BBC, DRAGON & ATARI GAMES FROM QUICKSILVA

DRAGON MINED-OUT

On Screen Features: Tricky Mines, Damsels in distress, Mine detection indicator, 7 levels of minefield, Safe area, Progressive difficulty, Scoring, High score feature, Full instructions.

Controls: Up-Down-Left-Right.

Special Features: Bill the Worm, Bugs (mines with legs).

Action Replay

Authors: **I. & C. Andrew**

ATARI 400/800 MAGIC WINDOW

Define characters on 8x8 grid. Save to tape. Load from tape. Freely merges character sets into existing programs. Hex & Dec. O/Ps. Character manipulation: Mirror, rotate, invert, left, right, up, down, hold, wipe, cancel. Redefine whole character set. Also works in colour mode. Excellent examples supplied.

16K RAM or more.
Author: **M. Walker**

As part of the plan to expand their range to cover all the most popular personal computers QUICKSILVA are proud to introduce 3 new programs for the BBC Computer, plus a version of their popular "MINED-OUT" game for the Dragon and also a character generating program for the Atari 400/800 "MAGIC WINDOW".

BBC GAMES MUSIC PROCESSOR

Exploits your BBC music potential to its limits.

Features: Full push button operation, over 30 separate functions for recording, mixing, editing and sound effects etc. 4 channels, 5 octaves, 100,000 envelopes easily selected. Over 2000 note storage capacity. Ready made music files included.

Author: **Andy Williams**
For model A or B

PROTECTOR

Features: Pods, monsters who kill on contact, mine laying UFO's, monsters increase in size as game progresses, new pods every 1000 pts., hyperspace function. Full colour hi-res graphics, sound. Joystick control.

For the model B with 16K + Joystick.
Author: **Andy Green**

WIZARD

The lands most beautiful maidens are being sacrificed by an evil King. Can you be their saviour, fighting off hordes of evil demons armed only with your wand and magical powers. A most compulsive and original game with hi-res colour graphics and full sound.

Author: **A. R. Buckley**
For the model B with 32K

Outsiders pip Acorn

Torch kindles CP/M on BBC

By Ian Scales

Acorn has been beaten by Torch in the race to provide the much-awaited 'second processor' for the BBC Micro.

The Torch offering of disks and a second Z80 processor running the Torch version of the industry-standard CP/M operating system is now widely available. Ironically, it increases the attractions of the BBC Micro at the Torch's expense.

CP/M operating systems seem to be the coming thing for low-cost micros. They are always coming but rarely arrive.

Besides Grundy (see story page 3) Computer's Lynx is another plodder in the CP/M stakes. Lynx owners were promised a CP/M upgrade as one of the major selling points of the micro.

The BBC Micro was designed as

an expandable system, but Acorn has been notoriously slow to come up with the goods.

Torch's own microcomputer uses a BBC board as its I/O handler and runs a version of CP/M (CPN) on a second Z80 processor with a full 64K RAM.

What Torch has done is take the non-BBC part of its Torch micro, minus the communications hardware and software, and package it as an upgrade for the BBC. For £780 plus VAT you get twin 400K disk drives plus a Z80 card with RAM which goes into the BBC under the lid and is cabled to the Tube port.

For around £1,500 you can put together an impressive CP/M system — £399 for a Model B, £200-£300 for a colour monitor, £95 for a disk interface and £780 plus VAT for the Z80 pack.

This seems to compare more favourably with the Torch itself, which retails at £2,795 plus VAT.

PCN will Pro-Test the Torch Z80 pack in issue 16.

and a 6502 for about £230, with applications software thrown in free.

The units will each have 64K RAM. Speed will be 6MHz for the Z80 and 3MHz for the 6502.

These units, when connected to the BBC's built-in 6502 processor using the now legendary Tube, will give very fast I/O and increase

Kenda boosts disk system

A disk filing system that looks streets ahead of Acorn's offering for the BBC Micro will be launched this month in response to the complaints of Acorn users.

And Kenda Software's Disk Management Filing System (DMFS) could mean more than just an improvement in the capabilities of a BBC system with disk drives. A third-party operating system could help ensure the long-term survival of the BBC Micro as Acorn turns its attention to the new Electron, due out in August.

The shortcomings of Acorn's systems software have caused many frustrations — DMFS shows what you can do about it. 'Acorn had nothing to do with it,' said Kenda's Alan Horner. 'Users asked us to develop the system.'

Mr Horner says the system will be cheaper than the BBC's version, which is £109.25.

'DMFS doesn't restrict the number of files you can have on disk, which is a major deficiency of the Acorn offering,' he adds.

The present disk filing system for the BBC gives you a maximum of 31 files, while the DMFS aims to provide efficient use of disk space, also letting you call up files you have erased. Using the BBC system, they are gone for good once erased.

The file structure is CP/M compatible, enabling DMFS to read CP/M standard disks. This fits in neatly with Acorn's plans and Torch's reality in adding CP/M to the BBC system.

DMFS allows file names of up to eight characters plus three qualifiers, and it can be used on its own or alongside the present DFS, allowing transfer of files between the two systems.

Kenda Software is on 0703 869922.

Acorn's Z80 due in August

More power should be available for the BBC Model B in August, when Acorn says it will launch two add-on processors — a Z80 for around £345

memory considerably. The Z80 will enable the BBC to run CP/M.

A unit with 64K RAM would give a total of 96K RAM, but the chances are that Basic would have to be copied into the add-on, reducing the total capacity.

The launch date depends on when the software is ready, and a

spokesman said that the launch time of the Electron, also in August, is 'purely coincidental'.

Meanwhile, don't get too excited. Acorn was promising the two add-on processors for August last year.

And the Tube could be the most apt name ever chosen.

Now for a cassette backlash

Dragon Data is bucking a trend by moving away from plug-in cartridge software to more cassette-based programs.

The introduction of a mid-price range of cassettes, it says, will spare you from forking out for the more expensive type of cartridges. Cassette software will be priced at £4.95, £7.95 or £10.95.

A spokeswoman said: 'The fairly hefty programs will still be produced on cartridges. But we felt we had to make this move because the user prefers using cassette software, because it's cheaper.'

Vicsoft too has expressed some doubt about the future of plug-in

software. A spokesman said: 'If we're talking about a Vic 20, who is going to invest a third of what he pays for his machine on a software package? We don't believe there'll be a swing towards cartridges.'

On the other hand, Texas Instruments has been moving in the plug-in direction because it says it offers better value for money. Richard Mann of TI said: 'The user gets better graphics — and it's faster and easier to load.'

Both Sinclair and Acorn see cartridges as a good idea and have jumped on the bandwagon. They will produce packages shortly (PCN, issue 10 & 12).

Halfway to Tomorrow's Office

Software supplier SoSoft is to put money on the Commodore 64, with the promise of a scaled-down version of its Tomorrow's Office database-cum-application-generator for the 64.

But SoSoft is hedging its bets, with versions for other small micros planned, as well as a new version of the full-blown package for the IBM PC.

The IBM version boasts multiple file-handling and built-in transaction handling, plus the ability to set up command strings which can be

run from user menus.

SoSoft says it's hoping to close an agreement with IBM under which the Big Blue Whale will distribute the package. And it's already found itself a US distributor, Professional Software.

But, of course, none of these will be on offer for the disk-based 64 version, which is to be sold as Micro Filer 64, for around the £60 mark.

'It will be nowhere as powerful as Tomorrow's Office, but the basic principles will be the same,' says SoSoft chairman Neil Hewitt.

GO-BETWEEN — This device could mark the end of futile juggling with the volume control on your cassette recorder as you try to load a program on to a ZX81. Called the ZX Tape Loader, it sits between your cassette deck and your ZX81 and stabilises the signal in both directions. It should also make life easier when you're switching from LOAD to SAVE — with its three-way switch there will be no need to plug and unplug leads from the input and output sockets.

The ZX Tape Loader costs £14.99 from Elinca Products, Sheffield (0742) 339774.

Play it again— on keyboard

Mattel's peripherals

By Geof Wheelwright

The day of the games machine cometh.

Keyboards that will turn both the Intellivision and Coleco games machines into home computers are to be released at the Consumer Electronics Show in Chicago this week.

The long-awaited keyboard for Mattel's Intellivision games unit—code-named 'The Lucky'—has the feel and look of Tandy's Colour Computer and features 49-keys, a space bar and an £89.98 price tag.

The price covers both the keyboard and the Computer Adapter—the adapter plugs into the Intellivision's expansion slot and the keyboard then plugs into the adapter.

Mattel has also released a number of other computer peripherals for the Intellivision.

They include: a program expander to add memory and an Extended Basic to the Intellivision computer, a computer cassette recorder and a music synthesiser.

Meanwhile, the soon-to-be-released Coleco games machine (*Pre-Tested in PCN, Issue 2*) is also to have a computer keyboard.

Its UK distributor is hinting at an 84-key, full travel qwerty keyboard with a built-in dot-matrix printer and 48K RAM for under £100. But Coleco has launched an 80K computer with detachable keyboard and printer for \$600 at the CES in Chicago, so its 'keyboard' for the games unit could in fact be a cut-down version.

All change in Tandy revamp

It's all change at Tandy with the launch of three new products, the dropping of two existing ones and price cuts.

June 28 should see the launch of the Model 100 portable, the Model 4 and later the MC-10, a smaller version of the Colour Computer. An expansion unit for the Model III at under £700 is also promised.

The Model 4 will feature a new CPU board, 128K RAM to run CP/M Plus, a new keyboard and an 80×25 screen, but the price is not yet available.

The Model 100 is comparable to the Epson HX20 and comes with up to 32K of RAM, integrated LCD display with eight lines of 40 characters and internal recharge-

able batteries. A built-in 300 baud auto-dial modem will give communication over the phone.

But if you want the old TRS80 Model 1 or the TRS80 pocket computer 1, forget it—both have been discontinued. The pocket computer got the elbow in April, while the other was phased out in December. A Tandy spokesman said they had been 'superseded by technological advances'.

Tandy is cutting prices, too. The TRS80 model III has been reduced to £1,699 to £1,299, while the model II is £1,999 as opposed to £2,699—drops of £400 and £700 respectively.

The TRS pocket computer II is now £129.95, the previous price being £179. You could always use

your £50 saving to buy the TRS80 pocket computer IV for £49.95—this will be in the shops by June 14.

As opposed to Apple, which is heading upstream with Lisa, and Commodore, which seems to be reaching for the lower echelons, Tandy does not appear to be taking any specific direction.

Richard Ford, managing director of consultancy Microsearch, said he felt Tandy was aiming at as large a mass of people as possible.

Russ Nathan, managing director of market research firm Rontech, had different ideas concerning Tandy's aims.

'They see themselves in the business market rather than the home one,' he said.

Micros reprieved

By Ralph Bancroft

The Commodore Computer Show this weekend should finally scotch the rumours that Commodore is dropping the 500 and 700 models.

The company confirmed this week that it had considered withdrawing the 500. 'But there was such a heavy demand for it that we decided to continue with it,' said John Baxter, Commodore's marketing manager. 'Dealers were ringing us up asking for as many machines as we had left because they reckoned they could sell every one.'

Commodore now sees a bright future for the 500, especially in scientific and technical uses, but it is not prepared to discuss what detailed plans it has in mind. 'We are considering upgrades and down-

grades for the machine but I am not prepared to say what they will involve,' said Mr Baxter.

He was also keen to dispel suggestions that the company was either scrapping the 700 (*PCN, issue 5*) or planning a relaunch. 'There are no plans to make any changes to the 700,' said Mr Baxter. 'In fact the machine went into production this week.'

While emphatic about the 500 and 700, Mr Baxter was less forthcoming about plans for new machines. The only machine that he confirmed would be coming to the UK is a portable version of the Commodore 64.

Also in the pipeline could be a new teachers' Pet. It will be a repackaged version of the 64 with built in colour monitor and is

designed to replace the 4032 in schools.

People who have seen prototypes of the machine have enthused over the colour graphics. Equally attractive is the rumoured selling price of around £400.

■ Don't buy a Commodore 64... well, not this month, anyway. Wait until next month, when its price should drop from the current £345 to somewhere under £200, and there should be more software for it, too.

Commodore is about to go flat out to push its scaled-up Vic to the front of the market, by slashing the price right down. 'We want to sell as many 64s next Christmas as we sold Vics last Christmas,' a spokesman says.

Newbrain CP/M at last

The advance guard of the CP/M Newbrains has appeared in London and you should be able to buy one this summer.

Two London stores were demonstrating hand-built systems last week. Grundy Business Systems' Keith Beverton said there were ten systems in existence. 'Those first two are really investigatory for us,' he said.

Grundy is on course to produce 1,750 systems by early September, he said, but advance orders will account for most of these.

The ten prototypes match what will be the production machine's specification almost completely. But Grundy will make minor adjustments to a ROM chip.

Mr Beverton said this move was to enable the Newbrain to run some CP/M software packages without modification. Some packages that don't conform to the protocol will be adapted.

The system software will also include a 'configure' program which will theoretically provide for any 8-bit CP/M machine's disk format to be read by the Newbrain. 'You will be able to re-configure drive B to read any disk format,' said Mr Beverton.

The minimum Newbrain CP/M system, built around a model A, will cost £603—for this you get 32K of RAM and 200K on a floppy. A 96K system with twin 200K floppies will cost £998.

COMING OR GOING—This could be the last you'll ever see of the Texas Instruments 99/2. A spokesman for TI said last week that the £80 black and white, soundless, 16-bit computer is currently being test-marketed in the US—and only after the results of those tests will TI in Britain decide whether or not to bring the machine here. Rumour has it that the vicious price war in the US has made colour and sound computers so cheap that the mute and colour-blind machine will never make it.

VIEW FROM AMERICA

Pacman puts the bite on Atari

From Chris Rowley

Pity the poor US micro manufacturers, for they are truly between the rocks and the cheap 64K RAMs. Low-price memory chips, marching Z80s, hordes of Sords and Sinclairs — this market has turned tough.

The competition is so stiff that prices have fallen to the point where the entire American middle class can access 64K RAMs without feeling any pain in the pocket-book.

Consider, for example, an optimum Timex Sinclair layout. The computer itself is \$50. From the mail-order people you can put together a \$150 RAMpack, a \$150 green-screen monitor, a 300 cps dot-matrix printer with cables and interface for \$400, a fully-detachable ASCII keyboard for \$100, a modem for \$140, joysticks for \$25, a tape deck for \$25, a power-surge isolator for \$20. For about \$1,000 you have a complete Z80-based micro with all the trimmings.

New machines keep appearing too. The Jupiter Ace is now on sale here for \$150. Tandy just announced the \$120 junior version of its Colour Computer. Mattel, the giant toy maker, is bringing out the Aquarius (expandable to 56K) for about \$300, and Timex Sinclair has released the TS 1500, an \$80 16K machine.

The question is how a manufacturer hangs on to a perfect margin in a market like this. By the skin of his teeth, for some. 'Expansion is everything now, profits must come later,' say a few, and 'Pacman take the hindmost' says the stock market.

Just 15 months ago Atari was the jewel in Warner Corporation's crown. Warner, number 92 in the Fortune 500, found that Atari was generating the bulk of its profits. Then that first surge in the video market passed. The bright light in Warner's front window had attracted an army of competitors — video games advertising had taken over network TV, and home computers were down to \$100 or less, not much more than a games machine. The ageing Atari 400 and 800 lost their lustre and began to look overpriced. Margins were slashed furiously to hold on to shelf space in stores and profits plunged. Warner fell out of the heavens on Wall St and crashed to an \$18.9m loss in the first quarter of 1983.

Warners announced a big shake-up at Atari and manufacturing jobs were hurriedly transferred overseas to South-East Asia. Then the corporate headsmen were sent into the executive suite.

Embattled Atari chairman Raymond Kassar is still in place, despite his being under investigation by the Securities and Exchange Commission for selling Warner stock just before the bad news broke last December and Warner's shares tumbled.

However, despite the smoke wreathing the executive desks, Atari is fighting back with a new range of computers. \$150 will buy the Atari 600 XL with 16K of RAM. The 64K machine, the 800 XL, will sell for \$300, the 1400 XL with built-in modem and speech chip will be \$500, and the top of the line 1450 XL will have all that and a built-in disk drive for \$800.

But whether this will plump up Atari's slice-of-the-pie chart remains to be seen. A lot of new machines are being released this autumn including IBM's Baby Blue 64K RAM 'Peanut' for less than \$1,000.

By Christmas the competition should rival shark feeding-frenzies, especially with the US economy on the mend, and with everyone capable of reading a magazine article aware that without computer awareness their futures may be humble and tedious. Fully one third of US university graduates this spring face a jobless autumn. Corporations are discovering a new facet of the computer age — five young executives can do the work of ten.

Indeed there are persistent rumours that on Manhattan's psychiatric Gold Coast, where the rent on a shrink's couch can be \$250 an hour, there are any number of keyboard-phobic chief executives undergoing rehabilitation.

Their unemployable descendants should do them a favour. For the price of a couple of hours getting rapped by a shrink for their terror of doing 'girl/secretarial' things like touching a keyboard, these guys could be having fun with a new Atari. You're never too old to learn... otherwise, let's face it, the Pacman'll get you.

Another spot for Ladybird

A new kind of generation gap is about to open. Those of us who grew up with Ladybird books are going to be succeeded by a generation growing up on Ladybird software.

Ladybird has joined forces with another specialist educational publisher, Longman, to produce a series of cassette-based educational software for primary schools. The programs will run on the BBC Model B and the first four were unveiled last week.

Although the Department of Industry has offered primary schools a 50 per cent subsidy on micro systems, it is widely felt that there is a dearth of good software at this level. Ladybird, which gave you such deathless prose as 'This is Sir Walter Raleigh. He lived a long

time ago' intends to step into the breach.

The first offerings try to make learning fun.

Rally I and Rally II offer practical, useful applications in maths, dealing with the kind of problems you might need to solve each day.

Terrible Tales lets you create your own monsters and giants.

In September Junior Maths, Basic Number Help, Other Worlds and Junior English are due out. They are expected to be the same price as the current programs — £11.45, complete with teacher's notes and pupil's work cards.

More programs are due out each Spring and Autumn. For more information contact Ladybird-Longman Micro Software on York (0904) 20801.

Soft on 45

Software on singles has been given a boost by a new release from EMI but the pioneers of the technique are on the point of launching their follow-up.

A two-piece band called Mainframe produced a single called *Radio (Will Bring Me Home)* in February; on the B side was a short Apple text program. Mainframe's follow-up, *Talk to me*, will be backed by software for the Apple and BBC, and in text form for Sinclair machines. It is out next week.

As a source of cheap singles might have a bright future — not many tapes cost less than £1.50. Mainframe record on MC².

Mainframe — John Molloy (left) and Murray Munro — interface with their Apple.

Adding add-on for IBM PC

A maths co-processor could be a future add-on for your IBM PC.

IBM in the US plans to introduce two additional programming languages, various educational/entertainment programs and a maths co-processor for its PC.

The co-processor is an Intel 8087 which you install on an IBM PC system board.

IBM should also implement a

programming language to take advantage of the maths co-processor's capabilities.

A spokesman for IBM confirmed that the US announcement was official, but that there was no equivalent announcement in Europe.

But users can take heart, since IBM UK tends to follow US announcements.

Win a micro in Capital competition

If you're 16 or younger and fancy winning a free micro, you'd better hurry. Capital Radio's essay competition closes on June 24.

The essay should start with the words 'Computers will change our lives because...' and be no more than 500 words long.

Jilly Clarke, spokeswoman for Capital, stressed that you should live within the 45 mile Capital radius in order to be considered.

The 50 best entrants will receive a two-day computer training course in Basic programming at Capital Radio, and the most promising students will go on to the Imbucon summer school for two weeks to do a further computer course as well as each receiving a free computer.

Details of the competition can be heard on Sunday between 4 and 5pm on 194 around London.

Sinclair packs Palace

By Sandra Grandison

Against the heat of a June summer's day, more than 8,000 people packed into Alexandra Palace for the Seventh ZX Microfair.

It was a good day, drawing 700 people more than last year and Mike Johnstone, organiser of the fair, said: 'People were pleased to have a bit more space at this venue. In the past shows have tended to be a bit too cramped.'

'This fair has been so successful that we are planning to hold another one at the Alexandra Palace for August 20.'

The fair attracted novices and boffins who crammed the 288 stalls. It was a Sinclair users' field day with add-ons and software for the asking.

Among the 148 exhibitors simplicity was the name of the game. For £3.95 a company called Sof-teach was selling a Custom Keypanel Kit for the Spectrum to end keyboard fumbling. Each kit comes with 10 matt black keypanels plus a sheet containing more than 140 self adhesive command labels printed with words and symbols.

Micro-Myte's stand was another

crowd puller, displaying the capabilities of an acoustic modem costing £39.60. Using it you can communicate data between compatible users over the normal telephone network. Included with the package is menu-driven software, cables and a 12-month warranty.

On Basicare's stand two new modules for its expansion system were on view — an 80-column dot-matrix printer drive, Pericon at £41.75, and a three-voice music synthesiser, Sonus at £30.15.

Quick-action wrists moved excitedly at stands displaying new

joystick interfaces. AGF Hardware was selling a programmable joystick interface at £32.95 which is compatible with all games. And Cambridge Computing was offering a similar product for £26.

On the Fuller stand, against the hustle and bustle, was a new 'printerface' for the Spectrum. For £34.95 and £39.95 you can buy RS232 or Centronics, respectively.

For the kids the main attraction was the bangs, splats and zaps coming from some of the big names in games such as Artic Computing, Romik, JRS and Mikro-Gen.

Apple alive and kicking

By Richard King

The Apple show in Slough was rather a quiet affair on the first day... not that it was poorly attended, just that it was 'restricted' to the trade. It's amazing how many 'dealers' are below the age of criminal responsibility, though.

As for the Apple itself, it's not only alive, but kicking lustily. So much for the perennial remarks by the ill-educated that it's 'out of date' or 'long in the tooth'.

Several interesting items were on display, and the most interesting one was actually flown in specially, from California.

This was the Videx Ultraterm, a new item from the company which produced the first 80-column card for the Apple, and thus started a major trend.

Its latest product is carried by Pete & Pam Computers, and P & P went to the expense of having a courier bring one over. It arrived in the middle of Friday afternoon, direct from Heathrow, and was plugged into a waiting machine.

Apple users have become pretty blasé about new add-ons which make their computers do amazing things, but this one looked incredible. Imagine a screen with 24 rows of 160 columns.

Of course, 24 x 160 means pretty small letters, but there are eight other modes, each with inverse and normal as well as high-light and low-light, plus graphics. Definitely an 'ultra' add-on, which we'll be reviewing soon.

Another interesting device was the Genie 5 + 5 hard-disk system. This has a removable 5Mb cartridge which completely solves the backup problem, but the price of £3,885 will have to drop before it gains wide acceptance.

Several companies were plugging networking systems, but rather desperately.

The software front was definitely weak... there wasn't much new stuff, and of that, most was American. Where is the British talent for software we hear so much about?

Hermit 21, an interface for the Hermes Toptronic 21 electronic typewriter, converts the Toptronic 21 into a full KSR printer/terminal. It features a 2,000 character print buffer and a 'white space skip' which increases print speed to 45 cps. It also has three modes of operation. Hermit 21, £402.50, is available from Duplex Communications at Dumton Bassett, Leicestershire, (0455) 209131.

PCN Charts

PCN Charts follows the rise and fall of the UK's best-selling micros. This fortnightly top-of-the-shops list tells you what's selling best over the counter; it does not take account of mail order and does not count deposit-only orders. This week's figures show the number of machines sold in the two-week period ending two weeks before publication date (in this case June 10), so these charts tell the story in high streets between May 13 and May 27.

Machine prices quoted are for the no-frills models and include VAT. Information for the PCN Charts is culled from retailers and dealers throughout the country and compiled by MRIB, London. They will be updated every alternate week... so watch for the arrows to follow the ups and downs of the best-sellers.

More micro cuts

Prices are continuing to tumble in the battle of the price-tags, with Oric, Alpha Micro and retailers all joining in.

Sinclair has been selling the ZX81 for £39.95 for about a month, but Greens has cut it to £29.99.

Dixons has turned the Texas Instruments 99/4A into a sub-£100 system with an offer that includes accessories supposed to be worth £56. For £149.99 you get the 99/4A, TI joysticks, Teach yourself Basic and a cartridge carrying four games. Elsewhere on Dixons' shelves you'll find the Dragon 32 at £174.99, the Atari 800 at £299.99, the Vic 20 starter kit at £139.99 and the Commodore 64 at £349.99.

Oric is mounting a summer sale

from July 1 to mid-September, offering a software package free with every 48K machine sold. For £169.95, you'll get the micro plus tapes on Home Finance, Teach Yourself Basic, Oric Flight and Multi Games, which the company says are worth £40.

The 16K model, which should at last reach outlets by early July, will also come with a software package, this time valued at £30. It will contain adaptations of the programs produced for the 48K. The 16K deal is £129.95 and both the Oric and ZX81 sell through W H Smith, Dixons, Greens, Laskys, Micro C and Spectrum Centres.

Not to be outdone, Alpha Micro has announced a 33 per cent

reduction in the price of the AM-100/L. This 68000 based micro, aimed at business, professional, scientific and educational users, will sell at £3,561 instead of £5,341.

But general sales manager David Ford would not be pressed on the subject of future price reductions. 'We haven't got plans for any further specific reductions at present, but prices are declining in the industry all the time,' he said.

Alpha Micro is based in Slough on (0753) 2821922.

The micro industry's reaction to the prices' helter-skelter has been mixed. One analyst described it last week as 'suicidal' but another said that the business market was not necessarily price sensitive.

Adman natter

The Chatterbox speech synthesizer for the Vic 20 (*Pro-Tested PCN March 18*) has undergone a facelift and price change under its new distributor — Adman Electronics.

The 'Jack-in-the box' logo has gone in favour of a swish new design. The new box is simply called the Adman Speech Synthesiser.

According to Adman, PCN's Pro-Test highlighted design problems in the documentation which have since been rectified.

The best news, however, is that the unit has been reduced to £49.95.

According to Adman spokesman Mick Shorrock there are many applications just waiting to be 'articulated'. He sees a big future in the education field (spelling programs) and in games.

Adman Electronics is on (0423) 62642.

Tri-compatibility means switchable software

Are you and your micro tri-compatible? Don't look for psychiatric guidance yet, it's just a new approach to software packaging that has slipped over from the US.

Tri-compatible means that a package can run on three different types of micro — each cassette holds a different program version for each machine. All you have to do is to choose the right program for your machine and load as normal.

For starters the first release of tri-compatible games is called Aztec Challenger at £12.95 for the Atari 400 and 800, Commodore's

Vic 20 and the Texas Instruments TI99/4A.

Cosmi, the Californian company that is behind this marketing ploy, also has three new arcade-type games for the Atari machine — Spider Invasion, Meltdown, The E Factor and Plumbous at £11.95 each.

Funware, another US company, has shipped in some non-violent games for the TI99/4A. They are Rabbit Trail and Henhouse, both at £29.95.

All packages are available from Centresoft; 021-550 8263.

HUNDRED CLUB — Mattel's Aquarius micro has made a little bit of computer history. It must be the first micro to have been reduced in price before its launch. Although it isn't due out until later this month, Mattel has announced that the planned price of £109.95 has now been slashed to £99.95 to bring it in line with the recent price cuts on Sinclair's Spectrum. The basic machine comes with 4K of RAM, has 8K of Basic, uses a 40 x 24 screen and offers 16 colours. But you'll have to pay extra for joystick paddles, the 'mini-expander' to use cartridges and a cassette recorder. This may of course change when the system is actually launched.

Commodore modem is now on show

Commodore 64 users will be able to buy a modem to hook up to Prestel in early autumn.

The modem on a chip works only with the 64 machine and plugs into the cartridge port at the back of the micro. It will operate at split speeds of 1200-75 baud and you don't need a separate power supply.

For about £70 the unit will come with software from Y2 Computing, so you can save Prestel frames and download telesoftware.

The hardwired device, a direct-connect unit, is 'less susceptible to noise', according to a spokeswoman from Commodore. The company is also considering a modem for the 700 machine.

You can get a sneak preview of three prototype modems at the 4th Commodore Computer Show, June 9-11, at the Cunard International Hotel, London. The price of admission is £3.

This Pixy plots pictorially

A colour plotter will be unveiled by Mannesmann Tally on June 21.

The Pixy III is intended to give high-quality plotting, and its features include triple pens for multi-colour applications, scientific symbols, 15 character sizes with four directions of rotation, plus line plot and scattergram marks.

A Z80 processor drives the device and gives automatic circles, arcs and curves.

The plotter costs £690 with a parallel interface, or £747.50 with a serial interface.

Contact the company in Wokingham on 0734-7887211.

Choice of parallel or serial interface with the new Pixy II colour plotter.

Old orange on the rebound

An old friend in new clothes and a rare new single-board system are on the way from a south London company.

Microtan of Dulwich is launching the Microtan 65, which is none other than the Tangerine micro of days gone by, and the Microtutor, a single-board machine-code system that may also strike a few chords in your memory.

The Microtutor, on sale later this month, is something of an oddity at a time when single-board systems seem to be increasingly unfashionable. It will cost £49.95.

The Microtan 65 has come into Microtan's hands following Tangerine Computer Systems' decision to sell off its interest in the system and its range of add-ons.

You may also know the machine as the Micron, another of its past identities.

Driven by a 6502 processor, it has just 1K in its basic form but you can add to this with Tanex cards from the same supplier. Input can be from a keypad or board, and the system can drive either a monochrome or colour monitor with a 128 character set and 'chunky' graphics.

Microtan 65 with a keyboard Tanex expansion, Basic, graphics and power supply will cost you £389. Microtan is at 16 Upland Road, Dulwich, London SE22, tel: 01-693 1137.

■ PCN will look more closely at the system in a future issue, if only for old times sake.

THE WORLD'S LEADING MICROS AT PRICES YOU CAN AFFORD!

OEM offer one of the most comprehensive ranges of business micros in the U.K. — so come to our King Street showrooms where you can discuss your application and have a demonstration on:

From £12.98 p.w.

IBM
Personal Computer

From £13.98 p.w.

olivetti M20

From £12.98 p.w.

apple III

From £12.98 p.w.

OSBORNE 1

From £7.98 p.w.

apple IIe

From £4.58 p.w.

Also Canon Photocopiers *from £3.48 p.w.* Call our hotline 01-748 8404 for some of the keenest prices in Britain!

PLUS! Epson — Ricoh 1600 Flowriter — Facit — Qume — Praxis 35 — and a whole range of dot matrix and daisywheel printers and peripherals.

As one of Britain's foremost companies in the field of high technology as well as one of the leading micro computer outlets in the U.K., OEM offer as part of our all round expertise:—

TRAINING

Our monthly training courses cover most leading software packages but must usually be booked 4 weeks in advance!

SUPPORT

Our customer support department is second to none!

NETWORKING

Our Multinet 2000 range interfaces almost any computer to any other computer/peripheral whether mainframe, mini or micro.

BUSINESS PACKAGES

A wide range including accounts, word processing and spreadsheet programs!

SOFTWARE DEVELOPMENT

Software written to your needs and specification.

HARDWARE DEVELOPMENT

Our team of engineers will design and build any system/peripheral you require!

MAINTENANCE

We will repair/maintain/service most micros whether purchased from us or not.

WEEKLY BARGAINS!

Every Friday evening we change our **showroom** demonstration models — which you can pick up (only one week old) at vastly reduced prices!

The June Top Ten in Spectrum software at W.H.Smith.

Flight Simulation
Sinclair 48K **£7.95**

Penetrator
Melbourne House 48K **£6.95**

The range of software available for the Sinclair Spectrum is to say the least, extensive.

So every month at W. H. Smith, we review the range with particular reference to presentation, challenge, excitement and value for money. And because we're quite severe it's a difficult job finally to arrive at a Top Ten. But as you can see, not impossible.

You don't have to take our word for it.

At W. H. Smith we stock the widest selection of Spectrum Software, so you can judge for yourself.

JOYSTICKS

JOYSTICKS FOR:

DRAGON
TANDY
BBC
VIC
ATARI
Spectrum
ZX81

NEW

We are pleased to announce our new self-centring J7 micro-switch joysticks for computers including: VIC, ATARI, ZX81, Spectrum and others. All versions normally have the VIC 9 pin D plug configuration and are compatible with these and similar computers. The same joystick plugs into our ZX81 and Spectrum interfaces (available late June). Unlike some of the large, stiff and cumbersome joysticks available, the J7 gives precise, light and rapid operation. 4 high quality long-life micro switches give the same positive click operation as good keyboards and the whole mechanism is rated at several million cycles.

Professional and industrial joysticks

Despite the success of our computer joysticks the major part of our business is still our wide range of high quality joysticks for all applications, from computer aided design and control panels to electric wheel chains and earthmoving equipment. In the event of even our extensive range not meeting particular requirements we build special versions quickly and economically. Recent special joysticks include single and dual axis units, 3 times normal size for a flight simulator, ruggedized versions for helicopter use and contactless units for a complex military radar system. Whatever your joystick requirement, please contact us for further information. We regret, however, that we are unable to handle direct sales for small quantities of the J6 or J7 computer joysticks — please contact your dealer.

Don't carry a LOAD on your shoulders, unburden yourself on PCN's letters page.

Share your thoughts in the UK's liveliest micro weekly letters columns. Funny, feisty or fanciful, your letter could win you £10 if it's of star status.

WRITETO: Random Access, Personal Computer News, VNU, Evelyn House, 62 Oxford Street, London W1A 2HG.

The whole Sordid story

Oh dear. That old, old chestnut once again, just when I thought it was safe to go back into the computer store. And to what am I referring? Why, the review of the Sord M5 (PCN May 27-June 2). The Japanese invasion has finally started, eh? Is this the same invasion that started in 1979 with Sharp, or the 1981 one featuring NEC, or a completely new one?

You will gather that I am rather sceptical about such claims, mainly because we've heard them all before. Since the first news of the inevitable a few decidedly non-oriental companies have come and, well, sort of stayed. You may have heard of them: Acorn, Sinclair, even IBM spring to mind. Meanwhile NEC, Japan's largest computer manufacturer, has captured a full 3 per cent of the US micro market.

Perhaps one day the 'storm that's bound to break' will actually do so, but certainly the Sord M5, nice as it is, cannot be described as more than a medium-sized raindrop. I can just imagine the agonising decisions being made by British buyers: Should I buy a 48K Spectrum with a printer for £170? Or should I pay £189 and get a Sord with a full 4K (whew!) of user RAM?

Nice try, Sord. Knock the price in half, shift the reset key away from the return key, add a space-bar and you might generate some interest.

It's not the same M5 that sells for \$159 (£100) in the US, is it? It is? Oh...

Nick Rushton,
Reading, Berks

You're right... we've all heard it before, but in this case powerful marketing and support could well make the Sord M5 the first really successful invader from the Orient. And the price? Inflated as usual, I'm afraid, but that seems to be the price of not being American — Ed.

Give 'mine is best' a rest

Am I alone among readers in being justly aggrieved at the amount of space taken up in your letters column by contributions from the 'mine is best' lobby? What can possibly be achieved by constantly insulting the intelligence of other computer owners by parading their machine's shortcomings across the pages of your magazine?

Honest micro owners know only too well the areas in which the performance of their machines could be bettered; but most are too busy utilising the strong points of their computers to be bothered by them.

Perhaps the people who resort to this kind of correspondence are the type who can't think up enough uses for their expensive toys and feel they must justify their purchases on the grounds that at least they bought the best available.

I own a Dragon 32; it's not the best micro in the world—I wish it had the graphics of a BBC, the sound of a Commodore 64, the speed of a Jupiter Ace, the colours of the Atari and the software support of the Spectrum—but look what it can do without them!

There seems something oddly perverse in criticising the minutiae of someone else's home computer, when not so many years ago we were all sitting, goggle-eyed, watching James Bond pressing the buttons on his digital watch.

David H Mitchell,
Edinburgh.

Debate about the virtues of various machines can help people new to micro-computing. Nevertheless, you do have a point — Ed.

Tape me back to dear old Dolby

I have heard that a lot of Oric 1 owners have problems CLOADING tape programs.

When I received my Oric, I purchased a small cassette player, labelled 'Suitable for use with personal computers.' I then spent a very frustrating weekend, trying to load a couple of pre-recorded tapes, as well as the demo tape. I tried every variation of volume setting, with no success, I could not even re-load programs which I had CSAVED off the machine.

I decided to experiment with my stereo cassette deck, and made up a 3-pin DIN to phono lead, using only one of the channels. It occurred to me that the purpose of the tape player is to accurately convert the magnetic information into electronic signals, and an expensive hi-fi unit should do that job much better than a cheap and nasty portable. It also offers the luxury of VU meters for proper level control.

Having switched off the Dolby etc, I gave it a try. Result—100 per cent perfect loading every time. I can load any of the Oric software first time, including the demo tape, at 300 or 2400 baud.

So if you already have a stereo deck, try using that first, and save your £25.

Just remember to note on which channel you CSAVED your masterpiece.

P R Strutt,
Norwich, Norfolk

Sympathy for the Devil

I write regarding the subject of software piracy mentioned in J R Mortleman's letter (PCN, issue 11).

The problem of software piracy lies with the software companies. Consider it, the vast majority of computer programmers who are likely to pirate programs are aged in their early teens. They probably receive a couple of pounds' pocket money a week, so it takes at least three weeks to save enough money to purchase a cassette containing, usually, one program. Therefore, who can blame them for clubbing together to buy cassettes and copying the original.

However, if the software companies were to reduce their prices to say, £3, many more people would be prepared to buy an original—I know I would.

Surely a minimum of £5 is extortionate for one program, and to my mind this gives the manufacturer a huge profit margin. Alternatively, more programs should be enclosed on the one cassette for £5. It can be done—look at Michael Orwin's game cassettes containing eight games.

To sum up, a message to the software giants, you cut your prices, we'll stop the piracy...
Lyndon Martin,
Whitehaven, Cumbria.

Atari does pack the cards

In PCN issue 9 Geof Wheelwright says he can't find an 80 column card for the Atari 800. Why doesn't he look in the Silica shop catalogue and price list. 'CXP 0880 80 column card—full view 80 (Bit 3) £249.00'.

Too many people seem too lethargic to find things out for themselves, especially about computers, even when the information is in the manuals supplied with them, as can be seen by looking at any letters page in any micro magazine.

As for all the writing about different computers and their proper use—piffle. If a person likes the one they have and it serves their purpose and they can afford it, then it's the best one for them.

Fred Vincent,
Maidenhead, Berks

Well, Geof tells me he didn't say we couldn't find an 80 column card—but that Atari wouldn't say where you could get one. Of course, you're right about Silica Shop and you'll find details of its card within PCN—Ed.

Grundy machine a brainwave

I'd like to reply to Anthony Hodge (PCN, issue 9). He may like to know that after Max Phillips' Routine Inquiries reply, I brought a Grundy Newbrain A.

For several years now I have been using a VAX (a DEC 32-bit mini). This meant that screen editing and a good keyboard were essential items.

Often underestimated, the presence of these on the Newbrain make program development infinitely easier (well, compared with the atrocious line editor on the Dragon 32).

Now then, with the machine selling consistently well in PCN Charts, 640×250 graphics (with commands to match) and the best built-in 80-column screen editor, when on earth are we going to see an Anatomy of the Newbrain between your worthwhile covers?

I D Walters,
Abertillery, Gwent

It's on our list, Mr Walters... but meanwhile if you've programs, tips etc, please send them in. Thanks—Ed.

PERSONA ZX

YOUR KEY
TO THE
TOWER
OF
POWER

You simply choose the following modules you want and plug them into the PERSONA and turn your ZX81 or ZX SPECTRUM into a total computing package ... into an ORGANIC MICRO.

PERSONA ZX81	£30.35
PERSONA ZX SPECTRUM	£45.00
RAM 08 (2K)	£24.50
RAM 16	£26.75
RAM 64	£76.25
MINIMAP	£35.95
DROM (2K)	£39.50
TOOLKIT	£22.20
PERICON a	£27.90
PERICON b	£33.75
PERICON c	£41.75
SONUS	£30.15

Options: USERFRONT	£8.00
Additional 2K for RAM 08	£6.50
Additional 2K for DROM	£7.50

Prices include: VAT, Postage and Packing for U.K. deliveries. Overseas Orders: please add 15% to price for surface mail.

Post to: BASICare MICROSYSTEM LTD
12 Rickett Street, London SW6 1RU
Tel: 01 - 385 2135

**BASICARE
MICRO
SYSTEM**

**BASICare
OFFERS**

**RAM SWOP
OR £10.00 OFF**

Facility to reset a crashed system without pulling the plug

Reliable power connection plus battery back-up points for failsafe operation

Controller to co-ordinate all peripherals

Circuitry to supervise and maintain memory add-ons

Power drivers to minimise loading on ZX81. More expansion with no troubles

Extra sources of power supplies to eliminate overheating on the ZX81

4" of high quality ribbon cable at no extra cost

Gold plated connector for firm connection to the ZX81

Din 41612 standard connector. Perfect contacts for 64 gold plated connections

Extra lines for one megabyte expansion

"....just 10 reasons why you need a ZX81 PERSONA"

**ORGANIC MICRO
BETTER_{by} DESIGN**

Visit our stand (No.606) at the "COMPUTER FAIR" in Earls Court, London between 16 - 19th June, and take advantage of one of these special offers! *

1. We will exchange your Sinclair or Memotech 16K RAM pack for our RAM 16 module, when you purchase a PERSONA.
2. If you have a 16K RAM pack of any other make, we will pay you £16.75 for your RAM pack, if you purchase a PERSONA module.
3. If you do not have a RAM pack, we will allow you £10.00 discount on the PERSONA module.

*These offers are available to personal callers at our stand. Your RAM pack must be presented at the stand and be in working order and reasonable condition. We reserve the right to reject any equipment deemed to be unsuitable for the purpose of these offers.

ROUTINE INQUIRIES

Got a query? Max Phillips opens the pod door Hal. Send all those unanswerables here. No personal replies promised but you never know . . .

Write to: Max Phillips, Routine Inquiries, *Personal Computer News*, VNU, Evelyn House, 62 Oxford Street, London W1A 2HG.

The ZX81 as Bingo caller

Q I'm a recent convert to the computer scene, and I wonder if you could help me with a programming problem on my ZX81? How do I get a random number to print in the correct space on a set form? For example, if I wrote a bingo program, when I generated a random number, how could I get it to appear in the correct square corresponding to that number?

Peter Davies,
Salford Manchester

A This is the sort of problem for which it's great fun to come up with your own solutions. If you are working with a complicated form, it's often easiest to use a look up a table for the coordinates of positions on the screen. So, if your tenth random number should be in a box at position 10,20 on the screen, you could have the 10,20 stored in any array X(10) and Y(10) and use PRINT AT Y(10),X(10); followed by the number.

If you've a simple form, it's often possible to use a mathematical formula to convert a number into a set of screen coordinates. As a very simple example, try the table in our illustration. Suppose you wanted to present a blank screen and then display random numbers in the correct positions.

The table has the numbers 0 to 9 on row 0, 10 to 19 on row 2, 20 to 29 on row 4 and so on. So we can get the row number to print on from the tens digit of the number. This is simply $2 * \text{INT}(N/10)$. In a similar way, the column to tab to can be squeezed from the units digit of the number, as $3 * (N - \text{INT}(N/10) * 10)$.

The $3 *$ separates the numbers out across the screen, assuming two character positions for each number and a space between them. Doing it this way means you should remember to put a leading space in front of single digit numbers so the columns align.

The program in our illustration is a makeshift demo of this.

If you thought that was complicated, wait until you try bingo cards. To do a good bingo program you should reproduce a real bingo card exactly, and this isn't easy.

A Mecca definition of bingo card is a nine column by three row matrix. There are five numbers and four 'blanks' on each row. The numbers from 1 to 90 can appear on this. Numbers less than ten should be (in order) in column one. Column two is for 10 to 19, three is for 20 to 29 and so on until column 9, which is for 80 to 90.

To prove it can be done, here's a sample card from my first attempt at it (running on a BBC . . . I'll admit it):

```
** 13 ** 32 ** 52 ** 72 81
6 16 ** 33 ** 54 ** ** 84
8 ** ** 34 44 55 ** 75 **
```

Incidentally, my program works on a 9×3 array, marking the blanks first and putting the numbers in afterwards.

The form is displayed simply by printing out the array in order.

Now the fun really starts. Your program shouldn't generate the same card twice in any one game (guess why). In real life around three-quarters of the numbers are the same on all cards, with the last quarter being random. This keeps the tension up and all the players interested.

In short, if you are looking for a good program to write, you've found one. Bingo!

Joysticks for the Spectrum

Q I was interested in the Pickard Joystick controller featured in PCN issue 11, and wondered if anybody can fit it, and will it attach to any Spectrum? Could you give me an address where I could buy one?

Andrew Ackers,
Ormskirk, Lancs

A Anyone can fit the Pickard provided they don't mind a bit of fiddle and tearing up their warranty card. You have to open the Spectrum, pull off its keyboard ribbon, connect the controller and reconnect the keyboard ribbon. There's no reason why the controller should be fussy about the sort of

0	1	2	3	4	5	6	7	8	9
10	11	12	13	14	15	16	17	18	19
20	21	22	23	24	25	26	27	28	29
30	31	32	33	34	35	36	37	38	39
40	41	42	43	44	45	46	47	48	49

```
10 CLS
20 LET N=INT (RND*50)
30 PRINT AT 2*INT (N/10), 3*(N-INT (N/10)*10);
40 IF N<10 THEN PRINT " ";
50 PRINT N;
60 GOTO 20
```

Spectrum that it is connected to.

The joystick controller is available only directly from Success Services at 154 High St, Bloxwich, Walsall, West Midlands. The price is £18.95 plus £1 post and packing. The phone number is (0922) 402403.

Research into RAMtop

Q I'm a long-standing ZX81 owner, but I've decided to upgrade to a 48K Spectrum. I've just a few questions: How do you check RAMtop on a ZX81? Where can I sell my 16K ZX81 with its software and hardware for a good price? Is it possible to load a 16K Spectrum cassette into a 48K Spectrum?

Larry Leung,
Sutton Coldfield, Birmingham

A RAMtop on the ZX81 is stored in locations 16388 and 16389 in memory, and is written about on page 177 of your ZX81 manual. To read its value, you can just use PRINT PEEK 16388 + PEEK 16389*256.

As to selling the ZX81, the choice is up to you. You'll get a good price through classifieds like PCN's Billboard, though selling time can be slow. Ads in local newsagents and so on can frequently bring a surprising response, and there are a number of dealers offering second-hand equipment and part-exchanges.

Some of these are one-off initiatives. Others are existing firms changing specialities, mostly camera shops. These are a bit young to judge at the moment, and camera habits such as book pricing don't put sellers in a good position. But a

reputable company will provide a quick and painless deal.

Lastly, of course you can load 16K tapes into 48K Spectrums. They even run.

Cheaper micros? Wait a bit . . .

Q Do you think IBM or DEC will bring the cost of a 16-bit system down to £500, and down to the size of the Newbrain, and if so, when? Tandy seems to be trying in the States, but it doesn't have the marketing in the UK media that is required.

J Gibson,
Romsey, Hants

A If IBM doesn't do it, somebody else will. Already, Advance Products is working on the Advance 86a, a £400 cassette-based version of the IBM.

The Advance is rumoured to use ULAs and such fancy gizmos to reduce the chip count and board size. So you can do an IBM in a small space. Hopefully, Advance can do it for a small price.

Of course, if you want a twin disk machine for £500, you'll have to wait a bit longer, but not a lot longer. IBM compatibles around the £1,400 mark will mean that cheapo CP/M machines will have to be re-priced. And of course, the Japanese can't continue to resist temptation.

So as a general trend, prices go down, performance goes up and size goes down. As for the other companies you mention, I wouldn't expect DEC to come down to the rough and tumble end of things, but Tandy is perfectly capable of anything to which it put its mind. Even in this country.

Dynamic Games for the ZX Spectrum

Dynamic Games for the ZX Spectrum

TIM HARTNELL

A SINCLAIR COMPUTERGUIDE

by Tim Hartnell

Tim Hartnell has selected 20 dynamic games of lasting interest. They range from board games like *CHESS* and *PIRANDELLO*, to arcade action in *JOGGER* and *DEATHRACE 2000*, and include a major adventure game, *REVENGE OF CASTLE DREAD*.

A detailed introduction is provided for every game and, in most cases, the program is explained line by line, highlighting the tricks the programmers have used and suggesting how these can be applied in other programs and games. At the end of the book a chapter is devoted to suggestions on how to improve your own programs.

The ZX Spectrum Explored

by Tim Hartnell,
Foreword by Clive Sinclair

In this practical guide — with programs throughout — Tim Hartnell takes his readers from their first steps in programming to how the ZX Spectrum can be used as a tool at home, at work and for education. He looks at the use of sound, colour and 3D graphics, and shows how to write programs in BASIC, as well as how to use machine code on the ZX Spectrum.

The ZX Spectrum Explored is complete with many programs for education, business and — not least — pure fun!

Got a tip? Send it to PCN and get a cash reward. £5 for every hint printed

If you've got something to crow about . . . a bit of magic that'll make the world a better place for micro users, then send it to PCN Microwaves—our regular readers' hints and tips page. We'll pay you £5 if we print it. We'll pay you even more if your little gem gets our vote as microwave of the month. Think on . . . and write to Microwaves, PCN, 62 Oxford Street, London W1A 2HG.

On location with the Oric

Here are a few tips for Oric owners. The top of Oric's user memory is stored in A6 (166) not 9A as it says in the manual. When you load machine code programs you don't need to specify the start and end addresses as these are stored with the program.

Once you've loaded the programs, DEEK(95) gives the start address and DEEK(97) the end address. These values could be useful if you want to restart or save the machine code.

*M R Chambers,
Bury, Lancs*

Tandy print diversion

There's an easy way to redirect output on a TRS80 model 1 or 3. To send LPRINTs to the screen rather than printer, POKE 16422,88: POKE 16423,4. To reset this to its normal mode POKE 16422, 141: POKE 16423,5.

Alternatively, POKE 16414, 141: POKE 16415,5 will send the output of PRINT statements to the printer rather than the screen. Use POKE 16414,88: POKE 16415,4 to put things back to normal.

*John Allsopp,
Huddersfield, West Yorks*

Improved ZX autostart

Most ZX81 owners know how to create an autostarting program. If you have the lines: 9000 SAVE "SELFSTART" 9010 LET START=10 9020 GOTO START

then saving the program with GOTO 9000 will mean that it starts running from line 9010 whenever it is loaded.

There is one snag with this. As well as saving the program, the ZX81 saves all its system variables. So if you use RAND before any user input in the program, the same random seed will be loaded from tape and you'll always get the same sequence of random numbers.

To cure this, use the following save routine:

```
9000 SAVE "SELFSTART"
9005 LET START=10
9010 CLS
9015 PRINT AT 10,3; "PRESS
A KEY TO START"
9020 IF INKEY$="" THEN
GOTO 9020
9025 CLS
9030 GOTO START
M J Plummer,  
Redhill, Surrey
```

Lynx memory on the move

This simple routine will move the start of the Basic program area on the Lynx to the specified address. It can be useful for storing machine code below Basic programs where it cannot be overwritten. You could even use it to hold two or more Basic programs at once.

```
10 INPUT "Start of Basic
area?";X
20 POKE X-1,13
30 POKE X,128
40 DPOKE 25082,X
50 DPOKE 25084,X
60 DPOKE 25119,X+1
```

25082/3 holds the location of the start of the Basic programming area and 25119/20 holds the end of the array area.

*Clive Newton,
Sutton Coldfield, West Midlands*

Speed up the Oric editor

Editing Oric programs using CTRL-A can get quite frustrating. You can make life easier by increasing the auto-repeat rate of the keys.

Do this by POKEing 839 with a suitable value . . . 16 is a good place to start. This might upset program execution so reset it with POKE 839,39 before running the program.

*P Humphrey,
Harraton, Washington*

Dragon dodges and interrupts

There are quite a few undocumented but useful Dragon addresses. 363 and 364 contain the vector for the machine's keyboard interrupts. The interrupts are enabled with POKE 362,126 and disabled with POKE 362,57.

Location 135 contains the ASCII code of the last key pressed.

One problem with the Basic is that only USRO works. To overcome this, you can change the address of USRO or go back to using plain old EXEC.

*A Ward,
Gillingham, Kent*

Oric reset disabled

All Oric owners know there is a soft reset switch on the underside of their machines. This switch is connected to an interrupt line on the 6502 which fetches the new program counter address from &FFFA. In the Oric, this address is &22B and the routine stored there is:

```
22B JMP F430
22E ORA (00,X)
230 RTI
```

To disable the reset key, all you need to do is put an RTI at the beginning of this routine. Just POKE 555,64.

*Gordon Love,
Hamilton, Lanarkshire*

Short sort for the Lynx

This short program for the Lynx will sort a list of words. It isn't intended to demonstrate the rather inefficient bubble sort technique but is designed to show a way of comparing strings on the Lynx.

Normally, the Lynx can only compare strings for being = or NOT. The section of program between 210 and 330 compares two strings character by character using the ASC function to extract the ASCII codes of each character.

You could pull this routine out of the program and use it as a PROCedure in your own programs.

*John Moulson,
Grimsby, South Humberside*

```
100 CLS
110 INPUT "HOW MANY WORDS ";A
120 DIM A$(20) (A)
130 DIM T$(20)
140 DIM R$(20)
150 DIM S$(20)
160 FOR B=1 TO A
170 INPUT A$(B)
180 NEXT B
190 FOR F = 1 TO A-1
200 FOR G = F+1 TO A
210 IF ASC(A$(F)) < ASC(A$(G)) THEN GOT
O 330
220 L = LEN (A$(F))
230 K = LEN (A$(G))
240 IF L < K THEN LET J=L
250 ELSE LET J=K
260 B=0
270 B=B+1
280 LET S$= RIGHT$(A$(F),L-B)
290 LET R$= RIGHT$(A$(G),K-B)
300 IF ASC(S$) < ASC(R$) THEN GOTO 370
310 IF ASC(S$) > ASC(R$) THEN GOTO 340
320 IF B < J THEN GOTO 270
330 IF ASC(A$(F)) < ASC(A$(G)) THEN GOTO
370
340 T$=A$(G)
350 A$(G)=A$(F)
360 A$(F)=T$
370 NEXT G
380 NEXT F
390 CLS
400 FOR B=1 TO A
410 PRINT A$(B)
420 NEXT B
```

String sort routine — see *Short sort for the Lynx*

David Janda explores the mind of a micro with a powerful Basic interpreter and editor.

Probe the NewBrain

The NewBrain microcomputer has been available for some months, but it has received little attention. This is surprising, because it has a very powerful Basic interpreter and editor. The Basic isn't the fastest available, but it's fast enough for most applications. Programs can be written for maximum speed by including LET statements with FOR...NEXT loops, for example.

The graphics on the NewBrain are also powerful, with commands enabling the user to set up a 'graphics screen' where lines and circles can be drawn. These graphics screens can take up any part of the screen, and text can be displayed around the screen if the user wishes.

Every NewBrain comes with two manuals, the beginner's guide and the user manual. In this and next week's issue I'll be looking at the various features of NewBrain Basic, and explaining how these can be used to interact with the user.

Unlike many micros available today, the NewBrain's numeric variables can be made up only of the letters A to Z, and the numbers 0 to 9. String variables are much the same, but must end with '\$'.

Using long variable names can slow down a program, but it is very handy — in long programs in particular, as using short variable names can be confusing.

On the subject of variable assignment, NewBrain Basic allows the programmer to either include or omit the LET statement. The examples in the beginner's guide show the latter, but, after running tests I found that the Basic runs faster if the LET statement is included.

String handling is achieved à la Microsoft Basic, the only major difference being that NewBrain Basic allows unlimited string size. But be careful — you may run out of memory.

All the usual Microsoft string handling commands, such as LEN(n\$), MID\$(n\$,X,Y), LEFT\$(n\$,X) and RIGHT\$(n\$,Y) are in NewBrain Basic. MID\$ is also allowed in the form MID\$(n\$,X) where n is the name of the string. This will return the remainder of the string from character X. The logical AND and OR may be used in IF statements where a string is part of the test, eg.

```
IF M$="FEBRUARY" OR
N$="February" AND D=28 THEN
GOTO 100
```

Vectors and matrices

The NewBrain will handle one and two dimensional arrays with up to 5,374 elements. The arrays should be declared before working on them, but if this is not done, a default of ten elements will be assigned.

One handy feature when using arrays is the ability to clear the contents of the array as well as cancelling the dimension by using CLEAR n\$(). This can be used as a form of garbage collection, and you would most likely use it in very large programs where remaining memory is minimal.

Most applications requiring the use of arrays only need two dimensions, and the NewBrain provides this. But it can be handy to use multidimensional arrays for clarity, especially when dealing with text, and it is a pity that the NewBrain can't handle multidimensional arrays.

Streams of control

The NewBrain provides sophisticated — albeit complicated — control of how information is handled by the computer. For the flow of data between the computer and I/O (including the screen), the OPEN statement is used. On the other hand, control characters can be 'written' to the

screen either directly or by writing them with CHR\$(n) or PUT x, y.

First the control characters. The PUT statement can be used to place text at a certain place on the screen, or to write control character to the screen. Here is a short list of some of the PUTs:

- PUT 31 — Clear screen
- PUT 30 — Clear a line
- PUT 11 — Move cursor up
- PUT 10 — Move cursor down
- PUT 1 — Insert blank line
- PUT 22 — Place cursor

The writing of control codes can be a powerful tool in designing screen layouts. It can also be used to control the switching of the four character sets that the NewBrain has — more of that later.

OPEN allows the programmer to control the way data is sent to I/O. This is used mainly for defining the high-resolution screens, but can be also used to control the way the data is sent to the cassette recorder and disks.

For example, it is possible to have either a 40 or 80 column screen on the NewBrain. The way to do this is to enter (in a program or direct mode):

- OPEN #0,0,"L" For 80 characters per line
- OPEN #0,0,"S" For 40 characters per line

The power (and complexity) of OPEN is clear when it is used with the NewBrain's graphic commands.

Before any graphics work can be done with the NewBrain, you have to set up a screen. Again OPEN has to be used to define the size, shape, and position of the screen.

NEXT WEEK A major program to illustrate control of data flow, plus data file programming commands and graphics.

GRAFIC CONTROL

Grafic is a simple interactive editor designed to be used in conjunction with the Sirius Graphics Tool Kit and Grafix kernal to design and save screens without the need to write one-off programs for development purposes.

Screens produced with Grafic can be used from applications programs using the Sirius Grafix program. Grafic — as listed on pages 22 and 23 — is written in standard Microsoft Basic and runs under MSDOS on the Sirius. It should give you a high-level interface to the Sirius Grafix kernal software for program and screen development purposes.

An interpretive version of the program will require a 256K machine, but if a compiler is available a compiled version will run on the basic 128K machine.

The command line for Grafic is free format and its only restriction is that parameters are separated from the keyword by at least one space. The command can begin anywhere on the current command line, as leading and trailing spaces are ignored.

The response "?" comes in reply to an incorrectly written or unimplemented command. If parameters are omitted, zero is assumed. Commands may be in upper and lower case. The draw command allows you to use the Sirius cursor keys to draw shapes anywhere on the screen, turn pixels on and off and start and stop drawing.

After using the cursor keys to draw a shape, you can then fill the shapes in with eight different types of patterns. FILL sketches the region surrounding the current cursor position with the currently enabled fill pattern. The pattern command (PATTERN x), where x is the number of pattern type, will be implemented on the FILL command.

The combination rules are the same as in the Graphics Tool Kit manual, which should be consulted for further details on how they work. The tool kit contains a number of other programs in addition to Grafix:

- Busigraf — A business graphics package that allows you to make and edit pie charts, bar graphs, line plots etc.
- Chargraf — A character graphics system that allows you to create and print graphics using characters instead of high-resolution graphics.
- Efont — A font editor used to define or modify the character set.
- Keygen — A keyboard generator used to define characteristics of individual keys.
- Modcon — A console modification utility that allows you to set and save keyboard tables and character sets.
- GW Basic — An interactive interpreter that supports hi-res graphics and music.

COMMANDS

EXIT
CLEAR

Returns to MS-DOS

Clears graphics screen and returns cursor to 0,0. Other parameters remain unchanged.

MOVETO x y
MOVEBY x y
LINE TO x y
LINEBY x y
CIRCLE x
PATTERN x

Moves cursor to screen co-ordinates (x,y).

Moves cursor from the current position by the increments (x,y).

Draws a line from the current position to the co-ordinates (x,y).

Draws a line from the current cursor position by the increment (x,y).

Draws a circle of radius x around the current cursor position.

Selects a fill pattern, where x is in the range 0-8. The density of the pattern increases as the number does. Pattern 8 is blank.

Fills the region surrounding the current cursor position with the currently enabled fill pattern.

FILL

Dumps the graphics screen to the currently enabled dot matrix printer (as specified when Grafix was loaded).

DUMP

Enables cursor.

Disables cursor.

CURSOR ON
CURSOR OFF
CURSOR SAVE
CURSOR RETURN
CURSOR FIND
CURSOR TYPE x

Saves internally, the position of the cursor on the graphics screen.

Returns the cursor to the last saved position.

Reports the current cursor position on the screen.

Selects a cursor type where x is in the range 0-2: Type 0 = block cursor Type 1 = gun sight Type 2 = arrow

Saves the current screen window on disk with the name filename SCR. No extension needs to be given, but a drive specifier may be used. Filename can be up to eight characters.

SAVE filename

Loads a screen at the current cursor position (filename details as above).

LOAD filename
BAR x y

Fills a bar with sides of size x y from the current cursor position with the currently enabled fill pattern.

ARC r xl yl x2 y2

Draws an arc of radius r from co-ordinates (xl yl) to (x2 y2) which must lie on the circle of a specified radius.

WINDOW FIND
WINDOW DRAG

Reports the current window origin and size to the screen.

Copies the currently defined screen window to the present cursor position.

WINDOW SET x y

Defines the current graphics window, based at the current cursor position with the height and width as specified by x,y.

LINE TYPE x

Sets the line type as follows: type 1 = solid line; type 2 = dashed line, 4 on 4 off; type 3 = dashed line, 8 on 4 off; type 4 = dot dashed, 4 on 2 off 2 on 2 off; type 5 = dot dashed, 8 on 3 off 3 on 3 off;

LINE WIDTH x
RESET

Selects the line width (in pixels), either 1,2,4 or 6.

Resets the system parameters (see Grafix manual, ESC 5d) and sets the step rate for the draw facility to 1.

SCREEN RULE x
STEP x
DRAW
WRITE string

Sets the current screen combination rule (see pages 22/23).

Sets the step rate for the draw command.

See panel below.

Write the string at the current cursor position.

Keyboard layout for the DRAW command

Return to Grafic	CLR 	DEL CHAR	Turn off a pixel (only with SCREEN RULE 3 enabled)
Start drawing line	LINE INS MODE	LINE DEL EOL	Stop drawing line
Unused	SCROLL	LTRL	Turn on a pixel
Cursor up			Cursor down
Cursor left			Cursor right

THE BATTLE IS OVER...

"MS-DOS has become the dominant 16-bit operating system . . ."

Computing, 17th February '83

"... now it is clear that MS-DOS is the runaway winner."

Weekly Micro Bulletin, 21st February '83

"MS-DOS . . . has virtually stopped the runaway success of Digital Research's CP/M in its tracks."

Infomatics Daily Bulletin, 14th January '83

"Digital Research . . . may be too late to stop the landslide."

Personal Computer News, 20th May '83

"In quick succession, more than 50 other computer hardware manufacturers picked Microsoft's operating system. As a result, MS-DOS has virtually shut CP/M out of the market for newer, more powerful microcomputers."

Business Week, 21st February '83

MS-DOS The industry standard 16-bit OS

MICROSOFT®

THE COMBINATION RULES

The portion of a screen (or a whole screen) to be moved is called the source and is labelled "S". The portion of the screen (or a whole screen) targeted as the location of the move is called the destination. Before your move, it is labelled "D"; after the move, the destination is labelled "D".

The following rules specify the possible transformations of the destination by the source:

D' = 0: The destination RAM contains all zeroes.

D' = S AND D: The destination is formed by ANDing the corresponding bits in the original destination and the source.

D' = S AND NOT D: The destination is formed by ANDing the complemented original destination with the source.

D' = S: The source is moved to the destination.

D' = NOT S AND D: The destination is formed by ANDing the inverted source with the destination.

D' = D: No operation; no change in the destination results regardless of the source.

D' = S XOR D: The destination is formed by XORing the corresponding bits in the original destination and the source.

D' = S OR D: The destination is formed by ORing the corresponding bits in the original destination and the source. This is the starting combination rule.

The listing for Grafic with the appropriate REM statements to allow easy diagnosis.

8
D' = NOT S AND NOT D: The destination is formed by ANDing the complemented destination and the complemented source.

9
D' = NOT S XOR D: The destination is formed by XORing the corresponding bits in the original destination and the complemented source.

10
D' = NOT D: The destination is formed by complementing all the bits in the original destination.

11
D' = S OR NOT D: The destination is formed by complementing the original destination and ORing the corresponding bits with the source.

12
D' = NOT S: The complemented source is moved to the destination.

13
D' = NOT S OR D: The destination is formed by ORing the corresponding bits in the original destination and the complemented source.

14
D' = NOT S OR NOT D: The destination is formed by ORing the complemented original destination and the complemented source.

15
D' = 1: The destination contains all ones.

The combination rules provide flexibility in graphics presentation, including simulating motion on the screen. The diagrams show the results of applying the combination rules to a simple destination and source.

LINE DRAW FUNCTIONS

The 16 combination rules can be summarised in the following four rules for all the Line Draw functions. In this case, the line is the source and all the dots in the source are ON.

- > Hard write (or OR-in) the line. (D' = S)
- > Erase a line. (D' = NOT S)

- > XOR-in the line. (D' = D XOR S)
- > No operation. (D' = D)

PCN

Special offer

SAVE MORE THAN £100 ON THIS FULLY GUARANTEED DOUBLE DISK DRIVE

Take up this reader offer now and you'll get this superb double disk drive subsystem for £100 less than its normal price of £700. And it comes with six months' guarantee, and VAT is included.

Thanks to *Personal Computer News*, you can build up your system, whichever micro you have, for only a portion of the costs.

And the only extra you'll need is the interface. This superb offer comes with cables and software worth more than £35. But you'll pay nothing for them in this offer. They're yours with PCN's compliments.

Slimline drives, for BBC and other micros

Boxed in a light beige, low-profile case with its own switch mode PSU, these 80-track double-sided drives give you 800K of formatted storage with the BBC micro, or 1600K for other machines.

The BBC drives of similar spec cost nearly £800; so take advantage of PCN's special offer now — get your order in by the closing date, June 30.

This offer comes with all you need except the interface:

- Mains cable with plug
 - Twin drive cable
 - BBC diskformatter program
- Bought separately these would cost more than £35.

To: PCN Special Offer, VNU Business Publications, 62 Oxford Street, London W1A 2HG

Yes, please send me _____ Disk Drive Subsystems at £499 + Delivery + VAT (total price £585.45).

I claim my FREE mains cable, disk drive cable and BBC diskformatter program, worth over £35!

I enclose a cheque for _____ made payable to VNU Business Publications.

Name _____

Address _____

This PCN Special Offer represents very special value: if stocks are exhausted, full refund will be made to all customers immediately.

VNU Business Publications Incorporated in the Netherlands. Handelsregister NR 01697 Haarlem.

Complete the coupon and send it to us today, with your cheque for £585.45 for each Subsystem. We'll deliver within 28 days. The drives will be provided by Micronix Computers Ltd and made by Mitsubishi or Canon, supplied at the discretion of Micronix.

SPECIFICATION

Capacity: 1Mb per disk, 500K per side
6.25K per track

Transfer rate: 250Kbits per second

Recording density: 5922 bits per inch

Track density: 96 tracks per inch

Access time: track to track, 3 milliseconds
settling time, 15 milliseconds
average, 94 milliseconds

Unit life: Five years

Mean time between failure: 10,000 power-on hours

Ted Ball tests the first micro-based version of a new language from the designer of Pascal.

Modula-2: son of Pascal

Richard Evans

Modula-2 is a general-purpose language designed by Niklaus Wirth, and combining his two earlier languages, Pascal and Modula. Pascal was intended as a teaching language, and incorporates the principles of structured programming.

Modula is a stripped-down version of Pascal, and has extensions including independently compilable modules and support for multiprocessing and low-level mainframe access. It was intended for programming small real-time control systems.

Modula-2 adds extra features to Pascal and Modula, and is designed for systems programming, and large-scale programming projects involving a team of programmers.

But a microcomputer implementation of Modula-2 is now available from Triangle

Software. It was developed by Volition Systems in the USA, and runs with the UCSD Pascal system. The Apple version was supplied for review.

Features

Modula-2 includes almost the whole of Pascal, but there are many differences in the details, apart from the specific Modula-2 extensions.

The differences include:

- Unsigned integers of type **CARDINAL** are included as well as signed integers of type **INTEGER**, and both types can be given values in decimal, hex, or octal.
- Structured statements in Modula-2 all have an explicit end and include statement sequences instead of Pascal's compound statements enclosed within **BEGIN ... END**. For example, in Modula-2 you write:

```
WHILE condition DO
    statement 1;
```

```
    ...
    statement n;
```

```
END
```

instead of

```
WHILE condition DO
    BEGIN
        statement 1;
```

```
    ...
    statement n;
```

```
END
```

in Pascal.

GOTO has been omitted from Modula-2 and replaced by **HALT**, which terminates program execution; **RETURN**, which transfers control to the end of the current procedure, and **LOOP/EXIT**, which provides a generalised loop structure allowing multiple exits.

Modula-2 does not have a separate **FUNCTION** definition, but functions may be implemented with procedures. If the statement 'RETURN expression' is included in a procedure definition, a call to the procedure will return the value of 'expression' in exactly the same way as a Pascal function call returns a value.

The Pascal reserved word **FILE** is omitted from Modula-2, but there is a file-handling module included in the system library.

The most important differences, however, are the features derived from Modula: modules, processes, and low-level machine access.

There are two types of modules — program modules and library modules, and each module includes its own declarations and procedures, but may also refer to other modules.

Program modules make up the top level of a program and you may use constants, variables, data structures and procedures from lower level modules in them by including names of the objects you want to use in an 'import list'.

Library modules consist of two parts: a definition module and an implementation module. The definition module contains an import list as in a program module, an export list detailing the objects from the module that may be imported by other modules, and the declarations and procedure headers for the implementation module. The implementation module consists of procedure definitions and program text.

A module may import either complete library modules or individual objects from library modules. It is possible to have either qualified or unqualified import. With qualified import, when an identifier is referenced by the importing module the identifier must be preceded by the name of the module it has been imported from. This makes it possible to construct a program from a number of modules that were written independently, without the possibility of confusion between the same name used in different modules.

'Processes' in Modula-2 are designed to allow multiprogramming, or concurrent

programming. Genuine concurrent programming requires a system with more than one processor, but Modula-2 supports *quasi-concurrency*, where a single processor executes one process at a time, but switches among several processes in a 'time-sharing' fashion, so that the processes appear to be running simultaneously.

Processes communicate through shared variables, which allow the transfer of data, and signals, which allow synchronisation of processes. The library module 'Processes' includes procedures such as WAIT and SEND which allow you to define the way that processes interact.

Processes may be used for handling input/output devices, either by polling or through interrupts, and Modula-2 allows several levels of priority.

As well as the compiler and the p-code interpreter the Modula-2 package includes a standard library of machine dependent modules for input-output, file handling and dynamic storage allocation, and a utility library which includes mathematical functions, string manipulation, and arithmetic operations on 19-digit decimal numbers.

Presentation

The package consists of two 5¼in disks containing the Modula-2 compiler, p-code interpreter and library modules, a user's manual in the usual ring-binder format, and a textbook, *Programming in Modula-2*, by Niklaus Wirth.

The textbook is described as an introduction to programming in general and programming with Modula-2 in particular, and as being suitable as a self-contained tutorial for the beginner. However, although the book does cover the syntax and features of Modula-2 in a very thorough way and explains the ideas involved, it includes some advanced concepts.

It is therefore not possible to understand the book fully or to appreciate the power of Modula-2 without programming experience and a good background in computer science.

The manual is a reference guide, divided into several sections. *Introduction to Modula-2* covers the syntax in detail and includes a section describing the differences between Pascal and Modula-2. *Standard Library* and *Utility Library* give details of the contents of these libraries, *The Modula-2 System* covers the use of the compiler, while *Implementation Guide* covers installation procedures and the use of machine specific features. The manual is well organised and clearly written, and there is a separate index to each section.

Getting started

The manual includes a section on installing Modula-2. This also describes how to incorporate the Apple Pascal library units into the Modula-2 system, and how to set up the interrupt system.

You need to understand something of the Modula-2 system before you start on the installation, but the instructions are clear, so you don't have to know everything before you start.

MODULE MainProgram;

...

MODULE RandomNumbers;
IMPORT TimeOfDay;

WriteInt(Random(), 7);

...

END MainProgram.

Family resemblance: a random number generator in Modula-2 (on the left) and Pascal.

In use

The compiler is quite complicated to use, as there are a number of directives and options, and conditional compilation is allowed.

Among the directives are STANDARD, which controls the use of the non-standard features of this implementation; \$TO, which is used in conjunction with predefined Boolean variables to allow various listing options; \$DEBUG, which controls the printing of debugging information, and \$IF, \$ELSIF, \$ELSE, \$END, which are used in conditional compilation.

I found the section of the manual on using the compiler rather more difficult to follow than the rest of the manual, but it does contain all the information you need, provided you look hard enough. One advantage of having the library modules, and particularly the Apple Pascal Turtle Graphics package, is that you can write short test programs to use while practising with the compiler.

Part of the difficulty in learning how to use the compiler is picking out the minimum you need to compile simple programs. For large programs you will probably need most of the features of the compiler, but only a small part of it is needed to start with.

Reliability

While testing the compiler I put in innumerable errors, both accidental and deliberate, and I found the error messages generally quite accurate and informative. There are about 150 error messages covering everything from missing punctuation marks and illegal variable names to illegal exports from program modules, and from syntax errors in compiler direc-

tives to compiler scope table overflow.

There are some things which are not covered, but warnings are given about these in the textbook and the manual. For example there is 'underflow' of cardinals, where an arithmetic statement would make a cardinal variable take on a negative value, but what actually happens is that the value is taken as a large positive value.

Verdict

Modula-2 is a very interesting language, and it isn't difficult to learn if you're already familiar with Pascal. It is well done and well documented.

With the price taken into consideration, it will appeal only to professionals and to advanced hobbyists, but if you are interested it is worth investigating further. The textbook and the manual are available separately, allowing you to decide if you can make good use of Modula-2 before you have to spend the full amount for the Modula-2 system.

Overall value

Name Modula-2 **Application** Systems programming language **System** Apple II 48K, 2 disk drives, Apple Language Card and Apple Pascal or Apple III with Apple Pascal/SOS **Price** Program Development System, £375 inc VAT; User Manual, separately, £39; Textbook (*Programming in Modula-2* by Niklaus Wirth), separately, £9.50 **Publisher** Triangle Software, 38 Belleville Rd, London SW11 6QT **Format** 5¼in floppy disk **Other versions** 8080/Z80, configurable for CP/M or other operating system

All of this.

For the price of this. Only £139.99.*

For one month only*, you can get a complete Commodore computer system for the price you'd expect to pay for the VIC 20.

It's a complete computer system: a Commodore VIC 20 computer, a cassette unit, a simple explanation of computer programming—"Introduction to Basic Part 1", plus an exclusive compilation tape of four computer programs, (Blitz, Type-A-Tune, Race and Hopbit).

And, while stocks last, all that can be yours for just £139.99. Which is almost exactly the price you'd normally have to pay for the VIC 20 alone.

There's only a limited number available, so we recommend you visit

your nearest VIC 20 stockist as soon as possible.

ALL ABOUT THE VIC 20

They say it's the best home computer in the world, and no wonder! There are educational programs for 5 year olds and up (spelling, physics, arithmetic etc.) Plus music, typing, chess and home accounts. And, of course, all those marvellous arcade games.

You'll soon be exploring new worlds of colour, animation and sound. With a vast choice of programs and unlimited scope for entertainment. All right at your fingertips.

*Or while stocks last. Details correct at time of going to press.

YOU CAN SEE THE VIC 20 AT ALL BRANCHES OF DIXONS AND WALLACE HEATON, AND AT SELECTED BRANCHES OF BOOTS, RUMBELOWS, LASKYS, CURRYS, GREENS, ORBIT, MICRO C, RANK XEROX, WIGFALLS, SPECTRUM, COMET, JOHN LEWIS, WOOLWORTH, REDIFFUSION, CO-OP AND OTHER GOOD RETAILERS.

ALSO AT BRANCHES OF A NATIONAL NETWORK OF COMMODORE COMPUTER DEALERS.

Sinclair Research Ltd., Stanhope Road,
Camberley, Surrey, GU15 3PS.
Tel: 0276 685311. Reg. no: 1135105.

At last, a 16K colour computer
with graphics for under £100!

Why have we done it?

Partly because the sheer
volume of Spectrums sold (over
300,000 so far) has brought
down unit production costs.

And partly, of course,
because we hope you'll buy a
Sinclair computer - and not
some competitor's promise!
We've all heard about colour
computers breaking the £100
barrier. Here's the computer
that's done it. A colour computer
with advanced graphics that's
fully supported, and widely
available.

Right now, you can order a
Sinclair Spectrum at these
prices direct from Sinclair on
the order form below. And to
make it even easier to handle
high-level computing at the

lowest possible price, we've
cut the cost of the printer, too.
At £39.95, it's almost
unbelievable!

At prices like these, there's
really no reason to wait.

Want to turn your Oric into a filing clerk? David Janda tests a database that might do the job.

GLOSSARY

Commands to be used on their own:—		OR	Find records, and add to already found list
EDIT	Edit last sentence	PRINT	Print data
LAST	Repeat last sentence that was understood	ADD	Arithmetic commands
SAVE	Save data	SUBTRACT	
ADD	Add new record	MULTIPLY	
SORD	Sort in ascending order	DIVIDE	
SORD	Sort in descending order	MOVE	
PON	Turn on printer	DELETE	Move data
POFF	Turn off printer	BEGIN	Delete record
DUMP	Print whole file quickly	ATRECORD (ATR)	Start of commands to be executed once before all records
FIELDS	List defined fields		Commands for each record selected
ABORT	Return to Basic	END	Command executed once, at end of records
Macro commands:—		IF ... ENDIF	Conditional commands
MACDIR	List all macros	Operands:—	
MACSAV	Save last command as a macro	#NN	Register to contain temporary data
MACDEL	Delete a macro	Field Name	Data from appropriate record
MACDIS	Display a macro	Literal	If not a field name, e.g. 4, SINGLE "abc"
MACRUN	Run a macro (The Macrun is optional)	INPUT	Stop and ask for data
Oricbase sentences:—			
FIND	Find records		
AND	Restrict FIND to a further condition		

in the session, but in fact you must decide the maximum number of records the file is going to contain. So you will need to decide in advance how big your file will ever need to be.

I had to make an educated guess. Further information was requested as to number of fields, length of fields and so on. After this I had to enter ADD to add the records. I entered some garbage, then tried to amend it.

The only editing commands available are used to edit commands, not the data in a record, and amending data in records means going through a lengthy procedure. To change the name in a field called NAME it was necessary to do this:

FIND NAME = "NIGLE" ATR MOVE "NIGEL" TO NAME

I found this long-winded and annoying. But long commands to do things like changing names can be incorporated into macros. These macros can be SAVED with the file, and used again by simply entering MACRUN *n*, where *n* is the name of the macro.

The diagram shows the commands Oric-Base offers. Some of the commands must appear in a particular order; for example, PRINT will give an error message if it is used on its own. The manual is not particularly clear on this.

Reliability

A lot of thought has gone into error-trapping here. You can't do silly things, such as asking to define fields with a length of 0. Trying to place alphanumeric data in a numeric field also brings up an error message, and you are asked to re-enter the data.

Error-trapping in any type of database is very important, and I was glad to see that Oric-Base is well up to scratch in this respect.

Verdict

There is a limit to what you can expect for £12.95. Many people are selling software at twice the price, but with half the features. Progressing up to a database with more facilities will not present any problem because Oric-Base gives you a good idea as to what database is.

The fact that you cannot add records at a later date is a serious weakness, and it would be significantly improved if some of the missing features were incorporated in later versions.

Basic Outlets Mail order, Oric dealers.

Oric-Baselines

Oric-Base is a database in cassette form for customer files, and small business and personal records. You don't have to be a big business user to benefit from using a database, because the operations involved in, for example, keeping track of back issues of a magazine are very similar to those used for storing information on the availability of spare parts for jumbo jets.

I used a 48K Oric 1 to review Oric-Base. A printer can be used for hard-copy output, but this is not essential.

Features

To store your data, it must be organised into records, and they in turn make up a file. Each record is divided into field which can contain alphanumeric or numeric data.

An address field, for example, will contain letters of the alphabet, and may also contain numbers. It is therefore an alphanumeric field. On the other hand, the field for dates of birth will contain only numbers, and therefore is a numeric field, and so on.

Oric-Base, like most other databases, will allow you to define the record — how many fields — and decide on what data you will put into the fields: numeric or alphanumeric. Once you have done this, and decided how many records you wish to have in your file, you're on your way.

The data in the fields can be edited to correct mistakes, records can be deleted, and calculations can be performed such as: 'SUBTRACT TAX FROM GROSS-WAGE MOVE GROSS-WAGE TO NET-PAY.'

You can search and sort, and files can be SAVED and LOADED. One useful facility is the ability to define macros. If you have a particular sequence of commands you use

frequently, you can set them up as a macro — a string of commands — and then execute the macro by simply entering its name. This saves a lot of time and effort.

As Oric-Base is much cheaper than most 'professional' databases, it lacks many of their features.

But there are a number of other things that Oric-Base should really be able to do and cannot, including addition and/or deletion of fields; naming files; merging tape files; and renaming files. You cannot add records at a later date.

Some of these omissions are more serious than others, and more arithmetic functions, including %, would also have been helpful. I hope the publishers will include them in later versions. It will use more memory, but these are important and useful facilities.

Presentation

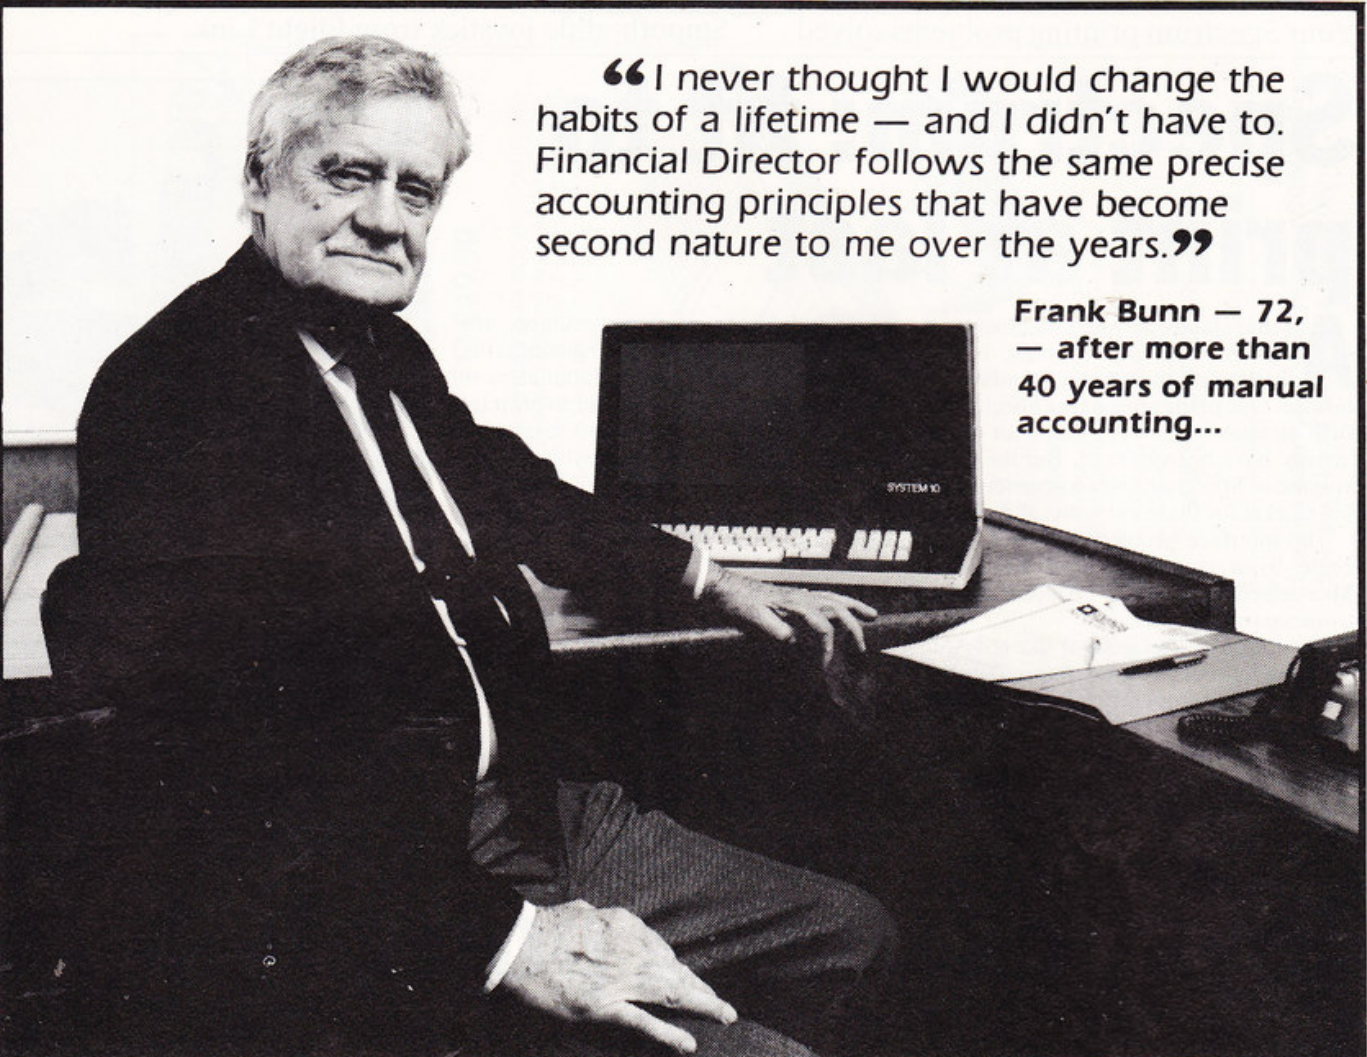

A 13 page handbook is supplied with the cassette. This contains the information you will need to get going. The details, however, are very sketchy.

Non 'computerate' people — the majority of those people who use databases — may find the handbook very confusing, and a rewrite would be in order here. There is a help file within the database itself, but this doesn't give you any more information than is already in the handbook.

In use

Setting up Oric-Base is fairly straightforward. Once you have LOADED the main program, you are asked whether you wish to create a new file or LOAD one that has been created already.

You are then asked 'How many records?' At first I assumed this must refer to the number of records I planned to create

“I never thought I would change the habits of a lifetime — and I didn't have to. Financial Director follows the same precise accounting principles that have become second nature to me over the years.”

**Frank Bunn — 72,
— after more than
40 years of manual
accounting...**

More and more people are finding *FINANCIAL DIRECTOR* is Right for their Business

Financial Director is a complete business book-keeping and accounting software package for small and medium-sized businesses and proven in two years' field testing.

Financial Director has been designed by professional Accountants and conforms exactly to British Accounting principles with essential items such as automatic double entry and a complete audit trail which are fundamental to successful computer accounting.

Financial Director has been described as the 'accountant in a briefcase' — partly due to its unique presentation, partly because it provides the financial control skills of the professional accountant and enables the businessman to keep totally up-to-date with the progress of his business.

Financial Director works on most business micro's and is available from good computer dealers all over the country.

We recommend that you consult your accountant and implement your computer accounting system with professional assistance.

Your Spectrum printing problems solved . . . Smooth-glide joystick from Flight Link.

Spectrum: fit to print at last

All that stands between the Spectrum and good-quality printing is the absence of an industry-standard interface. One of the reasons the Spectrum is such an economic buy is that a lot of the 'extras' have been left out. But the sheer volume of Spectrum sales has generated a big market for these extra bits and pieces.

The interface problem has been overcome by a company called Kempston Microelectronics, which produces a Centronics parallel interface.

The interface looks rather like a RAM-pack and fits onto the edge connector at the back of the computer. The male edge connector is continued at the back of the interface cabinet so that further add-ons can be configured. A ribbon cable runs from the interface to a standard Centronics printer plug.

The software to drive the interface is

LOADed from cassette. Once it's LOADed (this takes about 30 seconds) the user can set up the printing parameters — the format he wants the printer to print in. This is done through a menu — a series of questions answered via the keyboard.

The modified program can then be SAVED onto another tape. This copy can then be LOADed straight in, and the printing done without any further ado.

Changes in format after this operation are still possible. It is also possible to add extra control codes to generate special characters from the printer, although this depends very much on the printer you are using.

PCN has used the interface frequently for work in the magazine — printing out Spectrum game listings for instance. So far it has been reliable, and has added to the versatility of the machine.

Reliable cassette-driven Centronics interface.

Joysticks with potential

Flight Link's range of potentiometer joysticks for two of the most popular computers are featured here as a follow-on to the joystick round-up of last week (*PCN Peripherals*, issue 13).

Potentiometer joysticks use a different method of sending information to the computer.

Normally a spring-loaded stick mechanically closes one of (usually) four circuits to instruct the computer where to move a screen object. You can't execute a move up

and left, say, at the same time.

The potentiometer joystick, however, has two potentiometers positioned at right-angles. These are simultaneously manipulated by the stick through a universal joint mechanism. Instead of being spring-loaded, the stick moves smoothly, and the object on-screen goes through exactly the same manoeuvres.

This kind of joystick is capable of instructing a program in true two dimensional movement. You can, for instance,

move the stick cross-wise in a north-easterly direction, and both potentiometers will send information to the computer indicating between them the desired movement.

The Flight Link joysticks we tested were for the Dragon and BBC micros. The Dragon set uses a five-pin DIN plug, while the BBC uses the D-plug. Flight Link is also planning the release of versions for the Vic, Atari, ZX81 and Spectrum later this month.

The sticks themselves are dainty and feel very precise. They are just over an inch long, and glide smoothly from side to side. This delicacy requires you to adapt your playing style somewhat — you can't be as brutal as you would be with a gear-stick, unless you want to rip your hand open.

Instead you have to use the thumb and index finger. This can take some getting used to, particularly if you play violent action games requiring fast reflexes. A good feature of the controller design is its ability to be used either on the table, one hand holding it steady with finger poised over the single firing button, or aloft, with the thumb of the holding hand doing the firing.

• The case has a nice solid feel about it, and should stand maltreatment without getting too upset. The Flight Link joysticks have a quality feel to them and should prove good value.

Name Joystick Control Unit J6 **Machine** Dragon 32 or BBC Micro **Price** £15.95 and £17.95 respectively **Manufacturer** Flight Link Control Ltd on (0420) 87241 **Contact** Clares, 06065 51374.

Smooth mover — Joystick Control Unit J6 allows true two-dimensional progress.

TWO UNBEATABLE OFFERS FROM TEXAS INSTRUMENTS

OFFER No1

FREE WITH EVERY TI-99/4A HOME COMPUTER PURCHASED ... ACCESSORIES WORTH OVER £50

Dual Wired Remote Controllers

making it possible for you to react in a fast and positive way, especially with games programs.

COMET PRICE £22.90 inc. VAT

Beginners Basic Tutor Cassette

introduces programming concepts to the new user. Includes eight separate lessons that complement the 'Simple Programming' section of the user's guide supplied with every TI-99/4A.

COMET PRICE £9.90 inc. VAT

Connect Four

a challenging vertical strategy game. Players must get four markers in a row — down, across or diagonally — to win. An entertaining way to gain familiarity with your new computer.

COMET PRICE £19.90 inc. VAT

Texas Instruments' TI-99/4A is already established as one of the most successful Home Computers on the market. And now it brings you an added bonus. Whether you're investing in a TI-99/4A for the first time, or already enjoying its benefits, Texas have a terrific offer for you — an offer that will boost your buying power and extend the capability of your computer. All you need do to take advantage of either of these offers is to fill in the counter application form when making your purchase, send it in with your receipt — and wait for your bonus to arrive. It's a great offer to accompany a great computer.

TEXAS TI-99/4A HOME COMPUTER

From the moment you connect this Home Computer to your colour TV and slip in the first programme Command Module, you enter a new world of learning and entertainment.

You have your own personal tutor for you and your children, your own business or domestic advisor, your own language coach — or even your own playing partner (and instructor) for a game of chess. It's so simple a child can use it.

By connecting the computer to a domestic cassette recorder you can feed in your own facts and write your own programmes... compiling information and statistics that can be recalled whenever you need them. Your children can learn maths, spelling or grammar. You can use it to prepare budgets, household accounts, or to help you with your business. The possibilities are endless.

The built-in TI BASIC programming is designed for beginners and skilled computer users alike, and the self-tuition book that is provided with the TI-99/4A gives you full step-by-step instructions.

Plus free accessories worth over £50!

Kenneth Kendall's silken tones have been siliconised for the Beeb micro. Trevor Jones tunes in.

A word PHROM the BBC

When the BBC micro has a chip-based voice synthesis system designed for it you expect something rather grand. Voice output, after all, is what the micro's namesake is all about.

True to form, the BBC micro has struck a blow for the Queen's English and encoded the vocal tracts of veteran newscaster Kenneth Kendall in a silicon chip. Whether this development is causing concern for job security among the remaining BBC newscasters is doubtful, however.

Speech synthesisers have been around for a while but most of them have an American accent; not really surprising, since most of the development on speech chips has been carried out in the US. Texas Instruments, for instance, has been the leader in the field.

Most of the available speech synthesisers (*PCN, issues 1, 2, 3 and 4*) come in little boxes which are hooked into their host micros through an interface. In some cases they occupy some of the free memory address space.

The BBC micro was conceived as an expandable computer and has a variety of free socket spaces dotted about inside the cabinet. So the speech system comes as a piece of firmware encapsulated on two 40-pin ROMs.

These have to be fitted by an Acorn dealer due to the fact that on early versions of the printed circuit boards (PCBs)

installing the system involves breaking certain tracks and forming wire links. It's not a do-it-yourself job.

Our review machine had an issue four PCB which did not require any board modifications. Fitting the ROMs took 15 minutes, including reassembling the case and dealing with the inevitable unforeseen problems.

Generation levels

Our documentation was a pre-release photocopy — the finished product will undoubtedly be a professional production with much the same content.

According to this the user can generate words on several different levels. Choosing the level really involves a trade-off between time and versatility.

With the system fitted the BBC can produce words and sounds from a vocabulary contained within a word PHROM (Phase Read Only Memory). To encode speech in a binary representation, the speech processor uses a linear predictive coding technique. The speech processor takes serial data provided by the PHROM integrated circuit and converts it into audible 'words' under the control of the main CPU.

You can access and manipulate the 165 words already stored in the PHROM quickly and easily. This can be done in Basic or assembly language.

Existing Basic sound commands are used, but they take a special form: SOUND -1, (word number), 0, 0.

The value of the word number determines which of the 165 words are stored in the PHROM. For example, to create the word 'any' type SOUND -1, 168, 0, 0. You can also access ASCII characters by using the sound command in the following format: SOUND -1, ASC "(char)", 0, 0.

Using upper-case characters will produce the letters of the alphabet, and numeric characters will produce numbers. Lower-case letters and the remaining characters will produce words with some kind of association.

You can also make up new words by combining two words that are already supplied in the PHROM. These are known as compound words. Facilities are provided to delineate soft or hard sibilants ('S' sounds).

Silent periods can be generated by using codes 127 and 128, which give 0.125, 0.25 delay between the spoken words.

The basic sound commands require four parameters. The first parameter is treated by the computer as a systems command, while the second parameter determines the word spoken. Parameters three and four do not affect the sound generated. But they are expected by the system, so you have to include them.

Parameter value 1 determines whether

the computer obtains the word number from the PHROM, RAM or an absolute value in hexadecimal. There are four different ways to produce a word. This makes the system very versatile.

Choosing your language

To use the system in assembly language you have to access OSWORD and OSBYTE. Using the OSWORD call with A=&07 gives you the same facilities as the basic command SOUND, where the X and Y registers are used for sending the store locations containing the values of parameters 1 to 4 to the operating system routine. To actually do this is a little bit tedious, but nevertheless understandable.

The manual provides a good example of using the speech system in assembly language mode where you can write directly to the speech processor. This requires a reasonable grasp of programming, although the manual gives a breakdown of the listing to help you understand what the program is doing.

The advantage of this system for the BBC is that it allows you to incorporate the speech commands into your normal program, thereby enhancing and making it more user-friendly.

Here we have an Apple interviewing a BBC. As far as we know, this is the first time one micro, using a voice synthesiser, has held an intelligent conversation with another running a voice input system. The BBC voice chip is here outputting a series of audible commands to the VIM (Voice Input Module). The VIM is an Apple card linked to a microphone, which enables the computer to execute voice commands.

Roger Payling

Doing this in Basic is fairly straightforward, and it shouldn't be too long before you can write fairly complex programs utilising these facilities.

If, on the other hand, you are after speed of operation you have to revert to the machine code. It's a bit more involved than the Basic mode, but it's equally efficient.

The beauty of the system is that it allows you to customise and form your own special words. However, the amount of raw number typing necessary to achieve this is considerable. To manufacture the word Zero, for instance, you have to type in close to 1,000 individual characters.

If you want to create a number of words for your own use, this much typing—not to mention the considerable amount of RAM gobbled up—presents a bit of a hurdle.

It should be possible to save the words on disk as data files. These can then be called up by the program and used as, say, menu prompts.

The system doesn't depend on any high speed storage, but this would make it a much more attractive tool. It is also possible to load the words onto tape, but the loading speed would obviously preclude the interactive use of a tape recorder with a program.

Instead they would have to be stored in the memory, eating up valuable space—this would make things a little tight for any reasonably complex high-resolution graphics program sharing the memory.

The speech processor responds to a number of commands sent by the CPU. Once set, the speech processor executes

the command without involving the CPU. All the commands are explained in the manual, and their names are suggestive of their operations.

The documentation provides some useful examples and hints on the simpler aspects of the system. It also has the foresight to provide a program listing for sending speech data to the speech system.

Verdict

As far as the quality of the voice is concerned, it was recognisable as Kenneth Kendall—though he did sound as though he was talking from the bottom of a deep hole. This sound quality could be attributable in part to the BBC speakers.

Most of the words supplied with the system are useful and easy to get at. Forming sentences from compound words is also easy, once you get the hang of the commands, but some of the words needed careful listening to to understand.

The pitch of the voice is adjustable, but to do this you have to open up your machine and poke around, which is a fiddly operation at best. I haven't seen any similar products equal this system on price and performance.

The range of commands is comprehensive, and when the promised cartridges come onto the market the system should have even wider appeal. It's also available right now.

Richard King holds on to his hat and tests the Accelerator II from Saturn Systems

Turbo-charged Apple

Are you tired of S-L-O-W programs? Does your machine seem less snappy to respond these days? Do you feel nostalgia for the time when your machine was the fastest thing on the block?

Maybe you have a more serious reason for wanting to get stuff through your machine quickly — like money. The 'expert' will tell you to go and get a 'better' language or even a 'more powerful' machine. But this may not be good enough. There's no time to convert and debug, nor to transfer the files, and anyway, you can't afford a new machine.

What you really want is some magical item which makes the machine run more quickly, and does so without requiring any other changes.

The Accelerator II from Saturn Systems is exactly that. It's a plug-in board for the Apple II, which has a 3.6MHz 6502B

processor and 64K of fast RAM. Put it in, turn it on, and the Apple works like you've just stuck a turbo-charger on it.

Presentation

The packaging is basic. No bright colours or glossy pictures, but since this is not an impulse-buy item, the box is there only to protect the contents. This it does admirably, and I would have no hesitation in consigning it to the slings and hooks of parcel-postage.

The manual is less good. It does the job of explaining how to install the card, and provides several useful lists, but doesn't make any real attempt to give a thorough description of how the Accelerator II board works.

It would appear that Saturn Systems intends that the in-depth details are to remain a dark secret, and in many ways this is no bad thing. Certainly, the actual functioning is far from simple, and will

produce some nasty surprises if you don't understand it adequately.

How it works

The Accelerator II is billed as a 'co-processor', but this is a misnomer, since a true co-processor is one which works at the same time as the regular processor.

When you activate the Accelerator, it replaces the on-board CPU completely, so it should really be called an 'alternative processor'. Not only that, but it comes with its own RAM; you may ask why this is, when there's 48K of perfectly good RAM on the board.

The reason is that the 6502B on the Accelerator can read data from the memory very quickly. So quickly, in fact, that the 'old' RAM can't respond in time. The result would be that the 'new' processor would actually have to wait for the memory to reply, and this would degrade the performance. And since the only reason for making this board in the first place is to squeeze the maximum possible performance from it, that wouldn't make a lot of sense. Not that such considerations usually make a lot of difference in this industry...

The manual makes much of the fact that the Accelerator uses 'DMA', Direct Memory Access. All it means is that the memory in question, which actually belongs to one processor, is being used by another processor as though it were its own.

That sounds contradictory, since I said earlier that the 'old' memory on the Apple's motherboard is replaced by an equal amount of faster memory on the card. In most of the memory this is quite true, but for some parts it just isn't possible, notably for the screen-pages and the Input/Output area. These just *have* to be on the main board, since that is where the actual hardware that generates the TV signals and works the slots is located.

There are two ways of reconciling the conflicting needs of the Accelerator, which requires fast RAM, and the external circuitry, which has to have its memory in a certain place. One solution is to fix things so that the 'slow' processor is responsible for the 'fixed' RAM while the 'fast' processor has its own fast RAM. You then pass messages between them, and get a multi-processing system.

The other answer is to deactivate the slower CPU, let the fast processor have control of everything, and use DMA to put stuff into the proper places for the external circuitry.

The second method is the one used by the Accelerator II. There are pros and cons to both methods, the most obvious being that the first requires a complex program to make it work. This uses valuable memory and can easily go wrong.

The Accelerator's method has the

The board is plugged into slot 2, although you can use any slot with the proviso regarding the Z80 card. See main text for details.

438 advantage that the hardware takes care of the necessary switching, but has the disadvantage that you know that there is a perfectly good (albeit slower) processor doing absolutely nothing to earn its keep. I can't help feeling it's a pity Saturn Systems designed the board so one processor was idle, but I acknowledge that it would have been considerably more complicated and perhaps less reliable.

Installation

Power down, open Apple, find empty slot, insert board, shut Apple, power up. That's it — well, almost. There certainly can't be many add-ins to the Apple system that make such a difference in performance with so little fuss.

There are some switches which might have to be set, but since the board arrives with these in the (most probably) correct position, you don't have to do more than check. There are eight of these in a DIL package on the top of the card, and if one is in the 'on' position it tells the Accelerator that the corresponding slot has a 'slow' device in it.

But the term 'slow' device doesn't mean quite what it says. The fact is that certain peripheral cards are heavily time-critical, meaning that signals must be sent to it at specific intervals. If the signals arrive when they aren't expected the device just won't work.

Although modem cards such as the DC Hayes MicroModem and the Novation AppleCat suffer from this constraint, the only device which need concern UK users is the disk-drive card. This is designed to work with a processor running at 1MHz, and so the Accelerator must be slowed down when reading or writing to the disks.

The only thing that *must* be checked is

the location of the Z80 card, if one is installed in the system. For some reason (which is not explained in the manual) the Accelerator must be installed in a slot with a lower number than a Z80 card. Something to do with the subtleties of DMA and signal-timing, I believe.

Since a Z80 card also uses DMA, it cannot be used when the Accelerator is active, and vice-versa. This may not be obvious, but it's a fact. It isn't sensible to try to access the same piece of memory from two places at once, not to mention the small detail that doing so will quite definitely fry the chip in question.

In use

The card is almost invisible in use, and in many cases it is necessary only to boot the machine normally — for example with VisiCalc or most other pieces of self-starting code. But in some cases the Accelerator must be started correctly in order to gain the maximum advantage from it. This is accomplished by booting with a special piece of code which is provided on disk.

When the boot disk has finished grinding and grunting the screen displays a menu with four options:

- FAST APPLESOFT (or INTEGER if you have an early Apple)
- PHANTOM 0
- DISABLE
- SLOW SPEED

The first option is the one which is most used in Basic programs. In this mode, the Basic is copied from the on-board ROM into the top end of the Accelerator's RAM. This gives the fastest possible execution times, since everything is now in the fast RAM apart from the screens and I/O.

The second option is used for programs

which use a RAMcard in slot 0, such as the UCSD p-system. When the Accelerator is in this configuration, it looks as though there is a high-speed version of the RAMcard available.

The third option slows down the Accelerator to 'normal' speed, and this is effectively the same as mode 3. This is the one you would choose for running programs which are meant to work at certain speeds. Examples would be games, particularly arcade-type shoot-em-ups. In general these are designed to be pretty hairy at 1MHz, and at 3.6MHz they are terrifying!

What are the constraints in using this card? The most obvious is the difference between the two Basics when the card is up and running. In an un-augmented Apple they run at fairly comparable speeds. Integer Basic is faster, but not enormously so.

With the Accelerator in the system, the version of Basic which is on the card will run an order of magnitude faster than the one which isn't. One minor problem, especially when running several programs in sequence, is forgetting which mode the system is in, but it's fairly easy to find out by pressing Control-G (Bell). When the system is in 'slow' mode, the sound will be normal, but if the Accelerator is active the sound will be very much higher in pitch — more like the sound of the beeper on some digital watches.

So what don't I like like about the Accelerator II? Not a lot, to be honest. It's simple to install, it's reliable, it's easy to use, and it runs like a bat out of hell.

If I have to pick holes in it, I would say that the system is a little complex to start. There are several options, each of which will bring up a different configuration, but

The back of the board reveals that it was hand-designed but it is neat and tidy for all that.

the names of these aren't particularly helpful.

What does 'PHANTOM0' really mean? Plenty, if you know plenty about the internals of the Apple... not much if you don't. Maybe since the first option is 'FAST whatever is on the main board', the second could be 'FAST the other one'.

This would give 'FAST APPLESOFT' on an Apple II+ as option 1, and 'FAST INTEGER' as option 2. Simple enough, and much more understandable, provided you don't want the p-system.

Well, then, what else could it be called? 'FAST motherboard', perhaps, with 'FAST RAMcard' as the second option. Slightly less comprehensible, but still better than having unattributable ghosties wandering around!

The lists at the back of the manual give a fair indication of the most suitable configuration for the system for the most commonly used programs, but that's its weak point.

The list of programs in the manual is long, but it's far from being an exhaustive compilation of the software actually available on the Apple, and there isn't much help to be found if the program you want

isn't on the list. There's plenty that aren't.

The best that Saturn Systems can suggest is that you try the various options and see which works best. Or fastest, if that's what you want.

Another weakness, in my opinion, is the lack of really hard technical detail. This is obviously a deliberate policy on the part of Saturn Systems, which does not intend that pestilential users should start doing funny things with its new toy.

In view of the horrendous complications that could arise if somebody *does* re-program things so that (for example) the system works as a true co-processor, or perhaps as alternating processors, this is quite understandable, but I still feel that it's a pity, and to some extent a missed opportunity.

Another quibble I have is the fact that the regular 6502 is disabled when the Accelerator is working. Now I fully understand why, but I feel that despite the additional programming and hardware that would be necessary, it would have been worth it.

Perhaps it's some barely remembered childhood injunction against waste, but despite that, the system, though not

exactly the slowest thing around even with just one processor working from a less-than-optimal position, would run a sight quicker still with two.

Verdict

The previous section contains a lot of quibbles, but I must make clear that that is exactly what they are... quibbles. The Accelerator II makes such a big difference to the operation of the Apple that I wish it did more.

This is, I admit, a slightly unfair comment, since what I, as an incurable TJ, want out of the system is not what this item is intended to do. The Accelerator II is not really meant for people who insist on digging around inside their machines... it's intended for users. People who *do* things with their machines, like run businesses.

Such people want fast processing, not flexibility, and in view of this constraint, the Accelerator has been designed quite correctly.

For the real business user who wants a real increase in throughput, I would strongly recommend the product, which costs £299.

TIMINGS FOR ACCELERATOR II

PROGRAM	STANDARD	FAST	SPEED INCREASE
PCN TPT	159.27	47.36	3.362965
PROSE	1606.5	590.5	2.720576

How much difference will putting an Accelerator II into your Apple make?

On the face of it, you'd expect everything to happen at exactly 3.6 times the speed of an unadorned machine. The actual result, as shown in the table, is not quite that much. Due to the need to access certain parts of the memory on the motherboard, the final figures will be slightly lower, and the actual difference will vary depending on what one is doing.

For a purely memory-based program, there will be only a very small loss in speed over the theoretical maximum, mostly due to screen or other main-board accesses. For a program which is heavily dependent on disk-access, the drop will be more noticeable. This is due to the fact that the Accelerator must slow down to

read or write the disk.

Two programs were used for these tests. One was Prose, a text-formatter for the UCSD p-system, formatting its own documentation, which consists of about 40K of text, producing some twenty pages of printout. This was spooled to disk, and the time to perform two passes was averaged.

The other program was in Applesoft, and fills an array 12 x 100 with the mathematical tables. It works entirely in memory, and apart from minimal signals to say how far it's got, does no writing to the screen until the tables are complete, so it should be a fair measure of the 'raw' processing-speed of this machine.

IF YOU HAVE A BBC MICRO
THEN YOU NEED

LASERBUG

LASERBUG is the newsletter of the Independent National BBC Microcomputer Users Group. If you want the best source of information on the BBC Micro you can't do without LASERBUG. No matter what your interest — hardware, software, business, games or education then LASERBUG has something for you.

Also, LASERBUG has available many special offers including dust covers (for computer, monitor, printer, disks), cassette leads and 1.2 ROMS FOR ONLY £5.50 INCLUSIVE — THE CHEAPEST PRICE ANYWHERE! (Members Only)

LASERBUG defies description — send off for a sample copy and you'll find that it sells itself to you. See one and you'll be hooked for life!!

Please supply me with [] more details about LASERBUG and your special offers
[] a sample copy for £1.00 and an A4 SAE (17p postage)
[] 1 UK 12 Month Subscription for £12.00
[] 1 UK 6 Month Subscription for £6.00
[] 1 Overseas Surface Mail Subscription for £14.00
(air mail rates on application)

Please send the goods to:

NAME ADDRESS

I enclose a cheque/PO for £ p made payable to LASERBUG.

Please send the form to LASERBUG Dept. N.10 Dawley Ride, Coinbrook, Slough, Berks., SL3 0QH.

Are your finances driving you mad?

Do you find that working out your finances makes your head buzz? Do you see red?

Don't worry, now you can have **Hilton's Personal Banking System** on your side, giving you a clear head start and (hopefully) putting you back into the black!

Maintain permanent records and fully detailed statements of your finances including:

- ★ All cheque book transactions and bank receipts
 - ★ All standing order payments
- Automatically Processed** (monthly, quarterly, six-monthly or annually and for set number of payments)

In addition the ability to search, locate, delete or correct previous entries. List by category facility is included. Additional **Bank Reconciliation** module available to automatically match your Bank Statement to your **Personal Banking System** account. Full instructions included and **guaranteed** after sales maintenance provided.

- ★ **PBS ZX81 £8.95 (16K)**
- ★ **ZX SPECTRUM £9.95 (48K)**
- ★ **DRAGON £9.95 (32K)**

Bank reconciliation (for use with above) £5.

Ask for the PBS at your local computerstore. ORDER by POST (specifying machine) OR at the POST OFFICE using TRANSASH ACCOUNT 302 9557

**HILTON
COMPUTER
SERVICES**

Hilton Computer Services Ltd
(Dept XX) 14 Avalon Road,

Although the NewBrain is conceived as a total system, the unexpanded Processor itself has a great deal to offer. It is available in two forms: Model AD, shown below, with a built-in line display; and Model A, without the line display. Both models can operate with a monitor or a television set.

MEMORY

- 24K bytes of ROM;
- 32K bytes of RAM, at least 28K of which is available to the user.

THE SCREEN DISPLAY

- 40 or 80 characters to the line – without affecting the 28K bytes of RAM at your disposal;
- 24 or 30 lines to the screen;
- well-formed characters, with true descenders;
- a full European character set;
- normal or reverse video, high resolution graphics on screen of controllable size, 256, 320, 512 or 640 horizontal resolution by 250 vertical lines;
- a facility to set up a "page" of up to 255 lines, with the screen acting as a "window" to display it;
- ability to maintain several such pages simultaneously, and to switch rapidly between them;
- text may be used on graphics screen as well as on parts of the video screen not used by graphics.

CHARACTER SET

- 512 characters, including the full ASCII set, all European accented characters, Greek and graphics symbols.

GRAPHICS

- 20 powerful graphics commands;
- all text characters usable on the graphics screen;
- variable-sized graphics screen, with the rest of the screen available for text – for versatility and to save memory.

SOFTWARE

Enhanced ANSI BASIC; screen editor (32 commands); mathematics package (10 significant figures); graphics commands.

- a very friendly screen editor – a delight to use and readily adapted to text processing;
- arithmetic to 10 significant figures;
- very controllable output formatting of numbers – invaluable for accounting, statistics, and scientific applications;
- a powerful, much enhanced BASIC;
- a very flexible operating system, which allows any data stream to be opened to any device.

INTERFACES

- two tape cassette ports built into the processor unit;
- a built-in printer interface;
- a built-in communications interface (V24/RS232);
- a video monitor interface;
- a TV interface;
- an expansion interface for NewBrain system expansion modules.

KEYBOARD

- standard typewriter pitch, action, layout and size, with editing control and graphics keys.

*CP/M IS A REGISTERED TRADE MARK OF DIGITAL RESEARCH INC.

You can get everything in the box on the

If you understand the facts and figures on the left you'll soon realise that NewBrain has to be one of the most powerful micros around.

However, if you find the box on the left a little hard to follow, don't worry.

We've got over 120 dealers nationwide who've got all the answers at their fingertips.

Either way you'll discover that NewBrain is the kind of micro that will stop the competition getting a look in.

At £269 it starts off with twice as much memory as most of its competitors and can expand to over thirty times that amount. So there's no chance of being left behind in the micro race.

It comes with a very powerful language (enhanced ANSI BASIC) and it'll take CP/M, so it'll work on the same system as similar big business micros, giving you the capacity to use an almost limitless variety of tried and tested software.

But most of all NewBrain is a machine that can expand.

It's designed to take disks, printers and memory expansion modules (up to 2M bytes) plus anything else you'd expect a professional business micro to handle.

So, whether you understand the box on the left or not, pay a visit to someone in the know on the right.

They'll answer all your questions and give you a full demonstration.

NewBrain

BEDTIME STORY

SPECTRUM

Grin and bear it

Name Ah Diddums **System** ZX-Spectrum, 16K or 48K **Price** £5.50
Publisher Imagine Software, Liverpool, (051 236) 6849 **Format** Cassette **Other versions** None
Outlets Mail Order, Imagine Software, Mason Buildings, 28 Exchange St East, Liverpool L23PN, dealers

Ah Diddums from Imagine Software started as a professional promotion campaign complete with the customary long wait. In the end, Imagine Software turned out not to be imaginary. Now everybody is imitating the promotion, this is one 16K Spectrum game that will have to stand up for itself.

Objectives

Diddums has one of the silliest and most downright complicated scenarios yet invented for a cassette insert. It's done in daddybabyteddy language, presumably to get you in the mood, rather than as a reflection on the documentation department.

You're this teddy. Your baby is crying so you must comfort it, so you try to climb out of the toy box. But if you succeed, Mummy and Daddy will turn out the light and prevent the other toys from playing.

So that's why you're controlling a TB being pursued by numerous toys in an effort to escape from a toy box. Defend-

ing you from soldiers, spinning tops, trains and so on is a pea shooter (of course) and a friendly Jack-in-the-box.

You escape by picking up coloured boxes and stacking them in order on a ladder at the top of the screen. Once you've got the boxes right, you escape the toy box only to discover the first really ridiculous loophole in the plot.

Poor old Ted. He's working from inside a set of 99 nested toyboxes. So there's level after level, toybox after toybox to get through.

First impressions

The packaging fits in with the Imagine philosophy. This is how it should be done although it could do with the Fuller ad being removed. People gave this up with books and records a long time ago.

Diddums recognises and uses joysticks. Fuller ones. If you've bought someone else's joysticks there's no need to despair. There's an order form for the Fuller range included.

Now all Imagine has to do is rewrite the instructions so that they are as clear as the copyright notice. For starters, why can no one document which way up to load the cassette? 'Printed side upwards' it says. Fine... there are two.

Imagine guarantees the cassette for life, including freebie replacements if it does not load first time. The review copy did load... after three attempts. Perhaps I should send it back.

In play

Diddums has no on-line instruc-

tions. Just a full-screen coloured toy box, full of flashing toys and shapes. Imagine is proud of the graphics but they're not quite right. Animation is fast enough but everything flashes and jitters.

The Spectrum's two colours per character block rule means that there's a horrible mess when two objects cross. And Diddums isn't without its vanishing and mysterious objects.

It's such a shame because Diddums is simply over ambitious. It would look great on a true eight-colour display.

Getting started proved well nigh impossible. It took a while to figure out the controls. Almost all of the keys do something or other though you only need six to play. This is supposed to give you a choice of keys but only results in a confusion of fingers.

It goes something like this. Every alternate character on the bottom row moves left or right. A,D,G,J or L on the second row move down while Q,E,T,U or O on the third row move up. In between these, W,R,Y,I or P picks up or puts down any objects the teddy is touching. S,H,F,K or ENTER is used to throw objects teddy is carrying or fire the infamous pea shooter.

So I rushed Teddy round box one, picked up the blocks and stacked them as instructed. And nothing happened. Climb up ladder. No go. Charge ladder from base of screen. Bangs Teddy's head. Rearrange ladder. No help. Pick up the pea shooter and destroy everything in sight.

Hint: shooting the last baddy on any screen ends in almost certain plasticine. Not nice.

Six people tried and none of us could figure out what you were supposed to do. After 1½ hours I phoned technical support at Imagine. A word of help and I was able to progress to an entertaining and original game.

The blocks may look right but the lower ones can be out of order. So you stand on the ladder and keep pressing 'Pick up' around 10 times to move on to the next level. But putting a block down while you're on the ladder automatically puts it in the right place. End of problem, start of game.

Diddums gets to be great fun and it's quite hard by level 5. Each level brings more toys and more temper. You have to work hard with the pea shooter. Teddy gets five lives per game but each one starts back at the beginning of the current level: blocks scattered, pea shooter hidden behind spinning tops, soldiers back. Oh, and that damn train waiting in the corner.

Verdict

Ah Diddums is an original and fun game. It's a shame that Imagine has produced an unhelpful cassette insert and probably the first arcade game that needed hotline support to get going. Maybe I should retreat to the safety of dBase.

Diddums also suffers from the limitations of the Spectrum but I'll bet it will make owners of other machines jealous (Ah Diddums!) It's survived its false start and it's going to be a hit.

Issue 1, w/e March 18
Pro-Tests: Apple's Lisa, Textet TX8000; Spectrum speech synthesiser, Apple printer, Commodore network; 3D on Spectrum, graphs package for Apple and IBM, BBC graphics system.
Features: computer chess, Occam parallel processing language, Victor/Sirius function keys.
ProgramCards: Towers of Braham (Pascal), Biorhythm (Apple II), Roman Year (Apple II), Shape Utility (Apple II).
Gameplay: Darts, Soccer (Atari); Castle of Riddles (BBC Model B); Pimania (Spectrum); Flight Simulator (IBM PC).
Databasics: micros and peripherals.

Issue 2, March 25
Pro-Tests: Toshiba T100, Casio PB100, ZX81/Basicare, Vic speech synthesiser, Spectrum spreadsheet, IBM graphics, BBC word processing.
Features: Colecovision, micro backgammon, nursery computing.
Gameplay: Ultima II (Apple), Trader (ZX81), Starquest (Vic 20), Hungry Horace (Spectrum).
ProgramCards: String editor (Spectrum), Analogue Clock (BBC Model B), Chart generator (Spectrum), String extract/replace.
Databasics: full software listings.

Issue 3, April 1
Pro-Tests: TI Professional, Apple speech synthesiser, Facit 410 printer, IBM keyboards, Petspeed compiler, Sirius toolkit, Dragoncalc.
Features: Atom upgrade, Lynx programming, Apple music.
Gameplay: Mangrove (Vic 20), Mutant Herd (Vic 20), Compendium (Dragon), Patience (Spectrum), Noughts and Crosses (Dragon), Great Britain Ltd (Spectrum), Ulysses (IBM PC).
ProgramCards: Magnify (Spectrum), Spider (Vic 20), Firing Range (BBC).
Databasics: micros.
Micropaedia: Anatomy of the BBC, part 3.

Issue 4, April 8
Pro-Tests: Pied Piper Communicator, Olympia ESW3000 printer, Namal Supertalker, Commodore Calcresult, Spectrum Pascal, Cashbook (BBC).
Gameplay: Dark Crystal (Apple II), St George (Dragon), Wizard War (Dragon).
ProgramCards: Fruit Machine (C64), Tunesmith (Oric), Array Editor.
Databasics: peripherals.
Clubnet Micropaedia: Go Forth, part 1.

Issue 5, April 15
Pro-Tests: Commodore 700, Ikon Hobbit, 1-2-3 (IBM), ZX81 machine code.
Features: speech packs, monitors.
Gameplay: Grand Prix (Dragon), Derby Day (Spectrum), Deadline (Apple).
ProgramCards: Wacky Racers (Oric), Fruit Machine (C64), Parse Integer.
Databasics: Software.
Clubnet: full list of user groups.
Micropaedia: Go Forth, part 2.

Issue 6, April 22
Pro-Tests: Tycom Microframe, IBM PC, Spectrum Disks, Dragon sound module, ZX81 graphics, Bottom Line Strategist (CP/M), PaperClip word processor.
Features: IBM PC DOS, BBC word processing, PC-1251.
Gameplay: Mined Out (Spectrum), Transylvanian Tower (Spectrum), Lunar Leeper (Apple II), Evolution (Apple II).
ProgramCards: Wacky Racers (Oric), Mortgage Comparison (Sharp MZ80K), Computer Set Up (BBC), Day of Week.
Databasics: micros.
Micropaedia: Graphics, part 1.

Issue 7, April 29
Pro-Tests: Mattel Aquarius, Epson FX80, Olivetti JP101, Lisp on Spectrum, Vic 20 assembler, Supergrat on Victor/Sirius.
Features: Dealer support, Atari graphics.
Gameplay: Krakit (ZX81), Cruising On Broadway (Spectrum), Kaktus (Vic 20), Fantastic Voyage (ZX81).
ProgramCards: CBM controls, Computer Set Up (BBC), Wacky Racers (Oric), Julian Dates.
Databasics: Peripherals.
Micropaedia: Graphics part 2.

MICROPAEDIA LIST

Anatomy of the BBC micro

Part 1: Tune into the BBC — an exploded view; Tube map; blossoming into colour; second opinion — a first timer's look; maths and science on the Beeb; programming the function keys; learning with Logo; BBC Basic; User Guide extra; alternative languages.

Part 2: Introduction to peripherals; playing games — reviews and programs; word processing on chip and cassette; history.

Part 3: Networking; interview with Acorn's Herman Hauser; faults and servicing; video recorder link-up; turtle graphics; Beeb books.

Go Forth

Part 1: Basic and Forth compared; Forth on your micro; assembler language; changing up; the Jupiter Ace.

Part 2: Jupiter Ace software; guide to Forth; Forth on Apple, IBM and ZX81; more implementations; Forth 79 v FIG-Forth; books.

Graphics

Part 1: Colour co-ordinated; Spectrum, Oric, Atari.

Part 2: Graphics on the Vic 20; the Video Interface Chip explained; Dragon displays; video easel on Atari 800.

HOW TO GET THEM

All available back copies of PCN can be ordered from our new Back Issues Service, using the coupon printed here.

For a guide to the subjects covered by Micropaedia every week, see our Micropaedia list above.

Send your orders to: Personal Computer News Back Issues Service, 53-55 Frith Street, London W1A 2HG.

To make sure of getting all your copies in future, why not fill in the tear-out subscription card in this issue.

ORDER FORM

Any one issue is 75p, additional copies 55p, post & packing inclusive. Overseas readers please add £1 per copy airmail postage. Please allow up to 21 days delivery.

COMMODORE 64

Micros pass go

Name Monopole System
Commodore 64 Price £9.95
Publisher Rabbit Software, 01-863 0833
Format Cassette **Language** basic **Outlets** Mail order

The game is a two-player replica of the old family favourite Waddington board game running on the Commodore 64.

Objectives

This is a complete reproduction of the game which, as almost everyone knows, is aimed at budding capitalists who try to amass great wealth while eliminating the opposition by making them go bankrupt. The machine keeps all the records, and no board, dice, or paper money are needed.

First impressions

The packaging of the cassette is the usual Rabbit Software style — a colourful illustrated box, with a single instruction sheet inside which assumes you know all the rules of the game Monopoly.

In play

This is a very good game, with very impressive use of graphics and sound. Two players are relieved of all the tedious work involved in passing money backwards and forwards; the machine keeps a record of both players' cash and the property they own, and charges rents.

The dice are beautifully rep-

resented, and the tokens move automatically round the board, with sound accompaniment.

At the start of each move, a Transactions option is given, which is when you build on properties, or mortgage them, or have a look at your list of properties, or those of your opponent. At the end of each move, you are told where each player is, and how much cash they have. You go to jail accompanied by police sirens.

When you land on an unsold property, full details are given about its rental potential, with and without houses, and about whether any others in the set are already sold. You are also told its price, and how much cash you have in hand.

Interesting options are given at the beginning of the game: to tinker with the bonus effect of Free Parking, and to decide whether to auction unbought properties. Community Chest and Chance cards are faithfully represented.

This is one way of speeding up the old game to a point where play will be over fast enough to retain interest for today's kids. The only criticisms are that only two players can play, and that the rules are not given.

Verdict

The game is very well done, and makes imaginative use of the colour and sound facilities of the 64. Being on cassette, it is low-priced, and very good value for money. **Barry Miles**

SPECTRUM

Empire building

Name Automonopoli System
Spectrum, 48K Price £6 **Publisher** Automata UK, 65A Osborne Road, Portsmouth, Hants PO5 3LR, (0705) 735242
Format Cassette **Outlets** Mail order, various retailers

Those of you who have that empire building streak but not the finances to match can take refuge in Automonopoli — a version of the board game.

The game is similar to its counterpart with between two and five players and five tokens to choose from. And of course, the old familiar streets in London are there for the taking.

The Spectrum can be a competitor and/or banker.

First impressions

Automonopoli comes in the standard cassette casing with a clearly labelled cover on how to load and play the game. It didn't take long to get the hang of the game and before I knew it I was well on my way to beating the Spectrum.

Objectives

Your aim is to monopolise all the sites and property within the field of play through wheeling and dealing. If another player has the misfortune of landing on one of your sites, he then has to cough up the rent.

In play

I opted to play the Spectrum. So after entering my name and selecting my token I was given £1,500 to kick off the game.

The Spectrum made the first

move as the dice rolled automatically on the screen. To get the dice rolling for me I had to enter my initials.

On each player's turn his token, amount of cash and mortgage value of his property is shown on the right hand side of the screen. The lower part of the screen is divided into three windows — showing your position and two places after you. When the dice have been rolled the windows scroll to the left.

I landed on the inexpensive Angel and snapped it up immediately. If properties are not bought they are auctioned to the highest bidder. My mistake was to buy property too quickly, thereby ending up with very little cash. On several occasions the Spectrum outsmarted me — knowing I had £50 left, it would offer £51 and snap up a site.

During play a constant rundown of what property you own is available using the X key. In addition, this gives you a menu system enabling you to buy a house, mortgage property, swap property and all the usual transactions needed.

Chance and Community Chest cards are featured to musical accompaniment.

Verdict

The game has to be seen to be appreciated. It certainly gave me a run for my money and was a change from the usual shoot 'em up epics.

With careful planning you can make the right moves and deals to add a bit of flavour to your game. The game can also be saved, giving you a break.

Trevor Jones

RATING

Lasting appeal

Playability

Use of machine

Overall value

Mike Gerrard pulls a handful of hot chestnuts out of the Welsh micro's lair.

Dragon dramatics

Dragons are noted for being fiery customers — even the modern microchip variety does have a certain reputation. So this week PCN takes a trip through the latest in Dragon games to see if we can find any scorchers.

BONKA

To begin with the best of the bunch, Bonka from J Morrison is a colourful machine code version of the game originating in the arcades where you control a little man (looking like a flour grader here) who runs along platforms and ladders, occasionally stopping to dig holes into which he attempts to lure the Meanies who are chasing him.

A trapped Meanie must be promptly hit on the head, and points are scored depending on how far the creature plummets to its doom.

While inevitably lacking some graphic detail, this is still superior to most games around, giving you a choice of four speeds and between one and nine Meanies, and I defy anyone to stay alive at the highest level with all nine in hot pursuit.

The only drawback is that movement is through the arrow keys, with the space bar for digging and bonking, and it takes a little time and a lot of dead men (amusing graphics here) to master the controls.

All credit to J Morrison for concentrating on a few excellent machine code games for the Dragon, though I do wish its packaging was as good as that from Salamander.

NIGHTFLIGHT

Nightflight, you'll be astonished to hear, is a flight simulation program, the first I've seen, and it proved to be a slight disappointment, though this may or may not have something to do with the fact that I couldn't even get the wretched plane off the ground without crashing.

It certainly wasn't the fault of the instructions, which are detailed and clear, but I expected

more from the graphics than two converging white lines and a plain blue block at the top of the screen.

The lower half contains the information panel, with speed, position, heading, distance from runway and so on, while you key in alterations to your direction, power, flaps and undercarriage.

I was obviously the right person to test whether the program was idiot-proof, and it was, but for more experienced pilots the aim is to take off, fly around, perform a few rolls and loops if you can, and then land safely again. Having seen screen photos of other flight simulations, though, I don't think this can be one of the best.

CITY DEFENCE

Even more of a disappointment was City Defence from Shards Software, though I'm always wary of people who describe their own games in glowing terms, like this one: 'A fast moving missile-command arcade game.'

The arcades would soon be empty if they had only games like this Basic one, which didn't get off to the best of starts with the loading instructions being wrong. CLOAD "program name", you are told, whereas you need to CLOAD "Defence".

A minor irritation, but it doesn't inspire confidence in the rest of the product.

The game itself has you in command of a planet full of cities, with the usual hostile aliens who haven't seen E.T. hell-bent on everyone's destruction.

Three traces start to move down the screen, and you must guide your sights to the tips of these traces with your joystick (no keyboard option). There are four speed levels, and while it does make good use of the Dragon's colour and sound, the game would seem to have little long-lasting appeal... or even short-lasting appeal, and is scarcely better than some from magazine listings.

HANGMAN

From the latter company comes a very good version of the old favourite, Hangman, and while it's not a game I would play for too long myself, I can imagine young children getting a lot of fun from it, and that's the market at which it's aimed.

Features include a vocabulary of 1,000 words, three levels of difficulty, one or two player options, and the choice of using a timer as well. Words and pictures are all on the high-res black and green screen, new words take only about five seconds to appear, and there's also an automatic skill adjustment if hangings are too frequent or too few.

FAMILY PROGRAMS

An improvement on City Defence, and from the same company, is Family Programs, a collection of 11 varied items, the best being a 'Name That Tune' type of quiz, with over 100 songs in memory — great fun, and very tricky to do — with tunes being played at unusual tempos.

Also good is a Maths quiz in high-res graphics, with three levels of difficulty and an egg-timer running out at the top of the screen.

Other programs include a version of Simon, a slow tank battle, a quiz on various topics, a mortgage and savings calculator, and one or two odds and ends which seem to be there just to make up the numbers.

DARTS

All darts players know that you finish on a double, so I'll finish with Championship Darts, a game for two players. Games like chess transfer readily to the micro, while others might be better left where they are, and darts would appear to be one of the latter.

This version, though, is not an attempt at exact simulation

NIGHTFLIGHT

but more an adaptation within the confines of the computer, and is all the better for that. As a regular darts player myself I enjoyed it, even if the only improvement it will make to your game at the pub is by encouraging you to work out those finishing scores that much quicker.

Using the high-resolution black and green screen, the writer is to be congratulated on his impressive use of graphics, and for a Basic program the responses are very quick indeed.

So how does it work? A cursor moves clockwise round the board, and pressing any key will stop it on the number you want... well, you hope it will. Another cursor then moves back and forth across a bar, broken up into sections for single, double, treble, miss, 25 or bull, and again you must try and stop it on the one that you're after.

The game length can be anything from two to 999, and scoring the magical 180 earns you a multi-coloured flashing lights routine... and it's about as easy to get as it is in the real game.

Not an addictive game, perhaps, but certainly one I'd return to from time to time for a bit of fun, and done to a very high standard. Second only to Bonka in this little batch.

Bonka, £7.95, J Morrison (Micros), 0532 480987

Super Skill Hangman and Nightflight, £7.95 each, Salamander Software, 0273 771942

Family Programs, £6.95, **City Defence**, £5.75, Shards Software, 10 Park Vale Court, Vine Way, Brentwood, Essex CM14 4UR

The printer that thinks it's a computer!

FACT With internal microprocessor, 8K buffer store and total compatibility, the Ricoh Flowriter range has proved itself the most intelligent and reliable range of printers on the world market.

FACT Ricoh Flowriters can assume the characteristics of any popular 'intelligent' printer and plug into any hardware configuration.

FACT Ricoh Flowriters perform all your processing and printing needs while leaving the host computer free for other work.

FACT Ricoh Flowriters do all this, give you exceptional print quality, yet cost the same as ordinary daisy wheel printers!

FEATURES ■ Internal microprocessor

- 8K buffer under full program control
- Includes RS232, Centronics and IEEE 488 interfaces
- 60cps print on the RP1600, 37cps on the RP1300
- Qume, Diablo and NEC Spinwriter wp commands-compatible
- Auto-bidirectional and logic seeking high-speed printing
- Graphics capability down to 1/120"

- Built-in proportional spacing tables
- Automatic margin justification, even on proportional spacing
- 128-character printwheels, wide choice of fonts
- Wide range of accessories — sheetfeeds, tractor feeds, ribbons, printwheels
- Detachable keyboard option for using Flowriter as an intelligent typewriter or KSR terminal

For intelligent printing that frees the host computer and gives you exceptional print quality and speed, find out more about the Ricoh Flowriter — the printer that **knows** it's a computer, yet costs the same as those that aren't!

The RP1600 Flowriter

The Ricoh

FLOWRITER

'Spectrum Spectacular' by Roger Valentine, published by V & H Computer Services (Staines 58041) at £4.95 (paperback, 138 pages).

'Spectacular' may be overstating the appeal of this book, but it should make a valuable addition to the library of the enthused Sinclair user.

Fifty program listings and subroutines should provide many happy hours of keying. The book covers the full applications spectrum — from games to business programs. It's also nice to see a British flavour — there is a program for keeping track of the football league table, for instance.

The opening chapter, 'Five easy pieces' is designed to acquaint you with the machine's capabilities and includes short listings for producing large characters and also a clock.

Many people will be interested in the intriguing 'Not just your plaything' chapter. No, nothing like that! This introduces 'serious' applications through word processing and accounting listings.

Another nice touch is a practice game for arcade buffs. This is a 'warm-up at the nets' exercise. Balls are shot out and the player simply attempts to get his electronic bat to them. Because the code is fairly simple the screen movement is fast. The author suggests that arcade players with fragile egos can limber up before exposing themselves to the competitive atmosphere of the games arcade.

There are also a number of games — Firepower, Flying Saucers and so on.

These machine-dedicated books are improving as the competition heats up, but they are still dogged by cheap production. But minor quibbles aside, this book offers some useful listings and the light — one might almost say acid — narrative is refreshing. **IS**

'Using Computers in Mathematics' by Gerald H. Elgarten, Alfred S. Posamentier and Stephen E. Moresch, published by Addison-Wesley at £9.95 (01-631 1636) (hardback, 574 pages).

Using Computers in Mathematics is designed as an introductory text for a computer course, and as a supplement to teach the use of the computer in the traditional study of mathematics.

There are eight chapters, further divided up into sections. The text layout is very good and it makes reading the material more enjoyable.

All the computer ideas are introduced in the context of mathematical concepts, which means that the fundamentals of programming in Basic are learnt while the understanding of mathematics is added to and reinforced.

For example, in chapter 3, which covers geometry concepts, string variables, nested FOR-NEXT loops and logical operators are introduced.

The chapters cover programming concepts, algebra, trigonometry, statistics and end up with approximations for roots and functions.

Each chapter has worked examples followed by an exercise and further problems which enable the reader to test his understanding. Thanks to the sectional nature of the chapters, you can stop halfway through a topic and return to it later without losing continuity.

Listings are a joy to read and the flowcharts are drawn mostly on a separate page, usually accompanied by the corresponding code.

Don't be put off by the maths. *Using Computers in Mathematics* teaches a lot of fundamental programming concepts in a non-trivial way.

Business applications such as preparing invoices, printing charts, and sorting algorithms are also included. **TJ**

SIMPLE INTERFACING PROJECTS

OWEN BISHOP

'Simple Interfacing Projects' by Owen Bishop, published by Granada at £6.95 (paperback 168 pages).

After you've used your micro to play a few games, manage the household accounts and write a couple of letters what then? It seems a shame to have the machine lying around the house not doing something with its processing power.

Owen Bishop's book would be a good starting point for anyone wanting to explore the possibilities.

Granted, using your micro as a clock might seem an expensive way to tell the time but Mr Bishop does come up with some other ideas. How about controlling your electric kettle so it comes to the boil just before the start of News at Ten? Or a mains controller to switch lights on and off to confuse burglars into thinking you're in when you're out?

These are just a few examples which, although simple in concept, could spur the imaginative on to greater things. Among the other projects are a graphics tablet, music generator, ROM board, voice-operated controller, sound processor, digitiser pad and telephone modem.

With each project, a description is given of what it does and how it works, together with a circuit diagram. Constructional details are also supplied with a list of the components required.

Layout and presentation in the book are, like the contents, an example of clarity. A reader with some experience of wiring up electronic circuits should have no difficulty in understanding it. Even the uninitiated will quickly grasp the principles involved.

Simple Interfacing Projects is an apt title. It accurately describes both the complexity of the projects and the assumed knowledge of the reader. **RB**

'Learning Timex Sinclair Basic' by David A. Lien, published by Compusoft at \$14.95 (paperback, 331 pages).

The fact that there seems to be a plethora of books for the Sinclair ZX81 purporting to teach the raw user the ins and outs of Basic programming could be attributed to either the desperate interest of the ZX81 owner, or the shortcomings of the machine's users' guide.

Perhaps it's a combination of the two, but it would be nice if Sinclair's ZX81 manual was as lucid as *Learning Timex Sinclair Basic*. The book is aimed at the beginner with no computer knowledge or training in Basic.

There are eight chapters, starting with one on how to get started, and then the reader is introduced gently to maths operators, relationship operators, FOR...NEXT loops, and how to use the cassette tape recorder.

In chapter 3 it's strings, then onto maths function in chapter 5. All the basic topics such as graphics, arrays, PEEK and POKE are covered.

The chapters are well laid out with big clear print. Listings are printed unusually large. Each point is clearly explained and used in a program on the computer.

Most chapters have exercises to test your newly acquired knowledge and conclude with a list of the new commands.

The book has a light, conversational style which should make learning fun. *Learning Timex/Sinclair Basic* is ideal as a self-teaching aid and would be equally useful at home, in the classroom or on a training program.

There's no law that I know of that says a book dealing with a cheap computer must be down-market itself. I particularly liked the inclusion of a cartoon to wrap up each chapter. This care and attention to detail in a book for the ZX81 makes a nice change. **TJ**

*Let's face it — the sound from your Dragon 32
wouldn't win any prizes at an Eisteddfod.
You need a:—*

Dragon 32 Sound Extension Module

- Fully-cased module plugs into cartridge port
- Provides 3 channels of sound; 3-note chords and harmonies over 5 octaves
- Uses new BASIC command. No need to 'Peek' or 'Poke'
- Many built-in sound effects (e.g. bomb, laser)
- Music and graphics can occur together without loss of speed
- Based on popular, well-proven sound generator
- Two Input/Output ports included
- User manual provided, with examples

PCN ProgramCards

Another nine uniquely annotated ProgramCards submitted by you. We do hope you are still cutting them out and filing them away for future reference. You know it makes sense.

Sorry!

Oh dear! It's apologies time again. Two weeks ago (PCN May 27-June 2) we published a Spectrum program by Philip Arnold called Munchman. Unfortunately, the program contained a couple of confusing lines. The lines in question were 1000 and 4100, containing references to RND. Most of you no doubt used this as a keyword and therefore found that when running the program it gave up the ghost (tee-hee!) with a syntax error in line 4100. The solution to this is as follows:
Line 1000—type in RND as capitals, not as a keyword.
Line 4100—type in RND as capitals for the first and third references, but use the keyword RND for the second reference to it.

This should solve the problems encountered and it will thereafter run OK. Philip and ourselves regret this oversight.

This Week

As promised, we complete P Lister's Time Bomb program for the Atari 400/800. We hope you enjoy this game as much as we did.

Fans of Phil Drabble should quickly don their wellies and have a bash at the program sent to us by Bobby Rao, of Bedford. 'Who is Phil Drabble?' we hear you ask. Well, he's that awfully nice chappie that introduces the BBC-2 programme *One Man and His Dog*, about sheepdog trials.

Does this give you a clue?

Running on the BBC Model B, Bobby's program is a game called Sheep Drive. By controlling your dog (black, of course) you have to round up and pen up to five dirty (yellow) sheep. You can also dip them to make them clean (white), but do not exhaust them or they fall over and lie on

their backs—odd behaviour for sheep!

For those of you with disk-based systems there are a couple of things you will have to do to get this game to run. First, type in the program and save to cassette. Second, when successfully saved 'BREAK' the system and type in the following line:
PAGE = 3584 <RETURN>

This sets the machine to accept programs to load at the normal tape configured system. Finally, load the program from cassette and play the game. A bit long-winded but at least it works.

A RUN for our money

Gives us a RUN for our money.

Contributions should be sent on disk or cassette, with a plain paper listing and brief notes to:

Programs Editor, *Personal Computer News*, VNU, Evelyn House, 62 Oxford Street, London W1A 2HG.

All disks and cassettes will be returned, at our expense, after consideration or publication.

MOST OF THE PEOPLE READING THIS AD SHOULDN'T BE READING THIS AD...

Unless, that is, you're over 18 and a bona fide computer retailer or distributor or thinking of becoming one. If so, you're invited to **MICROTRADE 83** at London's Barbican Centre from 6-8 July.

MICROTRADE 83 is unique. Not only because there will be many new products and services on display, from Act, Burroughs, Logica, Portico and Sharp, amongst others, but because it's the only microcomputer show for the trade alone.

Which means everyone will be speaking the same language – with exhibitors looking for retailers and distributors and visitors talking availability, margins and support.

**SPONSORED BY MICROSCOPE
BARBICAN CENTRE, LONDON.
6-8 JULY.**

Make a stake in the future. Phone Timothy Collins on 01-486 1951 for **your free invitation**, or send your letterhead or business card marked 'MICROTRADE' to Montbuild Ltd 11 Manchester Square London W1M 5AB (01-486 1951)

MICROTRADE 83 is a trade-only show. No-one under 18 admitted
For special MICROTRADE travel and accommodation arrangements contact:
Pharoah Hughes Associates – 01-995 8995.

- 580-610 Routine to report on score and highlight success or failure
- 620-640 Routine to allow another attempt or end program

YOUR SEARCH FOR FULLY TESTED EDUCATIONAL PROGRAMS FOR THE BBC MICRO IS OVER

35 EDUCATIONAL PROGRAMS FOR THE BBC MICRO

Ian Murray

Here is a selection of fully documented programs ranging from mathematics to geography, history and general science to spelling.

Designed for use in schools, colleges – all programs have been checked in a classroom environment – and at home, this book will allow you to put your BBC to work as soon as it is unpacked. Each program makes full use of the BBC micro's remarkable graphics capabilities and together they provide a useful insight into programming techniques.

£6.95 (paperback)

240 pp

Available through all good bookshops but if you experience any difficulty please fill in the form below.

1070-1110

Function to calculate final score

1120-1160

Function to calculate how many sheep lost

1170-1300

Procedure to set up initial screen with pen, dip, bushes and sheep

1310-1320

Function to ascertain sheep in pen or not

1330-1340

Function to ascertain sheep in dip or not

1350-1370

Procedure to change colour of sheep to white if in dip

1380-1390

Function to determine if sheep off screen

1400-1420

Procedure to deal with sheep in pen

1430-1470

Function to detect sheep hitting something

MICRO MASTER

(For any Spectrum or for Vic 20 with 8K expansion)

All the programs have been RESEARCHED AND TESTED by teachers. They are easy to use (just RUN) and they have been designed with just one aim in mind — fast and efficient learning.

THE FOUR RULES OF NUMBER (A package of 5 programs). Virtually all mathematics requires use of the FOUR RULES of number. Knowing how to use them (add, subtract, multiply and divide) is NOT ENOUGH. Children must learn to be FAST AND ACCURATE as well as learn to cope with more complex arithmetic. They must also learn their tables WELL. Only in this way can a child even BEGIN to deal with mathematics.

The FOUR RULES package has been designed to achieve these goals QUICKLY. It will cater for an average 6 year old as well as for the best 11 year old aiming for a VERY HIGH STANDARD. Each program will adjust to the child's ability and keep him reaching upward. Grading tables show the parent where the child stands for his age and ability.

LANGUAGE DEVELOPMENT SERIES (For 7-13 year olds). Programs which will develop **Vocabulary, Spelling, Concept Attainment, Verbal Reasoning** and **Knowledge of the English Language**.

Each cassette contains 10 programs and there are 8 cassettes for each age group (e.g. 9A, 9B, 9C ... 9H for nine year olds). Purchasers should obtain the first cassette for the relevant age e.g. for a 10 year old the first cassette is 10A. The series will cater for remedial tuition as well as for **Common Entrance** levels of performance.

THE FOUR RULES PACKAGE£11.70
LANGUAGE DEVELOPMENT CASSETTE£7.90

Please state which one (9A or 10A etc) and remember to state which computer you use.

Cheques to: **MICRO MASTER, 94 Airedale Avenue, Chiswick, London W4 2NN.** For further details Phone: **01-747 1373**

BBC Microcomputer System

**OFFICIAL
BBC
MICROCOMPUTER
DEALER**

BBC Microcomputer System

This is the best microcomputer currently on the market, 32K of RAM, 32K ROM, 8 modes of operation, full colour, full size keyboard, internal expansions — in short a personal computer capable of expanding into a small business computer.

BBC Microcomputer Mod B	£348 + VAT = £399.00
BBC Mod B + Disk Interface	£409 + VAT = £469.00
BBC 100K Disk Drive	£230 + VAT = £264.00
BBC 800K Dual Disk Drive	£699 + VAT = £803.85
Torch Light Pen for BBC Micro	£65 + VAT = £74.75
Torch 800K Dual Disk Drive + Z80 Processor and 64K RAM, CPN Operating System supplied complete with Disk Interface Kit	£799 + VAT = £918.85
BBC Games Paddles	£11 + VAT = £12.65
Parallel Printer Cable	£10 + VAT = £11.50

100% BBC COMPATIBLE MITSUBISHI SLIMLINE DISK DRIVES

Double sided, double density, 80 TRKs, supplied in a specially designed case for the BBC microcomputer complete with cables, utilities disc and user guide.

Single 400K Drive	£239 + VAT = £274.85
Dual 800K Drives	£449 + VAT = £516.35
Single 400K switchable 40/80 tracks	£249 + VAT = £286.85

We stock a large selection of Software for BBC. Please send S.A.E.

TORCH Z80 DISC PACK FOR BBC MICRO

This includes DUAL (800K) disc drives, 64K RAM, Z80 2nd processor CPM compatible operating system (CPN). This enables you to use a range of standard business Software and other programming languages such as PASCAL, C, BCPL, FORTRAN, LISP and COBOL. (Please note — these languages are not included in the price).

SPECIAL OFFER: Torch Z80 Disc Pack + Disk Interface Kit for BBC Micro	£799 + VAT = £918.85
Torch Z80 Disc Pack	£780 + VAT = £897.00
Torch Light Pen for BBC	£65 + VAT = £74.75

COMPLETE WORD PROCESSOR FOR ONLY £1,099 + VAT

This package consists of BBC Microcomputer, View Processor, 400K Disk Drive, High Resolution Green Monitor, Daisy Wheel Printer and all the necessary cables and documentation.

OUR SPECIAL PACKAGE DEAL	
PRICE	£1099 + VAT = £1263.85

PROFESSIONAL MONITORS

GREEN MONITORS 12" green screen monitors with composite and sync input. Suitable for most computers. 18 MHz Bandwidth High Resolution. £89 + VAT = £102.35
15 MHz Bandwidth Normal Resolution £69 + VAT = £79.35

COLOUR MONITORS MICROVITEC RGB input monitor, normal resolution. As used with BBC computer. Metal cabinet.
Cub Microvitec. £239 + VAT = £274.83

SANYO RGB monitors in plastic cabinets.	
SCM14N — normal resolution 400 Dots	£239 + VAT = £274.83
SCM14M — medium resolution 600 Dots	£339 + VAT = £389.85
SCM14H — High resolution 800 Dots	£479 + VAT = £550.85

EPSON FOR RELIABILITY

EPSON FX80: 80 column, 160 CPS, normal, italic and elite characters, 256 user definable characters, superscript, subscript, 11 x 9 matrix, bidirectional logic seeking, hi-res bit image printing (960 x 8 dots/inch), friction and pinfeed, 9 international character sets, Centronic parallel interface.
FX80 PRICE £379 + VAT = £435.85

EPSON RX80: 80 column, 100 CPS, normal, italic and elite characters, 11 international character sets, hi-res bit image printing, bi-directional logic seeking, 4" to 10" adjustable pin feed, Centronic parallel interface.
RX80 PRICE £259 + VAT = £297.85

MX-100 136 column, 10 CPS, friction and tractor feed, up to 15" adjustable carriage, hi-res bit image printing, true descenders, Centronic parallel interface.
MX-100 PRICE £419 + VAT = £481.85
RS232 Interface for all above Printers. £55 + VAT = £63.25

GUARANTEED LOWEST PRICES

We guarantee that our prices are the lowest on the market. If you can find any item advertised and in stock at less than our price we will match that price.

NEW LOW PRICES STAR DP

The most cost effective quality matrix printers to be launched this year. DP510 and DP515 features include friction and tractor feed and roll holders as standard. 100 CPS print speed bi-directional logic seeking 9 x 9 matrix gives true descenders, 2.3K buffer as standard. Hi-res bit image plus block graphics, sub and super script, italic printing, auto underlining, vertical and horizontal tabulation, left and right margins set, skip over perforation, back space and self test.

STAR DP510 10" Carriage 80 Columns.	
SPECIAL PRICE	£269 + VAT = £309.35
STAR DP515 15" Carriage 136 Columns.	
SPECIAL PRICE	£369 + VAT = £424.35
RS232 INTERFACE FOR ABOVE	£50 + VAT = £57.50

TEXAS INSTRUMENTS TI 99/4A

This microcomputer is based on TMS9900 16 bit microprocessor. It includes 16K RAM, 16 colour high resolution graphic (192 x 256). The screen display is 32 characters, 24 lines TI-BASIC. Full size keyboard. For Software there are about 1000 Programs to choose from. There are a lot of peripherals available e.g. Disk Drives, Disk Interface, Speech Synthesizer, Extra RAM. Additional Languages (PASCAL, TI-LOGO, ASSEMBLER).

TI Home Computer & Cass Lead	£130.40 + VAT = £149.95
Peripheral Expansion System	£126.04 + VAT = £144.95
Disk Controller Card	£130.40 + VAT = £149.95
Single Disk Drive	£173.67 + VAT = £199.95
Speech Synthesizer	£36.48 + VAT = £41.95

If you buy TI Home computer before 2nd July 83 TEXAS INSTRUMENTS will supply FREE one pair of Joysticks, connect four game and beginners basic tutor cassettes. If you buy 6 software modules before 2nd July 83 TEXAS INSTRUMENTS will supply FREE speech synthesizer.

FREE!

We are official dealers for BBC Microcomputer System/Acorn Computers, Texas Instruments Home Computers, Y.E. Data Business Computers and Torch Computers.

DRAGON

32

A powerful computer specially designed for the family and small business use. It has 32K RAM, 16K Microsoft extended colour basic, high resolution colour graphics, 9 colours 256 x 192, Centronic parallel printer interface, professional keyboard and five octaves of sound.

DRAGON 32 with Cass Lead	£165 + VAT = £189.75
DRAGON JOYSTICKS (Pair)	£17.35 + VAT = £19.95
PRINTER CABLE	£10 + VAT = £11.50

A large range of Software is available on cassettes. Please send S.A.E. for details.

SEIKSHA DOT MATRIX PRINTERS WITH HIGH-RES GRAPHICS

AP-100A: 80 column, 30 CPS, Dot addressable hi-res graphics, 10" wide adjustable tractor feed, 7 x 5 print matrix, Centronic parallel interface.

AP100A PRICE	£169 + VAT = £194.35
FRICTION FEED ADAPTOR	£25 + VAT = £28.75
GP-250X: 80 Column, 50 CPS, tractor feed 10" wide fully adjustable, true descenders, 64 user definable characters, double height and/or double width printing, 8 x 5 print matrix, Centronic parallel and RS232 (serial) interface both included.	
GP-250X PRICE	£229 + VAT = £263.35

NEW ARRIVALS

- Shinwa CP80 Printer, Centronic Parallel Interface code compatible with Epson MX80. Price £269 + VAT £309.35
- Juki Daisy Wheel Printer with Centronic Parallel Interface. Price £369 + VAT = £424.35
- Four Colour Printer Centronic Parallel Interface, supplied with ten pens. Price £130.40 + VAT = £149.95

PLEASE PHONE FOR FURTHER DETAILS ON THESE ITEMS

All orders which accompany a cheque, cash or postal orders are CARRIED FREE (UK only). Please make cheques and postal orders payable to "AKHTER INSTRUMENTS". A carriage charge of 3% of invoice total is applicable to BARCLAYCARD and ACCESS orders. We accept official orders from Government and Educational establishments. We accept VAT FREE EXPORT orders, please phone or write to check shipping cost.

OPENING HOURS: MON-FRI 9am-5.30pm, SAT 10 am-2pm.
We welcome callers, no parking problems.

Social Spectrum of the Chiltern Club

In the back room of the Five Bells pub, club secretary Steve Betts demonstrates how fast Pascal runs on the Spectrum (top). After the talk the younger members get tapping on their Lynx, Spectrum and Dragon machines (above).

Running Pascal on the Spectrum was the topic of the night at the Chiltern Computer Club, in Eaton Bray.

About 30 members packed into the back room of the Five Bells pub armed with their micros, portable TVs and cassette recorders for the evening's play.

Against the background beat of pop music Steve Betts, general secretary of the club, delivered a talk on Pascal to an engrossed audience. To show the speed at which Pascal runs on the Spectrum, he contrasted it with a basic program on the same machine. The younger members in the room were amazed at Pascal's pace.

Sean Sullivan, one of the youngsters, told me: 'I've been coming to the club for about a month now. If I get stuck with a program on my Spectrum I can always get help from the club.'

Giving advice and help to members is one of the club's main functions — but to someone like Simon Cox, 15, using his

Spectrum has become second nature. So far he has written 20 programs and sold some of them, and he has even used his own micro to check the answers to his homework.

Brian Jones, one of the founder-members of the club, and an electronics engineer for ICI, told me about some of his ventures: a 16-bit micro which took him a year to build, and a sound output for the BBC machine.

The club celebrates its first anniversary next month. Steve Betts said: 'We encourage people to bring their own machines along to meetings. Until recently we used to have a free-for-all where people would swap ideas, programs and so on. But now we split the meetings into two halves. The first half is a lecture and the rest of the evening is left open for members to do what they want.'

Mr Betts is also trying to persuade local companies to get involved with the club, and has invited several to give a talk. Subjects on the agenda include connecting the Spectrum to a teletype through an RS232 interface and Spectrum graphics.

Sandra Grandison

Name: Chiltern Computer Club. **Venue:** Five Bells, Eaton Bray, near Dunstable, Beds.

Meetings: Second and fourth Mondays of the month. **Contact:** Steve Betts, 0525 220922.

NEXT WEEK We take up the invitation of the Watford ICPUG.

West Yorkshire Microcomputer Group meets on Tuesdays. Contact Phillip Clark, c/o Suite 204, Crown House, Armley Road, Leeds LS12 2ES, tel: 0532-632532.

York Computer Club meets at the Enterprise Club every Monday at 8pm. Contact K Thomas, Green Lea, Ripon Road, Harrogate, North Yorkshire HG1 2BY, tel: 0904-38239.

SCOTLAND

Bishopton Computer Club meets at 'Cwa Ben', Sachelcourt Avenue, Bishopton, Renfrewshire, on Sunday once a month (next meeting May 22 at 2.30pm). Contact Alasdair Law, 10 Dunglass Road, Bishopton, Renfrewshire PA7 5EF.

Edinburgh Home Computing Club meets at Clarendon Hotel, Edinburgh, on the 2nd, 3rd and 4th Wednesday of the month, produces bi-monthly newsletter. Contact I. Robertson, 031-441 2361.

Scottish Amateur Computer Society, contact Mike Anthony, 46 Moredun Park Gardens, Edinburgh EH17 7JR.

Central Scotland Computer Club meets at Falkirk College of Technology, Grangemour Road, Falkirk, on the first and third Thursday every month. Contact James Lyon, 78 Slamannan Road, Falkirk FK1 5NF.

Fife Computer Users Club meets fortnightly. Annual subs: adults, £5; under 18s, £3. Contact Murray Simpson, 31 Tom Steward Lane, St Andrews, Fife, Scotland KY16 8YB.

Grampian Amateur Computer Society meets at 35 Thistle Lane, Aberdeen, on the second and fourth Monday every month at 7.30pm. Annual subs: £12, £5 student, £2.50 junior. Contact Alan Morrison, 21 Beech Road, Westhill, Skene, Aberdeenshire AB36 6WR.

Kemnay Computer Club meets weekly. Contact S Stubbs, 15 The Glebe, Kemnay, Inverurie, Aberdeenshire.

Inverness Personal Computing Club meets every second Tuesday at 7.30pm. Subs: adults £5, juniors £2.50. Contact Gyl Mackenzie, 38 Arden Street, Inverness IV2 3EX, tel: 0463-220922.

Perth & District Amateur Computer Society meets at Hunters Lodge Motel, Bankfoot, on the third Tuesday of every month at 7.30pm. Annual subs £5. Contact Alastair McPherson, 154 Oakbank Road, Perth PH1 1HA.

Skye and Lockalsh Computer Society, proposed new club. Contact C Manvell, 25 Breacais Isol, Isle of Skye IV42 8QA.

Strathclyde Computer Club meets at Wolfson Centre, 106 Rottenrow, Glasgow, on the third Wednesday of every month. Contact B Duffy, 24 Lomand Drive, Condorrat, Cumbernauld G48 8NW.

WALES

Abergele Computer Club meets at Abergele CI Offices every Thursday at 7.30-10pm. Annual subs: £5 adults, £2.50 juniors. Contact W Jones, 77 Millbank Road, Rhyl, Clwyd, North Wales.

Colwyn Computer club meets at the Greens Hotel, Colwyn Bay, at 7pm. Contact D Bevan, c/o Abergele Road, Colwyn Bay, Clwyd LL29 7PA.

81 Club annual subs: £30 + vat. Contact Mike Hayes, tel: 0222-371732.

Gwent Amateur Computer Club meets at St Mary's Institute, Stow Hill, every Thursday at 7.30pm. Annual subs: £3.50. Contact Rothery Harris, 16 Alanbrook Avenue, Newport, Gwent, Wales NP26 6QJ.

Pencoed Amateur Computer Club meets fortnightly on Saturdays at Pencoed Library. Subs: adults, £5; OAPs and students, £3.50. Contact Philip Williams, 38 Bryn Rhedyn, Pencoed, Bridgend, Mid-Glamorgan CF35 6TL, tel: 05473 287.

Pontypool Computer Club meets at The Settlement, Roackhill Road, Pontypool, Gwent, on every Friday. Contact Graham Loveridge, on Pontypool 2827.

Swansea & South West Wales Amateur Computer Club meets on the last Friday every month. Contact Paul Griffiths, 1 Prescelli Road, Penlan, Swansea SA5 8AF.

NORTHERN IRELAND

Bangor Computer Club (N Ireland). New club. Contact Derek Blanc, c/o Queen's University, Belfast, Northern Ireland.

EIRE

Cork Amateur Computer Club. Talks and demonstrations. Hardware, programming and games. Contact T Moriarty, Tiger Bay, Rochestown, Douglas, Cork, Eire.

DATABASES

PCN Databases is presented in three-week cycles. This week it's the turn of software packages, next week hardware, and two weeks from now, peripherals... We can't fit all software packages in, so we've compiled a selection, giving best sellers from 100 publishers and distributors.

We confined coverage to five main types of applications: business, education, games, home and utility. All details published are the latest available.

Companies wanting to add their best-selling packages to Databases, or wanting to update information already here, should send details to: Databases, Personal

Computer News, VNU, 62 Oxford Street, London W1A 2HG.

APPLICATION Each software package is listed alphabetically by its application.

PRICE Includes VAT.

MACHINE/OPERATING SYSTEM on which the best selling packages runs.

MOTHER VERSIONS indicates whether or not the package runs on a different machine or operating system.

MEDIA SUPPLIED indicates in what format the package comes — either cassette, disk, or cartridge.

MAIL ORDER AVAILABLE tells you whether or not the package is available by mail order.

HARDWARE REQUIRED shows the need for special hardware, such as disk drive, joystick or printer.

PUBLISHER/DISTRIBUTOR This code refers to the distributor code table at the end of the listings, which will give the name and telephone number of the publisher/distributor.

COMMENTS — any other points of interest.

Accounting										
	£3,320	Apple II	●	Financial Controller	48K	●	●	●	S1	Also on Apple IIE. 8 modules (£402.50 each) — sales, purchase, invoicing, etc.
	£339.25	Apple II		General Ledger	48K	●	●	●	C1	Supports 1000 accounts and 100 analyses. Self-balancing, full audit trail.
	£552	Apple II		Informex Integrated Accounting System	48K	●	●	●	I1	Contains nominal, sales, purchase ledger + VAT. Can handle 800 accounts.
	£1,147.70	Apple II		Informex Integrated Business System	48K	●	●	●	I1	Contains accounting system modules plus invoicing + stock.
	£172.50	Apple II	●	Micro-General Ledger	48K	●	●	●	G1	Also on ITT 3030 and Basis 108. Goes through profit/loss + balance sheets.
	£402.50	Apple II	●	Nominal Ledger	64K	●	●	●	J1	Also on Sirius, IBM PC, Apple III + UCSD. Requires 132 column printer.
	£431.25	Apple II		Payroll	48K	●	●	●	C1	Supports weekly, monthly, + per monthly. Up to 350 employees per disk.
	£402.50	Apple II	●	Purchase Accounting & Cost Control	64K	●	●	●	J1	Requires 132 column printer, also Sirius, IBM PC, Apple III, UCSD.
	£402.50	Apple II	●	Sales Accounting System	64K	●	●	●	J1	Also on Sirius, IBM PC, UCSD. Provides conventional ledger.
	£339.25	Apple II		Sales Ledger	48K	●	●	●	C1	Supports 700 + accounts. Direct posting, credit control & 100 analyses, self balancing
	£1,725	Commodore 8000	●	Auditman	32K	●	●	●	C4	Also on Commodore 4000. Complete accounts production system.
	£1,552.25	Commodore 8000	●	Businessman	32K	●	●	●	C4	Also on Commodore 4000. Can be used with Auditman. 5 modules.
	£2,052.75	Commodore 8000	●	Data-Lex	32K	●	●	●	D1	Designed for solicitors + others who need to separate office & client's accounts.
	£2,070	Commodore 8000	●	Microfacts	32K	●	●	●	M1	Also on Commodore 700, Victor & Sirius. £345 per module. Integrated accounting.
	£454.25	Commodore 8000	●	Micro-simplex	32K	●	●	●	M2	Also on Commodore 64 (£172.50). Needs printer. For smaller retail business.
	£2,300	Commodore 4000	●	Pegasus Integrated Accounting Suite	32K	●	●	●	P3	Also on MS-DOS (128K). Contains six stand alone modules.
	£1,437.50	CP/M		Aurora Integrated Accounting Package	64K	●	●	●	G1	Five stand alone modules. Sales, invoicing, purchase, nominal and stock.
	£2,760	CP/M		Boss	64K	●	●	●	F1	Seven stand alone modules. Can link to Autowriter & Autoindex.
	£805	CP/M	●	Cash Book Accounting	64K	●	●	●	S2	Also on CPM-86 and MS-DOS. Amalgamation of sales, purchase & nominal ledger
	£2,300.00	CP/M		dBflex	48K	●	●	●	E1	Open item six module accounting system, (£575.00) per module. Works with dBase II
	£402.50	CP/M	●	Exact	64K	●	●	●	S3	Also on MS-DOS. Includes six modules — invoicing, ledgers, stock and payroll.
	£373.75	CP/M	●	Fast Nominal	60K	●	●	●	T1	Also on MS-DOS. Needs 132 character printer. Can define up to 99 report layouts.
	£3,059	CP/M		ISBS-W	64K	●	●	●	G2	Comes on hard disk. Contains ISBS functions plus job costing and purchase control.
	£1,840	CP/M	●	ISBS-S	48K	●	●	●	G2	Also on CPM-86. Contains seven modules.
	£2,271.25	CP/M	●	Multi-Index	64K	●	●	●	B1	Also on MP/M & PC-DOS. Contains five modules. Sales, nominal, VAT & stock control
	£569.25	CP/M	●	Nucleus	64K	●	●	●	C2	Also on MS-DOS. Disk drives of 280K needed. A program generating system.
	£1,431.75	CP/M	●	Padmede Business Control System	64K	●	●	●	P2	Five modules (£286.35 per module). Nominal, sales, purchase, invoicing, stock.
	£1,380	CP/M	●	Motor Dealers Part Distribution	64K	●	●	●	S2	Also on CPM 86 & MS-DOS. Combines stock control, order processing ledgers.
	£1,868.75	CP/M	●	Peachtree Basic Accounting Systems	48K	●	●	●	P1	Also on MP/M & MZ-DOS. Available on hard disk (£2,156.25). 5 stand alone modules.

[illegible]

Mailing	£86.25	CP/M							S4	Works with Super file. Prints labels, files, names & addresses. Mail merge facility.
Management	£226.16	CP/M	●			56K			M4	Also on CP/M 86, MS-DOS & PC-DOS. Spreadsheet using virtual memory.
Mathematics	£28.75	Commodore Pet	●			48K	●		S5	Also on Commodore 3000, 4000 & 8000. Available on floppy disk.
Medical	£517.50	Apple II	●			16K			A2	Also on Apple IIE, III & Sirius (£573.85). On hard disk. Age/sex register.
Office Information	£402.50	Apple II	●			48K	●		A4	Also on IBM PC & Corvus Concept. Information system which acts as a noticeboard.
Payroll	£69.00	Apple II	●			48K	●	●	H1	Also available as cassette for Spectrum ZX81 (£25.00). Needs printer.
	£287.50	Apple II	●			48K	●		T3	Also on CP/M & MS-DOS (64K). Up to 2000 employees, nine pay schemes.
	£977.50	CP/M	●			48K	●		O2	Also on MP/M and MS-DOS. Integrates with Omicrons nominal ledger. Handles SSP
Project Management	£747.00	IBM PL	●			48K	●		T2	Also on ICL PC, Sirius, Superbrain, Apple II, & others. Critical path analysis.
Project Planning	£1,150.00	Commodore 8000	●			32K	●		C3	Has eight optional variants (all eight £4,025). Network logic & variety of screen display
Property Management	£517.50	Apple II	●			48K	●		A2	Also on Apple III, Apple IIE & Sirius. Prints rent reminders, demands etc.
Purchase Ledger	£287.50	Apple II	●			48K	●		T3	Also on CP/M & MS-DOS (64K). Open item ledger — automatic payment facility, etc
	£805.00	CP/M	●			48K	●		O2	Also on MP/M & MS-DOS. Integrates with Omicron's Nominal Ledger System.
Sales Ledger	£287.50	Apple II	●			48K	●		T3	Also on CP/M & MS-DOS. Part of integrated system. 300 analysis codes.
	£373.75	CP/M	●			60K	●	●	T1	Also on MS-DOS & TRS/DOS. Needs 132 character printer. Part of Fast Range.
	£805.00	CP/M	●			48K	●		O2	Also on MP/M & MS-DOS. Multi-user system based on mainframe software.
	£325	DEC Rainbow 100	●			64K	●		D2	Also on DEC Mate II. Invoicing & monthly statement generating system.
Sales Order Processing	£805.00	CP/M	●			64K	●		C2	Also on CP/M 80, 86 & MS-DOS. Comes on hard disk. Control, stock, ledgers.
Sales, Purchase, Nominal Ledger	£1,207.50	CP/M	●			64K	●		C2	Also on CP/M 80, 86 & MS-DOS. Follows standard accounting procedures.
Sick Pay	£80.50	Apple II	●			48K	●		H1	Also on Spectrum. Does all SSP calculations.
Statistics	£172.50	Apple II	●			48K	●	●	G1	Also on Basis 108 & ITT 3030. Needs printer.
	£287.50	Commodore 8000	●			32K	●		P7	Also on Commodore 64 & Sirius. Fully interactive, (two modules at £99 each).
	£9.20	Sharp MZ80A	●			48K	●		K3	Also on MZ80K. Calculates mean & standard deviation for up to 100 items.
	£15.00	Sinclair ZX81	●			8K	●		H5	Also on Spectrum (16K). Activities entered from arrow diagram. Finds critical path.
	£977.50	UCSD-P System	●			128K	●	●	P5	Needs Hewlett Packard plotter. Developed to analyse historical time series data.
Stock Control	£373.75	CP/M	●			60K	●	●	T1	Also on MS-DOS & TRS DOS. Needs 132 character printer.
	£3,289	CP/M	●			48K	●		T2	Stock control system for manufacturing industry.
	£33.92	Newbrain				32K	●		E2	Stores large quantities of stock, accumulates new stock levels & checks stock level
	£25.00	Sinclair Spectrum	●			48K	●		H1	Also ZX81. Fast fwd/add/delete item. Prints complete or selective lists & total value
Word Processing	£228.85	Apple II	●			48K		●	P6	Also Apple IIE. Needs 80 column card. Storage/retrieval of names & addresses.
	£92.00	Apple II				48K	●	●	M5	Needs 80 column card. Allows entry, editing & print formatting of any text type.
	£125.35	Apple II				48K	●	●	P4	Word processor for the non-professional — minimum Apple system.
	£152.95	Apple III	●			48K	●	●	P6	Also Apple II. Has word wrap, glossary & word processing language.
	£28.50	BBC Model B				32K	●	●	H3	Also available on disk. Suitable for home & business.
	£10.50	BBC Model B				32K	●		I4	Includes DELETE, INSERT, SAVE, Date etc.
	£90.85	Commodore 64				64K	●		R2	Combined programmable word processor. Database and calculator.
	£89.00	Commodore 64	●			64K	●	●	A3	Also Commodore 8000. Compatible with WordPro & SpellPro.
	£488.75	Commodore 8000	●			32K	●	●	D1	Also on SuperPet, Sirius 1, IBM PC & CBM 64. Routine correspondence, mailing, etc
	£51.75	Commodore Pet	●			16K	●		S5	Also on Commodore 64, 3, 4, & 8000. Available on floppy (£53.49).
	£125.00	Commodore BK-20	●			8K	●	●	A3	Also Commodore 64 — needs printer. Comprehensive word processor.
	£145.00	CP/M	●			64K	●	●	X1	Also on CP/M 86 and PC-DOS. An optional MERGE, PRINT, extra for Wordstar.
	287.50	CP/M	●			48K	●	●	P1	Also MP/M & MS-DOS. Needs high quality printer. Contains proof reader.
	£339.00	CP/M	●			64K	●		S3	Also MS-DOS & Apple DOS. Contains quick reference card.
	£431.25	CP/M	●			64K	●	●	B1	Also MP/M & PC/DOS. Screen-oriented system.
	£316.25	CP/M	●			48K	●	●	E1	Also on Oasis. Word processing

EDUCATION

	Price inc vat	Machine/ Operating System	Other versions	Title	Memory required	Media Supplied	Mail order avail.	Hardware Required	Publisher/ Distributor	Comments
Basic Course	£9.95	Texas Instruments 99/4A		Beginners Basic Tutor	16K	●	●		T5	Gives explanations and examples of TI Basic — lets the user try.
	£13.95	Texas Instruments 99/4A		Teach Yourself Extended Basic	16K	●	●		T5	Needs extended Basic module.
Business Game	£9.95	BBC Model A	●	Business Game	16K	●	●		W1	Also on Model B. Two games for economics, business & general studies, teaching.
	£5.95	BBC Model B	●	Inkosi	32K	●	●		C9	Also on Vic-20. Rule for ten years, overcoming obstacles, e.g. famines.
Chemistry Children	£14.38	Research Machine 380Z	●	Symbols To Moles	31K	●	●		H4	Also on Apple II. Practise using chemical symbols, writing & mole concept.
	£37.89	Apple II		Bumble Plot	48K	●	●		P4	A set of five programs for developing graphics and maths skills. For children 8 to 13.
	£29.84	Apple II	●	Face Hanger	48K	●	●		P4	Also on IBM PC. Designed for children to learn computer keyboard by building up face.
	£37.89	Apple II		Gertrude's Secret	48K	●	●		P4	An educational game to teach logical thinking & planning. For children aged 6-9.
	£9.80	Atari 400	●	Jigsaw Puzzles	16K	●	●		T4	Also on Atari 800. Has 16 puzzles and optional difficulty.
	£9.95	BBC Model B		Letters	32K	●	●		C9	Designed for children aged 4-6 & for dyslexic & remedial children.
	£9.95	BBC Model B	●	Metrics	32K	●	●		C9	Also on Vic-20+ Spectrum. Structure of metric system, for children aged 10-15.
	£5.95	BBC Model B	●	Pascal	32K	●	●		C9	Also on Vic-20. Shows construction of Pascal Triangle and tests on it.
	£5.95	BBC Model B	●	Sequences	32K	●	●		C9	Also on Vic-20. Demonstrates number patterns.
	£6.50	BBC Model B	●	The Early Stages	32K	●	●		H3	Reading aid. Plays nursery rhymes. Available on disk.
	£4.50	BBC Model B		Super Hangman	32K	●	●		I4	Version of famous game. High resolution graphics. 800 words or enter own choice.
	£9.95	BBC Model B		Tree of Knowledge	32K	●	●		A9	Interactive program teaching categorisation. Simplified information retrieval.
	£4.95	Sharp MZ80A	●	Giant Maths	32K	●	●		S8	Also on MZ80K. Big screen figures & humorous error messages. 5 to 11 years.
	£4.95	Sharp MZ80A	●	Rocket	3K	●	●		S8	Also on MZ80A. Four difficulty levels. For five to 11 year olds.
	£9.20	Sharp MZ80A	●	Teach Tables	48K	●	●		K3	Also on MZ80K. Plays like game but motivates children to improve their ability.
	£4.95	Sharp MZ80K	●	Master Builder	48K	●	●		S8	Also on MZ80A. Repair a wall using random blocks. Teaches spacing.
	£5.25	Spectrum		Alphabet	48K	●	●		W2	'Picture for each letter of the alphabet. Option for lower case.' Aimed at ages 2-6.
Classroom Monitor	£322.00	UCSD-P	●	Classroom Monitor	64K	●	●		K4	Also on Apple II. Provides demonstration facilities & monitors student's progress.
Economics	£28.75	Sharp MZ80K	●	Broadwater Economics Simulation	16K	●	●		W1	Also on Commodore Pet & BBC. Simulates micro & macro economics.
French	£14.38	Research Machine 380Z	●	Repondez	31K	●	●		H4	Also on Apple II. Practising French verb formation (present tense).
	£9.20	Sharp MZ80A	●	French Conjugate	48K	●	●		K1	Also on MZ80K. Automatically conjugates regular verbs into tenses.
	£9.20	Sharp MZ80A	●	French Verbs	48K	●	●		K1	Also on MZ80K. Allows user to impart up to 20 verbs & eight tenses at a time.
Graphics	£8.00	BBC Model B	●	Painter	32K	●	●		A5	Also on Spectrum (£5.75). Atom (£6.90) & on disk.
	£9.95	BBC Model B	●	Creative Graphics	16K	●	●		A9	Book available (£7.50). Designed to illustrate BBC graphics.
	£20.13	Sharp MZ80A	●	Kings & Queens	48K	●	●		K1	Also on MZ80K. Facts & figures on English monarchs since 1066.
History	£7.95	Sharp MZ80A	●	Multilingual	3K	●	●		S8	Also on MZ80K. A language tutor to suit all European languages.
Languages	£8.95	BBC Model B	●	Angle	32K	●	●		C9	Also on Spectrum. Includes four programs designed to teach simple geometry.
Mathematics	£9.95	BBC Model A	●	Algebraic Manipulations	16K	●	●		W1	Also on Model B. Includes four programs designed for use in maths teaching.
	£82.80	IBM PC		Fact Track	64K	●	●		I3	Learning basic arithmetic. Presents simple two-line sums in random order.
	£46.00	Sharp MZ80A	●	Curve Fitting	48K	●	●		K3	Also on MZ80K. Calculates, intercepts & plots power curve.
	£9.20	Sharp MZ80A		Directed Numbers	48K	●	●		K3	Also on MZ80K. Teaches difficult mathematical functions.
	£9.20	Sharp MZ80A	●	Divisor Advisor	48K	●	●		K3	Also on MZ80K. Teaches division at a variety of skill levels.
	£27.60	Sharp MZ80A	●	Numerical Integration	48K	●	●		K3	Also on MZ80K & B. Teaches Simpson's Rule.
	£5.25	Spectrum		Counting	16K	●	●		W2	Graded programs. Good as a first introduction to numbers. Aimed at ages 3-6.
Meteorology	£23.00	Research Machines 380Z	●	Weather	31K	●	●		H4	Also on Apple II. Gives synoptic charts. Teaches elementary meteorology.
Morse Code	£9.20	Sharp MZ80A	●	Morse Tutor	48K	●	●		K3	Also on MZ80K. Used to teach morse code by sight and sound. At seven levels.
Physics	£14.38	Research Machines 380Z	●	Lenses	31K	●	●		H4	Also on Apple II. Illustrates formation of images by lenses using ray diagrams.
	£9.20	Sharp MZ80A	●	Casino Chips	48K	●	●		K3	Also on MZ80K. Uses radioactive chips to teach half-life concept.
Typing	£28.75	CP/M	●	Touch'n Go	48K	●	●		C6	Also on MS-DOS. Typing tutor for mastering numeric pad & Qwerty keyboard.
	£31.05	IBM PC		Typing Tutor	64K	●	●		I3	Presents exercises for learning touch typing or for improving existing skills.

GAMES

Adventure	£17.95	Atari	●	Arrow of Death	16K	●	●		C8	Also runs on TRS-80, BBC, Vic-20. A 'classic text adventure'.
	£7.99	BBC Model B	●	Adventure	16K	●	●		M7	Also runs on Atom. 'Many rooms to explore and many hazards to overcome'.
	£9.95	BBC Model B		Philosopher's Quest	16K	●	●		W1	'Progress through a world of fiendish puzzles.'

	£9.95	BBC Model B		Sphinx	16K	●	●	●	●	●	●	●	●	●	●	W1	'A classic adventure, moving through caves avoiding hazards to collect treasure'.
	£13.80	Commodore Pet	●	Hitch-Hikers Guide to the Galaxy	32K	●	●	●	●	●	●	●	●	●	●	S5	Also runs on Commodore 64, Vic-20, 3000, 4000, 8000. 'Involved, textual game'.
	£18.40	Commodore Pet		Pythonesque	32K	●	●	●	●	●	●	●	●	●	●	S5	'Increasingly difficult textual game based on Monty Python'. Disk available (£20.12).

	£3.95	Texas Instruments 99/4A	Chalice of Kalmar	16K	A8	'The aim is to relieve a chalice from a temple'.
HOME						
Clubs and Sports	£78.00	Sharp MZ80A	Clubman	48K	S8	Golf handicapping and competition results system complying with 1983 regulations
	£575.00	Apple II	Tab's Golf Package	48K	T3	Also on MS/DOS (64K). Maintains members handicaps including 1983 regulations
	£28.18	Epson HX20	Horse Race Forecast	48K	K1	Also on Newbrain and Sharp. A punters aid to betting.
	£28.69	Sharp MZ80A	Navex	48K	K1	Also on MZ80K. Simulations of navigating a yacht on the English Channel.
Diary	£9.95	BBC Model A	Desk Diary	16K	W1	Also on BBC Model B. Consists of address book & diary planner (plus instructions).
Home budget	£19.99	Atari 400	Home Financial Management	8K	T4	Also on Atari 800. Needs Atari Basic cartridge. Aids money management.
	£19.95	Epson HX20	Home Budget	16K	K1	Also on Sharp, MZ80 & Osborne. Keeps records of home finances with graphics.
Music composition	£14.95	Sharp MZ80A	Sam Analysis	3K	S8	Designed for balancing home debits & credits.
Stock control	£24.99	Commodore Vic-20	Vic Music Composer	8K	T4	Aids to aspiring composer. Also for entertainment and education.
	£10.00	Spectrum	Spec File	48K	A5	Stock control program useful in home, e.g. record collection, etc.
Various	£12.95	Commodore Vic-20	Home Office	5K	A3	Comprises VicPro (word processor) & VicData (A database program).
UTILITIES						
Basic	£201.25	CP/M	Basic 80	48K	L1	Industry standard Basic.
	£235.70	CP/M	Basic Compiler	48K	L1	Companion to Basic 80. Allows programs to run faster.
	£80.50	CP/M	BDS C Compiler	48K	L1	A subset of 'C' that enables its implementation. Includes symbolic debuggers.
	£121.90	CP/M	C Basic	64K	X1	Commercial Basic. Also on CP/M86 (£265.65).
	£213	Any Z80	X-Basic	48K	X1	Built-in matrix functions. Supports MP/M record locking. Graphics option.
Basic Upgrader	74.75	Commodore 64	VicTree	64K	S5	Also Commodore Vic-20. Also on floppy (£92.00). Adds 50 commands to Basic.
Card Index System	£215.05	Apple II	VisiDex	48K	R1	Also on IBM PC. Needs printer. One record/screen designed for cross-referencing.
	£178.25	CP/M	Cardbox	48K	O6	Also on MS-DOS. Needs 24 x 80 VDU & 100K disk storage.
Communications	£102.35	Apple II	ASCII Express — The Professional	48K	P4	Needs RS232. Asynchronous serial communications package.
	£448.50	Apple II	Editel	48K	O1	Needs modem. A Viewdata frame word processor designed to aid data editing.
	£626.75	Apple II	Owlisync 3780	48K	O1	A full IBM 3780 emulator package allowing communication up to 2400 Baud.
	£454.25	Apple II	Owitel	48K	O1	Needs modem. Allows access to Prestel & private viewdata systems.
	£149.50	Apple II	Terminal Utilities	48K	C1	Also on Apple IIE. Converts Apple II to intelligent terminal. Speeds of up to 9600 BPS.
	£57.50	CP/M	Xcopy 1.0	64K	X1	Disk copy utility for Cromemco machines. Copies 8" or 5 1/4" single/double sided.
	£454.25	CP/M	Micro-Linkline	64K	I2	Also on UCSD-P. Teletype comms for transferring datafiles.
	£575	CP/M	Bisync AC-3780	64K	E1	Also on MP/M & CP/M86. Micro-to-mainframe comms through IBM terminal emulation.
	£41.40	IBM PC	Asynchronous Communications	64K	I3	Needs asynchronous comms adaptor. Makes PC act as asyncs comms terminal.
	£117.30	IBM PC	IBM 3101 Emulation Program	64K	I3	Makes PC act as 3101 terminal provides 3270 emulations when connected to host.
	£638.25	IBM PC	PC SNA 3270 Emulation	128K	I3	Needs SDLL adaptor card makes PC act as IBM 3270 terminal.
	£22.43	Sharp MZ80A	Zen	48K	K1	Also MZ80K & B. Full Z80 editor/assembler.
	£115.00	IBM PC	Interlink	48K	T2	Also on Sirius, Apple II, Xerox, Osborne etc. Connects processors for downloading.
Database	£132.25	Apple II	DB Master	48K	M5	Available on hard disk. Allows 1K records over 100 fields. Report generation, etc.
	£224.25	Apple II	Informex Database System	48K	I1	Database system which can be used to & update info on any type of record.
	£402.50	Apple II	Mailist	48K	A4	Also for IBM PC & Corvus Concept. Requires hard disk. A networking product.
	£96.60	Apple III	PFS: File	48K	P6	Also for Apple II (£135.70). Used in tandem with PFS (£96.60).
	£215.05	Apple II	VisiFile	48K	R1	Also on IBM PC (£273.70; 64K). A database program suitable for up to 500 entries.
	£217.35	Apple IIE	VisiTrend + VisiPlot	64K	R6	Also for CP/M. Graphic representation of data. Compatible with VisiCalc.
	£10.30	BBC Model B	Filer	16K	M7	Allows searching, sorting, saving & recovery of data.
	£201.25	CP/M	Dataflow II	56K	G1	Also on CP/M 86. Needs 160K disk space. Extract files to link with other systems.
	£201.25	CP/M	Datastaff	64K	X1	Data entry & retrieval system. Interfaces with WordStar
	£499.74	CP/M	dBase II	48K	E1	Micro DBMS. Can be used for high level programming for a range of applications.
	£557.50	CP/M	Superfile	56K	S4	Multi-file database giving application package information.
	£166.75	CP/M	Supersort 116	64K	M10	A sort utility for handling various forms of data files. Mainframe-like additions.
	£1,840	CP/M	MDBS II	64K	T2	Also on CP/M-86, MS-DOS, Turbo DOS, Unix and Xenix. Mainframe-like facilities.
	£569.25	Commodore 800	The Administrator	96K	S11	Applications generator. No programming involved.
	£68.42	Newbrain	Invoice & Credit Program	32K	E2	The invoice program allows you to put in your own information and design invoice.
	£29.32	Newbrain	Database 40/S	32K	E2	Information gatherer, stores large quantity of information & can be interrogated at will.
	£684.25	Sirius	Tomorrow's Office	128K	S11	Complete applications generator. No programming involved.

Debugger	£258.75	CP/M	●	Animator	64K	●	●	●	●	●	M11	Also on Unix & MS100S, interactive source level debugging tool for CIs-Cobol.
File Transfer Graphics	£132.25	CP/M	●	BSTAM	16K	●	●	●	●	●	L1	Needs common interface ports or modem access. Utility for transferring CP/M files.
	£34.50	Apple II	●	Graphic Utilities	48K	●	●	●	●	●	C1	Also for Apple IIe. Parameter driven machine code programs' high res graphics.
	£24.95	Atari		Constructor	48K	●	●	●	●	●	C8	Less experienced & new programmers can design animated sequences.
	£9.95	BBC Model A	●	Creative Graphics	16K	●	●	●	●	●	W1	Also for BBC model B.30 programs on cassette produce range of pictures & patterns
Language	£24.95	BBC Model B		EDG Graphics Package	32K	●	●	●	●	●	S7	Computer aided design package. Reviewed 11.3.83.
	£50.60	CP/M		CP/M Graphics	64K	●	●	●	●	●	D4	Range goes up to £421.70 & conforms to GKS Graphics Standard.
	£488.75	CP/M	●	CIS Cobol	64K	●	●	●	●	●	M11	Also on Unix. Compact, interactive ANSI 74 standard implementation of Cobol.
	£1,109.75	CP/M	●	Level II Cobol	96K	●	●	●	●	●	M11	Also on Unix & MS-DOS. High level ANSI 74. Compiler, mainframe-compat code.
	£396.00	CP/M		Fortran 80	48K	●	●	●	●	●	T2	Useful for scientific applications, where Pascal is inefficient.
	£285.20	CP/M	●	Pascal — MT +	64K	●	●	●	●	●	X1	ANSI standard Pascal for Z80 processors. Also on CP/M 86 (£484-90).
	£210	CP/M	●	Supersoft C Compiler	48K	●	●	●	●	●	M4	Also on CP/M-86, MS-DOS, PC, DOS. Fast implementation of C.
	£114.43	Commodore 64	●	DTL-Basic Compiler	32K	●	●	●	●	●	D1	Also on Commodore 8000, 4000 & 3000. Also tape version on CBM 64 (£39.90).
	£16.85	BBC Model A	●	Lisp on the BBC	16K	●	●	●	●	●	W1	Also on BBC Model B. Book available £7.50. Lisp is artificial intelligence language.
	£253.00	CP/M	●	ProPascal	56K	●	●	●	●	●	E1	Also on C-DOS. Needs two disk drives. Native code Pascal.
	£40.19	Sharp MZ80A	●	Forth	48K	●	●	●	●	●	K1	Also on MZ80K & Osborne. Allows implementation of Forth.
	£25	Spectrum		Hisoft Pascal	48K	●	●	●	●	●	H5	Reviewed in PCN week ending April 8. Pascal compiler and screen editor.
Linker	£421.70	Any 8 or 16 bit machine		PL/1	48K	●	●	●	●	●	D4	A compact implementation based on ANSI standard general purpose subset of PL/1.
	£350.75	IBM PC	●	Lattice-C	64K	●	●	●	●	●	L1	Also on MS-DOS, C' Compiler for 16 bit machines — full implementation & execution
	£224.25	CP/M		Plink 2	48K	●	●	●	●	●	L1	Up to 8 megabytes.
	£59.80	CP/M		Operating Guide	48K	●	●	●	●	●	E1	Works by putting CP/M to sleep & replacing it with operating environment.
Operating system	£22.94	Apple II		Fasdos	48K	●	●	●	●	●	P4	Disk operating system for Apples which speeds up location of binary & Applesoft files
	£277	8086 micro		Concurrent CP/M-86	48K	●	●	●	●	●	T2	Enables four separate tasks to run in a single user station.
	£295.20	Any 8-bit micro		CP/M +	128K	●	●	●	●	●	D4	Upward compatible from CP/M enhanced 8-bit micro. O/S.
	£126.50	Any 8-bit micro		CP/M 2.2	64K	●	●	●	●	●	D4	O/S for 8-bit micros with over 1.5 million users.
	£379.50	Any 8-bit micro		MP/M	64K	●	●	●	●	●	D4	Multiuser, multitasking. Features record & file locking, date & time stamping etc.
	£210.80	Any 16-bit micro		CP/M-86	84K	●	●	●	●	●	D4	Manages up to one megabyte of RAM & allows up to 128 megabytes of on-line storage

PAEAN systems

Quebec Marketing (C.N.), Little Bealings,
Woodbridge, Suffolk IP13 6LT

PAEAN are hunting for high quality, imaginative and exciting programs for the BBC Micro to market in the UK and overseas.

If you have written an original games, educational or business program which you believe has commercial potential, send a cassette to PAEAN Systems and if we agree with you, we will offer you a contract. Don't forget to include your name, address and telephone number.

THINK ABOUT THIS:

A £50 note will be sent to the first response which correctly interprets the hidden significance of the PAEAN Logo.

Winner's name will be published.

Do you want a fast
return of post service
AND a 5% discount
on your software?

At Ivysoft we stock nearly 150 different programs for the Spectrum including all the popular titles. Phone or send a s.a.e. for a price list. Stop press. We now stock software for the Oric, Dragon, BBC and Vic 20 micros. Please state machine when requesting price list. We also have limited supplies of the Star 510 and 515 printer, at £325 and £450 respectively

The Beeb boobs

If you want to sell your BBC micro, don't try foreign markets. Unless, like Acorn, you are prepared to pay to relabel it.

BBC as a name is as much part of the British establishment as HMG, yet in Europe the initials have a different meaning. They are used as a trading identity by Swiss multinational Brown Boveri.

So Acorn discovered after producing hundreds of BBCs bearing the BBC logos for export. BBC (the Swiss one) took great exception to this and warned the Beeb not to market micros bearing these initials in West Germany.

Now the BBC (ours, that is) was far from happy with BBC's

reaction. It effectively brought its marketing operation — television programmes and all — to a grinding halt.

Marketing boffins were put to work to dream up a solution to the impasse. Back they came with the ingenious, if uninspiring, solution: 'Let's call the machine the British Broadcasting Corporation Micro-computer.'

And with these Reithian tones ringing in their ears Acorn's production staff were sent off to relabel the hundreds of machines already assembled.

Any suggestions as to how they squeeze this lengthy title onto the name-plate of the micro should be sent to Acorn.

Syntax Errors

Disk located

When labelling parts of a disk drive, captions get mixed up. So it was in Micropaedia, page 101. The part labelled The Magnetic Coil (part 13, issue 13 — no wonder) is the motor which moves the wheel pictured under the disk drive at 11. And 14 should read The Head Motor — which moves the head in and out. Sorry about that folks... but we're still not superstitious.

Sharp POKE

You had to be Sharp to pick up the mistake in issue 11's story on the MZ80 — and most Sharp owners are. In the first series of

POKEs one POKE was omitted — POKE 7388,140.

It should be obvious, but could lead to a crash if you don't expect it.

Graph supplier

In response to reader's requests, the address of Keyboard, which manufactures the Spectrum graph sheets featured in Micropaedia Graphics Part V, is Keyboard Word Processing & Advanced Office Systems, 28 Forest View Road, Walthamstow, London E17.

Address mode

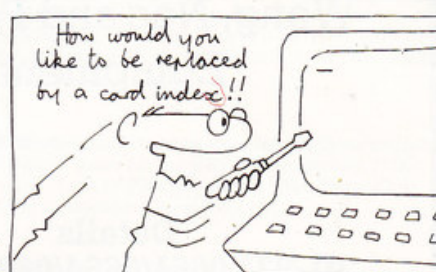

Letters sent to Elliot Right Way Books could go the wrong way if you follow the address we gave. The publisher is at Kingswood Buildings, Lower Kingswood, Tadworth, Surrey KT20 6TD, not Kingsway.

Laugh line

SUSPENSE OVER — This one taxed you all. Lots of 'testing the air brakes' and 'computerised route planners', and one 'systems crash' line. But best of the lot — better, we thought, than the cartoonist's 'Some of these video games are very realistic' — was Tim Fox with 'Hey, isn't that Silicon Valley down there?' Tim, of Shirehampton, Bristol, wins £20.

PAL2000
by Mollusc.

GALAXIANS The first 'arcade perfect' version of the popular game, written in machine code for super-smooth fast action play. Hi-res movement and superb sound effects make this the game other Onic games will be compared with. £6.95/48K Onic, 16k version soon. Realisation: Gordon Russell.

MONSTERS Don't PANIC! Alone in the maze of platforms and ladders on Saldon III you must find power-modules in the system guarded by the Monster-Robots. But you have your Laz-Gun to blast through levels and send them crashing to their fate. One of the best 100% machine code games yet for the Dragon 32. £7.99.

ROBON Quite simply a quantum leap better than other versions of 'Berserk' for the Spectrum. Nine levels of play, and full feature action including Robon chases, laser guns, and if you dally too long the Robon will get you! Any ZX Spectrum. £5.95 Realisation: Andrew Beale.

JOUST You, White Knight, do fly upon your Ostron and do battle with the Dark Lords upon their Buzzards. The most amazing hi-resolution graphics and movement ever on the ZX Spectrum. 16 or 48K RAM. £5.95 Realisation: Andrew Glaister.

FIREBIRDS Wave after wave of Firebirds and their cohorts the Blue Weavers and the White Bombers; ever chasing the Firebirds' Motherships. Unlimited waves and specially crafted machine coded super-smooth action and sounds sets a new standard in shoot-em-up games. Runs on any ZX Spectrum. £5.95 Realisation: Graeme Devine.

REPULSAR The last outposts of Mankind are under almost constant attack and you alone have control of the defense system. Fast and furious version of the arcade game Missile Command. Works with Joysticks. Any ZX Spectrum. £5.95 Realisation: Andrew Beale.
