Off the Hook – title details announced

TITLES have now been finalised for the Commodore 64 and Spectrum versions of *Off the Hook*, the follow-up to last year's highly successful charity compilation tape, *SoftAid*, which raised over £360,000 for the Band Aid Trust.

Off the Hook will comprise ten titles, donated by software companies. This time, the money will go to the Princes Trust for Drug Rehabilitation (see *Popular Computing Weekly*, January 9).

The Spectrum version will consist of *Psytron* (Beyond), *Fall Guy* (Elite), *Buggy Blast* (Firebird), *Ad Astra* (Gargoyle), *Splat* (Incentive), *Mugsy* (Melbourne House), *Kong Strikes Back* (US Gold), *Chequered Flag* (Psion), and *Blue Max* (US Gold).

For the Commodore, the tape will contain *Pitfall 2* (Activision), *Psytron* (Beyond), *Fall Guy* (Elite), *Demons of Topaz* (Firebird), *Sam Stoat Safebreaker* (Gremlin Graphics), *Kong Strikes Back* (US Gold), *Black Thunder* (Quicksilver), *Deathstar* (System 3), *Talladega* (US Gold), and *Classic Adventure* (Melbourne House).

Off the Hook's organiser, Rod Cousens, is determined that this time there should be as many machine versions as possible. Although Amstrad and BBC versions of *SoftAid* were planned, he was unable to reach agreement over enough titles to release a tape. "I definitely want to do versions for Amstrad, BBC and C16 owners – I've got

EDITORIAL

It seems strange that this weekend's Atari Computer show should be the world's first, as its organiser Database Publications is claiming. After all, Atari is a veteran in the games machine and computer market.

Yet the games machine and XL range always had something of a cult appeal. Software was pricey, due to much of it being imported product.

The arrival of Jack Tramiel as its new head 18 months ago and his radical new philosophy has changed all that. Tramiel's charismatic quality is far more than a journalistic cliché, and his aggressive determination to bring out the products he wanted has caught the world's attention.

British companies are now writing for the new machines as never before, even though the majority are still hedging their bets and waiting for a more substantial user base.

The ST range, whether you're a Tramiel fan or not, is radical. They

are the machines which all industry pundits have said for the last two years would be produced for the consumer section of the market, and Tramiel has dared to produce them. Furthermore, he dared to do it in an aggressive fashion with a company he took with heavy debts and a staunchly 'gamesy' image.

The first 520STs released last autumn, suffered the fate of many new machines: they were fundamentally unfinished and in very limited supply. Now that that hurdle has been more or less cleared, Atari is launching low-end versions (the 520 STFM and 520 STM) and a top end model (the 1040 STF) designed to add flexibility to the series.

A variety of STs at a variety of prices (from about £450 to £1,000) should make the range more attractive. But the paradox of hardware leading software and the software companies waiting for proven sales still exists.

The ST range is not yet a mass seller - but it has deservedly captured people's imagination.

Sinclair annoyed at 128 incompatibility

OWNERS of the new Spectrum 128 are discovering problems in trying to run their old 48K programs on the new machine. The two machines, it now transpires, are not quite as compatible as was first thought.

Firebird, Activision, Digital Integration and Software Projects are the offending companies. Firebird has admitted that *Elite* will not run in either 48K or 128K mode on the Spectrum 128.

The problem appears to involve an area of Ram immediately below screen memory which has been changed on the 128.

The same catch causes

trouble for Activision's *Hacker*, and Software Projects' *BC's Quest for Tires*.

Tomahawk is the guilty program at Digital Integration where the company says its tape-loader routine is to blame.

Melbourne House, however, has uncovered another snag. All of its games will run on the 128, but not if you have a Kempston joystick plugged into the machine. Kempston says it is aware of the problem and is investigating. In the meantime, Kempston owners will either have to use the keyboard option or invest in a new joystick.

Sinclair is understandably

annoyed about the problems and says they are caused by the software houses "making dangerous assumptions" about the operating system. However, it says the companies involved are working on fixes for the problems.

Digital Integration says it will have an upgraded version of *Tomahawk* ready in about two months, while Firebird will have *Elite* patched up within a month.

Anyone who has bought one of these products should return it to the retailer concerned for a refund, or send it direct to the software house involved.

See also Letters, page 6.

Off the hook

◀ continued from page 1

about five Amstrad titles already. We hope to get enough to do an Atari version too."

Rod Cousens hopes to get endorsement for the tape and its aims from Pete Townshend, the ex-Who guitarist, who has spoken out publicly about the dangers of heroin addiction. "What I'm trying to do now is to get some kind of audio input on the tape from Pete Townshend," he said.

Off the Hook, in each of its versions, will cost £6.99. Cousens is hoping it will be launched on March 24.

However, the *Off the Hook* appeal will not end there. Cousens plans to take an *Off the Hook* stand at September's *Personal Computer World* show, to sell old software titles for the charity.

Commodore reaches agreement with bankers

COMMODORE International's banks have reached an agreement with the troubled micro manufacturer over its credit facilities in 1986.

Commodore now has facilities of \$135 million (£93 million) up to March 1987. The agreement comes after financial losses for Commodore in the last four successive quarters. Now it has 13 months to re-establish profitability.

Commodore International's chairman, Irving Gould, said, "We have been working closely with our banking partners. In a series of recent meetings, we reviewed our forward plans including our product strategies and comprehensive cost reduction programme already in progress."

Meanwhile, it is unclear whether the comprehensive cost cutting programme, which has already involved the closure of the Corby assembly plant, will also demand further cuts at Corby, with the UK operation being slimmed down still further.

Atari confirms launch of new STs

ATARI has now confirmed it will launch a number of new products in its ST micro range at the first ever Atari Computer show, to be held at the Novotel in Hammersmith between March 7-9.

The one megabyte Ram ST, the 1040 STF, which was launched at CES in Las Vegas in January, is to be shown in this country for the first time. The F at the end of the micro's name denotes the floppy disc drive that is built in to the cpu. In the US the 1040 costs just under \$1000, so in the UK a

price around £900 looks likely. Like the current 520ST, it will be offered with either a colour or monochrome monitor.

Two new 520 STs will also be introduced, the 520 STM and the 520 STFM. These versions will fill the £400-£500 price slot, which was to be catered for by the 260ST, until Atari announced at CES that this would not now be continued. However, a 260 ST has been produced for the German market.

The 520 STM is a 520, but

with a TV modulator port, rather than the RGB output, so that it can be used with an ordinary television. It will be sold as a stand alone unit, and not with the disc drive and monitor.

The 520 STFM also has a TV modulator, but also a floppy disc drive built in as in the 1940. It is expected to cost around £500. Exact prices are to be announced at the show.

"The 1040 STF is the machine we will be selling to specialist dealers, and the 520s will become the low end machines," explained Max Bambridge, Atari UK's general manager.

"We always said we would do a low level machine, and at the time we anticipated a 256K memory, but prices have degraded so much that we can now do 512K at the same price."

Atari will also exhibit its 20M hard disc, which is already available, albeit in very limited quantities. It will furthermore, launch a new games machine, the 7800, which will be upwardly compatible with the current 2600.

The new STs, according to Max Bambridge, will be available almost immediately, with the exception of the 520 STFM, which will follow later.

Ex-Beyond chiefs join Nexus

BILL Delaney, formerly MD of Beyond Software, and colleague Clive Bailey have taken over new company Nexus (see *Popular Computing Weekly*, January 30).

Nexus was originally set up by programmers Paul Voysey and Tayo Olwu to supply Beyond with products.

The first product is titled *The Nexus Mission*, and will be available for the Spectrum 48K and 128, C64 and 128 and Amstrad CPCs. "We plan to bring that out at Easter, and then seven titles before April

1987," said Bill Delaney.

Nexus will cost £9.95 for tape versions and £11.95 on disc.

Disc drive ready for Spectrum 128

OPUS has launched the first disc system for the Spectrum 128. It is a new version of its Discovery disc drive package.

The Discovery is a 3½ inch, 250K capacity, double density drive and interface. The device also offers parallel printer port, joystick interface and built-in power supply for both the drive and the Spectrum 128 itself.

Discovery for the Spectrum 128 will cost £149.95, the same price as the 48K Spectrum version.

More details from Opus at 55 Ormside Way, Holmesthorpe Industrial Estate, Redhill, Surrey (0737 65080).

Atari TOS now available in Rom

ATARI's TOS operating system for the 520ST has finally made its way into Rom, rather than being loaded from disc.

Machine built now should have the operating system fully integrated in the Rom. Buyers of the 520ST since the beginning of the year should have found Rom upgrade kits with their machines. Those who bought the machine in 1985 can now buy an upgrade kit for £25.

However, ST owners who bought their machines from

Silica Shop, in Sidcup, Kent, should be able to obtain their upgrades free of charge. For details of Silica Shop's scheme, ring 01-309 1111.

Others can get further information from Atari UK at Atari House, Railway Terrace, Slough, Berks (0753) 33344).

New Activision text and graphic adventure

ACTIVISION's latest text and graphic graphic adventure is *Borrowed Time*, a Chanderlesque tale of 1930's private detective Sam Harlow.

You as Sam Harlow, must prevent a murder occurring. The twist is that it is you who is likely to be murdered.

The adventure features pull-down menus and interaction between characters. It is also one of the first in Activision's range for 16-bit machines, although the first version will be on disc for the Commodore 64 and 128 at £14.99 later this month.

Versions will follow for the Atari ST, Amiga, Apple II and Macintosh.

Football Manager kicks off again

FOOTBALL Manager, now four years old, is still alive and kicking.

It has recently been converted to the C16 and Plus/4, and now Addictive has developed a version for the Atari 8-bit range, at £9.95, for release this week.

This means that *Football Manager* is now available on 11 machines, which is almost certainly a record.

Samleco's NLQ dot-matrix printer

SAMLECO has announced a NLQ (near letter quality) dot matrix printer, available with interface cartridges for Commodore and Sinclair micros.

The DX-86 provides 80-column print-out, at speeds of 120 cps in draft mode, 65 cps in correspondence mode and 35 cps in NLQ mode. It also has facilities for condensed and double width printing.

Available now, it costs

£251.85. Details from Samleco, 9 Fairacres Industrial Estate, Dedworth Road, Windsor, Berks (0753 854717).

Open channels

Many thanks to G C Watson (letters, January 23) for solving the problem I had with List between Spectrum and Brother. Since writing in December I had found out (from the Microdrive manual) how to LIST, but I prefer the flexibility of Mr/Ms Watson's version. Also it demonstrated that I can have more than one channel open at any one time, something I found rather confusing in the manual. I also found the brackets superfluous with control character numbers.

I have also modified line 279 in Tasword Basic to print in English characters. (This only means using the hash sign for the pound, CHR\$(35).) 279 FORMAT "b"; 6900 :OPEN #3; "b":LPRINT CHR\$(27); "R"; CHR\$(0)

Pure whimsy

In volume 5 number 3 you suggested that no-nem potential market ground would be opened by the new Acorn Masters series. I disagree totally; what's more I believe little or no reasoning other than pure whimsy was employed in your biased degradation of what has the potential of being a market leader.

The Acorn Masters series is without doubt the machine that has been long predicted and long awaited by many computer enthusiasts. It has, of course, been obvious that Acorn were in the process of developing a minor

Tape offer

If you have not yet sent in your Firebird tape/Arcade Champion's Guide card with the coupons, please do so, so that it reaches us by Monday, March 31. This will enable us to process your entries more quickly.

Also, as from Wednesday, March 12, no more Micro Magic cards please. Believe it or not, there are some stragglers claiming prizes. If you still have a Micro Magic card, send it in now.

revelation.

The prices of course is, I agree, a little high but then haven't they always been. Certainly customers will inevitably be lost or rather not gained by the over all deciding factor, but as with all quality products, the proof is in the tasting and as with the late BBC B series, each savour will increase the satisfaction of the purchase success.

You are as well aware as myself that good potential in this market must be supported if it is to survive the disturbing slump. While I realise you are trying to present a critical eye for machines but wouldn't it be in your own interests if you lent a little more support when a young genius is in our midst?

Ups and downs

I read the letter from T J Box (Vol 5, No 7) with great interest. I am presently between micros having just disposed of a C64. I have followed the ups and downs of the Enterprise since its inception three years ago.

Although it has been available now for a few months, I have not seen any books or magazines to cover this machine, nor is there any abundance of software. I would, therefore, like to ask the following questions in the hope that some of your readers might know the answers.

- 1) Where can I obtain an Enterprise?
- 2) Are there any books on the machine?
- 3) Is there a monthly magazine or users group?

B Perrier
19 Cheviot Crescent
Dundee

Closed market

Regarding LW Tomlin's letter (Vol 5, No 6), the writer should look at the market the QL was initially aimed at. One can sell anything to home micro enthusiasts, especially when their parents do the buying.

"Now what are we going to call our next model?"

However, the QL was pitched at the small business user. Such a user will buy a machine for the software he/she sees it running, not from a look at the spec sheet. Furthermore, if it doesn't look as though it will work, doesn't feel as though it will work, and uses as storage medium one step up from knotted string, then I reckon the chances of it being a hit are severely limited.

Selling a few thousand that don't work effectively closes the market to you.

Paul Hardy
Bingley
W Yorks

Great success

I have bought many computers, but the QL is the first for which I have paid less than a million pounds. Or, to put it another way, the first bought with my own money. Since the original machine was replaced by Sinclair in mid-1984, I have used it for 20-30 hours a week with great success.

Like other of your readers, I thought that David Kelly's remarks (Ziggurat Vol 5, No 6) were made in ignorance, but his reply (Vol 5, No 8) made it clear that he was talking about one application - games playing. I don't knock games. Your magazine wouldn't exist without them, and many move on into computing. However, to regard the QL just as a games machine is absurd, even if it can run a stronger chess program than any other machine that appears in your weekly charts.

David Kelly says that 'so-

phisticated musical handling' is an essential requirement. I don't recall this being a feature of any machine by IBM or Amdahl and it certainly is not on the QL.

If you want to play games and nothing else, the QL may not be the best buy. For other tasks it must be a front runner. The bundled software alone is worth the price of the machine.

Caistor
Lincoln

Upgrade problems

On February 14 I bought a Spectrum 128. After reading the instructions, I realised it was about the same as the 48K model so I entered a few of my old games. Some worked, others did not.

I also bought a copy of *Elite*. After reading all the bad publicity the Lenslok system had had, I was astonished to find it easy to use. Unfortunately, the program crashed, despite using three different cassette players.

This morning (February 22) I purchased *Tomahawk* and rushed home, only to find that this game also refused to load.

I would like to know if Amstrad and Commodore users have experience similar problems on upgrading to 128K models, and I hope somebody will release a list of the games for the Spectrum 48K that will work on the 128.

Nick Palmer
Middlesborough
Cleveland

See the News Desk for more on this.

Ink problems

With reference to your letters page (January 23), black stamp pad ink works well, but the felt transfer pad will next cause problems by matting in line with the transfer roller base. Small slits in the end of the felt with a razor helps and increased spring pressure also helps.

It is worthwhile shopping around for ribbons. I buy from Meedmore in Liverpool at £3.78 each.

B Gibson
Stockport
Cheshire

The background of the advertisement features a dynamic illustration of two samurai warriors in a combat stance. One warrior, wearing red pants and a blue headband, is in the foreground, lunging forward with a sword. The other, in orange pants and a blue headband, is slightly behind him, also in a combat pose. The background shows a traditional Japanese landscape with blue mountains, a body of water, and a pinkish sky. In the bottom left, the nose and cockpit of a Spitfire fighter plane are visible, flying towards the right.

EAST

SAI COMBAT

Set against a series of subtle backgrounds, Sai Combat has 8 skill levels and can be played by one or two players, with a choice of 16 moves. The combatant sprites are large and easy to control via keyboard or joystick.

Spectrum maze

Walter Pooley, of Waterloo, Liverpool, writes:

Q I have been experimenting with generating mazes on the Spectrum, using the four compass points N,S,E,W, giving four exits from each location and moving four times to exit the maze. Would I be right in thinking there are 256 possible combinations $4 \times 4 \times 4 \times 4$? Would it be possible to write a Basic program to list these combinations?

A If we assume that after four (correct) moves you exit the maze, then can we also assume that after four (incorrect) moves in any one direction that you hit a bound-

ary of some sort. If we can, fine, if not then you have an infinite maze!

Assuming all that, then you have a 7×7 matrix (excluding boundaries and the exit). This gives you a total of 49 locations. If you include the boundaries then you have a 9×9 matrix, or 81 locations. The best way of listing the actual combinations generated is to hold the maze in an array, and using a For... Next loop merely print it out after generation has taken place.

Which computer?

K Jones, of London, writes:

Q My son wants a computer for his birthday and I'm not sure which one to get him. I'm hoping that you can help me make up my mind

He is 12 years old and would really only use the machine for games. I have narrowed the field down to the Amstrad CPC464, the Acorn Electron and the Commodore 64. Which one would you recommend and why?

A Of the three computers that you mention and for those reasons, I would go for

the Commodore 64 or the Amstrad. Simply on the basis of the huge amount of quality games software available, the Commodore would be a good choice.

The Amstrad is a good machine but does not have the depth of software that is available for the Commodore 64. Games written specifically for the CPC464 are still few and far between, although the number of conversions is growing. What the Amstrad does have is the built-in cassette deck and monitor, so there would be no TV arguments in your household.

The Electron disqualifies itself in my book, because Acorn is no longer manufacturing the machine, and there is not a vast software base in any case.

Graphic tablet

P Robinson, of Harlow, Essex, writes:

Q Can you tell me where I could buy a graphics tablet for the Spectrum?

A Certainly. Try writing to Saga Systems Ltd, Greenhaigh, Woodham Road, Woking, Surrey GU21 4DL. (You could always try scanning the ads in *Popular*.)

No support

G. Carter, of Leicester, writes:

Q I am using a BBC B at school as part of my O level computer studies course, and I want to buy a computer of my own for project work, etc. As the Electron is so cheap now, do you think I should get one?

A Probably not. Although it is very cheap at the moment, it is becoming increasingly hard to find, as Acorn has stopped manufacturing it, and therefore support for the machine will dwindle rather than grow.

However, if you only want to use the computer for project work related to BBC Basic and your school studies to get you through the O level course, then it's an awful lot cheaper than buying a BBC, even though the BBC B too, is getting hard to find in the shops. The catch is that after the exams, you may well still want to use your micro. The Electron's software range is not large, and it offers little in the way of cheap upgrade potential. And you may well find it difficult to sell second-hand these days.

The Rogue Program

THE FORCE

An icon-driven multi-screen strategic simulation of what it's like to take on the most difficult task of all

You may have saved the world from invading aliens many times over – but are you good enough to protect one small town from the criminal element within?

You have at your command around 500 officers, 100 vehicles and a host of other units. All that goes to make up four city police stations in fact. All you have to do is keep the crime rate down . . . and the people happy.

Special interest groups

This week I'll be looking at one particular facet of independent Bulletin Boards - special interest groups, or SIGs as the jargon will have it.

A SIG is a section of a bulletin board set up for a particular subject, and it needn't be computer-oriented. You can get restaurant guides, pen pal services - and one BB even has a SIG devoted to alternate medicine. Indeed, Prestel's own home computer database, Micronet, is shortly to diversify out of the computer arena with its Sunday supplement pages, which will include music and video reviews.

SIGs generally enables users to leave messages, letters and questions to peo-

ple with the same or similar interests. This means that they can get help about a problem they have from others who may know more about that particular subject.

Many BBs have more than one SIG, for example TBBS London has 10 different SIGs, and some, like most of the ITeC boards, have no SIGs at all.

SIGs are set up by the Sysop (SYStem OPERator) of that particular board and are often 'requested' by users of the BB. For example the Vulcan Board (NBBS Marlow) had a number of SIGs and recently added an Amstrad SIG to the list because so many people had left him messages requesting one.

If your favourite board lacks a SIG that you feel it should have, then get in touch with the Sysop (either by leaving a message or going into 'chat mode') and ask for one to be set up.

But, of course, most SIGs do deal with specific computer subjects; some of the most common SIGs are: CP/M, BBC, Spectrum, modems and hacking, adventure help and the TRS-80. How did the TRS-80 get in there you may ask? Well, the TRS-80 is the computer on which many boards run, including all of the TBBS boards.

If you are unable to find the SIG section on a board then either there may be no SIG section or it may be restricted access or even just plain hard to find. If it is restricted access then have a quiet word with the SYSOP to see if your security level can be roused to allow you to use the SIGs.

The list below comprises some of the larger boards and their SIGs.

NB the figures in brackets indicate the band rate on that board: 3 - 300/300 baud; V - 1200/75 baud; D - dual band rates: both of the above.

As with all charts, lists, tables, etc, this one can only be correct at the time of writing. A BB may have added new SIGs the meantime.

This week's BB top ten has been compiled by William J Holmes of Cliffsend, Nr. Ramsgate, Kent.

	Name	Baud Rate	Number
1.	Bluelips	300/300	0843-32637
2.	Marctel	300/300 & 1200/75	01-346-7150
3.	CCCBB	300/300	0249-817077
4.	Micrognome	1200/75	01-888-8894
5.	Vulcan	300/300 & 1200/75	0628-46691
6.	Dark Crystal	300/300 & 1200/75	01-954-9847
7.	CABB	300/300 & 1200/75	01-631-3076
8.	CommunTel	1200/75 demo 1	01-968-7402
9.	CBBS - SW	300/300 & 1200/75	0392-53116
10.	TBBS - London	300/300	01-348-9400

It's new Bulletin Boards time now: firstly CCCBB (listed in the SIG list), which stands for Calne Computer Club Bulletin Board. You can dial it on 0249-817077, and it's on 300/300 baud. It should be 24 hours a day by now but you may get a human answering the phone on the other end, if so this means the new equipment and software isn't working just yet. All you do if this happens is ask the person on the other end to put on the BB.

I'd better give a mention to the Vulcan Board, also known as NBBS-Marlow. Both names are correct but I think it prefers to be called the 'Vulcan Board'; it's both 300/300 and 1200/75 baud rates, 24 hours a day and the number is 0628-46691.

Now BBS09. This is a 'ring back Board' (first dial the number, let it ring once then replace the receiver. Redial and follow the normal procedure for dialling a BB). The number is 0705-736025, and I think it's 300/300 baud but I'm not sure - only way to find out is have a go at ringing it up. Its hours are 1900-2200, except Sundays when it's 1000-2200.

And the last one for this week is System 2000. Again it's a 300/300 baud board and it's open between 1900 and 0700. The phone number is 0642-486643.

MODEM HOUSE

BARGAIN BASEMENT

It's 1986 - The Year of Communications

Discover Prestel, Micronet 800, Viewfax, bulletin boards and open a whole new world.

Everybody's doing it — linking their home computers to giant mainframes and networking to thousands of other micro users via the phone and a modem.

A whole new world of mainframe games, electronic mail, free 'telesoftware', electronic notice boards, real time conversation, armchair shopping and home-banking will be at your fingertips! And at local and cheap rate, charges are only around 40p for a whole hour's entertainment for Prestel/Micronet.

The BBC Micropack comes complete with all the software (in ROM) required to access the world of electronic communications, networks, telesoftware and databases (both in public and private.)

ONCE ONLY OFFER — £29.95 incl. of VAT and P&P for limited period only

NEW... The very latest COMMSOFT ROM suitable for the BBC B, BBC Plus and MASTER SERIES — **£29.95** ex VAT

The Modem 2000 provides 1200/75 baud, enabling access to Prestel, Micronet 800, BT Gold, Farmlink, Citiservices, Homelink, and some free bulletin boards (some databases and networks require a small subscription). Fully BT Approved.

Simply clip the coupon and send it with a cheque (payable to Modem House) to:

MODEM HOUSE
70 Longbrook Street,
Exeter, Devon EX4 7AP
Tel. (0392) 213355

Please send to me:

- ☐ Modem 2000(s) **£29.95**
- ☐ COMMSOFT ROM **£34.95**

25 CHESS PROGRAMS TO BE WON!

Popular Computing Weekly has teamed up with CDS Micro Systems for a competition that is slightly more cerebral than most. We've got 25 copies of CDS's *Colossus Chess 4*, one of the foremost home micro chess packages, to give away. *Colossus Chess 4* has already been a hit on the C/S 64 and Apple II, and now it has just been released on the Amstrad CPC machines. All you have to do is study the chess problem shown in the diagram. When you think you've found the solution, send it in with the coupon to *Colossus Chess 4 Competition*, Popular Computing Weekly, 12-13 Little Newport Street, London WC2H 7PP. You can either mark your chosen moves on the diagram or send the solution on a separate piece of paper using standard chess notation.

White must move and checkmate Black in two moves

ENTRY RULES

Entries must reach us by Monday March 31, 1986. The first 25 correct solutions selected at random will receive a prize of a copy of *Colossus Chess 4*. The judges decision is final, and normal competition rules apply.

POPULAR CHESS COMPETITION

CANVAS

A new Software Development Company are looking for Z80, 6502, 6809 and 68000 programmers to work either on a freelance basis, or full time.

Our approach is to match the right programming talent with the right Software publisher. We will provide the successful applicants with design and artwork and also technical assistance if required.

Experienced programmers will command the highest rates, but we will consider anyone who can demonstrate a reasonable proficiency in Machine Code Programming but may not previously have felt confident enough to produce a finished professional product.

Name: Pete Cooke Tau Ceti programmer

Like lots of other programmers I began with the ZX81 which I bought mail order around six months after it was released - it went straight back because it didn't work. On the replacement ZX81, I mainly learnt Basic. I didn't get into machine code until the Spectrum came out.

I learnt machine code bit by bit, partly by just looking up op-codes in the back of the Spectrum manual and partly with the aid of Rodney Zak's book.

I think two things are important for those trying to learn machine code pro-

gramming. First it helps if the machine you're working on is fairly simple and lets you fiddle around with the processor easily - the Spectrum is good from that point of view.

Secondly you should get a good assembler from the very start, it helps enormously.

For my own programming work I use the Gens assembler on the Spectrum and the Rom-based Maxam on the Amstrad, but mostly I write my own utilities as I need them.

The people I tend to admire are those that produce high level languages and assemblers for micros - that seems to me one of the most difficult things of all to do. In that respect, I am very impressed by Hisoft, particularly its Pascal and C.

I am most proud of the shading effects I achieved in *Tau Ceti* - I developed a routine to fill a solid shape which took into account your angle towards it and the position of the sun.

My ideal program would be a sort of *Mercenary* with solid 3D graphics - a whole universe in the computer.

Name: Pete Cooke

Age: 29

Favourite Programs:

I think I play *Revs* more than anything else, though *Elite* is excellent as well. I also like *Flight Simulator 2* by Sublogic for its sheer size and breadth.

Favourite Machines:

I like them all for different reasons. I liked the ZX81 for being simple - I'd hate to try to start programming with an ST. I rate the Commodore for its sound, obviously, and I like the BBC for its graphics. On the other hand the Spectrum is a nice simple machine to use and the Amstrad is nicely documented.

Softography:

Invincible Island, *Urban Upstart*, *Inferno*, *Upper Gumtree* and *Ski Star 2000* for Richard Shepherd Software, then *Juggernaut* and *Tau Ceti* for CRL. I'm currently working on the enhanced disc version of Amstrad *Tau Ceti*.

Hobbies:

My main other hobby is music. I play jazz piano with some local bands. Originally that used to be my work, I was in various local bands that never got anywhere. I also like Science Fiction.

Spectrum Disk Package

BETA PLUS INTERFACE with the famous "Magic Button". One press and programs are automatically transferred to disk. Other features include Reset Button. Sequential and Random access files, Auto boot, etc. EPSON 500k 5 1/4" DOUBLE SIDED 40 Track Slim-Line Disk Drive and all connecting cables. 10 DOUBLE SIDED/DOUBLE DENSITY 5 1/4" Disk and storage case. All inclusive price of only £222.00 Fully G'nead.

Full-Size Centronics Dot Matrix printer made under licence by PANASONIC.

PRINTER OFFER

Full Epson compatibility, 96 c.p.s., friction and tractor feed, & true descenders. Outstanding value at £175.00 inc. Post & Package.

Computer Games is a volatile business. You've got to make the right decisions and work with the right people to be a success. At CRL we've been doing that longer than most Companies have been in business. If you've got a program, you'll want the worldwide distribution we take for granted and the Software Development back-up we pride ourselves in. If you're a designer, a programmer or both, get in touch.

POOLSWINNER

THE ULTIMATE POOLS PREDICTION PROGRAM

- **MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available - 22000 matches over 10 years. The database updates automatically as results come in.
- **PREDICTS** Not just SCOREDRAWS, but ALWAYS, HOMES and NO SCORES.
- **SUCCESSFUL** SELEC guarantees that Poolswinner performs significantly better than chance.
- **ADAPTABLE** Probabilities are given on every fixture - choose as many selections as you need for your bet. The precise prediction formula can be set by the user - you can develop and test your own unique method.
- **SIMPLE DATA ENTRY** All team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).
- **DISC/MICRODRIVE COMPATIBLE** Tapes supplied with conversion instructions.
- **PRINTER SUPPORT** Full hard copy printout of data if you have a printer.

AVAILABLE FOR Spectrum (48K), Commodore 64, VIC 20 (+16K), AMSTRAD, BBC B, Atari (48K), ZX81 (16K), Dragon, Apple II, ELECTRON

PRICE £15.00 (all inclusive)

**NOW
AVAILABLE**

FIXGEN 85/6

AT LAST! No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish fixtures for 1985/6. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner.

POOLSWINNER with FIXGEN £16.50 (all inclusive)

COURSEWINNER v3

THE PUNTERS COMPUTER PROGRAM

You can develop and test your own unique winning system by adjusting the analysis formula, or use the program in simple mode. Coursewinner V3 uses statistical analysis of major factors including past form, speed ratings, course statistics, prize money, weight, going, trainer and jockey form etc. etc. It outputs most likely winners, good long odds bets, forecasts, tricast etc. The database includes vital course statistics for all British courses. You can update the database - never goes out of date.

AVAILABLE FOR Spectrum (48K), Commodore 64, BBC B, AMSTRAD, Atari (48K), Apple II

PRICE £15.00 (all inclusive) includes Flat AND National Hunt versions.

Up-grade kit

Product QRAM 256K up-grade kit **Micro QL Price** £99.95 **Supplier** Micro Peripherals, 3 Wade road, Basingstoke, Hants.

Product 512K up-grade kit **Micro QL Price** £89.95 **Supplier** SPEM, Via Ponchielli 26/c, 10154 Turin, Italy.

Boosting the QL's 128K memory is now pretty big business with several peripheral companies offering a variety of competing solutions. The latest is a sort of DIY internal Ram up-grade which leaves the QL's left-side expansion port free and avoids the various Lego-like add-ons that until now were the only alternative to fairly expensive boards combining disc interfaces and extra memory.

At the moment, two companies - Micro Peripheral and SPEM of Turin - are selling Ram up-grade kits for QL owners with the bravery to open up their computers and start playing around with the chips.

For the less bold, Silicon Express offers a third choice: you send in your computer (and a cheque for £150) and the company returns a QL internally up-graded to 512K with a six month guarantee. New buyers can purchase a 512K QL from Silicon Express for £350 with a year's guarantee.

Repair costs

DIY enthusiasts take note: Opening the QL's case voids the Sinclair warranty so it would seem prudent to wait until the guarantee has expired before undertaking an internal up-grade. Even if the job is done perfectly, QL can be a bit temperamental and there is a real risk of unnecessary repair costs if the machine goes haywire on its own. With this in mind, the DIYers choice should - in a large part - depend upon an honest appraisal of their technical competence or the cost-effectiveness of paying for the job to be done.

Micro Peripheral's QRam is the obvious choice for the non-expert determined to go it alone. Opening the box reveals an L-shaped, 256K board fitted with 13 Ram chips and a small cabled extension.

The extension board contains 48 pins and a ribbon cable joined to the main L-shaped board with 40 connector pins at the base. There is a two page instruction sheet and diagram which is clearly written and divided into six simple steps.

The DIYer opens the QL case and removes the ZX8301 bus controller chip and the Motorola 68008 processor itself. The connector pins of the main QRam board are fitted into the sockets vacated by the ZX8301 and the small extension

board replaces the 68008. The ZX8301 and the 68008 are then reinserted into the sockets provided on the QRam boards without any need for soldering or desoldering.

The job is just about as simple as it could be. Lifting out the two QL chips is a delicate business but easy enough. Nervous types should take special care with the 68008 - it's encased in a brittle ceramic and costly to replace. Once QRam is in and the chips replaced, the fits are snug and it's only a matter of refitting the case.

The up-graded QL's total memory is now 384K but, unfortunately, that's the maximum the user can have as QRam will not work with memory add-ons utilising the computer's expansion slot. Anybody wanting more than 384K has got to look elsewhere.

Ribbon cables

Things aren't quite as technically easy with SPEM's 512K up-grade although the price is attractive. The first thing on the three page instruction sheet (with circuit diagram) is the warning not to go ahead unless "you are an expert in hardware". After opening the QL's case, all similarity with QRam installation ends and potential buyers should take the warning very seriously.

Paying for the job to be done is an obvious alternative but, unless it's cheap enough, there is a point where one should consider just sending off the QL to Silicon Express for its up-grade and a six month warranty as well.

The SPEM kit itself consists of 16 Ram

sockets, 16 HM50256 Rams and a new PAL circuit. After opening the QL's case and disconnecting the ribbon cables and loudspeaker wires, the reset button, heatsink and microdrives are taken out in a series of (careful) steps. The QL's old 128K Ram bank is unsoldered and replaced by the sockets provided. The new Ram chips are then inserted into their respective sockets. A small modification is made to the QL's ZX8301 and the new PAL circuit is installed in a series of fairly complicated solderings. Depending upon the particular QL, other small but delicate modifications may be necessary before the up-grade is complete or fully operative.

New circuit

The instructions aren't always as clear as they ought to be and there are a host of pitfalls waiting for the unwary and the non-expert - careless soldering, for example, can easily short-circuit the main board.

SPEM's kit offers a great deal of Ram for little money but it is probably only an option for the expert, or those non-experts enterprising enough to get the work done for them at little or no extra cost.

Internal upgrading, however, is probably the most rational approach to added QL Ram and both SPEM and Silicon Express deserve a great deal of credit for bringing their DIY packages on to the market at prices people can live with.

Brian Beckett

Teletext adaptor

Program TTX2000 S **Teletext Adaptor Micro Spectrum Price** £99.99 **Supplier** Volex Electronics, Lissadel Street, Salford M6 6AP.

Housed in a standard size under-the-Spectrum black box, the TTX2000 S could easily be mistaken for a modem. But its purpose is to access Oracle and Ceefax, ITV and BBC's way of making use of spare lines in TV signals, which hold text information pages, as well as a considerable amount of advertising on the commercial channels.

Strong signal

This lets a Spectrum and ordinary set receive them - it is not suitable for bulletin boards or communications - as well as downloading telesoftware directly into the micro.

The use of an identical power supply connector to the Spectrum's for the tuner creates an initial bad impression - a

simple slip could put 18V into your micro. You'll also need a strong signal to receive those spare lines and I found tuning incredibly difficult.

Once I had it set up I found that it created interference on normal vision, not that this mattered much because as far as I could tell there's no way of superimposing pages (eg, containing subtitles or newflashes) over broadcasts.

After all these problems I was surprised to find that the telesoftware downloaded without problem - I received a section of *The Living Body* program.

Normal vision

However, downloading is not fast and you're limited to Channel 4 telesoftware unless a soft converter makes the BBC transmissions available too.

All in all I wasn't impressed with the products performance and see little point in investing a penny short of £100 to indulge in the delights of broadcast teletext and software when a modem and subscription to a network gives you interaction too.

John Minson

Word lines

Program *Dr Draw Micro* Amstrad (on CP/M) **Price** £49.95 **Supplier** Digital Research, Unit 12, Fenton Way, Southfields, Basildon SS16 6SL.

DR Draw is from Digital Research, the author of CP/M, so the quality of this graphics package is assured from the start. You'd be right in thinking, though, that the price, pedigree and presentation of the package does not recommend itself to the mere dabbler. *Dr Draw* is rather for the business person wishing to make a sober presentation.

This is not to say that it is in any way less flexible. The building block with which your pictures will be built is the 'element': thus, a circle is an element which may be added to a square, also an element. This combination now becomes a third element.

Elements may be shrunk or magnified, moved around the screen, copied, filled - anything you like.

To help your design, grids of various sizes can be drawn on-screen (though rather slowly) and line-ends, box-corners and so on 'snapped', if required, to the nearest grid point. Free-hand drawing is hardly possible, unless the user has the patience to use very short lines to build up a free-looking picture. Several text fonts are supplied with the disc, and up to three at a time can be used in a picture.

The manual is a delight to see, and is an object lesson to others, leading the user slowly and carefully from basic techniques to a deeper look at each function: there's also comprehensive set of instructions for the Amstrad user. Once the picture is finished, it may be printed on printer or plotter, or prepared for camera if presentation slides are prepared.

This last sentence should indicate that this is a package for the serious business user - as such it is excellent.

Tony Bridge

All things?

Program *Personal Assistant Micro* Amstrad CPC6128/PCW8256 **Price** £94.95 **Supplier** FMP Business Software, distributed by Screens, Main Avenue, Moor Park, Northwood, Middlesex.

I imagine that this suite of six loosely related programs is aimed at busy owners of small companies who are forced to do their own secretarial duties. The names of the individual modules give a hint as to their purpose: *Bankmate*, *Billmate*, *Mailmate*, *Wordmate*, *Appointment* and, yes, *Datamate*.

The manual, produced on the *Wordmate* program, promises that the programs are compatible with the Amstrad CP/M machines - but, oh dear, they are not. And there are more bugs here than in the Insect house at London Zoo.

A few examples will suffice: the label printer works fine, except that names are not printed, only salutations and addresses (you could define the first line of the address as the name of course - simple!).

The printer menu of the *Mailmate* module refuses to accept any input, thus freezing the program and forcing a power-down (and ignoring the fact that control codes are not required for the PCW printer).

The cursor keys of the PCW don't work as promised within the *Wordmate* program, while the delete keys are also non-operative, with no mention of what might replace them.

Any references to specific Amstrad keys in the manual favour the PCW, with the 6128 owner being left to guess that many of the keys must be shifted (to be fair, Fydlar tells me that there is an update sheet to the manual, but I haven't seen it yet).

On the subject of keys, the 6128 owner will find that the numeric pad is for some reason defined as an alpha pad - easily rectified from CP/M, no doubt, but an insurmountable obstacle to the naive user. Prompts within each module (for example, Y/N) are case dependent, and users believe it or not, have to set *Caps Lock* themselves: a few bytes of code would take care of that.

Another facet of this particular failing is that, in the word

processor, the user naturally doesn't want to stay in *Caps Lock* but must return to it in order to proceed with saving, loading and so on.

Despite all this, is it worth persevering with the programs? The label printer, as we've seen, is totally useless and the appointment diary is slower and less attractive than the leather-bound paper variety. *Locoscript*, as every PCW owner knows, is almost unbeatable (certainly by *Wordmate*) and free, while the 6128 user has the choice of several infinitely superior programs, all of which are at least half the price of FMP's attempt. The invoice printer is okay if you don't have a VAT calculator around the office, but you're stuck with Fydlar's layout which can't be re-designed.

Probably the best part of the whole package is the database module, with its commendably fast sort and fine routine - it also has limited integration with the word processor and the label printer.

The manual starts well but gets worse. On balance not recommended.

Tony Bridge

Quick draw

Program *Qdraw Micro* QL **Price** £12.95 **Supplier** Psion Psion House, Norcourt St, London W1H 1DT.

There seem to be an excess of graphics packages for the QL these days, which is dominated by Talent's *GraphiQL*, so what have Psion got to overthrow Talent's number one spot?

I found that the Psion pack-

age was very easy to operate, drawing pictures in both modes. The control of the Cursor is done by using the directional keys that surround the 'S' key and the F4 key is used for special commands such as lines, expand, reduce, reflect and fill.

The main bulk of the documentation of this programme is spent on defining Shapes and how to manipulate them across the screen and changing their presentation in a variety of ways. This is somewhat useful to the freehand drawer, but if you plan your pictures well there is no need for such routines.

The answer to the question 'why buy this when *GraphiQL* is around' is that the *Qdraw* is a simpler package to operate and a cheaper one to buy. It is not as powerful as Talent's. I feel though, the difference in price makes up for the loss in facilities.

Matthew Palmer

Half baked

Program *Comic Bakery Micro* Commodore 64 **Price** £9.95 **Supplier** Imagine, Unit 10, The Park Way Industrial Estate, Heneage St, Birmingham B7 4LY.

Q uite what the connection is between racoons and a bakery

is beyond me I'm afraid, but that however is the subject of this tepid release from Imagine.

You are Joe, sole proprietor of this automated bakery whose job it is to bake as many loaves as possible before 5.00 p.m. in order to placate the hungry shoppers who are waiting in the front shop.

As Joe dutifully patrols up and down his conveyor belt,

racoons chase around switching off the machinery or eating the bread, and the only way the baker can stop them is by spraying them with of all things a stun gun (an essential tool for any aspiring baker) which sends those pesky animals to sleep for a few moments, enabling Joe to kick them out of the place. And so it goes on . . . and on and on.

On the brighter side is a gutsy soundtrack by Martin Galway, and some nice sprites of the racoons and the baker.

As this game is a Konami tie in, I suppose arcade freaks might remember it and enjoy playing their home version as this is quite a faithful reproduction, but with only two screens to play with, eventually it does get quite boring to say the least.

Dare I say it - A stale offering.

Andy Moss

Boys in blue

Program *The Force Micro* Commodore 64 **Price** £9.95 **Supplier** Mind Games, Liberty House, 222 Regent Street, London.

I f this game is at all realistic, the police have the most boring job in the country.

You play the part of the new superintendent responsible for allocating manpower in four police stations, in three shifts, seven days a week.

Your working week splits into two parts. The really boring part of allocating foot patrols, Z-cars, dog handlers,

mounted police, and the special reserve - not a brand of port but a horde of Dirty Harry clones who give the citizens the willies. You do this for the three shifts, etc, etc.

Then you sit back for the incredibly boring part where you watch the week unfold. The most exciting bit is the ticker tape which tells you when a Post Office has been robbed.

The entire game is icon-driven, which is confusing and frustrating. Numbers are denoted by colour, so a dark blue policeman's hat means one bobby, a purple hat means two, and so on.

You can also call up lots of obscure crime statistics for each area, with the end result

that the game properly involves half-a-dozen screen switches just to allocate one man. The sound is pitiful too.

In short, *The Force* is mind-numbing. No chance of disturbing the peace, but Argus could be charged for loitering without intent.

Peter Worlock

Bang bang!

Program *West Bank Micro* Amstrad **Price** £7.95 **Supplier** Gremlin Graphics, 10 Carver St., Sheffield S1 4FS.

T his game is so simple, yet great fun to play. It's like one of those police training exercises where cardboard cut-outs pop up and you have to dis-

tinguish between villain and bystander before firing.

West Bank contains some very tasty graphics which consist of mean critters like the Dalton Brothers and Jack Vicious who are hell bent on robbing the bank. There are 12 doors and as each one opens, you are confronted either with a customer or a gunman with an itchy trigger. Your job is to despatch the desperados without shooting the customers. The real prob-

lem comes when gunman is disguised as bystander.

There are quite a few extra features to enjoy, like a high noon shoot-out and a dwarf with seven hats housing either a pot of gold or a bomb!

A really entertaining game which doesn't bog you down with instructions, just lets you pull that trigger and, at the price, it's a steal!

Andy Moss

Big top

Program *Ballyhoo Micro* Commodore 64 **Price** £33.50 **Supplier** Infocom (various independent stockists).

E ven the merest hint of any impending Infocom release is normally enough for most adventure purists to start salivating at the prospect of doing battle with the devious minds of the American masters of adventure. Well, the rumours have turned to fact as before me is their very latest release - *Ballyhoo*.

It's another in their mystery series following on from *Deadline* and *Suspect* and is a standard-level game. It's set in the strange circus that time forgot - now, using a circus as a plot is nothing new (remember Brian Howarth's *Circus*) but don't be misled because with the Infocom treatment in terms of atmosphere, descriptive narrative and character interaction makes for a cracking story.

The basis of the plot is this - You've just seen the Big Top show and going backstage hoping to see some of the action behind scenes you overhear a whispered conversation about the kidnapping of the owner's daughter and the lack of any leads from the hired detective. You decide to help and are plunged into a mysterious circus world where corruption is centre stage.

There are some great characters to meet, like Andrew Jenny half-man half woman, each side with its own personality, a number of stunts to perform, and strange dressing rooms to explore.

Ballyhoo also has an even better parser than before (if that's possible) and a vocabulary of over 1700 words, the most advanced system yet.

All this comes in the usual superb Infocom packaging including authentic circus tickets and an official programme to the show.

Of course it's not cheap but the best never is. If you own a disc drive go out and buy it, you won't be disappointed.

Andy Moss

WORD PROCESSOR

by Glenn Counsell

This week sees the final part of the listing for a fully fledged wordprocessor for the Amstrad 484/664/6128 together with instructions for the use of its block manipulation functions.

CTRL + A - Deletes the block of text specified by the cursor position at the time of the first and second presses.

CTRL + I - The first press clears the screen below the cursor to allow text insertion at that point. Whilst in the insert mode this text is treated as a new text file allowing the use of all block functions.

CTRL + J - Left re-justifies a block of text defined by the cursor position at the time of the first and second presses. It places one space between each word and em-

plays wordwrapping.

CTRL + P - Prints a block of text defined by the cursor position at the time of the first and second presses.

CTRL + C/CTRL + T - The cursor position at the time of the first and second presses defines a block of text. This block is then either copied (CTRL + C) or transferred (CTRL + T) to below the cursor position at the time of the third pressing.

CTRL + E - Allows exit from the block manipulation functions at any given time before the final instruction is given.

Program notes

Wordwrapping and left justification are compulsory.

The number of text lines available depends on the text width.

Amstrad's garbage collection may occasionally suspend screen output for a short time. This is no problem, just keep on typing.

If using the wordprocessor with a tape based system carry out the following alterations:

Delete lines 80, 90, 100, 160, 170, 2440, 2460, 2680, 2660, 2670, 5440, 5450

Change the following lines to:

2150 openout "I" + fin\$

2590 openout "I" + q\$

If your finger are worn out by now then don't worry, as copies of the program can be obtained from G. Counsell, 216a Banbury Rd, Oxford for £7 (disc) or £3 (tape). Please state also whether you require the version of the program to work on disc or tape.

```

**FIRST
NORTHERN**

AMSTRAD COMPUTER SHOW

Organised by
Database Publications

**New Century Hall,
New Century House,
Corporation Street,
Manchester M60 4ES**

**Saturday, March 22 – 10am to 6pm
Sunday, March 23 – 10am to 5pm**

Bring this advertisement and save 50p
per person off the normal admission
price of £3 adults and £2 children.

The first two Amstrad Computer Shows played to packed houses in London. Now the event comes to Manchester, and with even more to offer...

- New hardware and software products galore.
- Special offers from all the leading companies.
- Free helpful advice from the Amstrad experts.

If you own an Amstrad – or are just thinking about buying one – this is the show you cannot afford to miss!

Exhibitors booked so far include: AMS, Amstrad, Amstrad Computer User, Amstrad User Club, Amtix, ANWUC, Amor, Beebugsoft, Bourne Educational, Cambrian Software, Caxton Software, Celcom Systems, Cirkitt, Compact Software, Computer Bookshops, Computing with the Amstrad, Connect Systems, Comix, Cube International, Dart Electronics, Datastar, Design Design, DKTronics, EG Computer Graphics, Electric Studio, Evesham Micro Centre, Fydler, Garwood, Grafsales, GEM Distribution, Gemini, Incentive Software, Interceptor Software, Interlock Services, John Wiley, KDS Electronics, LCL, Load & Run, Micropower, Micro Simplex, Minerva, Miniature Tool Company, Newstar, Northern Computers, Pace, Palantir, Phoenix, Preston Software, Quest, Sagesoft, Saxon Computing, Screens Micro, Shekhana, Siren, Software International, Software Plus, Tasman, Vanguard Leisure, Vulcan Electronics, Zonefour.

POP 1

SPACE PROBE

by Paul Bussey

Owing to the recent and future discoveries of the Voyager space probes, this program shows some of the aspects of these robot explorers. The program revolves around the formula; $F = (G \times m_1 \times m_2)/r^2$, where F is the gravitational force between point masses m_1 and m_2 distance r apart, with G as the gravitational constant.

In this case, one body is always stationary, this being the planetary mass. The second body is your space probe which will be affected by the gravitational pull of the planet. The aim is to direct the flight path of the probe into a certain area of space represented by a vertical or horizontal line randomly placed on the edge of the screen.

At the start of the game, the initial

velocity, initial angle and y coordinate of the probe have to be input. Each division on the y axis is 25 pixels. Zero degrees is due east, negative angles giving initial flight downwards.

Each new game gives a random mass of planet, shown in proportional size on the screen. If the planet is over a certain size then a series of rings are drawn around it. At the end of the plot, an option is given for either a new game or to keep the previous set up, and try again.

Program Notes

50-170 - The main number crunching loop. Distance between point masses, component forces and acceleration of probe are worked out. Checks if plot goes off screen.

200-280 - Uses point (x,y) to check if the flight path is plotted towards the line.

500-650 - Draws planet, the destination line, the y-axis with divisions, stars and the planetary rings, if needed.

800-870 - Uses OUT 25d,n to change the border colour with speed,n where n is the required colour, when mission is accomplished. Also gives endgame options.

1000-1500—Initialisation. Uses array as to temporarily store input values. This is where the random position and size of the planet is defined. The whereabouts of the destination line is determined. The length of the line can be changed by altering LINE at line number 1045. Increasing the variable dt speeds up the plot, but the plot is less refined. Inputs are given a range check; the ranges being permitted and the prompts are stored in a data statement. The angle is converted to radians.

HiSoft Pascal80
1001 £39.95

*Organise your
Discs with the
latest tool from
HiSoft
Catalog*

HiSoft Devpac80
1002 £39.95

HiSoft Catalog is the ideal utility for owners of CP/M machines like the Amstrad CPC range (with discs) and the PCW8256. It allows you to keep track of all your files spread across numerous discs, with date-stamping for each disc.

Catalog lets you find each occurrence of a file or group of files, it allows you to delete and rename files and it provides handy information such as the number of records in each file.

Catalog lets you give discs multi-character labels, with a full description of each disc's usage. All your floppy discs - even your hard discs - may be maintained and kept manageable with this new program.

HiSoft programmers use it all the time to locate up-to-date versions of compilers and so on. You'll find Catalog just as useful, whether you're a programmer, a database manager, a journalist or even a manic games-player. If you have lots of discs you need HiSoft's Catalog.

All this on 3" disc for your Amstrad computer running CP/M 2.2 or CP/M Plus and for almost any Z80 CP/M machine - please call or write to check availability of Catalog in your disc format.

Catalog is only £14.95

HiSoft C++
1003 £39.95

HiSoft sells a wide variety of programming languages and tools for most computers - all the Amstrad computers, the ZX Spectrum, MSX, CP/M and many more. For details of the programs advertised here and the rest of our range, please write or call.

HiSoft Pascal is an almost complete implementation of the Jensen/Wirth standard Pascal and, like all our compilers, produces pure Z80 machine code as its output. HiSoft's supreme C compilers run on every popular Z80 computer and provide just about all the features of C detailed in the Kernighan & Ritchie 'bible' (except floats).

Devpac is HiSoft's Zilog-standard Z80 macro assembler and debugging package, adopted by many computer manufacturers as their **official** machine-code development tool.

HiSoft also supplies **The Colt** Basic compiler for ZX Spectrum and **TurboBASIC** for Amstrad CPC464, CPC664 and CPC6128 owners.

We accept Access and Visa cards and are happy to take written or telephone orders. Each product we sell comes with complete documentation, is *guaranteed for life* and is fully-supported by our highly-trained technical staff. All orders are despatched by *first-class post*. Please don't forget to say what product you want and which machine it is for. Please call for export and trade prices.

RANDOM NUMBERS

by Dr R K Lowry

The SuperBasic RND function is based upon one of the most effective pseudo-random number generation algorithms I have encountered and the design of calling sequence makes it a delight to use in a wide range of situations. It therefore came as a surprise to me to find that it could not be accessed from machine code without a direct call to the Rom routine which is version dependent. Many machine code programs, particularly games, require a source of pseudo random numbers so what is the solution?

There are a couple of techniques that I have seen used. The first uses the Rom. A pointer is set to the base of the Rom and the random number routine simply returns the contents of the Rom a byte or word at a time. This works on some micros but there is a problem on the QL. The object code for the 68000 contains a high proportion of zeros, due in the main to 16 or 32 bit constants, which gives any random number routine using this method a strong zero bias.

The second method is the 16-bit 'random number' at address 2802E hex. This is *not* a random number but is in fact a counter incremented by a 50 hz interrupt service routine. Thus the sequence of numbers produced increment uniformly and it is possible to get the same value several times if the random number is sampled frequently. However, this may not be important if a subfield (eg, the least significant three bits) of the random number is used and sampling is infrequent.

Another problem with this method can be speed. Consider a loop which returns a random number in the range 256 to 512. If this is entered when 2802E contains 513, the loop will hang around for about 10 minutes until a suitable value is obtained. This may of course be coded around by taking a subfield of the random number and manipulating it. However, if the true nature of this 'random number' is not appreciated, it can take a long time before you realise why your program occasionally 'hangs'.

What alternatives are there? If you require a series of positive 16-bit random numbers (ie, random numbers in the range 0 to 32767) then the formula: $NEXT = (LAST * 1541 + 13849) \text{ MOD } 32768$ works quite well. However, the whole random number must be used and not just a subfield or the sequence of random numbers becomes extremely pre-

dictable. Likewise loops which return a random number within a specified range should be avoided.

In my opinion algorithms based upon setting a particular bit by XORing and then spinning the bits work better in the situations most commonly found in machine code programming. The assembler listing given is based upon an algorithm where a long word is shifted a single bit to the right with the most significant bit set to the result of bit two XOR bit nine. This has worked well in all but two situations.

First, the random number must not be seeded with zero or the only result possible is zero. Secondly, it is common practice to obtain a subfield of a random number by ANDing with a constant; ie, the subfield is the least significant *n* bits of the random number. If this is tested to control a program branch requiring a

smaller subfield will no longer be random. For example, consider a branch which is executed when the random number ANDed with 63 returns zero. If a random number obtained in that branch is ANDed with 15 the result will always be zero. However, this can easily be overcome by reseeding - I normally use \$2802E - or by using subfields other than the least significant *n* bits.

I hope this article illustrates some of the pitfalls awaiting QL machine code programmers who need random number generators. However, do not be too downhearted if you cannot work out which algorithm is best suited to your needs. My usual technique is to include several algorithms in a program, each as a separate subroutine, and select one of them as the 'work-horse'. In situations where the results are not what I require, I simply use one of the other algorithms.

```

```

AUTO-RUN

by W Wako

The Commodore 64, unlike a lot of the other machines on the market, does not provide for a direct means of a universal load and auto run of programs.

To overcome this oversight, the following utility was written and will load and execute programs saved to disc or tape be they in Basic or machine code.

A little understanding of the Operating System is required to understand the operation of the Loader-Run Program. When the machine is switched on and has set everything up, the machine then scans the keyboard buffer as a part of the Basic interrupt sequence. Fortunately for us, those clever "Commodore People" inserted a jump vector as part of this routine. All that is required is that when loading, this vector is altered to point to the start of the Loader Routine. After the load is completed, the system is thus directed to the start of the Loader Program which in turn loads and executes the desired program, having restored the altered vector to its original value.

The Loader Program is loaded into the Ram area from \$02A7 to \$02FF, so be sure that any programs to be loaded are not loaded to this area! This Ram area is right next to the Basic vectors. So it is a

simple matter of altering the desired vector and saving all as part of the Loader-Run Program.

The utility provides some degree of error checking of the Data statements in the form of a checksum at the end of each line. If all is well, when the utility is Run there will be a slight delay whilst the machine code routines are set up. The utility will then issue a series of prompts one of which will be a request for a "File Name". This refers to the name of the program you wish to be loaded and run. You will also be asked for the "Program Name", which is the name assigned to the Loader Program.

For machine code programs you will be asked for a "Start Address". This refers to the logical start of the program, ie, the location to which to jump to for the execution of your program. Remember to terminate all your prompts with a carriage return.

On loading your Loader Program be sure to load it as a machine code program, regardless of whether the file it will load is in Basic or machine code.

Evesham Micros PRINTER OFFERS

Look at these deals on centronics printers we believe that these prices offer the best value in the country. All prices include receipted delivery, despatch is within 48 hrs of receipt of order provided goods are in stock. A printer lead is supplied to suit your micro free of charge, (please specify Amstrad, BBC, Oric, Dragon, Einstein, CBM64 or Memotech) for Spectrum or QL owners we will supply with an appropriate interface for an additional £20.00.

SMITH CORONA FASTEXT 80

Bulk purchase allows us to offer this high quality, 80 column dot matrix printer for an unheard of price. Buy a proper printer for the price of a thermal. Friction feed is standard and an optional tractor unit is available.

ONLY £129.95

Price includes lead to suit your micro.

or to suit Spectrum with Kempston centronics "E" Interface £149.95

SHINWA/MICRO P. CPA 80 +

NOW WITH NEAR LETTER QUALITY MODE

Improved specification makes this, the latest version of this popular model, the outstanding printer buy in its class. As well as its normal superb print quality at 100cps (better than the NLQ on many rival models) it now has an NLQ Mode which offers even better print quality. This can be switched in either from a front panel NLQ switch or from software. Other features are friction and tractor feed, external dipswitches, graphics mode, square needle print head (gives less doty look to print) and Epson compatibility. Take a look at these unretouched actual size print samples.

New NLQ PICA print style

Standard PICA text (100cps)

True descenders on jpg etc.

ELITE mode gives 96 columns

CONDENSED mode gives 142 columns

ENLARGED mode

SUBSCRIPTS and SUPERSSCRIPTS

underlines nicely

Good italic character set

We are convinced that this printer offers the best performance and value in its class and at an unheard of price is a BARGAIN.

ONLY £189.95

Price includes Centronics lead to suit your micro.

Or to suit Spectrum with Kempston "E" Interface £209.95.

MICRO P. MP165

This printer is a very high specification at an unbelievable price. It boasts 165 cps in draft mode and 70 cps in near letter quality mode, which is switch or software selectable. It is friction and tractor feed as standard has a 2K buffer and is EPSON compatible (it even uses an EPSON ribbon), it can print in standard PICA 80 column mode or a variety of others from enlarged 40 column mode to condensed at 132 column. Italics are available in all modes. Normally this printer would be expected to sell at £300 plus we are offering it at our ultra keen price inclusive of printer lead to suit BBC, Amstrad, CBM 64, Oric, Dragon, Einstein or Memotech.

ONLY £249.00

Price includes Centronics lead to suit your micro.

Or to suit Spectrum with Kempston "E" Interface £259.00

TAXAN KAGA KP810

Now in stock due to popular demand, this printer which is essentially the same as the Canon PW1080A, features 140 cps draft mode and 27 cps NLQ. Friction & tractor feed, graphics capability and Epson compatible. A super printer offered at a sensational price.

ONLY £219.95

Price includes Centronics lead to suit your micro.

Or to suit Spectrum with Kempston "E" Interface £239.95

3D GRAPHICS

by Wail Sabbagh

The program involves using sophisticated graphic manipulation to rotate a three dimensional pyramid on three axis and clearly demonstrates the high speed of the new Atari computer as well as its graphics.

The program should be quite easy to understand, as it is divided into several subroutines:

- Initialise:** set the arrays and variables of the program
- Background:** draws the axis in ST

Draw: virtual screen draws the actual pyramid

Rotate: updates x,y and z coordinates

GEM is turned off in this routine to speed it up.

This demonstration will prove useful for children who find it difficult to think in 3D, as well as older users who are interested in the theory behind the manipulation of 3D - plus showing off the power of the Atari ST.

Can YOU avoid the fangs of a deadly spider?

BOFFIN

A Mad Professor on the Loose

Boffin is a challenging, action-packed game requiring a combination of cunning and slick keyboard control. Beware the Giant Puffer – Blimps in your way and give the massive Tarantulas a wide berth! Land on the giant hydraulic rams and they will slam you into deadly neutron magnets embedded in the cave roof! Manta-bats are useful allies and the trampolines will help you gain height – but remember to use your umbrella to break a fatal fall!

Available BBC B and Electron £9.95

Recent hits

Despite the traditional rush to release software in time for Christmas, it seems that some of the very best games programs have been held back until now. The Commodore 64 has had some excellent pure arcade releases lately; *Uridium* from Hewson being of particular note. Ever since I saw the smooth multi-directional scrolling of *Gribbly's Day Out* I've been longing for them to use the routines for a space blast and here it is. Fast, furious and great fun. The only thing to match it is, of course, the superb *Mercenary* from Novogen and there are lots of interesting rumours about a forthcoming *Mercenary 2*. Let's hope it isn't as long appearing as the first one.

US Gold has also slipped out two of their best games to date: *Kung Fu Master* is an extremely addictive copy of the arcade game of the same name and is slightly different from other karate games in that it gives you several, very fiendish, opponents at once. *Hard Ball* is one of the best looking sports simulations I've ever seen, although a bit tricky to play. Lets hope that they make a good job of the conversions. Incidentally, BBC owners should note that US Gold is now converting some of its recent hits for that machine.

Licensing deals are of course still popular, but they seem to be settling down and actually adding something to the game other than cheesy attempts at making the sprites look like TV characters, etc. *Back To The Future* is possibly the best release to date from Electric Dreams and is an arcade adventure based on the plot of the film - different from the usual fare and with nice digitised graphics.

Battle of the Planets from Mikro-Gen, on the other hand, is a little disappointing - there is some of the smoothest and fastest 3D vector graphics yet seen and it's a good shoot up, but it lacks in plot and some of the enemy ships look like Rowenta steam irons.

Ever since the release of *Knight Lore* there have been loads of games using a similar 3D design and the whole thing has started to get a little boring. To date, only *Sweevo's World* and *Rasputin* have made any attempt at improving on the

atmosphere and plot of the games. All that has changed now, with *Movie* from Imagine, a game set in the world of a 1940's Philip Marlowe detective story that is a superb complement to the 3D design.

An original story line and some nice touches such as speech bubbles have breathed new life into the Spectrum - don't miss it.

Anyway, enough of the games news for this week and on with the tips. Here's a couple of little bugs that I've picked up on the Amstrad version of *Bruce Lee*. First off, if you move to the right on to the third screen and go to the bottom right level, beneath the big hippo, by pressing the down key you will jump several screens and reappear at a much later stage in the game, missing out on some rather sticky problems.

Secondly if on the opening screen you select the option of one player against an opponent rather than against the computer, you will find that you start with nine lives rather than the usual three. The next trick is to get to the screen that has an object like a huge double Chinese lantern. Collecting this will normally give you an extra life, but if you can do it without losing one of your nine on the way you will be rewarded with a magnificent 99 lives.

I have managed to complete the game, although it needed nearly all of these lives - has anyone got a reliable system

another ankh symbol on the wall and some skeletons will appear. Match the two symbols before they get you and they will be stopped.

The symbol will change and fall off the wall - take it. You will find a different room with the changed symbol on the wall. Match it with the ankh and skeletons appear, match it with the new symbol and the magic is switched off and the one on the wall changes into a crown symbol and falls to the ground. Take this and find another crown symbol to match it to reveal the exit.

The cursed key is useful here to unlock many of the doors. Whilst you are looking around beware of invisible snakes that become visible if you touch them.

Use *Heal* if they bite or use *Mantle* to protect against all magic and poisons.

Find the small blue key and use it to unlock two blue chests. Take the spells and a door key. Open the door to the third wraith room with this. *Bane* and wraiths. Use the same key at the other end. Keep *Bane* on and search the tombs for spells. Search with the crown symbol to get the crown but avoid the hand that will fall down.

Take the crown to the anvil to destroy it.

Now place the crystal of antithought on the anvil so that it can absorb the magic. You get the message, 'Now gem can tame five legged Morag's Bane'.

Bruce Lee from US Gold

for getting through the screen that has four levels of moving platforms (you will know the one I mean, if you've got that far)?

Now we are going to return to the demon cursed depths of *Dragontorc*, to find out what has happened to poor old Maroc (this is just like *Eastenders*).

We left him underground in the cursed crypt clutching a cursed key and an ankh symbol. Find the room with

Take the gem to the cursed crypt and take the hand with it. Leave the gem.

We're on the last stage now - proceed to Wyemwood which is where the evil Morag can be found at last, guarded by an evil creature that she has summoned to her side and also lots of handy elvish cannon fodder for you to use. Unfortunately that is where we are going to leave you to sweat it out for yet another week.

Tony Bridge's Adventure Corner

In vogue

Why should record buyers have all the fun when it comes to collections? We adventurers too should be able to buy tapes of several well-selected examples – and indeed, this sort of compilation tape seems to be enjoying a vogue at the moment. I hope that it continues, because, as you'll see, there are some good collections around at the moment.

Last week, we saw a pack of reasonable adventures at a reasonable price: this week, a couple more.

Pimania, after a short rest, has returned, I'm glad to say, in the form of *10 Packs*. I've seen volume three, and I imagine that it is in much the same vein as the others; that is, several arcade games together with a couple of text adventures.

In this case, the arcade games are pretty dire: in fact, ZX81ers would laugh with barely-disguised pity, although there is at least one (*Crazy Castles*) that might persuade the player to postpone more mundane amusement such as kicking the dog.

Buried amongst the dross, however, are the two adventures. *The Royal Adventure of a Common Frog* by Terry Braverman is wacky indeed. It's "rescue the princess" time again, but this time, instead of starting out on your white charger with trusty sword in hand, you begin the adventure sitting on your little lily-pad.

Yes, you're the frog, of course, which means that you are amphibious and can happily swim down from the pad to start your quest.

The layout is standard *Quill'd* stuff, white text on blue paper, although the

adventure is *Illustrat'd*, so many of the locations have associated pictures: actually, not far from the start, you'll come across a maze, and the fact that the program draws pictures only in previously unvisited locations should help you here.

Quite a large number of locations to be visited, however, and enough to keep the player going for some while. The puzzles are quite entertaining, particularly as you will eventually be transformed from a frog to – gasp – a full-grown human (well, a prince anyway).

The second adventure on the tape is an old favourite of mine, *Here be Tygers*, from Bob Franklin. One of the few *Quill'd* adventures with absolutely no sign of a spelling blunder! It's a beautifully-written adventure, at the start of which you find your toe stuck up the tap in your suite in the Penge Hilton. Just another Saturday night really!

There are several introductory screens full of instructions, during which

Tygers is a warped sense of humour, a pair of jeans and a tin ear: this last requisite comes in handy when in contact with the singing obstetrician, Dr Hank Wangford. A sweatshirt emblazoned with his picture is present in the first location, don't ask me what purpose it fulfills in the game, just get it and wear it! Now you know about as much as I do – just play and enjoy, but a warning: this game will pollute your computer and damage your tender little ego!

Artic has also recently issued a compilation tape, but in this case, the tape contains two arcade games on the first side, with on the second side, two adventures, *Curse of the Seven Faces* and *Robin Hood*. I've raved over *Seven Faces* before, so I won't go into detail here, but suffice to say that it is an extraordinarily good text game, with lots of tough puzzles and plenty of humour. One day, this adventure will get the fame it deserves.

Robin Hood is *Quill'd* and *Illustrat'd*,

with a spindly character set which is rather difficult to read sometimes. Quick death greets you at many turnings, but play is very quick and you'll soon work out where not to go. The occasional odd spellings don't, however, detract from the fact that there are lots of objects, treasures and locations (nicely illustrated) waiting to be explored and taken, and it is fairly easy to find the purpose of keys and other artefacts.

St Bride's School

you learn that "Certain Parties" (again) need a volunteer... ah, you've just volunteered. For what? Well, it's a case for saving the universe again, starting on planet Gekko 4: the Certain Parties are the eponymous Tygers of Gekko 4.

After translating the instructions, which are written in ancient Sumerian, you'll know that all you have to do to solve this adventure is to, among other things, rescue the 19th iridescent owl from the flaming pit, spoken the spell of Oblivion from the lexicon of the Undead, bored the weregerbil to death, read the small print, rescued the droid's peanut butter – well, you get the picture, and after that, things start to get difficult!

The essential things in tackling

Although there is a bit too much of the "You see nothing special" kind of response, the adventure is satisfying to play for beginners, who will find plenty to do before becoming completely stuck: and for the expert, *Robin Hood* is a pleasant way to spend a few hours.

Finally, at last I don't have to suffer alone in reading Sensible News Releases from that seat of lunacy, I mean learning, St Bride's School. *The St Bride's Swashbuckler* will be packed to bursting with, they say, news of forthcoming games, articles about adventures and arcade games, comics and so on. What's more, teacher is offering the first issue free to anyone who sends two stamps to cover postage, to: Swashbuckler Offer, St Bride's School, Burtonport, County Donegal, Ireland.

Buckle your swash and send off as soon as you can – St Bride's is now an officially recognised industry in Ireland, and you'll be doing your bit for the economy: apart from which, why shouldn't you suffer as well?

Adventure Helpline

Going bananas? If you are stuck in an Adventure with nowhere to turn do not despair – help is at hand.

Fill in the coupon, explaining your problem, send it to us, and a fellow adventurer may be able to help.

Remember – the system only works if those adventurers who have solved the puzzles get in touch. Every week is Save An Adventurer Today (SAAT) week!

SOFTWARE

WDSOFTWARE

FOR THE QL:

JOSS base £13
Forget that tedious, time-consuming syntax! Just move the cursor and press SPACE for all your file commands. Cursor keys or your joystick allow you to access microdrives (up to 8) and floppy discs (as many as our interface allows) with up to 150 files on each! Scroll and print directories, COPY, DELETE or PRINT any file, select TV or Monitor mode before LOADING or RUNNING any program. You only use the keyboard to set the DATE or label a device when FORMATING. Easy to use with Pison and other software. No silly icons to learn — JOSS will TELL you what it's going to do! Programmer's toolkit and mass copying/printing utilities also supplied. Specify microdrive-only, Microperipheral or CST-compatible disc versions.

Ref QL7 base £7
1300 useful QL references with ARCHIVE 2 search/print program. Too long for just one cartridge, so if you have RefQL5 just pay 2 and extra media cost to update.

Mdv Extension Cable £5.50
Eight inches long; allows addition of extra microdrives to your QL. Twist it to put their slots facing you.

FOR THE QL: SPECTRUM; BBC; ELECTRON

WD Morse Tutor base £4
Written to teach amateurs, now used by professionals too! Absolute beginner, or stretching your speed to 18 wpm, you won't find anything with more helpful features. What else can offer 100 random sentences as well as all the basics? Disc version unavailable for BBC B+.

FOR THE SPECTRUM:

Wordfinder (Microdrive/disc only) base £8
For CHEATING at crosswords. Finds miss-spelled letters, solves anagrams, 13,000 word vocabulary, so too long to share a cartridge. 10-letter word ending in ATE? No problem.

Tradewind base £3
Sailing/trading strategy game with graphic surprises.

Jersey Quest base £3
Text adventure in time. Background of Jersey folklore from Stone Age to Berengerac.

For export:
QL hardware and software from many sources. Ask for list/quotation.

ORDERING ADD COST OF MEDIUM, POSTAGE £1 OUTSIDE EUROPE.
Mdv or 5.25" floppy = £2 3.5" floppy = £4 Cassette = £0

The 1st choice

EXPRESS SPECTRUM, BBC and COMMODORE REPAIRS!

2 GAMES
(WORTH £10) WITH
EVERY REPAIR*

WHY PAY HIGH
'FIXED'
PRICES

Spectrum
repairs between
£9 and £20.

BBC repairs
between
£14 and £45.

Commodore
repairs between
£14 and £35.

*Spectrum only

(We do not charge you for our fancy premises by charging high 'fixed' prices!)

Reputations take time to build. We have been repairing ZX81's, Spectrums, QL's, Apples and BBC's professionally, for 2½ years - who is coming second?

In all U.K. with While-u-Wait repairs with INTERNATIONAL repair service!

to charge LOW PRICES for the smaller repairs (e.g. £9 for keyboard faults)

FOR LOW PRICES - "My computer blew recently, I took it to MANCOMP, who fixed it in 8 minutes and for less than £10! They are local, 'clued up', and blindingly efficient!" 4 HEATONS DIGEST.

FOR PROFESSIONALISM - "Of all the repair companies, 'Sinclair User' spoke to, MANCOMP seemed the MOST PROFESSIONAL when it came to advice and a helpful attitude" AUG 85.

FOR HONESTY - We let you watch your computer being repaired and if there is nothing wrong with it, we will tell you!!

FOR REPUTATION & HELPFULNESS - "I have come across a firm that will be more than willing to advise you as to how to remedy your problems. They are called MANCOMP and as well as repairing faulty computers, are also quite willing to discuss your problems with you and offer reasonably cheap and more importantly CORRECT CURES" Phil Rogers POPULAR COMPUTING WEEKLY JAN 85.

FOR SPEED - "One firm at least can effect any necessary repairs over the counter in 45 minutes. Based in Manchester, MANCOMP can offer what is arguably the FASTEST turnaround in the business to personal callers" CRASH Magazine JUNE 1985.

THIS IS WHY Spectrum users from London, Cornwall, Scotland, Birmingham, Liverpool, Coventry, Leicester, Glasgow, 12 M, etc. AUSTRALIA, AUSTRIA, BELGIUM, EGYPT, EIRE, GERMANY, HOLLAND, KUWAIT, NORWAY, PAKISTAN, PAPUA

NEW GUINEA, SAUDI ARABIA, SWEDEN, SWITZERLAND and ZIMBABWE - send their Spectrums to MANCOMP for repair!
24 HR. TURNAROUND NO QUIBBLE GUARANTEE. NO HIDDEN COSTS.

Because we repair hundreds of computers every week, we are able to pass on our 'component-buying discount' to YOU in lower prices... 280A cpu £1.50, 4116 50p, Upgrade fitted £18.95 - we bring down the prices for repairs and components!

(We may refuse to revive computers suffering from attempted D.I.Y. repairs!)

Every parcel sent by Royal Mail Receipted Post and insured for return journey! (For next day delivery include £1.50 extra).

(Security by prior arrangement). On-site maintenance for Apples, I.B.M.'s and most makes of printers also available.

Guaranteed 4hr response! WHY DELAY - OUR ESTIMATES ARE FREE AND WITHOUT OBLIGATION. IF

YOU DO NOT LIKE OUR ESTIMATE, WE WILL RETURN THE COMPUTER AND REFUND THE POSTAGE INCURRED

EARN A FORTUNE!

Make Money From Used Computers is an incredible new manual which shows how you can earn you a fortune from buying and selling used home computers, accessories and software for amazing profits. You can make hundreds a week from this vastly under-exploited market with the hard-earned facts and figures contained in this information-packed 25,000 word guide.

Even if you do not own a computer this report will give you all the necessary facts. Contents include how to get stock, what to pay, what to charge, what to sell - and what to avoid, sales techniques, testing, profitable sidelines, computers, software, printers modems, disk drives, monitors and much more.

Whether home-based, mail order, or in a shop, Make Money From Micro will show you exactly how to run a part-time business or make a full-time living from this highly lucrative market. This must be the biggest money spinner yet so don't waste a second. Order a copy right now and start earning real cash - a single sale can recoup your outlay many times over!

Make Money From Used Micros - £8.95 inc. p&p.

Distributors Wanted

PROGRAMMERS

Superb opportunity for persons with creative thinking ability.

Several vacancies exist for proficient machine code programmers with an extensive knowledge of Z80 and 6502 assembly language.

A knowledge of 68000, C and hardware would be an advantage. Self motivation and a strong interest in home computers are essential.

PROGRAMMER/ ENGINEER

We have an immediate requirement for a Programmer/Engineer to provide both a maintenance service for our range of Z80, 6502 and 68000 based machines as well as undertake development projects and systems software.

Applicants should be qualified to degree or equivalent level in electronics.

Write (including c.v.) or telephone:

Mrs. Mitchell

Winning Phrase No 64: "Amstrad Elite: no go", from Mark Lumley of Morden in Surrey, who wins.

Now voting on week 66 - £25 to win

Each week *Popular* is compiling its own special software top ten chart - compiled by YOU.

And each week we will send £25 to the person who sends in, with their chart votes, the most original (witty, neat or clever - but never rude) phrase or sentence made up from the letters (you don't have to use them all) in the titles of the top three programs in this week's Readers' Chart, published above.

You can still vote in the chart without making up a slogan - but you won't be in with a chance of winning the prize.

All you have to do is fill in the form below (or copy it out if you don't want to damage your magazine) and send it off to: Top 10, *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2H 7PP.

Voting for Week 66 closes at 2pm on Wednesday March 12, 1986. Entries received after that time will not be eligible for inclusion in that week's voting. The judges decision is final. Only one entry per individual per week will be allowed.

Name	My top 3: Voting Week 66

New Releases

STUNNING

Lurking behind the rather naff cover of *Contraption* is an inventive platform and ladders game with some of the most stunningly detailed graphics ever seen on the Amstrad. Perhaps not all that surprising really since it is converted from an excellent BBC game which also featured fine graphics.

The game plays in hi-res mode and features a plot totally designed to encourage loony animation as it's chock full of wackyness as it is of alliterations (poisonous plants, bouncing bombs, pumping pistons, jiving jelly-fish - that sort of thing.)

Does anyone really need to know about the plot? You have to collect some objects, step on things and dodge whatsits, you being a terminally mad professor (isn't everyone). Nevertheless, no matter what other bounce and jump games you own, *Contraption* is another necessary

addition. Not only are the graphics superb but the 11 screens are so fiendishly planned that the game provides a challenge equal to that of the original Miner game. Highly recommended.

TRIPLE SCORE

Great news for QL owners with another one of those rare packages that actually uses some of the power of the machine and this forms a mandatory purchase (even for those currently only using their QL for business).

Computer *Scrabble* has been around for a while and I still find the original Spectrum version one of my most frequently loaded titles. The QL version is certainly the finest so far with extra features and a larger dictionary.

Unlike other versions, the board on the QL edition is large enough (filling around two thirds of the screen) to incorporate information on double letter triple word score positions (by letters rather than square colours). The rack, displayed in the bottom of the screen, is large with a nicely designed, authentic looking, character set.

Every option you could possibly want is present; playing against the computer, skill level, speed levels, save game, even a timer for two

Pick of the week

Sticking my neck out I will predict that, in the long run, programs like *Fleet Street Editor*, will be of more practical use to more home users than a thousand home budget or spreadsheet programs. What *Fleet Street Editor* allows you to do, with a few restrictions on this version, is design a printed page. What a wordprocessor does for words, *Fleet Street Editor* does for words and pictures.

Who needs it? Small businessmen who can knock out customised ads/rate cards, people holding functions like fairs and jumble sales, clubs with a use for newsheets and booklets (computer clubs and adventure clubs spring immediately to mind), school magazines, freelance writers wanting a customised logo or heading, etc, etc.

You require a BBC B, disc drive and a dot matrix printer. It is relatively simple to configure the program for your particular set-up from within the program. As with all commands, the main options required are selected via icons - a number of printers are already listed if yours is not.

A library of graphics is held on a separate disc, there are a large number of predefined shapes and logos covering everything

THE PRINTED

from elaborate illuminated manuscript style letters to a digitised Margaret Thatcher. These shapes may be 'pulled in' from the library by marking them out with a cursor driven box; they can be used in virtually any size and stored for use in the final make-up.

An alternative to using the graphics layout is to design your own shapes using a straightforward, but completely acceptable 'artists designer' package built into the package. This provides (again via icons) the usual draw, fill, expand/reduce, facilities, and again the graphic is saved for later use.

Actual layout of the page occurs via panels, this is the major restriction in the program. You must work in terms of a series of page subdivisions called panels - you have a choice of either eight (four down each

PAGE

half of an A4 sized sheet) or four (four running right across the page) or a combination. The construction of each panel is a matter of manoeuvring the graphic to the correct place and typing text in around it. The program automatically arranges the text.

Once each panel with text has been constructed, it is possible to look at the completed page in a slightly schematic form.

There are obviously a great many more procedures and subtitles including using wordprocessor files from other sources (like View) and a variety of body text styles. The manual includes an extensive general feature on the whole business of publishing - sections on litho printing and photocopying; nothing, though, about moving to Wapping...

This BBC package is the 'baby' of the Fleet Street range and suffers slightly from memory limitations, despite the extensive use of discs. Nevertheless, it is a very useful and user friendly package.

minutes to go, tournament rules, etc. I played the computer at a middling level and found the responses easily fast enough and intelligent enough to give me more than a run for my money (well, actually I lost). Things started badly with oozing on a double word and continued with the outrageous (but legal) toeline on a triple.

An excellent program, and astonishingly enough it costs no more on microdrive for the QL than the Spectrum original cost on tape - £14.95. For a program of this quality, that is very cheap indeed. It doesn't matter if you don't like games - pretend it's an educational tool for improving your vocabulary (perhaps it is) and hide it among the spreadsheets.

VISUAL PROBLEM

In the past year or so Bubble Bus has become one of the more highly regarded independent (ie, not part of US Gold) software houses with releases like *Wizards Lair* and *Starquake*.

Latest from the company is an Amstrad game called *Deathville*. It is an arcade adventure game closely moulded on *Sorcery* with detailed multi-coloured graphics and complicated plot. I think the game lacks some of the professional finish in *Sorcery* and is a little rough around the edges.

Whilst *Deathville* features woods and caves, boiling cauldrons and oak doors all drawn in multi-coloured detail, the graphic design makes it sometimes a little difficult to see what is what. Another visual problem is the central figure, he lacks any substance or solidity - this is definitely a mistake, since the other characters don't have this problem.

Although the controls have been reduced to up, down, left, right, pick up, drop, there are, nevertheless, a large number of complex puzzles in the game.

For addicts of this style of adventure, *Deathville* has much to offer, otherwise you may remain unconvinced.

CORRUPTED

Microdeal have leapt into the Atari ST market with a number of disc utilities packaged in smart, shiny, silver plastic folders. *Disk Help* is a sort of mini Disc Doctor in that it helps you recover, to some extent, corrupted programs.

There are essentially two different kinds of damage that may occur to a disc - magnetic, where the disc is physically OK but data has been corrupted, or physical, where the disc itself is damaged.

Whatever the problem the program will take a damaged disc and rewrite it byte by byte on to a fresh disc, filling in any missing data with X's. At this stage you should be able to load and correct the new version of the file.

The programs contain a couple of other utilities as well - format (without returning to desktop) and a special format that does not erase existing data since it saves it first, formats the disc and then rewrites it to the fresh disc. One final useful feature - discs formatted under this system may be used even if there is an error somewhere on the disc.

Quite a useful utility then, easy to use for the beginner and suitable for use with both single and double-sided discs and drives.

Chat lines

Do you remember the ad for business computers that emphasised their networking capabilities, and ended with the slogan, 'We should be talking to each other'? It struck me at the time that the slogan is at odds with the image of the computer hobbyist as a solitary being, staying up to the early hours either playing or programming games. Has the computer led to increasingly isolated individuals, I mused?

Then, more recently, I was given a tour of Micronet 800, the home computer user's database on Prestel, and as I shown the various facets of the network it became clear that far from being a lonely and introverted activity, computing has great and radical potential for bringing people together. So if what I say about electronic publishing refers specifically to Micronet, I hope the other networks will forgive me - the implications apply to them all, from the largest to the smallest bulletin board.

Put aside the downloading of games, the multi-player adventures and the competitions, and look instead at the chat lines. Here, for only 40 pence per hour, off peak, anybody with a computer can 'talk' to other computer users anywhere in the country in CB emulation style - that's to say that there's time to read a message then it clears for the next one. Nothing so radical in that, except that you've no idea who you're talking to - there is nothing physical to create preconceptions about a person.

Then there are the specialist areas of these open forums. Want to discuss politics? There's an area for you. What if

you're gay? Micronet's most used section is their gay chatline, and though computers and affairs of the heart may seem strange partners, it makes a lot of sense, providing an opportunity to talk for those who dare not or will not come out.

Perhaps the most exciting possibility though is for the disabled. Somebody who is house-bound, for whatever reason, can suddenly find themselves part of a widespread social net, providing they can use a keyboard, and they can be sure that there won't be any adverse reactions to their disability because nobody need know. On a bulletin board, everyone is equal.

By now I was extremely excited by the possibilities of the networks. Then a doubt set in. Could people expect this idyllic state of free speech to last forever? Certainly Micronet won't censor communications. The only way to get thrown off the network is to raise the wrath of so many people that they start to complain. But free and open exchange can be a frightening thing for governments and the networks allow not only for chat-lines but also publishing. Using the Gallery pages, subscribers can write and illustrate their own electronic magazines, to be read by any other subscribers. And those magazines can contain whatever views they want.

Now I wouldn't want to suggest that our present government is censorship happy (after all, we don't even have film censors any more - while tightening up and extending their powers they made the C stand for Classification) but one day an MP looking for a cause to woo the voters will seize upon so much subversive free speech and pounce.

Bulletin boards and networks still have something of an air of mystery, an arcane area for the boffins of computing, which is sad. With the very reasonably priced modems available and highly reasonable subscription charges there's no reason why many more people shouldn't be taking advantage of the opportunity to log on and spread ideas. Yes - we should be talking to each other!

John Minson

Puzzle No 198

'Flickafree Rentavision' the television rentals firm has just come to the end of a three week sales campaign, which has resulted in a record number of new installations. Over this three week period a total of 96 TV sets have been installed, and each week was an improvement on the previous week.

When the figures for each week came to be analysed it was noted that the difference in sales between the first and second weeks, multiplied by the difference in sales between the second and third weeks, came to the actual number of sales during the first week.

How many sales were made during the third week?

Solution to Puzzle No 193

The dates of birth were: Simon's father 3:8:1924, Simon's mother 8:5:1929, Simon 31:7:1961, Simon's cousin 2:8:1961, Simon's sister 4:7:1969.

330 DATA 59,76,81,84,89,96
```

It is fairly well known that square numbers can only end with the digits 0, 1, 4, 5, 6, or 9. Not so well known is the fact that if the final two digits are taken these can only be one of 22 possible two-digit termini. These are the values used in the DATA statements, and which are used in Line 80 to generate the year values in the range 1900 to 1996.

The program generates all dates having 31 days and 12 months for each of these years, and tests the resulting figure to determine if it is a perfect square. Any found are printed out.

Winner of Puzzle No 193

The winner is I A Scott of Darlington, County Durham, who will be receiving £10.
