Atari revives 260ST with built-in drive

ATARI has revived plans to manufacture a low-cost version of its eagerly awaited 68000-based ST model, originally shelved in mid-May.

It now seems that Atari will release a 256K version of its ST range - a 260ST - in this country, possibly for an au-

tumn launch. The machine replaces the 128K 130ST, plans for which were dropped in May.

The new 260ST model will be launched in the US in September.

Atari will offer the machine in two versions - a stand

alone model and one with built-in disc drive, similar to Commodore's two versions of the C128 micro with which Atari hopes to compete. The model with disc drive will look slightly different from the rest of the range - the casing being much larger to accommodate the single 3½" 500K drive.

"The 260ST and 260STD machines will cater for the

low-end mass market. Now that the 520ST is being sold in specialist computer stores, the new machine will be available from general retail channels," said James Cope-land, Atari's vice president of marketing.

"The stand alone model will cost \$399 (around £300), and the disc version \$499 (around £390). The machine

Goonies!

Steven Spielberg's latest film *The Goonies*, is being released in the UK at Christmas. US Gold will be importing Datasoft's computer game in September.

The game closely follows the film's plot involving a gang of children, who bored with long weekends in their sleepy seaside town, take on a quest to find pirate treasure in a network of underground tunnels, and caves pitting their wits against escaped convicts.

'Sir Clive Ltd' to head R&D

SOME of the confusion surrounding the announcement of Robert Maxwell's proposed takeover of Sinclair Research is beginning to clear.

Conflicting reports have appeared of the role Sir Clive will play in the future of Sinclair Research and of his intention to set up a company of his own. It now seems that Sir Clive's new company is being set up to facilitate his long term involvement with Sinclair Research.

"Sir Clive will continue to direct the company's research and development, but he will do so not as an individual employee, but as a com-

pany - say, Sir Clive Sinclair Ltd," explained Nigel Searle, Sinclair's head in the US. "The new company will exist to provide services to Sinclair Research, which will primarily be the availability of Sir Clive himself."

Nigel Searle also confirmed that Sinclair director Robb Wilmot will continue to head the search for external funding for a separate wafer-scale integration company - to the tune of around £50 million. However, there has been some question over the nature of the technology Robert Maxwell will preside over.

EDITORIAL

Jack Tramiel's influence on Atari is becoming clearer. As Commodore always did under his command, Atari is developing the technique of keeping people guessing with a constant round of new micros being announced, then dropped.

What will the final line-up look like? Who knows - but Atari needs a low-cost ST and the 260ST is flavour of the week. At \$499 for a 16-bit micro with 256K of Ram and built-in disc drive it certainly ought to keep Atari in the headlines.

The biggest problem any 16-bit home micro faces is the cost of software. The new wave of machines such as the ST, QL and even Amiga may be quite cheap to buy, but their programs will undoubtedly be a lot more expensive than the £5.95 we are used to paying for a top quality Spectrum program.

If say, Ultimate, releases a game for the Spectrum there are something approaching a million potential customers, the cassette costs around 30p to make, and their programmers only have to write 40K of code.

On the new 16-bit micros, there is no user base, the disc adds about £2 to the price and up to 256K of code is required.

Development times are bound to be lengthier, particularly where a particular title has been specifically commissioned and the quality of the conversion is all-important.

On the ST the Gem operating system is designed to allow software houses to maximise their development time by writing in C and transporting the same program across a number of machines. This is fine for home business and utility packages. But what about entertainment software? To be competitive it must make the most of the particular machine's features, and to do that it must be written directly in machine-code.

All this means we must expect prices around £25 which are unlikely to drop until there is a substantial user base.

Also, don't expect incredible software for the new machines straight away. To begin with the top Spectrum software will knock the socks off its ST rivals.

But, make no mistake, the ST is capable of a great deal more.

Computer Trade Association Magazine of the Year

Crisis talks at Acorn continue

AS ACORN's financial crisis deepened last week the company was involved in urgent talks with the BBC, its major manufacturers, merchant bankers Close Brothers, and Olivetti, to try to put together its second rescue package this year.

The company is understood to have discussed with the BBC the possibility of reducing royalty payments for sales of the BBC B and B Plus, and postponing payment of debts. Since the launch of the BBC micro over three years ago, the BBC is estimated to have earned around £11 million in royalties from Acorn.

The company is also holding further talks with its major creditors, the three main manufacturers of Acorn's machines, BSR International, AB Electronics, and Wongs Electronics, to try to again reschedule its repayments of debts. Only last February Acorn arranged its debts to manufacturers to be paid in instalments up until early 1986.

At AB Electronics, its chairman, Henry Kroch, said last

week, "We are talking to Acorn about its present financial difficulties, though as yet we have not made any firm decision." He also commented on the view that Acorn may withdraw from marketing machines entirely, and become solely an R and D company. "It is difficult to talk about new directions because there has not been a managing director since the rescheduling in February."

"The acting MD, Alex Ubaldi, has spoken a great deal, however, about R and D prospects."

Henry Kroch also confirmed that production of BBC

and Electron computers had been drastically reduced since Christmas.

As Acorn's financial problems continue, Olivetti must now choose whether to inject more cash into Acorn by taking substantially more control over the company - at present it owns 49.3% - or to write off the £10.4 million it has so far invested.

● Acorn has officially cut the price of its new BBC B Plus, according to one independent retailer. "Acorn cut the price from £499 to £449 just a week ago," said a spokesman for Capricorn Computers in Colchester.

Compunet expands after 'teething troubles'

AFTER overcoming what it describes as "early teething troubles", Compunet now plans to expand its services during the rest of 1985.

It has recently introduced an on-line-chat feature, where users can up-load messages. Messages can be either general - addressed to all those on the system, or aimed at one particular subscriber. Up to 15 pages can be sent for 1p per page.

Also new to the network is a document transfer facility. This means that word-processed files, for instance, can be up-loaded into the system,

drive is a good one. Amstrad has made everyone over here wake up to the fact that it is nice to have everything compact and in one box."

Atari has also fixed release dates for some of its peripherals in the US. The 1M floppy disc drive is due out within the next month at \$399 (around £300), and the 10M hard disc in August. The company still hopes that its compact disc Rom player, which was shown for the first time at this year's Summer CES, will be available in the US by the end of this year.

and then down-loaded by other users.

"We have now got over the problems we had in January and February when we underestimated the length of time people spent on Compunet, and some of the Commodore modems were too oversensitive to line noise," said Jane Firbank,

editor of Compunet.

However, some of the facilities announced last year such as the home banking and estate agency services, have yet to appear.

"Home banking will be available early next year, and the estate agency service is temporarily in abeyance, though it's still a possibility," Jane continued.

Amiga's US launch set for July 23

THE US launch of Commodore's much feted Amiga machine will now take place on July 23. The launch was originally planned for July 18.

Commodore US would not, however, be drawn on a date when the Amiga would reach American shops, nor would it give a firm date for the British launch.

"At the moment our priorities are the C128 and 900 machines - which we need to get out," said Susan West of Commodore US. "The Amiga is still on for a January launch in Britain, but at the moment it is not at the forefront of our minds."

Gargoyle to abandon Celtic myths

GARGOYLE GAMES is to forsake the Celtic background of its last two games, *Tir Na Nog* and *Dun Darach*, in favour of space.

According to company spokesman Greg Follis, Gargoyle is working on a new series of "action adventures".

The title for the series of three at present planned is *The Siege of Earth* trilogy.

The first game, *Marsport*, is set in the twenty-third century, and is due for release at the end of September. It will run on the Spectrum and Amstrad, and will cost £9.95.

The second game, *Fornax*, is planned for Christmas, with the third, *Gath*, to come early in the new year.

'Sir Clive Ltd'

◀ continued from page 1

"There have been suggestions that Sir Clive will hive off research into using bipolar techniques entirely separately, leaving Maxwell with the more conventional NMOS technology," said a Sinclair spokesman. "We really can't comment either way, since nothing of that detail has been hammered out yet. After all, Maxwell is not yet chairman of the company."

Atari's 260STD

◀ continued from page 1

will both contain an internal modulator so that they can be used with both a television or monitor.

"When the 260ST is launched, the operating software, that is, GEM, Atari Basic and Logo, will all be in Rom."

It seems likely that the 260ST will form the £400-£500 machine promised by Atari UK earlier this year (see *Popular Computing Weekly*, June 6), although it has not yet been officially decided.

"We in the UK are very keen to have at least one of these machines - though perhaps not both," said Atari UK's general manager Simon Westbrook. "It's a new decision taken in the States to definitely bring it out, but I think the idea of a built-in disc

Amstrad hits tape copy row

AMSTRAD has run into a legal storm over its dual cassette player which allows tape-to-tape copying.

Last week the company – which itself has a major software division – was told by a High Court judge that its twin cassette recorder incited buyers to infringe copyright of music or software on cassette.

The dual tape deck, introduced in spring 1984, of which around 25,000 have so far been sold, is being advertised as capable of recording from one tape to the other at twice normal speed. Amstrad received complaints from the British Phonographic Institute, which protects the copyright interests of the music recording industry.

Amstrad then applied to the High Court, seeking a declaration that its dual tape deck

was lawful. The judge declined to make that declaration.

Amstrad intends to make an application for an appeal against the decision this week. It plans now to carry on selling the machine, but not to advertise the product. "It appears that the judge was concerned not so much with the nature of the equipment, but the way in which Amstrad advertised it," said Amstrad's solicitor Tony Willoughby.

While dual tape recorders have been available here since 1979, Amstrad drew attention in advertisements to the ability to record at twice normal speed. In 1984, Aiwa withdrew from the market a similar machine which recorded from tape to tape at four times normal speed, in agreement with the BPI.

Amstrad's packages contained a warning of breach of copyright notice. "Two out of the three people called by the BPI knew they were breaching copyright in recording," continued Tony Willoughby. "It seems to be a comparable situation to the health warnings on cigarette packets – people keep on smoking regardless."

Comms package and database for 464 users

A NEW database, Viewfax 258, is being set up on Prestel specifically for Amstrad users. The operation is being headed jointly by Lindsay Reid and Micronet 800. Micronet will market Viewfax 258.

"We have a target date of October 1 to launch the system," said Lindsay Reid. "We're aiming to have between 2500 and 3000 frames, so it will be large database by Prestel standards."

The only approved communications package for Viewfax 258 so far available is

the newly launched *Multi-Port* from Skywave Software.

Multi-Port comprises an RS232 serial port, which supports a range of baud rates, from 300/300 up to 9600/9600, a 24-bit parallel port, which can be used as a general purpose I/O port, and a side-ways Rom card, which takes Skywave's *Multi-Com*.

Multi-Com provides four colour text and graphics in 40 col mode, a printer dump and save to tape or disc facility.

Currently the product only fits the 464, but a 664 version is in development. Skywave is also planning its own bulletin board for *Multi-Port* users called Skytel.

Multi-Port should be available now, at £99.95. Details from Skywave Software, 73 Curzon Road, Boscombe, Bournemouth. (0202 302385.)

Back to Basic

I am considering buying a Tatum Einstein which includes as part of the package you buy a disc containing a version of BBC Basic.

What I want to know is, when the BBC Basic disc is loaded, will it just run only 100 per cent Basic programs or will it run (once transferred to 3½ inch disc) any programs that the BBC runs?

Are there any other versions of the Basic language available for the Einstein - eg Spectrum, Amstrad or Commodore Basic?

Barry Barwick
12 Carslake Road
Collyhurst
Manchester 10

The answer is that compatibility with BBC software only extends to programs written entirely in BBC Basic. No other versions of Basic are, as far as I know, available. The copyright for each other Basic variant rests with the relevant manufacturer.

Looks can kill

Your review of the Enterprise 128 stated that there existed only the one minor bug in the Basic Rom. Your reviewer missed a fatal bug in one of the potentially most useful commands which the Enterprise has.

The command in question is the *Look* command whose syntax is as follows: *LOOK channel,AT x,y:* (variable name) The purpose of which is to 'look' at the graphics page and assign to the variable the palette colour number at point *x,y*. The channel part is optional, as is the *AT* part - the current cursor position is used instead. What is not optional is the variable name, which if missed out will cause a spectacular crash.

The *Look* command, though, is useful for more than just graphics. It serves the same purpose to the text screen when *channel=102*, but the *AT* clause cannot be used. The usefulness does not end here as the channel system allows the command to be used to wait for a output from any channel, a good example being the keyboard. The Enterprise does not have

a documented command to wait for a keypress but *LOOK* £105: serves this purpose with the ascii code of the key being placed in variable *a*.

There are also some undocumented commands and functions hidden inside the Rom shown here:

<i>Print Ver\$</i>	Will print a string telling you the version of Basic you have;
<i>Print VerNum</i>	Will print the version number of Basic;

<i>Set Tape Protect On</i>	Stops future files saved being copied using Basic's Copy command.
----------------------------	---

Also in the Rom among the other commands, etc, there is the word *Font*, but I have yet to discover what purpose this serves. I would be interested to here from anybody who knows.

Duncan Sinclair
8 Tiptree Gardens,
Bearsden,
Glasgow.

Beatlemania

Aaargh (sob). We would like to express our utmost disgust and displeasure at the attitude of the obviously tone deaf philistine who had the audacity to suggest that the Beatles could be anything but the greatest purveyors of musical culture who ever have or ever will bring pleasure to the ears of humanity.

The neo-hippies (eg Neil) are by no means representative of the phenomenon that was, and still is, the Beatles. Such references show that the reviewer either has absolutely no idea what he is talking about or has had his head in a bucket for the past twenty-three years.

Just thought we'd let you know.

M Ward
A Smith
4 Fairfield Avenue
Hepworth
Huddersfield
West Yorkshire

First Supertramp and now the Beatles. Is nothing sacred? I can't see a thing in here.

(Just for the 'record' the reviewer in question has *Sergeant Pepper*, *The White Album* and *Magical Mystery Tour* and he says he has played them at least once.)

Free trip

Some American-based companies appear to be being over enthusiastic when it comes to marking up their products for sale in the UK.

In the US a typical price for a Commodore MPS801 printer is \$179 (around £137). Over here the same printer costs £230. Also the US price for the Atari 1027 printer is \$219 (around £168). The UK price is around £249.

A particularly good bargain is the SX64 Commodore portable micro with a US

price of near \$749 (around £575) and a UK tag of £895.

This means you could afford to collect it personally, have a brief stay in the US and still have some change left!

The only snag is you'll need to run any US micro you buy from a monitor because the US TV modulator is different.

1 Dell Cottages
Log Mill Lane
Godstone
Surrey

What cost?

Reviews of programs costing £89.95 and £95.95 (June 20 issue), both for the QL, would hardly seem to be in keeping with a magazine entitled *'Popular' Computing Weekly*.

Could future reviewers please stick with popular computers and affordable software.

John Ure
6 Oak Avenue
Runcorn Road
Birmingham

Language packages always tend to be more expensive than other types of software. The price of these QL programs is around twice that of an equivalent package on say, the Spectrum. Nevertheless, with so little software currently available for the QL I believe that the interest from QL owners justifies coverage of the occasional packages at this price.

Micronet competition

In conjunction with Thames TV's *Database* programme and Micronet 800, *Popular Computing Weekly* is running a four part competition to win free yearly membership of Micronet and Prestel.

The competition takes the place of four clues to be printed in the magazine over four weeks each divided into two sections. So what do you have to do? That's the first riddle: "Line parts A and B together To map a final clue, The answer to the crossword, Is where they all cross through."

Solve all the clues over the next four weeks and keep your answers with you. In-

structions on what to do with the solutions and where to send them will be printed with the fourth clue.

To kick off this week, here is the first clue:-

Clue 1 Part A

"The Roman's Venta Belgarum became, The Wessex Capital during King Alfred's reign, In 1603 Walter Raleigh was tried, In the City's gaol Thomas Hardy's Tess died."

Part B

CBTGMKL sounds Welsh already to Trithemius

Nothing wrong

Hardware Precision Pixel Plotter
Micro Amstrad Price £3.75 + £1.00
p&p Supplier PS Graphics, 161
Mountview Road, London, N4

I remember the first pixel plotter pad I bought for the Spectrum – it was only after I got it home that I realised the number of squares on the page didn't even match the resolution of the screen.

Thankfully those days are long past. This Amstrad plotter has large A3 sheets divided into full screens of character and

pixel squares, as well as having the appropriate scales printed alongside. Beneath the screen map are eight smaller boxes you can use for design of UDGs.

Although there is nothing startling or original in the package the manufacturer has managed to avoid getting anything wrong, and I should imagine it will be welcomed by all Amstrad owners trying to do interesting things with the graphics. It is also very reasonably priced.

You are presented with 25 sheets plotted to fit mode 0, low res, and 25 sheets to fit mode 1, high res (if only the software produced came in that ratio too). The sheets are just about transpar-

ent enough to be used for tracing of a well outlined drawing or photo.

Inside the front cover is also a wealth of info related to the machine's graphics, including a full character set, with decimal and hex codes, a summary of the inks available and a very useful table I have never seen before concerning the codes that control pixel colour in mode 0.

The only point of criticism is that, despite claims that it is designed for both Amstrad machines, one table that summarises the available graphic commands misses out the extensions to the 664's Basic.

Tony Kendle

QL with the DR effect

Hardware CP/M 68K Price From
£355 (200K disc drive plus CP/M
68K) Micro Spectrum QL Supplier
Quest International Computers,
School Lane, Chandlers Ford, Hants
SO5 3YY. Tel: 0421 66488.

On paper the Sinclair QL looks like a credible business computer, yet so far it has failed to convince the business world because of its early reputation for unreliability, its obvious non-standardness, and its lack of outstanding features when compared to more traditional computers. Sinclair Research recognises the problems and is trying to overcome them with expensive advertising as well as the release of Version 2 of the Psion software.

Quest International has attempted to get around these same problems by offering an alternative to the microdrive-based QDOS in the form of a floppy-disc system which can be used from QDOS, and hence with the Psion software, which can alternatively be used with CP/M 68K, a version of CP/M produced for the 68000-series microprocessors. There are now several companies offering disc drives for the QL in a range of capacities. Quest is unusual in providing one which requires the disc-driver software to be booted from microdrive rather than being resident in Rom, a design decision which was taken in order to allow alternative operating systems to be used. The first such operating system available, CP/M 68K, is a logical choice because it is written around the 68000. In principle, other possibilities exist for the future, such as Digital Research's GEM or a Unix derivative such as OS-9/68000 and Uniflex, but CP/M 68K is available now.

CP/M has been around in one form or another for around ten years. It was first written for the 8080A 8-bit microprocessor to make use of floppy-disc technology and was the first successful machine-independent micro-computer operating system. It soon became associated with the Z80 microprocessor and became the *de facto*

standard for business computers. Only the development of 16-bit microprocessors could shake CP/M from this position. IBM were fully aware of the situation and wanted, with the introduction of the IBM PC, to offer a system which was sufficiently close to CP/M to be accepted by most users and yet technically unique in order to dissuade competition. IBM demanded that many CP/M features be included in PC-DOS (which annoyed the author) and made sure that PC-DOS was sufficiently like CP/M to permit software producers to be able to transport their CP/M programs to PC-DOS with relative ease.

In the meantime Digital Research was busy upgrading the old 8-bit CP/M (now called CP/M 80) to run on the 16-bit 8088 and 8086 microprocessors and renaming it CP/M 86. This did not have the desired effect of challenging PC-DOS, and Digital Research have been trying ever since to regain their hold on the market by bringing out a series of CP/M operating systems, including the multi-tasking Concurrent CP/M 86 (which, in its latest version, claims a small degree of compatibility with PC-DOS), Concurrent PC-DOS for the IBM PC offering windows and multi-tasking along with improved compatibility with PC-DOS, CP/M 68K for the 32-bit 68000, and most recently Concurrent DOS 286 for the 80286.

Thus CP/M 68K for the QL looks like it

should be a good idea. There are literally thousands of CP/M 80 programs and this would seem to offer a better chance for the provision of business software than QDOS. Unfortunately it has not worked out quite like that to date. Even the best of CP/M 80 software, such as *Wordstar* and *DBaseII*, although still very popular, is beginning to look a little sad when compared to the versatility and performance of the newer 16-bit only software, and few authors are interested in performing the conversion. The vital American market has not responded to CP/M 68K and the number of applications available under CP/M 68K remains very small.

CP/M 68K (in common with the other CP/Ms, PC-DOS, MS-DOS, and so on) is not Rom-based and thus must be loaded from microdrive or disc each time the machine is switched on.

Commands available once the operating system is loaded are concerned with handling files held on disc and microdrive. Files can be listed, erased, copied to screen, and executed. A number of utility commands are also provided on disc or microdrive with the system which are in fact programs which run under CP/M 68K. These utilities include a 68008 assembler and a C compiler, which are of more interest to programmers than business users, and some advanced file-handling programs. Of interest to some is the ability to read and write data to disc using the same format as the IBM PC. This does not mean that programs can be transferred but the possibility exists for the transfer of data and thus, for example, the QL could be used at home to do simple word processing which could then be transferred to an office-based IBM.

The provision of CP/M 68K on the QL seems unlikely to sway business opinion very much in its favour, principally because of a lack of applications. The provisions for running programs in C may prove valuable, as many applications these days are produced in C, but this is only of interest to programmers.

But business users require working application programs now.

John R Cochrane

Hardware Reviews

New Converts

Hardware Interface III Micro Spectrum & Interface 1 Price £39.95 Supplier Micro Centre, Bridge Street, Evesham, Worcs.

Hardware Microdriver Micro Spectrum & Interface 1 Price £44.95 Supplier Mirage Microcomputers, 24 Bank Street, Braintree, Essex CM7 7UL.

In terms of reliability Spectrum Microdrives have now somewhat proved themselves. But if you invest in one, what do you do about your existing tape based software and indeed the dearth of new microdrive based material? What use is high speed loading if there's nothing to load.

For people who aren't high powered machine-code programmers able to instantly disassemble code there are now two hardware products claiming to do the job for you.

They both use a similar principle of operation, using non-maskable interrupts. This is a line unused on the Spectrum, which, when normally triggered, resets the machine. These devices use this, in conjunction with special Roms of their own to dump the whole of memory at any time onto cartridge, having waited

for the game to load.

The first one examined is the Interface III from Evesham Micro Centre, costing £39.95. It comes in the usual sort of black box that plugs into the Spectrum edge connector, with a push button switch on the top. Inside, there is a simple Pcb, with just eight chips on it. There are seven standard TTL, for the decoding and Rom paging. There is no through connector, but as you only have to connect it once when you convert a program, this should not be a problem. To convert anything simply load it as normal, then at a suitable point press the button. It then copies the entire machine Ram and registers on to a cassette, in a special format. Next, you have to reset the machine, then load in the conversion program from cartridge or cassette. This takes the special format tape and converts it into a couple of files on the cartridge. To use, simply switch on, put the cartridge in, and type *Run* in the usual way. The Interface III is only necessary for the first stage of the operation - it doesn't always need to be present.

There is one snag with the Interface III - it has to use a little Ram for a scratchpad while loading, from cartridge and it uses a small section of the screen. This can cause difficulties with programs that do not re-draw the screen, or those that contain 'invisible' machine code, requir-

ing some trial and error on the exact timing of the button press.

The rival system is the Mirage Microdriver, costing a fiver more at £44.95. While the principle is similar, there are quite a few differences. The box is similar to Interface III, but with a through connector, as it has to remain in place all the time.

Inside there are just three chips - a 4K Eprom, 4K Ram, and a Pal for the decoding. The inclusion of a Ram chip gets around the problems of the Interface III.

To use it the program is loaded in the usual way from cassette, then at any time you like you press the button. A small menu appears in the top 3 lines of the screen, with 5 options. The first one you select is normally *Save*, which dumps the machine out onto a cartridge directly. The part of the screen used for the menu is restored before the *Save*, and the internal Ram is used for buffering, so no corruption takes place.

To load a converted program is simple - just switch on, press the button on the box, choose the *Load* option, and give it the filename. The machine state is stored in a one specially coded file, of just over 48K in length, so you can only get one per cartridge. Both devices worked well, though I preferred the Microdriver, because of its ease of use.

Minter Mania

Llamasoft Software, 49 Mount Pleasant, Tadley, Hants.

The release of a Llamasoft game is always an occasion of universe-shattering celebration. Notorious for endless whackiness, graphic genius and inventive gameplay, Jeff Minter's games often stretch the 64 to its limits. The time was bound to come, though, when such is the great man's inventiveness that he would develop a game so far out that it was quite impossible for humans to play. This, *Mama Llama*, is it.

You control a family of three llamas and a telepathically-directed killer droid. The droid is used to neutralise attacking baddies which supposedly come in all shapes and sizes.

Since you can apparently select which order you want to play through the phases, *Mama Llama* is more than just a straightforward zapper. But in fact it's so devilishly complicated that it will take a three-headed Vegan slime-octopus to work it all out. I'm not even going to try to give this a rating for gameplay — if you want a real challenge, just go out and buy it.

Program: *Mama Llama*, 64 Supplier: Llamasoft Price: £7.50

Graphics: ★ ★ ★ ★ ★ ★ ★ ★ Sonics: ★ ★ ★ ★ ★ ★ ★ ★ Gameplay: Glurk!

Commodore Horizons

MAMA LLAMA (Llamasoft) for Commodore 64: Another one from the Jeff Minter stable, and, if your brain works on the same wavelength as his, you will love this game.

Nobody could accuse Llamasoft of skimping on the instructions; there are "acres" of them and trying to absorb them all and loading the tape takes a very steady nerve.

The trouble is my brain refuses to accept all these instructions but nevertheless I got the tape programmed in the computer. What I saw looked good — the graphics were superb — but I did not understand any of it, I think I would rather try to remember word for word the complete works of William Shakespeare in Norwegian.

Sorry, Jeff, this is not my game, but I am sure that your fans will adore it. If you do decide to buy it (don't let me put you off) you will need, as you will with all Llamasoft games, a joystick. That I did discover.

Thetford & Watton Times, Norwich

Llamasoft Jeff Minter's latest game is called *Mama Llama* and is one of the most colourful games I have ever seen. It has over a 100 different levels and involves both skillful play and strategy if it is to be mastered.

An excellent game that should do very well once the distributors latch onto it.

Computer Games & Systems Retailer

Camel Ye Faithful and knuckle down to a session of JEFF MINTER'S newest smasherooni—and a continuation of the Ungulant Saga, TONY TAKOUSHI reports...

JEFF MINTER's pilgrimage to Peru last October was the inspiration for his latest game called *Mama Llama*. It features a (surprise!) mother Llama and her two babies, all of whom are being attacked, in the best Minter tradition, by aliens.

The game follows the Minter style of a good shoot 'em up but uses smooth scrolling backdrops to good effect. The scrolling backdrops are a first in that they are very colourful (unlike Tony Crowther who sticks firmly to four background colours).

The overall aim is to survive and protect the baby llamas, who mimic their mothers every action so as she leaps and spits at the aliens so do they! You have many sectors to patrol, with scanners within each section to help you locate any approaching nasties.

Following on from *Sheep in Space* and *Ancipital*, Minter has further evolved his gravity routines to allow incredible permutations on the alien attack patterns and on the movement of the llama. If you manage to clear a sector a warp gate will open to another sector, but you can choose to stay where you are a little longer.

Other sectors include the Inca City, Egyptian City, Space City, Rock City and Inca Homeworld — the gravity and viciousness of the aliens being suitable altered for each.

One of the most outstanding features of Minter games is his increasing ability to make the game feel good to play. When you pick up the joystick it feels true. Real gamers will know what I mean (the rest of you will just have to work at it!).

At the time of review the game was only half complete and had to be reviewed as such due to print deadlines but even semi-complete its quality stood out and I look forward to seeing the finished item.

Big K, London

A shoot 'em up with no bullets

ONCE upon a time computer games either derived from amusement arcades — which meant they consisted of shooting up aliens — or were adventures, which involved reading a lot of text and reacting to it.

But now, how do you classify *Mama Llama* (Llamasoft, £7.50). Jeff Minter's latest opus for the Commodore 64?

It is an arcade game — of sorts. But it's not like other shoot 'em ups. There's none of the usual approach of "make one mistake and you're dead." You don't even work your way through waves in the time-honoured way.

Ever since his first speedy variations on Centipede — Laserzone and the like — Minter has been rethinking computer games. He even altered the playing area, as in *Sheep In Space* with its planetary surfaces at the top and bottom of the screen.

Minter, who coined the phrase "mega-game" to describe his programs, understatedly calls his latest "rather unusual".

Mama Llama may be his masterpiece — a whacky, surrealist piece of lateral programming. It's a shoot 'em up with no bullets. And the player can choose at what point he or she even enters the game, and can even move on when the going gets too tough — which happens when Rory the savage guinea pig makes his biting entrance.

You control a mother llama and her two children, protecting them from danger by means of a killdroid which removes obstacles by touching them.

Well animated with good baroque and roll musical accompaniment and excellent, varied backgrounds for you to walk through, the game will especially appeal to fans of *Revenge Of The Mutant Camels* — a great game now also available for the Atari at £7.50. Keyboard by John Walker

North Western Evening Mail, Barrow-In-Furness

LLAMA MIA

There comes a time where every reviewer has to own up — after reading through the many lines explaining the plot of *Mama Llama* several times, I am still baffled. This is what I've got so far: the plot, incomprehensible, involves simulated video games on a planet called Led-Zepp IV (was that the one with *Stairway to Heaven* on it?), first part of game is a grid in which you choose what planet and how many aliens you want to fight. Part two sends you to the planet where you defend your Llama offspring from attack from various kinds of alien, one of which looks like a buffalo. However, there are things called Antigenesis devices, and Retrogenesis devices, which seem to be the Minter equivalents of smart bombs in that they reduce the number of aliens in certain ways. There appears to be all kinds of strategic elements to the way the game is played and it zaps like crazy. Beyond this, I don't dare to comment.

Program *Mama Llama* Price £7.50 Micro Commodore 64

Popular Computing Weekly

Watch out — this guinea pig bites!

John Walker

MAMA LLAMA

From the wagging ears and tail and nodding heads and curtsies of llamas on the opening screen, *Mama Llama* may look like just another tame beast with her two babes. But not Jeff Minter behind it.

Rather, the plaster on one of the babe's cheek in the cover group shot is more an indication of this hazardous, fast-paced trauma. And then there's the small but threatening KillDroid that hovers overhead to protect this cozy family. To do any good, however, you have to master it's inertia-controlled movement — no easy feat if it's possible at all.

As usual, instructions are very involved even not considering the detailed account of what inspired Minter to produce his latest ungulates. Your choice of playing modes, difficulty, scenes, etc. are numerous since you pick from a grid. Minter calls it a "totally amorphous wave select system."

The harrowing pace of *Mama Llama* is daunting even in the beginner phase but substantial practice sharpens your skills. Meanwhile the changing scenery, situations and attackers keep the player occupied. This is a toughie probably best conquered by dedicated Llamasoft fans rather than those just seeking an introduction to Minter's mind.

Considering that, the action is good and *Mama* and the player could become rather attached to *Mama* and her babies. All around, it's off-the-wall enough to keep the experts amused and glued to their joysticks.

Commodore Computing

Eye of the Tigress

Plotting to kill. **Martin Croft** exposes the operation of the 007 games' creators, Tigress.

There was a time when computer games really were written by teenagers, who came up with wacky ideas, worked out by trial and error just how to implement them, and then programmed the whole thing themselves – usually in the gaps between various sets of exams.

More often than not, they would also set up companies with really strange names, publish the games themselves, and go quietly bust.

Those days are over. Now specialisation is the name of the game. One set of people designs the games, another does the programming, yet another the marketing – and a completely different set rakes in the money.

One of the best examples of this new type of product is the latest Domark game, *View to a Kill*. Domark are publishing it, a company called Softstone did the programming, the game design was by Tigress Marketing, who produced a storyboard based on the script of a film featuring a character who was originally created over 30 years ago.

Tigress Marketing used to be in marketing – no surprise there. But now they specialise almost full time on writing game scenarios for people who can't write their own.

Tigress is really three people – Beth Wooding, David Bishop and Chris Palmer. Listening to them, you get the impression that the most important thing about a game is the design of what happens in it – the story, if you like.

The rules, the permissible actions, the victory conditions, the penalties all take precedence over the mechanics of programming.

As Chris put it, "we do the storyboarding to a level where we can give it to a 'dumb' programmer – technically brilliant, but no creative thought."

"Software houses," Beth chipped in, "got their fingers burnt because they were trying to do too much – often they had programmers who just couldn't write games."

View to a Kill started life back at the tail end of 1984. Domark, with whom Tigress had worked in a marketing function on *Eureka*, asked them to prepare an initial treatment for a game based on the latest Bond movie.

"Domark had contacts into the company running the rights for Bond," Beth recalled. "We had to do a lot of work producing the storyboard to convince the people at Pinewood to give Domark the rights."

"Pinewood were reticent at first, but the storyboard impressed them – though they didn't know what the computer game was all about.

"I think the thing which clinched it for us was that we weren't just using James Bond to sell something which wouldn't sell otherwise," said Beth pretty convincingly.

"We took quite a gamble," Beth continued, "that's the thing about storyboards, there's nothing before it. We have to take all the risks."

Tigress started risking all on the project last October – "Pinewood didn't even have a film!" Chris wryly observed.

"A lot of the game was written on the back of the film storyboard," he said. "The script wasn't much help – it's only when you read a Bond movie script that you realise just how little dialogue there is in it."

Dialogue may be sparse in a Bond film – the finer nuances of human emotion are left to Roger Moore's eyebrows – but you can be sure of plenty of action sequences. Tigress identified six which they felt had potential to be turned into computer games.

Of the six, only three are to be found in the final package. These are *Paris Chase*, *City Hall* and *The Mine*. The ones which didn't make it were a ski run game, with Bond simultaneously taking on a downhill slalom and enemy agents, a horse race game, ditto but the Grand National, and a fire engine game, in which 007 steals a fire engine and, for a change, outwits the police.

The main reason for only half the proposals seeing the light of day seems to have been time. From the first idea to producing the final product took about six months – fairly speedy for three games, an intro and an outro, on both Spectrum and Commodore – ten separate programs in all.

Having identified potential games, Tigress then prepared 'treatments' of each of the six. These treatments – all on paper rather than screen – included basic screen designs, what players would have to do and how they could achieve these objectives.

"We put in the game play first, then we add the nice touches that the computer can produce," said Chris.

"Previously, games were written by programmers – they'd find a new utility, and then write a game around it. More often than not, you load up a game and it has great scrolling or great sprites – but that's it. Our job was to make sure the whole thing works as a game."

"Then we go to the programmers and say we want a map so big, with eight levels of animation on the sprites, five levels of depth – that sort of thing."

Having handed over the final design treatment to the programming team,

The Tigress team.

Softstone, Tigress' involvement didn't end there.

"I hate to think," said Beth, "how much time we've spent journeying to Camden." It's a long way from Putney.

"At the start of the project, we didn't have a programming house, so we couldn't get their input. Softstone only got involved later on." That meant they were forced to make some assumptions which later caused problems. For example, in the *Paris Chase* game, Bond has to manoeuvre his car through the streets of Paris.

"We wanted a fairly accurate representation of Paris on the on-screen aerial view – but when the programmers had a look at it, they said no way. They couldn't do smooth scrolling and diagonal streets at the same time."

Another restriction facing the design team was that James Bond could never be killed.

After all, as everybody must know by now, 007 is indestructible. No matter how serious the situation he may find himself in, he always escapes.

That meant standard arcade punishments like the loss of a life were ruled out from the start. As a result, Tigress incorporated the daze factor – when the player does something wrong, Bond suffers a time penalty. If Bond fails to save the world (unthinkable!) before time runs out, he gets another chance. It's only a game.

Rather neatly, the time factor is included in the code the player gets after completing each game – load the code from game one into game two, and the program knows just how much time Bond has left in which to save the world. The better a player does on the first two

(l to r) Beth Wooding, Chris Palmer, David Bishop

games, the more time 007 can spend in the silver mine in game three.

View to a Kill – the finished game – is very much a product packaging operation, something Domark excels at. It

would be uncharitable to blame Tigress for the games' limitations – they had a job to do and they did it.

They are, however, working on other projects, some of which appear as con-

strained as the Bond game. Others, however, seem to offer a designer more scope – many of these are game ideas which one or other of the Tigress team has just suddenly come up with.

Most of them were top secret, since they involve complicated licensing deals – however interested in imagination Beth, David and Chris might be, they understand the advantages of product recognition.

Currently, they are working on a design for a game based on the BBC TV series *Yes, Minister*.

It will be a largely text adventure, requiring strategic decisions from the player. The objective, in best Civil Service tradition, is to ensure that absolutely nothing is achieved.

Mosaic is to publish the *Yes, Minister* game, while the programming is to be by the Ram-Jam Corporation, better known for their text and graphic adventure *Valkyrie 17* – hardly dumb programmers.

Tigress has also submitted a design for a Duran Duran game, or rather a series of games – one for each of the band, appropriate to his instrument. That however is still up in the air – "We're waiting for their manager to get back to us," said Beth.

Explaining to the band how their music is going to sound on the Spectrum will be an interesting marketing exercise.

Software Reviews

Dashing

Program *Dynamite Dan Micro* Spectrum 48K **Price** £6.95 **Supplier** Mirrorsoft, Maxwell House, Worship Street, London EC2A 2EN.

Fade up *William Tell* overture. Announcer (in dramatic voice): "Will the dastardly Dr Blitzen's plans for world domination succeed? What of his assistant, the devilish Donna? Only one man can collect the eight sticks of explosive and blow the safe before escaping in his trusty airship, but where is he? Where is *Dynamite Dan*?"

Yes, the Spectrum has a new hero, cast in the mould of all those dashing do-gooders of yore, those Fearless Fosdykes who defeated fiends like Blitzen before dashing off to the club for

cocktails. And that's one of the features that sets this game apart from other anonymous alliterative imitations of Matthew Smith's *Miner* - the hero and villain show character.

There are also objects to collect for points, extra lives or special effects, such as the oxygen that gives you a few seconds to bop the baddies with impunity. There's also the need to maintain energy by eating food, but most importantly there's the sheer complexity of the routes around the screens and the initial uncertainty of what you'll find when you step onto the next one. It all calls for split second timing and pixel accuracy and I found it near impossible to get very far... but then again I remember most people said that about JSW at first.

John Minson

Painless

Program *Spectrum Assembly Language Course Micro* Spectrum **Price** £12.50 **Supplier** Glentop Publishers Ltd, Standfast House, Bath Place, high Street, Barnet, Herts. EN5 1ED

I've said it before but it's true; taking your first step into assembly language is a leap into the dark. What the novice machine coder needs is a guide to dispel the terrors of all those LD, POP and even JR NZ instructions. Given this friendly hand it doesn't take long to realise that assembler itself

isn't as complex as it looks; in fact it's extremely logical. The main problem then is how you use it and what you use it for.

This 'Dr Watson' course consists of a book and tape in one box. I was initially disappointed to find the opportunity to illustrate the tuition with the program has been missed, apart from decimal/binary/BCD/hex conversion. But strictly low tech (ie, paper and ink) lessons hardly matter when they're as clear as this. Martin E Thompson has written a no-nonsense introduction to the world of mnemonics, moving through them in a sensible order and not becoming involved with chip architecture or hex until ab-

solutely necessary. In addition there are copious appendices including several ROM calls.

Backing up this is the assembler itself which is clear and efficient to use. There are a couple of niggling typographical errors in the book

but the package price is extremely reasonable. While it won't teach you everything about assembler it will get you started with minimal pain.

John Minson

Satanic maze

Program *Go To Hell Micro* Spectrum **Price** £6.99 **Supplier** Triple Six, PO Box 190, Maidenhead SL6 1YX.

Something wicked this way comes. There is Germanic lettering with blood dripping from it on the cassette box, the game is set in hell, the company's name is Triple Six, number of the best. It can mean but one thing... Devil worshippers? Worse! Heavy metal fans!

Somewhat surprisingly, for the jaundiced reviewer, behind all this satanic kitsch lies a reasonable game. More

surprisingly it belongs to that 'dark ages' genre, the maze game. Of course it's bigger than mazes used to be (50 screens) but the quest to find objects, in this case holy crosses, remains the same.

What brightens this one, albeit with a sulphurous light, is the landscape of Hades, with passages lined with suffering souls, some just wide enough for your tiny figure to move through, opening on to clearings where the damned (no, not the band) are having their heads sawn in two or being stretched on racks. Triple Six are obviously aiming for some press notoriety!

While it's not quite the 'nasty' they claim, it's graphically gory and gruesome and your battle against the forces of darkness, only defeated by the crucifixes you throw, is fairly addictive.

I'm sorry to say it's about a pound too expensive though.

John Minson

Ambience

Program *Mordon's Quest Micro* Amstrad **Price** £7.95 **Supplier** Melbourne House, Castle Yard House, Castle Yard, Richmond TW10 6TF.

Mordon's Quest is intended by Melbourne House to be a sequel to the old *Classic Adventure* chestnut. It retains some of the major locations of the original but sets a new task - to retrieve the missing bits of Mordon the Ancient One's immortality machine.

True to the original, this is a text adventure pure and simple, the puzzles are difficult and the only concession to graphic effects are the multicoloured division of description, input, objects owned and so on.

There are 150 locations and the descriptions are rich and evocative. The opening section is that mysterious old house featured in the *Classic Adventure*. The vocabulary of 500 words is enough to ensure that you can spend a very, very long time indeed puzzling over what to do next.

Text analysis is relatively simple, being restricted for the most part to two words: phrases like *Go South*. Score tells you how you are doing.

Later in the game the blurb promises 'a fantastic future world with perspex domes, flashing lights and ambient music'. It adds deadpan: 'it's all very mysterious' - it certainly is. What the ancient elves of Tharg are going to make of ambient music. I know not.

Graham Taylor

ATARI ST

520ST

POWER WITHOUT THE PRICE

THE NEW ATARI 520ST

Under the new leadership of Jack Tramiel (former boss and founder of Commodore Business Machines), Atari Corporation have marked their entry into the world of business/personal computers with a machine which leaves the competition standing. Tramiel's slogan 'Power Without the Price' has been implemented in the manufacture of the new 512K Atari 520ST colour computer which offers the user amazing high performance at an incredibly low price. Launched as a work-station, this new system incorporates seven software packages as well as the 520ST computer with 512K RAM, mouse controller, high resolution monochrome monitor (640x400), 95 key keyboard (with 18 key numeric keypad), MIDI interface, GEM and a 500K 3 1/2 inch disk drive, all for the package price of only £651.30 (+VAT = £749). Dubbed the 'Mac beater' and the 'Jackintosh' (after Atari's Chief, Jack Tramiel), Atari's new machine has been directly compared with the Apple Macintosh RRP £2595 (+VAT = £2985), which offers similar features and capabilities but at a much higher price. Favourably reviewed by the UK's highly critical specialist computer press, the 520ST is likely to make a great impact in this country as a sophisticated alternative to an IBM PC, APRICOT or APPLE MACINTOSH. Unlike its overpriced competitors, the Atari 520ST can be linked up to a colour monitor to unleash a choice of up to 512 colours. The addition of colour brings out the full potential of graphics packages such as GEM.

USER FRIENDLY GEM OPERATING SYSTEM

The power of the ST is harnessed and made user friendly by the new operating system GEM from Digital Research. GEM stands for Graphics Environment Manager and allows a user friendly colour or B/W graphics interface which closely resembles that of the Macintosh. This similarity extends to the use of movable resizable windows, icons to represent objects such as disks and disk drives, and the use of pull down menus and a mouse. The advantage of all this is that the computer becomes extremely easy to use. GEM has now been implemented for the Atari, ACT, Atari, IBM, ICL, and Olivetti. Software written for GEM on one computer should also run under GEM on another computer. This will enable the market to quickly produce a large library of standard interchangeable software.

FREE SOFTWARE AND FUTURE EXPANSION

The Atari 520ST comes supplied with seven free software packages as listed below: 1) TOS - Tramiel Operating System based on CPM 68K; 2) GEM Graphics Environment Manager by Digital Research (DR) giving a WIMP (Window, Icon, Mouse, Pull down menu) environment; 3) DR GEM Paint for creating graphics masterpieces; 4) DR GEM Write for word processing; 5) Logo learning language to enable you to write your own programs easily using turtle graphics; 6) DR Personal Basic a powerful user friendly version of the Basic programming language; 7) DOS operating system giving you access to dozens of business applications packages already available on the market. Designed with future expansion in mind, the ST also features a host of different interfaces to the outside world and an impressive list of accessories is planned. Atari will soon be releasing a 1000K (1MB) 3 1/2 inch disk drive, and a 15MB hard disk storage system as well as a mass storage compact disk (CD) player capable of storing an entire 30 volume encyclopedia on one disk. A full range of inexpensive printers are planned including dot matrix, daisywheel and thermal colour printers. With its unbeatable graphics, speed and software at a price which is far below that of any comparable personal computer currently on the market, the ST is all set to do battle with the competition. To receive further details of the ST from Silica Shop, just fill in the coupon below with your name and address details and post it to us.

Silica Shop Price: £651.30 + £97.70 VAT = £749.00. This price includes:

- * 512K RAM
- * B/W MONITOR
- * MOUSE
- * 500K 3.5" DISK DRIVE
- * GEM
- * KEYBOARD (95 KEYS)

£749

ATARI 520ST SPECIFICATION

MEMORY
512K RAM (512,000 bytes)
16K ROM expandable to 320K
Port for add-on 128K plug-in ROM cartridges
300K 720 operating system

GRAPHICS
Individually addressable 512K bit-mapped screen with 3 screen graphics modes:
320x200 pixels in 16 colours (low resolution)
640x400 pixels in 4 colours (med resolution)
640x400 pixels in monochrome (high res)
16 shades of grey in low res mode
512 colours available in med/hi-res modes
9 levels of each in med, green and blue

ARCHITECTURE
4 custom designed chips:
68000 Orig. - MPU/Memory Manager Unit
DMA Controller - Graphics Processing Unit
68020 - Motorola 68000 processor at 8MHz
eight 22 bit data registers
eight 32 bit address registers
16 bit data bus/24 bit address bus
7 levels of interrupt/8 bit instructions
14 addressing modes/8 data types

DATA STORAGE
High speed hard disk interface
Direct memory access 1.33 Mbytes per second
CD (Compact Disc) interface
Built in cartridge access
Dedicated floppy disk controller

DISK DRIVE
500K (unformatted) saved 3 1/2" floppy drive
360K (formatted) storage capacity

SOUND AND MUSIC
Sound Generator
Frequency control from 30KHz to above audible
3 voices (channels) in wave shaping sound in addition to a noise generator
Separate frequency and volume controls
Dynamic envelope control
ADSR (Attack, Decay, Sustain, Release)
Noise generator
MIDI interface for external music synthesizers

KEYBOARD
Access keyboard and processor
Standard QWERTY typewriter styling
Ergonomic angle and height
18 keys including 10 function keys
Numeric keypad - 18 keys including ENTER
One touch cursor control keypad

MONITOR
12" screen - high res monochrome monitor
640x400 monochrome resolution
Note: Some of the above specifications are pre-release and may therefore be subject to change.

MACINTOSH v F16 v 520ST

Imagine a Fat Mac - the 512K Apple Macintosh - but with a bigger screen, a far bigger keyboard with numeric keypad, cursor and function keys, and colour. That gives you some idea of what the Atari 520ST is like, except for two important things. First the Atari seems faster. Second the Atari system is about one third of the price. June 1985 - Jack Schofield - PRACTICAL COMPUTING

"Atari's new corporate image as an aggressive low cost computer maker is likely to mirror that of Commodore where Mr. Tramiel established the maxim that 'Business is War'." August 21st 1984 FINANCIAL TIMES
"This is the only personal computer I know of that comes with a MIDI interface as standard." Peter Bright March 1985 PERSONAL COMPUTER WORLD
"The GEM version running on the Atari 520ST machines will have the additional advantage of leaving the PC version standing." April 6th 1985 PERSONAL COMPUTER NEWS
"It would seem that GEM offers the ideal operating system." March 7th 1985 POPULAR COMPUTING WEEKLY
"I found it (GEM) extremely easy to use and was very impressed with the way in which it disguises the unfriendly hardware and operating systems lurking under the surface." Peter Bright Feb 1985 PERSONAL COMPUTER WORLD

PRESS COMMENT

"The electronics in the machine are a work of art... The heart of the 520ST is a Motorola 68000, one of the most powerful 16-bit processors around and in many respects it is close to being a 32-bit chip... when the machine appears in the shops I'll be at the front end of the queue to buy one." Peter Bright June 1985 PERSONAL COMPUTER WORLD
"This machine is significantly more powerful than an IBM PC. If it's possible to design a pure file writing machine, this is it." May 11th 1985 PERSONAL COMPUTER NEWS
"... the use of GEM makes the new range of Atari computers so similar to the Macintosh (with the added attraction of colour, that they are already being called 'Jackintoshes'." May 2nd 1985 COMPUTING

"The new Atari ST computers truly represent to the consumer what Jack Tramiel is saying - 'play-to-use computing power without the price'." March 1985 ANALOG COMPUTING
"It (the ST) uses the latest modern technology that is affordable, in a package that gives a professional impression." May 23rd 1985 POPULAR COMPUTING WEEKLY
"The Atari ST is one of the most elegant designs I have seen... Atari has used an original and elegant method of memory management which should make the ST faster than any other PC on the market - in any price bracket... The 54K dollar question is would I go out and spend money for one? To which the only answer is 'Try and stop me'." John Lambert July 1985 ELECTRONICS & COMPUTING
"The 520ST is technically excellent... The 520ST hardware is the new standard by which others will be judged." July 1985 YOUR COMPUTER

WE ARE THE UK's No1 ATARI SPECIALISTS

At Silica we have been successfully dedicated to Atari ever since their products first appeared on the UK market. We can attribute our success largely to the Atari specialisation which we practice and to the user back-up we provide. Rest assured that when you buy a piece of Atari hardware at Silica you will be fully supported. Our mailings giving news of software releases and developments will keep you up to date with the Atari market and our technical support team and sales staff are at the end of the telephone line to deal with your problems and supply your every need. With our specialist staff, we aim to keep stocks of all the available Atari hardware, software, peripherals and accessories. We also stock a wide range of Atari dedicated books and through us, the owners on our list can subscribe to several American Atari dedicated magazines. We can provide a full service to all Atari owners and are now firmly established as the UK's NUMBER ONE Atari specialists. Here are just some of the things we can offer to our customers.

- * FREE POST & PACKING ON MAIL ORDERS
- * FREE NEXT DAY SECURICOR DELIVERY
- * INFORMATION MAILING SERVICE
- * TECHNICAL SUPPORT TEAM
- * HIGHLY COMPETITIVE PRICES
- * AFTER SALES SUPPORT SERVICE
- * REPAIR SERVICE ON ATARI PRODUCTS

If you would like to be registered on our mailing list as an Atari computer owner, or as a person interested in buying an Atari machine, let us know. We will be pleased to keep you up to date with new Atari developments free of charge. So, return the coupon today and begin experiencing a specialist Atari service that is second to none.

Hot graphics

Program *The Captive Micro*
Commodore 64 Price £1.99
Supplier Mastertronic, Park Lorne, Park Rd, London NW8

Unwittingly, you have wandered deep into the Glen of the Coloured Corpses. You find yourself in the streets of a village set in a landscape which is surrounded by a dense forest. Now the trouble really starts in *The Captive*.

The game action is displayed in a window covering most of the top half of the screen. As your joystick-controlled adventurer moves, the landscape scrolls around him. While exploring, he will come across various strange items and buildings. By pressing the fire-button you can access a menu which allows your hero to pick up, drop and use items. Careful

planning is needed, though, as he can only carry three objects at once. He will also have to avoid the deadly plague carriers. They pop up all over the place, and contact with them means sudden death.

It's obvious that to escape you need to work out how to use the many items which are scattered about the place. For example, if you've found the blue scroll and a typewriter, you can type your name on the scroll and it miraculously becomes a flying licence!

The way the computer handles all this with the joystick is really quite neat. The graphics are also pretty hot, with a good screen-display. Gameplay is definitely for those who enjoy adventure-type puzzles, but it's easy to get into and fairly addictive. Mind you, I really hate those plague carriers!

Tom Hussey

Addictive

Program *The Wild Bunch*
Micro Amstrad Price £2.50
Supplier Firebird Software, Wellington House, Upper St. Martin's Lane, London, WC2H 9DL.

One of the rising stars of Firebird's silver catalogue is without doubt *The Wild Bunch*. It's a simple, well implemented, idea that, although not a classic, clicks into an engrossing and addictive game – just what a cheapie should be.

Whilst billed as a 'wildwest adventure' it relies more on strategy elements than a con-

ventional adventure. You are presented with the scene where you are, wrongly, accused of murder. Whilst pursued by the Pinkerton Agency you must identify and capture the member of the wild bunch who did the foul deed. This involves travelling to various towns where you can challenge strangers to a gunfight. Various facial characteristics relate the figures to wanted posters on show in the sheriffs office and part of the strategy element relies on keeping tabs on, and identifying, the correct one. Picking the innocent town mayor for a shoot out does little to raise your social standing. The telegraph office also provides valuable information on

the whereabouts of the bunch and of the Pinkertons.

Several towns need to be visited in order to solve the problem – travel and sustenance both need money and the best way to boost this is in the poker games of the saloon, if you can avoid getting too involved with the firewater.

It is predominantly menu driven, the graphics are effective additions to the game, the shoot outs are particularly good, and both these, the wanted posters and the poker cards actually contribute to the game, which is a welcome point.

Tony Kendle

It's official

Program *Monopoly* Price
£9.95 **Micro Spectrum 48K**
Supplier Leisure Genius, 3 Montagu Row, London W1H 1AB.

At last an official version of this classic board game from a company which has specialised in such conversions. At least two previous (unofficial) versions have existed but were criticised because one only showed you part of the board providing no overview while the other revealed the whole board in such tiny detail it was difficult to tell what was going on.

Leisure Genius has solved this problem with a perspective board view upscreen and below it the strip of properties following the player's current position. A lot of care has been taken with the 'feel' of the game; when the dice are thrown you see them roll and better still, when property is auctioned not only does a hammer descend with a bang but the dice jump as it lands. Player messages appear in the centre of the board and once you're used to looking there it's a sensible arrangement.

The program provides a complete and standard game, the computer playing any of six players, and its strategies seem strong. The documentation on the program could be better and several points may

prove confusing or result in crashes until you've played a couple of times. I also found the absence of all those little cards and banknotes removed some of the fun, and it helps to know how the property is grouped in the real board.

However, though I consider *Monopoly* primarily a social game, I'm sure budding property developers will be delighted now they can get their fix of capitalism any hour of the day or night.

John Minson

Bat or Bowl

Program *Graham Gooch's Test Cricket* Price £7.95 **Micro Commodore 64**
Supplier Audiogenic, PO Box 88, Reading, Berkshire

There are several cricket simulations around for the Commodore 64. One of the better ones is *Graham Gooch's Test Cricket*.

It's better because graphically it's fairly sophisticated, with large well animated sprites instead of the usual matchstick men.

You can choose your own teams and either bat or bowl – there is an ingenious use of the joystick to give you quite a wide range of both bowling and batting options. It is possible, for example, to play either aggressively (with its attendant dangers) or defensively if the score looks in your favour.

When in bat the fire button determines the timing of each stroke – it requires a good deal of skill not to give away an easy catch or, worse still, witness the wicket crumbling behind you.

If you want a cricket simulation – and it is the right time of the year – then so far this is the one to go for.

Graham Taylor

One-Key

Program *The RefQL Database* **Price** (see below) **Micro QL Supplier** WD Software, Hilltop, St. Mary, Jersey, Channel Islands.

The RefQL database is a file of data to be used in conjunction with Pion's *Archive* - note, Version 2, it won't with Version 1. The tape also contains a little program to be booted in before the main data, and this program acts as a "front panel", aiding in the retrieval of the data by the user.

The main facility that this program offers the user is "one-key" commands. As you know, *Archive* requires the user to type in commands such as, *Find, Order, Search, Next, Continue* and so on, in full, which can be rather tiresome when a large database is being used. All one has to do with WD's routine is to press the first letter of the command, thus F for *Find*, N for *Next*. You can use this program with your own files, thus making life a lot easier (but, you could also write a similar program yourself in half an hour).

The main program is a database of references to the QL in British magazines, including the house journal of the QL User Group. As such it's a pretty hefty piece of work - the database is now in its third update and currently contains 500 records. Of course, this is very handy to you if you want to track down an article on, say, QDOS that would be extremely useful if only you could remember where it was published! You can, though, be rather more cunning or sophisticated than this, using the data, for example, to find out the best magazine to send review copies of your latest *Jet Set Willy* killer, or which author appears to be an expert in a certain field. It would be perfectly possible for you to update the records yourself, but WD offer to do the updating for you (supply you with the latest version) for the differences in price plus postage - very reasonable.

Although there was some corruption evident on my copy, with many of the

records displaying as a meaningless jumble of graphics and half-words (I assume this is not a normal case), and although some of the on-screen prompts get permanently overwritten by system messages, nevertheless the package is good value, if only because it will save an awful lot of typing.

WD maintains a unique price structure, allowing the

purchaser to "mix 'n' match" programs, paying a "medium" charge plus a charge for each program recorded on the medium, so see WD advertisements for details or contact them direct.

Tony Bridge

Topical

Program *On-Court Tennis* **Price** £10.99 **Micro** Commodore 64 **Supplier** Activision UK Inc., 15 Harley House, Marylebone Road, Regents Park, London NW1 5HE

With Wimbledon capturing the interest of sports fans everywhere, Activision have chosen a good time for the release of their simulation, *On-Court Tennis*. Do you fancy a game against John, Bjorn, Jimmy or Ivan? Each of these players have their strong and weak points, so it's important to choose your opponent with care. It is also possible to select which type of court to play on - grass (fast), hard court or clay (slow).

The court is displayed as if you were sitting in the commentary box behind the server, with the graphics big and clear. No ball-boys, umpires, touch-judges, photographers or crowd to clutter up the screen here.

The first thing you have to master is how to serve. The player automatically throws the ball up, and you have to

time your swing and direct the stroke. Quite tricky (just like real tennis!). During the rallies, the computer positions your player in the correct place to make a shot. Then you actually make the shot by one waggle of the joystick: drop shots, slice shots, flat shots, top-spin shots or even lobs are possible.

Timing is crucial as the timing of your swing determines in which of the 16 directions (angles) the shot can travel. When the computer or your human opponent tries a lob shot, you automatically go into a special "smash-mode". This enables you to overhead smash the ball into any part of your opponent's court. Smashing the ball into the corner leaving the computer stranded is just great! It looks really impressive, too.

The computer also boasts something called "floating intelligence" - as you get better, so does the machine. Can't be bad - but it's the great control you have over the shots that really makes the game. A good buy - even professional tennis players will enjoy this game.

Tom Hussey

Un-English

Program *On-Field Football* **Price** £10.99 **Micro** Commodore 64 **Supplier** Activision UK Inc., 15 Harley House, Marylebone Road, Regents Park, London NW1 5HE.

Sporting simulations seem to be all the rage at the moment. Programs on Basketball, Squash, Baseball, Boxing and Cricket are pouring from every door of the software houses. Now, Activision is getting in on the act with a number of titles.

As you might guess *On-Field Football* isn't about good old British soccer, but the American equivalent. I shan't begin to go into the complex rules, but suffice to say that it's vaguely similar to Rugby, with forward passing. The program allows you to take on the computer or a human opponent (if you've got an extra joystick). After juggling through a few menus and choosing your team, play begins.

The action starts with the customary kick-off. Instead of the usual 11 players (from a total squad of 49), you only control four, but this is about all you can manage. Before each play, the team huddles, and you have to choose your attack plan. This involves selecting the formation and the running patterns of wide receivers, tight ends, etc - all within 30 seconds. When on defence, you must choose your pass coverage and rushing plays. Eventually, the actual play starts and you are able to try out your attack plans.

The so-called player perspective graphics aren't exactly spectacular, but they are adequate. The game-play realistically covers most aspects of American Football: time-outs, substitutions, field goals - it's all there.

Being a Channel 4 American Football fan, I was just about able to cope, but a novice would probably find the comprehensive instructions and game-play very bewildering. Still, I've always wanted to be a quarter-back.

Tom Hussey

Jumbling along

A sliding block puzzle to while away those hours between programming for the QL by R Forsey

This is an adaptation of the well known sliding block pocket puzzle. In this version the computer draws a picture on the screen and then jumbles it up; all you have to do is to restore the jumbled up picture to its original state.

To restore the picture you have a cursor. This is moved around the screen using the arrow keys. To move a piece into the black space, the cursor must be placed on the piece you wish to move. Then press the space bar and the piece will move into the black space.

There are two other keys that can be used; *Enter*, which will move the puzzle five times randomly, and *Escape*, which will finish the game.

Proc Start - sets up the variables and screen layout. It then acts as the control

procedure for the program.

Proc Jumble - jumbles up the pieces. It is called with a parameter *Num*. This tells the procedure how many times to move the pieces. It works by generating random numbers which are interpreted in the *Select On* routine. This determines if a piece is moved left, right, up or down.

Proc Selx - finds the pixel y coordinate for the scrolling window.

Proc Sely - works very similarly to *Jumble*, but instead of using random numbers it takes them from the user.

Scrl, *Scrr*, *Scru*, *Scrd* - each procedure checks if the conditions are correct to scroll, then calls *Selx* and *Sely*. Creates a window #3 in the correct position, and then scrolls. Increments variable *MO* (moves) by 1. Sets new position for black space.

Proc Curs - this contains the main loop which reads the procedures *Temp* and *Slide*.

Proc Drawpic - this contains the main loop which reads the keyboard and moves the cursor.

Proc Slide - draws the word *SLIDER* and can be called with parameters *X1* and *Y1*, which give the coordinates for the beginning of the word.

Proc Temp - draws the temple using procedures *Box* and *Roo*.

Proc Roo - draws the roof of the temple.

Proc Box - draws a box with *X,Y* for the coordinates and *X1,Y1* for length and height.

Proc Fin - the finishing routine. Tells you how many moves you had and asks if you want another go.

Direct commands and no nonsense

Got a bug in the works? Try this Trace routine from the keyboard of **Howard Allen**

This is a machine code program for the Spectrum which when used with a Basic program will display the line and statement number currently being executed in the top right corner of the screen. This is obviously of use when debugging and developing programs.

The code should be placed in memory at address 50401 after a *Clear 50400* command. It is activated by *Randomize Usr 50401* and deactivated by *Randomize Usr 50410*. When a Basic program is then *Run*, the line and statement numbers are displayed as explained, and also the program is slowed down, making it easy to follow. If the program is slowed down too much then this can be altered by *Poking* a number of between 1 and 255 at address 50570. The larger the number then the longer the delay except for 0 which gives the longest delay.

It should be noted that if a *Break* is made into the program then the line and statement number displayed will be nonsense. To correct this and also to return to the normal operating speed, enter a direct command (eg *List*), and the Trace will temporarily stop (until the program is next *Run* again). This is because Trace is designed only to work when a program is actually running.

The principle on which Trace works is quite straightforward. The line number currently being executed is held in a System Variable called *PPC* (23621) and the statement number in one called *Subppc* (23623). It is therefore a question of reading these and displaying the re-

sult. In order to achieve this the interrupt mode of the Z80 has been utilised.

The Z80 has three kinds of interrupt: *IM0* which cannot be used on the Spectrum, *IM1* which is the normal operating mode and *IM2* which can usefully be used by programmers. There is also a non-maskable interrupt but this has been deliberately blocked in the Spectrum Rom. When in the normal interrupt mode ie *IMI*, and an interrupt occurs, control is transferred to address 56 (38H) in the Spectrum Rom. This contains the Rom routine which updates the clock and reads the keyboard. On exit, control is transferred back to the exact place that the interrupt occurred. These interrupts occur at the rate of fifty per second.

The interrupt mode that Trace uses is *IM2* (interrupt mode 2). In this mode an address is formed from two bytes: the low byte is supplied by the hardware that caused the interrupt, in this case the Sinclair ULA which by default supplies 255 (FFH) and the high byte from the *I* register, a register supplied on the Z80 for this purpose. The value of the byte supplied by the *I* register can be altered by the programmer but for technical reasons it cannot hold between 64 (40H) and 127 (7FH). The value that it normally holds is 63 (3FH). An inspection of the address so formed is made and a jump made to the address that it holds. This is known as a vectored address. This method has been adopted to give flexibility. When different peripheral devices are attached, they supply a different byte to

each other and to 255 so the Z80 can differentiate between them. A table of vectored addresses can be built up to direct the interrupts.

The byte supplied by *I* in Trace is 196 (C4H) so the full address is 50431 (C4FFH). This address must hold the address to which control is now transferred and it is 50433 (C501H) which is the start of the Trace code. It is also the next byte after the vectored address which is convenient. A clever idea is to find an address in Rom which is xxFF (where xx is a suitable value in *I*) which holds a number which is an address in Ram where an interrupt routine is held.

When using an interrupt in this manner all registers have to be saved then restored at the end of the routine; this is not done automatically as when using *Randomize xxxx*. The exit from Trace is via *Mask-Int* so that the clock is updated and the keyboard is read.

It is important to note that the byte supplied by the Sinclair ULA may not be 255 if a peripheral device is attached, and that vectored addresses in Rom should be avoided with Interface 1 added because occasionally the vectored address is taken from the Shadow Rom, causing a crash.

It should be possible to use Rom routines in programs using interrupts if all registers are saved then restored afterwards; in practice I have found it easier to make Trace self contained, which is why all the division and printing is done from within the program.

Just your type

The concluding part of this printer utility for the QL
written by Dr R K Lowry

This week, the concluding part of the SuperBasic listing which we started last week. As it stands, on

running, you will be presented with a number of menus which should allow you to choose typefaces, character sets

and so on, without going through the usual painstaking routine.

At the moment, the program is set up for the Canon PW-1080A, but it shouldn't be too difficult to customise the listing to suit.

Computer as canvas

Create a work of art on the Amstrad machines with this program by R Mitchell

The following programme will enable people to use the Amstrad as a canvas, to draw and paint pictures on.

There are 16 colours in mode 0. One of these is the paper colour; you will be able to use the other 15 of these to paint with. I've chosen white for the paper, colour number 13, which comes out more like a light grey. The pen that I've used for this is Pen 0. This colour can be altered from within the program quite easily at any time and the border will change to the same colour.

When you run the program you will see the 15 colours along the top, and underneath are the 8 shapes you can use. To get access to these shapes you have to use the numeric keypad on the right hand side. Keys 0 to 7 are the keys required. By pressing the corresponding key the shape will appear in the top right hand corner of the screen.

Cursors - these move the cursor on the screen in the direction that the arrows point.

Shape 0 - This is just a single plot. If you want

to draw a shape with this, press the D key to draw and a face will appear in the top left hand corner. This is to let you know that you are drawing. To move the cursor without drawing press the M key and the face will disappear. M means move. Use the cursor keys to move.

Shape 1 - This is a wide band and you control it with the same keys as above. It's best used with the Shift key down, then press the cursor keys.

Shape 2 - This plots at random on a 8*8 area; again it's best used with the Shift key down. If you press the R key you will get the dots printed in a random colour. Sprints them in a single colour.

Shape 3 - This draws a line between two points. If you position the cursor when you want the line to start from, press the I on the main keyboard and then move the cursor to where you want the line to finish and press the J on the main keyboard.

Shape 4 - This draws a box. Position the cursor at the bottom left and press the I on the main keyboard then position the cursor at top right and press the J on the main keyboard.

Shape 5 - This draws a solid box. Use the same as above.

Shape 6 - This will draw a circle. Position the cursor where you want the centre of the circle to be and press I on the main keyboard. Now move the cursor to where the outside of the circle is to be drawn and press J on the main keyboard.

Shape 7 - This draws a triangle. This is the only shape you have to set three points, using the I, J, K on the main keyboard.

F - Position the cursor in the middle of what shape it is you want to fill, then press the F key.

To Change Colour - Press the spacebar and the first colour will start flashing. Move along the colours using the left and right cursor keys; when you have the colour that you wish to use, press the copy key.

To Change Pallet - To alter the colours of the pallet, first press the spacebar then press the C key. You will now see a number appear in the top right hand corner. This should be 13 if you are using this control for the first time. If you press the up and down cursors the number will change and the paper and border colours will be the same as the colour number. This is because you are altering the colour of pen 0. This is the pen that I've used for the paper. To move along the pallet press the left and right cursor keys and then alter the colours by pressing the up and down cursor keys. Press Copy when you have finished and you will return to the main routine with your new colours intact.

POPULAR COMPUTING WEEKLY

Less manual labour

A utility for all 1541 owners – an error reader for the CBM 64 by D K Amos

This program is for Commodore 64 users with 1541 disc drives. It allows the user to read error messages from the drive's error channel, and also clear it, without having to type in the program given in the 1541 manual.

It is run in the direct mode using 'Sys 52992'. An example of the display produced is:

Error 67, Illegal System T or S
Track 18, Sector 00

The disc drive error channel will also be cleared, and this will be shown by the red indicator on the front of the unit going off.

Note that if the routine is called from within a Basic program, the program will

terminate without an error after the routine has executed.

Once installed in memory, using the Basic loader shown, it will not be affected by 'New' or even 'Sys 64738', so it is recommended that the routine be loaded in to the computer on power up.

1541 FLASH!

Do you get bored waiting for your disk drive to load your favourite programs? Thinking of reverting to 'turbo' tape routines because they're quicker? WAIT!!!

From SUPERSOFT comes a great NEW product which you can fit in minutes to upgrade your Commodore 64 and 1541 Disk Drive. All disk operations are speeded up as much as THREE times (for example, programs which normally take a minute to load will load in twenty seconds or less using FLASH!)

1541 FLASH! is 100% compatible with Commodore BASIC. However, if you really want to you can easily revert to the normal slow mode at any time - but we don't think you will!

If you take your programming seriously you can speed DATA transfers by up to 10 times normal speed (in your own programs), and can also make use of 11 screen editing functions, as well as 17 disk commands.

Pressing SHIFT and RUN/STOP becomes the same as LOAD***.8,1 so you can start work about five seconds earlier each day!

Supersoft have 1541 FLASH! in stock NOW, so send your cheque for £89.95 or 'phone 01-861 1166 to order by Access.

P.S. Unlike some add-ons we could mention, 1541 FLASH! leaves you all your memory and the cartridge port available!

SUPERSOFT

PD040

Almost as easy as ABC

A program that teaches alphabet and keyboard familiarity on the BBC B by **Andrew Heptonstall**

This program for the BBC model B tests children's knowledge of the alphabet, and gives experience of using the keyboard. Five options are available: 1) Alphabetical order against the clock, 2) Alphabetical order, 3) What letter is before/after, 4) Upper case, 5) Lower case.

Option One is a race against the clock: a bell sounds if the correct answer is entered, a noise sounds if the letter is incorrect. Option Two allows the alphabet to be typed in letter by letter. If the letter is correct, a space rocket flies up the screen and a tick appears. If the letter is incorrect, an ambulance crosses the screen accompanied by the appropriate sound effect. Option Three asks

what letter comes before/after a particular letter. Options Four and Five select upper and lower case characters: the program automatically switches on and off the caps and shift locks, so you do not need to select these.

I would suggest that an adult is present when a young child is using the program, to help when the child becomes stuck, and to show it what to do. I would also suggest that when using lower case, you should stick stickers on the keys.

Program Notes

Line Nos

40-150 Calls procedures.
170-260 Calls procedures concerning level three

280-350 Calls procedures concerning level two

Procedures	
Procinit	Defines envelopes and characters.
Procbad	Called if answer is incorrect; draws ambulance.
Procgood	Called if answer is correct; draws space rocket.
Procleve1	Selects levels.
Procupper	Sets upper case.
Proclower	Sets lower case.
Procleve1	Level 1.
Procheading	Writes heading on screen.
Procnxttime	Gives time and number of mistakes.
Procleve2	Level 2
Procleve3	Level 3

POWERFUL UTILITIES

FOR YOUR SINCLAIR SPECTRUM

MAKE THE MOST OF YOUR MICRODRIVE WITH

INTERFACE III

THE IMPOSSIBLE HAS BEEN DONE

Yes it's true this fantastic new peripheral will transfer every program available on to microdrive. Yes every one. Yes, believe it or not, it is so easy to use that we are taking our pet cat (Civie) to use it. Any-one capable of loading and saving a BASIC program can transfer really awkward programs to microdrive.

Just look at these features...

- Consists of hardware and software (software on microdrive cartridge).
- Transfers all programs available on to microdrive.
- Very, very, easy to use. (If Civie can do it we're sure you can.)
- All programs reload and RUN once transferred.
- Makes a "snapshot" of any stage of a program. (Saved as a screen.)
- Transfer can be activated at any stage allowing "customised" versions.
- Will also save to tape. (Normal speed load once saved.)
- Programs will reload independently of the "Interface".

IF YOU HAVE A MICRODRIVE YOU MUST HAVE INTERFACE III

ONLY £39.95 inc. P&P

DOUBLER Mk.II

After amazing success on the CBM 64 we introduced "Doublers" on the Spectrum. Now we have improved it and have a "Mark II" version which has already satisfied hundreds of users. Requires the use of two cassette decks and has proved capable of 100% success with all types of loader regardless of length and speed.

ONLY £14.95

B.B.C.

TAPE TO DISC UTILITY
The "TD ROM" is the most powerful utility of its type. It will transfer the vast majority of protected software onto your own discs. It is VERY easy to use and full screen reporting is provided.
Two versions are available, the normal Acorn DFS version plus one suitable for Cpu's Solidisk DDDDS.

ONLY £18.95

DATA RECORDER

A dedicated data recorder designed for use on the CBM 64 or Vic-20. Specification as C2N but with pause button. Model available for the PLUS4 or 16 at same price.

SATISFACTION GUARANTEED.
ONLY £29.95

AMSTRAD

"SPEEDMASTER" allows you to make a fast loading back up of your software at a choice of SAVE speeds. Incorporates a header reader and deprotect BASIC screen. Works on ALL normal Amstrad loaders.

ONLY £7.95

"DISCHMASTER" allows you to transfer mass protected software onto disc. The process is automatic and will work with multi part programs. Supplied on disc.

ONLY £12.95

FOR YOUR COMMODORE 64

NEW DISC DISSECTOR V3.0 NEW

This NEW VERSION of "D.D." has once again proved it as the leading copy/utility package for the 1541 user. As well as general improvements, plus the addition of more useful utilities, two important new programs have been added.

"THE EVESHAM NIBBLER"
A first on the UK market. A true nibbler (byte for byte) copier. Copies ALL DOS errors automatically. This includes errors 20-29 inc. plus non standard errors like half tracks, extra tracks, non standard sync, remastered tracks, etc. No knowledge is required at all it just "nibbles away" and produces a perfect copy. Yet it only takes 5-8 minutes. Has copied all discs tested (except itself). A class above anything else available.

"FAST FILE COPIER"
An incredibly handy selective file copier that LOADS and SAVES at five times normal speed. Sounds useful? Too true.

As well as these programs 17 other useful utilities are included. An essential purchase.

ONLY £29.95
Customers with earlier versions may return them along with £9.95 for "V3.0".

NEW QUICKDISC+ NEW

Get a "QUICKDISC+" CARTRIDGE plugged into your 64 and your 1541 will really start to perform. Unbelievable value.

Fast LOAD and SAVE (four to five times normal speed). Will LOAD most protected software. Uses no memory area, can be switched in and out from the keyboard.

Fast Format takes just 10 seconds.
Fast Backup copies an entire disc in four minutes (not protected software).

Fast File Copier (selective).
Improved DOS commands (DOS 5.1) makes for easy use of the disc drive, e.g. (RETURN) will LOAD and display a directory, without overwriting BASIC. (SHIFT) RUN/STOP will LOAD "D" or "B" etc. etc. Very useful.

Incorporates Centronics printer software (user port) with CBM graphics capability. (Works with "Commodore Connection").

A RESET switch is fitted.
Now the price. No not £49.95, it's not even half that much. Can you afford to be without "QUICKDISC+"?

ONLY £19.95
No internal connections needed and unlike most similar products it is compatible with printers and second drives.

DOUBLER

The amazing cassette port adaptor for the 64 is still keeping its 100% record. Comes

of hardware and special software. Requires the use of two data recorders. Tests have proved conclusively that "Doublers" can be 100% successful, even with fast loaders. They said it couldn't be done.

ONLY £12.95

STILL POPULAR

"DISCO"
Still the best tape to disc utility for normal speed loading tapes. Simple to use but rarely beaten.

ONLY £9.95

"FASTBACK"
Converts most slow loading tapes to "turbo" load. Single and multi part. Very easy to use.

ONLY £9.95

"BIG MOUTH"
A superb text to speech synthesis program that is great fun to use. Unlimited vocabulary.

ONLY £7.95

"COMMODORE CONNECTION"

Software and cable for connecting any Centronics type printer to the 64. Or use with "QUICKDISC+".

ONLY £17.95

"AZIMUTH 3000"
Allows you to check and realign your data recorder head alignment. Software provided.

ONLY £8.95

"THE ANATOMY OF THE 1541"
Get to grips with your 1541 with this very detailed book. Includes a full ROM disassembly.

ONLY £8.95

All prices include P&P and VAT. Send cheque. Postal Order of Credit Card No. Credit Card orders accepted by phone. Callers welcome. Wide range of goods stocked. Trade enquiries welcome. European orders send price as advertised. Outside Europe £2.00 for airmail. Mail order to Evesham Shop please.

Peek & Poke

Below the
line

P Roberts of Hereford, writes:

Q I have a BBC Model B. When using the 32 line modes, they disappear at the bottom and the cursor is not visible at the top of the screen. I can make everything visible by using TV 255. Is it not possible to achieve a 32 line display without using this command?

A The loss of the top line of the BBC display is a common problem and is solved

by using the *TV 255 command that shifts the whole display down by one line.

Your problem of losing lines at the top and bottom of the screen means that your TV is in need of adjustment. If the controls are not accessible then you should find a qualified engineer to do the adjustment for you. All standard monitors and TVs should be able to display the full 32 line display from the BBC.

Old
faithful

R J Woodberry of Farnham, Surrey, writes:

Q I am considering learning machine code on my Spectrum but I am in need of a good, comprehensive book on the subject, I have heard that the Melbourne House publications are usually excellent and that the *Zeus* assembler is one of the best, but which should I buy?

Merging mania

John Porter of Garforth, Leeds, writes:

Q The Arcade Addicts Guide in *Popular Computing Weekly* (Vol 4 No 24) is a superb idea, however for me there is a big bug.

I recently bought a Spectrum and the *Soft-Aid* tape. Your guide includes *Pokes* to use on *Pyramid*, *Kokotoni Wilf* and *Jack &*

Beanstalk (all on *Soft-Aid*) but I cannot figure out how to get them into the games.

I would dearly love to have unlimited lives in these, so please help.

A The majority of Spectrum Pokes quoted in magazines are statements that have to be inserted into the short 'Header' program that precedes the main program on most games.

To do this, type *Merge* "", and then *Load* the tape as normal, stopping it immediately after the 'Header' has loaded - (your Spectrum should be saying *OK*). The program can now be listed - and more importantly - *Edited*. The *Poke* statements can now be inserted within the program, but they must be placed before the final *Randomize Usr* statement.

Now Run the program, and start the tape from where you left off. The main program should Load and Run as normal - except of course, you'll have infinite lives (or whatever) during the gameplay. Good luck!

Unsurpassed

At times, it seems as though this column is turning into an extended plug for the Commodore 64. I must say that, right now, this doesn't seem a bad thing to be. With the computer market in such evident disarray - to the extent that even the 64 seems on the point of extinction - it is surely time to reflect on the whole business.

From the musical point of view, the Commodore remains unsurpassed at its price and certainly second only to the Yamaha CX5M in the computer market as a whole. The curious thing is

that - CX5M apart - no succeeding machine has come up to the 64's musical standards. Even Commodore has produced new generations of computer with less to be said for them musically. The manufacturers in general seem uncertain whether to plump for better or cheaper small computers. As a result they have tended to produce unsatisfactory compromises.

The problem is clear. Businesses tend to write off the capital cost of equipment in a period of two or three years. As has long been the practice with cars, they will upgrade regularly - in fact, as soon as this amortisation period is over. The home owner, on the contrary, buys a computer to last, not to be replaced after a few years. A new business computer therefore has a ready made market, while the home computer either has to reach people who've never bought a computer or has to create a demand among existing computer owners.

It seems that the manufacturers are not impressed by

music as a means of creating that demand. While plenty of effort is put into creating better firmware, better peripherals and even better graphics, and perhaps even more effort is put into reducing prices all round, there is precious little evidence of anybody working on music and sound facilities. The result is that the best music machine we have, taking everything into account, is - in computer terms - almost a pensioner.

The worrying thing, then, is that the market will move ahead - one way or another - and leave the many people who are interested in computer music having to get by with old computers. In some ways, this is just another argument for software compatibility. That may be a forlorn issue, but the situation is made worse by the possibility that companies will withdraw or be forced to withdraw from the home market and that good machines like the Commodore 64 will find themselves largely forgotten

(except by their owners) without anything better - at least, musically speaking - to replace them.

One reason I make these points is quite simply that the extent of the Commodore 64's contribution to computer music is becoming increasingly obvious, and not just in this country. Listening to the computer music competition entries, it was apparent that the decline of the 64 would leave a huge gap in this growing art.

Gary Herman

The Music Box is a weekly column with news, reviews and readers comments on all aspects of micros and music.

Any readers with experience of computer music making or companies with new product news are invited to write to drop a line explaining what they're doing to: Gary Herman, The Music Box, 12-13 Little Newport Street, London WC2R 3LD.

COMPUTER HARDWARE & SOFTWARE

WINNING AT THE RACES USING YOUR COMPUTER

Book Winning at the Races Using Your Computer
Price £6.95 Micro Any Supplier Interface Publications, 9-11 Kensington High Street, London W8 5ND.

Every punter's dream is to devise a system that beats the bookies. Paul Worden doesn't offer that, but his book demonstrates how to use your micro to increase your edge when gambling. Given enough time and effort, he says you can analyse data to show how to exploit the odds.

Mr Worden obviously knows his stuff and his style is informal in the extreme, but his programs, based on Microsoft Basic, are all documented. The book's main failing, apart from some sloppy proof-reading and transposed pages, is that it's based on Australian racing.

While it's far from a get-rich-quick formula, it pro-

vides an insight into how computerised number crunching can discover patterns and turn the odd losing tipple into an educated, winning scheme. Be warned though - you'll work hard for your profits.

John Minson

Book Advanced Commodore 64 Basic Revealed
Price £9.95 Micro Any Supplier Collins, 8 Grafton Street, London W1X 3LA.

Where, C64 owners may ask, has this 'Advanced Basic' been hiding all this time? Nick Hampshire's answer is within machine language, for despite that reassuring 'Basic' in the title, to make the most of your Commodore you'll need to understand how the language works and be open to the assembly lan-

guage routines that will help exploit the ROM.

This is not a book for beginners, progressing as it does from memory architecture and utilisation by Basic, through arithmetic processing and the keywords to an extended Basic package listing, in code, that adds 31 new commands and modifies two others.

The book's style is serious and technical; advanced experimenters will find much here to help break the boundaries of Commodore's often criticised Basic.

John Minson

Book Out of the Inner Circle
Price £8.95 Micro Any Supplier Microsoft Press, Penguin Books Ltd., Harmondsworth, Middlesex.

A new type of trespass is taking place through telephone wires and into the hearts of mainframe and mini-computers. Bill Landreth was apprehended by the FBI for becoming just such a 'ghost in the machine' and perhaps not surprisingly his book adopts the 'moral' slant of advising systems operators on safeguards; after all, he is on probation.

Of interest to more than just the poachers and gamekeepers of computer security, though full of tips for both, Landreth's book presents a fascinating picture of a technological revolution which leaves itself, on average, only forty per cent protected in his estimation. Written with obvious expertise and in a generally clear style it reveals an insight into this curious obsessive fetishism for hi-tech and its accompanying immorality.

John Minson

TIPSTER SPECTRUM+/48 AMSTRAD CPC464/COMMODORE 64

The most accurate horse race predictor on the market

- ★ Tipster V2 took 18 months of trial and error before we arrived at the system that makes it the most accurate race predictor on the market.
- ★ Fully tested against other computer race predictors.
- ★ Tipster even performs better than the human tipsters from the top nine newspapers.
- ★ Many winners found at high prices.
- ★ For both flat and national racing.
- ★ The system will never go out of date.
- ★ We reveal the secrets of profitable betting.
- ★ Special tutor for the absolute beginner to racing.
- ★ Tipster also includes a program to calculate your returns for you.

If you can buy a more accurate race predictor we'll refund your money

Don't be tempted to buy cheap or inferior products.

PD458

Readers' score

Now then, here is a letter from an old friend Michael Banbrook of Streatham who gave us a tip to type *Call ZZ* on *Sherlock* which we printed as *Call 22* – sorry.

There are some things that our readers seem united on when it comes to games; one is that Incentive's *Moon Cresta* is brilliant ("Thank God, Elite didn't get that one," says Mike), another is that Activision's Spectrum versions are awful, and the latest that is emerging is that Elite's games are overrated. "My games to avoid are *The Pyramids* (boring), *Cookie* (dated) and *Kokotini Will* (dreadful – one of the most over hyped games ever)" says Laurence Moran who recommends *JSW*, *Knight Lore* and *Match Day*. Iain Gibson of Harrogate writes, "Avoid *Fall Guy* (do Elite have any good games?), *Daley's Decathlon* (overrated) and *Blue Thunder* (how was this ever made a Crash Smash – the same goes for *Jungle Trouble*). Does anyone want to jump to Elite's defence here? I didn't think their games were that bad!"

Iain goes on to ask for help with *Backpacker's Guide*. "I know how to use the transformation crystals (drop them in the cells next to the large red discs), but how do I use the dynamite? Here are my high scores, without cheating: *Jetpac* 89,385; *Arcadia* 8,447; *Zzoom* 326,060; *Ant Attack* 46,879; *Lunar Jetman* 122,565; *Pyramid* 75,515; *3D Death Chase* 85,773; *Penetrator* 149,520; *Manic Miner* 26,310 and *3D Star Strike* 1,123,600.

Staying with this subject for just a minute, Adrian Byrne of Bracknell has finished *Will* using the infinite lives *Poke* we published and putting 0 for the number of lives (the game may look as if it crashes, but pressing enter restarts it). Adrian recommends this as the best method for

getting to see the secret of the amulet. He also has the following scores, obtained without *Pokes*: *Knight Lore* 79%; *Pyjamarama* 90% 5,417 paces; *Sabrewulf* 84%, *Atic Atac* 99%, *Hunchback* 1,143,100.

That's not as good as Robert Lomax of Anglesey who has scored a terrific 3,064,200 on the latter game (witnessed as well). Incidentally, someone write from Bristol with a name I can't read but no, I don't think you can get to the tower in *Hunchback*.

A game that owes a lot to *Atic Atac* is, of course, *Bubble Bus's Wizard's Lair* and Alan Salmon of Bristol has written with some invaluable tips for this. "Pick up everything except the skull. Keys are needed for square door, rings for round doors and diamonds for pointed doors. Flashing goblet gives extra life, flashing helmet protects you for a while. Axe, pickaxe, etc, give you more weapons, food and drink are for energy, wings speed you up. Crown, coin chest, etc, give you gold, scrolls are spells that change gold into useful objects or energy, crosses allow you to pass snakes of the same colour. Creatures enter the room through doors, if one comes through a wall it means there is a secret passage you can use. Do not stand by an automatic door waiting for it to open because creatures can come through while they are closed. To use the magic lift the levels are – CAIVE (start), HAWLO, CRYPT, DUNGN, VAULT, LIAYR, LYONS."

One game that keeps its

popularity over the years is *Chuckie Egg* (I hope you all enjoyed the *Pokes* for filling in the holes in our special issue as much as I did). I have been very lax in not printing these two high scores earlier – Sara Ferring of West Lothian has got a very respectable 395,450, but is beaten by Charlotte Anderson of Dunbar (something in the air up there, I think) who has reached 1,106,040 on level 57, beating her husband George's "mere (sic) 1,082,590. One point spoils it – a million does not register so I am placed quite low in the Hall of Fame".

You think you have troubles, Charlotte – I'm afraid it all pales into insignificance when compared to Allan Harvey who has sent in a witnessed score of 10 million on the Electron version! Allan writes: "In answer to Tony Jaques who was having trouble with level 32. First clear as much corn as you can then let a duck get you. Go up to the far left of the first left platform, wait until the duck on the first centre platform has climbed down. Jump on to this, up the ladder on to the right and jump on to the second right platform. Wait until the duck comes down the ladder and climb up this. The duck on the top levels should be climbing, or already up the ladder. Jump on to the third middle platform and up the ladder – you should now reach the top. My other high score is 277,835 on *Elite* – rating Dangerous."

On a related subject, Malcolm Lawrence wants to know what the baskets do in

Chuckie Egg 2. Can anyone help? "PS. Are AnF taking the mickey out of Sir Clive with the graphics of the CS? The lift when I finally reached it gave me the message 'Out of order'."

Let's finish this week with some quickies. Mike Page of Solihull can't escape from *Atic Atac* – yes, Mike there are three parts of the key! The third is hard to recognise but looks something like a crown. Maximum score on the game is 99%, Mike, so there may be a room you haven't found yet.

Mark Sutton of Swansea wants to know if anyone has landed the F-15 in Digital Integration's superb Amstrad version of *Fighter Pilot* and lived to tell the tale. Well, I spent some hours trying, Mark, and only managed with two people working the controls – the documentation tells you all the essential limits to say within, but it is fiendishly hard to keep control of everything. The best tip is to rely on the instrumentation as much as possible and keep practising.

Finally, here are some more things to type in the high score table in *Dark Star-C&VG*, Keith Campbell, Tony Thing, Joystick Jim, S. Brattel, C64, T. Bridge, Starblitz, Defenda, Invasion of the body Snatchas, Rommel's Revenge, Pinback, Martin Smith, Motty, Cheesecake, Lynn, Linda, Mash, Robin Meh, QL. These come from Dave Gooch of Rayleigh who also wants tips for "that brilliant Addictive game *Invasion of the Snatchas* – I can only manage 13,800."

Tony Kendle

We are searching for the top UK computer games player – the best there is!

The very best of Britain's game players will get to fight it out on a number of top secret new games – scheduled for release in the autumn.

Here's how it works

Study the table below and look at the column for the machine you have – these are the games you'll need to master. Send your high scores in on the form below, making sure that your scores are authenticated by a responsible individual signing the form. Any score achieved using technical short-cuts – such as infinite lives *Pokes* – will not be accepted.

Between now and September Tony Kendle will be keeping you up to date on the *Arcade Avenue* page with just who has the scores to beat. Then, in September, the top three scorers on each machine will battle it out for a place in the final and the chance to be the first to play our 'top secret' games.

	Commodore	BBC	Spectrum	Amstrad
Game 1	Suicide Express	Elite	Technician Ted	Sorcery
Game 2	Beach Head	Jet Pac	3D Star Strike	Splat!
Game 3	Shoot the Rapids	Chuckie Egg	Cyclone	Manic Miner

Tony Bridge's Adventure Corner

Keep the faith

It's good to see that there is a steady flow of software now coming on-stream for the QL. The machine hasn't sold very well, but those of us who took the plunge at the beginning are staying faithful in the hope our faith is rewarded. It is an exasperating machine (those dreaded words "Bad or Changed medium" are worse than "You see a Troll blocking the way, what next?"), but the included software is so good that one must persevere (and I mean persevere - I've just spent two hours trying to get a precious set of data to load back in!). Software for we adventurers is rather scarce at the moment - with the exception of Talent Systems', *Zkul* and *West*.

Apart from these two, I haven't seen much else, until this week - S.B. Software of Diss have sent me their *Fantasia Adventure* to look at.

It's an unfortunate fact that many software houses think that reviewers of adventures need a challenge in their lives, and consequently don't provide maps or solutions with their new releases. I don't have the time required to work all the way through every adventure, so first impressions mean a lot - in the case of *Fantasia Adventure*, first impressions have been so-so. This one follows, as far as I can tell, the usual route - you, the hero, are stuck in "a hostile world of ancient cities, complex cave systems and harsh deserts.", as the advert promises. This means that you will find plenty of mazes and quick ways of dying!

The adventure is not in the Infocom class, let us say. Right at the start, you'll find an ancient scroll, just asking to be read or examined. Asking for help, or

examining the scroll at this point, gives the player a rather obvious Biblical reference (Ezekiel 3.1, look it up) and other pleas for help are equally boring (cross-word clues, for example, which wouldn't worry a six-year-old - not mine, anyway!). On the other hand, there is something to be said for this easy start.

In this regard, *Fantasia Adventure* comes up trumps. There is, as I've indicated, the Ancient Scroll right at the start, and very close by is the Obligatory Key, and the Necessary Helmet. Another step further on is the Lamp, nestling by the Book. All this is standard Middle Earth-ian fare, and the puzzles associated with the objects are not so difficult as to cause terminal frustration. Any gripes I may have concern the QL's innate drawbacks - I'll never understand, for instance, why a computer with such a fast chip should be so achingly slow to process commands. The good old ZX80 was quicker, I'm sure! And the type-ahead keyboard does not reward the impatient player who taps at the keys while processing is going on - if you are a confident typist, of course, several commands may be pre-typed in this way. I was disappointed that no use was made of the Microdrives and random access. Thus, once the adventure is loaded into memory, that's it - it would make for a more interesting game if locations could be loaded in as required from the cartridge. Apart from this, though, and the rather restrictive command structure ("Get all", for example, is impossible, and it's no good typing "Get the Candle and the Book", it just isn't recognised), the adventure is a good traditional romp for the QL, and very reasonably priced at just £8.50. Write to S. B. Software, Nicholas Street, Diss, Norfolk.

Hands up those of you who remember the Beatles. Well, I was never an old hippy, but still I feel nostalgic whenever the emblems and badges of those times are used. It's a temptation, of course, for authors of any kind to use them, and a couple of adventures have come my way which stir the old recollections.

The first is from WCB Software of Derby, who sent me the first two parts of what they call "a Quadology". *Abstract* and *Contrasts* are the adventures in question, and their origins are plain from the quotations plastered over the cassette inserts (handwritten, so I don't

know if these will appear on the final version) - "A splendid time is guaranteed for all" and "Nothing is real", Beatle fans can provide the titles of the songs that the quotes come from.

The two adventures are written with the Quill (and, given that limitation, it's the usual thing that you might expect.) Actually, although I've stressed the Beatle aspect, another 60s hero, Dr Who, is the main point of reference in the first, *Abstract*.

While it retains the standard Spectrum character set, *Contrasts* has a rather attractive skinny set, unlike the usual BBC-like design.

In the latter adventure, you are still a Time Lord, but this time in Pepperland, along with other characters such as Mungo, McJaffy and a snoring dog. With locations such as Psychoville Manor, and juicy details like Blood running in the Freezer, a splendid time is guaranteed for all here! Write to: WCB Software, 49 Borrowash Road, Spondon, Derby DE2 7QH.

Now to the second adventure for those of us who like to indulge a tear of nostalgia. This is from Mushroom Software, who are on their own admission "the smallest software company in the world, with an output of two programs a year". Their catalogue is varied, consisting of, among others, a Rubik's Cube solver - now they have an adventure, *Software Pirate*. The subject matter is pretty self-explanatory, and features a sort of house-character called Cedric, the hero of most of the other Mushroom programs. It's another Quill'd program, and has no fancy re-designed character sets or flashy screens. It is, however, extremely good value at an amazing £1.49, mail order.

In *Software Pirate* the locations are many, and are easily mapped (though I certainly didn't get to them all, it's not that easy), and are well-populated by many local characters, who can be spoken to (will they divulge clues - I'll find out sooner or later). Objects abound, and many of them are useful, like the radio that can be switched on. As a postscript, Mushroom have asked me to pass along a request to the couple in Solihull who wrote to them regarding help in their first adventure, *Bigtime*. If you're reading this Corner, Solihull, Mushroom would like your address so that they can reply! Mushroom Software, The Plymouth Software Exchange, Plaza Arcade, Bretonside, Plymouth.

Adventure Helpline

Going bananas? If you are stuck in an Adventure with nowhere to turn do not despair - help is at hand.

Fill in the coupon, explaining your prob-

lem, send it to us, and a fellow adventurer may be able to help.

Remember - the system only works if those adventurers who have solved the puzzles get in touch. Every week is Save An Adventurer Today (SAAT) week!

WDSOFTWARE

For the QL:

WD Utilities (3rd ed) (base £5.50)

PRINT 60-file Directory or view it on one screen, one-key LOAD, COPY or PRINT 60 files with one key
(allows for namesakes). Multiple FORMATTING to prevent corruption by stretching of tape. TOOLKIT to
give dated, numbered modules in program development. PRUNE old files to release space (one key
DELETES a file). Full instructions in QUILL file. Use up to 6 EXTRA MICRODRIVES (add on your
Spectrum ones!)

WD Utilities for CST Q-Discs (base £8)

100-file capacity, for CST/Computamate disc systems AND up to 4 extra microdrives. User-friendly
timesavers.

RefQL (3rd ed) (base £3)

500 useful QL references in an ARCHIVE file (too long for one cartridge with Utilities and Morse).

For Spectrum/QL/BBC

WD Morse Tutor (base £4)

From absolute beginner to beyond RYA and Amateur Radio receiving. Adjust pitch. Set speed to your
test level (4-18 wpm). Learn from single characters, via groups with wide spaces to random sentences;
decrease spacing to normal. Write down what you hear, then CHECK on Screen or Printer (or speech
for Spectrum with Currah Microspeech). Also own message, random figures, letters or mixed.

For Spectrum 48K

Tradewind (base £4)

Sailing/trading strategy game with graphic surprises.

Jersey Quest (base £4)

Text adventure with Bergerac and the Dragon (not disc)

PRICES (incl Europe postage — elsewhere add £1)

Spectrum/BBC Cassettes — base price only

QL or Spectrum Microdrives — £2.00 cartridge plus base price

5 1/4" Floppies, £2; 3 1/2" Floppies, £5. (please state format wanted)

Two or more programs on medium — pay medium + base, eg. WD Utilities and RefQL for £10.50, but IM-
POSSIBLE to mix QL/BBC/ Spectrum programs on one medium. Send YOUR cartridge and pay base
price but FORMATTED if FIRST in your DRIVE 1 for compatibility. PL87A

FAST SPECTRUM AND DRAGON REPAIRS

First company in all UK. to introduce while-u-wait service. Now first to offer an international repair service.

I have come across a firm that will be more than willing to advise you as to how to remedy your problem. They are called MANCOMP, and as well as repairing faulty Spectrums, are also quite willing to discuss your problems with you, and offer reasonably cheap, and (more importantly) correct cures

PHIL ROGERS 'Peek & Poke' "POPULAR COMPUTING WEEKLY" January 1985 (Vol IV No 1).

"Your service still remains first class" J. BOURNE (BENHILL-ON-SEA)

"I only posted it on Tuesday and received it back on Thursday... two days later! I've never had such service" K. I. CAIRNS (LEEDS)

"Fast service... not too pricey!" J. TANT (WOKINGHAM)

"Excellent and quick" B. P. ANDERTON (MAIDSTONE)

"Thank you for your excellent service" A. WALLACE (BEDLINGTON)

"Prompt... reasonably priced... delighted" C. TOWNEND (KEIGHLEY)

"Thanks for your speedy service" I. J. TONKS (PRESTON)

AVERAGE £15

● PHONE/SEND SPECTRUM FOR FREE ESTIMATES. ENC £1.80 (U.K. I.O.M. EIRE, C.I.) £6.50

(EUROPEAN/SCANDINAVIA) ● NO HIDDEN HANDLING CHARGES

NEW TAPE TO DRIVE TRANSFER OF RECENT PROGRAMS

Yes SPECTRUM owners can even transfer many of the LATEST last/jerkly programs to their drives at **LOW COST** with our software and information sheets. You will be amazed at what can now be done and with no risk as our programs carry our **MONEY BACK GUARANTEE** (not updates).

Firstly you will need our MD1b (for m/drive) or WD1b (for Wafa or disc drive) programs that give you the tools to convert programs. Includes the ability to chop/split bytes in one go, bytes mover, "VAL" creator and REMkill, make visible etc. FULL manual (highly rated by CRASH) with example transfers. MD1b or WD1b cost £5.99. "MD1b manages more programs" - Your Spectrum.

To manage the latest programs you will also need our **Tape Copier 7** program at £6.50.

EXTRA program to CONVENIENTLY transfer converted bytes directly to m/drive with many other features (eg. alter program names, stop programs, etc) buy **MT6** at £3. (Wafadrive version is called **WAFATAPE** at £4).

NEW LERM INFORMATION SHEETS

Each sheet gives you the DETAILED instructions required to transfer to your drive 8 of the more POPULAR programs. They cost £2 EACH plus SAE. Up to sheet 4 available.

UPDATE SERVICE: Send old tape + large SAE to get a £2 REDUCTION. OVERSEAS: Add £1 Europe, £2 others for each product. SAE for enquiries. PL411

**LERM, DEPT PCW, 10 BRUNSWICK GDNS,
CORBY, NORTHANTS NN18 9ER**

SPECIAL AGENT SPECTRUM DE-LUXE

Ideal for experienced or absolute beginner.

☆☆☆ 5 STAR RATINGS ☆☆☆

1. Copies multipart program all in one loading.
 2. Copies Basic, Microcode, Headerless programs upto 51k.
 3. Cannot be fooled by weird names which crash other copiers.
 4. Can remove Autostart from Basic.
 5. YOU can determine Pause between sections.
- (Also includes a program to transfer to microdrive using the velocity method for low starting machine code.)

Once you've experienced this super DE-LUXE talk smooth easy to use Copier, you'll never use any other.

£5.95

Overseas: + £1 Europe, + £2 Others

KERR, (Dept PCW) 1 & 2 The High Street

King's Lynn, PE30 1BX PL431

STOP-REVEAL

Genuinely let you:

1. STOP virtually all programs, Basic, Microcode & Headerless even if protected.
 2. REVEALS hidden Basic in Microcode programs. (Could be clues in an Adventure or 10k of ANT ATTACK).
 3. LISTS actual Microcode on screen.
- Now you can STOP/REVEAL/modify study most Spectrum programs at leisure.
- Includes a DISASSEMBLER so could even study Sinclair ROM, etc. Plus the most Advanced HEAD-READER even writes, plus pages of super SECRET OF THE TRADE explaining professional methods used to hide lines/programs, etc. EVEN STOP/REVEALS PROGRAMS WHICH ARE A GENUINE 48K LONG.

£5.95

Overseas: + £1 Europe, + £2 Others

KERR, (Dept PCW) 1 & 2 The High Street

King's Lynn, PE30 1BX PL432

INTERFACE 007

The Ultimate Back-Up copier to Tape or Microdrive

Any program, even Hyper Loads or Headerless can be transferred at the touch of a button. Tapes can be Saved to re-load at 1,2,3,4 or 5 times normal speed. You do not need an extra tape recorder.

Simply plug **INTERFACE 007** into back connector of your Spectrum. Load in your game as normal, play it first if you want. At any time press button on **INTERFACE 007** and your program will freeze. Pressing key 1,2,3,4 or 5 will Save a copy to a blank tape at 1,2,3,4 or 5 times normal speed. This tape when reloaded will Load at this selected speed and recommence the game from point it was Stopped at. NOTE: Unlike our competitors, the Back-Up tape is NOT simply a dump of all the memory, but is only as long as the Data necessary for the game/program. Your Back-Up tape is transferred to a Microdrive using the special MD tape included.

INTERFACE 007 is now in production & will be ready for despatch beginning of July 1985. (Wafadrive version available in August).

INTERFACE 007 £29.95

ZX-GUARANTEED (Dept PCW)

29 Chadderton Drive, Unsworth, Bury, Lancs, BL9 8NL

MULTI-CHOP PLUS BYTE-COUNTER

A suite of 6 extremely useful and easy to use programs which let you chop programs into 2 or more parts ready for transferring into other Microdrive, Wafadrive or Octadrive or simply use to chop off Screen as programs load faster.

- Your programs can be split into:
1. Just the first 6912 (screen).
 2. All except first 6912
 3. First 4000 + remainder
 4. 4000 + remainder less screen
- Can reduce Superlong programs up to 65279 bytes down to size Has been used to successfully split MONKEY-MOLE & POGO on Microdrive.

Includes a Header-Reader and byte counter which can even give the length of Headerless-Files.

POST £3.95 FREE

Overseas: Europe + 55p Others + £1.55

(Please order as MULTI-CHOP)

ZX-GUARANTEED (Dept PCW)

29 Chadderton Drive, Unsworth,

Bury, Lancashire BL9 8NL PL434

MAGIC-MESSAGE PLUS

This tape lets you do remarkable things with programs. Such as:

- * Rewrites and lets you change hidden basic in "machine-code" programs. (Even the basic messages in the Sector Item will be rewritten.) Could reveal clues in some games. Just for fun, a game was changed to say: Written by Chris Carr!
- * Puts headers on headerless files ready to load into magic-message or make them ready to transfer to a Disc/Mini/Microdrive.
- * Makes false headers for any programs (so will stop the unhelpful!) Load magic-message, play it, program and see magic messages will appear on video for you to read/change.

POST £3.95 FREE

Overseas: Europe + 55p Others + £1.55

(Please order as Magic M)

ADVENTURE HELPLINE

Message from Andromeda on Amstrad. I can't get any further when reaching panel/square plate or glass pedestal. Mr W Prime, 130 Hazel Ave, Bury, Lancs.

Mission Impossible on Vic 20. Can't open white yellow or blue door. Paul Bevan, 20 Hill Green, Pitsea, Basildon, Essex.

Castle of Terror on C64. How do I get back out of the secret chamber and how do I free the girl? Peter Dent, 11 Stavordale, St West, Seaham, Co Durham.

Mission 1 Project Volcano on Amstrad. How do I get into the lift past the lift droid? Charles Taylor, Meadowside, Forcett, Richmond, W Yorks.

Eureka! How do I get past the sun shooting man in prehistoric adventure. Torbjorn Troldmyr, N-6484 Rod in Romsdal, Norway.

Jewels of Babylon on Amstrad. How do you deal with the crocodile in the swamp, or the body of the sailor? John and Linda Marshall, 3 Silvermallee Ct, Kelmslot 6111, Perth W Australia.

Urban Upstart on Spectrum. How do you get past the officer at the airport? Where is the book? Johnathan Hiscock, 371 Newton Rd, Lowton, Warrington, Cheshire.

Ring of Power on C64. What is the password to gain access to the palace? K Ryan, Rivendell, Church Rd, Pontnewydd, Cwmbran, Gwent.

Pirate Cove on Vic 20. How do I get out of the London flat? Stephen Ryan, Old Bridgend Inn, Pontnewydd, Cwmbran, Gwent.

Time Lords on Amstrad CPC 464. How do you get the keys from the shed in zone 1? (if with a shovel, how do you get that?) Peter V Degorgio, 75 Main Street, St Julian's, Malta GC.

Snowball on Amstrad. How do I get off the bottom layer? Can anybody explain what happens after typing 'p'? Andrew Walton, Finlow Hill Cottage, Over Anderley, Macclesfield, Cheshire.

Castle Quest on BBC. I have found the wand. Now what do I do with it? P Kowabnik, 42 Clibran St, Cheetham Hill, Manchester 8.

Spiderman on Spectrum. How do I get Bio Gem and how can I defeat Electron and Doc Octopus? Andreas Schnordewind, Dessauerstr 58a, 4050 Moenchengladbach 1, Germany.

Mountains of Ket on Spectrum. How do I cross the ravine or enter caves beyond lake? Bill Stansfield, 16 Snowdeley Green, Wheaton Aston, Stafford, ST19 9QB.

Starcross and Infidel on C64. How do you get the red rod from ratant's nest? How do you find the pyramid in Infidel? Michelangelo Pignani, 9 Caroline Rd, Llandudno, Gwynedd.

Jewels of Babylon on Amstrad. How do I find the key to the door in the dusty corridor? How do I get over the bridge? Richard Charters, 117 Scale Gate Rd, Upperby, Carlisle.

Espionage Island on Spectrum. Where's the rope? Koen Hartsuiker, Elzengaard 47, Bostel, Holland.

System 15000 on Spectrum. How do you get your file recognised by the Seicra Securities system? T Williams, 91 Brittain Dr, Grantham, Lincs.

Eye of Bain on Spectrum. How do you get past the black beast, get things from the tent and cross the ravine? David Ledbury, 82 Wealdstone, Woodside, Telford.

Doomdark's Revenge on Spectrum. Where is Morkin, and hoe do you find him? Where do you find the rows and spells? David Ledbury, 82 Wealdstone, Woodside, Telford.

Inca Curse on Spectrum. How do I get past fire and the panelled room? Any other advice welcomed. David Ledbury, 82 Wealdstone, Woodside, Telford.

System 15000 on Spectrum. Does anybody know what the Midminster account number is? Tony Scrivener, 14 Upton Dene, Grange Road, Sutton, Surrey.

Mountains of Ket on Spectrum. Can anybody give me directions from the scorced tunnel to the hut? Stephen Pollock, 145 Peveril Avenue, Glasgow.

Eureka on Commodore 64. Part 2 What are in the catacombs? What do I do with the chicken and the egg. Part 3 What tune do I play to crack the crystal and how do I make the lift move? Part 4 I have the photo and the blank ID card. How do I make a valid ID card? Richard Kette, 160 Station Road, Leigh-on-Sea, Essex.

Zodiac on Oric. What do I do in the cave? How do I open the cell - I can't find the key? A goodsman, 73 Fellows Court, Weymouth Terrace, Hackney, London E2.

The Sorcerer of Claymorgue Castle on Commodore 64. I cannot get up on to the battlements and I keep getting killed in the ballroom. Also, the stone door won't open. Can anybody help? S D Shipp, Legg of Mutton & Cauliflower, 48 The Street, Ashted, Surrey.

Sherlock on Spectrum. How do you get Inspector Leatrade to arrest Mrs Jones? Neil Harrison, 27 Lindrick Close, West Bessacarr, Doncaster, S Yorks.

Circus on spectrum. How do you open the wagon door? Where are the slippers and can you open the chest? John Toal, 75 Greenwood Crescent, Cotbridge, Lanarkshire.

Twin Kingdom Valley on Spectrum. How do you kill the dragon in the castle? Christopher Hallam, 43 Duke Street, Cotmanhay, Ilkeston, Derbyshire.

System 15000 on BBC. How do you access further in Midminster Bank, Boon or Routledge? Any help at all needed. Paul Tang, 21 Main Street, Branston, Burton-on-Trent, Staffs (Tel: 0283 65635).

Lords of Midnight on Commodore. Tips wanted on beating Doomdark by use of armies. S D Christian, 45 Wallgate Road, Liverpool 25 (Tel: 051 722 7052).

Castle Quest on BBC. How do you get out of the dungeon and get past the spider? Guy Nooh, Rose Hill Lodge, Rose Hill, Dorking, Surrey.

Castle of Terror on Commodore 64. Any help appreciated. Gavin Day, 57 Rossall Road, Cleveleys, nr Blackpool, Lancs.

Colditz on Spectrum. How do I get past the bayonet and how do I free the POW. F Still, 2 School House, Well close Square, London E1 (Tel: 01-709 0128).

Eric the Viking on BBC. How do I get the things from the eagle's nest? How do you get the amulet? What are the bra and specs for? M Rowarth, 2 Woodview Drive, speen, nr Aylesbury, Bucks.

The Hobbit on Commodore 64. How do I get the past the bulbous eyes? How do I get the Barrel from the wine room to float down the river safely? Richard Kette, 160 Station Road, Leigh-on-Sea, Essex.

Eric the Viking on Spectrum. How do you get the feather out of the dragon's nose? John rundle, 26 Western Road, Aldershot, Hants.

Eureka on Spectrum. Part 5 What number opens the door? I can help with Parts 1, 2 and 4. Ian Sumter, 10 All Saints Close, Springfield, Chelmsford, Essex.

Eureka on Spectrum. How do I greet Nero and how do I get into the plane? I R McAdam, 5 Bridge Close, Terloggan, Newquay, Cornwall.

Hampstead on Spectrum. How do you get past the butler in the mansion in St John's Wood? Tanwen Sparks, 3 Yateley Road, Edgbaston, Birmingham B15.

Winning phrase No 31: "I often drink 8 light ales" from J S Russell of Fareham, Hants who receives £25. Other who came close include "Giant Sir fell - KO!" from Bruce Greig of Exeter, and "Is he an old golfer?" from S G Young of Garrowhill, Glasgow.

Now voting on week 33 - £25 to win

Each week *Popular* is compiling its own special software top ten chart - compiled by YOU.

And each week we will send £25 to the person who sends in, with their chart votes, the most original (witty, neat or clever - but never rude) phrase or sentence made up from the letters (you don't have to use them all) in the titles of the top three programs in this week's chart, published above.

You can still vote in the chart without making up a slogan - but you won't be in with a chance of winning the prize.

All you have to do is fill in the form below (or copy it out if you don't want to damage your magazine) and send it off to: Top 10, *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2H 7PP.

Voting for Week 33 closes at 2pm on Wednesday July 10 1985. Entries received after that time will not be eligible for inclusion in that week's voting. The judges decision is final. Only one entry per individual per week will be allowed.

WITCHLESS

Metabolis is a Sorcery-style program from Gremlin Graphics – its first game title for the Spectrum in quite a long while. It has the immediate virtue of being a Sorcery-style arcade adventure that does not feature spells and witches. It also looks quite good on screen.

The plot involves your having to free the world from the grasp of the Kremlin, who are some sort of alien something or others that happen to have the same name as the famous centre of the Red menace. Humanity generally has been turned into assorted mice and birds, and you have been part transformed so that you swing uncontrollably from bird to man. This misfortune, though, helps you seek out the serum that will stop your transition. Next you blow up the Kremlin with four pieces of nuclear fuel and save the world. The usual stuff.

It's multiscreen, lots of sprites wandering about in the shape of wacky animals, flickering things to collect – not an original bone in its body.

On the other hand it looks good, the design of the sprites is amusing (although some of the backgrounds look curiously simple and drab) and it seems to hang together as a game.

CHALLENGING

Crystal Theft is a very complex text adventure from Wicca Soft.

Complex in several ways: first it can handle very long sentences like 'Go south then take the key and climb the rope', second, the structure of the game is devious: it's in real time and many of the puzzles must be solved within a time limit. Finally, it's very, very hard indeed.

I hate summarising the plots of adventure games, but here's a quick jaunt through the salient points of this one: Vegan Wars, technologically superior baddies, but crack Intruder commando units from Earth, flaw in Vegan's dictatorship (controlled by priesthood), weak strategy, can Earth's defences repulse invaders? Can you retrieve the faster than light crystal from the Vegan temple?

The screen layout is helpful – description of location, inventory, computer response and your input are divided into different windows. I'm not sure about the blue text on green background though.

Reading through a reviewer's cheat sheet reveals some of the subtleties to be found later on in the game. I can't wait until I find out what 'Things which get lost can generally be found again when you get fed up arguing philosophy' means.

An excellent and challenging text adventure.

ALL GRAPHICS

Glass from Quicksilver has been getting some excellent reviews recently. It's not difficult to see why; graphically it's fairly spectacular.

The problem is, though, that graphics alone isn't enough and I really don't think there's much of a game here.

Good evidence of lack of real plot ideas is when a game is divided into several sections – *Glass* has lots of sections.

The plot has you blasting through enemy defences in an attempt to reach the city strongholds. This involves lots of big alien sprites on a *Buck Rogers* style 'moving staircase' background.

Later sections of the game feature some beautifully designed and vast alien spaceships – it's really very pretty.

Really though this is only a series of pretty screens with a lot of blasting. It lacks a sense of purpose and I don't find the graphics enough to hold my attention through more than a couple of plays. Still the programmer(s) is/are obviously hot stuff I look forward to other games.

ON THE HOP

Buck Rogers was one of the classic arcade games. The Commodore version was also fairly popular and now US Gold have converted it to the Spectrum.

The conversion is actually fairly good. The 3D effect has been achieved convincingly with hardly a colour clash problem in sight. For those unfamiliar with the game it is a zoom around between zapping electron posts blasting against aliens that not only match you zoom for zoom but, most devastatingly of all, hop.

It's a high speed affair and really my only objection to it is that this kind of game is dreadfully old hat.

It's sad how quickly last year's (well, a couple of years back) epics grow out of date. If you're already a fan of the game this is a good Spectrum version with little competition. I wouldn't recommend it otherwise though.

LETTERS FROM MAX

Beyond is rather surprisingly leaping on to the educational software bandwagon.

On perusal, I would have thought the program puts more emphasis on learning one's way around the keyboard, and identifying sounds, than the alphabet itself. Divided into four sections, parent and child are led through the alphabet by Max, a sort of spacehopper (remember spacehoppers?) with legs. Max does appropriate actions for each letter, though he bends his antennae for A.

Now, on to *Press a Letter*, where Max enacts the words corresponding to child's key press.

Thirdly, Max hauls each letter on to the screen.

Once the child is familiar with the program the fourth section provides a letter quiz with Max enacting his routines and the child pressing the right key.

ONE OF THE BEST

While it seems pretty clear that the C16 was nothing like the success Commodore expected it to be, last Christmas a sizeable minority did opt for the machine. Those people need games urgently and very few companies are supporting the machine.

Of the companies that are backing the C16, Gremlin Graphics is emerging as the company taking the most trouble over the end result. *Sword of Destiny* might even have made a few non C16 owners pretty jealous.

Basically, you slash away at all sorts of ghostly and ghoulish sprites, collecting the ubiquitous flashing objects and travelling around by a mixture of bouncing (like in yoghurt adverts) and jumping into warm air vents which lift you skywards. The graphics are big and detailed and by C16 standards this is one of the best yet.

SOPHISTICATED

Atlantis Software was responsible for perhaps my favourite card game simulation, *Eights*, which also happened to be a budget price item. Now the same programmer and company have issued *Chinese Patience*, like *Eights* a card game seldom covered on micros.

Chinese Patience is one of the few forms of the game which can be played competitively – you challenge the computer to get rid of its cards first. The rules are essentially simple: there are nine piles, eight 'general' ones and the opponent's playing hand onto which cards may be discarded. The piles are grouped into different rules: one section must have cards ascending of the same suit, another group must be descending cards of alternate colours. You may discard a card on to your opponent's pile if it is the same suit and one number above or below it.

You may keep taking and discarding cards as long as

possible – when you can't go, it is the other player's turn. It's actually a very sophisticated game, much thought is needed in deciding where to place the cards and, consequently, that the computer plays very well is a tribute to some very ingenious machine intelligence.

The screen layout is as neat as it could be, given the need

to display so many different and often lengthy piles. At £1.99 this is a fine successor to *Eights*.

UP TO PAR

I've always thought that golf simulations don't get the attention they deserve from programmers – you tend to end up with a result that is often in Basic, features matchstick men and simple graphics and generally lacks the professional touch. On the other hand I've often found that presentation excluded, golf works well as an entertaining computer simulation.

Now we come to *Handicap Golf* on the Amstrad from CRL, and it illustrates some of the points made above. While the graphics are simple with dots for ball and hole and a 'Saint'-like matchstick man for the golfer, the game is a lot of fun. Holes are simply drawn, a few trees here and there, simple yellow for bunkers and so on – each one extends over several screens so there are options to preview each before you slice away.

You have a wide selection of golf clubs, both woods and irons, from which to choose and must take into account not only the power you give to the hit and direction but the wind power and direction as well. When you make it to the hole you get a close up and a little cursor that must be aligned with ball and hole. It's

NEAR PERFECT

Beyonds' *Spy vs Spy*, to my mind one of the most addictive Commodore 64 games of the year, has now been converted to the Spectrum. What's more I think it's as perfect a conversion as there could possibly be - it looks exactly the same as the Commodore original.

The success of the game is, I think, the way it completely captures the atmosphere of the original *Mad* cartoons - the excellent graphics ensure a superb graphical duplication but it's more than that. The cartoons are full of sniggering malice and undisguised viciousness, bombs are black cannonballs with a fuse on the top and behind every door lurks a bucket of water.

The game has exactly this flavour - the computer display is in two sections each showing the current location of their the black or white spy. As you move your spy from room to room so the appropriate display changes. The nominal objective of the game is to collect some secret plans and escape with them. In fact though the real motivation to play the game is to blow up the other spy. Unlike normal arcade games where complete obliteration is zap/pow/dissolve, in *Spy vs Spy* it is deliciously slow.

Each spy has a selection of

traps and weapons - bombs that can be affixed to desks and drawers, buckets of water to put over doors and so on. The idea is that you set up traps and watch gloatingly as the other spy in the process of looking for plans accidentally triggers them - then blam! The spy explodes and in skeletal form ascends to heaven. It's hilarious - the only way to avoid the traps is to keep a careful watch on what the enemy is doing, so you could argue that there's quite a bit of skill in it too. Buy this game.

GREAT GRAPHICS

Answering the critics who have scorned Ariolasoft's American imports for being out of date, the company is rush releasing Electronic Arts' *Skyfox* for the Commodore 64 in mid-July, just six weeks or so after its US launch for the Commodore, although it's been kicking around on the Apple over there for some time.

Skyfox is an air combat game - basically it's a question of getting your plane in the sky and then bombing everything that moves. What lifts it above the level of similar scenarios is the superb quality of the graphics.

You are the pilot - with a bewildering number of permutations of skill level and type of war you wish to fight in. You peer out at the landscape through a remarkably realistic representation of your cockpit; these really are some of the most stunning graphics ever. The ground appears at first to be spattered with molehills which on closer inspection turn out to be surprisingly detailed animations of tanks - all awaiting obliteration.

You can graduate from cadet to 'ace of the base' (not sure about authenticity of the jargon here) using continuous laser cannons or heat seeking missiles - or even the boring old guided variety - in a number of battles ranging from a mere spat (training mission) to 'massive onslaught'. Great graphic details and destruction; what more do you need!

If you're into quality shoot 'em ups and dogfight simulations this should do you well,

and at £12.95 on disc and £9.95 cassette it's actually one of the better value for money American imports.

SPRITELY

One on One was a basketball game issued first on the Commodore 64 in America where it did well, then imported by Ariolasoft and issued here, where I think it did less well. Now it's been converted to the Spectrum.

The game pits two basketball players against each other; the focus is all on the basket end of the court and the idea is that the simulation is very accurate indeed. The players get tired and are even individually programmed to behave slightly differently.

However the problem with the game is that you never really get a chance to test out the 'realism' of the simulation aspect, simply because the graphics are so poor and characterless. What you get are two small, flickery sprites - it's difficult to get any great sense of character and animation.

Little brother

Possibly one of the worse aspects of 1984, the year of Big Brother, was the film of the book 1984.

The film took the standard approach towards the book, which is that George Orwell was worried principally about a totalitarian prying state.

There are many worries concerning Big Brother, where for BB we can read the vast all-seeing computer database (choose your own poison, your own pet totalitarian organisation). The scenario is this: soon every part of our life will be documented and stored away on a set of computers. This means, so the argument runs, that to find out everything about a certain person, all that will be necessary is to connect the computers to cross-check information.

For computer to talk to computer, assuming that the information is not stored on one vast machine (very open to industrial action, system crashes, or bombs), then there has to be some means by which the computers can talk. To talk requires a communication channel, and all communication channels can be overheard. As they said in the war "Careless talk costs lives". If we have a distributed communication system then there are distributed opportunities for access.

The opportunities to overhear a computer conversation are increasing in frequency if we have a system with many users who access the machine by telephone. In the gloriously impractical and much over used "we will all work at home at terminals connected to a central computer" syndrome, then the possibilities for illegal intrusion by professional intruders as well as amateurs are greatly increased. The computer may not be a high security system with personal files

on individuals, but even so intrusion for commercial espionage cannot be ruled out.

It is difficult to protect any installation completely, and the problem is not just LB (Little Brother, the hacker) but FB (Foreign Brother, the spy). There is one way in which any installation can be totally protected from illegal conversations (by use of the standard communication channels); that is, to make the computer a deaf mute. The only computer safe from talking to LB or FB is the computer which never communicates with another. A computer which never talks to another is in dangerous isolation, because when it is sick or injured it cannot operate successfully.

An integrated network of computers sharing information is subject to the attentions of both LB and FB, whereas the isolated computer installation is subject to sabotage from FB, and industrial action from its employees.

One reason why sensitive information (such as DHSS records) are being stored on separate computers is this worry about industrial action. By networking these computers, the opportunities for electronic intrusion become greater. No computer is completely safe from the attentions of a determined and knowledgeable little brother.

Orwell's all-seeing surveillance system was tied into a concerted attempt to change people's attitudes by changing their language. The psychological implications of the effects of language on people's conceptual structures were - I think - far more important for Orwell than the all-seeing pervasiveness of BB but, as ever, the message became lost in the medium.

1984 (the book) was a great success, but the novel was not the best medium for expressing Orwell's message. In 1984 the all-seeing BB was far more interesting and had a greater impact on the readership than the subtle message of indoctrination by changing the language.

Personally, I am more worried about political doubletalk than I am about BB.

Boris Allan

Sharp practice

Puzzle No 165

You may remember Sammy Sharp, the well-known trickster. If you do, you will no doubt be relieved to hear that as a result of his last escapade, he is spending a few months as a guest of Her Majesty!

However, let me warn you, lest you be lulled into a sense of false security, that his sister Samantha, who is every bit as wily as her brother, is still to be found operating illegal betting games at the local racecourses. One of her favourite gambles is as follows:

The punter is asked to shuffle a standard deck of playing cards, and he is asked to deal three cards face up onto the table. If the product of these cards is an exact multiple of their sum then the punter wins, otherwise he loses.

How would you estimate the chances of winning with this bet? (Ace = 1, and Jack, Queen, and King count as 11, 12, and 13 respectively).

```
10 FOR A=100 TO 316
20 FOR C=10 TO 31
30 P=A*A:Q=C*C+2:R=3*A:S=(A+C)*(A+C)
40 A$=STR$(A):C$=STR$(C):P$=STR$(P):Q$=STR$(Q)
50 R$=STR$(R):S$=STR$(S)
60 IF MID$(S$,1,1)=MID$(Q$,1,1) AND MID$(S$,2,1)
70 =MID$(A$,3,1) AND MID$(S$,3,1)=MID$(P$,3,1)
80 AND MID$(R$,3,1)=MID$(S$,5,1) AND MID$(C$,1,1)
90 =MID$(P$,4,1) THEN PRINT A,C
60 NEXT C
70 NEXT A
```

Solution to Puzzle 160

Answer:

A = 218; B = 57; C = 24; D = 17.

From the number of spaces in the grid we can determine that the value of A is in the range 100 to 316 (6 across), and C is in the range 10 to 31 (2 across).

The program gives values in the ranges to A and C by means of two For Next loops, the values of 2, 4, 6 and 9 across, and 2 and 7 down can be calculated. Line 50 checks to see if the various digits that interlock in the grid are the same.

This then prints out the two values of 218 and 24 for A and C respectively. Once this has been done the values of B and D can also be easily found by a similar method.

Winner of Puzzle 160

The winner is Johan Bosschem of Gent, Belgium, who receives £10
