formation of five by eleven and there are four protective guards at the bottom behind which you can hide. Movement, left or right, is controlled by joystick of keys.

You start with three lives. An extra life is obtained when the score appropriate to the skill level is achieved. If the invaders reach the bottom the game ends regardless of lives remaining. If you succeed in destroying a wave of invaders another takes its place, but lower down this time. At intervals a mother ship flies across the top and there are bonus

points if you destroy it.

At the start of a session you can choose the background colour, and at the beginning of each game you select from three skill levels. Current and highest score are displayed. Graphics are very good. It's fairly easy to destroy a wave at the first level but extremely difficult at level three. I enjoyed playing at all levels. Full instructions are on the insert but the print should have been larger.

Demon Raider TI-99/4A £5.50

Harmansoft

A rather disappointing photocopied inlay bearing the name and a small illustration, together with instructions (printed upside-down!), confirmed my suspicions that this was another game based around an over-used idea.

The "battle", if it can be called that, starts in the outer base, inside the martian moon, with your spacecraft making an unimpressive entrance to the cavern from the top.

At the bottom are about 40 power modules, with guns on a hill at either side. Scattered around are demi-mines, separated from the power modules by a force field, running from one hill top to the other.

Using the arrow keys, you move around firing your laser (which looks nothing like a laser) at the force field. When a hole has been made you can blast the power modules. Only after each shot do the aliens make a feeble attempt to destroy you. After the aliens have launched a missile, you have no control over your spacecraft and are unable to move from its path.

If you are destroyed, the computer cheekily and insultingly displays "Too tough for you ha!". What a joke! Overall, a pretty poor game, relying too heavily on luck as opposed to skill.

25%
65%
20%

3D Space Raider 32K BBC £7.95

Microbyte, 18 Hilgrove Rd, Newquay

Confirmed space invader addicts will enjoy this, with its excellent fast-moving graphics. I found it very difficult to fight my way far enough into the game to review all available levels. Even then I failed to destroy the base.

Good 3D screen effects and enough screen changes to maintain interest. The main object is to destroy the enemy base. Your spacecraft has to destroy, or dodge, squadrons of android craft and thread a path through asteroid belts. Points are given for craft destroyed and for each screen safely negotiated. A player

is tempted to stay still and fight but unless you learn to shoot straight and dodge asteroids, energy levels soon fall.

The spaceship is protected by an energy shield and can attack with photon charges and a limited number of smart bombs. However, the ship also has a limited amount of energy which is quickly depleted by collisions. There are freeze action and hi-score facilities, and players have the option of joystick or keyboard control.

An excellent game with very clear on-screen instructions.

80%

Glaxxons Dragon 32 £8

Microdeal, 41 Truro Rd, St Austell, Cornwall PL25 5JE

An arcade game that duplicates the original (note similarity of name) to as high a standard as the Dragon is capable which, in my opinion, is to about 75%. It's very much a space-zap game allowing you to kill off aliens as they swarm to attack your position.

Many recent games from Microdeal now offer three options on colour of background. However, once you have chosen you cannot change your mind without reloading. Green was best here. It gave a colourful and varied game.

Choice of colours apart though, there wasn't much variety in the game to make it addictive. Speed and manoeuvra-

bility were required to dodge the descending hail of laser missiles and the aliens themselves which peeled off from the main formation. The speed of interaction was true to the arcade game and the joystick quite responsive. One problem you have is the limitation on your firepower — only one missile at a time. Pressing the fire button gives you a fresh missile but wipes the first one out. There are tactical advantages to this. Quite difficult to play as it's fast moving.

Games for your Spectrum 2

A second page of software reviews for the 48K Spectrum. Read before you buy

Bear Bover £6.95

Artic, Main St, Brandesburton, Drifffield YO25 8RL

You've probably seen colour adverts with a bear standing on a ladder and waving. Here's what it's about.

You are Ted, who must climb ladders and platforms to get batteries for your new electric truck. You are pursued by Bover Bears and a "Special Mystery Guest"! When Ted has collected all the batteries on one screen, he drives to the next, more challenging stage. There are two skill levels: "Baby Bear Mode" and "Big Bear Mode."

There are tunes and detail and animation are superb, cartoon-style, flicker-free and extremely

realistic. The "attract screens" between games are even better than the game itself — the best I have seen for any game on any machine. There is a beautiful picture of Ted and several screen in large, rounded letters. For example, one offers four volume levels from "shh" to "unBEAR-able" and informing us we could press 5 to "PAWS".

Instructions are brief and to the point, without revealing the many surprises.

Bear Bover should become a classic, like Arcadia, Jet Pac, Manic Miner and The Hobbit. It is a credit to the Spectrum. **M.T.**

instructions	95%

value for money	95%

Loony Zoo £5.95

Phipps Associates, 172 Kingston Rd, Ewell KT19 0SD

If you can't beat them, join them. That was the strategy used by the author of this game. Unfortunately, he hasn't joined them: this is a very much below par version of Manic Miner.

In this version you have to escape from a cage in an alien zoo. A button at the top of each cage must be pressed to open the door to the next. You climb to the top and down again to do this, while avoiding the occupants. Unlike Manic Miner, there are no collapsible and moving walkways, no poisonous stalagmites or bushes and only one type of alien in each cage. The platforms are just block graphics and all screens look pretty much the same except

for colours and aliens. The game lacks the wit of Manic Miner, the extra lives don't dance, there are no silly names and objects like "mutant Telephones", and nothing to touch the Monty Python boot and pedestal of the original.

Instructions are a separate program — a brief screen setting paragraph and control keys which, incidentally, are a little weird.

This isn't particularly bad, it just isn't a patch on the old block off which it is a chip.

M.T.

Dinky Digger £6.95

Postern, PO Box 2, Andoversford, Cheltenham GL54 5SW

Postern certainly won't trouble the Advertising Standards Authority: the program is billed as "fast, furious and as mean as they come." It is, in fact, too fast, too furious and too mean!

The object is to clear the playing area of cherries and monsters — a feat I have never achieved. You have a crystal ball to throw at the monsters, but this may not always return immediately, so make sure every throw counts.

This sounds easy; I can assure you it isn't. You see, the monsters can move twice as fast and head for you along the passage you've just dug!

The graphics are nothing to write home about, only user-defined graphics. An awful off-key tune, played before each life, nearly drove me mad. Instructions were adequate: there's not much to write about such a simple game. I had some difficulty loading — it loads at a different volume level from all my other programs.

Dinky Digger is not original, but this is the only Spectrum version I have seen. You might like to add it to your program collection, but to me it's run of the mill.

Monkey Bizness £6.95

Artic, Main St, Brandesburton, Drifffield YO25 8RL

King Kong walks — or throws things — again to ensure you cannot rescue the princess from the top of a scaffolding structure. To reach her you climb ladders while avoiding the burning barrels thrown by Kong. They can only be smashed by hammers found on the way up. Unfortunately they prevent you from climbing ladders and jumping unspecified number. When hit you lose one of your four lives, and umbrellas can be used to jump safely to earth.

When you reach the top of the first screen, the second starts as straightforward as the last. But

the following six become more difficult; with stairs to be jumped, long jumps, flying barrels, showering barrels, disappearing and reappearing barrels and finally a requirement to knock out seven weak points in the scaffolding.

There is no hall of fame, the level numbers do not appear on screen and Kong looks like a Teddy Bear! Barrels smashed and levels completed add to the played score.

This reasonably addictive game has not used the sound potential beyond "beeps" and "boops" and the graphics are only at a basic level.

Fred £6.95

Quicksilva, 13 Palmerston Rd, Southampton SO1 1LL

The first thing that appealed to me was the option to re-define the five control keys — a feature, easy to incorporate, which should be included in every game.

We find Fred, an athletic explorer, inside a labyrinthian pyramid, trying to find his way out. With only six bullets he has to contend with an assortment of nasties, among them rats, skeletons, and acid dripping from the roof! Fred responds quite well, moving easily to right or left, and jumping when required.

One of the most fascinating talents is his skill in climbing ropes hanging from the roof. If you can see the end of the rope, then all well and good, you know

in which direction to go. Quite often, though, this is not possible, and you are likely to find yourself on a fruitless journey to a blind alley, and there are plenty of those. Somewhere along the route is to be found sustenance and treasure and, once found, maps are displayed. I found movement between screens a little jerky, but this in no way put me off.

A fascinating, and addictive game and, though I think it's a little overpriced, well worth adding to your collection. The game is a Spanish import... more please!

How it works

1-25 set up user-defined graphics, print instructions, screen colours, define variables
 30-40 input difficulty level
 50-180 main loop: prints cars, checks for movement, gears and crashes; prints scores and lives. Prints scenery and track
 1000-1020 print opposing car
 2000-2010 oil patch
 2050-2060 log
 2200-2300 road narrows
 3000-3020 road works
 3500-3700 re-fuel car
 4000-4020 night driving
 4500-5070 high score routine
 8000-8030 crash routine
 9000-9020 data

Monaco GP is for all those people who think they can win behind the wheel of a grand prix racing car.

Choose one of the nine skill levels and the game starts at once, with the trees and the track scrolling past.

Opposing cars start to appear, moving faster depending on the gear you have selected.

The drivers are very intelligent and lock onto your last co-ordinate, so you are dodging all the time.

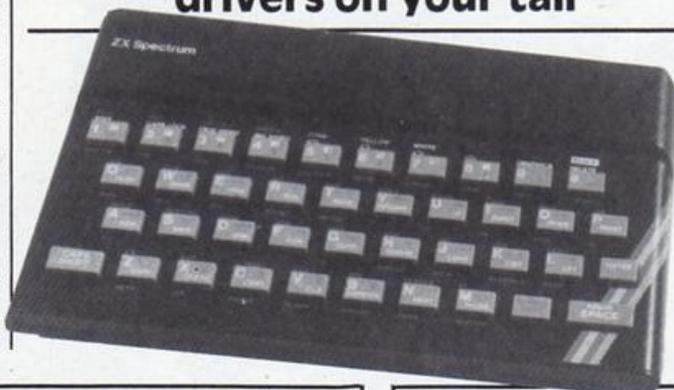

Once you have finished driving through the night other obstacles appear — 3D logs, oil patches, road works, narrow roads, fuel depots and so on.

You steadily gain points and more are added as you pass each obstacle safely. Score and lives remaining are shown at the top of the track.

After a while you will need to

Hazards galore as you get behind the wheel of a racer...

Test your skill in the Monaco GP, Neil Hewitt's fast-moving game for the Spectrum. As well as the obstacles, there are other drivers on your tail

refuel, so you must go through the fuel depots. If you do this safely you also gain extra points. If you don't then all your lives are lost.

There is a high-score table for the three best, which can easily be extended to more.

My game runs fast and will test your reflexes to the utmost. The beep in line 81, which gives a continuous sound, slows it down slightly.

To make the game trickier you could try playing it with just one life.

I think the graphics and the cars are very lifelike and the scrolling is fairly smooth.

The capital letters in quotation marks are user-defined graphics and should be entered in GRAPHICS mode.

This is what they represent: A-F, car, G, tree; H-K, oil; M-V, log.

Note: there should be a "greater than" symbol in line 3515 after IF j.

SOFTWARE FOR SPECTRUM AND ZX81

OUR POLICY

We aim to create programs which you will keep on using until your computer wears out. You won't find our programs in the top ten and you will look in vain for colour adverts and fancy packaging. Nevertheless we have built up a solid following of discerning users in all parts of the world. Read the reviews of our programs if you can find them. We have been consistently praised for quality, originality and value for money.

WHAT DO YOU GET?

The bulk of our cassettes are now made by the factory which produced the Horizons tape. Programs are recorded twice and carry on the reverse side an audio narrative to supplement the operating instructions. Where appropriate, cassettes are accompanied by a comprehensive and clearly written instruction manual.

48K SPECTRUM

"Day of the Match" £5.00

Fascinating and realistic simulation of an entire football season. Name your own teams if you wish (English league provided on cassette). Rate each team from one to nine in various success categories such as attack, defence, manager, etc. Watch the season unfold. Includes knock-out cup option.

"Ball by Ball" £5.00

Simulates a test match series or one day international series. Set up your own teams and pool of players (England v Australia provided). Rate each player's capabilities as batsman and bowler on a one to nine scale for qualities such as talent, effort, etc. Pick your teams and play the match. Electronic scoreboard shows progress of a match. Full supporting score card and series averages.

"Superplan Generator" £12.00

Spreadsheet type program with variable column width and variable number of columns. Lets you sacrifice columns you don't need to get more lines.

"Superplan Pack 1". Business Applications £7.00

Ready-made applications programs for sales day book, purchase day book, cash book and petty cash book.

"Superplan Pack 2". Home Computing £7.00

Ready-made applications programs for home budgeting, nutrition tables, car running costs and bank statements.

"Superview" £5.00

Simple but effective information display. Up to 42 pages of text and low-res graphics. Access pages on demand or run in perpetual 'slide-show' mode. Full facilities to create your own pages and build up an information library on cassette.

16K SPECTRUM

"Superdraw" £5.00

Create full colour high-res pictures and store them on cassette for use as titles or background screens in other programs. Or just have fun doodling and build up a cassette library of your creations. Slide show option allows you to review pictures stored on cassette.

16K ZX81

Here is a selection of titles still available for ZX81. Send s.a.e. for illustrated catalogue. These are the ZX81 equivalents of the Spectrum programs described above. Although similar in concept the specifications fall short of the descriptions given for the Spectrum.

"FOOTBALL-LEAGUE" Forerunner of "Day of the Match" £4.00

"TEST-MATCH" Forerunner of "Ball by Ball" £4.00

"VIDEO-PLAN" Forerunner of "Superplan" £7.00

"VIDEO-AD" Forerunner of "Superview" £7.00

"VIDEO-SKETCH" Forerunner of "Superdraw" £7.00

Many independent computer shops now stock our products but we continue to supply by mail order on an off-the-shelf, immediate delivery basis. Prices include VAT, post and packing in U.K. Add a bit for postage if you live in Outer Mongolia. (Note: "Day of the Match" not available until late October 1983).

VIDEO SOFTWARE LTD.,

DETAILS

Level 9 Computing specialise in high, pure-text puzzle adventures with detailed scenery and a wealth of puzzles. All games have over 200 locations and a save game feature, and cost £9.90 inclusive.

MIDDLE EARTH ADVENTURES

1: COLOSSAL ADVENTURE. A complete, full size version of the classic mainframe game "Adventure" with 70 bonus locations added.

2: ADVENTURE QUEST. Centuries have passed since the time of Colossal Adventure and evil armies roam The Land. With cunning, you must overcome the many obstacles on the road to the Black Tower, source of their demonic power, and destroy it.

3: DUNGEON ADVENTURE. The trilogy is completed by this massive adventure, set in the rich caves below the shattered Black Tower. A sense of humour is essential!

THE FIRST SILICON DREAM ADVENTURE

4: SNOWBALL. The first of Pete Austin's second trilogy. The giant colony starship, Snowball 9, has been sabotaged and is heading for the sun in this giant game with 7000 locations.

THE LORDS OF TIME SAGA

7: LORDS OF TIME. Our congratulations to Sue Gazzard for her super design of this new time travel adventure through the ages of world history. Chill to the Ice-age, go romin' with Caesars legions, shed light on the Dark Ages, etc. etc.

LEVEL 9 ADVENTURES

**BBC 32K COMMODORE 64 SPECTRUM 48K
LYNX 48K NASCOM 32K ORIC 48K ATARI 32K**

Level 9 adventures are available at £9.90 from good computer shops, or mail order from us at no extra charge. Send order, or SAE for catalogue, to the address below - and please describe your micro.

LEVEL 9 COMPUTING

HCW52 229 Hughenden Road, High Wycombe, Bucks HP13 5PG

REVIEWS

"Adventures which have a fast response time, are spectacular in the amount of detail and number of locations, and are available to cassette owners... Simply smashing!"
- Soft, Sept 83

"Colossal Adventure is included in Practical Computing's top ten games choice for 1983: "Poetic and tough as hell."
- PC, Dec 83

"To sum up, Adventure Quest is a wonderful program, fast, exciting and challenging. If you like adventures then this one is for you!"
- NILUG issue 1.3

"Dungeon Adventure is recommended. With more than 200 locations, 700 messages and 100 objects it will tease and delight!"
- Educational Computing, Nov 83

"Snowball... As in all Level 9's adventures, the real pleasure comes not from scoring points but in exploring the world in which the game is set and learning about its denizens... this program goes to prove that the mental pictures conjured up by a good textual adventure can be far more vivid than the graphics available on home computers."
- Which Micro?, Feb 84

"Lords of Time. This program, written by newcomer Sue Gazzard, joins my favourite series and is an extremely good addition to Level 9's consistently good catalogue... As we have come to expect from Level 9, the program is executed with wonderful style - none of those boring "You can't do that" messages! Highly recommended."
- PCW, 1st Feb 84

Make more use of your Spectrum

Draw and learn with your computer. Our testers report back on a new batch of five programs — how useful were they?

How Long Have You Got? £3.45

Eastmead Computer Systems, Eastmead House, Lyon Way, Camberley, Surrey

The title refers to your life expectancy! Like all the Eastmead Medical Series, this had severe loading problems, caused by poor quality recordings, and an over-long series of introductory SCREENS with impressive sounding titles.

Based on medical statistics, by asking question about your life-style and habits, together with weight etc, it gives an estimate as to how long you're likely to last! Each factor has a weighting in years, added or subtracted. The

theory is that, for example, seeing how many years your 40 fags a day costs, will stop you smoking.

There are two versions on the cassette, for 16K or 48K, which prompts an interesting thought: Will you live longer with a 16K Spectrum?

Eastmead will pleased to know I only have nine years left on the basis of this program! But to be honest, I got so tired of trying to load this beast, I almost gave up. If you can get a copy that loads, and you are a believer in probabilities based on statistics, and you want to examine your life-style in terms of your longevity, then this could be for you.

The Complete Guide to Medicine 48K £6.90

Eastmead Computer Systems, Eastmead House, Lyon Way, Camberley, Surrey

This is not what the title claims it to be, but a long illustrated lesson in anatomy, a sort of workshop manual of the human body covering the skeleton, digestion, blood system, reproduction and so on. There is an enormous amount of information, structured in many independently loaded sections. This, of course, takes time — lots of it! Implementation on Micro-drives would improve this markedly.

Remembering my biology lesson, the text appears accurate; it should be, it was written by a

doctor. So if you are prepared to plough through it, you could learn a lot.

The graphics, however, are something else! Although the screen presentation is good, apart from some unwise colours for lettering, graphics are poor. Even the humble Spectrum gives a good programmer the opportunity to realistically show muscles contracting, blood moving.

Having been critical, it's fair to say a book with this amount of info would cost a lot, and the program might prove useful for teaching people a little more about their bodies. But "A complete Guide to Medicine"? No!

Paintbox 48K £7.50

Print 'n' Plotter Products, 19 Borough High St, London SE1 9SE

For those who regard the Spectrum as a number cruncher, or an intergalactic battlefield, the demo side of the tape will raise eyebrows. A motor cycle, car, electric guitar — just three of the pictures shown. And, within the limitations of the Spectrum, they are in almost perfect proportions.

To guide you through the working side, a 28-page booklet gives all the information you are likely to need. Four banks of user-defined graphics are built into the program, each of 21 characters. Three are suitable for building into graphics for games, and the

fourth is the alphabet A to U. Should you need to, any of the characters can be re-defined using the drawing board facility, including reverse, rotate and mirror image.

Although the high resolution plotter can be controlled by joystick, I found cursor controls quite adequate. By switching between facilities you can gradually build up your masterpiece, saving it, or recalling it, at any stage. There are a few of these utilities on the market, some having more than others. So it's really a question of paying your money and making your choice.

Chess Tutor 1 48K Spectrum £9.95

Sinclair, Stanhope Road, Camberley, Surrey

Get this if you do not know the first thing about chess and you wish to learn. To give you an idea of how comprehensive it is, both sides are used. Starting with the positions of all the pieces, demonstrations are given of moves each can make. Even pawn moves are covered thoroughly, including en passant and promotion. At every stage you can participate in exercises, and you will be shown the solution should you make a wrong move. From the beginning you are taught about rank and file, and the correct notation for recording moves. The basic tactics are well

covered, with plenty of exercises. In particular, two exercises from the section dealing with knights will occupy you for quite a while. The first involves the capture of so many pawns in a certain number of moves. The second is the knights' grand tour: you have to move to every square, only one visit per square, and finish on the start square.

Very well thought out and well presented. The almost mandatory booklet from Sinclair tells you little about the program, but all the instructions are on screen. Highly recommended.

Draw 15 £5

Fowler Software, Hendon Mill, Nelson, Lancashire BB9 8AD

Draw 15 is a utility, also available as a listing for £2, which allows you to design and colour shapes, using an almost unlimited number of character squares, store the shapes above RAMTOP and, using a BASIC routine listed, POKE them to the screen as required. In other words, you can move your own shapes about the screen.

You can, of course achieve the same using the internal UDGs, but the number is limited. Draw 15 gets round this.

The program isn't very user friendly, but comes with a detailed manual which goes through the whole thing. The

provisional version was, however, confusing, in that it was produced on a typewriter which obviously has no 1 key, just an I. And you need both. It is also supplied with character design grids. All in all, you get a lot for your fiver, if you're prepared to stick at it.

The results, however, aren't very impressive as the POKE to the screen routine is slow and jerky. You can buy a Graphics Subroutine in machine code from Fowler and this will do the trick nicely. The trouble is that costs £10 which is far too expensive.

COMMODORE 64 PROGRAM

Your base is undergoing a night-time air raid.

Use the searchlight to pick out the enemy bombers and then blast them out of the sky!

There is no moon to help you, but you do have three flares at your disposal if you cannot find your target.

Shoot down as many aircraft as you can before your base is bombed out.

Use the joystick to control the searchlight and shoot down aircraft. Flares are fired using the space bar.

Eyes to the skies... and blast the bombers

● **Winning Games on the Commodore 64**, published at £5.95 by Ellis Horwood, Market Cross House, Cooper St, Chichester, West Sussex PO19 1EB. As well as 21 game listings, the book explains how to make best use of the Commodore 64. A cassette of the programs is available at £5.95. Book and cassette costs £11.95. A disc version is due soon.

It's World War Two again and you're in charge of an anti-aircraft battery. Taken from Winning Games on the Commodore 64, by Steve Colwill and Terry Barrett, just published by Ellis Horwood

...LET'S GET DOWN TO BUSINESS...

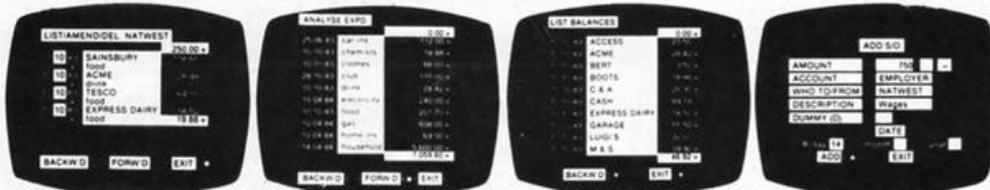

★ ★ ★ FINANCE MANAGER ★ ★ ★

Voted "the best value financial program available" by SINCLAIR USER

FINANCE MANAGER is a powerful, flexible and very fast MENU DRIVEN general purpose ledger package which includes both standing order and special forward planning features. The program will handle up to 255 separate accounts and 1800 transactions. The power of MACHINE CODE has enabled us to produce the very latest "on the page" presentation which lets you enter and edit data naturally, as if you were filling in a form.

These screens are just a sample to show the style of the program:

But that's not all, not by a long way. This program **automatically** raises a corresponding debit or credit for every entry, and will even open a new account if an entry features an unrecorded account name.

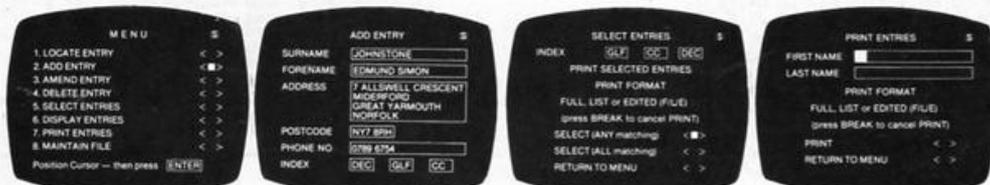

Information can be manipulated in various ways — you can call up your bank or credit card account, or analyse expenditure according to a variety of categories which you assign to the transactions. Instant Account balances can be listed at any time. A great time saving feature of this program is that account names and transaction descriptions need only be recorded **once**, as all the input fields will scroll existing files. There are many, many more features which make this the most powerful finance package around, we even include a test file for you to experiment with before getting started.

★ ★ ★ ADDRESS MANAGER ★ ★ ★

ADDRESS MANAGER utilises the same "on the page" presentation as **FINANCE MANAGER** and offers Spectrum owners a professional standard address filing, indexing and retrieval system. Below are examples of the screen presentations.

ADDRESS MANAGER has been carefully constructed to provide the user with a tool that is extremely friendly and easy to use, the speed and presentation of this program are second to none.

ADDRESS MANAGER features **MULTIPLE INDEXING** via our 3 way 3 character index, an ability to store over 400 full names and addresses or 1500 individual names/titles.

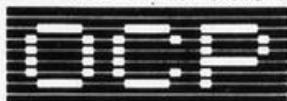

USES include storing and updating names, addresses and phone numbers, printing out Xmas card lists etc, mail order work, customer classification by type size, (doctors have used this program to catalogue patients by treatment).

★ ★ ★ 80 COLUMN-PLUS 80' VERSIONS ★ ★ ★

VERSIONS OF BOTH THESE PROGRAMS ARE NOW AVAILABLE FOR USE WITH AN 80 COL PRINTER. WORKING IN CONJUNCTION WITH THE KEMPSTON CENTRONICS INTERFACE THESE "PLUS 80" PROGRAMS CONTAIN ALL THE NECESSARY SOFTWARE AND CONTROL CODE FACILITIES TO OPERATE ANY KEMPSTON COMPATIBLE CENTRONICS PRINTER.

VISIT YOUR LOCAL SOFTWARE STORE NOW AND ASK FOR FINANCE MANAGER AND ADDRESS MANAGER BY NAME —

also available from selected branches of W. H. SMITH, BOOTS AND J. MENZIES

If you experience difficulty obtaining your copies of these programs send a cheque or postal order for £8.95 (£19.95 for PLUS 80 versions) or telephone your details to (0753 888866):

Oxford Computer Publishing Ltd.
4A HIGH STREET, CHALFONT-ST-PETER, BUCKS, ENGLAND

Dragonsbane
48K Spectrum
£6.95

Quicksilver, 13 Palmerston Rd, Southampton SO1 1LL

First, there was the purely text adventure game. Next were text/graphic, and pure graphics adventure games. Examples of all have passed through my Spectrum, ranging from absolutely gripping, to pathetically boring.

This adventure, a text-graphics mixture, is somewhere in the middle. The graphics display the rooms, and contents, through which you are travelling. At top right is an indicator which shows direction of travel, and swings like a compass needle according to which cursor key you have pressed. Also displayed are objects collected, and current room number, a great help if you

make maps. Among the indicators is one showing the proximity of the damsel you are trying to rescue.

Although you, the player, are not portrayed, you do get the feeling of actually moving through the game. This is what it's all about, this sense of involvement, and I found the screen part excellent. The let-down is the actual text. Not the plot, or theme, but the dialogue. Which is a pity. Closer attention to the finer details of dialogue and careful program structure, to achieve faster responses, would lift this program from the ordinary to the gripping. **B.B.**

Castle Blackstar
48K Spectrum
£8.95

S.C.R. Adventures, 190 Shelbourne Rd, Tottenham, London N17

S.C.R. claims this game is a high quality adventure aimed at master player and novice alike. I have no quarrel with that, Castle Blackstar is very good indeed.

Having "woken from a sleep troubled by strange dreams", i.e. with a hangover, it seems that you have rashly promised the tall, willowy, blonde Lady Artemis that you will enter Castle Blackstar to reclaim an orb. In return she will let you keep anything else you may find. Not much of a bargain, I grant you, but that's blondes for you.

The game is text only and has a vocabulary of over 200 words of which only a few are known to you to begin with. Response time is good and you may use short sentences like "Take lamp and light it" or simple verb and noun combinations. As you search you face many and varied dangers, not least of which is getting lost if you do not keep a careful note. If you are killed, and you certainly will be, you are reincarnated outside the castle.

Castle Blackstar uses almost all available memory to provide maximum play potential and should offer long term interest. Highly recommended! **D.J.**

Lords of Time
32K BBC £9.90

Level 9 Computing, 229 Hughenden Rd, High Wycombe, Bucks HP13 5PG

First, my thanks to the company which thinks of the poor reviewer of adventure games and provides a useful help sheet. My lips are sealed!

This is a text adventure which contains over 200 locations and some of the most intriguing puzzles I've come across. There's so much to do and so many places to visit.

The plot involves travelling to nine time zones and collect the "symbolic objects" needed for the final victory. The booklet is the usual blend of hints and tantalising information but it does reveal that it is essential to get in the clock and travel to the

various zones. Those that I have travelled to are well described and include many oddities and anachronisms, liberties which the author freely acknowledges.

It is a friendly game, allowing you to save and restore game positions. It also accepts complete phrases, thus allowing a more human dialogue. You can repeat previous commands with AGAIN, use LEFT and RIGHT instead of west and east. All these and many more make this a pleasure to play.

If you enjoy text adventures then this is not to be missed.

Take a step into the unknown

A page for adventure addicts... follow in the footsteps of our intrepid review team

Transylvanian Tower
Commodore 64
£6.50

Richard Shepherd, Elm House, 23-25 Elmshott La, Cippenham, Slough, Berks

This is advertised as a spine-chilling adventure with spectacular 3D graphics. Well, it didn't chill my spine, and I don't see anything spectacular about a view of three walls of a room.

It is basically a maze game. The first stage is a very straightforward maze through which you have to find your way, with the assistance of a floor plan which you can look at as often as necessary. The next three stages are remarkably similar mazes, but a few complications start to creep

in: there are various objects to find and vampire bats to kill, and views of the floor plan are not so readily available. On level two, shooting the bats is very easy, but it gets harder as you go on.

If you have the time and patience to find your way through four different mazes, then you are rewarded on level five with a chance to kill Count Kreepee and find his treasure. You'd have to be unusually keen on mazes to get this far, though.

Valley of the Pharaohs
32K BBC £7.95

First Byte, 10 Main St, Derby

The more adventures I review the more I feel they should have to declare certain features. The sort of thing I would like to see are details of how many locations, language used, i.e. machine code or BASIC, type of graphics, if any, and some indication of difficulty. That is not easy to assess at all, for what is difficult to one is frustrating for another and simple to a third.

This program is written in BASIC and, while being fairly attractive on the Mode 7 screen, is very small and slow to respond to your moves. It is also extremely frustrating with only two

locations accessible at first, therefore I find it hard to believe that a beginner with adventures will enjoy this. You do like to get somewhere in the first few moves, I find. The story line is fairly standard and has been used many times before, notably by Acornsoft. The language understood comprises less than 50 words — I cheated and looked — which means some frustration in getting your message across. In common with other releases from this company there is no written documentation, only that seen on screen.

WE STOCK A LARGE RANGE OF SOFTWARE FOR BBC MICRO INCLUDING ACORN/SOFT BBC SOFTWARE, LONGMANS SOFTWARE. PLEASE SEND LARGE STAMPED ADDRESS ENVELOPE FOR FULL DETAILS.

TORCH Z80 2nd PROCESSOR For only £347 + VAT

Torch 2nd Processor Z80 is supplied with perfect writer (a powerful Word Processor), perfect spellier (spelling checking program), 1 show how used one for making this advert), Perfect Filer (A Database Program), Perfect Calc (Spread Sheet). It includes 64K memory (Almost 60K available to user). Fits inside BBC Computer.

Z80 2nd Process - Perfect Software £347 + VAT £399
Z80 Processor - Perfect Software - Dual 800K Disk Drives £695 + VAT £799

GUARANTEED LOWEST PRICES

100% BBC COMPATIBLE MITSUBISHI AND TEAC SLIMLINE DISK DRIVES

NEW LOWER PRICES!

These drives are supplied ready cased with all the necessary cables, formatting program and User Guide. There are some very useful utilities included on formatting disc e.g. * DISASSEMBLER: This is 6502 machine code disassembler. * DUP: To copy and rename a file on disc. * FORMAT: Formatting program for 40 & 80 tracks. * FREE: This utility provides a disk usage analysis. * MDLMP: Enables you to display and modify any part of BBC memory. * MERGE: Merge a number of text files into one file. * RELOCATE: Downloads a basic program to &EOO. * SDDUMP: Screen dump for EPSON in all graphic modes. * VERIFY: Verifies every sector on a disk. * MENU: A flexible menu program.

Single drive 100K 40 trks, single sided £147 + VAT £169
Dual drive 200K, 40 trks, single sided £286 + VAT £329
Single drive 200K 40 trks, double sided £173 + VAT £199
Dual drive 400K, 40 trks, double sided £330 + VAT £379
Single drive 400K 80 trks, double sided £199 + VAT £229
Single drive 400K 40/80 trks, switchable DS £282 + VAT £329
Dual drive 800K 80 trks, double sided £382 + VAT £439
Dual drive 800K 40/80 trks, switchable DS £408 + VAT £469

All above drives are low power slimline. (0.3 A typ. at 12v and 0.4 A at 5v per drive). Normally extra power supply is not required, the BBC Computer power supply is designed to drive two low power drive (IT IS NOT DESIGNED TO DRIVE INTERNAL ROM BOARD).
40 Track SS-DD diskettes (10-Box) £18 + VAT £20
40 Track DS-DD diskettes (10-Box) £23 + VAT £26
80 Track SS-DD diskettes (10-Box) £28 + VAT £32
80 Track DS-DD diskettes (10-Box) £30 + VAT £34

U.S. SCENE

MSX micros are caught in a vicious circle

Here's a little news about the standard that hasn't happened yet. Around the middle of last year a group of Japanese and American companies decided to establish a standard operating system for home computers to be called MSX. This was developed by our very own Microsoft, which seems to have its hand in everything these days from Apple's mouse to Zenith's operating system.

Although the Japanese firms which subscribed to the MSX standards are apparently doing well with them in Japan, the onslaught of 8-bit Japanese machines using MSX has yet to be felt over here. The anticipated flood is instead turning out to be a trickle. Industry experts are starting to wonder if indeed MSX machines could even penetrate the market at this point. One thing that a lot of us noticed at the recent Consumer Electronics Show in Las Vegas was the lack of MSX micros.

Even Microsoft's Far East rep mentioned his surprise at this, but felt that the hold-back was due to the reluctance of the Japanese firms to take on America before the Taiwanese, Korean, Hong Kong and Japanese markets were satisfied. Even though Microsoft says otherwise, it is also felt that the MSX standard is just a Japanese one.

Another drawback is that not one MSX machine has been approved for sale in the U.S. Before any computer for home use can be sold, its generated interference level must be acceptable to the Federal Communications Commission, which controls use of the airwaves.

Still another drawback is the old question of software. There are only about 150 titles of MSX software available in Japan, and hardly any in English. This situation is not likely to change soon. Activision, Sierra On-Line, and Spinnaker, which all agreed to the standard last year, are three manufacturers which are very reluctant to spend a significant amount of research and development money on software products that may never be hardware-supported.

There is also trouble trying to find domestic hardware support. To date, the first and only U.S. hardware company to support the standard is Spectravideo in New York. Its model SVI 728 is basically a CP/M machine having a decent keyboard and MSX in ROM. It also markets a larger machine, the SVI 328, for which a \$50 MSX adapter will become available in spring.

Microsoft is hoping this will truly become a standard, so much so that it has even designed a 16-bit version called MSX-DOS which will be compatible with CP/M-80 programs but will be able to have colour and graphics capabilities too. MSX files will be compatible with MS-DOS files. Microsoft hopes this will encourage users of MS-DOS at work to buy smaller and less costly machines to process the same files at home. Later this year it is planning to release rewritten versions of some of its existing applications programs such as Multiplan, and languages such as BASIC, FORTRAN, and COBOL.

Spectravideo is, of course, working hard to develop hardware that will support all this, in the obvious hope that it will be the leader of the pack, MSX-wise. It feels that its second generation machine, to be introduced in June at the summer Consumer Electronics Show in Chicago, will take the industry by storm. Two of the leaders of the low-cost computer market, Coleco and Commodore remain unimpressed. A spokesman for the former indicated that the main manufacturers have already adopted a wait and see attitude, while the Commodore spokesman was very forthright in stating that there was no point in adapting a hardware standard for which there was no software.

pro clone.

1984 is already beginning to see Pro Clone Ltd as the most sought-after duplication house in the United Kingdom.

WHY?

- All our customers receive personal service.
- All material is dealt with in the strictest confidence.
- Our insistence on the use of quality raw materials and stringent quality control.
- Extremely fast turn-round, normally within seven days.
- Very competitive prices.

We can also supply very high quality blank media — any quantity.

If you would like to discuss your requirements further, do not hesitate to contact:

Dambusters 32K BBC £7.95

Alligata, 178 West St, Sheffield S1 4ET

This game has a new scenario, to me at least. You pilot a Wellington Bomber as part of the 617 Squadron in an attack on the Mohnesee Dam. This means you have not only got to try to bomb the dam but also keep off the enemy aircraft.

To help in this task you have both rear and front gun positions. This means that with up, down, accelerate, decelerate and release bomb there are seven control keys. This suggests one of two things: either the game is meant for Planetoid freaks, to whom the manipulation of hundreds of keys presents no problems, or that it is for those under the advanced age to which I now have to admit! Put

in other words I found the game rather hard and I'm not even sure if there is a second more difficult screen yet.

The screen layout is a little lacking in colour but I'm certain this is for speed, of which this program does make good use. The moving graphics are very good indeed. Bomb aiming is fairly easy using the convergent light principle the actual bombers used. But mine kept hitting the island.

Stock Market 48K Spectrum £6

Cases Computer Simulations, 14 Langton Way, London SE3 7TL

If you're fed up with eating power pills and slaying dragons then this may be for you.

You have five days to maximise your investment in six companies. You are given £15,000 to start with and you can then buy or sell shares. Your cash level is constantly printed and you are allowed overdrafts. If you have over £15,000 you can bank some to gain interest.

Lots of detailed information is available, well presented and clear, with the option of well-drawn diagrams. Play is interspersed with newflashes which affect prices and stability of the

market. If a company has done very well you get bonus shares, but sometimes companies fail. There is a minor bug: when you have asked for company details at the beginning the program is aborted later. Type "GOTO 1" (not RUN), refuse these details and all will be well.

It prints a critical analysis of your tactics, for example: "On two occasions you held onto shares at high prices when they were falling." Several paragraphs are in the same vein. I like this idea; perhaps I should have asked the program to review itself!

Sub Spectrum £6.99

Romik, 272 Argyll Ave, Slough, Berkshire

Sub simulates a struggle between you, captain of the frigate Anachronous, and a Soviet submarine. How accurate it is I would not know as my naval warfare experience extends no further than the queue in the cafeteria on the Isle of Man ferry. But nevertheless Sub is intriguing and challenging.

The screen shows instruments for range, depth and direction of foe along with you speed, heading and rudder position. Also displayed is the depth setting and your depth charges. In the centre is the sonar display.

By varying course and speed

you try to intercept and destroy the sub before he torpedoes you. My early efforts included being blown out of the water after less than a minute, likely to be an unbeatable record. If you win you get a brief rendering of Rule Britannia.

There are three ranks, promotion leading to a harder game, and five skill levels. Higher levels are certainly taxing. Selecting Russians as enemies seems somehow improper compared with fictitious planets. Definitely not one to improve East-West relations!

Will you believe it's real?

Our reviewers tackle bulls, run businesses, command a sub and pilot a bomber

Bull Run Spectrum £5.95

Phipps Associates, 172 Kingston Rd, Ewell, Surrey KT19 0SD

Bull Run has nothing to do with the American Civil War battle of that name but is an amusing little game based on the quaint Spanish custom of releasing bulls into the streets for the braver or dafter locals to play with.

The screen nicely represents an aerial view of the town and you have to try and trap the bull → graded on three levels of bovine nastiness — in the arena. You chase around the town erecting fences and acting as live bait. Of course, the bull wants to gore you and often knocks over your fences. It stalks you in an exciting

way and the action, while rather jerky, is quite fast. Success is rewarded by the townsfolk with muchos pesetas and a commendable feature is that the bull has a rather better chance than in real life.

The game is one of those that keep you "wanting just one more go" until you have mastered it but this is quite quickly done and then there is little more on offer. Compared with the many multi-staged games on current release Bull Run is, I feel, rather overpriced.

Manage 48K Spectrum £6

Cases Computer Simulations, 14 Langton Way, London SE3 7TL

A program for the budding entrepreneur or A-level business studies student. I had to engage the services of both to enable me to make head or tail of it.

The idea is to build up cash and plant so your opponent cannot compete successfully.

Each must make decisions: price of goods and marketing, production, research and development costs. Once you have typed in these numbers, the results are calculated. This is where my entrepreneur/business student came in: five pages of information were displayed, all double Dutch to me, even though

the inlay stated: "No prior financial knowledge is required." The meaning of the jargon is not explained in the instructions — they don't explain much more than the rules.

However, once in the know, I found the information to be an essential part of the game, well displayed and easy to understand once you know what the headings mean. As a game I found it a little tedious to play, because of all the data players have to enter. However, it could prove useful as an educational aid. Nowhere does it tell you what you are supposed to be selling!

Hints on conversion

PROCedures are similar to GOSUB except that they need no line number. The following PROCs are used:

- PROCinit initialisation
- PROCtitle title page
- PROCunit_roads(LEVEL) sets number of cars on roads depending on level
- PROCscreen sets up games screen
- PROCmove_cars moves cars on road
- PROCKey_check checks if key has been pressed
- PROctime updates time count-down
- PROClives(LV) prints number of lives left
- PROCsname moves snake in grass
- PROCscore(S%) updates score
- PROCcrash_check checks if frog has been killed
- PROctune plays tune
- Mode 2 sets up screen 20 rows by 32 columns or 1280 by 1024 pixels.
- !&FE00=&10200A kills the cursor
- ?(&25A)=40 puts keyboard in upper case and keeps it there
- +FXIS,1 clears keyboard buffers,
- ADVAL(0) checks fire button and ADVAL(1) and ADVAL(2) check joystick movement.
- VDU23,... defines user definable graphics.
- ENVELOPE controls character of SOUND statement.
- VDU28 sets text window.

In this game for the BBC Model B called Ribbet, you are a frog and you have to cross a main road with lots of cars.

You have five lives and there is also a clock at the top of the screen — dawdle too long and

Hop across the road... and watch the cars and snakes

Your skill at dodging cars and Sid the Snake will be tested in this variation on a popular game from Andrew MacMaster

```

Variables

- S% score
- LV lives left
- X1 X position of frog
- Y1 Y position of frog
- TT time left
- HOS(4) river bank holes
- LS middle of road
- RS(4) roads
- RIS(4) river
- LEVEL current level
- AS input
- JOY joystick or not
- AA middle point of frog

you run out of time and die. There is also a patch of grass near the road which hides Sid the Snake.

Get four frogs across safely and you get a chorus of Yankee Doodle Dandee and go on to the next level — there are five in all.

You can use joysticks in place of the keyboard. When the program says SPACE or FIRE to start the game press FIRE for the joystick selection.

The game takes up 6634 bytes of memory in MODE 2 leaving 2070 bytes free to shorten the program. Typing in Time, the title page, joystick routine and two tune sections could all be left out.

How it works

- 1000-1011 initialise and call title page
- 1020-1030 set road and set up screen
- 1040-2000 main program loop
- 3000-15140 subroutines
- 15300-15350 joystick test

NAME _____

ADDRESS _____

Mind the flak, chaps. We must destroy the dam

Your aircraft is trying to destroy an enemy dam by dropping bouncing bombs. Your bombs must hit the water before hitting the dam or the enemy will retaliate with anti-aircraft fire, damaging your engines.

Five hits on the dam are required and you have up to 10 bombs to complete your mission. The game is fairly user-hostile in that there are many ways of losing — crashing into the water, getting hit by your own bomb, being shot down or just running out of bombs.

Full instructions are included in the program, so good luck and come back safely, chaps.

The pride of the squadron rests with you, your crew and your TI-99/4A. Type in Graham Baldwin's game for the standard TI... and return home safely to Blighty

How it works

- 190-390 define characters and assign colours
- 400-590 title screen and instructions request
- 600-700 instructions
- 710-820 skill levels
- 830-1080 set up screen and set variables
- 1100-1170 set plane moving
- 1190-1210 detect plane crash
- 1230-1490 detect keys and release bomb
- 1500-1530 check position of bomb
- 1550-1790 anti-aircraft fire, hits on dam
- 1810-2140 dam destroyed
- 2170-2580 lose sequences
- 2600-2630 print routine

Hints on conversion

TI BASIC is fairly standard but has some unique graphics commands, some of which are detailed below. The screen is made up of 32 columns and 24 rows.

CALL CLEAR clears the screen. Replace with CLS or similar on other machines

CALL CHAR re-defines an ASCI character with a sixteen digit hex string derived from an 8x8 grid

CALL HCHAR(R,C,ASCE) places a character at row R and column C on the screen and optionally repeats it horizontally

CALL VCHAR similar to HCHAR but repeats character vertically

CALL GCHAR(R, C, X) repeats the ASCI code to variable X of screen position R and C. Similar to a screen PEEK on other machines

CALL KEY(3, K, S) places the code of the key pressed into the variable K. Similar to GET on other computers

Main variables

- ROW row of plane
- COL column of plane
- BR row of bomb
- BC column of bomb
- SCR number of hits on dam
- BMS number of bombs
- REV climb or dive plane

LANGUAGE LEARNING AIDS FOR FRENCH, GERMAN & SPANISH

Already in use in numerous schools and colleges, these programs provide an immensely powerful aid to foreign language learning. The cassettes include extensive vocabulary lists arranged as a series of lessons, each covering a different subject. A tuition control program enables individual lessons to be loaded and used as required.

Words, phrases etc are presented first in one language, then the other complete with all necessary accents and special

characters. Masculine, feminine and neuter words appear in different colours to encourage gender learning. All lessons can be run in three different ways, i.e. learning only, self-test or speed and accuracy test.

The programs are suitable for pupils of all ages as simple commands enable new lessons in vocabulary or grammar to be entered by the user. These may then be edited as required and stored on cassette for later use. Invaluable for homework and exam revision!

Level A Cassettes: Contain the tuition control program and 16 comprehensive lessons for general vocabulary learning.

Level B Cassettes: Contain the tuition control program and 16 lessons including verb lists, adjectives, adverbs and phrases.

Available from dealers, large stores or mail order.

Also Available "THE SPANISH TUTOR"

"Run more than ten tasks on a ZX81-FORTH ROM?"

Sure! More than 10 tasks simultaneously and, in some cases, up to 300 times faster! That's what replacing the basic ROM with the new FORTH does for the ZX81 — and more!

The brains behind the breakthrough belong to David Husband, and he's building Skywave Software on the strength of it. Already orders are flooding in and it's easy to see why.

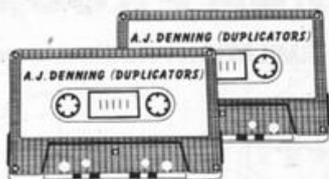

The ZX81-FORTH ROM gives you a totally new system. In addition to multi-tasking and split screen window capability, you can also edit a program while three or four others are executing, schedule tasks to run from 50 times a second to once a year, and with a further modification switch between FORTH and BASIC whenever you like.

The ZX81-FORTH ROM gives you a normal keyboard with a 64 character buffer and repeat, it supports the 16k, 32k, 64k RAM packs, it is fig-FORTH compatible and it supports the ZX printer.

The price, too, is almost unbelievable. As a "fit it yourself Eprom", complete with manual, it's just £25+VAT. Add £2 p&p UK (£5 Europe, £10 outside Europe) and send your order to the address below.

David Husband
73 Curzon Road, Bournemouth,
BH1 4PW, ENGLAND.

NO INTERFACE!!! SPECTRUM-STICK

ONLY £9.95 inc. VAT. P&P

- Operates cursor keys directly
- Simply clips onto case
- Leaves rear socket free for accessories
- No wiring
- 8 axis control
- One hand operation
- Essential for all flight simulation games
- Ideal for plotting & drawing
- Tough Maranyl Nylon moving parts

READ WHAT THE PRESS SAYS:
"an ingenious low cost joystick".
POPULAR COMPUTING WEEKLY

"Robustly made & handles well" PERSONAL COMPUTER GAMES
"an ingenious device... found it to work well" ZX COMPUTING
"the best feel joystick... produces 8 directional movement with perfect accuracy... a worthwhile investment"
CRASH MICRO GAMES ACTION

Now that most modern programs offer user-defined or cursor key choice, Spectrum-Stick is being used more and more, even by owners of interface type joysticks who prefer the light one-handed control plus the freedom to plug in other accessories to the Spectrum rear sockets.

We cannot list all the programs suitable for Spectrum-Stick, but here are a few:

Atic Atac	Fighter Pilot	Nightflight	Knot in 3D
Apple Jam	Flight Simulation	Paratroopers	Vu 3D
Airliner	Froggy	Paint Box	Wheeie
Bedlam	Gold Digger	Robot Panic	3D Desert Patrol
Bonkers	Gold Rush	Scuba Dive	3D Maze of Gold
Bubble Trouble	High Rise Harry	Splat	3D Tunnel
Caterpillar	Maze Death Race	Super Digger	3D Vortex
Chopper Rescue	Maziacs	Spectrapede	Last Sunset...
Cybertanks	Mined Out	Harrier Attack	Corridors of Genon
Earth Defence	Missile Defence	Morris meets Bikers	Etc. Etc. Etc.

CLIP-ON AND TURN ON to SPECTRUM-STICK

DUCKWORTH HOME COMPUTING

All books written by Peter Gerrard, former editor of *Commodore Computing International*, author of two top-selling adventure games for the Commodore 64, or by Kevin Bergin. Both are regular contributors to *Personal Computer News*, *Which Micro?* and *Software Review*.

SPRITES & SOUND ON THE COMMODORE 64 by Peter Gerrard

A complete guide to using the extraordinary features of the Commodore 64, together with a full working explanation of the chips that make it possible: the 6581 Sound Interface Device and the 6566 Video Interface Chip, together with the processor that makes it all tick, the 6510.

Sections on programming your own musical instruments, producing sprite and programmable character animation, make this the guide for users of the Commodore 64 who want to get the most from the special features of their computer.

£6.95

COMMODORE 64 GAMES by Kevin Bergin

This is a collection of 21 exciting programs specially written for the Commodore 64, including Golf, Snake, Air Attack, Draughts, Car Dodge, Tank Battle, and Minefield. An adventure game is also included as well as a program to enable you to devise your own version of Basic by re-defining keywords. Each program is accompanied by notes on its structure to enable you to modify or extend it.

£6.95

Other titles in the series include *Using the 64*, *12 Simple Electronic Projects for the VIC*, *Will You Still Love Me When I'm 64*, *Advanced Basic & Machine Code Programming on the VIC* and *Advanced Basic & Machine Code Programming on the 64*.

Write in for a descriptive leaflet (with details of cassettes).

HAVE YOU SEEN THESE GAMES YET?

Hunchback Havock (BASIC) £5.95
Arcade action in TI-BASIC! Race with Egor thru four castles and 24 different sheets. Superb graphics and great fun.

Daddie's Hot Rod (BASIC) £5.95
Drive through sheep fields, woods, over rivers and avoid all obstacles, then pick up hitch-hikers down perilously twisting roads. HCW gave five stars.

If you haven't yet seen our range of games and utilities for the TI-99/4A, then perhaps it's about time you joined in the fun!

Our products are also available from such big TEXAS retailers as Galaxy (Maidstone) — Parco Electrics (Honiton) — Blue Chip Computers (Wigan) and many more.

Send cheque or P.O. to

LANTERN SOFTWARE,

4 Haffenden Road, Tenterden, Kent TN30 6QD

or SAE for full list. Look out for our products at your TI retailer.

Brrr! Deep in the confines of the frosty blue maze Pengy is pushing his way out of trouble. Pengy's frozen wasteland is a random maze constructed of blue ice blocks raided by the dreaded Sno-bees. The sno-bee's sting is deadly, but Pengy can retaliate by squashing them with the ice blocks that he pushes around. Pengy is based on one of this year's arcade successes, and this version captures all the action and addiction of the original. Packed full of features, super smooth graphics, flashing and bonus blocks, double score bonuses, dizzy bees, and hours of entertainment!

ANY SPECTRUM.

PENGY

TUTANKHAMUN

48K SPECTRUM ONLY—The treasures of TUTANKHAMUN are awesome—but so are the creatures that guard them. Explore the pharaoh's tomb which is a very large series of scrolling mazes separated by locked doors. You have a limited time to unlock the doors with the keys, and escape with the treasure. Luckily you are armed with lasers and smart bombs as you will have to face a horde of guardian cobras, spiders, skulls, monsters and mummies. TUTANKHAMUN is what you'd expect from Micromania—fast, furious arcade action packed full of arcade features: 100% machine code, fast, smooth, hires arcade action; tomb is over 40 "screens" long, opening doors, keys, treasures, maps, level selection, sound effects and tunes.

CYBOTRON SPECTRUM GAMES

The fastest, meanest robot shoot-out game ever. Based on the arcade game that made Defender look lame, CYBOTRON is impossible to beat—only speed and skill can save you from the chaotic robots. Packed full of features: Four types of robots, bombs, multi-directional plasma lasers, up to 50 robots on screen. 100% machine code, a game that will test your reactions to the limit. ANY SPECTRUM.

keyboard only operation

100% machine code, fast, smooth, hires arcade action. Kempston, cursor key, joystick or keyboard operation. Games available direct £5.95 inc. p. + p. 24 HOUR DESPATCH, or from good software outlets. Trade enquiries invited. Good programs always wanted.

MICROMANIA

SCISOFT EDUCATIONAL SOFTWARE FOR MICRO COMPUTERS

All of Scisoft's programs have been comprehensively tested and are regularly used in schools. Please note that the pupil, parent or teacher should check with the syllabus to make sure that all the components of the packages are relevant. Some Boards may not require knowledge of all the contents of our packages.

PROGRAMS FOR YOUNGER CHILDREN

All available in Full Colour Presentation Boxes

STAR READER (6-11 YRS)

Improve your child's reading. Written by experts in reading skills. Designed to complement reading skills taught in schools. Simple to use, but extremely sophisticated programs utilising some machine code and most of a 48K machine.

PACK A - Space and Mountains Themes (2 Programs)
PACK B - Sea and Pyramids Themes (2 Programs)

NEW

WIZARD BOX ANY AGE

Set a test, or a quiz, learn foreign language vocabulary. Multi-purpose program which holds 10 sets of 10 words for 45 children (Spectrum version). A game can be played at the end of the test but only if the child obtains a high score. A versatile and useful program which can be used in all subject areas in a school, at home and even at parties! The Spectrum package also has 3 extra sets of the program

NEW

(1) French Vocabulary (2) Junior Spelling (3) General Knowledge.

PACKAGES FOR PUPILS STUDYING FOR EXAMINATIONS

All the programs have been produced by very experienced teachers. They all contain problems to be solved on the major themes of the relevant examination syllabus. Wherever possible the problems contain randomised data, so that the programs can be used time and time again with increasing benefit. Most packs also contain sets of multiple choice questions typical of those found in examination papers. Complete with a comprehensive book of REVISION NOTES. Extremely useful as examination day approaches. All packs contain a program of hints on HOW

Learning is fun!

TO REVISE AT HOME. Written to be compatible with most O-Level Boards and also useful for the most able CSE pupil.

PHYSICS

Two programs full of problems. Ohm's Law, Refraction, Resistances, Linear Expansion, Moments etc., etc., 5 sets of multiple choice questions. Book of notes. Hints on revision. Fantastic value.

CHEMISTRY

Two programs full of problems. Gas Laws, Molarity, Titrations, Mystery Compounds etc. 3 sets of multiple choice problems. Book of notes. Hints on revision. Very good use of graphics.

Maths I

MATHS PART I

Problems with random data on: Algebra, Equations, Functions, Areas, Perimeters and Volumes. Book of notes. Hints on revision. A real must for all children.

MATHS PART II

A series of programs designed to complement PART I. Problems with random data on: Proportions, Percentages, Differentiation, Integration, Trigonometry. Book of notes. Hints on revision.

The No.1* Football Game

Football Manager

Designed by Kevin Toms

Some of the features of the game:

- ★ Matches in 3D graphics
- ★ Transfer market ★ Promotion and relegation ★ F.A. Cup matches ★ Injury problems ★ Full league tables ★ Four Divisions

- ★ Pick your own team for each match. ★ As many seasons as you like ★ Managerial rating ★ 7 skill levels ★ Save game facility.

addictive

* ZX81 Chart
Home Computing Weekly
1.8.83 and 1/11.83.

Comments about the game from press and our customers.

"FOOTBALL MANAGER is the best game I have yet seen on the Spectrum and my personal favourite of all the games on any micro. To the ordinary person it is an excellent view of what can be done in the field of computer games. The crowning glory of this game is the short set pieces of match highlights which show little stick men running around a pitch, shooting, defending and scoring. It is a compulsive game but people who cannot take game sessions of 9 hours or so, which happened on one happy Sunday, will be grateful to know that there is a 'save to tape' option. FOOTBALL MANAGER has everything it could. The originator, Addictive Games, certainly deserve the name." Rating: 19/20 (Practical Computing - August 1983).

LETTERS

Whoops!

Robot Riot, costing £5.95 for the 48K Spectrum, is by Silversoft, of 271/273 King Street, London W6 9LZ, and Heist, the BBC game, is by Softspot, 29 South Crescent, Prittlewell, Southend SS2 6TB. These details correct errors in our review pages.

HCW review team

Help me over Hobbit

You announced in your news section in November that a BBC version of *The Hobbit* had been released by Melbourne House and I purchased a copy of this tape for use over the Christmas period.

First of all, I encountered the same problem as your reviewer (HCW 44, Jan 10) in that one side of the tape would not load on my BBC model B or on two other machines owned by friends.

The second side of the tape loaded with difficulty, but you could eventually get the program loaded and running.

But after a short time problems occurred. The two "windows" merged, with the communication window displaying into the adventure window, answers given when no questions were asked and answers given incorrectly, e.g. "you cannot go south" when you had typed in "go north".

I had the same results on my friends' machines and on all three computers the program finally seized up with the SHIFT LOCK light coming on and all functions ceasing, except for the final BREAK.

I duly returned the tape to Melbourne House, in Teddington, Middlesex, on December 28 and have not heard a word since.

They are among your regular advertisers, so would you please take up the matter with them?

D. E. Keightley, Welford-on-Avon, Warwickshire

Alfred Milgrom, managing director of Melbourne House, said: "My staff has searched the records thoroughly and we can find no trace of Mr Keightley's tape. This could, of course, be due to the Christmas post."

"However, we would like to apologise to him for the obvious inconvenience."

"Our policy is that when we receive a faulty tape, which is quite rare, we always replace it with a brand new one straight away."

"These, and any other enquiries, should be sent to our customer services de-

Send your letter to Letters, Home Computing Weekly, No.1 Golden Square, London W1R 3AB. Don't forget to name your computer — the best letter could win £5-worth of software. Got a problem with your micro? We'll soon be starting a queries page, so send your technical questions to Queries at the above address

partment at Church Yard, Tring, Herts HP23 5LU. The phone number is 044282 6649. Sales and marketing enquiries should continue to be sent to our new offices in Richmond, Surrey.

*"We have sent a replacement copy of *The Hobbit* to Mr Keightley and we hope he has many hours of enjoyment with it."*

Seeking software

I am the owner of a Memotech MTX 500 and an avid reader of your magazine. But, for a computer that has so much going for it, I only know of one firm that produces software for it.

So could you please inform all other MTX 500 users that they are not alone in wanting software that will use the full capabilities of this excellent computer.

Maybe one day in the near future we'll see printed some reviews for MTX 500/512 software — perhaps by myself when I get better at programming.

A. W. King, Lisburn, Northern Ireland

Invaders on the way

Following a review in your magazine, I asked my wife, Rosalie, to buy me *Invaders* for the 48K Oric, from Arcadia Software, of Swansea, for a Christmas present. She sent a cheque for £5.50 at the beginning of December.

When nothing arrived by Christmas we assumed that it was due to the Christmas rush and held on for another fortnight.

A bank statement then showed that the cheque had been cashed before Christmas and I wrote to the company on January 16 asking them to send the game or refund the money.

We have received nothing. Directory Enquiries has no telephone number for the company, so I cannot get in

touch with them that way. I would be most grateful if you could assist us in any way, as you appear to have helped many other readers.

Alan James, Leek, Staffs

*Tony Love, proprietor of Arcadia Software, said: "There seems to have been a slip-up somewhere. We are sorry that Mr James did not receive the tape. We are sending a copy of *Invaders* to him by first class post today and we know he will enjoy playing it."*

Give it a rest

I am writing to try and clarify a point made by one of your reviewers in HCW 48 when he claims: "I can never remember seeing a dotted semibreve rest. Perhaps they have just evaded me." Well that is the case — they have evaded him.

I have been playing E flat tuba in brass bands for several years and in music where there are in excess of four parts, as the reviewer probably well knows, rests of short or long periods are frequent. If the time signature is 6/4 or 12/4, then the dotted semibreve rest can become quite a common occurrence especially in the very rare 9/4 time.

I am not trying to criticise the reviewer in any way. It's just a point I feel should be put straight.

John Wisbey, Abertillery

What about the 1K?

I have only one question to ask you ZX81 owners. Why aren't you sending any 1K games?

It's easy for you 16K owners sending in programs but the 1K owners (of which there are a lot) — come on, send in your programs and this will make the other owners happier as there aren't many 1K games about.

Robert Jones, Burton-on-Trent

New club

We have just started a computer club in our area covering all types of computers. Can you give us a mention in your magazine? We meet twice a week Monday and Friday evenings 7pm to 9pm at The Co-op Rooms, 20p entrance fee.

SOFTWARE
APPLICATIONS

SPECTRUM KOPYKAT
IMPROVED PERFORMANCE

Simply the best. Copying any program is now as easy as LOADING and SAVEing your own programs. Any ZX Spectrum program can be backed-up onto a fresh tape. Even programs that cannot be stopped can now be copied. 100 per cent machine code. Prints file names. Copies headerless files. SPECTRUM KOPYKAT uses no program area so full size programs over 41.7K (9K for 16K machines) can be copied. PLUS FREE Header Reader program.

Despatched by first class return of post.

Send cheque/PO for £4.95 to:

MEDSOFT

61 Ardeen Road, Doncaster,
South Yorks DN2 5ER.

IT CAN EVEN COPY ITSELF

Armchair Thriller!

THE ULTIMATE SECRET?

WHEN you have endured the burning farmhouse and discovered a strange diary, avoided the football hooligans, met the shady lady, Japanese tourists, the pop star and the busker; avoided the gunmen, Eddy the crook and Scarface; visited the waxworks, the natural history museum and the arcade; worked in the street market, the agency or the cafe; travelled through France, Germany, Italy, Turkey and Israel, experiencing Abduls maze, the labyrinth and meeting a handful of very strange people on the way...

ONLY THEN can you be deemed worthy of discovering the ultimate secret.

PETTIGREWS DIARY is available for only £7.95 from BOOTS and all major stockists or by sending a cheque/PO to us at:

SHARDS SOFTWARE, 189 ETON ROAD,
ILFORD, ESSEX. IG1 2UQ.
(Access/Barclaycard orders phone 01-514 4871)

ALTERNATIVELY you can play PETTIGREWS DIARY on your Dragon, BBC B or Electron, and learn the secret from the safety of your own armchair. BUT DON'T JUST LISTEN TO US!

"Pride of place in this supplement for the most original and entertaining adventure... it's got to be value for money" Computer & Video Games adventure supplement.

"The best adventure game for the Dragon on the market that I've seen" Personal Computer News.

"I have nothing but praise for this unorthodox adventure" Micro Adventurer.

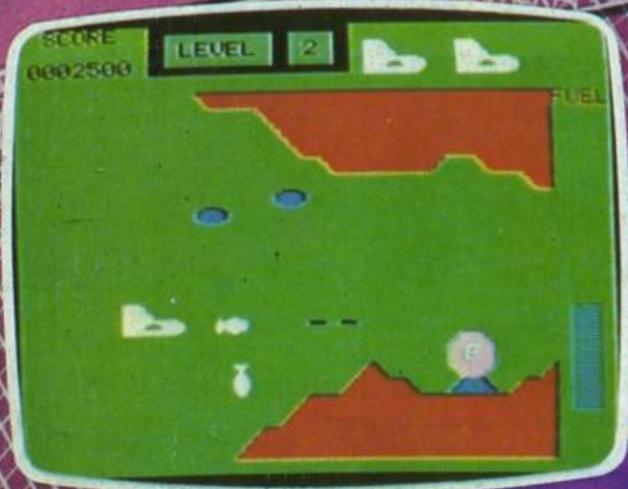

"If you like puzzles and mysteries you'll like this package" Computer Choice.

ORIC (16&48K) TANDY COLOUR (16K)
DRAGON 32

SKRAMBLE

Actual picture of screen on
ORIC 48K

Your mission is to penetrate the enemy scramble system and destroy their headquarters. You will start with three of our latest spacefighters equipped with repeating cannon and twin bomb launcher. If you succeed in evading the elaborate ground defences, you will arrive at the Cave where flying becomes more difficult. In the cave are UFOs, after which you must avoid a hail of meteorites. Very few pilots succeed this far, but if you do, then you must enter the Fortress, followed by the Maze. If you manage to destroy Enemy Headquarters, then your reward will be a more difficult mission! One or two player game. Machine Language, High Speed, Arcade Action. Full colour graphics with sound. Keyboard or Joystick control.

Available on tape for
