Olivetti cash revives Acorn

Acorn has been rescued from imminent bankruptcy by Olivetti. The Italian electronics giant has bought £4m of Acorn shares to give it a 79.8 per cent stake in the company.

As part of a refinancing package Acorn's major creditors have agreed to write off debts amounting to £7.9m and the BBC will waive 50 per cent of royalties owed over the past year.

Alex Reid, chairman of Acorn said, "We were on the verge of receivership and if any of the parties involved in the refinancing plan had not agreed the receiver would have been called in."

Alex Uboldi, an Olivetti executive who has been in charge at Acorn during the recent financial crisis said the company was in "a stable condition".

"The financial problems have not impaired Acorn's major projects for the future and new products are on the way."

The first of these, added Mr Uboldi, is the Cambridge Workstation which should be ready at the end of July.

Acorn has also announced the appointment of a new managing director. He is Brian Long, 41, who has previously held executive positions with Massey Ferguson in Canada and Europe.

The financial difficulties at Acorn have cast doubt over the future of the BBC, BBC B+ and the Electron but Herman Hauser, deputy chairman of Acorn stated, "We have a continued commitment to BBC machines and a number of add-ons are in the pipeline."

Mr Hauser declined to confirm or deny whether production of the BBC would cease in the near future but said, "The main emphasis will be on the BBC B+."

As part of the new deal with the BBC, "Acorn has agreed to continue to introduce new models in the future."

Alex Reid commented that the Electron "was still being made and delivered to suppliers." He added, "We will continue to provide support for the 200,000 Electron owners."

Herman Hauser - Acorn's Deputy Chairman

Hackers enter war machine

Seven American teenagers have been arrested and charged with using their home computers to hack into a top secret military computer system.

The hackers, whose computers and software has been seized, also re-programmed a communications satellite's position and disrupted telephone calls on two continents.

The case has caused concern over national security and inspired comparisons with the film "War Games" in which a home user gains access to American Strategic Command computers and almost sets off World War III.

Alan Rockoff, the lawyer prosecuting the case said, "It's like 'War Games' only it's real life. It's happening today. They got into a defence command computer and in that program were direct lines to the supervisors of sensitive sections of the armed forces."

War Games a reality?

The case raises questions about Britain's military computers' vulnerability to illegal entry. A Ministry of Defence spokesman told HCW that the MOD were aware of the case. "We keep in touch with developments and see what lessons can be learnt," he said, "but we are confident that our classified data is adequately protected."

HOME COMPUTING WEEKLY

War games — is it real?

Soapbox

After all the unholy glee in some sections of the computer press at the failure of the first Acorn, then Sinclair Research, there has followed a time of sombre serious editorials reminding us that Sir Clive is the father of the mass consumption computer market and that we should all be grateful to him, which is true. The failure of the QL to attract a large consumer base is often cited as one of the problems.

With the exception of the QL, I bought everything Sinclair announced as soon as it was available on mail order... and I learned. I had to wait months for it with my money frozen; when it arrived, it didn't work. When I relied on it, I couldn't get loan equipment, and the names and phone numbers of the ladies in Customer Relations at Cambridge and Camberley were engraved my on telephone bill and I learned that "immediately" usually meant in two weeks, and "two weeks" meant almost never.

Non "Sinclair-people" need not feel self satisfied either! Remember the equally shameful BBC Micro introduction, or the continuing saga of faulty Commodores? Could it be that the computer bubble hasn't so much burst, but been squeezed by the arrant complacency of the manufacturers to the extent that the enthusiasts who have always formed the bedrock have become older, wiser and won't get fooled again, no matter what the name on the micro? The 8th Personal Computer World Show

**4-8 SEPTEMBER 1985
OLYMPIA, LONDON**

Sponsored by Personal Computer World

Meet us there!

You will be fully aware by now that the Personal Computer World hits town from 4-8th September.

The show, which will be at the Olympia Exhibition Halls, is probably the biggest in Britain and features all the big names. Britain's biggest name in computer magazines, Argus Specialist Publications, will also be having a stand... part of which will feature your very own HCW.

We thought that we would take this as an opportunity to meet our readers and after weeks of begging, Argus have agreed to unlock the foot shackles and let us out of the

dungeon.

So for the three public days of the show, Friday, Saturday and Sunday, someone from the editorial team will be on the stand to answer your questions, compliments and listen to your complaints.

It will provide a chance to hand in your Hi scores (with a picture we hope), give us your bouquets and brickbats and even to meet Ron Complex. In fact we will arrange it so that any reader who correctly identifies Ron Complex will win a prize!

Please don't bring your programming problems though, we can handle them by letter much faster and with more detail. Don't forget to say hello!

At the Show

You will all be aware, by now, that the PCW show is due to blast off in early September and a number of companies are aiming to have new products ready for the event.

We will bring you the details and whiffs of gossip as soon as we get them. So look out for this column with all the up-to-date information.

Mikro-Gen have a brand new product concept, that will be revealed and demonstrated at PCW. At its basic level it is a soft and hardware combination for the 48K Spectrum that will give the machine a 56K total user memory. The first game to make use of this package will be Shadow of the Unicorn, an arcventure which would have been impossible to write on the un-expanded Speccy.

The pack will contain a book, the add-on Rom unit shown here and a cassette containing the rest of the program. Besides the Shadow of the Unicorn, the ROM will also have a tape alignment routine that is instantly loaded by simply plugging in the add-on and a micro-drive routine to allow you to load the other part of the program from your microdrives and therefore save all that time!

The price of the complete package is, wait for it, just £14.95, or thereabouts. Sounds like good value to us but we will review it as soon as we can.

Virgin Games tell us that they aren't going to be at the show but might be appearing in your homes soon enough. I'll let you try to work out how.

They are currently working on a new game featuring a 1950's comic book hero. Now who could that be? Answer next week and positively no prizes!

Prototype of the main board

Mikro-Gen's Spectrum memory module

Software Update

It seems to be a week for BBC and Electron users judging from the new releases. That isn't too much of a surprise with the Acorn Show being so close!

The releases from Vannin software are all educational programs aimed at junior aged children with BBC machines. They are only available by mail order at the moment. We hope to have reviews of them soon.

Bevan Technology, who recently introduced the BBC bridge interface module, has waded into the software market with five new BBC titles. All are arcade type games and a few are reviewed in this issue of HCW. It claims that the games have a very high addition level but check this out on our review pages.

Sparklers is effectively doubling its range with the release of its four new titles. All are in the £2.50 price bracket and hope to capture the pocket money market.

The most interesting title looks to be St Crippens where you are admitted to the worst hospital in the world. The aim of the game is to escape from the ward, find a new set of clothes and avoid all the medical "help" that pursue you. There is even a genetic engineering department with all its attendance terrors to avoid.

English is getting all excited about its new Chop Suey game which it claims to be the first Atari Kung fu game programmed at this side of the big divide. The game has all the usual features with "surprises of the animal variety" — the mind boggles as to what they could be.

MIRRORSOFT

MEMO FROM: THE WAR DEPARTMENT, MIRRORSOFT
TO: ALL RAF SPITFIRE '40 PILOTS

HOW WE LOST THE WAR

MIRRORSOFT are extremely sorry to have to announce that the first Spitfire 40 pilot to claim the coveted role of Group Captain, DSO DFC VC is in fact an under-cover agent from the Fatherland.

Come on, you Brits, liven up! This is just not good enough, chaps. The Luftwaffe cannot be allowed to get away with this. The gauntlet has been thrown down, and it's up to you to accept the challenge. We just can't have spies running the RAF!

We expect to see the results of your labours by mid-August, or we will not be responsible for the consequences to this great country of ours.

Your response should be addressed as follows:

SPITFIRE DIVISION
MIRRORSOFT LTD
MAXWELL HOUSE
74 WORSHIP STREET
LONDON EC2

SOFTWARE FOR HOME COMPUTERS

Card-Power

Micro Power, the publishers of the successful BBC game Castle Quest (a more complex sequel for a variety of machines follows in the Autumn) are now producing hard and software for the Amstrad in their Superpower range.

Immediately available is a cased sideways Rom-card for

the CPC 464 which allows the user to fit up to seven sideways roms acting as foreground, background or extension roms.

The card simply fits straight onto the back of the machine and is priced at £39.95 plus 95p p+p.

**Micro Power, Northwood Hse,
North St, Leeds LS7 2AA**

The Superpower Sideways Rom-card

All-Points-Bulletin

Yes, this is an APB from HCW to all Atari-48K-users who fancy using their literary skills to review software for us.

All you need do to join our ranks of software Shakespeares is to send your details (name, address, machine and any relevant experience) to Kerry Fowler at the HCW offices and we'll take it from there.

**HCW, No. 1 Golden Sq, London
W1R 3AB**

A Little Light-Music

If you're a music-lover and appreciate the sounds of Duran Duran through to Haydn then Hybrid Technology's latest audio cassette will have you singing their praises.

The 40-minute tape was produced with its Music 500 synthesiser for the BBC, and according to Hybrid, will allow you to enjoy the benefits of a complete orchestral sound without a studio full of equipment.

"An Evening in the Company of the Music 500 Synthesiser" is available direct from Hybrid and costs £1.95.

**Hybrid Technology, Unit 3,
Robert Davies Ct, Nuffield Rd,
Cambridge CB4 1TP.**

Testing-Times

Amstrad Consumer Electronics came out with lowest percentage return on faulty machines in a recent survey by a chain of computer centres in the North-West of England — with 1.8% being returned.

In the same survey, which Sinclair dismissed as unrepresentative, Commodore returns were 17.4%, BBC 'B' 17.4% and Sinclair Spectrum 30.6% — as opposed to their own figure of "around 12.5%". (HCW 121).

These figures were arrived at from 'dead on arrival' stock and did not include machines returned after 30 days purchase.

Amstrad, who has been in the computer market for just over a year, produces the CPC464 and CPC664 and are obviously pleased with the results of this particularly survey.

Disc Drivers

Mr G Pomery, an HCW reader from north of the border, will be speeding his programming very soon, when he receives his prize in our Disc Drive Competition.

His entry was the first out of Bryan's small hat (there were only five envelopes in it) which listed the same order of letters as the Editor. The winning order was A,D,F,C,B,E.

The 20 runner-up prizes go to those readers with the letters nearest to the winning combination. Roland in Space was chosen by: K Chua, Birmingham; I Pigney, Brentwood; Paul Leonard, London; D Greenhalgh, Altrincham; Colin Powell, Salford; A Billingsley, Trowbridge; E V Browning, Llanedeyrn; B D Everingham, Romford; R H Evans, Brigend.

The following readers are looking forward to Bigger appearing on their doorstep: P J Wilson, Southampton; Malcolm Allen, Coalville; Michael Skinner, Burton; George Pilch, Gwinear; H Colborn, Londonderry; Mark Phillips, Padstow; Andrew Peel, Rochdale; Jane Boddy, Avon Tyrell; P D G Soundy, Kinloss; B Bullock, Seacroft; James Davies, Ferryside.

There are only four readers looking for Roland in Space. The Prize or Punchy. They are: Ian Neve, London; R F Holt, Teignmouth; S M Crimson, Willesden; W Smith, Sheffield.

Congratulations to all those who won and to those who came close to the winning combination. We did say that the Editor had a strange and devious mind!

School photo — Computer Press 1985

Bob Hillyer and Mike Male, co-authors of Southern Belle

All Steamed Up

Hewson Consultants, one of the oldest surviving software houses, recently celebrated five years of trading with a gathering at Didcot Railway Centre.

This small remnant of the Great Western Railway is only three miles from the company's HQ at Abingdon and the occasion also featured the first showing of the new game Southern Belle which is reviewed elsewhere in this issue of HCW.

The event was a chance for the country's computer press to get together and we were all

marshalled together for our "school" photo, as Andrew Hewson kept calling it.

This is the first occasion that Bryan Ralph, our new assistant editor, has been allowed out of the office, well — we have to protect the public as much as possible, so to celebrate this event we are offering a prize to the first reader to return the "school" photo, or a photocopy, to us with the correct face ringed. Entries from industry personalities and his wife will not be accepted.

Hewson Consultants, 56B Milton Trading Est, Milton, Abingdon, Oxon OX14 4RX

Enterprising enough?

We have recently received a copy of the first magazine to be produced by the Independent Enterprise User Group and although we don't often recommend rival magazines we have to admit that it is a very good first issue.

It is a 24 page, A4, Black and White magazine packed with

news, reviews and programming hints. There is an article on interfacing to the Enterprise which includes details of do it yourself cable making!

In all it is a very brave, and well put together, first effort and can be recommended to our Enterprise owning readers.

Independent Enterprise Group, 40 Mansfield Rd, London NW3 2HT.

Dragon Slayer

Barry Ward from Wokingham fought off other Dragon fanatics to win a complete Cumana disc drive system in Incentive's Back Track Champ competition.

Barry won the competition to complete Back Track in the fastest time at Incentive's

offices in Reading, slaying four other finalists on his way to victory.

However, Barry didn't quite leave them for dead and the five of them managed to collect their prizes from Back Track author, Chris Andrew.

Barry Ward collects his Cumana system from Incentive.

Graham Gooch's TEST CRICKET

Audiogenic

Catch one of a century of Graham Gooch's Test Cricket games in this week's competition

You could be walking back to the pavilion with a copy of Graham Gooch's Test Cricket for the C64 under your arm if you can spot the number of famous cricketers' names cunningly concealed in the word square.

Audiogenic's game, sold at £9.95, uses graphic animation and joystick control for either batsman or bowler to create an exciting simulation of run scoring and wicket-taking without the dangers of body-line bowling. The big match atmosphere is enhanced by sound effects and speech and the armchair cricketer can choose to play a full two innings test or opt for limited overs.

Team selection is, of course, vital and you can select from squads of England or Australian players or using a free extension programme you can fantasise about your all star line-up from the annuals of cricketing history.

Between overs the scorecard and bowling figures are flashed on screen for the benefit of statistic-addicts.

To win one of these fast load cassettes you don't have to be a cricket buff and name the opening batsman for England in the third test against Australia in 1897 or the name of the groundsman responsible for manicuring the sacred crease at Lords. Instead we've devised this test (which shouldn't take five days) to pick out the well-known wizards of the willow and lobbers of the leather orb from the confusion of letters.

Graham Gooch's TEST CRICKET

How to enter

Study the wordsquare. Hidden in the square are the names of test cricketers past and present. When you have found as many as you can, circle them clearly on the wordsquare and fill in the coupon clearly and carefully.

Write clearly the number of words you have found on the back of the envelope. Post your entry to Graham Gooch Competition, Home Computing Weekly, No.1 Golden Square, London W1R 3AB. The closing date is first post on Friday 16 August 1985.

Important: please follow

carefully the guidelines on entering — incomplete coupons and entries with no numbers on the back cannot be considered.

If you are a winner, the coupon will act as a label for your prize, so clear writing is essential.

The rules

- Entries will not be accepted from employees of Audiogenics Software Ltd, Argus Specialist Publications and Alabaster Passmore & Sons. This restriction also applies to employee's families and agents of the companies.
- The How to enter section forms part of the rules.
- The editor's decision is final and no correspondence can be entered into.

RON COMPLEX

Introducing Ron Complex, private investigator, in a computer thriller with a plot that makes a maze look like a one-way street. Follow this serial and your life will never be different again

Part One: The Thaw Before the Storm

Ron Complex was in a bad mood — he'd been defrosted too quickly. He was the only person in the boardroom of Murkotronic Computers Inc who was visibly steaming. He was the only one wearing a t-shirt with "Suspended Animation is Fun" written on the front. Ron felt out of place.

He was sitting at a huge oval table and around him a semi-circle of executives were frantically scribbling memo's and slipping them into each others pickets. They all looked worried. Ron caught a glimpse of a note before it disappeared from view. J' said, "I'm really wor-

ried. How worried are you?"

Only one seat at the table was empty. Behind the vacant chair, on the wall, was a plaque inscribed with the words, "What I don't know about computers even the computers don't know."

Suddenly the door of the boardroom was flung open. Everyone in the room froze — except Ron. Standing in the doorway was Harvey J. Murko, head of the biggest computer multinational in the world. At the age of 12 he had revolutionised the computer by inventing the Murkodrive and now 20 years on he was known simply

as "King Silicon".

"So how was the deep freeze, Complex? Catch a chill?" "Cut the cracks Murko, you'd better have thawed me out for a good reason," snapped Ron. "But I have. I loathe to say it but I need you Complex. You are the only man alive who can undertake this mission."

A warm glow of satisfaction spread through Ron's body. He knew that his biggest hunch had paid off.

"So you need me do you? I remember how 20 years ago everyone laughed at me when I said one day the world would need someone who knew absolutely nothing about computers. Now that day is here."

Way back at the beginning of the computing era, in the time now called "the Pong Dynasty", Ron had foreseen trouble ahead for a computer dependent society. He organised Computer Avoidance Training courses which consisted of tips on hiding in airing cupboards. Nobody came. Finally, exasperated, he put himself into cold storage until that time when his total lack of computer expertise would be called on to solve the crisis.

As the refrigerator door closed, two decades before, Ron had waved goodbye to his trusted friends who would guard his secret and reactivate him when they felt the insight of his ignorance could save the day.

But the temptation was too much and Ron's plan to put himself on ice was leaked to the press. For a day Fleet Street gave over their front pages to the man they called "the human fish finger."

Then over the years the world forgot Ron, all except Harvey J Murko who had filed Ron's details away in the memory banks under the heading, "Loonies who may come in handy."

Ron Complex, private investigator, and now the planet's most advanced computer illiterate slammed his fist down on the boardroom table. "Just one thing before you tell me what this mission is Murko — where do I get hold of a raincoat with a turned up collar and a battered trilby hat?"

Next week: Part Two: Slightly into the Labrynth.

SOFTWARE

Frankie Goes to Hollywood

Frankie is not so much a game as a compendium of games united by a single aim. The idea is to progress from Mundanesville through to the Pleasure Dome increasing your personality to maximum as you do so. Along the way there are puzzles to solve and action screens to be overcome, each with its own reward. Most of the games inter-relate and objects gained in one can be essential keys to another.

The superb graphics place you in the streets of Mundanesville and you must enter each house in turn searching and touching objects as you go. If any objects looks useful then it may be carried with you but you can only carry a limited number so the choice must be made carefully. Using video cassettes or touching pictures can allow you to enter the action screens, once you learn how (I'm not telling). There are 10 action screens in all and objects found in the houses usually enhance your chances of success.

At one point you discover that a murder has been committed and it is your task to deduce who the murderer was from clues which may be collected in the houses. This had me running for a pencil and paper because there are about a dozen suspects and it is impossible to keep track of all the clues. Solving the murder rewards you with more personality points, but what are these all important factors?

Personality is divided into four elements (pleasure, war, love and faith) represented by four columns at the side of the screen. As you complete each

game the columns increase in height and Frankie gives you occasional reports on the percentage of your full personality which the total of the columns represents.

The ZTT Room has a large screen and a set of buttons pressing the buttons lights up a different part of the screen or turns it off again. Success is achieved by lighting up all of the ZTT symbol. The Sea of Holes is inspired by the Frankie symbol from which the hero character of the game was derived. As you disappear into one hole you reappear from another. If you reappear on the base line of the screen you are rewarded with a chance to enter another action screen. I think you will see by now that the screens are varied, all use superb graphics and there have been no bytes spared to produce this game.

There is even a maze which can be mapped by noting the colour of the manholes which are found there. These are the Corridors of Power in the Pleasure Dome itself and when your personality is complete the door to the final screen will be revealed here. The final screen? The title screen itself. Such is the elyptical nature of this game.

My only criticism of this game is the computerised version of Relax which plays while the program loads. It sounds awful. Don't worry though, there is a free live recording of Frankie doing the same song on a separate tape in the box. Take my advice, stick that on the hi-fi and turn the sound down on your TV during loading and remember Frankie says buy this and you'll have Ocean's of fun.

Ghost Chaser

When judging a game, one yardstick which I rarely have to use is the length of time it takes to complete. Unfortunately this measure comes into play in my review of Ghost Chaser. I succeeded in completing all 16 screens, caging the phantom by doing so, which only took about two hours. The disappointing fact is that there isn't a higher level, so once you have completed it there is no challenge left.

The game tells the tale of a little bear, who looks very much like Sooty, and his aim is to rid a ramshackle house of its spooky occupants. Our intrepid ursean ghostbuster does this by moving from room to room, collecting all the keys to unlock every room in the house. Occasionally the phantom materialises but he can be dispelled by blasting him with cannonballs whenever possible. This has the effect of making the ghoul disappear for a while, presumably to lick his wounds. Teddy bear's ammunition is in plentiful supply lying around the house and they can be picked up by merely walking past them.

The rooms also contain smaller spooks, bats, ghostly flames or dripping pipes. Contact with any of these gives Teddy the shivers and three contacts in any one room means death to the bear (luckily he has five lives). Death can also result from a misjudged jump or by falling down a trapdoor.

The game is quite enjoyable to play and because of this it just misses a Comatose rating but buyers should beware of the limitations which I outlined at the beginning of this review.

Whirlinurds

A Whirlinurd is known to its friends as a Nurd. It is a little creature with helicopter blades on its head and it lives in a dangerous world of mazes. Whirlinurds are an example of one of nature's magpies, the ultimate consumer snapping up anything that takes their fancy.

Wherever the Nurd goes there are creatures intent on preventing him from getting the television sets, candlesticks, spectacles and other such desirable objects which litter his landscape. The most common enemy is a bouncing eyeball which appears to be a gregarious creature, often found bouncing up and down in large groups. Slightly less common are the snakes which dash backwards and forwards across many of the higher level screens. Other high level problems include moving force fields, live terminals and pulsating nodules.

Using a joystick you can move the Nurd left and right and the fire button switches on his rotor blades lifting him up off the ground. In tricky situations a boosted lift can be achieved by pushing the stick forward at the same time as pressing the fire button, but this facility can only be used once in each screen.

Some of the screens require you to find keys which open walls in the maze allowing access to trapped objects but this also releases whatever terror may be lurking inside the compartment.

Whirlinurds will not extend the limits of C64 programming but it does give a degree of enjoyment and I found myself wanting to play on to see what the next screen had in store. However, this is not one of US Gold's greatest games. **E.D.**

April Showers

It sometimes seems as if we can't move for Beeb games in Mode 2. All too often they just take the superficial aspects of Frak! but without the winsome originality; until April Showers that is. In fact, this game is so original I can't think of anything quite like it and I'm still trying to work out just what you have to do, let alone manage to do it!

The plot is simple. You are a little cloud with eyes (what?) whose pleasant task is to water the plants in the garden (aaah!). However, the naughty flying umbrellas will steal your rain and kill your plants (grrr!) unless you water them and put them out of action. Your own liquid supplies are replenished from the other little clouds (without eyes) which flit across the sky. Yup, pretty original.

Unfortunately, there are no instructions apart from the control key display and it takes a few moments to work out even in a rough way what it is you have to do. As you scroll

right or left the little eyes flick from side to side and the sky and ground move in relation to you, centre screen. Your options, apart from shifting the whole display, are to fire (i.e. rain on things) and zip up and down to collect water from the other clouds and come into contact with the brollies. This is wild!

No doubt there are patterns and tactics which will emerge but the only rational response on initial play is to watch the little clouds and snarl at the brollies. How often does a game make you smile even when you lose?

This is superb fun — one of the most playable games I've seen for a long time but also one of the simplest. Proof positive that you don't need 64K of code or giant databases on disc to be compulsive. Whether it's non-violent as well is something you'll have to decide but it's certainly the most compulsive non-destructive zapper I can recall. Shame about those instructions, though... **D.R.**

Flipped

Hooked

Keen

Yawning

Comatose

Corpuscle

After levering out the disc filing system chip, loading proceeded normally, accompanied by strains of "I've got you under my skin". Very whimsical when you realise that in this game, the objective is to float about in the blood-stream shooting germs.

You soon discover that by keeping the cross-hairs of your germ gun on the black hole in the centre of the screen and then holding down the fire button you can kill 'em all. However, in other tubules that you are not patrolling, the bacteria are lurking and multiplying and the germ count zooms up. If you follow the right blood vessels you can enter the body organs but with this particular bod — it's difficult to tell if you're in his feet or his lungs.

To help you find your way about, so that you can rush to a particular organ when there's a "germ alert", the cassette inlay provides a map of all the body's major blood vessels. It's all in Latin and reminds one of an Italian underground system.

Eventually of course, the germs win and your host dies. This is perhaps not such a bad thing, as with these lungs, he didn't have long left anyway.

Ice Busters

Ice Busters combines two arcade games into one. The first brings back memories of a Donkey Kong type of game — you must jump over snowballs and climb ladders to get to the top level before you can continue on to the second screen. It's a pity that they had to rip-off Donkey Kong instead of creating something original.

The next screen consists of lots of square blocks of ice through which there is a network of paths. The Snow Bees move around in their direction and crush them. This may sound easy but believe me — it isn't.

The graphics are nothing to get excited about and the general presentation could be better. There are versions of both these two games already available from other software houses, in my opinion Cascade Software seem to be re-inventing the wheel.

The instructions are very simple and straightforward, they assume that the player already knows what to do. I found that the F3 key will pause the game and the F1 will release it, the stop key is used to abort the current game. No mention of this was made on the inlay card though.

Play may be achieved using either the keyboard or a joystick. The game does not seem to use any turbo-loader although the inlay card claims that it does, I found the loading very unreliable and slow.

Super Brat

Atlantis claim Super Brat is the most authentic tennis game available for the Spectrum, yet only forehand shots from the baseline are possible!

Your player must take on Super Brat in the British final and if you succeed you move up to the European and the World finals — not even the competitions are realistic! Game controls are limited to left, right and swing your racket, there is no joystick option. To hit the ball to the left you must hit the ball quickly, hitting it slowly moves it to the right.

The background graphics of the umpire and line and net judges are excellent; the players are reasonable, though their legs are a rather odd shade of pink. There are irritating little tunes when a game is won, which can be switched off, and an excellent simulation of applause.

You can play three or five set matches and normal tennis rules apply, except the players don't change ends. You must be careful of conceding foot faults if you don't position your player correctly when serving. Some of the umpire's decisions seem odd but Super Brat usually remains calm, though he has been known to throw his racket down in disgust.

There is a slow response to the keys, and it's hard to spot the ball, making it difficult to get in line correctly, so this is a poor game to play.

Most authentic Spectrum tennis game? They cannot be serious!

SPECTRUM

Davy — King of the Wild Frontier

Imagine the scene; you're in the Wild West, the Indians are sending smoke signals between the hills while horse-drawn stage coaches pass along the roads. During the night the Indians took your cloths, rifle and girlfriend. The next morning you wake up and must collect your possessions while avoiding the oncoming arrows, lances, tomahawks, snakes, cacti and Indians.

The game is based upon a number of different screens. On each one you must collect a different article before you may continue onto the next. The background graphics are good although the foreground moving characters could do with a little more attention to detail — it's a pity they spoil the game.

One of the features that the game boasts is speech. Every now and again it keeps stopping play and saying something such as "Wild Indians". For some reason I cannot understand most of the words that it comes out with — perhaps I'm getting old and deaf! After a while you will get sick of listening to it and turn the sound down anyway so I don't suppose that this is much of a bad point.

I found the game was quite playable and despite all of the wrong key pressing and attempts to crash the program I will have to announce that it is bug-free.

The cassette cover claims fast loading of the program. I did not find it any faster than normal and it certainly did not use any special turbo-loader. Loading was not very reliable either.

Hacker 2,000

The scenario for this adventure, set in the year AD2,000, is that with your computer and RS232 interface lead, you have tapped into a broken data line, in an attempt to find and change your brain scan file. This will prevent the "thought police" catching you. However, penetrating the security system of the multivax computer is a difficult and complex task.

Loading was difficult as there was a glitch right through the tape and data blocks had to be obtained from both sides to achieve a load. The loading is accompanied by a rather weird rendering of Gustav Holst's "Mars". Very dramatic music to set the scene.

The usual adventure features are present, including a save game option. However, as one might expect, HELP is not provided. Interpretation of human input is limited to one or two words, the usual abbreviations applying.

I got in there hacking and managed to locate Rover V, an errant robot intent on blowing up multivax's EPROMs. He was quite useful until we encountered a security droid intent on blowing us up. This he achieved with consummate ease, exterminating Rover V and sending a high voltage surge down the line, killing me too!

In summary, I liked the concept of this adventure and the presentation created quite a dramatic atmosphere. The plot is a refreshing change from myth and magic. **M.B.**

BBC

The Train Game

When loading, the program draws a random railway track layout, together with a few stations, trees and an engine shed. This procedure takes some considerable time and I suspect after several games, the fascination of seeing the computer feel its way around would be lost.

You start with one train which you have to control by changing points, stopping and reversing, with the objective of collecting passengers at one station and delivering them to another. In this way, you collect fares and make a profit, unless you happen to crash into the points when they are against you.

Just when you are finding things easy, another train is released from the shed and you must control them both. Other hazards to contend with are crashing into your own trains, running out of coal and demon trains. It's only a matter of time before panic sets in and there's an almighty crash.

The graphics are fair, coupled with a nice "chuff chuff" sound as the locos move round the track and the idea of the game is relatively novel. It is a multi-screen game, with an increasing degree of difficulty. If you've always wanted to be a train driver, here's your chance. **M.B.**

BBC

Fatty Henry

With the limited ROM in the unexpanded VIC-20, it is quite a problem to create a game which is both novel and testing. This game appears to fill this role easily.

The scenario is rather bizarre. You play an octopus who is earmarked as the main course at a restaurant. You are dumped in an oven and must put out the flames at the bottom of the oven before the temperature reaches 100 degrees.

You do this by collecting droplets of condensation from the top of the oven and dropping them on the flames. Your efforts are impeded by pieces of flying food debris and a dog called Fatty Henry.

Collisions with flames, food or Henry cost you a life. There are a range of ovens with different layouts and hazards to complete.

The graphics are quite splendid with multicolour chunky figures. The octopus and Fatty Henry are built up from several characters to give pseudo sprites. The effect is enhanced with some reasonable animation.

Overall this is a challenging game which is colourful and quite a reasonable achievement on an unexpanded VIC. **A.W.**

DFM Database and Labels

With these two well documented programs for the storing of data and printing of labels you can use your Amstrad as a filing cabinet, to store names, addresses, products, catalogues etc, as you choose. The machine holds one file at a time, each sheet in the file is a record, and each line in the record is a field. Via a series of menus, you declare your file structure, stating how many fields, and their size. DFM then tells you how many records can be accommodated. If you OK this, you then decide how you want the info presented on screen and printer, then enter the data.

You may then sort the file in alphabetical or ascending numerical order and retrieve the file you want using any field. Data can be saved to tape (there's no provision for discs) and loaded into the second program for label printing, in addition to presentation on screen.

The obvious comparison is Masterfile 464, which is £10 more, and which holds much more data, has many more facilities, and is easily transferred to disc. DFM is well written, but given modest programming skill, you could write it yourself. At £6.95 it would be worth having just to see how a database works, however, any serious user would be well advised to go for Masterfile. In the long run, it will save you time, temper and money if you buy the one which meets all your needs, present and future. **D.M.**

NONTERRAQUEOUS

Nonterraqueous

The aim is to guide the "seeker" through the insides of a mountain and destroy the base of an evil, tyrannical computer. Mastertronic say there are over 1000 screens to search.

Instead of a set amount of lives you are given a psyche level, the game ends when the level falls to zero. Colliding with an alien or the room-surround will reduce your psyche. In some rooms there is an object which boosts your psyche level, but some give you "decayed" psyche which is fatal. You can also die by running into a proton thruster, which is a white vertical line gradually increasing and decreasing in length.

Graphics are smooth and the three different rooms are much of a muchness since there are only a few static objects present in each and the same object can be found in many rooms.

Kempston, Protek and Sinclair joystick interfaces can be used, the keys are well chosen but cannot be redefined. Instructions are reasonable though there is little relation of the plot to the game.

In most rooms it is easy to avoid the proton thruster, provided you concentrate, but the different problems give the game its appeal — these include finding bombs to blow up force fields and obtaining fuel to power a rocket to take you through a gas room.

Once you have solved a problem the game seems easy — until the next is encountered, making Nonterraqueous a compulsive game and an excellent buy.

SPECTRUM

LIVE OUT YOUR DREAMS

ON THE

SOUTHERN BELLE

The Southern Belle

This is pretty amazing. It's a simulation of the London—Brighton run on a 1930's steam engine, and is possibly the most complex (and presumably realistic) simulations I've yet seen.

The screen display presents you with a view from the driver's position, and the landscape as you travel along the line is displayed using line-vector graphics. You have a time-table to keep to, and the various stations along your route, and major landmarks (tunnels and bridges etc.) make up the landscape graphics. These moving graphics are a little jerky, but very detailed, and the way that they seem to grow larger as you draw nearer is nicely done.

Controlling the train can be as simple or as complicated as you want, as there are an enormous range of control/difficulty options for you to choose from. You can, for instance, start off on a simple training run, during which you only have to worry about the brakes and a couple of simple controls, or you can go the whole hog and take total control of the train in a variety of conditions. This means that you can start off simply, but as you become more skilled, the game can become more difficult so that it will continue to present a challenge for some time to come.

It's difficult to do justice to such a richly complex game in a short review — it's probably for the arcade enthusiast, but if you are the kind of person attracted to the complexities of simulations, then I should think that this is a must.

SPECTRUM

Thing on a Spring

This is one of those games that are so addictive you cannot resist playing. On loading a nicely animated title page is displayed with a rather catchy tune playing in the background. You may start the game from here and use either the keyboard or the joysticks to play — the keys being totally user definable. There is also an option that will let you turn off/on the music and keep the special effects that are used in the game.

Your objective is to move Thing On A String through the factories and collect the nine pieces of a jigsaw. In the factories there are sinking floors, lifts, slides, etc. Wandering around are various strange objects that will drain your oil at a rapid rate. If your oil level gets too low then your spring will seize up and the game will inevitably end.

Between the screens there is a network of tunnels through which you must pass, in these you will find more oil draining creatures and obstacles in your way. At this stage you may also look at the jigsaw that you have so far completed.

The graphics are of an excellent quality; smooth scrolling, bright colours and imaginative designs have been used. To add variety to the game each screen contains different colours, designs and shapes each time you play.

Unfortunately the instructions are rather brief and lacking in detail. Apart from this it is an excellent game that I would strongly recommend.

Chinese Patience

You must pit your wits against the computer, in a desperate bid to get rid of all your cards. The winner scores points equal to the number of cards left in the loser's hand.

Each player is given 22 cards, the aces are used to start piles in which cards must be placed in suits in ascending order. The remaining four each form the start of piles in which cards must be placed in descending order with alternate colours.

You may twist the top card from your deck onto your discard pile, but you may only twist again in the same turn if you have moved the first "twisted card". As well as moving your own cards you can transfer cards from one pile to another to make space, and you can transfer a card to your opponents pile if it's in the same suit and of value immediately above or below the top card.

The computer moves quickly, although the card placing from stack to stack does. The beep signalling the movement of cards can get irritating, a different tone announces the end of the computer's move — so you can switch over to watch television while waiting! Another annoying feature is that you can type in your commands too quickly for the computer to understand.

To succeed — remembering to make all possible moves isn't enough — luck is essential! Nevertheless, "Chinese Patience" is an ideal choice if you enjoy trying your hand at cards.

3B OR NOT 3B

John Daddy put Voltmace's BBC joystick through its paces so read on and find out what he thinks!

Delta 3b Single Joystick (MK11)

Up until this morning's post arrived I had never been a very keen user of joysticks and felt much more comfortable using a keyboard to zap nasties or draw pictures, but today I had to revise my opinion.

Having used sniffer dogs and X-rays to check out a mysterious parcel left on my doorstep I finally unwrapped a Voltmace Delta 3b joystick and immediately fell in love with it. All together now, — ah!

The Voltmace Delta 3b has an uncluttered modern design

and the workmanship, (sorry! workpersonship), was excellent, both inside and out which gave it a precise and positive feeling. Another plus for me was the small joystick which could be held with finger and thumb, unlike many joysticks which feel like car gear levers. Being very patriotic, I was also delighted to see that it was British made.

The joystick casing is made from nylon and should be almost indestructable. The shaft is steel set in a ball and socket joint which actuates two firmly positioned potentiometers set at right angles to each

other, one for sensing the left to right movement and the other for sensing the up and down movement of the joystick. It has a strong and very quick self-centring action which is obtained by a simple mechanism actuated by four small springs.

The potentiometers produce an analogue signal which represents the position of the joystick and if it wasn't for the strength of the springs, which make it difficult to hold the position of the cursor on the screen, the Delta 3b would be an ideal choice for graphics software control.

In the top panel of the case, just below the joystick, there are two red buttons which act as fire buttons and below these is set a further green button. Pressing these buttons in different sequences, and checking the value of ADVAL(0)

AND 3, the following readings can be obtained.

No buttons pressed — ADVAL 0 AND 3 = 0
 Either one of the red buttons pressed — ADVAL 0 AND 3 = 1
 The green button pressed — ADVAL 0 AND 3 = 2

The horizontal position of the joystick can be read from ADVAL 1 or ADVAL 3.

The vertical position of the joystick can be read from ADVAL 2 or ADVAL 4.

This gives the user the opportunity to write software which will enable the keyboard key functions in games to be controlled by the joystick keys and should save games players much of the frustration of searching for the correct key on the keyboard at some desperate point in a game.

The two fire buttons, positioned at either side of the top face of the case, make this joystick an ideal choice for left handers. Designers often condemn left handed people to a

life of "Cross Hand Boogy", and not only joystick designers.

For lazy programmers Voltmace produce a joystick utility which will convert some non joystick games to work with twin or single joysticks. The instructions for the joystick suggests that the software is user friendly and says that it will work with single or twin joysticks, but unfortunately this tape was not sent for review along with the unit. The program is said to allow any key function to be replaced by the joystick direction, and its sensitivity can be altered, so

that the amount of movement required to simulate a key press can be changed.

Also included is a rapid fire feature which enables a continually depressed key to simulate repeated pressing of the fire button; a boon to games players like myself who are often so absorbed in trying to position the source of the projectile that they forget to pull the trigger.

The Delta 3b will run any Acornsoft, or Acornsoft compatible, software written for a single joystick or games which do not require players to use a joystick each. For games which do require both players to play at once a Delta 3b twin is available. It is compatible with BBC machines fitted with the A/D interface, or Electrons fitted with a Plus 1 interface.

Overall I was very impressed with this unit and it is especially good value for money. A one year guarantee is given against faulty workmanship or parts

but I don't think Voltmace will have to worry about many dissatisfied customers knocking at their doors. Some joysticks I have tested have been badly engineered and inaccurate but this Voltmace product is well engineered in all respects and should prove to be very reliable.

BEGINNING MACHINE CODE

Using your bits of your bytes as flags is the subject of this week's machine code tutorial from Diana and Colin Smith

This week we are going to cover those Z80 instructions which allow us to manipulate the eight bits which make up each byte.

The simplest are the BIT, SET and RES instructions which are used to test, set or reset a bit (0-7) of the A, B, C, D, E, H or L registers or (HL).

BIT 0,A tests bit zero of the A register. If the bit is *reset* (0), the flag will be *set*. However, if the bit is *set* (1), the zero flag will be *reset*. The BIT instruction is therefore normally followed by a conditional instruction like JR Z,n.

The SET instruction ensures that a stipulated bit is *set* and likewise RES ensures that a stipulated bit is *reset*.

e.g. SET 3,A
RES 5,A

You can use these instructions to create your own "flags". Reserve a byte at an address held in the HL register pair. The eight bits of that byte can now be used as separate flags in your own routines. They could indicate that a figure had jumped, fallen, turned around or run off with the girl next door!

The BIT instruction is often used when reading the keyboard to check which particular key has been pressed. We will see an example of this in the next article, when we cover the machine code IN instruction. In the meantime, you may like to read up about the BASIC IN instruction in your Spectrum manual.

The rest of this week's article is devoted to the rotation and shift instructions. These are used to move the bits of a byte and all the examples we will cover also involve the carry flag.

These instructions operate on the single registers and (HL). Listing 1 is a short routine to produce the mirror image of a character, in this case, a reversed "B".

Listing 1

30000	LD	HL,65376	33

			2
30021	CALL	5633	205
			1
			22
30024	LD	A,145	62
			145
30026	RST	16	215
30027	RET		201

The routine uses two rotation instructions which allow us to use the carry flag to transfer information from one byte to another. Refer to Fig.1 which should make the following explanation clearer.

HL is loaded with the address of the first byte of Graphic B — 65376 for the 48K Spectrum. For eight bytes of the character, the A register is set to zero by

XOR A and we enter the second loop. The instruction RRC (HL), (Rotate Right with Carry, the byte addressed by HL) takes bit 0 of the byte addressed by HL and copies it to the carry flag. All the bits move one place to the right with the original value of bit 0 going to bit 7.

The instruction RLA, (Rotate Left the A register) copies the value of the carry

Listing 2

30000	LD	HL,16384	33
			0
			64
30003	LD	B,192	6
			192
30005 L1	PUSH	BC	197
30006	AND	A	167
30007	LD	B,32	6
			32
30009 L2	RR	(HL)	203
			30
30011	INC	HL	35
30012	DJNZ	L2	16
			251
30014	POP	BC	193
30015	DJNZ	L1	16
			244
30017	RET		201

flag to bit 0 of A, moves all the bits one place to the left and the original value of bit 7 goes to the carry flag.

After eight such repetitions, the byte addressed by HL has regained its original form and the A register contains its mirror image. The LD (HL),A instruction replaces the original form of the byte with its mirror image and INC HL moves us on to the next byte.

If you are feeling adventurous, you could modify the code so that the mirror image is transferred to another User Defined Graphic character. The remaining code tells the Spectrum to print the new Graphic B on the screen.

Use an assembler or the loader program given in the first article of this series to load the code of Listing 1, starting at address 30000. Run the routine with RAND USR 30000 to see your reversed Graphic B.

As you might expect by now, the Z80 instruction set also provides instructions which work in the opposite direction to the two used in our example. Fig.2 shows the RLC (Rotate Left with Carry) and the RR (Rotate Right) instructions which complement, respectively, the RRC and RL instructions in the example given.

As a bonus, Listing 2 provides a routine to scroll the screen one pixel to the right. Print something on the screen, then try calling the routine with the Basic line

```
FOR n=1 TO 256: RAND USR 30000: NEXT n
```

You should be able to understand how the routine works for yourself by now. Note that 16384 is the first byte of screen memory.

To finish off, we will look at two shift instructions. SLA or Shift Left moves all the bits one place to the left with bit 0 being reset and the original bit 7 going to the carry flag. This has the effect of multiplying the byte value by two, provided there is no overflow to the carry flag, i.e. the original number was less than 128.

SRL or Shift Right Logical moves all the bits one place to the right with the original bit 0 going to the carry flag. Bit 7 is reset and this has the effect of halving the original byte value.

These instructions are illustrated in Fig.3.

In the next article we will look at the IN's and OUT's of machine code or reading the keyboard and driving the loud-speaker with machine code routines.

Fig. 3. Shift instructions SLA and SRL

BEEZY BEE

*There just might be a sting in the tail
in this family-fun game from Andi
Cowley for the Spectrum*

In this Spectrum game Bert the bee has to avoid the gardener in order to go about his daily buzziness of collecting nectar.

Bert can be controlled either by joystick or by using the keyboard — Q=up, A=down, O=left, P=right. There is a hi-score table so you can keep your own pollen-count whilst making sure the gardener ain't misbeehivin'.

How it works

0 save
2-4 initialisation of variables
5 gosub for menu
10 initialisation of variables (controls)
15 set timer
16-25 set up screen
30 gosub for controls
40 change level
800-910 joystick control routine
900-990 keyboard control routine
1000-1010 end of game
1015-1110 input/view highest three scores
8500-8740 instructions

REVIEW

MUROM

For the BBC Micro

BEBUG
SOFT

Dave Reeder lends an ear to music on the BBC with Beebug's MUROM. Read on to find out why he was impressed

In common with most Beeb users, I've never really come to terms with its music capabilities. The variety and depth of its sound channels and parameters mean that even moderately complex musical arrangements can reduce the average user to a state of gibbering insensibility all too quickly.

All of which is to say the least, a waste. As tools to be exploited, the SOUND and ENVELOPE commands deserve special notice, and an ever-increasing number of music add-ons, such as the MIDI explosion, compete for our attention and our money.

Enter Beebug — with MUROM and a promise that with it, you will be able to exploit the Beeb's sound potential to the full. The package itself looks promising — an 8K ROM (version 1.20 under review), a demo cassette of music data files, a quick summary function card and yet another function key strip to misplace.

So, to work! Two minutes with a screwdriver and the ROM's in place, ready to be called from within BASIC (note that there is a possibility of workspace corruption if called from another language) with one of four possible variations of the command SCORE, or directly by MUROM.

The Editor

Calling MUROM defaults to the Music Editor (a cold start) with 4K of memory reserved above the existing page — this allows up to 341 notes per channel, but the workspace area can be easily altered if you wish. The initial screen display is clearly laid out: four channels, note numbers and a selection of

toggle displays between horizontal or vertical editing modes, playback status and note entry details. Virtually every command can be entered with either a single keypress or combination of Shift, Control and Keypress.

The four channels (three music and one white sound) can be filled with notes using the cursor keys and, although rests are entered automatically, there is no bar entry. A simple colour marking of every eighth note helps though as bars are usually four, eight or 16 beats. Each note can be entered by channel (0-3), octave (0-5), envelope (1-16) and length. The editor's ease of use is amazing once the basic techniques are grasped. The music entry becomes fast and accurate — especially with copy techniques, transposing modes, optional harmonies, letter or keyboard entry and so on. Music data can also be loaded to and from disc or cassette.

Star Commands

As well as *SCORE mentioned above, there are a variety of star commands which can be used outside MUROM (as long as the ROM is present in the machine!):

***PLAY** — This obviously plays the data you have entered, but is interrupt driven so that you can hear your masterpiece whilst running a program, printing or even loading from cassette.

***TEMPO** — 15 tempos are available and the speed of music playback can be changed even whilst music is playing!

***HARM** — Not a true harmony, but this does produce quite a pleasing effect and is especially useful in providing a basis for your own more precise harmonies.

***MUTE** — Instant stop to any music playing.

***MONO/*COLOUR** — The Music Editor can be in either colour or monochrome, depending on your TV/monitor,

Envelope Editor

The other main part of the utility is a display enabling you to define up to 16 envelopes. Again, the editing is simple — it needs to be! As you'll know, the following parameters of the Beeb's envelopes can be defined: Attack, Decay, Sustain, Release, Level and Decay Level, with possible value ranges of 0 to 127. Anything that simplifies such a complex system is to be welcomed, and when it is as clear as MUROM's display, it is doubly so.

MUROM also includes a selection of pre-defined envelopes (*PIANO, *FLUTE, *DRUM, and others which can be used both in your own programs and within the Music Editor. And, to complete the package, a range of instant sound effects for game use such as *ZAP (spaceship laser) or *TRIM (trim phone).

Getting Technical

The demo tape included in the utility shows in 11 selections just how effective the Beeb's music capability can be, from Bach's "Anna Magdalena" to Madness' "My Girl"! My litmus test for music packages is to try and key in Scott Joplin's "The Entertainer" (theme from "The Sting") — usually I collapse in despair but MUROM handled it like a dream. Its 10 note value and five octave range (two octaves either side of middle C) made light work of multi-octave syncopation.

In short, this is an excellent utility. I recommend it highly, but with one small word of caution — the more you understand and can read music, the more you'll get out of MUROM. Well done, Beebug!

Here is a handy guide to making music on all the popular home computers. This table gives the equivalent values of a note for the Spectrum, Amstrad, BBC/Oric/Atmos, Commodore 64, computers. If you see a program containing a tune for another computer, in Home Computing Weekly or anywhere else, then with this guide you can convert that tune to play on your own machine.

BBC GAME

There's only one survivor after this gun duel to the finish. The loser books in permanently at the underground hotel on Boot Hill. So sit down for a showdown with Stephen Gray's game for the BBC

BOOT HILL

Play the roles of Buffalo Bill and Big Bad Tom in this western shootout game for two players. The first gunfighter to score five hits wins the game and is declared the greatest gunslinger in the West.

Controls

Bill up — caps lock, down — shift lock, fire — Z
Tom up — return, down — delete, fire — /

Variables

B% hits by Bill
T% hits by Tom
H has someone been hit?
BY% Bill's y coordinate
MY% Bill's last y coordinate
J% has anyone moved?
BF% has Bill fired?

Programs are always supplied on cassette and are accompanied by full details of the program variables, how the program works and any hints on conversion you can offer. Please type these details double spaced. Listings are helpful but not essential. What is vital is that the programs should be completely error free, so please double check.

Always use a coupon firmly fixed to the back of your envelope, and fully complete and enclose the cassette inlay card.

We are particularly interested in programs with less than 100 actual lines of BASIC. All submissions are acknowledged.

Send your programs to HCW!

Use this cassette inlay card for your program

EDUCATION

Choosing educational software for use in the home is John Henderson's subject this week. Read on and you will know what to look for in future

Sometimes the only clue available to help parents in choosing software for their children to learn at home is the label *educational*. There is so much to choose from whatever the make of computer, yet often educational software bears little resemblance to what children are doing in schools. What should parents look for?

Well, start by thinking of the micro itself. How is it changing our lives by our involvement with it? It is creating changes in the way our children learn and this is the first clue to choosing software.

Look at the software before buying. If it seems to be the kind of drill and practice type exercise that was abundant in

our school days, the chances are that children will become quickly bored in the same way that we did. Hardly the best way to use new technology, which naturally motivates children. If you find the learning boring, children will too — using the micro should add a new dimension to learning enabling children to think more for themselves.

Allow younger children, especially, time to explore situations and extend themselves. Many shops now have facilities for previewing software, if not ask if it can be returned or exchanged after viewing at home (no copying of course).

When choosing a micro, fac-

tors such as range of colours available, sound options, peripheral ports etc. probably figure high on the list. Look then to see if software uses sound and colour effectively or merely to jazz up a poor program. Most educational programs use few space-invader type graphics or sound, but there are notable exceptions such as **NUMBER CHASER** from ASK. Colour can be particularly helpful to draw the attention of children to certain words on the screen, as can letters printed in double-height text. Above all the **screen display should be clear** to help children understand what is going on.

Program loading times can be important, especially with cassette users. Better publishers indicate clearly in their loading directions the length of time required to load. They also supply a duplicate copy of the program on the other side of the cassette in case of loading difficulties. This leads us to another clue to success — **the publishers name**.

Most reputable publishers want to protect the quality of their products and reject work that is below their own stan-

dards. Look for publishers who explain aims behind their programs and any add-ons that are required. Support materials and documentation illustrate the thought that has gone into developing a program. Spelling mistakes in documentation or the actual program often occur in poor programs. The inclusion of actual screen illustrations within their booklets is a good sign to look for. When you find a program that is successful at home, look for others from the same stable as a quick guide to quality.

Having loaded the software the next best thing to do is **annoy the program**. By this I mean make deliberate errors to see how the program handles mistakes. If you are asked to input a number, try to input a letter. Press W instead of A, answer NO instead of YES, or press ESCAPE to see what happens and how the program reacts.

A good program will always have some form of help page that the user can refer to and will, in some cases, actually direct the learning pattern. Children finding difficulties expect more help than a loud noise and a screen message showing a tick or a cross. Programs bearing a scoring system are often poor, emphasising competition in favour of education when the two can happily assist each other. Good drill and practice programs should have variable skill levels with lowest numbers for lowest skills, a record page to give some form of feedback, and a help section which shows clearly what is happening if children are making mistakes.

Learning to cope with mistakes takes a long time. The micro provides an ideal opportunity to make learning fun. The infinite patience of the machine coupled with speed and range of responses give our children opportunities that have never before been available. Disastrous software can throw away all the advantages and reduce the micro to an impersonal teaching machine.

Choosing software is often related to personal choice, but try to make these choices informed ones by seeing how others react. Educational programs for groups of children need groups of children to prove their value. Inviting friends around to play can

benefit your children (even if the noise level rises). The real key to choosing successful educational software is a dual involvement between parents and children.

Let's look at one suite of programs for infant children that are effective and enjoyable (even adults enjoy these). Adventure Playground is a suite of two programs based on nursery rhymes.

In Queen of Hearts, the screen display is split into two clear parts — the top half presents the graphics and the bottom half the text, which is a mixture of upper and lower case letters. Children are given clear information on which to act. They are told which exits are available to them using standard formats of N, S, E or W. YOU CAN SEE and YOU HAVE help to instil a picture in the minds of the children showing exactly which options are open to them.

Travellers in this magical world are allowed to carry only two objects at a time. This may seem small compared to other adventure programs, but is ample for younger children to cope with.

Using SWAP, TAKE and LEAVE allows plenty of flexibility with only a few words to learn to read. In fact, the whole aim of the program is to give confidence to young children. Many of us have dreamt of entering Aladdin's Cave, or taking the Yellow Brick Road to the enchanted wood. In Queen of Hearts it all comes alive in a meaningful way. As children collect and use the spider to frighten Miss Muffet, the proceed along an imaginative path full of intrigue.

Children particularly enjoy the friendly messages contained in the program. If travellers need to re-trace their steps, messages such as THE LAST TIME YOU CAME HERE YOU DRANK SOME MILK appear as reminders before the journey continues, all of which helps users to become familiar with the planned route.

After battling with wands, books, clocks and broomsticks to name but a few, the object of this adventure is to take the tarts to the Queen who lives in the castle. If you arrive without the tarts, the Queen is quite naturally upset. However, your problems may still not be over if you have the tarts, as the knave

is likely to steal them. What is worse, the wicked magician has jumbled up the route of your journey and the exploration must begin again.

What makes this so special and one of the best pieces of infant software on the market?

1. The stories have a natural appeal to the children as they are based on well-known rhymes.
2. The number of commands to be learnt is small — seven in all. This also means less typing.
3. The superb graphics are colourful and relevant to the adventure.
4. Care has been taken to disable the escape key.
5. In the documentation there is a clear directive for parents and children to use the programs together for the first time. This enables a realistic discussion of the possibilities. Having done this, the situations within the story are changed by the computer and the child embarks on a journey which, although meeting some familiar characters, is full of new adventures.

Crooked Adventure is a set of four games based on the poem THERE WAS A CROOKED MAN and the aim is to get the crooked man and his crooked cat and the crooked mouse to the crooked house. Sounds easy, but there are a few surprises on the way.

At the beginning music plays and the nursery rhyme is displayed on the screen. The beauty of this program is that it can be driven with any one key from the keyboard. In reality, the ARROW KEYS and BREAK pose problems. However this is particularly helpful for children with limited reading/manipulative skills. Even ESCAPE allows them to carry on.

Game one involves the crooked man in search of the crooked stile. Movement is by choosing one of four ways, and extra moves are gained by choosing the correct shape to complete the puzzle. On the way it is advantageous to collect as many of the three pairs of glasses hidden on the screen as possible, so that you can see your way to completing the trail.

Game two, the crooked sixpence, involves searching for hidden keys by matching the colours of pairs of trees. Game three is a simple chase game — the crooked cat has to catch the crooked mouse. Finally in game

four, all three have to get to the crooked house being careful not to fall down the traps.

Only when all three are in the house can children try the keys they have collected (up to five) to see if they can open the door. Thus the excitement is maintained to the very end, and very little reading skill is required. The real learning medium here is the discussion that goes on whilst the program is running.

Value for money does not necessarily mean the cheapest programs available. There is a plentiful supply of expensive rubbish on the educational scene. Reviews can be helpful, but the most effective strategy is to spend a long time looking at the software in the shop with the children who are going to use it, or to ask local teachers what is being used in schools.

Most teachers would be only too glad to supply help where necessary. Start by working through the programs with children so at least you are aware of some of the situations users are likely to meet and can talk about the results at the end of a computer session. The most effective judges are the children themselves — software that they keep going back to is a clear indication of success for them as individuals. For a final quick checklist, here are some golden rules:

1. **Look** before you buy.
2. Is the screen display clear?
3. Are colours and/or sound used effectively?
4. Is there a **Help** page always accessible?
5. Do you recognise the name of the publisher?
6. Use the program with your children and learn and talk with them.

BEAT THE CLOCK

There's fun and education in John Wright's Sum-Vaders game for Amstrad CPC464 users

Aimed at the seven to ten age range Sum-Vaders is designed to make a game out of practising your sums against the clock. So get those brains into action but don't forget to keep an eye on the time!

How it works

10-50 initialisation calls
100 timer routine
110-160 controlled user input
165-175 sound sub-routine
180-190 unplotting sub-routine
200-620 main loop
700-750 compute sum
800-870 new invaders screen
900-910 update players ranking
920 update score
930 update laser power
940 update lives
1000-1100 set up playing screen
2000-2040 initialisation
2500-2660 get players name
3000-3090 title screen
4000-4400 end of game routines

Variables

score, lives, level, name\$ what else?
f, g, h flags
type max length of user input
a\$, b\$, x, y input
gun gun position

inv number of invaders
fire length of laser shot
laser laser position
count number of tries at sum
b, c, d, e sum values/answer
rank\$ name of highest scorer
best\$ name of highest scorer
high high score

BRIGHT SPRITES

In this first part of a new series for C64 owners, Andrew Clarke explains what sprites are, how to put them on screen and which memory locations control them

Sprite graphics on the Commodore 64 are difficult to understand and use but are child's play when you have the necessary knowledge to get them on screen and moving about.

They have several advantages over UDGs in that they are fairly easily defined, quite simple to move and animate, and are far more 'mobile' in that you do not have to go through the continuous routine of moving and rubbing out the old position. They can be imagined as a sheet of plastic placed on the screen which may be defined as you wish and moved at will — rather similar to the technique used by cartoon makers.

Firstly let's get through all the barriers and get a sprite on the screen. Type 'V=53248' and Press RETURN then type 'POKEV+21,1' and press RETURN once again. You have now given the variable V the value of the location of the first register of the 64's graphics chip — the VIC chip. The second instruction simply tells the computer to switch on sprite number 0 — remember they are numbered 0 to 7!

Although you have switched on the sprite nothing should appear on screen yet, simply because you have not positioned it. Type 'POKEV,150' and press RETURN then type 'POKEV+1,150' and press RETURN.

You should now have something on screen. It will not look too exciting because you are looking at an undefined sprite — that is, you have not yet altered it to your needs. If you have nothing on screen try typing these additional instructions — 'POKEV+39,1' and 'POKE2040,199'. Then you ought to have something to see.

The latter two instructions turn the sprite colour to white

and tell the sprite to get its data from block number 199. These are used in case your sprite registers are set differently — for example, the sprite may have been blue (the same colour as the screen) and therefore invisible, or the sprite pointer may have been pointing at a sprite block where no data of any description was present!

For the moment let us discuss 'POKEV,150' and 'POKEV+1,150'. The first deals with sprite zero's X position — if the screen was given an axis horizontally then it would be called the X axis. A vertical axis would be the Y axis and this is programmed by the second instruction.

If you have experience with graphs then imagine the screen as a piece of graph paper with the zeroes of both the axes in the top left corner. The figures after the comma relate to the position on the screen. For experimentation purposes type those instructions again but this time use different figures (from 0 to 255) and you will see the sprite appear in various locations. It is possible that it won't be on screen because the 'sprite screen' is bigger than actual screen which you can view!

This screen is shown in Figure 1. You'll see that the X position

Sprite Pointer Locations

2040	Sprite 0's pointer
2041	Sprite 1's pointer
2042	Sprite 2's pointer
2043	Sprite 3's pointer
2044	Sprite 4's pointer
2045	Sprite 5's pointer
2046	Sprite 6's pointer
2047	Sprite 7's pointer

Table of sprite locations

V = 53248

Location(V)	Numerical	Purpose
V	53248	Sprite 0's X position
V+1	53249	Sprite 0's Y position
V+2	53250	Sprite 1's X position
V+3	53251	Sprite 1's Y position
V+4	53252	Sprite 2's X position
V+5	53253	Sprite 2's Y position
V+6	53254	Sprite 3's X position
V+7	53255	Sprite 3's Y position
V+8	53256	Sprite 4's X position
V+9	53257	Sprite 4's Y position
V+10	53258	Sprite 5's X position
V+11	53259	Sprite 5's Y position
V+12	53260	Sprite 6's X position
V+13	53261	Sprite 6's Y position
V+14	53262	Sprite 7's X position
V+15	53263	Sprite 7's Y position
V+16	53264	Far X position for all sprites
V+17 to V+20	not relevant	
V+21	53269	Turn on sprites
V+23	53271	Expand sprite vertically
V+27	53275	Sprite to background priority
V+28	53276	Switch on multi-colour sprites
V+29	53277	Expand sprite horizontally
V+30	53278	Collision register (sprite to sprite)
V+31	53279	Collision register (sprite to backgrnd)
V+32	53280	Border colour of screen
V+33	53281	Background colour of screen
V+37	53285	Multi-colour 1
V+38	53286	Multi-colour 2
V+39	53287	Sprite 0's colour
V+40	53288	Sprite 1's colour
V+41	53289	Sprite 2's colour
V+42	53290	Sprite 3's colour
V+43	53291	Sprite 4's colour
V+44	53292	Sprite 5's colour
V+45	53293	Sprite 6's colour
V+46	53294	Sprite 7's colour

Figure 2

only extends part of the way across the screen. Do not worry! This is easily overcome. Just POKEV+16 with any one of the following values:

- 1 — Sprite Zero
- 2 — Sprite One
- 4 — Sprite Two
- 8 — Sprite Three
- 16 — Sprite Four
- 32 — Sprite Five
- 64 — Sprite Six
- 128 — Sprite Seven

This will switch the appropriate sprite onto the far X position. To switch more than one sprite add up the values and POKE that in. For example for Sprites One, Three and Four the value is $26 = 2 + 8 + 16 = 16$. You will find that this method is used in most of the registers needed to control sprites — multi colour, expansion etc. — so it is worth remembering.

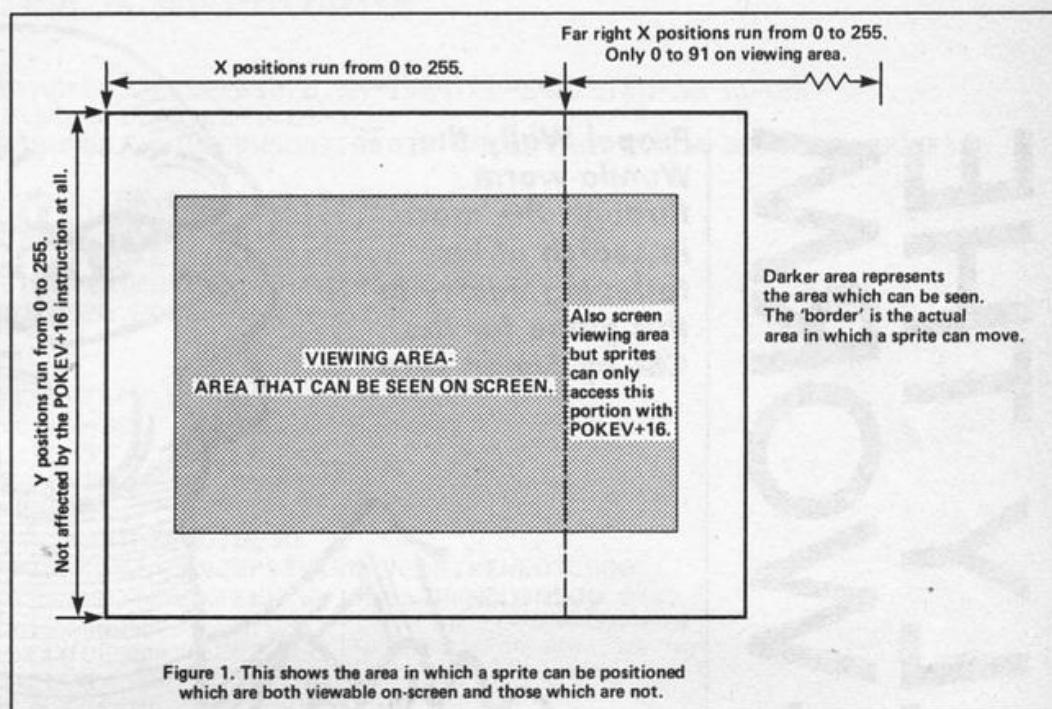

To switch back to the near X position simply omit the value from the total and rePOKE the far X register. You can POKE the X position register with 0 to 255 but only values of 0 to 80 will allow the sprite to be visible.

I suppose before we go much further it would be interesting to have something good to look at. Therefore the following short program will define a sprite. You can have some fun with the sprite pointer register at 2040. Poke it with any value from 0 to 255. You'll notice that lower values will flicker at times — block 2 is generally of this variety.

What you are looking at is the 64's operating system — the living part of the 64 if you like. Higher in memory is the character set and then your own program space. Generally it is best to store sprite data after block 199 — on larger programs use higher locations or switch blocks altogether. The Programmer's Reference Guide will be of great help at this stage.

After running this program you will have a Droid sprite on screen, coloured white. If it isn't white then type 'POKEV+39,1'. This simply tells the VIC chip to colour sprite zero white. To change the colour POKE that location with one of the other figures below:

- 0 — Black
- 1 — White
- 2 — Red
- 3 — Cyan
- 4 — Purple
- 5 — Green

- 6 — Blue
- 7 — Yellow
- 8 — Orange
- 9 — Brown
- 10 — Light Red
- 11 — Gray 1
- 12 — Gray 2
- 13 — Light Green
- 14 — Light Blue
- 15 — Gray 3

You will probably notice that some colours do not come out too well on the blue background. Changing the background colour generally helps but surprise surprise no colour will show up on a screen of an identical colour. If you try to POKE sprite zero blue it will vanish — but it is still there. If you run the cursor past the sprite position you'll see that it hasn't moved, it has just been

camouflaged with the background.

You'll probably wonder what happens if you POKEV+39 with a higher value (16 to 255). Don't expect unlimited colours though the same sixteen are simply repeated. As with most of the locations given here anything over 255 will result in an "illegal quantity error".

As you have probably realised by now getting a sprite actually on screen is easy. You just need to remember your V+21s and the V+39s. It may seem a little difficult at first but if you resolve to have at least half an hour each night at the keyboard they'll become second nature.

Of course, location V+21 is actually value 53269 and V+1 should be 53249 but which do you think you can remember

most easily? I know which one I prefer and I think whoever wrote the CBM 64 Programmer's Reference Guide agrees with me. This is obviously one standard but I'd recommend using it as your own as it makes other people's programs far easier to understand.

Fig. 2 is a complete list of sprite commands using the variable V as the starter location. Included are the numerical equivalents purely for a reference basis. So far I have used sprite zero, but using the information in the chart you can try to get the other sprites on screen too.

As a piece of homework I'd like you in particular to get sprites 1, 2 and 5 on screen. Colour them all yellow and make them all access sprite block 199. Solution next time.

WALLY THE WUNDA-WORM

Propel Wally the Wunda-worm through the maze in search of his fattening quarry in this game for the C64 by Simon Eyre

Unlike most worms who favour a diet of soil, Wally has cultivated a taste for buns and if he can't consume ten he won't be able to progress to the next level of this four screen game where ten more buns await the voracious arthropod. Toadstools which litter his path are deadly and should be wriggled around.

This worm will turn if you press Q to go up, A to go down, O to left and P to go right.

Variables

WM position of worm
CL poke of colour
SR sustain, release
AD attack decay
WA waveform
VO volume
HI hi-frequency
LO low-frequency
LE no of level
LV no of level
KE key check

How it works

10-50 initialise variables
60-125 set screen according to level
130-170 check for key press
180-220 check for collision
230-290 move Wally
500-580 deduct one life
800-840 add one bun to tally
850-940 move up a level
1000-1020 set up level one
1030-2010 set up level two
2020-2040 set up level three
2050-3010 set up level four
3020-3110 end game/restart
4000-5000 print toadstools and buns
5010-5100 set up UDG's
5200-5310 instructions
6000-6060 data for UDG's

A vertical strip of a woodblock print illustration. The top portion shows a hand holding a brush, with the brush tip touching a surface. The bottom portion shows a rounded, textured object, possibly a piece of fabric or a container, with a series of parallel lines indicating its form. The style is characteristic of traditional Japanese woodblock prints.

Programming in BASIC

When you have been involved in computing for several years you tend to forget what it was like to be a raw beginner. Browsing through "Programming in BASIC" brought back memories of those restless nights spent contemplating such earth shattering questions as "What is the difference between numeric and string variables" — we've all been through it.

The book begins at the most elementary level possible, the first program that I encountered was 10 PRINT "END OF CHAPTER ONE" 20 END. As the book is obviously aimed at the absolute beginner, I was puzzled by the next sentence which told the user to save the program to disc. How many absolute beginners have access to a disc drive? Normally by the time you have saved up for your disc system you have progressed far beyond the bounds of this text.

The dialect of BASIC used in the book is APPLE BASIC. Fortunately this is a fairly standard form of the language so conversion of the programs to run on your micro should pose few problems.

At the beginning of the book the authors emphasise that the main aim of the book is not to teach the user to write lines of code. They hope to introduce the user to the concepts of program specification, design, and finally, implementation. These skills are not language specific and should therefore remain useful no matter in which language, or languages you eventually specialise.

The book certainly covered all of the areas that it set out to, but I found the layout to be rather cluttered and some of the explanatory diagrams rather confusing.

Good BASIC Programming with the BBC Microcomputer

The majority of home computer users in the country are self-taught, they have been through the routine of late nights and well-thumbed manuals and emerged at the other end quite capable of writing computer programs which work. It wasn't until I joined a local computer club that I was introduced to the pleasures of good programming. With the release of Margaret White's new book it is possible for newcomers to computing to develop good habits from the beginning, or old hands to see what they have been missing.

The book tackles programming by dividing program production into several logical stages. Having decided upon the specification for your program (i.e. what you want it to do) you are lead into the area of program design. This is dealt with using both flow charts and a generalised form of coding, both of which are used to describe the same program. This generalised coding contains structures that are found in several high level languages e.g. IF ELSEIF ENDIF, CASE ENDCASE, LOOP ENDLOOP. As these are not implemented on the BBC I cannot help feeling that they may lead to some confusion amongst some of the less experienced readers.

The largest part of the book explores BASIC in such a way that it could also be used by owners of other machines.

The book is written using very sound techniques and is an ideal way for the self-taught BASIC programmer to get onto the straight and narrow before it's too late.

BBC

Interfacing and Robotics on the BBC Micro

"Control the running of a power station with your computer!" is one of the slogans that has formed part of the sales claims of many computers in the past. "Interfacing and Robotics on the BBC Micro" may not exactly fulfill this purpose but it provides the necessary knowledge to enable you to free your BBC from the confines of its cream box and begin to control various devices in the real world.

The book tackles the subject in a logical manner, thoughtfully providing a chapter on the theory behind much of the electronics (for dummies like me). It moves on to circuit board design and production, hints and tips on soldering, and finally into the heavy stuff of explaining the various ports on the BBC and projects of varying difficulty. The projects include a graphics digitiser, an X-Y plotter, a robot arm, and finally a computer controlled house!

The book expects the reader to be a competent BASIC programmer and preferably have some knowledge of assembly language. In both cases the programs provided are fully annotated allowing them to be easily understood and therefore modified should the user wish to improve the projects at a later date.

Electronics was a subject that I was never taught at school, and I have never even thought about delving into the hardware side of my BBC computer, yet after reading Mr. Bradley's book I feel excited about the whole idea. The book has been written in such a clear and concise way that it cannot help but instil confidence in the reader.

TOP 20

Compiled by
Gallup

SOFTWARE

Fortnight Ending July 19, 1985

A great deal of movement this week but no new entries.

The top spot has changed again and it will be interesting to see how long the Fist can keep hold of its current position.

Hypersports brings the number of Imagine games in the top 20 to two. I thought that after last years events that would never happen again. Well, you can't be right all the time.

In the lower reaches of the chart we have a number of new entries. Highest of these being the superb graphic game from Quicksilver, Glass.

Other new entries, all below 45, are Graham Gooch's Test Cricket, Spectipede, Dynamite Dan and Subsunk. We will have to wait for another fortnight to see if they can move any higher.

For those who like statistics the longest stayer in the chart this week is Daley Thompson with over 35 weeks in the running. Football Manager has also been there for 35 weeks!

Oric oddments

In your sixth article on BASIC conversion you printed that the oric doesn't have any commands for the loading/saving of basic variables.

Although the Oric-1 hasn't got any commands the Atmos has the following for saving arrays, STORE a\$, "filename" or STORE a, "filename" or STORE a%, "filename".

Store saves the complete array only. For loading of arrays the Atmos has the following, RECALL a\$, "filename" or RECALL a, "filename", or RECALL a%, "filename".

When using RECALL the array must have been dimmed first, eg to RECALL a\$, DIM a\$(x) RECALL a\$, "filename". Where x is the number of how many dimensions the array AS has.

How about a few more software reviews and perhaps a software chart for Oric owners?

D Goodrum, Norwich

We are sorry if we caused any confusion with our conversion chart. The Atmos does have those commands but ORIC 1 doesn't.

With regard to reviews we can only reflect the software market at the moment, if there are no ORIC programs being released we cannot review them!

Whoops

Due to an unexpected error with our Spectrum printer interface the World Flags listing in HCW 121 was printed incorrectly.

The user defined graphics were printed as spaces in lines 6510, 6920, 7020, 7500 and 8620.

So that you may correct your programs we print below the relevant sub-routines and ask that you accept our apologies. The program is worth the time, honest!

Review revival

I would like to put a few points forward about your magazine. I purchased your mag when the new-look edition came out and as I am a TI-99/4A user I've noticed there have only been a few reviews for it since the change round.

There are many new tape games out now and even more cartridges so what is wrong with reviewing games like Zork, 1,2,3 or Hitch-Hikers Guide to the Galaxy? The few programs that you do review are always tapes — not cartridges!

In HCW 119 you wrote about sound for different computers. Why write about sound for the Spectrum which isn't very good at all but leave out the TI which has some of the best sound around? I must say however that your magazine is way ahead of the others when it comes to supporting the TI.

Darran Parker, Giltbrook, Notts

Capital complaint

As a regular reader of HCW I am a little disappointed with the new layout. No one objects to the five-pence price rise but it would appear that all we have in exchange is a great deal more adverts.

I appreciate that you could not exist without advertising, but it gets a bit boring when there is too much. Where are all the London based computer repairers? They don't seem to exist!! All adverts seem to be from firms outside London.

True, it's not your fault but it's time London engineers pulled their fingers out and started advertising for London computer owners in our London based magazine, HCW.

In your reviews it is rarely mentioned if the game is joystick or cursor controlled — or both. Pensioners like myself, who find the hardware too expensive and have problems using a joystick would find this information most helpful.

Software

WD Software

For the QL:—

WD Utilities (3rd ed) (base £5.50)

Print 60-file DiRectory or view it on one screen, one-key LOAD. COPY or PRINT 60 files with one key (allows for namesakes). Multiple FORMATTing to prevent corruption by stretching of tape. TOOLkit to give dated, numbered modules in program development. PRUNE old files to release space (one key DELETES a file). Full instructions in QUILL file. Use up to 6 EXTRA MICRODRIVES (add on your Spectrum ones!)

WD Utilities for CST Q-Discs (base £8)

100-file capacity, for CST/Computamate disc system AND up to 4 extra microdrives. User-friendly timesavers.

RefQL (3rd ed) (base £3)

500 useful QL references in an ARCHIVE file (too long for one cartridge with Utilities and Morse).

For the Spectrum/QL/BBC

WD Morse Tutor (base £4)

From absolute beginner to beyond RYA and Amateur Radio receiving. Adjust pitch. Set speed to your test level (4-18 wpm). Learn from single characters, via groups with wide spaces to random sentences; decrease spacing to normal. Write down what you hear, then CHECK on Screen or Printer (or speech for Spectrum with Currah MicroSpeech). Also own message, random figures, letters or mixed.

For Spectrum 48K

Tradewind (base £4)

Sailing/trading strategy game with graphic surprises.

Jersey Quest (base £4)

Text adventure with Bergerac and the Dragon (not disc).

PRICES (incl Europe postage — elsewhere add £1)

Spectrum/BBC cassettes — base price only

QL or Spectrum Microdrives — £2.00/cartridge plus base price

5¼" Floppies, £2; 3½" Floppies, £5 (please state format wanted).

Two or more programs on one medium — pay medium + base. e.g. WD Utilities and RefQL for £10.50, but IMPOSSIBLE to mix QL/BBC/Spectrum programs on one medium. Send YOUR cartridge and pay base price but FORMATTed it FIRST in your DRIVE 1 compatibility.

**Immerse yourself in Mastertronic info
by taking up our discount offer for
membership of the new Tronix club**

Mastertronic, the budget
software label, has
recently launched a
new club for all its fans and in a
unique offer for HCW readers
we can give you a discount on
the membership fee.

Members of the club will
receive a quarterly club
magazine called Tronix, packed
full of interesting contents for
computer fans. For example the
first issue will feature full
details, photos and reviews of
the new Mastertronic titles,
including Nonterraqueous and
Clumsy Colin.

There will be a full length
story in each magazine and the
chance to enter interesting
competitions. The prize in the
first competition is a full set of
Mastertronic titles for your
machine and the chance to win
a royalty contract. In case you
hadn't already guessed, all you
have to do is design an original
game idea for a new
Mastertronic title.

Added to all this there will be
readers letters, jokes and
puzzles. In all it looks very
similar to HCW but only

quarterly!

Each new member will also
receive a free Tronix badge and
a free Tronix pen in their
membership pack.

There is one other free gift,
and we have saved the best until
last! Each new member can
choose one Mastertronic title,
from the full list, as a free gift.
This means that your member-
ship of the club costs you
nothing, Mastertronic games
themselves sell for £1.99 in the
shops.

In all, club membership at
£1.99 would be a bargain but
with our exclusive special offer
we can give you a discount of
50p making the whole package
just £1.49, even less than the
cost of a Mastertronic game.

All you have to do to take
advantage of this offer is follow
the instructions on the coupon
and then you can look forward
to the postman staggering up
the drive with your new
members pack. Orders can only
be accepted, at this rate, with
the original coupon from
HCW, photocopies cannot be
accepted.

HOME COMPUTERS

Before I sell it, it wants to know if it's going to a good home.

Nottingham obviously has some very interesting computer games (and stores) if this press cutting from Tim Love is anything to go by!

Balancing Act

How many triangles are needed to make the third pair of scales balance?

Reader's hi-score table

Name	Game	Machine	Score
James Donnan	Chuckie Egg	BBC	519,160 (level 38)
	Pole Position	BBC	112,570 (lap 8)
Shaun Lowe	Bruce Lee	Spectrum	547,450
Glenn Gilney	Bruce Lee	Spectrum	246,175
Mark Grove	Zaxxon	C64	53,100
	Pole Position	C64	89,480
	Pooyan	C64	104,250
	Breakdance	C64	3,917
	Theatre Europe	C64	96%

Helpline

Here are some more Staff of Karnath hints from Ian Longdon of Hinckley for the C64 version.

To get the piece of the pentacle in the library, shoot it with the yercbors spell and the skeleton won't appear. In the store room, shoot the spider with the Ibrahim spell.

A ting will sound, so rush through the kitchen to the store room and the piece will be on the floor. In the morning room, shoot the plant pot on the table a few times with the Ibrahim spell from the left hand door.

The piece in the Timeless room is obtained by shooting the carpet with the Throbin spell, and then acting quickly. The serpent can be levitated using the Knossos spell.

From the heart of Texas

I would like to congratulate you on a great magazine. I wonder if you could please help me and my friends who all own TI-99/4A's. All we ask is could you please answer these questions.

Are Pyramid from Mogul and Wheeler Dealer from Mr Chips Software Basic or Extended Basic? Can I order direct from these companies?

If you could help us it will be so good, not just for us but for other TI owners.

Keep up the good work and thank you for supporting the good old TI-99/4A computer.

A McIntyre, Newport

Contacts

Manchester now has its very own Amstrad Users Club offering a monthly newsletter, computer pen pals, a software library and many more services for Amstrad owners. For further details write to:

All night Chuckie Egg

I have just read about your egg addict, Stephen Doherty, in HCW 116, and I decided to write and tell you about my efforts, although it's a long time since I passed level 132. Last Christmas, my brother received Chuckie Egg from my parents and during most of the holidays my brother, father, sister and I were up until about 2 am playing the game, sometimes even all night.

My mother abandoned us at 11 pm. At the end of all this, father reached level 15, my brother got to level 21, my sister level 26 and I made it to 46 with a score of 400,000 and several empty coffee mugs.

The worst level so far seems to be level 32, the bug duck keeps getting me! After that the geese and ducks just seem to be getting faster and faster and now they tell me that Chuckie Egg 2 has come out. Is there no end in sight for my bruised fingers?

To relieve my misery I have written this letter to you, if only to get a female name on the high score table.

Lucy Bird, Kenton
