Crime by numbers

Computer crime has hit Micronet 800, but the Prestel-based network is taking action to step the thefts.

Commercial software, downloaded from the system and paid for by legitimate subscribers, has been stolen by people who have used Micronet's exhibition and demonstration identities.

Now Micronet editor David Babsky has renewed his appeal to his 8,500 subscribers: "Do not let anyone know your identity number or your password."

Micronet, and sometimes other companies, uses special 10-digit identity numbers along with alterable four-character passwords to demonstrate the system at exhibitions.

Some visitors have been
Continued on page 5

Pirates on the air

Software pirates have taken to the airwaves — and lawyers have been brought in to stop them.

A&F, the Lancashire-based software house, has tapes of hours of broadcasts by radio hams exchanging software.

Managing director Mike Fitzgerald said one ham broadcast a program which turned out to be a list of 416 commercial programs from big-name companies.

Each program had a number, so a ham would place an "order" and have the program transmitted to him.

Mr Fitzgerald said A&F found out through a tip-off by a radio ham with an interest in software and commented: "We were amazed and horrified."

Now the company has two monitoring stations, one in its offices and one in Barnsley, plus a mobile receiver.

And to prove to themselves that broadcast software worked, A&F staff loaded and ran several. They included their own programs and several from other companies.

Mr Fitzgerald said: "We have concrete evidence and we have instructed our solicitors to approach certain people."

"Initially we are after undertakings from the serious offenders to stop doing it and we want details of those they are sending it to. They are stealing our software."

THE NAME IN VIDEO GAMES

Visions

DEMOLATOR

Following the Thousand year war with the Alien Demolators the last remnants of the human race are being transported across the galaxy in cryogenic suspension aboard the B.S. Quinn (Battle Star).

The Demolators however have invaded the cargo bay and it is your job to destroy the Demolators and to protect the human cargo. All you have to defend Humanity with is Xeno (popularly named "the Phobe") the ultimate Robot. You can control his movements on two planes and fire an ultrasonic Cannon to defend humanity with.

EXCLUSIVELY AVAILABLE FROM LARGER BRANCHES OF

DEMOLATOR — BBC — MODEL 'B' OS1-2, £6.95

Crime by numbers

From front page

memorising the numbers and — in the short period before they are changed — using them to download software.

And one reliable source said the thefts had gone further, with a confidence trick played on genuine Micronet subscribers.

The source said the thieves had been leaving messages for subscribers, purportedly from Micronet, saying there was a problem with their numbers and could they log them onto the exhibitions or demonstrations mailbox numbers.

Then they inspect the mailboxes, take the numbers and use them to get more software. To make matters worse, says the source, they change the passwords, locking out the genuine subscribers.

Mr Babsky acknowledged that the first method had been used but had no knowledge of the second.

He said: "We acknowledge that it's just something that happens if people are careless. It's one of the facts of life."

"When I'm at exhibitions I'm very careful. Other people give demonstrations on our behalf and we expect them to be as careful as we are."

He said the maximum period during which these special numbers could be used was one day, as they were changed at the end of each exhibition day.

He said: "Everyone who joins Micronet gets a number from Prestel and they are told not to divulge it to anyone at all. If they have that's something of their own doing. They must not do it under any circumstances."

"We at Micronet have no reason to want their 10-digit number or their password and we will not ask for it under any circumstances. The only number we need is the Mailbox number so that messages can be left."

If subscribers mislaid their numbers, Prestel would treat it in the same way as a lost credit card. It would be sent to the subscriber's address in sealed envelope.

Asked about genuine subscribers' numbers being illicitly used, he said: "It is possible." *Micronet 800, Telemap, Scriptor Ct, 155 Farringdon Rd, London EC1R 3AD*

WP for the VIC-20

New word processing programs are now available for the VIC-20 with at least 8K expansion. Atlantic Software has brought out the TOTL range, available on tape and disc and costing from £11.95 to £19.95.

The range can be used not only

with Commodore printers, but also with other parallel and RS-232 printers. Programs are also available for the VIC-20 with 16K, providing advanced functions such as merge and labels.

Atlantic Software, 18b Thorpe Road, Kingston, Surrey KT2 5EU

Light up a buggy

Northern Computers has launched a Micropulse buggy for use on the BBC computer in conjunction with its Micropulse Young Trainer.

The buggy costs £29 and comes with two light dependent resistors which you can program to follow a torchlight. A micro-switch is incorporated so that the buggy does not collide with stationary objects.

Also included is an accessories kit; together with the Micropulse Young Trainer, a robotic device which can simulate traffic lights. This forms part of a teaching course suitable for secondary school pupils.

Northern Computers, Churchfield Road, Frodsham, Cheshire WA6 6RD.

All change for Oric

If you have found that your Tansoft Oric tapes are not compatible with the new Atmos, you can now exchange them at a cost of £3.

Munch, Base, Forth, Mon, CAD, Zodiac and House of Death are the titles affected; this offer does not apply to Oric Flight or Multigames 1 and 2, as new versions are not being produced.

Send a cheque/postal order for £3 per tape to cover handling to: *Tansoft, Units 1 & 2, Techno Park, Newmarket Road, Cambridge.*

Pirates on the air

From front page

On pricing of commercial software, Mr Fitzgerald said: "If they feel a program is over-priced they should leave it. I don't walk into Tesco, think an item is over-priced and then walk out with it. That's a direct parallel."

"A lot of genuine radio hams have been ringing us up because they think it's annoying having the radio waves taken over."

He stressed that only a small percentage of radio hams were involved and that it was perfectly legal for them to transmit programs they had written themselves.

A&F's technical director Martin Hickling reported on the company's four weeks of monitoring to the annual meeting of the Guild of Software Houses.

GOSH secretary Mike Johnston said: "Our members were

horrified, as you can understand. What we are good at in this country is ideas, which everyone has been ripping off, from jet engines and all the way down the line. Software could generate a lot of wealth for the country."

A three-man group has been set up by GOSH to report back on practical ways of tackling piracy. The members are Nick Alexander, of Virgin, who is also GOSH chairman, Rod Cousins of Quicksilver, who is vice-chairman, and Rod Evans, of New Generation.

David Evans, general manager of the 36,000-member Radio Society of Great Britain, said: "We don't have any knowledge of any of our members being involved. We are not a law enforcement organisation, but we will be putting a message in our magazine that this is an infringement of copyright."

"My own feeling is that the people who are involved probably do not appreciate the copyright laws. It has probably been done in ignorance rather than a malicious act. After all, there are many other ways of doing this without using the public amateur bands."

● Through Home Computing Weekly, Mr Johnston is appealing for readers who have evidence of piracy to contact him.

● A&F has just launched its first program using copy protection devised by JLC Data, another version of which was placed on the secret list by Whitehall. Mr Fitzgerald said: "We are confident it will reduce piracy by 99.9 per cent."

The program is for the BBC and is called Haunted Abbey. It is priced at £6.90, £1 less than usual, because of the greater potential sales if copyright is impossible, said Mr Fitzgerald. In about a week it would be available for the Commodore 64 and all future A&F software would be protected in the same way.

*A&F, Unit 8, Canalside Industrial Estate, Woodwine St, Rochdale, Lancs OL16 5LB

Briefly

The Midland Computer Fair will be held from May 4-7, 1984, at the National Exhibition Centre, Birmingham. Over 16,000 attended last year's exhibition and more are expected this year as the show is over a Bank Holiday weekend.

Midland Computer Fair, Reed Exhibitions, Surrey House, 1 Throwley Way, Sutton, Surrey SM1 4QQ.

An association between five software houses — IJK, Joe and

Lion, PSS, Severn Software and Arcadia — has been formed with the aim of promoting Oric and Atmos software.

The Association of Oric Software Houses, c/o 18 Harrow View, Harrow, Middlesex

The Sinclair QL Companion, by Boris Allan, has been published by Pitman at £6.95.

Pitman Publishing, 128 Long Acre, London WC2E 9AN

Bubble Bus has released an updated version of Word Wizard, its Commodore 64 word processing program, to run in conjunction with the Commodore 1520 printer/plotter. It can be set for 80 or 40 columns and supports most Commodore and Epson printers. Price: £6.99.

Bubble Bus, 87, High Street, Tonbridge, Kent TN9 1RX

Atari has launched its biggest ever cartridge promotion with Phoenix, Galaxian, Battlezone and Ms Pac Man retailing at £9.99, a saving of up to £15. Cartridges for the Atari XL and VCS will fall into three price brackets — £29.99, £24.99 or £19.99.

Atari, Atari House, Railway Terrace, Slough, Berks SL2 5BZ.

New from Mirrorsoft are two learning games on one cassette: Old Macdonald's Farm and Sort, for the 48K Spectrum. Old Macdonald's Farm is for children aged three to seven, while Sort is for six years and upwards. It costs £7.95 and Commodore 64 and BBC B versions are being prepared. Also from Mirrorsoft: Go-Sprite for the Commodore 64 (£9.95), and Count with Oliver for the 48K Spectrum (£7.95).

Mirrorsoft, Holborn Circus, London EC1P 1DQ

Beta-Base, a disc-based database for the BBC micro, allows 200 fields, each of up to 254 bytes, and more than 2,000 records, according to Clares Micro Supplies. Up to five fields can be searched and up to three sorted at once and a file of 500 records can be sorted in about 60 seconds. Price: £25 with manual and demonstration program.

Clares Micro Supplies, 98 Middlewich Rd, Rudheath, Northwich, Cheshire CW9 7DS

PDF has added thick top workstations to its range of furniture. The thick top (50 mm instead of the normal 30 mm) increases the height between keyboard well and worktop. The keyboard well is narrow, only 250 mm deep, and the unit is finished in veneered teak and African walnut.

Planned Data Furniture, Unit 8A, Vaughan Industrial Estate, Manchester M12 5DU

Valhalla, the best-selling adventure from Legend, will be available for the Commodore 64 in May at £14.95. Although identical to the Spectrum version, claimed to have sold £2m-worth, Legend's managing director John Peel said the new version would have more lifelike backgrounds and smoother, flicker-free animation.

Are you a winner?

The solution to our Phoenix Software spot the difference competition:

- hatband, stripe missing
- bullets missing from belt
- bullet omitted bottom left
- tuft of grass changed
- part of path of bullet missing
- letter L omitted from wanted poster
- part of child's dummy missing
- mountain range altered at right
- hinge on pram hood different
- spokes missing from pram wheel

Winners of two twin-packs of software worth £9.99 each:

K Brooke, West Yorks; Geoffrey Baldock, Maidstone; Mike Long, St Johns Hill; M Joyner, Nuneaton; William J Fox, Derbys; Thomas P Kilroy, Ireland; Mr S Webster, Cambs; Keith Blackwell, Romford; G N Lacey, Kent; Damian Hargreaves, S Wales; D J Wilson, Hants; J Newman, Ryde; Ian Bowell, Dublin; Svend Sorensen, Denmark; M Javed, Surrey; David Caulfield, Pennington; R D Bamford, Mansfield; S Phillimore, Halifax; M C Newhouse, Croston; F V Harrison, BFPD 45; Jason Taylor, Coventry; C Gouch, Manchester; D Shaw, Argyshire; Mr H Collings, Aldershot; Simon Whitting, Norfolk; Mark Maynes, Burton-on-Trent; Mr D Russell, Warminster; Graham Furniss, Chesterfield; P J Gunn, Harlow; E Edginton, Frome; Mark Kent, Lincs; Tim Prince, Cumbria; Andrew Doyle, Huddersfield; Mark Morrison, Tyne & Wear; Clayton Thompson, Newark; William Rennie, Aberdeenshire; R C Coppock, Nottwich; J J Hartopp, Nuneaton; Ian Mansfield, Windsor; J A Robson, Leigh-on-Sea.

Legend, P.O. Box 435, London E4 7LX

Cubsoft, a new Lynx software house, has launched CBS-Forth for the Lynx at £19.95 with five free utility programs. CBS-Forth is for the 48K or 96K Lynx and, says Cubsoft, offers twice as much useable memory as its nearest 96K competitor, is the only version for the 48K model and has its own unique three-command editor.

Cubsoft, 6 Okeover Rd, Salford M7 0JX

ZX Lprint does more

A new version of the ZX Lprint interface for the Spectrum works with a wider range of printers and offers both RS232 and Centronics outputs.

Euroelectronics says the COPY command can be executed from the keyboard or from BASIC and that no extra software is needed to send a high-resolution screen picture to a number of printers.

Routines are built in for printer models from Seikosha, Epson, Star, Walters, Shinwa and CTI. Full colour screen COPY can be made on the Seikosha GP700.

Euroelectronics says these will produce user-defined graphics and Spectrum block graphics in text or a program listing. On other printers a routine scans the display and prints alphanumeric characters, allowing daisywheels to be used.

Soon to be added are routines for printing in hi-res full colour on the MCP 40 and Tandy CGP 115. Other printers to be added shortly include the Microline 80 and 82.

Prestel pages can be printed and baud rates under RS232 can be varied between 75 and 9600.

ZX Lprint costs £34.95; Centronics and RS232 cables are £9.95 each.

Euroelectronics, 26 Clarence Sq, Cheltenham, Glos GL50 2UJ

Computers don't think

The question of artificial intelligence, or whether an inanimate machine such as a computer can be said to possess intelligence or not, is an important and interesting one. Or at least it would be were there to be found any arguments in its favour which could be taken seriously.

It is an endearing, if irrational, weakness of people to ascribe human characteristics to objects such as motor cars, ships, and so on, and one which perhaps serves to compensate for unconscious fears of isolation and insecurity in occupying our unique position in the animal kingdom. This idiosyncrasy can be expressed most readily toward computers because such artifacts can be made to give the appearance of simulating consciousness quite convincingly. Even apparently anti-A.T. writers fall easily into the trap of anthropomorphism. How often I've read the words: "... computers are really quite stupid."

Of course, even stupidity presupposes some degree of intelligence, and can be no more ascribed to a computer than to, say, a milk bottle or a carpet tack.

The confusion is not eased by the unfortunate choice of terms used in computer jargon, such as "electronic brain", "memory", etc. This latter is an especially bad one as computer "memory" in no way resembles true memory, but is closer in function to an abacus, albeit an electronic one.

The foremost reason for the popular belief that computers are potentially capable of thought must be that, whereas most tools have been designed to assist with primarily physical tasks, such as removing nails and opening tin cans, computers on the other hand help to perform mental tasks like arithmetic. Because the computer appears to be more efficient at logical processes, and logic being a property of mind (though by no means its most sublime attribute), it is tempting for some to infer that the hardware and program in combination are exhibiting intelligence. This is no more true, however, than saying an abacus thinks when you move its beads.

The belief that computers resemble minds is no more than a harmless fad. The real danger lies in the obverse assumption that minds are really no more than very sophisticated computers. Ludicrous as this notion may seem to all but the most hopeless materialist today, future generations could nevertheless fall victim to such a delusion, if only by the natural contrariness of the young, which always delights in opposing or shocking the beliefs of the previous generation. But such a conviction would contribute more than any other single factor in lowering the quality of life.

An individual so convinced will deny himself access to the limitless creative potential of his mind, dull his imagination and appreciation of the more subtle and loftier realms of human experience; in short, become a computer.

P.J. Willcox
Cardiff

Over 300 games from

must be
won in our
FREE
competition

Your mission: to rescue the imprisoned princess. There's nearly £2,000-worth of games of Rescue — CRL's Spectrum mind-stretcher — waiting to be sent to the winners of this week's wordsquare competition

There's a princess waiting to be rescued — if you're one of the 300-plus winners in this week's great wordsquare competition.

We've got nearly £2,000-worth of tapes from CRL to give away. That's a total of 333 winners of Rescue, a classic adventure for the 48K Spectrum.

Written by army captain Derek Baker, author of CRL's best seller Test Match, Rescue gives you the rôle of a secret agent.

Your first challenge is to find the castle in which the princess is held prisoner. Once inside there are several rooms to search, each one a different game in itself.

Problems don't end when you have reached the fair maiden — now you have to get away, while being chased by armed patrols.

Rescue, a game of strategy and tactics, has both text and graphics and keeps many players occupied for days.

CRL's managing director, Clement Chambers, admitted he had to cheat and said: "It would have taken me at least four hours at the lowest level — and that's the record for this game."

Our prizes are for the 48K Spectrum, and would cost £5.95 in the shops, but Rescue is now out also for the Oric and the Commodore 64.

The original took Derek Baker four months to write because of its complexity. And the conversions are said by CRL to be just as mind-stretching.

How to enter

Examine the wordsquare and mark all the CRL titles you can find with a ball-point or semi-opaque felt-tip pen. Complete the coupon fully and clearly — if you are a winner it will be used as a label — and send the wordsquare and coupon to us.

You may enter as many times as you wish provided each is on the official wordsquare and coupon and in a separate envelope. Please do not enclose anything else.

Important: you must write on the back of your envelope the number of titles you found.

The titles in the wordsquare are all drawn from this list of CRL software:

Orpheus	Fifth
Rescue	Zaraks
Stargazer Secrets	Glug Glug
Test Match	High Resolution
Pandemonia	Handicap Golf
The Great	Omega Run
Detective	Incredible
Woods of Winter	Adventure
Grand National	Olympics
Jackpot	Draughts
Derby Day	Crawler

All except High Resolution (ZX81) are for the Spectrum and

some are also available for other computers: Test Match (BBC), Glug Glug, Omega Run and Derby Day (Commodore 64), Zaraks (ZX81) and Handicap Golf (Dragon).

Send your entry to CRL Competition, Home Computing Weekly, No.1 Golden Square, London W1 3AB.

Closing date is first post on May 11, 1984. Senders of the first 333 correct entries we open after that date will win the prizes. They will arrive from CRL within 28 days, or earlier, of the results appearing in Home Computing Weekly.

The rules

Entries will not be accepted from employees of Argus Specialist Publications, CRL and Alabaster Passmore & Sons. This restriction also applies to employees' families and agents of the companies. The rules include the guidance in the How to Enter section. The editor's decision is final and no correspondence will be entered into.

Technical Press

As commander of a nuclear submarine you are told that a device has been placed on the seabed near a fault in the earth's crust.

Should this device explode the result will be an earthquake of sufficient magnitude that a giant tidal wave will engulf all continents and their inhabitants will perish.

Of course, you and the rest of your crew would also perish due to the hull of your submarine being crushed in the blast. Hence there is some incentive for you to try to prevent this slight messy situation from occurring.

How then can you find and destroy this menace? Easy. You have two aids to underwater vision. One is the 360 degree sonar scan. This is the display which presents itself when the game starts.

Submariners may skip this explanation and go onto the next section. The sonar sweeps around the hull of the sub sending out sound pulses and listening for echoes. Targets are displayed on the TV screen in such a way that the arrow head on the display points in the direction of travel of the sub. Thus an object on the left appears on the left of the screen.

If you spin the sub round the dot corresponding to an object would travel round a circular path in the opposite direction to your spin direction.

Horizontal movement of the right hand joystick will cause the sub to spin on its axis, i.e. this stick controls the submarine's heading. Run the program, select the easiest level, make sure the left hand stick is pulled as far back in the vertical plane as it will go, and try moving the right hand stick horizontally.

You will see that the dot (which is the object to be located and destroyed) will appear to move in a circle about the centre of the screen. It is not

How it works

- 10 reserve graphics screen memory and clear screen
- 20-30 DIMension arrays, initialise variables
- 40 set graphics mode, clear graphics screen
- 50 set up strings for drawing numbers for timer
- 60 set timer value and initialise time to 10secs
- 70 draw time in top right of screen
- 80 set variables SX and SY to a clear part of screen, set viewer distance (D) to 75 units, set flag (FL) to select sonar display on entry
- 90-220 set up the sonar display in screen 1
- 230-340 draw the status displays for sonar screen
- 350 ask user to set level of difficulty
- 360-370 initialise object's X,Y,Z position
- 380-390 initialise sub's X,Y,Z position
- 400-410 set initial pitch and heading to zero
- 420-530 generate look up tables for sines and cosines
- 540-650 read in data to form 3D picture of bomb
- 660-720 sample joysticks, compute new values for pitch, heading and speed
- 730-760 form new X,Y and Z components of velocity
- 770-800 calculate new sub position using new velocities

really the object that is moving, but the fact that your sub is spinning about its axis. At the same time a beeping sound will indicate that the object has been located by your scanners.

While spinning round, watch the dials at the bottom of the screen. The leftmost dial shows the heading of the submarine relative to the points of the compass (North at the top). This dial will rotate as your heading changes.

To move nearer to the object, use the heading control to bring the dot back to the dead ahead position (i.e. on the line with the arrow head).

Now, holding this heading, move the left hand joystick

the bomb before it's too late for us all

forward and watch the dot move nearer to the centre of the screen. The pitch of the bleep goes up as the dot gets nearer.

Don't get too near as the bomb has a proximity fuse which will be triggered if the range is less than 7 units. (The object is initially at 600 units away, due North).

The pitch of the sub is controlled by vertical movement of the right hand stick. Pull this back and the sub rises in the water, push it forward and the sub dives. This control only takes effect if the sub is moving.

The starting depth of the sub depends upon the level of difficulty selected, and at level 9 the sub is on the sea bed, as is the object. Thus, to destroy the object from level 1 (the hardest) the submarine commander is going to have to dive from the surface to the sea bed pretty quickly if the world is to be saved.

The middle dial shows the pitch angle of the sub and the pointer will be level if the sub is neither rising nor diving. The right hand gauge shows the sub's depth, the pointer being at the top when the sub is at the surface and vice versa.

The time readout at the top right shows how much time is left until the bomb explodes. Keep an eye on this. It could be important to several people.

When the dot is within the innermost circle on the sonar display it should be visible on the second (TV) display.

Press the button on the right hand joystick to turn on the TV camera mounted on the front of the sub. When the object is in view it will be seen that it is a rectangular box with a cross on one end.

To destroy the bomb the centre of this cross must be aligned with the cross hairs on the TV display. When all is lined up, press the button on the left hand joystick to fire.

Note that, due to the slowness of BASIC, the buttons

have to be pressed for a considerable time before they take effect.

If all is well and you have aligned the cross hairs on the display with the cross on the box you will succeed in destroying it. The snag is that you can't fire **through** the box. This means that you must be sure to have the end of the box with the cross marked on it facing you when you fire.

Hint: use the sonar display to help you move round the bomb. To move round it in an anti-clockwise direction, keep the dot on the horizontal line to the left of centre and move the speed control forward.

Adjust the controls to keep the dot on the line and watch the heading indicator turn. When the heading has changed by the required amount (say 90 degrees) bring the dot back to the dead ahead position and look at it on the TV display.

Remember not to get too close or the proximity fuse will detonate the bomb. A warning will sound when the sub is approaching the point where this will occur, so take note!

Left joystick

Vertical speed control
Horizontal not used
Button fire

Right joystick

Vertical pitch
Horizontal heading
Button change display

NEW!

48K SPECTRUM FRED

Author: **Indescomp** ☐

Action beneath the Pyramids!
Fearless Fred the Intrepid Archaeologist searches the creepy catacombs below the torrid tomb of 'Tootiecarmoon' for the terrible treasures amidst monstrous mummies, ghastly ghosts, bats and rats!

COMMODORE 64 BOOGABOO (THE FLEA)

Author: **Indescomp** ☐

Itchy action!
Jump your way out of the caves with Bugaboo the flea but beware of the fearsome Dragon as you jump around the exotic vegetation.

48K SPECTRUM RAYMOND BRIGGS' THE SNOWMAN

Author: **David Shea**

An enchanting game based around episodes of Raymond Briggs' amazingly successful book.

All games marketed exclusively by Quicksilva Limited.
Please send me the games I have ticked.

I enclose cheque/P.O. for _____
Send to Quicksilva Mail Order,
P.O. Box 6,
Wimborne, Dorset BA21 7PY.

QUICKSILVA

WARNING: These programs are sold according to QUICKSILVA Ltd's terms of trade and conditions of sale. Copies of which are available on request.

It was the best then...

Chess-players with a 48K Spectrum will find this program ideal if they are stuck for a partner.

I have seen other chess games for computers, but as far as I am concerned, this is the best so far, and should give hours of enjoyment to the chess buff. B.B.

instructions	95%
playability	100%
graphics	75%
value for money	100%

Ten levels of play ★ graphic display of board ★ can change sides or level in midgame ★ board can be set to any position
history of moves ★ copy display & history to printer at any time
★ can save game at any point ★ displays your moves and computer's

... and now it's even better, with these new features:

- ★ Unique digital chess clock. Automatically records time taken by player and computer
- ★ On-screen indication of total possible moves
- ★ Interrupt facility - forces computer to play current best move
- ★ Opening book of over 5,000 moves!

FOR 48K SPECTRUM ONLY

Masterchess - the game for the real player £6.95

WHAT IS EDU-GAME?

EDU-GAME

EDU-GAME is a new concept in education. Various subjects are covered by different tapes including sequential programmes in Spelling and Maths – to 5th year High School level. When you have finished your lesson reward yourself with a FREE game on the other side.

VIC 20
VALUED AT ONLY
£5.99

Cut-price school offer

COMMODORE has finally come up with its answer to the government's 'micros in schools scheme' – a cut-price offer of its own. Deliberately designed to coincide with the end of the government scheme, Commodore is offering schools and

colleges throughout the UK the chance to buy Commodore 64s complete with 1541 single floppy disc drives, Logo and Simon's Basic for £299.99 per package. This is a saving of £172 over the recommended retail price of £472.

Light Cycle Wars 32K BBC £6.95

Personal Software Services, 452
Stoney Stanton Road, Coventry
CV6 5DG

This review should be one word — impossible! I have seen other versions, based on the light cycles in Tron, and found them tedious. But this is fast, desperate and difficult. Control can be from keyboard or joystick and the latter is really necessary to play well, especially against the computer. As yet I have not been able to outwit the beast, though human opponents are possible and, fortunately, a little easier to beat.

The BBC's highest resolution is used which makes the light cycle lines rather thin, but means

play is much more sensitive and difficult, as the gaps between cycle trails become almost invisible. If you hit your own or your opponent's trail you are dead, so hand and eye co-ordination is the name of the game. You can only win if you take risks, but too great a risk and you're off your bike.

I think this game may pall after a while. It cannot be varied much and higher levels are simply faster. Nevertheless it is certainly as breathless as PSS claim and I recommend it to all Tron fans.

Line up 4/ Reversi VIC-20 £6.95

Terminal, 28 Church Lane,
Prestwich, Manchester M25 5AJ

Line up 4, connect 4, or any other name you care to call it, is a simple strategy game for two players. Getting four counters in a row, with the computer as your opponent, is not an easy task, although it is possible to win, occasionally. The computer response time is quite fast and, to emphasise that point, both your time and the computer's are displayed at the end of each game.

I know there are some people who take this type of game quite seriously. If you are one of them, you will find this a challenge.

Much less of a challenge is the version of Reversi. The programmer seems to have got it wrong, I'm afraid. Quite easy to beat, the computer seems bent on self destruction, making the most obvious mistakes. Without trying too hard I won the first game, leaving the computer with just six pieces to its credit.

If the programmer produces a better version of Reversi, then both games on one tape would represent better value for money. As it is, with only the one worthwhile game, Reversi detracts from the value.

Golf 48K Spectrum £5.95

Lyversoft, 66 Lime St, Liverpool
L1 1JN

With so many golf simulation programs now available for the Spectrum, a new one must offer something special to stand out from the crowd. This one doesn't. It is no better or worse than several others.

Program instructions are available as an option at the start, providing a clear, but unimaginative guide.

You can choose between a nine or 18 hole course, and one or two players. At the start of each hole, you get a bird's eye view of the fairway, with all the information necessary to select club and strength of shot. The possibility of hooking or slicing appears to be selected at random, so the only skill required is in judging the direction, and selecting the right club.

Once you get to the green, the view changes to a close-up. Here you decide on the direction and strength of your shot. It is rather confusing that the strength scale is different for putting on the green, compared with the fairway.

A few minor bugs in the program only helped to confirm that this is a mediocre offering from Lyversoft.

Out of doors with your computer

Games which take you outside
— and into space — star-rated
by our panel

Checkout 32K BBC £7.95

Virgin, 61/63 Portobello Rd,
London W11 3DD

An excellent and very colourful arcade-type game. You guide Checkout Charlie around a grid, changing the colour of the squares as you pass over them. The first time you run over a square it turns striped, the next it becomes the target colour — the one the grid has to be completely covered in before you can proceed to the next screen.

This may sound more like a game of logic rather than an arcade game, probably because I haven't told you about the remote controlled robot who moves very swiftly around the maze. If he bumps into you, you lose a life.

On the left of the screen is an egg timer. Every time the last few grains of sand disappear the robot fires a four-way death dealing laser. If you happen to be in its path you disintegrate.

As you clear more screens the action speeds up, and even though the concept remains the same I haven't got bored yet. Superb graphics and sound, and originality, combine to make a wonderful game.

Pedro Dragon 32 £5.50

Imagine, 5 Sir Thomas St, Liver-
pool L1 6BW

An excellent arcade style game with plenty to keep you on your toes (or rather your joysticks) and an endearing story line for anyone with a garden.

The game is set in the garden of poor Pedro who is fighting a losing battle, I'm afraid. He tends two flower beds but, being rather poor, he can't afford enough bricks to keep holes in the fences blocked. This means that all the animals who pass by try to take a nibble of Pedro's prize blooms. You can help him to block the gaps with the one brick he has left or with compost but this is only a temporary measure as the animals just eat it away.

During the first screen it is ants who invade, then rats followed by rabbits who jump over the walls anyway. The game is responsive on both keys and joysticks, although we preferred the stick, and has an attractive screen. Sound is also of a very high standard. I'm not going to tell you what to do with the tramp or what he does to you! Try it for yourself.

While attempting to discover a new sea route through a group of volcanic islands, you are shipwrecked in a sudden storm off the south coast of Saurus Island.

You reach the safety of the island but have to traverse it, searching for materials to build and make a raft before you can set sail for the mainland and home. You have to sail from the calm waters of the northern shores.

Saurus Island has only been seen from the air before. It has remained unexplored because pilots of the aircraft have reported horrendous, strange and gigantic creatures lurking in its swamps and forests. These creatures are dinosaurs, extinct except on Saurus Island.

No man has dared to set foot on it before. Will you survive the dangers of Saurus Island?

You will travel by many different routes meeting many hazards. Like all discoverers, you need to keep an accurate log of your journey saying who or what you meet and the hazards you encounter.

Most of the land is low and flat and warm seas frequently flood it. There are many marshes and swamps with a lot of green plants resembling giant ferns which thrive in this warm moist climate. Streams have their sources in the high areas and flow quickly down mountain sides, often by way of gorges or waterfalls.

They then flow sluggishly over the flat plains until they reach the sea. Ravines, and pits appear everywhere caused by many factors. Perhaps as the earth was formed meteors fell from space; perhaps by the movement of rock; earthquakes or by volcanic eruptions.

Volcanoes may erupt at any time, sending out streams of lava so hot that everything within its path is burnt, or they may hurl out massive boulders in all directions, or ash or poisonous gas.

And remember, the island is full of dinosaurs lurking everywhere. Some, like Ankylosaurus and Stegosaurus are friendly plant eaters whose defence is an outer coat of armour plating and whose biggest enemies are the meat eaters, like Tyrannosaurus Rex.

To meet Tyrannosaurus Rex means instant death. Pteranodon is a dreadful dragon like reptile and king of the air, with a long pointed beak, no feathers and wings like a glider. Travel with caution if you meet this creature.

Naturally any discoverer will have prepared for mishaps, but remember you have been

shipwrecked and the only equipment you managed to save is:

- a compass
- a penknife
- rope
- drinking water
- a badly damaged map of the area

As you trek around the island you may need to replace lost equipment but you **must** visit a certain spot on the edge of the forest for twine, **you** must find this place. Remember you need wood and two lots of rope to build your raft. You begin with one lot of rope. If you lose this it needs replacing.

You will need fresh water for drinking and a visit to the spring is necessary once you have started your journey. Good luck and have a safe trip home.

You may find it useful to make booklets showing the island, giving the rules of the game and allowing for space for the explorer's log to be kept, which will include illustrations of the dinosaurs met, and the route taken.

Instructions: Move through the island one square at a time in any of the four compass directions. You are not allowed to move into the sea. You must visit the spring for fresh water at least once. Twine is found near the forest but you must find the exact spot. Your survival kit is a compass, a penknife, rope, drinking water, a badly damaged map. Always remember to log your journey. You may cross any obstacles that you see.

● Computing for all the Family, £6.45, covers simple to advanced BASIC programming and contains four games listings and 25 instructional programs. Published by Sigma Technical Press, 5 Alton Road, Wilmslow, Cheshire SK9 5DY

AGF Joystick Interface II for Spectrum or ZX81

Now the AGF Interface II is even better value. Since we pioneered the cursor-key interface in October 1982 there are now over 100 games or utility programs with either the AGF option or cursor key controlled - that makes it unbeatable at this new low price.

Still incorporating the all important rear expansion connector which means other peripherals can be connected at the same time i.e. Ram Packs, Printers, Speech Units etc, and of course the key replication principle used guarantees this will never conflict electrically with any other add-ons.

When you feel like upgrading to a more flexible joystick system you can claim 12.5% off the purchase price of our Programmable Interface.

All AGF Joystick interfaces will work with any industry standard joysticks using 9-pin 'D' plugs - including QuickShot II and the new Trackball controllers.

Don't settle for less choose AGF.

Joysticks

The choice is yours. The standard QuickShot is excellent value incorporating suction cups for sure-footed precision and a comfortably contoured handle with a convenient top firing button, plus conventional button in the base.

Four feet of cord terminates in the industry standard 9-pin 'D' plug for compatibility with our interfaces or direct connection to a selection of home micros.

The new QuickShot II has improved styling with a trigger type firing control as well as the top firing action and a broader base for greater suction stability. The rapid fire switch, which allows a continuous stream of shells where normally a button press is required for each one, is located in the base for easy access in use.

Cord length and termination is as the standard QuickShot controller.

Tower TI-99/4A £7

Not Polyoptics, from Stainless, 10 Alstone Rd, Stockport, Cheshire

Here's a chance to exercise some brain power instead of finger muscles, in this simulation of a flight controller's duties at Washington airport.

There are three levels, ranging from beginner to pro, but even the easiest proves demanding.

The screen shows runways and surrounding area as it would be seen on a controller's scanner. The aircraft appear as small white blips and there is a storm cloud for them to avoid. The object is to safely land five planes. As you may have to take control of a possible 10 aircraft some snap decision making is required.

Using several commands, you control the course and altitude of planes that are airborne and coming in to land. At the same time you must not forget to plan take off for those still on the ground.

Because the program is continually undating the screen display and aircraft data, trying to input commands seems very slow, and can be inaccurate. If you don't correct your mistakes a "Message Garbled" appears on the screen. This sometimes locks up the program, in which case you have to break and start again.

J.W.

Black Jack/ Slot Machine Sord M5 £8.95

Computer Games, Golding Hill, Loughton, Essex IG10 2RR

As if you didn't know, Black Jack is the card game as close to 21 as possible. The computer plays the part of the dealer and takes care of all the calculations. You start off with 10 chips and the game continues until you run out of chips or cards remaining is less than nine.

The other game in this pack is a simulation. You simply enter how much you want to bet and press RETURN. The computer takes care of everything else. There are no options such as nudge, hold or gamble.

Both these games have respectable graphics considering the limitations of BASIC-I and the memory restriction. But these are rather severe restrictions and it shows up in the games. Also, as the main attraction of gambling games such as these is money, computer simulations, not just for the M5, very often require absolutely no skill and fail to maintain interest for long. I'm afraid this games pack is no exception.

Oligopoly Spectrum 48K £5.95

Cases Computer Simulations, 14 Lanton Way, London SE3 7TL

A management game for one to six players. You decide how much to manufacture, what to spend on advertising, research, new equipment dividends and your sale price.

Prompts give last year's details under each heading and entries are secret although opponents can guess by the number of asterisks displayed. Play length selects two to 25 years and strikes, taxes and Japanese imports abound. Bar and pie charts of all players' assets and sales are displayed and yearly results, in the form of company accounts, are displayed — (where everyone sees them) or sent to printer — 10 inches of paper per company per year could bankrupt you!

Instructions say the object is to make your shares highest valued and to pay dividends, but the winner is the one with most assets and dividends decrease these. Strangely, obsolete stock makes the balance sheet give an increased (and false) total of assets — mismanagement could win! This and the failure to erase parts of previous prompts, causing confusion, spoils the game and questions the standards of the 1983 Cambridge Award won by this program. Bugs corrected, this game might while away a rainy afternoon. **Warning:** do not use this to do forecasts for a real business. D.C.

Use your brain as well

Think and zap in a new
selection of games for the
Spectrum, Sord M5, Dragon
and TI-99/4A

Cuthbert in the Mines Dragon 32 £7.95

Microdeal, 4 Truro Rd, St Austell, Cornwall PL25 5JE

I have to admit that while the Cuthbert series is the flagship of this particular software house, I was less than impressed by another in the series. This one is superb, however, and worthy of high praise. In particular the sound is very good. I have only previously heard the Dragon sound as organ-like as this through a synthesiser program. Graphics are also very good, flicker free and fast.

Here the mine has been taken over by Moronians and in order to escape you have to jump your way to the exit avoiding ore-

carrying trucks which will knock you back a level if they hit you. This seems quite a mild penalty when compared to what happens to hapless frogs in their game, but it is all too easy to get knocked into another truck and then find yourself in the fires of hell at the bottom. There is also the ladder climbing demon who, if he gets onto your level, throws a fire ball and sends you flaming into the pit.

A good value program with plenty of interest and action.

Timequest 48K Spectrum £6.95

Mikro-Gen, 24 Agar Crescent, Bracknell, Berks

No insert instructions — not even loading. Side 1 contains an instruction program and, as each further page of over-crowded, complicated instructions appeared (13 in all) our groans grew louder. Had review not forced continuance I'd have given up then. Printed instructions, for reference during play, seem vital.

Having foolishly ventured into a black hole with your tachygen, it promptly breaks into 20 pieces, randomly scattered through time, which you must find to return to your own time.

Each era displays the same green field, containing unconvincing graphics representing, you are told, Roman soldiers or such, sometimes weapons, bits of tachything and you. You move by rotating an arrow and fire by similar arrow rotation. Unfairly, the other characters seem to get longer moves than you and, if bracketed, you cannot move further. You could shoot but even at point blank range can miss. Without weapon, you either wait until your wound points are used up and you die, or try to jump to another era. I wish I could find something nice to say about this program. D.C.

University Software

LIBRARY OF ADVANCED MATH/STAT/ECON FOR SINCLAIR ZX81 AND SPECTRUM

TAPE 1: MATRIX OPERATIONS (*), (+) £9.95

SIDE A: Inversion, multiplication, addition, subtraction, scalar multiplication and determinants of matrices and vectors within one single program. Any output can in turn be used as the input of the next operation without re-typing. Capacities: 16K ZX81: 25x25, 16K Spectrum: 15x15, 48K Spectrum: 48x48.

SIDE B: Determinants of square matrices.

TAPE 2: POLYNOMIALS (+) £8.95

SIDE A: Includes quadratic equations (as degree 2 polynomials) and Newton-Raphson and half-interval search methods for higher degree polynomials. Computes the real roots with 8 digits of precision. SIDE B: Plot of polynomials in any interval, values of real roots, extremum points.

TAPE 3: INTEGRATION (+) £6.95

SIDE A: Simultaneous integration of two functions by Simpson's and trapezoidal rules. Also computes the area enclosed between the two functions. SIDE B: Plot of two functions in any interval. Integrated area shaded.

TAPE 4: SUPER-REGRESSION (*) £14.95

SIDE A: A highly developed multivariate regression program with log/ln option on each variable, allowing for exponential and geometric regressions. Displays estimated coefficients, standard errors, t-statistics, R^2 , corrected R^2 , F-statistic, degrees of freedom, Durbin-Watson statistic, variance-covariance matrix, matrix of correlation coefficients, INTERPOLATION and PLOT of residuals. Capacity examples (var.xobs.): 16K ZX81: 2x400, 5x200, 10x100, 16K Spectrum: 2x75, 5x30, 48K Spectrum: 2x1650, 5x900, 10x500. SIDE B: Plot of bivariate regressions, slope, intercept, R^2 , standard deviation.

TAPE 5: PROFESSIONAL LINEAR PROGRAMMING (*) £14.95

SIDE A: A user friendly optimisation program capable of handling all sorts of linear programming problems (any combination of $<=>$ constraints and $X_i > 0$, $X_i < 0$, $-a < X_i < a$ sign constraints). Displays the canonical equivalent of the primal, values of slack variables, dual problem and its solution. Capacity examples (var.xcons.): 16K ZX81: 10x21, 15x18, 20x13, 16K Spectrum: 8x8, 48K Spectrum: 10x45, 25x35, 50x25. SIDE B: Solutions of simultaneous equations.

TAPE 6: STATISTICS (*), (+) £14.95

SIDE A: STATISTICAL TESTS AND DISTRIBUTIONS. Chi-square, Students t, F, Mann-Whitney U, Wilcoxon's Signed Rank tests and Chi-square, Students t, F, Binomial, Poisson and Normal distributions. Data on many samples can be entered at once, sorted and basic statistics displayed. Capacity examples (samp.xobs.): 16K ZX81: 1x230, 2x110, 5x45, 16K Spectrum: not available, 48K Spectrum: 2x1300, 10x250, 20x125.

SIDE B: DESCRIPTIVE STATISTICS. Analysis of ungrouped or grouped data. Ungrouped data sorted and grouped. Output includes mean, mean deviation, standard error, skewness, kurtosis, moments, Pearson's coefficient, etc. A comprehensive histogram with up to 30 class intervals, class frequencies, midpoint values. Capacities: ZX81: 450, 16K Spectrum: 200, 48K Spectrum: 2000.

- Cheques payable to: UNIVERSITY SOFTWARE, 29, St Peters Street, London N1 8JP. Tel: 01-359 0978.

Mower by Jarrod Grundhill and John Marshall

Guide your mower around the garden cutting down all the weeds while avoiding the flowers and the garden wall.

When you have demolished all the weeds the screen will clear and you will move onto a harder screen with more flowers.

One of the good points about our game is that the mower is made up of four user-defined graphics together for each of the four directions.

How it works

- 5-90 introduction and instructions
- 92-185 define variables and set up main screen
- 190-250 move mower
- 260 check if mower has hit a flower, weed or the wall
- 270-400 restart in centre of screen
- 970 game over. Alter high score if necessary
- 4999-9010 DATA for user-defined graphics

```

Try mowing, hopping and driving with your Spectrum

• When typing in all Spectrum programs, capital letters in PRINT statements should, unless part of text, be entered in GRAPHICS mode.

Cubit by Robin England

Your task in this game for either Spectrum is to jump on every square on the pyramid — avoiding the ball and a snake.

There are 12 pyramids to cover and if you reach the twelfth there is a special bonus. You have three lives.

How it works

1-4 set up screen
7-18 initialise variables
19-25 instructions etc
26-92 main game routine
93-105 more instructions
106-131 define characters

Hazard Driver by A.G. Bird

Drive your car through 10 laps of a race track to assess your driving ability.

The hazards to avoid are broken glass, logs and oil slicks. The best of luck to you.

How it works

10-20 draw borders
30-40 variables
50-65 check lap, print hazards
80-180 main loop (car lap)
200-300 print car as it goes out of picture
500-610 game end, give score
1000-1200 keep score
7000-7050 instructions
9000-9500 graphics

Variables

lap laps
dd driving ability
b horizontal position of car
a loop for car (vertical)

```
hi-score: 0
score: 20
lives: 3
pyramid: 1
```

Looking for the ultimate joystick?

Creative Software has just announced an integrated line of software called *The People's Choice*. So far, it consists of three programs called *Jack's Calc*, *Fred's Filer*, and *Joe's Writer*. Each is designed to be able to be used by older children and adults at all levels of computer experience. The firm claims that, using *Joe's Writer*, anyone can be writing letters within 15 minutes, even if they have never used a computer before. That claim comes from Joe Jetson, the programmer. The program has all the standard word processing features plus an on-line help feature and a brief instruction card. Says Joe: "If you can use a typewriter, you can use *Joe's Writer*".

Using *Jack's Calc*, developing forms for business and personal finances becomes an easy thing to do, while *Fred's Filer* allows the user to create an index card-like system on the screen using whatever format seems best. Later the user can scan through the file making changes at will.

Look for *The People's Choice* series, to be available for the Commodore 64 soon, with IBM PC and PCjr versions expected by mid-year. The programs can be purchased separately or as a package and can be used together as they share a common command vocabulary. The suggested list price of each program will be \$49.95. You can contact Creative Software at 230 East Caribbean Drive, Sunnyvale, California 94086. (408) 745-1655.

Are you a computer games player looking for the ultimate joystick? Watch out for the *High Score (HS-20) Tournament Master*, which is being billed as the first ergonomically designed controller.

Although you really need to see this product to be as impressed as I am (and I don't often play games), here are a few of its many features:

- Fire buttons are the same size as regular coin-operated arcade games
- Two fire buttons are supplied — manual fire and auto fire
- The latest design is used for increased sensitivity coupled with high reliability
- It includes a carrying bag which has space for 10 games cartridges

The *Tournament Master* is nine inches long, 5¼ inches deep, it is compatible with the Atari, Coleco, Apple and TI-99/4A and all switches are of the heavy duty industrial grade leaf type. And it comes with a five year warranty.

Although I cannot give you a price, you can find out for yourself by contacting *High Score*, 1667 West Ninth Street, Long Beach, California 90813.

I have just received some interesting information on another piece of hardware, and thought I'd pass the information along. It's called *Micro-X64* which is an expansion board for the Commodore 64. It plugs into the expansion slot (naturally) and provides the following features: allows the addition of a Z80 card so the machine can run CP/M; supports an additional disc drive; allows the use of a DMA controller; it's small and convenient to use; has two vertical slots and one horizontal slot; provides a system reset button; a system pause switch; uses all gold connectors; supports an 80-column card. Best of all, it is very reasonably priced at \$49.95. Contact *Compuscope Inc.*, 6400 Signal Street, Tillamook, Oregon 97141. (503) 842-4431.

Some time ago I wrote here about the problem of using portable video games and computers on board airplanes. The situation seems to be getting resolved.

In a recent announcement, Eastern Airlines, one of the first to ban the items, stated that passengers would indeed be able to use portable computers on board at any time except during takeoffs and landings. This decision was based on its findings that such devices do not interfere with the navigation instrumentation.

The tests that led to such a conclusion were conducted by Eastern and the Federal Aviation Administration. Since the FAA has set no firm policy on the issue, it is therefore up to each individual airline to set its own policy. As far as I know, so far Eastern, TWA, United Airlines and Delta allow computers, whereas American Airlines does not.

The policy of certain airlines regarding this now becomes one more reason to prefer flying one airline over another, that is if using a portable computer is important to you. In which case, you may find that certain skies are friendlier than others.

A few new product announcements from the Hayden Book Company: First there is *The Unofficial I Hate Computers Book*, by John Barry and Richard Tennant. This 80-page paperback contains 76 anti-computer cartoons that offer a "tongue-in-chip" look at the perils of home and business computing. To give you an idea, the cover shows a cat using a computer as a litter box, while on the back an ape is about to use a computer as a punching bag. The contents are filled with similar "applications".

Next, Hayden has announced the *Fast Reference Guides* series. This is a line of six reference booklets that include options, menus, commands, and formats for dBase II (one for programming and another for using it), *SuperCalc*, *CP/M*, *VisiCalc*, and *WordStar*. A glossary of useful terms is included in each guide. The suggested price of each guide is \$3.95.

Atari in Wonderland is the title of a Hayden text that contains 22 short stories and programs designed to introduce children to the Atari and have them learn word and numerical skills. Among other things, the book explains how to count in French and Spanish, how to appear on a TV quiz show, how to write songs, how to measure angles while riding on a roller coaster, and how to write a book report. The book also includes a listing of programs and instructions for using Atari graphics. Each chapter shows how to modify the programs and use the features. Hayden is planning to make the programs available on cassette soon. The paperback has 128 pages and costs \$9.95.

Hayden has also brought out two books for the Commodore 64. The first is called *Commodore 64 Programs For The Home*. It contains over 40 BASIC listings for the entire family and is written for first-time users. The book explains and lists each program including a symbol table, sample data, and an example run. All programs can be easily modified and have been thoroughly tested. This 170-page paperback will cost \$14.95. The second is *Basic Commodore 64 BASIC* and is a guide that is designed to be used in the home or in class. It starts with short easy-to-learn programs, adding one command at a time. Each program is kept short and is divided into segments, most of which can fit on a single screen page. This 256 page paperback also costs \$14.95. In the unlikely event that you cannot locate a source for these, contact Hayden Book Company directly at 10 Mulholland Drive, Hasbrouck Heights, New Jersey 07604. (201) 393-6303.

Definitely out of space again. See you next week.

The First Major Software House to introduce programs for the Memotech 500/512

PSS LAUNCH MEMOTECH SOFTWARE

IN
YOUR
SHOPS
FROM 21st
APRIL

MAXIMA is certain to become a best seller for the Memotech. It is a graphically superb game that has you zapping 16 different varieties of aliens, each with its own formation and attacking patterns.

The game opens with your ship executing an impressive jump through hyper-space to where the action is. First up are the green snappers - easy targets against the starry backdrop. Next comes the blue meanies, a swirling bunch of wriggling invaders. To follow, a crescent of rather beautiful revolving hexagonal barrels who arc around the screen raining bombs on you. Its a shame to pot these lovely creatures. On you go to a further 13 screens of magnificent graphics.

Devastatingly simple in concept it nevertheless has that indefinable ability to compel you to have just one more attempt to try and see what the 16 screens hold in store.

A must for all Memotech owners.

Petite Pascal Dragon 32 £14.95

Oasis, Alexandra Parade,
Weston-super-Mare, Avon BS23
1QT

Attractively packaged in a video-
style case with manual, one tape
contains the machine code
program and the other a series of
applied demonstrations, from a
simple sort routine to a P-Code
disassembler (there are 12
altogether).

The manual is in two sections:
first a simple tutorial and a
second for the more experienced
programmer.

It was interesting that part of
the claimed advantage was that
Pascal "prevents the
programmer from jumping in
feet first" and "from writing at
the terminal". It therefore

"forces the program to be
structured and designed first".

Whether you need another
version of BASIC is debatable
but this one comes with its own
compiler to produce fast running
times. Even this is not essential
when Oasis has a very good
Dragon BASIC compiler.

Everything performed well
although I would have liked
more detail with the
demonstrations. They were not
self explanatory to the beginner.
Which brings us back to the
central question: why Pascal?
Does the experienced
programmer want another high
level language? I suspect not.

Turbo Compiler 32K BBC/Electron £9.95

Salamander, 17 Norfolk Rd,
Brighton, East Sussex BN1 3AA

This may seem to be the answer
to many prayers: the speed of
machine code by writing BASIC.
But life is never that simple. If it
was we would all be writing
chart-toppers.

The problem is that this can
only cope with a small subset of
BASIC keywords. The manual
claims it covers 65, but even to
do this you must write in a
particular way. For example, a
MOVE statement must first be
translated into VDU statements
which may not be easy if you

don't usually use this method.

That understood, this is a very
compact and fast compiler which
does all that is claimed. The
manual is well written although I
didn't find the disc instructions
very easy to understand. The
subset is reasonable and the code
you produce can be used without
compiler in memory.

The demo program shows
another problem, though. The
machine code version of the first
part is no faster than the BASIC
one and the second doesn't even
run in BASIC as it was written in
a special way so the compiler can
make sense of it!

Adventure Creator 48K Spectrum £7.95

Fusion, 17 Crome Cl,
Colchester, Essex

This program is a little like a toy
piano — you can pick out a tune
on it but wouldn't use it to play
Beethoven. The authors have
programming expertise but
insufficient knowledge of text
adventures.

Adventures created permit
verb/object commands.
Normally, solving problems
requires discovery of the exact
two words, i.e. only "Wave
Wand" in sealed room reveals
exit. But this program only
permits one Wave or Wand, but
not both. Exit would reveal with
"Wave Dwarf" or "Eat Dwarf"
or any combination of keyword
and another!

Only part of the built-in
vocabulary is revealed — a coy
note says it understands many
more. Quite how the writer is
supposed to use these unknown
words escapes me. A better
manual with explanation of
menu headings would help.
Displays in same two colours
throughout, exits must be strict
directions and "facility to add
your own graphics" translates as
"we've left room if you know
how". Music selection available
— Congratulation and Funeral
March being obligatory.
Although apparently cheaper
than others, still too pricey for
what it is, even with sample
adventure thrown in.

Are these any use to you?

New utilities for the Dragon,
BBC/Electron and Spectrum
examined by our experts

H.U.R.G. 48K Spectrum £14.95

Melbourne House, 131 Trafalgar
Rd, London SE10

A long time coming but worth
the wait. My criticism of games
designers so far is you're
confined to variations on space-
invaders — graphics change but
game's the same.

The demo games are not great
but I guess they are deliberately
left simple so you can easily see
what they are doing and use them
for experimentation. Initially,
the many menus and options
seem confusing. I got stuck
trying to enter yes/no answers,
having skipped "keyboard or
joystick left, right, up, down and
fire controls work both games
and program". If you haven't
written games before, some

terms may be new but the
manual explains well. If you're
still not sure, try it and see.

You can load previously
designed backgrounds then,
within the program, design and
test animation of player's and
enemy graphics, set colour,
movement, collisions,
explosions, etc. It will take time
and practice but it really makes
original games design possible.
Hopefully, due to delay in
release, Melbourne House will
extend the £3,000-plus-
publication competition for an
original H.U.R.G.- designed
game which, at present, closes
April 30. If so, have a go!

Graphics and Sound Toolkit Spectrum £5.50

Lerm Software Products, 16
Stonepit Dr, Cottingham,
Market Harborough, Leics

Contains 25 machine code
routines giving scrolls: up, down,
right, left by character or pixel;
screen "dissolve"; character
rotation, reflection or upside-
down; box-fill with character or
attribute; attribute change
without CLS; screen invert;
screen-fill with random pixels or
colours; screen flash; border
stripes and flashes; and several
sound aids.

A demo program loads with
the toolkit, breakable for study
and erasable, allowing initial
practice with routines. For
practical work, provision is made
to copy toolkit without demo.

Instructions include: demo
listing with REM headings on
routine used; list of routines with
USR call address, POKES
necessary and menu line
reference for study; manual with
simple explanations and sample
programs. In principle, excellent
but missing string/hash symbols
with some address misprints.
Box-fill example gave problems
with window size and crashed
program but worked O.K. on
reLOAD.

Takes 2K relocatable memory,
allowing other utility use at same
time. Must be present in
programs but author only
requires acknowledgement.
Useful package with very nice
effects.

Chopper X-1 Spectrum £5.50

R & R, 5 Russell St, Gloucester
GL1 1DE

As commander of a helicopter gunship, you must destroy waves of Spinad, Spore and Fusa before they reach earth and rear attack. Your helicopter is firmly fixed left of screen, moving only up (cursor 7) or down (6), firing missiles (0) and smart bombs (9), green ground scrolling beneath you. Attacks come from above by upside-down ice cream cones, from the right by white whirling crosses, with occasional blue octopi dropping, out of range, to earth. Score is shown at the top, with five unexplained graphics marked "Pods", increasing and decreasing. Similar graphics appear, already imbedded, as the

ground scrolls on, and explode upwards as they pass you. Since the game's aim is to destroy aliens before they reach earth, it seems a bit unsporting to let them land off-screen. And, without rear missiles, your two smart bombs are your only hope.

Mindless "zap aliens" games without originality or complexity, difficult only for lack of manoeuvrability and off-screen or out of range items, might have been acceptable once but program design has moved on. When landing aliens erase character squares in supposedly solid mountains, a problem overcome by most novices. **D.C.**

Star Commando Commodore 64 £7.95

Terminal, 28 Church Lane,
Prestwich, Manchester M25 5AJ

I've tried — I've really tried — but I'm still a rookie. Is it me, I ask myself, or a game too difficult even in easy levels? First you log in your name (I swear the computer sneers) and bang, you're in outer space, nervously peering through a target sight. Examine score (nil), hi score (unbelievable), energy (full 500). Check scan information — tells you, (sometimes), what fiends await you where and mothership location.

Right, let's have a go at the Sausonic Raiders — enter

selection, hyperspace flickers... help, you're in the middle of the moaning, whistling horde. Fighting like a tiger but no good — too many — can't escape sector until they or you are finished... made it... fuel low! Head for Mothership sector. Mid-air refuel operation, must lock both target sights. And Mother doesn't hang about. Any fumbling and whoosh, she's off leaving you half-full.

There are various colourful, noisy, deadly nasties and seven levels, culminating in Star Commando wings. If anyone makes it, don't tell me. **D.C.**

Altair 4 Comodore 64 £7.50

Voyager, Business Centre,
Cloughton Road, Birkenhead,
Merseyside L41 6ES

A text adventure, at least no graphics as far as I've got — about 15%. Story so far: your strato-cruiser is badly damaged in an asteroid storm. You land on Altair 4 — a galactic penal planet — and must find repair equipment, avoiding vile, cannibalistic criminal inhabitants. Finding and befriending wrongly imprisoned Furry Wokey could help.

Some rooms to be explored inside the strato-cruiser. In one, damaged cables and a snoring animal, with comment, "not badly damaged, needs some patching up". Animal or cables? He or it refuses to awaken and I can't find the first aid so I've started exploring the planet.

The nicest thing is that you feel the author, K. Suddick, is sitting inside the TV, watching your progress with fellow-feeling and offering the occasional encouragement or hint. I would have put on the spacesuit unprompted but the suggestion I do so was friendly.

Descriptions are detailed, atmospheric and sometimes subtle. Colour is used sparingly but to good effect and text occasionally behaves in a graphical way. Loved the adventure, hated the 15 minute LOAD. But highly recommended.

Up and away by computer

Five new games, all involving
flight of some sort. Our
reviewers return to earth with
their ratings

3D Space Wars Dragon 32 £7.95

Hewson Consultants, 56B
Milton Trading Estate,
Abingdon, Oxon OX14 4RX

No prizes for guessing that this is another 3D shoot-'em-up game in which you sit in your nice padded pilot's seat trying to despatch the latest invaders to a land from which they can never return.

So what is special about this one? Well it certainly is the best, yes the best, graphical screen I have yet seen for the Dragon. To be honest I had despaired of ever seeing anything this good. There is always a price to pay, however, and that is paid in the lack of

colour. The screen is only black and white but the detail is well worth it and the colour comes back when you explode which, if you're like me, is quite regularly. The game has all the other features you would expect: radar screens, fuel gauges, speed changes and a mother ship to dock upon when needed.

The only disappointing feature is the sound which is the on the pathetic side of inadequate. While this is poor enough to lose a star in the ratings, anyone wanting this type of game should give it a whirl. **D.C.**

Up Up Balloon Sord M5 £23.95

Computer Games, Goldings Hill,
Loughton, Essex IG10 2RR

There is one thing for certain: this is one of the most original games cartridges.

You move a little balloonist around the screen collecting hearts, or "Gal Marks" as the instructions call them, avoiding Galoons, Pirocs, Kniphoons, Sharcoons, Condolooncs and Barracudas. There are two ways to tackle these creatures: knock them down with your balloon from above, or shoot them with your arrow. However, you can be knocked out by colliding with any of the creatures, being eaten by a barracuda, or by failing to collect nine Gal marks within the time limit. You have five balloons.

All this takes place to a jolly background tune. Graphics and animation are extremely impressive, especially the enormous barracuda which jumps out of the water from time to time with mouth agape. The creatures all behave in their own ways and if you are not playing, you will enjoy watching them wandering around the screen. With professional touches like two-player and joystick options, Up Up Balloon is well worth its hefty price and a must for anyone who is fed up with traditional shoot-'em-up games.

You could be on our pages

We welcome programs, articles and tips from
our readers. If you feel that your work meets our
standards, please submit it to us for
consideration for publication.

- Programs must always be sent on cassette.
Listings are helpful, but not necessary.
Check carefully that they are bug-free.
Include details of what your program does,
how it works, variables you have used and
hints on conversion.
- Articles on using home computers should
be no longer than 2,000 words. Don't worry
about your writing ability — just try to keep
to the style in HCW. Articles most likely to be
published will help our readers make better
use of their micros by giving useful ideas,
possibly with programming examples. We will
convert any sketched illustrations into
finished artwork.
- Tips are short articles, and brief
programming routines. Your hints can aid
other computer users.

All submissions will be acknowledged and the
copyright in such works which will pass to
Argus Specialist Publications Ltd will be paid
for at competitive rates.

Keep a copy of your work and include an SAE.
Label everything clearly and give a daytime
and home phone number if you can.
All work for consideration should be sent to:

O-LEVEL and A-LEVEL STUDENTS...

Check out these excellent REVISION PROGRAMS

from **Calisto**
Software

CHEMISTRY 'O' LEVEL

MATHEMATICS 'O' LEVEL

PHYSICS 'A' LEVEL

BIOLOGY 'O' LEVEL

These new educational packages from Calisto Software are designed to be of assistance to Maths and Science students prior to taking their 'O' level and 'A' level examinations. They may also be of considerable help to CSE students, although the content will exceed requirements in some areas.

As computer controlled revision programs, they make use of wide ranging multiple-choice questions to trigger memory refreshments of previously learnt material. They are also aimed at reinforcing ordered recall as a suitable preparation for the examinations and to help with conventional revision techniques.

Patscram Mission TI-99/4A £6

Stainless, 10 Alstone Rd, Stockport, Cheshire

The third in a series featuring the Starship Patscram. Your mission is to restore the Cube of Peace, that the Zirgons have made ineffective, by penetrating their defences on five different screens.

After the title screen you choose the momentum type that your spacecraft will have and keyboard or joystick control. You then have the unusual option to practice operating the ship before play starts. Another feature is the choice of a demonstration game by the computer — far more valuable than a set of instructions.

Once the preliminaries are over, you make a start with Starship Patscram lift-off. By steering through Zirgon mines, it has to be taken to the top of the screen. On screen two you have a limited time in which to destroy Arrowite weapons. This you do by crashing into them! On screen three the converse applies as you have to avoid asteroids. On the fourth you manoeuvre gliding cubes to recover the Cube of Peace, and on the fifth take it back home. But when you've landed the game won't end here as the action re-starts on screen one. Needs Extended BASIC.

Confrontation 32K BBC £7.95

M.C. Lothlorien, 56A Park Lane, Paynton, Stockport, Cheshire SK112 1RE

You may have guessed from its name that this is a game of war. In fact it's one of a series of two-player strategy games. The instructions reminded me of the typical rules for a board game. They are very complicated and detailed and if you read them extra carefully you may just be able to comprehend them. But I'm making no promises.

When the game has loaded there is no scenario in the memory, so it can either be loaded from the tape or you can make up your own, which can also be saved. Each player's

forces consists of 35 units, 12 separate types of unit, each holding different properties. The conditions for victory are decided upon by the two players. For example, you may wish the outcome to be decided on the number of cities taken rather than units lost.

If you hate board games this isn't really worth considering. If, on the other hand, you like the sound of it try and find out more about it. The same game has been released for the Spectrum.

Pettigrews Diary 32K BBC £7.95

Shards, 189 Eton Rd, Ilford, Essex IG1 1UQ

This adventure comprises three programs, each under its own chapter heading, and each just as difficult as the last.

In the first, The Burning Farmhouse, you have to venture inside to retrieve as many objects as you can, avoiding the swirling flames. Once you have completed any stage you are given a code word, and from then on that stage can be missed out if wished.

In London Frolics, the next chapter, you have to earn enough to buy a ticket to Paris. You communicate with the computer in two-word phrases.

In Chapter 3, European Trek, you have to complete eight tasks. If you succeed you will have solved the mystery of Pettigrew's Diary. Graphics are included in Chapters 1 and 3. Each is referred to separately in the instructions, which tell you as much as they can without giving too many clues away.

After a while the music in Chapter 1 began to aggravate me a little but now I have most of the codes I don't have to listen. I haven't got long to go now. I'll complete the adventure soon.

Are you game for some fun?

**A batch of programs for the
BBC and TI are given the once-
over by our team**

Wallaby TI-99/4A with Extended BASIC plus Joystick £7

Counterpoint, from Stainless, 10 Alstone Rd, Stockport, Cheshire

Poor Wally the Wallaby is trapped inside a Thing-A-Ma-Jig factory and must find his way out. Exits are on four different screens along which he will encounter various obstacles. Successfully completing all four screens, however, only returns Wally to a more difficult screen one.

The first displays a series of ladders leading to upper floors, at the top right is the exit. Wally must not only climb these ladders but jump over sliding baskets and duck to avoid overhead

buckets. Should he be hit not only does he lose a life but must start again.

Having reached the exit, Wally receives bonus points before continuing on the next screen, where he must travel down slides. On the third screen are both slides and ladders, and on the fourth, moving holes.

The program runs smoothly unless you attempt to move sideways off screen. Then it crashes with a BAD VALUE. I had to enlist the help of a nephew to find what lay beyond the first screen. "What a Wally," did you say?

Mr D TI-99/4A £5

SP Software, from Stainless, 10 Alstone Rd, Stockport, Cheshire

Mr D is certainly strange. Not only does he resemble a little horse, but goes underground to collect cherries. I always thought they grew on trees.

It seems dinosaurs are also fond of these fruits — on each screen there are two that pursue Mr D, who will lose a life if caught. Using keys or joystick, Mr D must collect all the cherries to progress onto another screen and score points. Also beneath the ground are apples. If Mr D passes directly under one it will fall down the screen. Should one fall on a dinosaur's head, the monster is killed.

If Mr D can't manage to out-run the monsters he does have five magic balls to use in each screen. When fired, it will follow the path left by Mr D, destroying a dinosaur if it happens to be in the way.

Compared with other games of its type, this doesn't stand out as being particularly original or inspiring. Some variation in the graphics and a high score table might add more interest to what is otherwise a very repetitive game.

Secret Agent TI-99/4A £7

Stainless, 10 Alstone Rd, Stockport, Cheshire

We've all seen the classic film stunt of running along a moving train, leaping from one carriage to another. Now here's the chance to try it without leaving the comfort of your armchair.

You have five enthusiastic agents with which to recover a briefcase — full of secrets, of course! On the first screen your agent crosses the train by jumping over pylons and taking care not to fall between the carriages. The briefcase is located at the far end of the train, but once recovered another appears at the opposite end. This continues until a total of six have been collected, the number of pylons increasing with each complete traverse of the screen.

The train then disappears and your agent reappears on one of a series of cable cars. By jumping up and down onto the cars he must once gain take possession of the briefcase which has been hidden in one of the cars. If he survives this screen he returns to screen one which continues at a faster pace.

Makes excellent use of the sprites available in Extended BASIC, providing graphics that are both amusing and effective.

J.W.

Fruit Search Sord M5 £19.95

Computer Games, Goldings Hill, Loughton, Essex IG10 2RR

The instructions tell you that you are planning a party for your girlfriends, but each will only eat the kind of fruit she likes. Your job is to find out which kind of fruit each girl prefers.

On the left of the screen there is a fruit shop from which you can select various fruits and on the right there are fruit baskets. You select three to five fruits, depending on the difficulty level, then the computer prints a blue fruit for each fruit of correct position and type.

Sounds familiar? Well, you've

probably guessed by now, Fruit Search is a derivative of Master Mind, except you have to guess the right combination of fruits instead of boring little pins. And you get pretty pictures on the screen.

Graphics are nice and clear, presentation very professional. There are many nice touches as joystick option and difficulty levels and, even though relatively cheap for a cartridge game, it doesn't represent very good value for money.

S.S.

Last day of the Earth/ Mini Star Trek Sord M5 £8.95

Computer Games, Goldings Hill, Loughton Essex IG10 2RR

Both are, in fact versions of the Star Trek game that originated on mainframe computers. They do not transport well onto machines such as a standard Sord M5 which has a tiny memory.

Basically, the universe is infested with Klingons, or any other nasties, and you have to crusade to fumigate it. But it's not an easy task as the cosmic vermin are everywhere so you'll have to travel through sub-universes if you want to effectively clean up.

To aid your heroic quest, there are several allied base stations throughout where you'll be able to replenish supplies and stock up on missiles. The universe is divided into sub-universes but as the screen is too small to show them all at once, it will only display one at a time. To effectively clean up the universe, you have to use warp drive and shifts cunningly and use missiles sparingly.

Although both games are very simple, they are well written and surprisingly fun to play.

	S.S.
instructions	80%
playability	50%
graphics	40%
value for money	60%

Wonder Hole Sord M5 £23.95

Computer Games, Goldings Hill, Loughton, Essex IG10 2RR

The blurb says that all you have to do is to drive the car across the field, and wherever you encounter a monster, knock it underground. But the monsters won't stay put. They will dig their way back up to the surface and as soon as they remerge, they will regenerate into larva, "Lar", then pupa, "Boo", and will continue to grow every time they are knocked underground until finally, they turn into adults, "Eema". These are particularly nasty as they shoot at you.

In fact you drive your car over what look like plates and you

simply go over anything that's not an "Eema". That's just about all there is to the game apart from the odd chance to get bonus points. You go on to the next screen when you knock out all the monsters. I must confess that I couldn't achieve this however hard I tried.

Although the game uses sprites and sounds well, the baddies and yourself doesn't show up well at all on the light coloured background and this spoils a game that could have been very addictive.

value for money	60%

Starprobe 99 TI-99/4A £7

Counterpoint, from Stainless, 10 Alstone Rd, Stockport, Cheshire

Just as it seemed that the Xyolians had been expelled from the galaxy, a starprobe has reported underground activity on a small moon. Now it's up to you to penetrate the defences of their hidden base by controlling the probe.

As the game starts your probe descends into the depths of a cave. Using keyboard control to hover, move left, right or fire either QuasiThermite bombs or the Superbeam, the probe must be guided down the maze of tunnels that scroll up the screen, blasting Xyolian defences all the way. Any fuel depots you see should be bombed to boost the probe's reserves. The same applies to ammunition dumps.

When the game ends you are given the total depth, reserve fuel and ammunition, and your deepest probe, although this information can be called any time during the game by the P, pause, key. You may play again in the same cave or in any of another eight different ones.

If you're looking for an entertaining program for your unexpanded TI this is an excellent choice. It's by far the best that I've seen for a long time that exploits the better qualities of this under-rated machine.
