Acorn steals Atari's thunder

Acorn launched the successor to the BBC B+ at last week's PCW show at Olympia.

The new machine offering 128K with a full 64K available to BASIC will retail at £499. Known simply as the B+128K it is aimed at the serious home user and the small business market. With an eye to business applications the micro has greater data processing power for bigger spreadsheets, larger database, 20K screen and 64K RAM usable by BASIC.

Atari put the 520ST on public view for the first time at PCW. In the lead up to the show, Atari's Sales and Marketing manager Rob Harding commented that the £749.99 machine will be "the natural successor to the BBC Model B."

The BBC

With Acorn now fielding their own potential heir to the machine that has now sold over 500,000 units it remains to be seen if Rob Harding's prediction comes true.

The first book on the Atari ST, called the Atari ST Companion by Jeremy Vine, was also launched at PCW.

The Commodore Amiga made a largely unheralded British debut on Metacomco's stand demonstrating the Bristol based company's software packages. The Amiga, introduced in America in July, has still not been given an official launch date in this country.

Being demonstrated for the first time in Western Europe were Bee Cards, credit card sized modules with up to 256K memory.

The manufacturers, Hudson Soft, have not fixed a UK price for Bee Cards yet, although the price in Japan is around £15. So far the Bee Cards are compatible only with MSX but managing director, H. Ishihara, told HCW that they could be adapted for Commodore, Amstrad and Sinclair micros within a year.

As expected, Enterprise unveiled their disc drive controller for the 128 as well as 30 new software titles.

Old names — New homes

The Bug-Byte label is being revived following the acquisition of the title by Argus Press Software.

ASP's Ron Harris said that Bug-Byte would be returning as a budget software label with games costing £2.50.

It is not a nostalgic marketing exercise, Ron stated. "We won't be putting the old software from the back catalogue. If it's on Bug-Byte it will have to be new and it will have to be good. We intend to carry on the Bug-Byte tradition."

"Bug-Byte were one of the founder software companies in the days when it was all a cottage industry and the name is remembered with fondness.

Ron added that Bug-Byte, a label with a reputation for arcade games and adventures such as Twin Kingdom Valley was back not only in spirit, "but with a considerable amount of substance to it."

The first game, available in about six weeks time is called Hey Zoot, and incorporates speech synthesis. Zoot "loses his marbles" down a monster infested drain system and has to recover them.

• Your 64, the Commodore specialist magazine published by SportsScene, has been bought by Argus Specialist Press.

The October issue was the last to be produced by SportsScene and from November the more popular features of Your 64 will be published in Argus's own Commodore title, Your Commodore.

Soapbox

As we go to press with this issue of HCW, the PCW show is in full swing and all the major manufacturers are showing their new computers.

There are 128K, 256K and even 512K versions of some machines, featuring new processors which are claimed to be faster and better in every respect. I have my doubts I'm afraid.

They may have more memory and they may be faster but how long are the home users going to have to wait for software that makes the extra memory and speed worthwhile?

It strikes me that some of the manufacturers have lost sight of the fact that computing in the home should be FUN with a capital F, U and N.

The new machines might have sound and colour but the price is too high for the home-user who isn't a millionaire to buy one. Where is the toy computer that has added facilities and extra power at half the price?

That's the kind of machine that will sell well this Christmas. It might just be the Amstrad, at its new low price, certainly Sinclair don't offer much in the way of opposition — apart from the QL. I think that's a very sad reflection on the British micro industry. **Dave**

If you disagree, or agree, please let us know and perhaps you can feature in your own Soapbox.

Find the Wizard in yourself

If you like to wallow in the M.U.D. then there are riches and fame for you in this weeks competition. It's The Great M.U.D. Spectacular for the winner

For you mere mortals with designs on becoming wizards, M.U.D. — the largest multiple-user dungeon in the world — is now offering the chance to fulfill your wildest goblin-filled dreams.

M.U.D., which had its glorious launch at the PCW show last week, is a wonderfully complex role-playing venture that took five years to develop. It's a question of letting your fingers do the talking as anyone with a telephone, modem (300/300, 1200/75 baud), computer and M.U.D. -pack can enter the realms of this spell-binding fantasy.

Your task is to conjure up a cultish name for a M.U.D. mortal and give a brief description of your mortal's characteristics.

The most captivatingly original entry will not only be rewarded with a M.U.D. starter's pack (worth £20), on-line tuition from an arch-wizard and two Silver Firebird games, but will be treated to an all-expenses paid trip to the London Dungeons to partake in the first round of the Great M.U.D. Challenge on November 5th.

Four runners-up in the HCW-based competition will also receive two Silver Firebird

games. The overall winner of the Challenge will receive £100 cash plus 1000 M.U.D. credits worth £200 (the two runners-up will win 100 and 50 credits, respectively).

So psyche yourself into a suitably Gandalfian state, put quill to parchment and the M.U.D. gates may well open for you.

How to enter

Simply devise a name for a M.U.D. mortal and then, in not more than 20 words, describe the character you've created — the more lurid the description, the better.

Post your entry to M.U.D. competition, Home Computing

Weekly, No 1 Golden Square, London W1R 3AB to arrive by first post on Friday 27th September.

Please remember to indicate which machine you use on the entry coupon. Also put the name of your character clearly on the back of your entry envelope.

The rules

- Entries will not be accepted from employees of New Information Services, Argus Specialist Publications and Alabaster Passmore & Sons. This restriction also applies to employee's families and agents of the companies.
- The How to enter section forms part of the rules.
- The editor's decision is final and no correspondence can be entered into.

I am a _____ user (write your computer here)

Complete clearly and fully — if you win a prize this coupon will become your address label. Post to: M.U.D. Competition, Home Computing Weekly, No 1 Golden Square, London W1R 3AB. Closing date: first post Friday 27 September 1985. Please remember to write the name of your character on the outside of your envelope.

Switched on for lights-out

The more avid home enthusiasts might have a compost-driven generator in the cellar to combat the programmers perennial nightmare, the powercut, but for the less dedicated, Power Equipment's new 120 VA model power bank could turn the nightmare into mere whimsy.

This unit gives you emergency power for 20 minutes — enough time to transfer working copy to disc. Working from batteries continuously recharged from mains supply, the unit will signal an audible alarm when the input voltage fails.

However, it's up to you to generate the £495.00 (exc. VAT) to cover the cost of the unit.

Power Equipment, Kingsbury Rd, London NW9 8UU

Time in hand from the 120 VA Power Bank

Educational software made easy

If you've had difficulty acquiring educational software when and where you need to then your burden will be considerably lightened with the establishment of BESA.

British Educational Software Associates is an alliance of eight edsoft firms which will appoint specialist retailers who can assure schools supply from BESA's 250-title catalogue.

Schools and colleges can expect most selected retailers to take official orders and requisitions. The 1985/6 catalogue is now available from BESA.

BESA, 4 Little Essex St, London WC2R 3LF

Sorry seems to be the hardest word

HCW would like to apologise to Virgin Games for the error in issue 128 which wrongly attributed Virgin's Now Games to Activision. Now Games, which comprises "six top class games on one tape", received a flipped rating from HCW and costs £8.95.

Virgin Games, 2-4 Vernon Yd, Portobello Rd, London W11 2DX

Byte Busters

Winners of our silly game of the week competition this week (only joking) are Hobbyte Home Computing of St Albans.

At the Annual Carnival they had a float based on the game Ghostbusters and had a number of their staff and friends dressed for the part. There was Gozo, the marshmallow man, Blob and a team of "busters" ready to deal with any stray psychic phenomena.

The float was awarded 2nd Prize for their efforts and the population of the town were suitably scared. Dr John Jux, managing director, commented "Although we have a reputation for helping people to be

less frightened of computers, our younger customers got a great kick from being scared by the Hobbyte team today."

The company are not at all despondent about the future of home computers and have shown their faith by opening a new shop in the St Albans Market Place. They are seeing an increasing demand for more powerful machines which encourages a higher standard of quality and sophistication for programs and games.

If your local shop or computer club have taken part in any carnival or similar event please let us know and we will try to include details in our pages.

Eat your heart out Notting Hill

The Xyllyx Viewdata range

A name to play with

The year of the modem is growing apace and a new company has just joined in the fun.

Xyllyx, if you can say it we

think you should be able to claim a discount!, have announced a whole range of Viewdata packages for popular computers which include a modem for 1200/75 baud operation.

Further details are scarce at

the moment but there are packages for BBC, C64, Pet, Apple and Tandy machines all at around £99.95.

Xyllyx, Whitechapel Tech Centre, 75 Whitechapel Rd, London E1

Ani-mation

It was a hot and humid day in August with the ball point pens dripping molten plastic onto our hands. The typewriters were jamming due to overheating and as for the editorial staff they were sitting in pools of perspiration.

When looking like a refugee from an ice factory the super cool postman arrived with a parcel from none other than CGL.

Kerry was the only one with enough energy to open the parcel and what a joy it was. Inside the bubble packing were two cardboard boxes containing, wait for it, two cuddly toys.

Well that did it, the office stopped and all eyes were on the HCW desk as the penguin and the cow walked, moored and quacked — well what do you call a penguin noise — across the desk.

"What are they doing here?" I asked. "They are mini computers" was the reply. "If that's true I'll take them apart." That did it!

Umpteen pairs of hands

descended upon the toys with such speed that my eyes couldn't follow the rush. The basic idea was that I was not to do any such thing and CGL's Ani-Mates remain completely intact with their microprocessor still hidden.

If ever I manage to prize them away from their protective keepers I will bring you a full report on their robotic innards. Watch this space...

If you too would like the chance

to cuddle your own micro-processor toy CGL have generously offered us two cows and two penguins for creative HCW readers. All you have to do in this mini-competition is think of a suitable name for the two animals which reflect their endearing features.

You need to find a name which will reflect both the sweet and cuddly nature and the high tech image too. We didn't say it would be easy! When you have

pondered a while over this conundrum write your names on the coupon and post it to us to arrive not later than Friday October 4th and the best names chosen by the Editor will be sent a cuddly toy by CGL.

The usual competition conditions apply — see competition page in this issue for further details. It is essential that you write the names on the back of your envelope and that you address the envelope correctly.

CGL Ani-Mates Competition Entry Coupon

My name for the cow is _____

My name for the penguin is _____

Name _____

Address _____

Post Code _____

Please complete clearly and fully — If you are a winner this will be the address coupon for your prize. Send to Ani-Mates, Home Computing Weekly, No 1 Golden Square, London W1R 3AB. To arrive not later than Friday 4th October 1985.

Vox-pop

Time was when you could have a good jamming session in the sitting-room with nothing more than a triangle and a few bean-filled washing-up bottles. These days it's a case of getting your woofers and tweeters in order or finding yourself a decent digital sampler.

If you were at the Commodore Show you may well have seen Supersoft's Microvox — the new digital sampler for the C64 — being tried out by

Feargal Sharkey of Undertones fame. Microvox has eight sampling rates, with a maximum of 42 kHz giving a 20 kHz bandwidth. Also included in the package is a 2000 note sequencer with real time recording and step-time editing.

At £229.95 and featuring two 24 dB/octave it's a far cry from the old "Blue Peter style" hardware.

Supersoft, Winchester House, Canning Road, Wealdstone, Harrow, Middx HA3 7SJ

Drive it away

No this isn't another disc drive story — How do you fancy a new Porsche 924S?

Star Printers are offering such a machine in their new autumn promotion and all you have to do to get a chance of the big prize is buy one of their products between now and March next year.

The car theme is taken even further for during this period there will be the chance to "test drive" one of the printers at your local Star dealer. All you

have to do is ask for a demonstration and the printer will deliver an entry form for another competition in which you can win one of the five Star SR-10 printers on offer.

So if you're feeling lucky or your stars are in the right houses this could be the time to get along to your local dealer with your driving gloves and goggles. Good luck!

Star Micronics, Craven Hse, 40 Uxbridge Rd, Ealing, London W5 2BS

Feargal Sharkey awaiting his turn on Microvox

My other car's a Mini

Pool winners

The Hustler competition (HCW 124) nearly gave our postman a hernia as he heaved sacks containing the hundreds of entries into our offices. It proved to be the most popular competition for some time and one hundred winners will soon be changing their names to the Tilbury Typhoon or the Hartlepool Hurricane as they come to grips with Bubble Bus's computer pool game.

The answers to the six questions were: 1. chalk 2. Paul Newman 3. Kryptonite 4. Oval 5. Thames 6. Everton. When the first letters of the six words were rearranged they become the word, pocket.

The hundred winners are:

Cwmbran; John Collins, Manchester; Roger Morton, Normanton;

Stephen Ogden, Felixstowe; A Clarke, Southampton; Jamie McLellan, Penge; David Kell, Truro; R Robertson, London E2; Ronald Pearson, Clydebank; Kevin Thorold, Portsmouth; Michael Dumbarton, Newcastle; Keith Hindhaugh, Alnwick; Mark Srebalus, Manchester; A Gregory, Dagenham; Michael Jones, Bayswater; Gerald Goodwin, Nottingham; Mark Gregg, London N8; Ian McAllister, Co Down; David Cambell, Dumbarton; J Bridge, BFPO 45; Andrew Bisby, Manchester; D Powlson, Luton; G Dawson, Leicester; M Mawson, Slough; Simon Maders, Stockport; David Porter, Rochford; Paul Delph, BFPO 29; Sean Lavery, Co Down; P Shepherd, Nottingham; J Dawson, Sheffield; M Gough, Hersham; P Appleyard, BFPO 110; Scott Thomson, BFPO 42; A Rahman, Nottingham; Dennis Lawrence, London E18; Garry

Garside, Alnwick; D Dickerson, Huntingdon; Donald Henderson, Glasgow; David Corcoran, Coatbridge; Lee Frere, Haverhill; Steven Donaldson, Aberdeen; Ian Beeton, Newcastle-Under-Lyme; Simon Hunter, Hartlepool; Neil Bishop, Melton Mowbray; D Harris, Barbican; David Lim, South Benfleet; Michael Pendry, Tredegar; Darren de Courcey, Manchester; Brian Buckley, Oldham; R Sutton, Molesley; Mick Cliff, York; Sean Lally, Sydenham; James Preston, Carlisle; Paul Baldwin, Barnet; S Christian, Liverpool; T Richards, Oldham; A Edmunds, Wandsworth; Jamie Roche, Poole; Salvatore Costa, Battersea; C Glasspool, Bexleyheath; Richard Walker, Dudley; Shane Parris, Abergeaveny; Danny Boles, Poplar; David Shiels, Bolton.

R M Caton, Laidon; Tim Prince, Ware; Bryan Steele, West Drayton;

E Jones, Coventry; Chris Crane, Stoke-on-Trent; Royston Lawrence, Stourbridge; Jonathan Biddle, Leiston; Keith Mawson, Slough; Anthony Scott, BFPO 807; Clive Evans, Basingstoke; S Cole, Helensburgh; Martin Simmons, Maldon; John Jessop, Harrow; Gary Bird, Newport; T Britton, Boverton; Terry Duckworth, Bingley; R Houlton, St Helens; Tom Haggie, Wickersley; A Back, Bakewell; Andrew Bird, Ripley; Ian Murphy, Liverpool; C Coles, Leamington Spa; A Thorpe, Seaham; D Brown, Winchester; B Mitchell, Lenton; D Rehm, Hampton; James Clarke, Consett; George Overy, Peckham; Edwin Desewu, London W11; V Tondeller, Oulton Broad; Ray Tunstall, Darlington; Malcolm Arnold, Leeds; R Bashford, Battersea; D Nicholls, Holborn; Kevin Betteridge, Cradley Heath; Jason Wilshaw, Pershore; Philip Rice,

Bits and Pieces

The horrors of Spanish package holidays are brought to life in **Terrormolinos**, a spoof game by the same authors who brought you *Hampstead*. Melbourne House's spoof game confronts the player with the perils of the beach, sea, bullring and the grim encounters of a culinary kind in the restaurants. In **Terrormolinos** it is claimed that "every holiday disaster can come true." The game is available for Spectrum, BBC/Eltron, C64 and Amstrad at £7.95.

A program for those in two minds is **Schizophrenia** from Quicksilver in which the mad scientist's assistant creates an alter ego which sets out to ruin life in the lab. Alfonse the assistant tries to get back together with his other half but his "doppelganger" is hell bent on getting Alfonse made redundant from his job as lab cleaner by playing dirty tricks. Costing £7.99 **Schizophrenia** is available initially on the C64 with a Spectrum version to follow. **Monty on the Run**, the sequel to Gremlin Graphics' *Wanted!* Monty Mole is due for release on 8th October for Spectrum (£7.95), Amstrad (£9.95) and C64 (£9.95 and £11.95 for the disc version).

For the less serious minded, New Generation's Fun 'N' Games range sounds like good slap-stick stuff. **The Custard Kid** is searching for a secret recipe but not only has he 600 locations to wade through but the security guards are out to put him into custody.

Cliff Hanger is not quite as messy but there's still the chance of a sticky ending in what turns out to be a whacky cartoon-like game. Available from the 12th September Fun 'N' Games are for the Spectrum and priced at £4.95.

Coming later in September are two new utilities for the Spectrum from OCP. **Art Studio** promises to be "not just

a graphics program but a full artist's studio" with 16 pens and 8 random sprays to aid the budding David Hockneys among you.

Word Manager should satisfy those with a more literary or practical bent — both OCP programs are on cassette and disc priced at £12.95 and £19.95 respectively.

World's worst

Global Software are making a serious attempt to carry off the "worst film tie-in computer game ever made", award by securing the exclusive rights to **Attack of the Mushroom People** for a fee probably in excess of two luncheon vouchers. But it won't end there, with a grim determination bordering on obsession Global will be bringing out a series promising "all the intensity, drama and bad acting of some of the planet's worst movies".

You can be thrilled to distraction as the crazed Mushroom People attack the seven crew members of the yacht that has

sailed into their sacred bay. But calm yourself — *Attack of the Mushroom People* won't be available until mid-October. Spectrum, Amstrad and C64 owners await with trepidation.

In the meantime Global are set to release **The Magicians Ball**, an adventure set in the distant past when magic flowed like tap water. You can control two characters, Caro, an adventurer, and Azul, a white witch, in your quest to defeat the evil magician and free the king's daughter. The adventure is accompanied by music adapted from Mike Oldfield's *Tubular Bells* album. The C64 version is released today (£7.95) and

Spectrum and Amstrad versions will be available on September 9th.

South Bank is a real time graphics adventure game set on London's South Bank complex and the 200 locations including Festival Hall, the National Film Theatre and the National Theatre. In a bravely optimistic news release Global announced, "This program seems doomed for the sort of success that so slowed the Beatles' early potential rise." Amstrad and Spectrum versions are due out on September 7th (£7.95 and £6.95) followed by the C64 version on September 20th (£7.95).

Gold in them thar hills...

US Gold have announced the Spectrum version of **Bounty Bob Strikes Back** will be available on September 23rd (£7.95). Already available on the C64 and Atari **Bounty Bob** is the sequel to **Miner 20049er** and has Bob back down the pit encountering such things as Moving Weirdos and Mutant Organisms while avoiding such occupational hazards as acid-rain, pulverisers and the mobile suction unit.

Only slightly less subterranean is US Gold's new trench warfare game **Doughboy** in which you try to go over the top and cross no-man's-land. Enemy troops are moving in the opposite direction and mortar shells are falling around your ears. Your aim is to recover the supplies which have been scattered across the battlefield and return to your own lines. **Doughboy** is available for the C64 and costs £9.95 or £14.95 (disc).

US Gold have also released **Wizard and the Princess**, a save the fair damsel adventure in which you are pitted against the magician Harlin who has whisked the princess away to his horribly cobwebbed castle beyond the Great Mountains. **Wizard and the Princess** is for the C64 price £9.95 or £14.95 (disc).

Amstrad
CPC 464

Melbourne
House

Amstrad all-sorts

A mixed bag of conversions for the Amstrad this week including hi-speed action, deep space adventure and adventures of a purely linguistic kind with **The French Mistress**.

Kosmos Software's **The French Mistress** (Levels A and B) gives the low down on thousands of French words, verbs and phrases and the Amstrad version is reckoned by its makers to be the most sophisticated version yet. So if you want to make a stab at French vocab **French Mistress** costs £8.95 and £10.95 on disc.

CRL is shortly to release **Formula One** and **Juggernaut**. **Formula One** is a racing management simulation in which the player has to steer his racing team to the pinnacle of Grand Prix success. In **Juggernaut** you are the driver guiding the massive rig through the narrow city streets to various pick up points before returning to the depot.

Starion, the futuristic space battle and strategy game from Melbourne House fought out in 243 different time zones is available now on Amstrad for £9.95.

SOFTWARE

Jet Set Willy

The revolutionary thing about this game is the way it is presented. To my knowledge it is the first game to be produced on one of the credit card sized Bee Cards which promise to change the world of cartridge games.

The game is the follow up to Manic Miner and follows the story of Willy the Miner after he has found fame and fortune. Our dissolute hero has just gained fame and thrown a party for his friends who are an untidy bunch, leaving bottles and glasses all over Willy's house to the annoyance of his wife, Maria.

Despite the fact that the morning has broken, Maria insists that Willy tidies up the house before he goes to bed. You must guide him around his amazingly lethal home to help him in his drink sodden quest.

Not all of the rooms contain party debris but strange creatures lurk in all of them there are floors within each room and the only way to pass along many of these floors is to jump. Really, if I had Willy's money I would rather go out and buy another house!

This game is well known on other machines and this is a good conversion but a little slower than the Spectrum equivalent. The main advantage is the instant load which the card permits and an adapter is provided which slots into the cartridge port so that the card can be slotted in.

Trivia UK

At last an acceptable version of Trivial Pursuits, the game which dominated Christmas stockings last year. Unlike US Gold's Monster Trivia, this is an accurate copy of the game with questions tailored for British players.

The questions are loaded in from a main program from two double sided cassettes containing over 1400 questions.

Between two and four players can join in the fun as they travel around a board answering general knowledge questions on a range of subjects. Each correct answer allows the player to move the number of squares which have been determined by the throw of an electronic dice. The best feature is that answers are called out by the player rather than typed in so if, like me, your spelling is atrocious it won't lose you points!

After calling out an answer, a press of a key will reveal if you were correct and your symbol will move around the board if you say you were correct. Never play this game with a nimble fingered cheat.

Some of the squares are larger than others to indicate that they are bonus squares. These should be your focus of attention because success on

one of these squares wins a piece of pie and the first player to gain six pieces wins. That is assuming you can jump the last hurdle when your opponents are invited to select a final category of question that must be answered for success.

The game owes more to its contents for its attraction than to its presentation. The graphics and sound are fairly rudimentary and loading the questions takes a long, long time. A little more thought should have gone into the program when the computer is searching for a question. Normally the question appears almost instantaneously but occasionally it can take a while before anything appears on the screen and I found myself wondering if the computer had crashed.

The level of the questions is what I would class as intermediate, not too hard but not too simple. This doesn't matter too much because there is an editor program which allows you to compile your own question tape if you wish.

My overall opinion is that this is the best Trivia game available for the C64 only because it has very little opposition. It probably won't be long before it is superseded by a better presented version, but at least it's relatively inexpensive.

William Wobbler

If you own a disc drive you could find yourself becoming very popular in the near future, and William Wobbler is the man to thank. It is all because Wizard are offering a £1000 prize for the first person to crack the secret of William's world and you need access to a disc drive to enter.

Who is William? Well he's a cartoon character dreamed up by programmer Toby Crowther, and he's called Wobbler because he wobbles a lot (William not Tony). As William walks his head jiggles around almost uncontrollably over his gangly body. Despite his ungainly appearance, William is a man with a mission because scattered around the tunnels beneath his world are clues which could lead to the superb prize.

He can enter the world through any of ten hollow tree trunks which each lead down to a passageway and each passageway is guarded by a droid. There is only one way that he can pass these guardians and that is to find the glowing orb which lies at the end of the only unguarded passage.

To find this passage he must

jump down each hollow tree trunk in turn, avoiding a rather vicious lady with a large club and a blue bird which swoops up and down across the screen. There is only one way to escape a guarded passage and that is to go deeper underground where a long tunnel leads to a rope. A series of snakes and flying frogs lurk here but, with care, these don't provide much of a problem.

Once in possession of the orb, William can investigate all of the other passages, picking up objects which may be of use as he goes and collecting any clues that he finds. Most of the objects are useful but some are not, only trial and error will tell.

Keys lie around down here and they open locked doors which lead to yet more passages full of falling rocks and flying debris. Behind one of these doors lies the route to a floppy disc which can be placed into a subterranean disc drive allowing William to save his current collection of goodies and guarding against the loss of his single life.

This is a superb game with excellent graphics and lots of interesting problems to solve.

E.D.

Mail Order Monsters

When it comes to game concepts, the Americans seem to have some pretty bizarre ideas. This game is possibly the zaniest I've seen to date. The idea is simple, you must enter your pet monster in a fight to the death against another.

So where do you get your monster? The answer is in your mail order catalogue! First you choose one of 12 basic MORPHS — Mail Order Psychon Heroes. These range from crabs to dinosaurs. With the balance of your available cash you then buy a series of extras. These include armour and weapons as well as monster's attributes — speed, muscle, etc. The choices give you a huge range of possible monsters. Once all is set, you choose the type of battle and the terrain. Three types of battle are possible — straight hand to hand destruction, capturing flags and dealing with a hoard of invaders.

Beyond this basic game, you can progress to tournament which offers many other refinements. Surprisingly enough, this isn't a mindless zap-the-nasty game, and tactics and thought are an integral factor.

Not surprisingly, the graphics are to a high standard with some splendid multicolour monsters. The view of the action is from above with a scrolling map of the terrain. When the combatants engage, the map zooms in to the immediate area of battle.

This is a novel game which is great fun to play and a fair challenge. The price is a touch too high even for a disc based game.

London Adventure

It's games like this that give adventure players a nasty headache. I can't understand why software companies even accept this kind of stuff in the first place. I enjoy both adventure and arcade games, but when I load something like this into my Spectrum I really do wonder how they expect to get good reviews.

The game itself is quilled, but what a mess! I have seen many games done on the quill and know it can produce far better than this.

At the start of the game you are situated in the Greenwich observatory. Then you have to try and work your way through London and all its sites, collecting and using objects as you go, to end up at a safe-deposit box. You then enter a series of numbers which are found within the game and you've cracked it.

There are plenty of locations, but the game itself lacks depth and playability. Another thing to point out is that you have to complete the game in a certain number of turns. If you exceed the limit you won't be able to open the deposit box, thus not allowing you to troop around the different locations getting familiar with them. I think the game is overpriced by at least £2, and would disappoint a beginner.

I don't think I could recommend this game to anyone except tourists, who may find it a convenient guide of London. This is just another slapped together game which should be avoided completely.

Jet Set Willy II

It's a little surprising really, that JSW II passed with so little comment. That's partly Software Projects' own fault of course, for trying to flog it as a new game when it's just the original JSW with extra rooms. Admittedly there are quite a lot of new rooms, almost doubling the size of the game, but after all the times I've played JSW I just couldn't work up the enthusiasm to go through all those familiar scenes in order to find the new ones.

It's also an indication of how far Spectrum software has come in the year and a bit since JSW was launched. Way back then the game represented the state of the art. The quality of the graphics had everybody stunned, and the sheer number of rooms in the game was unsurpassed. Now of course, JSW II, with no real enhancements, looks quite dated, and if it weren't for the connection with Matthew Smith's original game it could easily be dismissed as just another old fashioned platform game — just another JSW clone in fact.

It's still an enjoyable game, there's no doubt about that, and some of the new rooms are just as infuriatingly addictive as those in the original. But, if you've got the original and you're still in the market for a platform game, then you might be better off buying a game that is entirely, rather than just 50%, new.

Steve Davis Snooker

Further emphasising the excellence synonymous with the name on the game, this superb implementation is uncannily close to the real thing.

The challenge to improve your performance at the table becomes overpowering as your full sized problems are reflected on the small screen.

Having neither cue to chalk nor chalk to loose, setting a small black cursor cross determines all the angles.

Speedy movement and fine control are both incorporated as the cursor has a two speed gear-box. Allied to this is the automatic return to the blue ball position at the centre of the table, giving the shortest distance across the cloth to any position required.

A wide-ranging linear display at the bottom of the screen sets up the power of the shot from genteel to please-can-I-have-my-ball-back. Strength is set to half-power before each players turn.

The third parameter controls the spin on the cue ball. Displayed at the bottom of the screen as a large white circle representing the cue ball, on which the spin cursor, another cross-sight is positioned.

This facility enables back spin, top or bottom to be applied to the cue ball with devastating effect upon a lesser opponent.

A one player game allows for all those hours of practice that Steve has done and you have been promising yourself. Shots can be re-set and played again — a very helpful facility. D.H.

Android Two

I never got round to playing Android One, so I cannot make much of a comparison between the two games. However, if Android One is anything like Android Two then I'm surprised that they even considered releasing a sequel.

The best feature of the game is the maze design which is pretty tortuous particularly when you are attempting to move at speed. As you move around its confines, you must watch out for static land mines, Hoverdroids, Bouncers and Militoids. These malevolent creatures will cost you a life if they manage to touch you but with the exception of the bouncers, all can be slain with your mighty laser blaster.

The game features wrap-around screens so as you reach the edge of one screen, the next scrolls on. This is fine in theory, but the scrolling isn't really fast enough and this does become annoying when you are moving through the maze at the edge of the screen.

The game is split into three zones which all require the same creature-dodging and eradicating skills. I admit to not getting past the first zone, but then I didn't lose that much sleep over my failure either. The game just doesn't have that addictiveness which makes a game a winner. It has all the expected features, high score, time limit, detailed graphics and progressive difficulty but it is not different enough to warrant a £7.95 release price. C.G.

Way of the Exploding Fist

I understand that Melbourne House now want to build themselves a reputation for arcade games that's as good as their reputation for adventures. If Exploding Fist is typical of the standard of the arcade games they've got lined up, then they're not going to have any problems at all on that score.

Exploding Fist pits you and your martial arts skills against the computer or a second player, as you attempt to progress from humble novice ("Ah so, Grasshopper") to computerised Bruce Lee (or even Miss Piggy — hai-ya!).

To achieve this you must gain mastery over the mysteries of the 18 joystick controlled movements, which include a wide range of kicks, punches and defensive movements. My own personal favourite manoeuvre is the graceful somersault, followed by a boot in the face — violence with a touch of class, just my style. Of course, your opponent has just as many moves that he can make (both figures are male I'm afraid, there are no optional Emma Peel figures that can be used by female players), and he isn't above landing a few elegant haymakers himself.

The graphics are excellent, clear and smoothly animated, and there's a satisfying crunch emitted whenever you make contact. There are also some nice touches, such as the rather smug way in which your opponent straightens his jacket after stomping you into the ground.

Mastering all the available movements will take some time, so there's a lot of enjoyable playing time to be had.

Ah so, Grasshopper. C.J.

Convoy

Convoy is a two player naval strategy game based on World War Two, covering the Atlantic Ocean and the North Sea. Each player commands a fleet of warships, an air force and a convoy of merchant ships, with the objective of supplying their own country and blockading their opponent's.

Each turn you may signal to any of your 17 ships to alter their speed and course, remembering to allow for the wind, and the positions of all your ships are given — so your opponent must promise not to look! Only when all the signals have been completed can both players view the screen together, but then only the location of ships in port is given which takes several minutes to print up.

If visibility is good aircraft can be sent out, when an enemy ship is found there is a simple action sequence in which you can try to bomb your opponent's ship. If two ships sight each other the fight is automatic. Damaged ships can be repaired by returning them to a home port.

Comprehensive instructions and a map are included. There is no time limit, so the game can be recorded before the start of each turn.

There are so many ships under your control that it becomes tedious to keep track of them and alter their positions in line with a strategy. Nevertheless, war game enthusiasts will appreciate the amount of detail included, although Convoy can only be recommended if you can find a worthy opponent. S.J.E.

Project Future

In this space game set in the innards of an evil ship, the SS Future, your task is to penetrate the five decks, ward off the nasty droids, monsters, use the teleport to move between decks and find the codes to activate the ship's self destruct system. Then get out quick! In other words, it's a shoot-'em-up-collect-the-objects-maze game.

Though the brief instructions promise music, I didn't find any. The sound effects of lasers and zaps were particularly effective however — even more so in stereo. Graphically the maze, drawn in Mode 0, is very colourful and effective, with pseudo depth achieved by careful use of shading, and flashing inks used to colour various gizmos like condensers, pipes and so on. The characters are also well done; when zapped they are recreated in another form and follow obediently to mortify you. Movement is smooth, but a hint of flicker is present.

Keeping your fire button pressed dispenses with most of the aliens, and, as they reappear very quickly, you have little time to appreciate the graphics. There's also no time to map the ship, but using the teleport is fun. Even so, progress is not easy as the challenge lasts for 256 screens.

I would like to have seen a full hi-score table, demo mode, some music, and a colourful start up screen rather than just the program title in standard characters, and the chance to zap aliens permanently would have added to the game's appeal. D.M.

Tour de France

All of you lazy cyclists will love this game; you can enter the famous Tour de France cycling race and complete it in only a few hours while sitting in the comfort of your living room with a pot of coffee and a packet of biscuits.

There are 16 different sections of the track that you can cycle along. Each section is loaded off tape separately as it is needed. There is certainly plenty of variety to choose from. The program gives you the choice of playing through the entire race or just certain sections of it. Playing the entire race takes a very long time and tends to get boring.

The colours of the background, border and your cyclist are user-definable. The player selection screen contains a list of different nationalities and their respective flags, you may choose a nationality, enter your name and select the sections of the game you wish to play. Next the first section of the race is loaded and away you go. The graphics are displayed in 3D and contain plenty of detail, the spectators even wave at you.

To peddle your cycle you have to move the joystick from side to side. Turning is achieved by holding in the fire button and pressing the joystick in the direction that you wish to turn. The instructions are quite comprehensive and provide plenty of heavy reading. The game is certainly original and gives good value for money. K.I.

Q-Man

Pyramid decoration is the name of the game in Q-Man, a version of Q-Bert, from Blue Ribbon Software.

Q-Man is a small red chap who is 75% nose. His job in life is to wander his way around the outside of a pyramid. Every time he steps upon a stone it changes colour. The aim of the game is to manoeuvre Q-Man onto every stone, thus re-decorating the complete pyramid.

This would not prove too difficult were it not for the maniac snooker player who hides behind the pyramid. This character constantly lobs a snooker ball over the top of the pyramid. The ball then bounced from stone to stone on its way towards the bottom of the screen. Should you be unfortunate enough to be caught by the ball then you can say goodbye to one of your Q-men. You begin the game with three men but acquire a new man for every screen completed. This is quite a generous allowance and can result in some quite lengthy games.

As the game progresses the bouncing ball is accompanied by a large snake which also jumps around the pyramid, usually in your general direction. On both sides of the pyramid there is a small disc. By jumping your man from the pyramid onto the disc he is miraculously transported to the top of the building. Great for getting out of those sticky situations.

Q-Man is a reasonably accurate version of the arcade game, but the action can become a little sluggish at times.

Make Music with Mistertronic

Commodore 64 owners possess one of the most sophisticated sound synthesis chips on the market. Controlling it from BASIC however, is a real pain, hence the increasing number of utilities and music and voice synthesiser programs. You can pay over £50 for these programs and now as little as £1.99. So, what do Mastertronic offer for £1.99? Answer — not a lot!

What you do get however is easy to use. You compose tunes in the musically natural way, placing notes onto a five line stave, selecting the length of note, quaver to dotted semibreve, by joystick or cursor controlled pointer. Only a single note melody up to about 100 notes in length is possible, notes being selected from a 12 note scale. There's a menu of five instruments: trumpet, piano, guitar, recorder and trombone. Only the recorder is realistic (the trombone sounds more like a bass guitar), and the rest sound nothing like the real thing.

Tunes can be saved and loaded from tape and three sample tunes are included with the program. The instructions claim that the music can be printed out onto a Commodore printer, but it didn't work on my Commodore MPS 802. The most irritating feature was the inability to edit a tune, other than deleting the notes from the end.

Whilst it's very limited, it kept my five year old son quiet for a couple of hours composing er... tunes. That's worth a couple of pounds on its own.

Transact

Transact is a book-keeping system for small business. It presupposes knowledge of Double Entry book-keeping, it does not set out to teach book-keeping. However, if you are already running a business and wish to simplify your accounting procedure then this program may be of help. It sets out to speed up the process of recording and reporting a company's financial affairs in a manner consistent with normal accounting practice.

The program is menu-driven, and comes complete with preset demonstration Accounts file. On running the program you are asked for a report date and then given the option of loading an existing file or creating a new one. There are 10 preset key accounts headings; and 90 account headings to be defined by the user. Once headings have been defined the menu offers the options of accounts file handler, process transactions, restart program, or end. Choice is by single key-press, extremely easy to use. Each option is menu-driven, with a clear screen layout. Pressing **enter** returns you to the main menu.

Other options include automatic VAT calculation, end of period profit and loss update, summarise entries by total or item, and journal facility. Input of information is extremely simple, and the constant security reminders a nice touch. The manual claims the program to be protected against user error and in testing this seemed to be the case.

The only true way to test a program like this is in everyday use. If you are looking for a simple to use, comprehensive book-keeping program then this may be what you are looking for.

Bio-defence

The idea of defending a body from the invasion of a talking virus is certainly novel and should have resulted in a better game than this.

At the start, the virus introduces itself as "Inectorf M" and informs you that it is active. The main screen shows a human outline drawn over a mapping grid along with the body's present temperature and a nice EKG display which blips away cheerfully while the body is healthy.

Your joystick controls a target square moving across the grid. When it is over a highly infected area a star lights up. A quick press on the trigger then takes you into the patient's bloodstream where you become a white corpuscle chasing after lots of black dots and chains in a simple maze. You destroy the virus by swallowing all the dots. Eating too many of the chains too quickly causes the corpuscle to turn black and die and raises the patient's temperature; when it reaches 108 degrees the patient dies.

The movement of the corpuscle is well done, but the other graphics used in the game are poor and make no use of the Atari's capabilities.

The virus speaks with a deep, guttural voice which is very hard to understand. In fact the only thing that kept me playing this game was the need to hear the spoken phrases several times to understand them.

A set of instructions might have helped, but at £9.95 this game will always be poor value for money.

Dragonatorc

It looks like Merlin the magician has gone and got himself into trouble again. As his life long buddy, Maroc, it is your unenviable task to try and rescue the old fool. Herein lies the theme of Dragonatorc from Hewson Consultants. Dragonatorc is a program which falls into that relatively new, but increasingly popular class of game, the arcade adventure.

Before the game begins you are given the option of controlling Maroc via a joystick, the default keys, or selecting your own. Your next decision is whether or not you wish to load a previously saved game. This is a common option on adventure games but it is the first time I have encountered it on an arcade/adventure package.

The opening scene depicts Maroc sitting cross-legged in a woodland clearing. By pressing the fire button a scroll appears at the bottom of the screen. The scroll displays the particular spells that are at your disposal. One of these gives you the power of movement, having selected this spell Maroc's astral projection leaves his body and can be moved around the screen.

On his travels Maroc will encounter numerous malevolent characters. Some of these may provide Maroc with new spells, should he be willing to trade specific items for them. In all there are 19 such spells, and you're going to need them all at some time or other.

As a game Dragonatorc is very playable, but it still suffers from that age old problem of Sinclair Spectrum conversions. The graphics are clever but basic.

Summer Games II

When it appeared, Summer Games took the software market by storm, there was no sports simulation to match it. Rather than simply being a follow-up, Summer Games II is even more impressive. The format of the two programs are similar, part two is simply slicker and more enjoyable.

Eight events are offered — triple jump, rowing, javelin, equestrian, high jump, fencing, cycling and kayaking. Unlike other packages I've seen, most of the games do not require constant wrist breaking thrashing of your joystick. Having said that, the control of some of the events takes some getting used to. Fortunately, a practice mode is available allowing you to get the knack of each event. Two joysticks can be used and up to eight players can take part.

Each event is portrayed in excellent multicolour mode with very smooth scrolling as required. The equestrian event is

Price: £9.95
(disc £14.95)

Publisher: U.S. Gold

Address: Unit 10, The Parkway Ind. Est, Heneage St, Birmingham.

particularly tasty with differential scrolling of the background to give a feeling of depth and parallax. The standard of animation is superb with full attention to detail. The use of sound is both effective and entertaining. Each event has the sounds of running feet, trashing water or whatever effect is required. Between events there are a wide range of themes including the national anthem of the winner.

As before, the games have both opening and closing ceremonies. The opening is essentially unchanged but the closing ceremony is highly spectacular with very juicy visual effects. The strength of this game lies in its accuracy, addictive quality and pure attention to detail. An excellent touch is that if you possess part one of Summer Games, there is an option to combine the two so that you can compete in 16 events — nice one!

My advice is simple, forget the rest, buy this package — you won't regret it. M.W.

C64

3D Munchy/ Hangman

While I waited for the game to load, I read the instructions.

Move Munchy around munching the pills and scoring points until the maze is empty or your time runs out. You must avoid four monsters who will destroy you. Arrgh!! This cannot possibly be, just cannot be, just when I thought I would never see another rip off of Pacman!

Well, actually, "3D Munchy" is not a straight copy of the arcade classic. As you might have guessed from the usual plan view. Also, the monsters are rather more devious than their arcade counterparts. They have evolved to dig holes at frequent intervals. Obviously, you cannot go over these and this makes it much more difficult to munch up all the pills in order to clear a screen.

Luckily, Munchy himself is a little smarter than the yellow Pizza man since he has learned to use a shovel! Unfortunately, a shovel cannot be used more than once and you start off with just three shovels, the number increasing with each screen cleared. To make retaliation slightly easier, there are four power pills as in the original.

There is also a version of Hangman on this cassette. The instructions on the inlay card explains that normal rules apply and the game itself is well written and has good graphics.

The games are good fun but not exceptional. However, two reasonably good games for the price of a quarter of a game can't be bad! S.S.

BBC

PERIPHERAL

Jon Revis reviews two comparable printers — Epson's P40 and Micro-Peripheral's CPP-40. Which will best suit your purpose?

A printer is normally the first hardware addition that most users make to their system. We are fortunate today that there is such a large range of printers to choose from. However this large range of printers comes in a large range of prices, with the majority of printers falling within the £200 to £500 price bracket. This week however we will be taking a look at a pair of printers which retail at below £100. Does low price inevitably result in low quality, to find out read on.

Rather suprisingly the first offering in the "below £100" bracket comes from the Epson stable. The Epson P40 is a stylish 21 x 13 x 4 cm cream box which would easily fit into a businessman's briefcase along with his Epson portable computer. This idea of portability is maintained by the inclusion of an in-built power supply. The Epson has its own rechargeable batteries which provide sufficient power for up to six hours printing, a mains adapter/charger is also included.

The P40 is a thermal type of printer, these construct their characters in dot matrix fashion but without the use of the conventional inked ribbon. The print head produces a spark which prints a dot on the heat sensitive paper. One thing that you must bear in mind with this type of printer is that you must be able to find a stockist for the paper. And you must also be prepared to pay that much extra due to its heat sensitive qualities. I suppose that a small plus

point is the fact that you will never have to purchase a printer ribbon. The paper is purchased as a continuous roll which fits snugly inside the machine. This should prevent it from making a bid for escape down the aisle of the Leeds to London 125 whilst you are in the middle of printing the company's sales figures. The paper is a mere 11 cm wide but can still comfortably hold 80 characters when the text is printed in condensed mode.

Finally we get down to the nitty gritty, can this small cream box produce printed text of sufficient quality to bear the Epson name. In a word, the answer must be, yes. I was very impressed by the quality of the printout. The printer worked with a variety of the different control codes giving normal, double-width, condensed, and emphasised printouts. Even when all text was output in condensed mode it was still very legible.

The Epson P40 printer is compact, stylish, and produces a very high standard of printout. At a price tag of just under £100 the P40 is a bargain.

The second of the two budget printers that I took a look at was the Micro Peripherals CPP-40 colour printer/plotter. This too is a portable printer which contains its own internal rechargeable batteries and comes complete with an AC mains adapter. The CPP-40 is supplied in centronics format only, but this shouldn't worry too many users as most of

today's computers are fitted with a Centronics interface as standard.

The method of printing used by the CPP-40 is quite novel, it uses a series of four small pens, each of a different colour, which fit into a rotating barrel. This barrel is used as the print head which moves from left to right over the paper. The paper is supplied as an 11.5 cm wide continuous roll which sits on top of the printer.

The printer will print text in either 40 or 80 columns across the paper. The user selects the required mode via a series of DIP switches which are located on the base of the machine. In both cases the letters are actually drawn on the paper using continuous lines, unlike a dot matrix printer which uses patterns of dots. Lower case p's and q's are drawn with true descenders in either 40 or 80 column mode. All of the characters are well defined though users with below average eyesight may have difficulty in reading the 80 column printout.

The CPP-40 has two modes of operation, these are Text and Graphic, both of which are software selectable. The text mode is the default mode and is the one which would be used for producing listings and when the printer is used in conjunction with a wordprocessor. When in this mode any change of pen colour must be performed via the controls on the front of the printer before printing begins.

The graphic mode of operation is selected when the user wishes to make use of the plotter feature of the CPP-40. To use the graphic mode your computer's version of BASIC must possess the LPRINT state-

The Hobbit (Disc Version)

Melbourne House Software

BBC Model B

#17,95H

When the Hobbit was first released for the Sinclair Spectrum one of its selling points was its graphics. When it was squeezed into the BBC the graphics were lost due to insufficient memory. This has now been remedied with the arrival of the disc version for the BBC computer.

The Hobbit is recorded on both sides of the floppy disc supplied. A double sided drive is not required to read the disc as the disc is a reversible one. Side two is accessed by removing the disc and turning it over before re-inserting it. Before you can play the game with pictures you must prepare your own picture discs. If you have 48 track drives then you will require two picture discs. If you wish to save your position then you must also prepare a "save game" disc. By now the game is becoming pretty heavy on disc usage!

The game can be played with or without pictures. Each time you visit a new location the drive whirrs away and a new picture is loaded. Pressing the space bar toggles between the picture and its accompanying text. This constant accessing of the disc becomes pretty tedious as the pictures are not all that good. Even when playing a text only game the program still accesses the disc. This

Manufacturer: Epson UK

Address: Dorland Hse, 388 High Road, Wembley, Middx

The unit is very compact (21 x 13 x 4 cm) and is powered by built-in rechargeable batteries which provide sufficient power for 6 hours printing. It's diminutive size makes the P-40P an ideal choice for the businessman to use in conjunction with his portable computer. The major limitation with this size of printer is the fact that the paper used is only 11cm wide, and probably expensive. Many readers may remember the thermal printer produced by uncle Clive Sinclair for use with his computers. Fortunately the P-40P does not produce the same "smudge matrix" quality printout. The little Epson produces the quality of printout that users have come to expect from such a stable. The default printout is 40 characters wide, but when used in condensed text mode it can quite happily fit 80 readable characters onto a single line, and still retain it's true descenders!

Speedwise the P-40P is not exactly the fastest printer that I have ever encountered, but for quality and portability it is definitely a winner.

The third offering in the "unconventional" category is the CPP-40 from Micro Peripherals, it is a multi coloured portable printer costing #79. As with the Epson P-40P, the CPP-40 has a built-in rechargeable battery and comes complete with a mains adapter.

The CPP-40 uses 11.5 cm wide paper and prints using a series of four pens of different colours, these are held in a rotating barrel. A set of DIP switches situated on the bottom of the machine can be used to switch between 40 and 80 column printing modes. The quality of the printout is very impressive, even in 80 column mode the characters are well defined, though users with below average eyesight may have difficulty reading the text.

Timeman One	Telling the time and setting the clock	£6.95	£12.95	£8.95
Map Rally	Car rally to help understand the compass	£6.95	£12.95	£8.95

Please tick the items you require and put an x against your micro

BBC Acorn Electron Amstrad

Cheques/postal orders payable to BES (HCW Offer), Bourne House, The Hundred, Romsey, Hants SO5 8BY.

C64 GAME

GUESSING GAME

**Pit your powers of guesswork against
your C64 in this game by
Michael Diskett**

Try developing your powers of ESP in this card guessing game where the computer holds all the cards. The game is a version of the TV show "Play Your Cards Right" minus compere Bruce Forsyth and studio audience shouting "higher" or "lower". You will have to invite the rest of the family in to provide crowd effects.

The idea of the game is to successfully predict whether the next card will be higher or lower than the previous one. If you are correct then a note will be played and you will again be required to predict the next card. This will be repeated until the five cards on the screen have all been turned over then the last card is taken and placed at the start of the next five cards, which will have been dealt from the re-shuffled pack.

If you fail to predict the next card, the computer will respond with a cry of doom and display the "GAME OVER" message

How it works

60-80 blank screen, set keyboard buffer to 1 character and disable stop key
100 set extended background colour mode
110-130 set up sprite position
140-290 set variables
300-360 print back of five cards
370 start of main loop
380-410 pick value for next card
420-460 check if player predicted correctly
470-520 display next card
520-560 update score and print it
570-640 get players prediction
650 end of main loop
660-680 play note
690-780 tell player mistake made
790-1000 high score table
1100-1160 give card value
1170-1270 put pips on card
1290-1350 data for machine code
1360-1560 data for characters
1570-1730 data for sprites

on the screen. If you have managed to get one of the highest scores, you will be allowed the privilege of typing in your name, to be recorded on the high score table.

The keys used are the function keys marked F1 and F7. F1 is used to predict higher, and F7 to predict lower. Included in the program is a routine to trap any errors in the data. The error messages are self explanatory and usually say something such as "DATA ERROR FOR CHARACTERS". As the program contains some machine code, you should save the program before running it for the first time.

Variables

V start address of video interface chip
s start address of sound chip
bs() top 9 scores and names
b(x,y) positions for pips on cards
cs() strings of characters for back of card
as() strings of characters for front of card
ca() contains card number for all five cards
pa set to 1 if card is an ace
d character poke code
cl colour for character (red or black)
cw token value for card
c number of card being guessed
sc your current score
ss score put in string format
er set to 1 if you guess wrongly
h set to 1 if you guess higher

IT'S A GAME

How to make your graphics move is the subject of this week's discussion in our Amstrad programming series by David Ellis

There are various ways in which movement can be simulated on the VDU. The easiest way is to use different graphics characters at the same location on the screen and switch between them — in the same way that a cartoon movie is built up.

The listing **STATIC DISPLAY** demonstrates this in its simplest form. Three pairs of graphics characters are used and these are printed alternately at the same location. The effect is one of movement. Naturally, you could use larger areas of the screen to display larger characters. These may be built up from several user defined graphic (UDG's) characters to produce a reasonable display of movement.

The listing **UDG MOVEMENT** shows a simple example. This is still static movement though. Although the character is moving it stays at the same location on the screen.

To move an object around the screen you first have to print it, then delete it, and then print it at the next position on the screen. The listing **ARROW MOVEMENT** shows this technique using four graphics characters relating to the four cursor key arrow symbols.

When the program is run, the arrow will appear to move around the screen — albeit somewhat jerkily. This program shows the use of the **WHILE/WEND** structure. Note how the nesting takes place. I could have used **FOR/NEXT** loops instead but opted for **WHILE/WEND** as it is more fashionable these days!

The program **CURSOR MOVEMENT** moves an arrow around the screen in a similar manner, but this time the movement is controlled by you. When you **RUN** the program, press any of the four cursor keys and the arrow will be printed for that key. The arrow will move if you hold the key down. Hold down two adjacent keys and the movement will be at 45 degrees. Not very exciting I agree, but this routine is the key to the most fundamental part of any game.

Most games require you to move some object around the screen. With *Knight Lore* it is the 'adventurer' that you move. With *Sorcery* it is the Sorcerer that you control. With *Fighter Pilot* it is the scenery that changes in response to the cursor keys or joystick. Naturally, these are all programmed in machine code — but the principal remains the same.

The problem with UDG's is that they tend to produce rather jerky movement as each time the character is moved it has to jump by one whole screen printing position. In Mode 2 this is a jump of 8 pixels. In Mode 1 it is a jump of 16 pixels, and in Mode 0 a whopping 32 pixels. No wonder it's jerky!

One way to overcome this is to use **TAG**. This will 'tag' the normal print cursor onto the graphics cursor. Movement can now be made in steps of one pixel, producing smoother but slower movement.

The listing **STAR COLLISION** is a 'mini' game that uses this technique. However, in this

case it is not a UDG that gets printed but a point is **PLOTEd** instead. The object of the game is simple:

The subroutine at line 2000 plots 500 random points in three different colours. Your quest is to visit as many of the stars as possible but you must avoid running into your own trail left in the sky, and you must also avoid colliding with any **RED** stars. By the way, if you are using a green screen monitor you will have trouble seeing the **RED** stars and also your own trail, so change **INK 1** in line 20 to a brighter colour. Try **WHITE (13)** and you should then be able to differentiate between the three star types. You get 10 points for visiting a **BRIGHT CYAN** star, and 50 points for the flashing **YELLOW/BLUE** stars.

Your speed is fixed — pressing any of the four cursor keys changes your direction accordingly. You can go off the limits of the screen if you wish, but there is little point (excuse the pun!). Your score is printed in the top left hand corner of the screen — avoid this also — in fact, if it's **RED**, avoid it like the plague!

The three lines that do the main work are at 1010, 1020 and 1050. These use the graphics **TEST** to test what **PEN** the pixel is, at the next location — ie the location that you will be moving to. If this is **PEN 2** (line 1010) then you score 10 points and get a reassuring beep. If it is **PEN 3** (line 1020) then you score 50 points and get a beep. If it is **PEN 1** however, then you crash, this produces an explosion sound (line 1060).

And don't write in to complain to the Ed. that it is not up to the standard of *Knight Lore*, *Alien 8*, *Sorcery* etc. What do

you expect for a mere 21 lines of BASIC!! The program is brief and without frills — crude even. But it does form the basis of a useable game which could be extended and modified to make

it much more interesting and usable. I shall be returning to this game in a later article, after looking at interrupts and sound, to see how these could be used to liven up the program.

STAR COLLISION.

RON COMPLEX

Ron Complex gets his fingers burnt by a hot tip in this weeks instalment of the serial with the built-in time warp

Ron Complex bit into the first cashew of his emergency supply. He'd been standing in a doorway opposite the Amalgamated Consolidated Building for three hours. It was lam and the wind blew empty crisp packets down the deserted street like cellophane tumbleweed.

Ron's tip-off was late. Rex Retina had told him tonight was the night, and the offices of Amalgamated Consolidated were the first target in the Random Code word Generator hook up operation.

Ron thought about going home, "I've still got 20 years worth of old newspapers to catch up on. I wish I'd cancelled that subscription before the big

freeze". Ron was busy picturing his house crammed solid with yesterdays news when he heard a car approaching.

The car stopped outside the AC building and a second later accelerated off into the night.

Left on the pavement was a tall thin figure dressed entirely in black garb save for a pair of green day-glo socks. The figure knelt down and took a black balaclava from a small kitbag and pulled it over his head.

After a few moments he took off the kit bag and put on the balaclava. "Something tells me this guy is from the Erratic Club," thought Ron.

The black figure took four ucker pads from the bag, put two on his shoes and attached

the others to the palms of his hands.

"It looks like human fly time," assessed Ron. Within a few moments the day-glo socks were all that could be seen as the figure crawled up the outside of the building. Ron moved across the street. He spat on his hands and rubbed them together. "Why couldn't he use the drainpipe like everyone else?" thought Ron.

As Ron began to scale the drainpipe a black car pulled up on the street corner. On the roof of the building Ron saw an open skylight and jumped down into a darkened corridor. He heard the sound of far-off manic chuckling and headed for it.

Back in the Murkotronic building, Murko was bent over his computer terminal frantically wiggling his joystick. He'd been trying for five minutes to manoeuvre his remote controlled surveillance pod through the skylight of the roof of the AC building.

The sensors on the hovering pod were picking up approaching persons on the roof. "Time to get out of there," said Murko. He heaved the joystick to the right. The monitor showed a chimney rapidly filling the screen.

Murko pulled back on the joystick but it was too late and the screen went black. Murko wrenched the joystick out of its socket and picked up the phone. "Zibowitz. Break out another pod and make it pronto."

Ron could hear the mad giggling growing louder as he walked down the corridor. He pushed open an office door about an inch and saw the silhouette of the human fly crouched over a glowing terminal screen. Ron crept across the room and stood behind the trespassing chortler. "I always enjoy this bit," thought Ron as he put his hand on the man's shoulder. The chuckling stopped.

"Okay kid. I'm pulling the plug on you," said Ron. Ron felt a hand come down on his own shoulder. "Inspector Pythagoras — Logic Squad," said a voice. "You're both under arrest. Don't do anything irrational, it could be held in evidence against you."

Next week: The Rational Slammers

BBC B PROGRAM

LASER REVENGE

Not only do you have to be a D-I-Y enthusiast to succeed in this game but you've also got to be pretty handy with a laser gun.

You are trapped in a room with a couple of meanies. The only way to escape is to paint at least 50% of the floor and blast the meanies out of your way. You'll then find yourself in progressively more difficult rooms — wreaking revenge as you go!

Notes

This program is in two parts to save memory. Part 1 defines graphics and ENVELOPES to be used and instructions. Part 2 is the game itself to be SAVED as "REVENGE" to be CHAINED from program 1.

This program was written on a disc based machine and automatically downloads. If, however, you do not have a disc-drive make the following alterations:—

Program 1

DELETE 430
Alter 420 to 420VDU30,11,31,
7,0,129,157,135:PRINT;
SPC(21);CHRS156:VDU28,
10,0,30,0,12

Program 2

DELETE 10 **Warning:** Do Not
Renummer

Some machine code is used in Program 2, make sure you save it before running because if you make a mistake it's quite possible that you will lose the whole program.

The enlarging routine in program 1 could be adapted for your own programs as could the machine code in program 2 which simulates the SCREEN command.

Variables

E to find end of data
A% sound loop
WS contains message to be
scrolled
T% used in scroll

SKETCHIT

In this short routine Maurice Gavin explains the differences between the Spectrum and Spectrum + when you are using cursor control

5 REM SPECTRUM+ sketchpad

via IN command & cursor keys
by Maurice Gavin: 1985

```
10 LET x=123: LET y=60
15 REM x,y=start position
20 LET a=IN 61438
30 LET b=IN 63486
40 LET x=x-(b=239)+(a=251)
50 LET y=y-(a=239)+(a=247)
60 PLOT x,y
70 GO TO 20
```

5 REM SPECTRUM sketchpad via

INKEY\$ command & 5,6,7,8 keys
(=cursor keys original Spectrum)
by Maurice Gavin: 1985

```
10 LET x=123: LET y=60
15 REM x,y=start position
40 LET x=x-(INKEY$="5")+(INKEY$="8")
50 LET y=y-(INKEY$="6")+(INKEY$="7")
60 PLOT x,y
70 GO TO 40
```

5 REM IN command for Yes/No?

```
100 INPUT ""
110 PRINT #0;"ok ? (Y/N) "
120 PAUSE 0: LET a=IN 57342
130 IF a<>239 THEN PRINT "No"
140 IF a=239 THEN PRINT "Yes"
150 GO TO 100
```

The cursor or arrowed keys on the Spectrum+ are now conveniently placed at the bottom of the keyboard either side of the "space bar".

Unfortunately in their new location these keys no longer respond to the INKEY\$ command. Any program written for the original Spectrum and using

keys 5, 6, 7 and 8 at the top of the keyboard via INKEY\$ will be inoperative using the new cursor keys. Luckily, however, the IN command remains compatible with both machines and both sets of keys.

Page 160 of the Spectrum Manual explains the use of the IN command to check if a key has been pressed. Unfortunately the Spectrum + Users Guide on page 60 incorrectly states the byte values for the keyboard addresses (although the addresses themselves appear to be correct).

The correct addresses and byte values for the cursor keys are as follows:—

Cursor left or key "5"
IN 63486,239

Cursor right or key "8"
IN 61438,251

Cursor up or key "7"
IN 61438,247

Cursor down or key "6"
IN 61438,239

Cursor "left" and key 5 are read from the top left-hand half of the keyboard to address 63486. The remaining cursor keys and keys 6, 7 and 8 are read from the top right-hand half of the keyboard to a single address i.e. 61438 with an appropriate byte value.

The sketchpad routines included here are used to demonstrate the IN and INKEY\$ commands to read if a key has been pressed. Because cursor left (key 5) has a different address from the other cursor keys it is possible to produce diagonal lines to the left by simultaneously holding cursor "left" and cursor "up" or "down" together.

Diagonal lines to the right are not possible, using this routine, because these cursor keys share the same address i.e. 61438. The second routine uses the INKEY\$ command which will only recognise if a single key has been pressed.

The IN command does not distinguish between upper and lower case letters and the final routine shows how the IN command can be used to identify key "Y" (or "y") at address IN 57342,239. Any other key produces the response "No".

MUSIC 500

Shingo Sugiura sings the praises of the Music 500 system for the BBC

The Beeb has a dialect of BASIC with very powerful commands to control the sound. Not only does it allow you to play short pieces of music without too much difficulty, it allows you to control the waveform of a sound and reproduce it with ease. Not surprisingly, many people get immense satisfaction from transcribing music for the Beeb.

However, there comes a time when you realise that the Beeb's built-in sound chip with its three voices is just too limiting to play any decent music and BASIC is just a pain in the neck for composing tunes. So I was quite surprised that it has taken so long for Acorn to produce a

synthesiser specially for the Beeb but I think it's been worth the wait.

Music 500 is not much to look at. It comes in a metal box, about the size of a half-height disc drive and is connected to the Beeb via a ribbon cable to the 1MHz bus. As with all peripherals, the ribbon cable is much too short and I had to reposition everything before I could use the Beeb, see the monitor and access the disc drives and the printer at the same time!

Then I came across another snag. The cable to connect the system to an external amplifier (the Beeb's internal speaker cannot be used) is not included

so I quickly rushed to my local Hi-fi dealer and bought an appropriate cable.

Before you can use the Music 500 system, you must load in AMPLE (which is an acronym for "advanced music programming language"). This is a big program so I was pleased to see that Acorn have supplied a program to transfer all the necessary files from tape to disc. They have also included various demonstration pieces for you to listen to. These are very well done and shows the incredible powers of the Music 500 system. However, before you can start making pieces like these yourself, you must learn a totally new language — AMPLE.

Some of you may think that supplying a brand new language is going slightly over the top but it is in fact the most sensible

thing to do. In music, things tend to happen simultaneously. A conductor does not rapidly go through every single player for every single note! It is for this reason that AMPLE is multi-tasking.

Some of you might be surprised to learn that it uses reverse-Polish notation as in forth, so the familiar command "MODE7" would be entered as "7 MODE" in AMPLE. This may seem a little odd (or even ridiculous) at first but you will quickly get accustomed to the idea. In fact, AMPLE is a very powerful music composition language indeed.

On booting the disc (or loading it from tape), AMPLE greets you with the message—AMPLE model BCE Version 1.0

(C) 1984 Hybrid Technology %

The "%" is the prompt for you to enter commands, just like "X" in BASIC. Now, you can play simple pieces of music directly by using quite readable

notation and store them away as "words".

A word is a predefined set of instructions or a new function (rather like procedures in BASIC) and should be familiar to Forth users. Words are available to control basic things like the duration and pitch of a note, tempo, rests, key signatures as well as creating the waveforms of the sounds themselves.

As you could probably imagine, creating a new sound is quite complex (even more complicated than the ENVELOPE command!) The features available will not mean much if you have never used synthesisers before but they include ring modulation, frequency modulation (used by the very successful Yamaha DX range), white noise (for percussive effects) synchronisation and detuning (to fatten up sounds).

Waveforms may be created by harmonic synthesis and geometric synthesis. Creating waveforms is probably the most

difficult part of AMPLE. The manual is rather difficult to understand (ok, I'll be honest, it's virtually incomprehensible) and it took me a long time to get even a squeak out of the system.

Luckily, 13 preset waveforms comes with the package so you can start creating music without having to worry about the sounds themselves but let me assure you that mind boggling effects are possible if these features are exploited.

AMPLE is indeed a very powerful language but unfortunately, the manual leaves a lot to be desired. Not only has the manual no index and printed by a dot-matrix printer, it is full of technical gobbledegook and is very badly set out.

In fact, unless you are a competent programmer and a musician, I would have thought the manual to be totally incomprehensible. However, Music 500 is a very powerful piece of hardware accompanied by a very powerful and innovative language and the quality of manual should not put you off.

Many peripherals are planned for the 500 system. There is already a keyboard by ATPL and Hybrid themselves are

planning to release a keyboard and a MIDI interface soon. I would personally like to see AMPLE implemented on ROM. This would make things a lot easier for tape users and would obviously allow much bigger pieces to be written. Also, a cheap but good quality amplifier would not come amiss, after all, not everyone has a Hi-fi system next to his/her Beeb.

A version of Island Logic's music system for the 500 should be useful for those who cannot read music (or those who prefer the traditional tadpole like symbols to the textual notation of AMPLE). On top of that lot, a set of definitions to mimic popular instruments, a compilation of popular music pieces and a better manual would all be a welcome addition.

At the moment, there is nothing to touch the Music 500 system in terms of power, flexibility, quality of software or value for money. If you are thinking of buying a synthesiser, I would strongly urge you to go and see (and hear) the 500 in action. After all, at £199.00, it's a lot less than most decent dedicated synthesisers. S.S.

Halley's Comet. Computer planetarium for the Spectrum 48K £8.95. Contact: Anima Scientific Computing, 23 Crawley Avenue, Hebburn, Tyne & Wear NE31 2LT

WD Software

For the QL:-

WD Utilities (3rd ed) (base £5.50)

Print 60-file Directory or view it on one screen, one-key LOAD, COPY or PRINT 60 files with one key (allows for namesakes). Multiple FORMATTING to prevent corruption by stretching of tape. TOOLKIT to give dated, numbered modules in program development. PRUNE old files to release space (one key DELETES a file). Full instructions in QUILL file. Use up to 6 EXTRA MICRODRIVES (add on your Spectrum ones)!

WD Utilities for CST Q-Discs (base £8)

100-file capacity, for CST/Computamate disc system AND up to 4 extra microdrives. User-friendly timesavers.

RefQL (3rd ed) (base £3)

500 useful QL references in an ARCHIVE file (too long for one cartridge with Utilities and Morse).

For the Spectrum/QL/BBC

WD Morse Tutor (base £4)

From absolute beginner to beyond RYA and Amateur Radio receiving. Adjust pitch. Set speed to your test level (4-18 wpm). Learn from single characters, via groups with wide spaces to random sentences; decrease spacing to normal. Write down what you hear, then CHECK on Screen or Printer (or speech for Spectrum with Currah MicroSpeech). Also own message, random figures, letters or mixed.

For Spectrum 48K

Tradewind (base £4)

Sailing/trading strategy game with graphic surprises.

Jersey Quest (base £4)

Text adventure with Bergerac and the Dragon (not disc).

PRICES (incl Europe postage — elsewhere add £1)

Spectrum/BBC cassettes — base price only
QL or Spectrum Microdrives — £2.00/cartridge plus base price
5 1/4" Floppies, £2; 3 1/2" Floppies, £5 (please state format wanted).

Two or more programs on one medium — pay medium + base. e.g. WD Utilities and RefQL for £10.50, but IMPOSSIBLE to mix QL/BBC/Spectrum programs on one medium. Send YOUR cartridge and pay base price but FORMATTED it FIRST in your DRIVE 1 compatibility.

Replace or repair?

All too often computers are returned to shops within twelve months of purchase and their owners are told they will be sent away for repair, and then they have to wait up to a month for the return of their machine.

Readers may like to know that if a fault occurs in their machine within twelve months of purchase they are legally entitled to a new machine as a replacement. It is the same with most consumer goods.

The assistants will often persist in advising you to

take repair but it is actually against your best interests. Once you submit to having it repaired it means that during the remaining period of the twelve months it can only be repaired again — you can't replace it.

Also it is not advisable to fill in the guarantee card as the manufacturers all print at the bottom 'Your statutory rights are not affected' meaning that that piece of card is useless.

A till receipt is the only thing needed as it is the shop with whom you have the twelve month guarantee. This letter was written as a

direct result of a recent clash I had with Dixons over a radio cassette. I was refused a replacement and a refund and the assistant would not back down until I submitted it for repairs.

I have since learned that I was entitled to a replacement and so are you if you are in the same position. If they refuse, get the manager, and if he refuses call the head office or get advice.

Don't let my mistake be one of your own. It is your right, you know!

Andy Clarke, Atherstone

In praise of older micros

Firstly may I congratulate you on producing such an excellent magazine, however I do have a few grievances.

Firstly, would it be possible to replace the pictures above the software reviews with actual screen shots of the program. Surely the type of program can be deducted from the review.

Also could you please publish more articles on

topics such as different popular languages ie Pascal Forth instead of the numerous articles about the "introduction to BASIC programming" and others of that type? Would it be possible to include a "helpful routines page"?

Finally my biggest complaint — the Spectrum (no I'm not another Spectrum basher, well, not quite) I agree that the Spectrum and to a much lesser extent the C64 are

fairly decent machines but could the amount of software reviews devoted to them be reduced slightly in favour of some of the more, dare I say it, outdated machines such as Dragon, Texas and Oric? I realise that little new software is being released for such machines but surely it is better than reviewing yet another Manic Miner rip-off?

Colin Wilcox, Manchester

IT'S A RACE

Get those skates on if you want to enter our Mikro-Gen competition and there are big prizes on offer!

It's speed that counts in this very special competition from Mikro-Gen.

They have a new game due out in the autumn based on the Battle of The Planets television programme and as a taster for Home Computing Weekly readers they are offering 200 cassettes of a preview game FREE!

All that you have to do to take advantage of this special offer is send the coupon below to Mikro-Gen and the first 200 they receive will get a copy of the game by return.

With the game will come instructions on how to enter the Battle of the Planets competition in which the highest scorer will have the prize of a trip to London and the chance of a £250 cheque and £75 worth of games. There is certain to be one HCW reader in the final and they will win £30 worth of games in addition to a Mikro-Gen Trophy.

So get yourselves moving all you Spectrum owners, you have to be one of the first 200 to get the tape and then you have to play the game in earnest in order to increase your score. The high score codes must be back with Mikro-Gen by Friday 27th September if you want a crack at the prize.

Don't wait, post the coupon today, you have a great deal to gain and only 17 pence to lose.

Micro-Gen's Battle of The Planets

Entry Coupon

I am a Spectrum owner and would like to have a go at the special Battle of The Planets pre-view tape. If I am in the first 200 please send me a copy. I understand that if 200 tapes have already been despatched I will not be able to enter or receive a tape.

NEW COMMODORE 64 CASSETTES OUT NOW FROM ARIOLASOFT ▶▶▶

▶ KARATEKA

A Karateka is one trained in the Way of Karate, the centuries old martial art of Japan. In this classic story of one man's battle against insurmountable odds, your mission is to rescue a beautiful princess from a dungeon deep inside the palace of the evil warlord Akuma.

Brøderbund have created an arcade action game as close to an interactive movie as computer game players are likely to see. Extremely large and realistically animated figures come alive against beautifully detailed scrolling backgrounds. You are in full control of the hero's every movement. Walking, running, bowing and all fighting movements including the strategic timing and placement of kicks, thrusts, jabs and punches are an integral part of the gameplay.

The story progresses through a series of increasingly more challenging encounters with the enemy, until you finally meet the ultimate opponent. Built-in surprises make trying to rescue the princess difficult and addictive.

- ▶ Suspenseful, move-like story
- ▶ Run, Punch & Kick ability
- ▶ Smoothly animated characters
- ▶ 3D scrolling backgrounds
- ▶ Realistic Karate fights to the death

▶ STEALTH

STEALTH has everything the arcade action player dreams of. You are right at the heart of the action as you pilot a powerful Stealth Starfighter on a mission of utmost importance – to destroy the Dark Tower and with it the Merciless Council of Nine.

The sky is alive with warp-fighters closing in from all directions. The landscape bristles with automated radar towers firing heat-seeking projectiles of doom.

Robot-controlled photon tanks ... high energy laser artillery ... all of this and more await players of STEALTH.

- ▶ Stunning 3D effects
- ▶ Deadly Enemy Attack Planes
- ▶ 5 Levels of Skill
- ▶ Vicious Heat-Seeking Missiles
- ▶ Ominous Dormant/Active Volcanoes
- ▶ Positive/Negative Energy Fields

AGAINST DEADLY ALIENS**

▶ THE CASTLES OF DOCTOR CREEP

Thirteen castles containing over 200 rooms await inspection. You will find each room filled with challenging puzzles and sinister surprises. Force fields, electrostatic generators, death rays and wandering mummies are only a few of the treats in store.

THE CASTLES OF DOCTOR CREEP is a very challenging arcade strategy game, full of surprises and the Doctor's rather weird sense of humour. There's no turning back on a tour of the good Doctor's home. You will want to keep coming back for more of the Creepy hospitality.

- ▶ 2 Player interactive action
- ▶ 13 Separate Castles
- ▶ Over 200 Rooms
- ▶ Mummies and Frankensteins
- ▶ Deadly Lightning Machines and Traps
- ▶ Perilous Moving Ray Gun
- ▶ 1 or 2 Players.

Graeme Marsh

Dotty over Mr Do!

Lee Caller from Staines tries on his Atari reviewing hat and has a crack at US Gold's Mr Do!

This game first made an appearance in the arcades some years ago and was a mild hit. Now US Gold have released it on the Atari and it's every bit as good.

The cassette takes some time to load, but when completed you are greeted with a clear title page with options for one or two players using either or both of their joysticks in a left/right handed fashion — something new.

The idea of the game is to collect cherries using your clown. He can defend himself with a powerball, killing the various ordinary boss, diggers and henchman monsters. In order to gain an extra Mr Do! you must kill all boss monsters who carry a letter to spell out the word "Extra" as shown at the top of the screen.

There are ten main screens and each is laid out with "cute" graphics. The monsters are fast and yet you feel sorry either killing them with the powerball or letting one of the many giant apples that litter the screen fall on them.

After every three screens a cartoon reveals time taken and score in great animation. The best is yet to come when you are given an extra life in the form of a scrolling masterpiece.

Sound is constant throughout, playing a different tune for each event, which can be turned off (although I don't know why) at any time.

This has to be one of US Gold's best yet and if you don't have it — get it. It's a joy to play and please no end, from the well defined characters to the crying monster cartoon and the pleasant music.

Price: £9.95 or £14.95 (Disc)

SOLUTION to last weeks puzzle

45. It's not difficult to work out that there are 3 ways to spell C; 6 to spell CO and 10 to spell COM. 3,6,10... has the pattern +3, +4... so adding 5 then 6 and so on gives 15,21,28,36,45. (You may know these as triangular numbers).

Spuds Up

Harvest time at Farmer Nure's potato field has produced a curiously mathematical crop. A ☺ shows the position in each row where a plant has thrived.

Can you complete the picture by marking in the X's where plants should be growing in the bottom row?
