New ZX81 Software from Sinclair.

A whole new range of software for the Sinclair ZX81 Personal Computer is now available – direct from Sinclair. Produced by ICL and Psion, these really excellent cassettes cover games, education, and business/household management.

Some of the more elaborate programs can only be run on a ZX81 augmented by the ZX 16K RAM pack. (The description of each cassette makes it clear what hardware is required.) The RAM pack provides 16-times more memory in one complete module, and simply plugs into the rear of a ZX81. And the price has just been dramatically reduced to only £29.95.

The Sinclair ZX Printer offer full alphanumerics and highly-sophisticated graphics. A special feature is COPY which prints out exactly what is on the whole TV screen without the need for further instructions. So now you can print out your results for a permanent record. The ZX Printer plugs into the rear of your ZX81, and you can connect a RAM pack as well.

Games

Cassette G1: Super Programs 1 (ICL)

Hardware required – ZX81.

Price – £4.95.

Programs – Invasion from Jupiter. Skittles. Magic Square. Doodle. Kim. Liquid Capacity.

Description – Five games programs plus easy conversion between pints/gallons and litres.

Cassette G2: Super Programs 2 (ICL)

Hardware required – ZX81.

Price – £4.95.

Programs – Rings around Saturn. Secret Code. Mindboggling. Silhouette. Memory Test. Metric conversion.

Description – Five games plus easy conversion between inches/feet/yards and centimetres/metres.

Cassette G3: Super Programs 3 (ICL)

Hardware required – ZX81.

Price – £4.95.

Programs – Train Race. Challenge. Secret Message. Mind that Meteor. CharacterDoodle. Currency Conversion.

Description – Fives games plus currency conversion at will – for example, dollars to pounds.

Cassette G4: Super Programs 4 (ICL)

Hardware required – ZX81.

Price – £4.95.

Programs – Down Under. Submarines. Doodling with Graphics. The Invisible Invader. Reaction. Petrol.

Description – Five games plus easy conversion between miles per gallon and European fuel consumption figures.

Cassette G5: Super Programs 5 (ICL)

Hardware required – ZX81 + 16K RAM.

Price – £4.95.

Programs – Martian Knock Out. Graffiti. Find the Mate. Labyrinth. Drop a Brick. Continental.

Description – Five games plus easy conversion between English and continental dress sizes.

Cassette G6: Super Programs 6 (ICL)

Hardware required – ZX81 + 16K RAM.

Price – £4.95.

Programs – Galactic Invasion. Journey into Danger. Create. Nine Hole Golf. Solitaire. Daylight Robbery.

Description – Six games making full use of the ZX81's moving graphics capability.

Cassette G7: Super Programs 7 (ICL)

Hardware required – ZX81.

Price – £4.95.

Programs – Racetrack. Chase. NIM. Tower of Hanoi. Docking the Spaceship. Golf.

Description – Six games including the fascinating Tower of Hanoi problem.

Cassette G8: Super Programs 8 (ICL)

Hardware required – ZX81 + 16K RAM.

Price – £4.95.

Programs – Star Trail (plus blank tape on side 2).

Description – Can you, as Captain Church of the UK spaceship Endeavour, rid the galaxy of the Klingon menace?

Cassette G9: Biorhythms (ICL)

Hardware required – ZX81 + 16K RAM.

Price – £6.95.

Programs – What are Biorhythms? Your Biohythms.

Description – When will you be at your peak (and trough) physically, emotionally, and intellectually?

Cassette G10: Backgammon (Psion)

Hardware required – ZX81 + 16K RAM.

Price – £5.95.

Programs – Backgammon. Dice. Description – A great program, using fast and efficient machine code, with graphics board, rolling dice, and doubling dice. The dice program can be used for any dice game.

Cassette G11: Chess (Psion)

Hardware required – ZX81 + 16K RAM.

Price – £6.95.

Programs – Chess, Chess Clock. Description – Fast, efficient machine code, a graphic display of the board and pieces, plus six levels of ability, combine to make this one of the best chess programs available. The Chess Clock program can be used at any time.

Cassette G12: Fantasy Games (Psion)

Hardware required – ZX81 (or ZX80 with 8K BASIC ROM) + 16K RAM.

Price – £4.75.

Programs – Perilous Swamp. Sorcerer's Island.

Description – Perilous Swamp: rescue a beautiful princess from the evil wizard Sorcerer's Island: you're marooned. To escape, you'll probably need the help of the Grand Sorcerer.

Cassette G13: Space Raiders and Bomber (Psion)

Hardware required – ZX81 + 16K RAM.

Price – £3.95.

Programs – Space Raiders. Bomber. Description – Space Raiders is the ZX81 version of the popular pub game. Bomber: destroy a city before you hit a sky-scraper.

Cassette G14: Flight Simulation (Psion)

Hardware required – ZX81 + 16K RAM.

Price – £5.95.

Program – Flight Simulation (plus blank tape on side 2).

Description – Simulates a highly manoeuvrable light aircraft with full controls, instrumentation, a view through the cockpit window, and navigational aids. Happy landings!

Education

Cassette E1: Fun to Learn series – English Literature 1 (ICL)

Hardware required – ZX81 + 16K RAM.

Price – £6.95.

Programs – Novelists. Authors. Description – Who wrote 'Robinson Crusoe'? Which novelist do you associate with Father Brown?

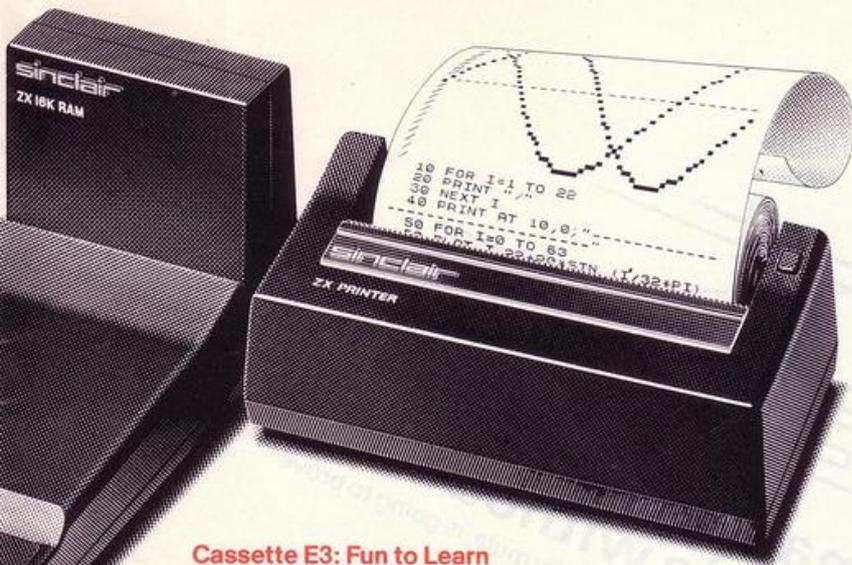

Cassette E2: Fun to Learn series – English Literature 2 (ICL)

Hardware required – ZX81 + 16K RAM.

Price – £6.95.

Programs – Poets, Playwrights. Modern Authors.

Description – Who wrote 'Song of the Shirt'? Which playwright also played cricket for England?

Cassette E3: Fun to Learn series - Geography 1 (ICL)

Hardware required - ZX81 + 16K RAM.

Price - £6.95.

Programs - Towns in England and Wales. Countries and Capitals of Europe. Description - The computer shows you a map and a list of towns. You locate the towns correctly. Or the computer challenges you to name a pinpointed location.

Cassette E4: Fun to Learn series - History 1 (ICL)

Hardware required - ZX81 + 16K RAM. Price - £6.95.

Programs - Events in British History. British Monarchs. Description - From 1066 to 1981, find out when important events occurred. Recognise monarchs in an identity parade.

Cassette E5: Fun to Learn series - Mathematics 1 (ICL)

Hardware required - ZX81 + 16K RAM. Price - £6.95.

Programs - Addition/Subtraction. Multiplication/Division. Description - Questions and answers on basic mathematics at different levels of difficulty.

Cassette E6: Fun to Learn series - Music 1 (ICL)

Hardware required - ZX81 + 16K RAM. Price - £6.95.

Programs - Composers. Musicians. Description - Which instrument does James Galway play? Who composed 'Peter Grimes'?

Cassette E7: Fun to Learn series - Inventions 1 (ICL)

Hardware required - ZX81 + 16K RAM. Price - £6.95.

Programs - Inventions before 1850. Inventions since 1850. Description - Who invented television? What was the 'dangerous Lucifer'?

Cassette E8: Fun to Learn series - Spelling 1 (ICL)

Hardware required - ZX81 + 16K RAM. Price - £6.95.

Programs - Series A1-A15. Series B1-B15. Description - Listen to the word spoken on your tape recorder, then spell it out on your ZX81. 300 words in total suitable for 6-11 year olds.

Business/household

Cassette B1: The Collector's Pack (ICL)

Hardware required - ZX81 + 16K RAM. Price - £9.95.

Program - Collector's Pack, plus blank tape or side 2 for program/data storage. Description - This comprehensive program should allow collectors (of stamps, coins etc.) to hold up to 400 records of up to 6 different items on one cassette. Keep your records up to date and sorted into order.

Cassette B2: The Club Record Controller (ICL)

Hardware required - ZX81 + 16K RAM. Price - £9.95.

Program - Club Record Controller plus blank tape on side 2 for program/data storage. Description - Enables clubs to hold records of up to 100 members on one cassette. Allows for names, addresses, 'phone numbers plus five lots of additional information - eg type of membership.

Cassette B3: VU-CALC (Psion)

Hardware required - ZX81 + 16K RAM. Price - £7.95.

Program - VU-CALC.

Description - Turns your ZX81 into an immensely powerful analysis chart. VU-CALC constructs, generates and calculates large tables for applications such as financial analysis, budget sheets, and projections. Complete with full instructions.

Cassette B4: VU-FILE (Psion)

Hardware required - ZX81 + 16K RAM. Price - £7.95.

Programs - VU-FILE. Examples.

Description - A general-purpose information storage and retrieval program with emphasis on user-friendliness and visual display. Use it to catalogue your collection, maintain records or club memberships, keep track of your accounts, or as a telephone directory.

How to order

Simply use the FREEPOST order form below and either enclose a cheque or give us your credit card number. Credit card holders can order by phone - simply call Camberley (0276) 66104 or 21282 during office hours. Either way, please allow up to 28 days for delivery, and there's a 14-day money-back option, of course.

Sinclair Programs

Say hello to the magazine that no Sinclair User can do without

We are proud to announce Sinclair Programs which, with its unique formula, is going to prove a great companion publication to Sinclair User. The first edition of Sinclair Programs is on sale now and contains 40 programs covering the whole spectrum of ZX usage . . . all listed for you to key in. To guarantee you receive the magazine that guarantees you hours of enjoyment fill in the order form below.

ORDER FORM

- Please start me a subscription to Sinclair Programs at £6.60 for six issues including postage. Applies U.K. only.
- Please send me a single copy of Sinclair Programs at £1.10 to include postage. Applies U.K. only.
- I enclose a cheque for £.....

THE ZX BOOK CLUB

The ZX81 is the world's biggest selling computer and, just announced, is its big brother, the ZX SPECTRUM.

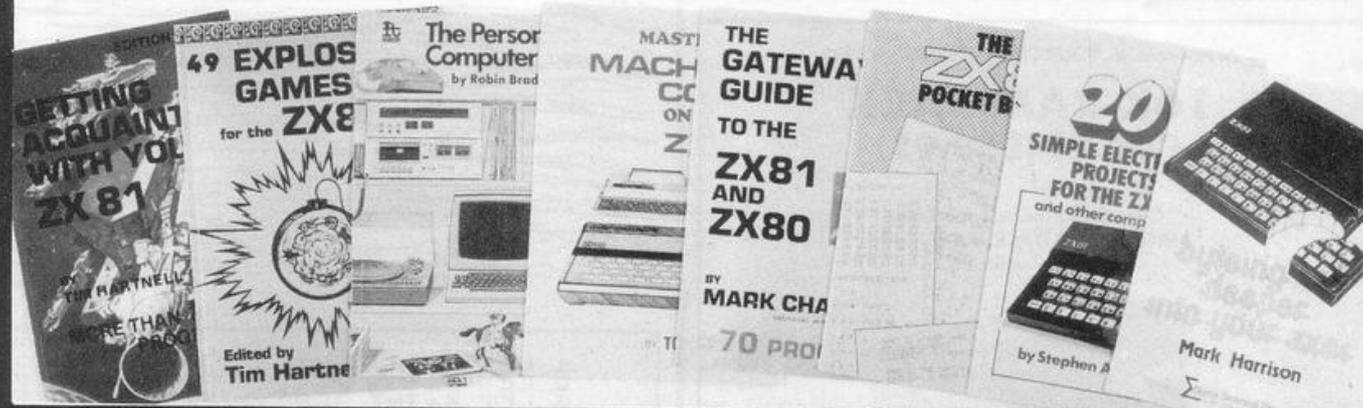

For value for money, these two computers must be the best "computer" buys on the market – but – to get the most from them, every owner, and prospective owner, needs a library of books for programs and operations.

Read-Out has selected the following bestselling books and can supply from stock.

For the Beginner: – **Getting Acquainted with your ZX81** by Tim Hartnell, containing over 80 programs. **34 Amazing Games for the ZX81** by Alistair Gourlay, which shows you what you can do with only 1K of memory. **49 Explosive Games for the ZX81** by Tim Hartnell which describes games listings for the memory sizes 1K – 8K. **Coming Soon! Learning to Use the ZX81** by Robin Bradbeer and **Learning to Use the ZX Spectrum** by Robin Bradbeer – two new books in a new series designed to help the first-time user (both due August/September 1982). **The Personal Computer Book 2nd edition** by Robin Bradbeer – an introduction to the world of microcomputing which is generally regarded as the best available.

For the Enthusiast: – **Mastering Machine Code on your ZX81** by Toni Baker will help you develop your

programming skills to a point where you can really use machine code easily. **The Gateway Guide to the ZX81 and ZX80** by Mark Charlton is a "doing" book describing each function and statement in turn, illustrates it in a demonstration routine or program and then combines it with previously discussed material. **The ZX81 Pocket Book** by Trevor Toms covers the use of the ZX81 in detail and leads the reader into a clear understanding of programming. A brand new book is **20 Simple Electronic Projects for the ZX81** by Stephen Adams which can really put your ZX81 to practical use in a number of interesting electronic projects – thermometer, burglar alarm, voltmeter etc. **Byteing Deeper into your ZX81** by David Johnson-Davies – the bestseller which tells you how to get to grips with your ZX81 and with 39 programs to match!

ZX/1

THERE ARE memories of Captain Nemo and the Nautilus in the game of **Octopus**. A submarine is being chased by the octopus—which unfortunately looks more like a crab—and it is only a question of time before it is caught.

As the game progresses, the speed of the submarine falls but that of the octopus does not. The aim is to stay

out of the grips of the octopus for as long as possible. The submarine is manoeuvred using the normal cursor keys.

After several attempts, the *Sinclair Programs* reviewer managed a score of 109.

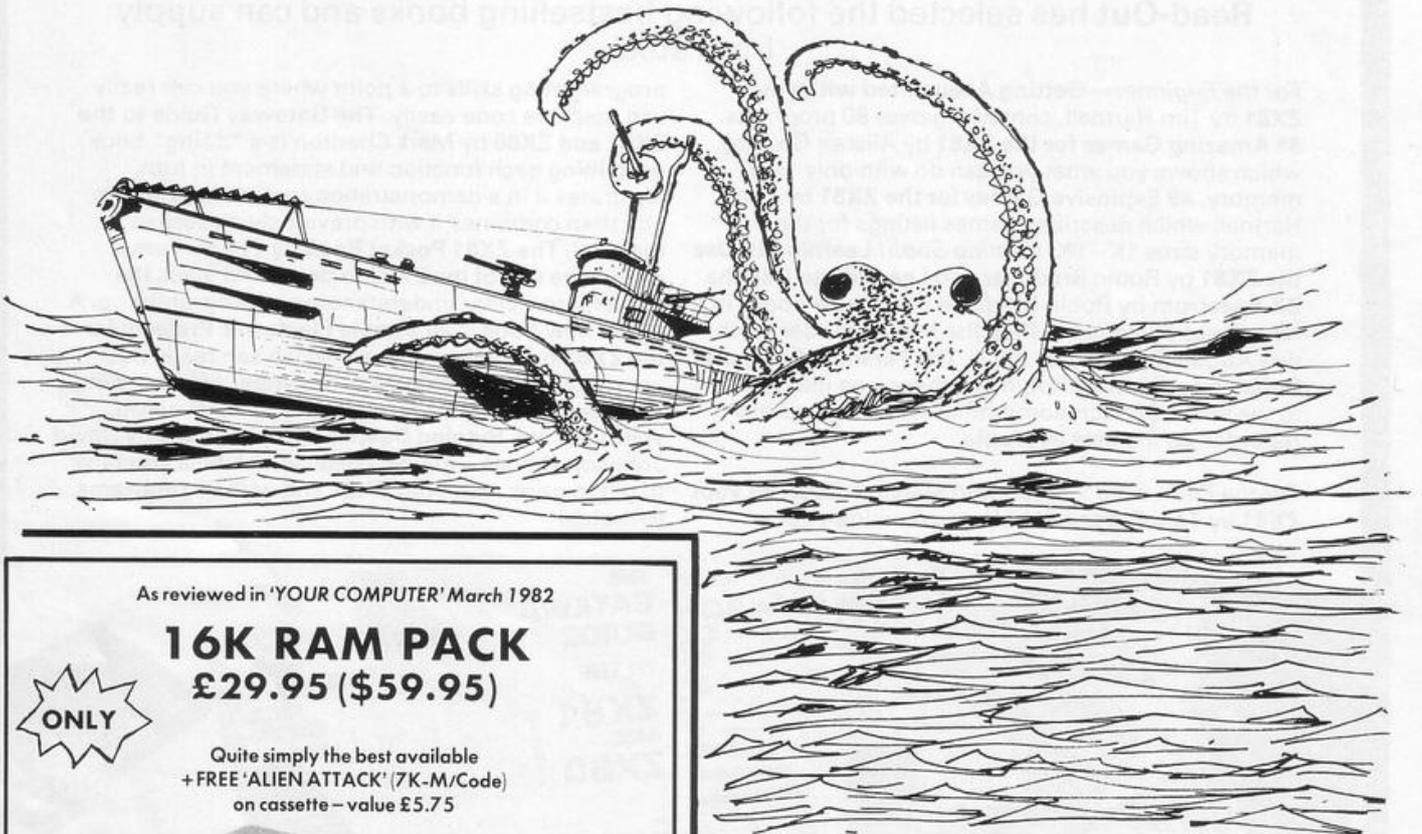

As an added interest, when the octopus hits the top of the screen the lines comprising it

are reversed, giving the impression that it is standing on its hands.

The graphics in lines 1 and 2 for the octopus are shifted T, P and Y and shifted Y, space and shifted T.

Octopus was sent by Colin Macdonald, of Gourrock, Renfrewshire.

OCTOPUS

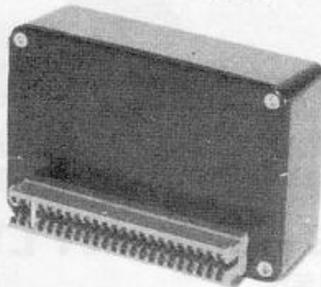

As reviewed in 'YOUR COMPUTER' March 1982

16K RAM PACK £29.95 (\$59.95)

Quite simply the best available
+FREE 'ALIEN ATTACK' (7K-M/Code)
on cassette - value £5.75

Fully built, tested and guaranteed
Uses existing power supply (min 600 m.a.)
Compatible with printer.
No wobble problems.
Gold-plated edge connector for perfect contact with your ZX81.
Normally despatched within 10 days of receipt of your order.

With advances in Microtechnology we are now able to offer the **64K RAM PACK**. Same quality as the 16K to give massive memory to your ZX81 with external dimension no larger than the 16K RAM pack (above).

ONLY £62.95 (\$125)

```

DESPITE the short history of *Sinclair Programs* and its companion publication, *Sinclair User*, we are already spawning new ideas. The inspiration for **Dragon Crunch** from D G Hockey of London, E18 was Tim Hartnell's **Monster Munch**, which appeared in the May edition of *Sinclair User*.

Hockey thinks that this version is better, because it lasts longer and fits into the 1K ZX-81 by using a number of memory-saving devices.

To move the figure which is being chased by the dragon, it is necessary to enter two letters, such as W for west and NE for north-east but that is not too much of a problem.

When the dragon eventually catches you the number of moves taken is shown. Hockey says that the maximum achieved by his family was 48.

STAR SMASH

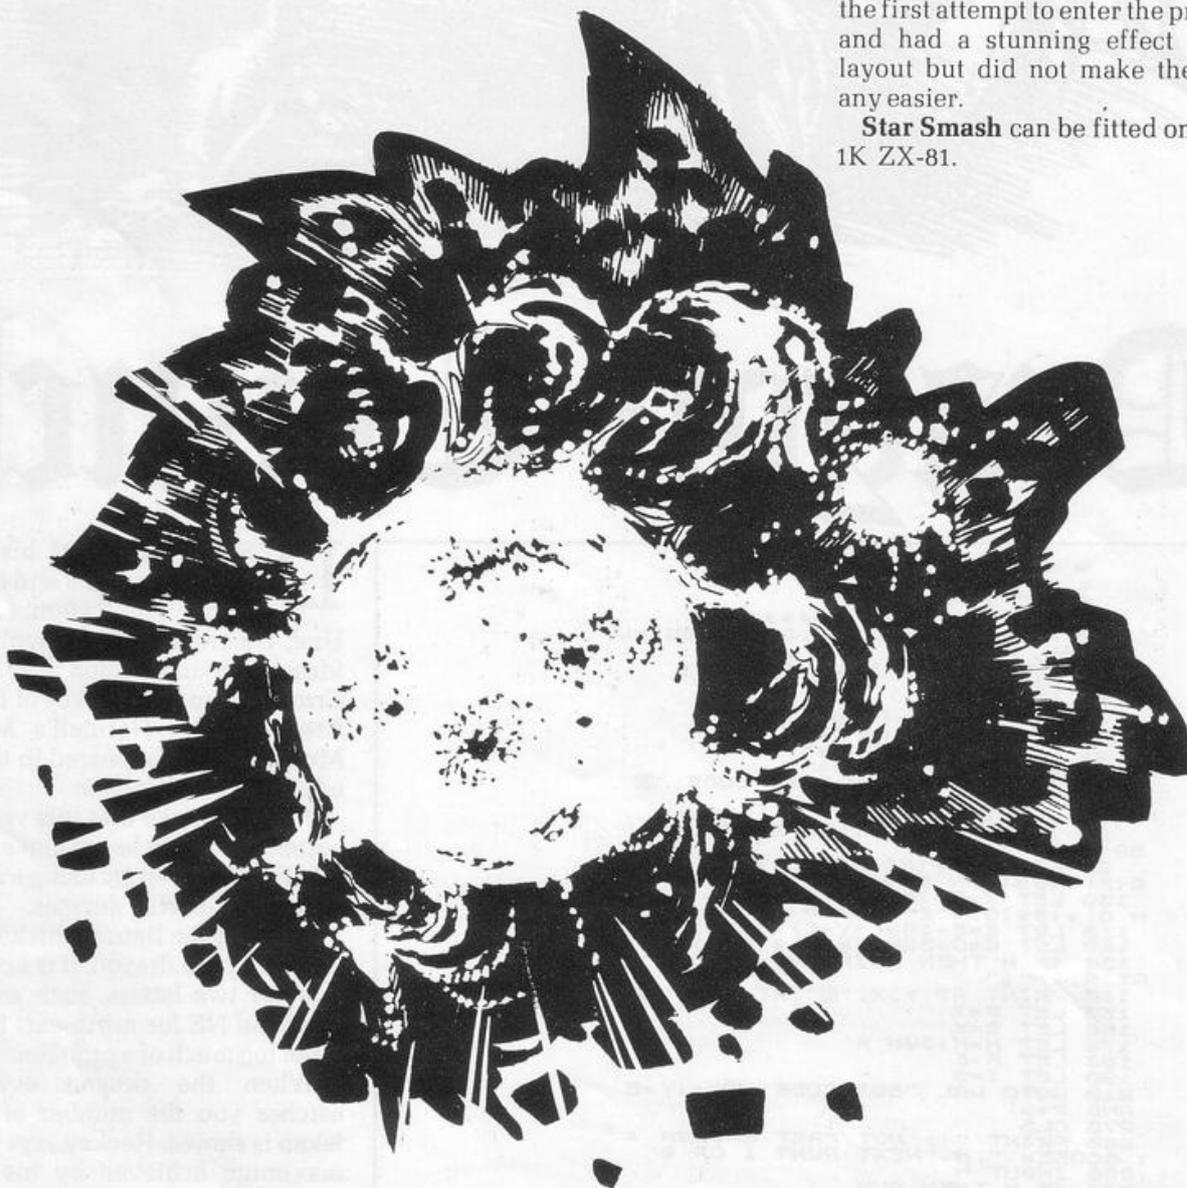

```

STAR SMASH is similar to the slalom games except that the object is not to avoid the obstacles moving towards you but to hit as many as possible. The ship is moved from side to side by the cursor keys 5 and 8. After a given time a score is shown.

The game can be re-started by pressing RUN and NEWLINE. Care is needed when entering the program not to confuse the S and the figure 5. Fives appear in lines 5, 20, 81, 88, and 110, while the S is used in lines 6, 10, 65 and 140.

Our reviewer also had difficulty entering the single spaces between the quotation marks in lines 80 and 81. In sending his listing, Adam Hobden, of Tollesbury, near Maldon, Essex, rightly wrote SPACE to make the lines clear. They were written in the first attempt to enter the program and had a stunning effect on the layout but did not make the game any easier.

Star Smash can be fitted on to the 1K ZX-81.

RAINBOW

SPECTRUM

FOR THOSE fortunate enough to have managed to obtain Spectrums, here are two simple programs you can try on your new machine.

The first **Rainbow**, which as you might expect draws a rainbow, makes use of the Spectrum colour capabilities. The other, **Interfere**, requires the addition of the printer on which it produces some very attractive interference patterns.

Both are the work of Richard Altwasser, who designed the hardware for the Spectrum. Both are featured in a book which will be available soon. It is called the *Cambridge Colour Collection*, costs £6.95, and can be obtained from Altwasser at 22 Foxhollow, Bar Hill, Cambridge.

WO PROCI

A PROGRAM which allows the 16K ZX-81 to be used as a word processor has been sent by K J Moore of Shoeburyness, Essex. It was a runner-up in the May competition in our companion publication, *Sinclair User*.

It allows the user to enter text directly on to the screen; the print position can be moved to any point using the cursor keys and up to 10 screens of text can be entered.

When run, a brief list of instructions is given and to continue press NEWLINE, when 'Screen 1' will appear. Press NEWLINE again and you are ready to enter text.

Moore advises that when the program is run for the first time the user becomes used to entering text on the screen before proceeding to press

RD ESSOR

EDIT, which brings up a list of print options. A further warning is that once an option has been chosen there is no chance to change it until listing or printing has finished.

One problem when entering text is that the space key doubles as the BREAK, which will stop the program running. Within that system the space key is NEWLINE. It is also worth noting that the typing must be done at the normal speed for acceptance by the ZX-81, which can seem slow. While it is possible to correct letters, ones which have been missed cannot be inserted without repeating a good deal of text.

To make the listing clearer, in lines 1080, 5020 and 5050 are inverse K, G and K again.

A SIMPLE game with some ingenious graphics has been produced by Ian Johnston, of Newmarket, Suffolk.

A train moves across the screen from left to right and the object is to block it, using a large buffer on the right-hand side of the screen. The train arrives at varying heights and the buffer must be moved up and down to stop it, using the Q for up

and the A for down. When the train nears the buffer it is necessary to press P to stop it.

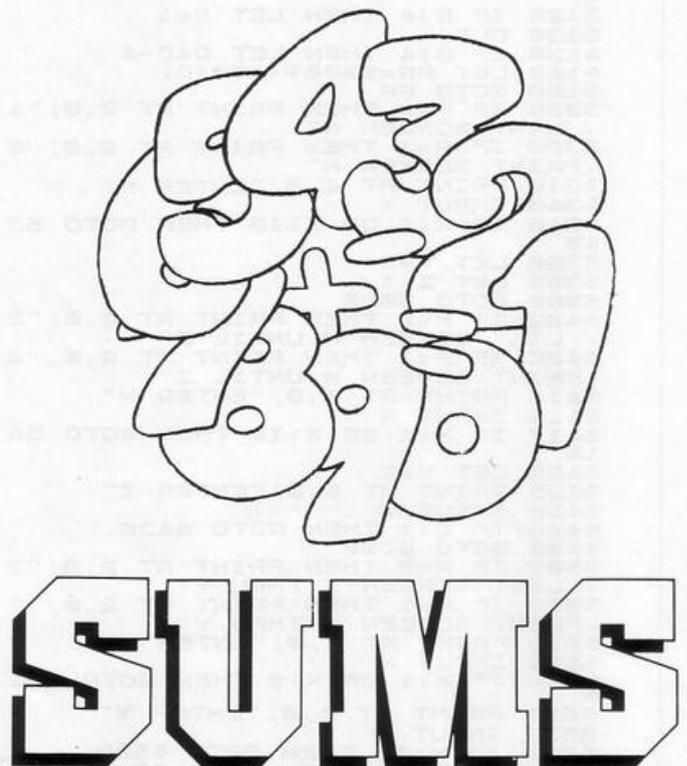

Each time a train is blocked, one is added to the score, which is shown on the buffer. The game ends when three trains have passed the buffer.

The graphics shown in line 30 of the printout are from left to right, shifted E,H,M,G and in 40, again both shifted, N and L.

WE RECEIVED a letter from R G Searle of Salisbury, Wiltshire, complimenting us on our first edition but complaining that few programs catered for those under the age of eight. "Yet

that age group is fascinated by the ZX-81," he wrote.

To help to remedy that he included a simple program which we print.

As he said: "It does not really do

anything but I think it does what it does nicely."

It is called **Simple Sums** because that is what it does, taking young children through the steps of simple arithmetic in a friendly way.

PONTOON

THIS VERSION of the card game **Pontoon** requires a minimum of 4K RAM on the ZX-81. The program is a very good simulation of the game which is played with the computer as the dealer.

S is pressed for stick and T for twist, with the answer as to whether you wish to play again after the end of a game being a Y or N. No betting is involved—only the satisfaction of having beaten the computer.

To help with the graphics for the card designs, on lines 30 to 100 there are five spaces between the quotes.

Pontoon was sent by Paul Mapstone, of London N7.

HANGMAN

GILL of Westerham, Kent has produced a game of **Hangman** which can be played on the ZX-80. The program, as written, contains a set of 12 six-letter words which it chooses at random and the player has to guess it, losing one life out of 10 each time an incorrect guess is made.

If the player guesses correctly, the screen shows: "Well done, that is it". If you run out of lives it says. "You are dead".

The line of words can include a total of about 70 letters, so that other combinations, such as 14 words of five letters each, can be used. If other groups are used it is necessary to change line 5. If the case of 14 words of five letters it would read

```
5 LET A=RND ((14)-1)*5.
```

```
5 LET A=RND ((12)-1)*6
10 DIM L(6)
15 LET AS="LETTER NORMAL BATTLE
VISION MUTINY BARREL VOYAGE
RETURN DEVOID MUTTON BOTTOM
REFORM"
20 IF A=0 THEN GO TO 30
25 GOSUB 200
30 FOR G=1 TO 10
35 PRINT "INPUT YOUR GUESS"
40 PRINT
45 INPUT GS$
50 CLS
55 LET T=0
60 PRINT "YOU,VE GOT ";10-G;" LIVES
LEFT"
65 PRINT
70 FOR B=1 TO 6
75 IF CODE (BS)=CODE (GS) THEN LET L(B)
=CODE (GS)
80 IF L(B) > 0 THEN PRINT CHR$(L(B)); " ";
(space)
85 IF L(B)=0 THEN PRINT "-"; " ";
90 IF L(B) > 0 THEN LET T=T+1
95 LET BS=TL$(BS)
100 NEXT B
105 GOSUB 200
110 IF T=6 THEN GOTO 400
115 PRINT
120 NEXT G
130 GOSUB 200
135 CLS
140 PRINT "YOU'RE DEAD"
145 PRINT
150 PRINT "IT WAS";
155 FOR B=1 TO 6
160 PRINT CHR$(CODE(B));
165 LET BS=TL$(BS)
170 NEXT B
175 GOTO 420
200 LET BS=AS
205 FOR B=1 TO A
210 LET BS=TL$(BS)
215 NEXT B
220 RETURN
400 PRINT
410 PRINT "WELL DONE, THAT,S IT"
420 POKE 16421,24
```

AS contains 12 words each six letters long. Any words can be substituted so long as they are all the same length. Words of, say, five letters long can be used, when AS can be 14 words long—AS can contain about 70 letters. Line 5 should then be changed to:

```
5 LET A=RND ((14)-1)*5
```

CHORDS

FOR ALL who are trying to master a musical instrument, **Chords** is a good learning aid. By entering the name of a chord, the notes which comprise it are displayed on a piano keyboard shown at the top of the screen.

Despite some chords having complicated titles, the program can deal with them by using a code for the different elements, such as the note, whether in major or minor and whether diminished or not. The code is shown on the screen beneath the keyboard.

To help in printing, the keyboard line 1030 contains a shifted 8 then a

shifted 7 and a shifted space followed by alternate shifted 7s and spaces.

Line 1070 is made up of a shifted 8,30 shifted 6s and a shifted 5, and in lines 1100 to 1200 there are six spaces for letters in the second set of doubles and 32 shifted 7s in line 1210.

In line 1110 there are two sets of double quotes, shifted Q, after TAB 26.

Chords was sent by Paul Hopgood, of Wantage, Oxfordshire. It was one of the runners-up in the May competition in our companion publication, *Sinclair User*, and needs the 16K RAM pack.

TREASURE HUNTER

TREASURE HUNTER is a clever little game in which a hunter, denoted by an asterisk, has to find treasure which is hidden at a random position on the screen. The only assistance given to the hunter is that he is told when he is getting warmer.

It can be very annoying when, whichever way you move, you seem to be getting warmer but cannot find the exact location of the treasure. When the correct spot is found, the number of steps taken is shown on the screen, along with the program's idea of the optimum number.

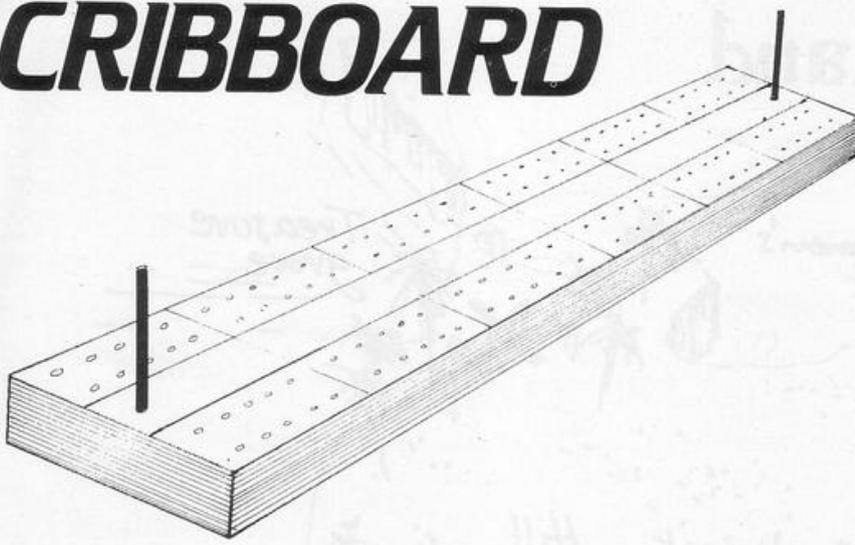

The first attempt by the Sinclair Programs reviewer resulted in 453 steps taken against an optimum of five. That later improved to 84 against an optimum of 30.

The hunter is moved by using the cursor keys but an added difficulty is that if you go to the edge of the screen you bounce back so that the left and right keys and the up and down keys can become reversed.

Treasure Hunter was sent by P Brown of Charlesworth, Derbyshire.

```

CRIBBOARD

CRIBBOARD, as the name suggests, is a scoring system to use while playing cribbage. A board is displayed on which the state of the game is shown by the blanked-out hole on the board and the numerical total is shown. The result in the number of games is also given.

When run, the players are asked if they are playing a bust or no-bust game and the game is recorded as required. A maximum score of 29 is allowed on each turn and the impossible figure of 19 cannot be entered. The score is entered by giving the letter of the player, followed by his score.

The program was sent by M J Bennett of Jeddah, Saudi Arabia. It requires the 16K RAM pack.

ALIEN LURE

A GAME which links the bug-baiting type of program with a battle against alien invaders has been produced by Sanath Yogasundrum of Ashton, Preston, Lancashire.

When the game begins, the player is asked for a skill level, A or P, which stand for amateur or professional. It is advisable to start on the amateur level while the player begins to understand this complex game.

A small grid is shown in the bottom left-hand corner of the

screen in which there are four aliens, shown as X and S, with a soldier (*). The soldier has to dig a hole (O) and then lure the aliens into it, scoring 100 points for every X and 200 for every S.

The hole is dug by going into dig mode, pressing 2, and pressing the cursor key for which side of the soldier you wish to place the hole. The soldier can then be moved by pressing 01 to return to movement mode, and using the cursors in their normal directions.

A soldier can be killed either by

falling into his own hole or being eaten by an alien. The game lasts for the lives of three soldiers, although an extra soldier can be gained by scoring more than 3,000.

Two other limitations are that only one hole can be dug at a time and a hole cannot be dug beneath an alien. Once an alien has fallen into a hole it is filled immediately and the game continues.

Even after playing for more than an hour at the amateur level, no-one at Sinclair Amateurs managed to score more than 1,300.

WIPE OUT

A DECEPTIVELY simple but frustrating game has been sent by Keith Paterson of Newmarket, Suffolk. When run, two walls are displayed with an O between them. The O can be used to eliminate the walls but as it does so it leaves a trail of Os behind it when moving vertically. No trail is left when moving horizontally.

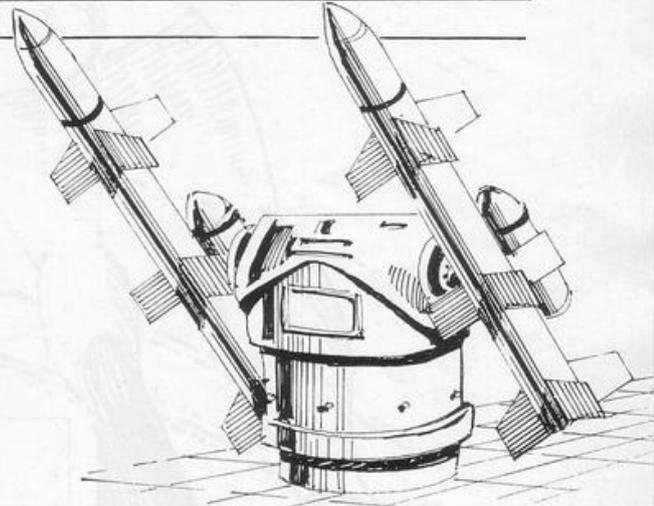

The object is to finish with only one O on the screen. Despite a lengthy attempt by the Sinclair Programs reviewer, that proved impossible but Paterson maintains that it can be done with a little thought and concentration.

The O is moved by the cursor keys in the usual directions. It can run on the 1K ZX-81.

```

2 PRINT "USE 5,6,7,8 TO CLS
3 PAUSE 200
4 CLS
5 FOR X=1 TO 6
6 PRINT TAB 0;"O"
7 PRINT TAB 10;"O"
8 NEXT X
9 LET A=10
10 LET B=10
11 LET C#=""
12 PRINT AT 0,0;" "
13 IF INKEY#="0" THEN LET B=B+
14 IF INKEY#="5" THEN LET B=B-
15 IF INKEY#="6" THEN LET A=A+
16 IF INKEY#="7" THEN LET A=A-
17 PRINT AT A+1,B;" "
18 IF B>10 OR B<0 THEN LET B=0
19 IF A>12 OR A<0 THEN LET A=0
20 PRINT AT A-1,B;" "
21 GOTO 3

```

SHIPS

```

1004 LET C=0

1022 NEXT A
1023 PRINT AT 20,16;C
1024 PRINT AT M,16;" "
1025 LET M=M-2
1026 RETURN
1027 PRINT AT M,B;"BANG"
1028 PAUSE 50
1029 LET C=C+1
1030 NEXT A
1031 PRINT AT 20,16;C

```

FOR THE 1K ZX-81, **Ships** is a simple type of missile game in which a target moves at various distances from the gun across the screen and the objective is to hit it. Ten ships pass and the score is shown at the end of each game.

Only one shot can be made at a time, so the skill is in judging when to fire, so that the missile and ship coincide. When a hit is made in the middle of the ship, BANG is shown on the screen.

Press RUN and NEW LINE to start each game and P to fire the missile. The Sinclair Programs reviewer managed a top score of four.

The graphics in line 100 are, all shifted, 3,6 and 4 and line 125,Q,F and W. Ships was sent by Ian Johnston, of Newmarket, Suffolk.

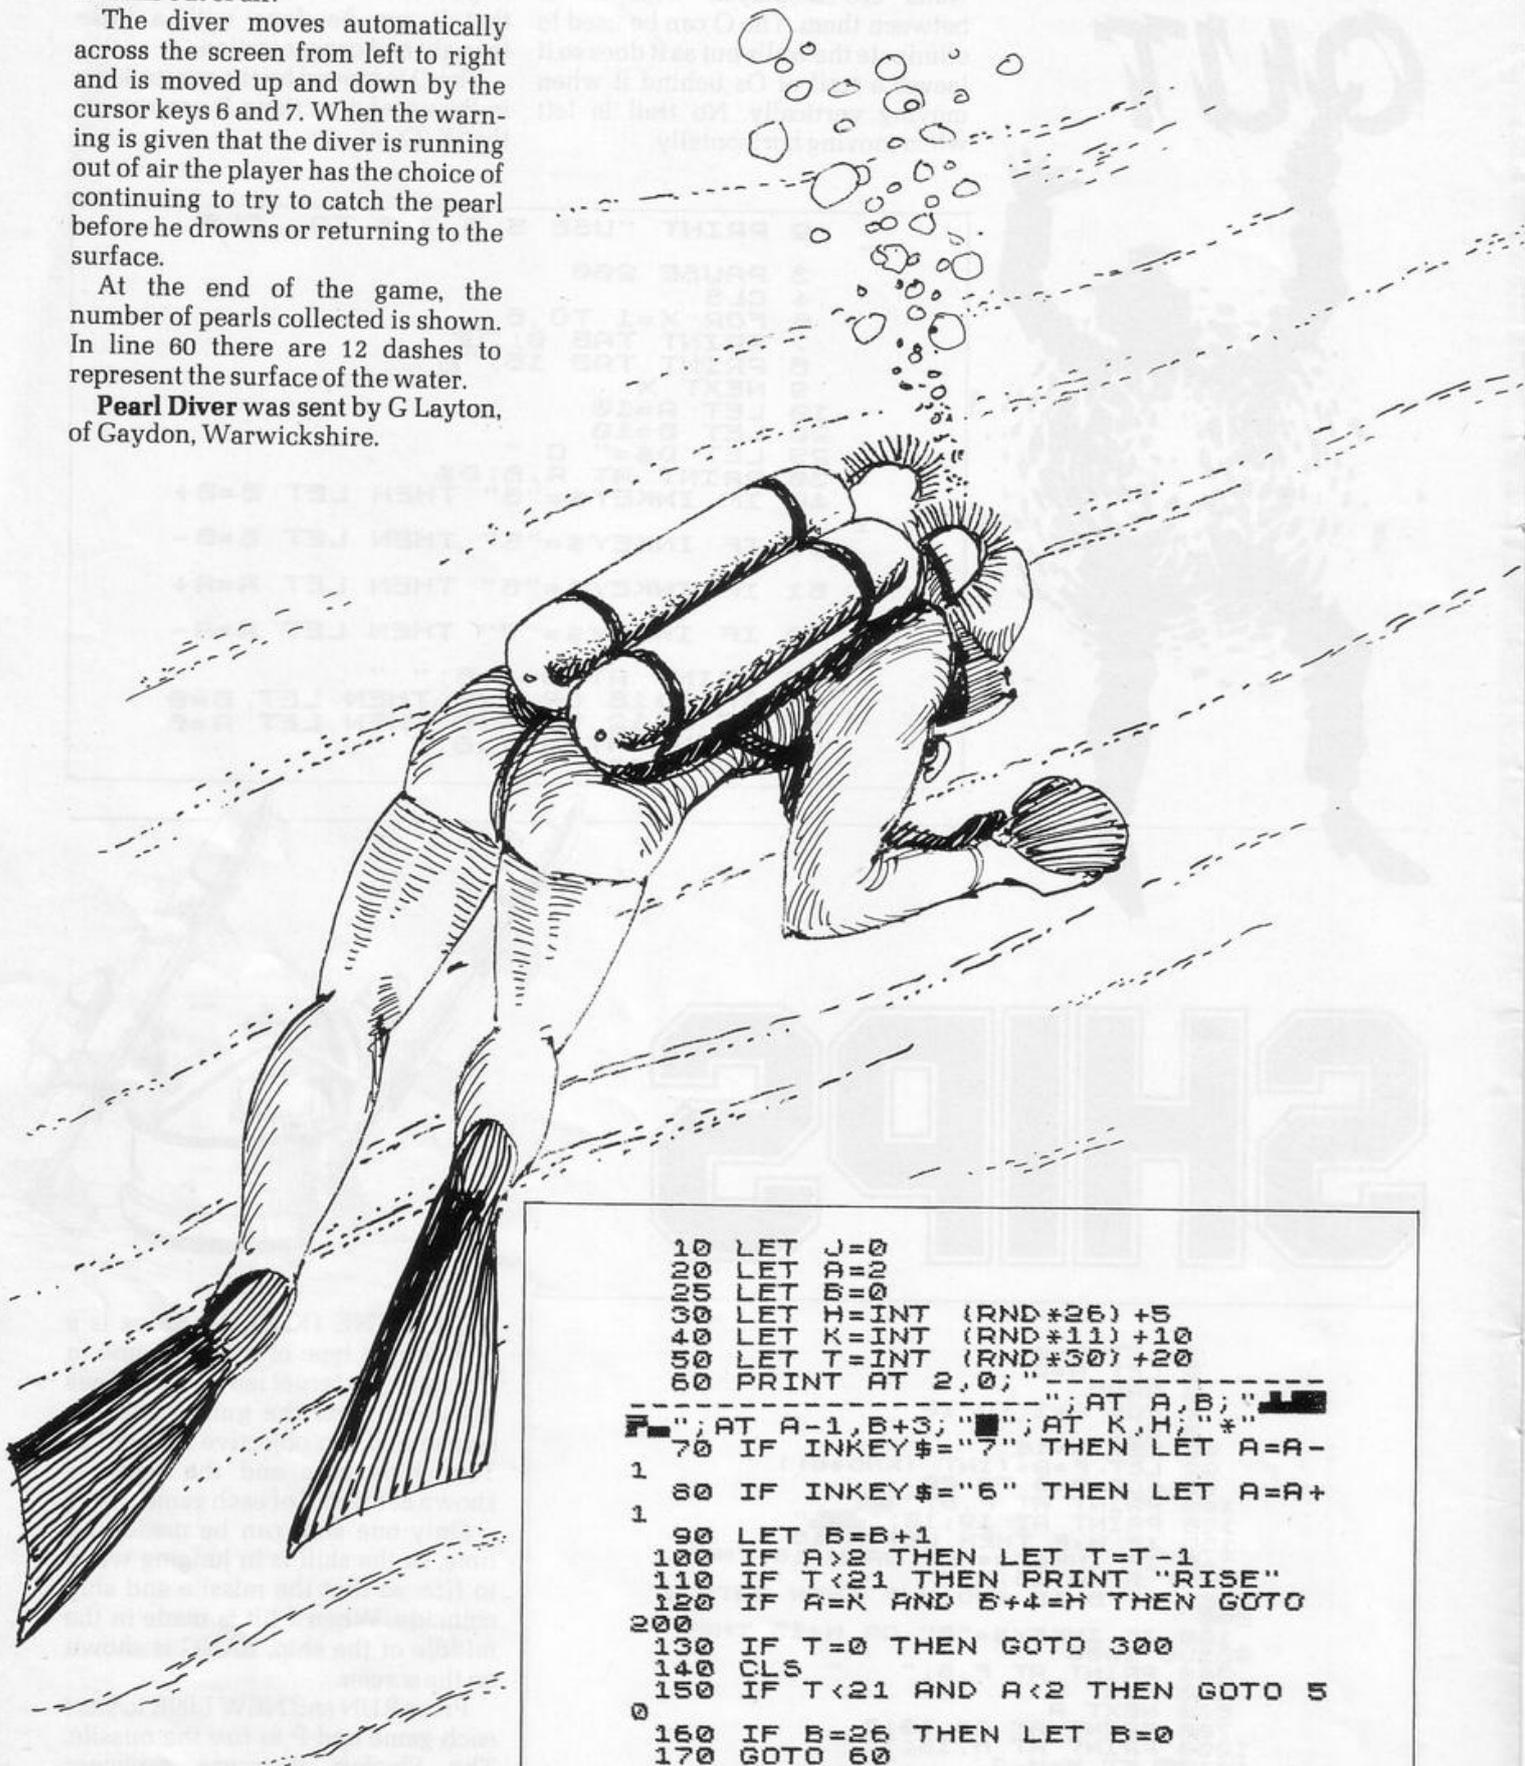

PEARL DIVER will fit on the 1K ZX-81 and, as the name suggests, involves a diver attempting to pick up a pearl before he runs out of air.

The diver moves automatically across the screen from left to right and is moved up and down by the cursor keys 6 and 7. When the warning is given that the diver is running out of air the player has the choice of continuing to try to catch the pearl before he drowns or returning to the surface.

At the end of the game, the number of pearls collected is shown. In line 60 there are 12 dashes to represent the surface of the water.

Pearl Diver was sent by G Layton, of Gaydon, Warwickshire.

PEARL DIVER

```

10 LET J=0
20 LET A=2
35 LET B=0

220 GOTO 20
300 PRINT AT 0,0;"YOU RAN OUT O
F AIR"

```

CONSTELLATIONS is a program specially for all avid stargazers. After the lengthy process of entering it, press RUN and NEW LINE and a menu is provided, listing 10 groups of stars. Pick which one you wish to see and the group of stars is shown, along with its name.

The list available is the same as that sent by the writer of the program but others can be added or substituted according to taste.

The main idea is to provide some kind of record of a particular constellation, so it is essential to save the program on cassette.

Kevan Cheyne, aged 10, of Hartlepool, Cleveland, wrote the program for a school project on stars. No doubt the next project will be to draw a picture of Patrick Moore.

WORD PUZZLER is not so much a game as a game generator.

The object is to make word puzzles like those which appear in puzzle magazines, where a series of words is hidden in a grid of random letters.

The words can be vertical, re-

versed or diagonal, but rarely obvious.

The ingenious program requires a list of up to 15 words each of up to 12 letters, in order of length and pressing NEWLINE TO to start. The screen goes blank as the computer goes into fast mode to re-arrange the

letters and hide the words in a square of 15 by 15 letters.

Eventually the word puzzle is shown on the screen and the game is to find the input words which are listed by the side of the square.

The grid can be printed so that a number of puzzles with different

words can be made at the same time.

The dimensions of the square are set by the variable G\$(15,15) which can be altered to provide other sizes.

Word Puzzler is from Andrew Blackburn, of North Hykeham, Lincoln.

MEMORY

AS ITS NAME suggests, **Memory** is a game for remembering things. When run, a series of 10 random characters, both letters and numbers, is displayed for about four seconds. The screen then goes blank, during which time you have to enter as many characters as you can remember.

After another six seconds, the

characters which you did not type-in are displayed on the screen.

The game can then be repeated by pressing RUN and NEW LINE, when another series of characters appears.

It is a simple but absorbing game which can be played for hours. It was sent by C J Barnatt, of Fernhill Heath, Worcester.

FIRE ESCAPE

FIRE ESCAPE, which can fit into 1K ZX-81, is a variation of the catcher type of game. When run, a block of flats is simulated on the left-hand side of the screen from which a figure, denoted by a bracket, jumps, and the object is to catch the figure before it hits the ground.

The catching blanket is moved from side to side by the cursor keys 5 and 8.

The game is made more interesting and difficult by a 'wind' moving the figure in the air, which makes constant adjustment of the blanket necessary. The concentration needed to do it makes it difficult to play the game for long, as the flashing of the figures hurts the eyes after a time.

After 10 people have jumped, your score, showing how many you saved, is shown and you can start the game again.

Fire Escape was sent by Roy Hair, of Kilmarnock, Scotland.

KNIGHT'S MOVE

KNIGHT'S MOVE uses the movement pattern of the Knight in chess to try to cover every space in a square. The program asks where you wish to start on the board, giving the vertical co-ordinate first, and then marks the moves as you make your way round the board.

There is a check routine to make sure you cannot cheat by making an incorrect move or land more than once on the same square. When no more squares can be visited, enter 0 as the number for the next square.

Press NEW LINE to replay the game or any other key and NEW LINE to end the game.

The graphics in line 20 are the capital I reversed with two reversed dashes, shifted J, between each. In line 30 the dashes are replaced by reversed spaces.

Knight's Move was sent by K M Godolphin, of Camborne, Cornwall, and needs 16K RAM.

STUNT RIDER

STUNT RIDER simulates a motor-cyclist of the Evil Knievel variety jumping a series of barrels. The J key is pressed to jump and if it is not held down long enough the cyclist falls into the barrels, bringing a CRASH on the screen.

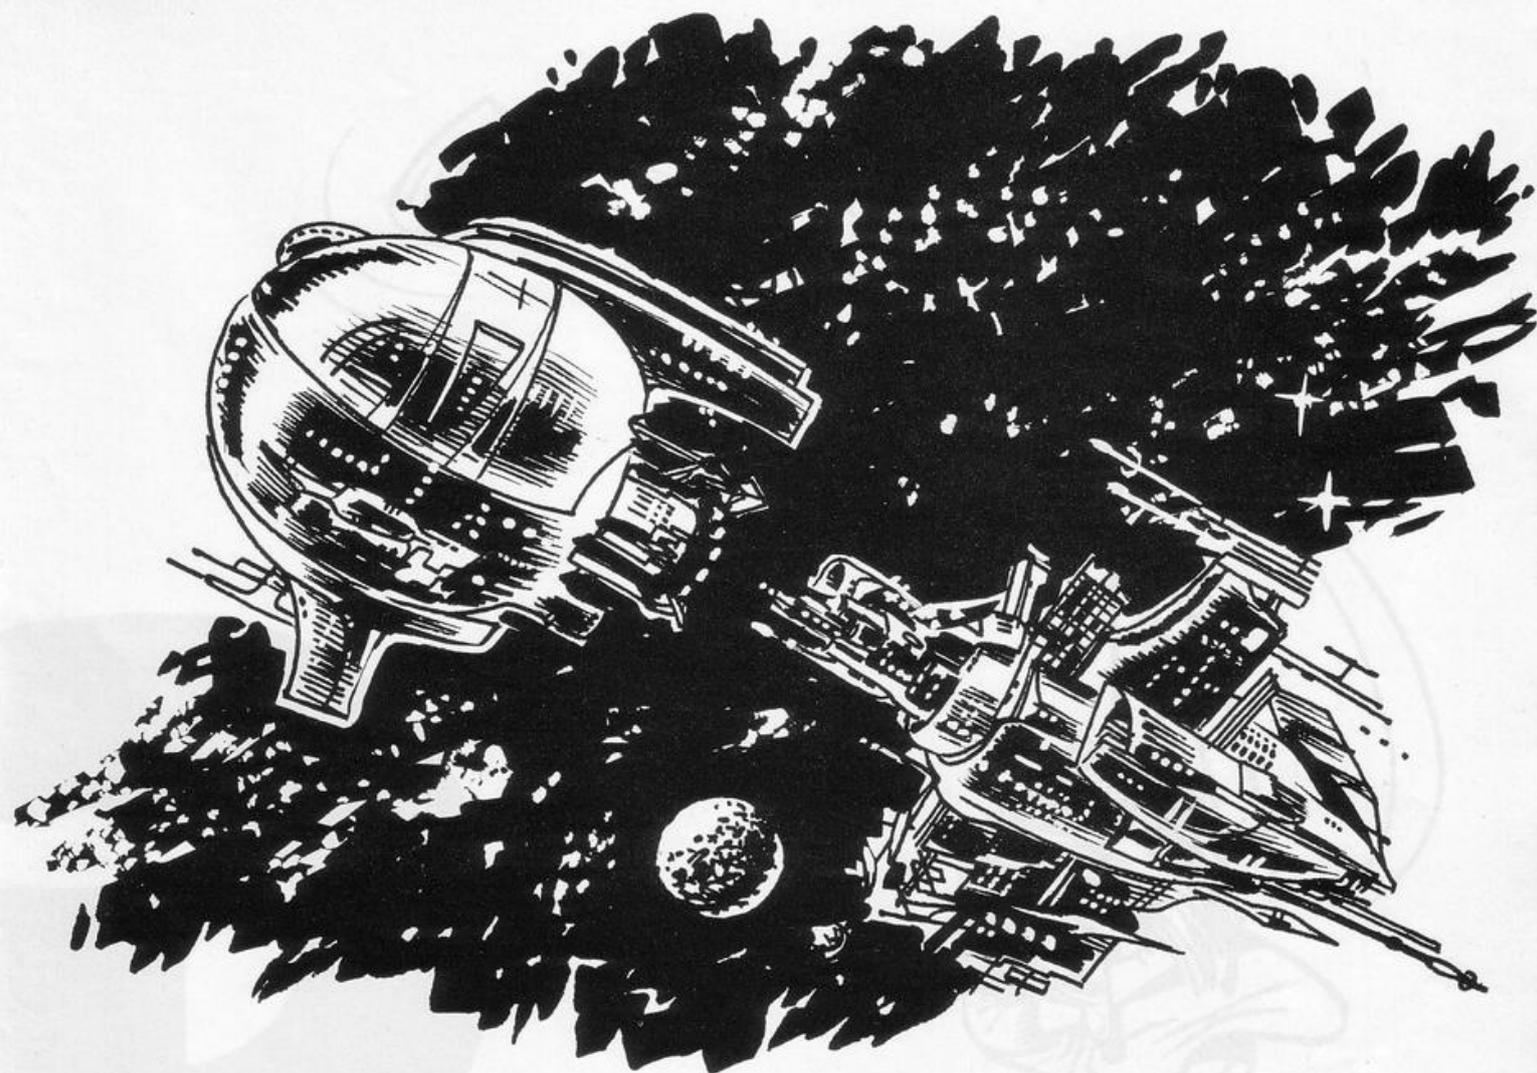

It is a very simple program. It does not take long to enter and can provide some enjoyment. To help with the design in line 30 there are 32 dashes and in lines 45 and 80 there are four spaces between each set of quotation marks.

Stunt Rider was sent by Paul Richards, of Swindon, Wiltshire.

DOCKING, from J Smith of Coulsdon, Surrey, is like many of the Lunar Lander types of games where a craft has to be manoeuvred to land safely. The added spice to this version is that, in the words of its creator, "the space station is infested with 'space virus' which creates havoc and sends people mad. The station therefore is out of control".

The landing must be made as the station is moving about the screen in a random fashion with a limited amount of fuel remaining.

As usual, movement is controlled by the cursor keys and if a safe landing is achieved the number of moves taken is recorded.

ON THE RARE occasions when the weather is too bad to play **Golf**, fanatics may care to try the computer version. It requires the 16K RAM pack and can be as frustrating as the real thing—but not so tiring or expensive.

For each of nine holes the program selects a random distance between 200 and 400 yards and displays it with the par value. The player is invited to play strokes at strengths from one to nine and after each stroke the distance remaining is displayed, with the number of strokes taken at the hole, and a further

request to choose a shot.

That continues until the ball is in the hole, when the comparison with par is shown.

At the end of the nine holes the par for the course is shown, with the score for that game and some advice about the future of your game.

The numbers for strength of shot do not correspond to the numbers of real clubs. The best guide to the distance which can be expected can be obtained from lines 90 to 98. Although each distance is chosen at random, they are in the region of the last figures. The exception is shot

one, which always moves the ball one yard.

That random element is the cause of the frustration, particularly when the ball is less than four yards from the hole. The choice must always be between taking the safe method and playing a series of one-yard shots, and the two, which can give two, three or four yards.

With a little concentration, a good level of skill can be achieved and you can avoid being told to sell your clubs at the end of the nine holes.

Golf was sent by R A Lean of St Austell, Cornwall.

DESPITE the two guns in this game looking more like machine-guns, they fire only one at a time. They are even gentlemanly about refusing to fire a shot until the previous shot has either missed or found its target.

The duel is fought against the

computer, which seems to have an uncanny sense of when to shoot. The player has to put the gun into the correct position by using D for moving up, G for down and F to fire.

Duel, which can fit on to the 1K ZX-81, was sent by Mark Beard of Hilsea, Portsmouth.

AN ATTEMPT is made by Martin Bushell, of Wokingham, Berkshire, to bring a little happiness into the lives of readers of *Sinclair Programs* by producing a smiling face.

When running, two eyes appear first on the screen, look around, and are then followed by the nose and a smiling mouth. The left eye then winks and continues winking until the program is stopped by pressing

the BREAK key.

It is a very simple program, with little sophistication, but it can provide some scope for making alterations to the graphics.

Bushell sent it as an entry for the May competition in *Sinclair Programs* companion publication, *Sinclair User*.

To help with the graphics shown on the printout in line 110 they are all shifted, T,7,7,7,Y, four

spaces,T,7,7,7,Y. In line 20 they are shifted 5,space,O,space,shifted 8, four spaces, shifted 5,space,O,space,shifted 8. In line 30, all shifted, Y,6,6,6,T,four spaces, Y,6,6,6,T. In line 140 they are shifted T,7,Y, in 150 shifted T,three spaces,Y and in 160 shifted 6,7,6,7,6.

In line 170 the graphics are shifted Y followed by 12 spaces and shifted T with in line 180 a row of 12 shifted sevens.

FOR ANYONE who wants to keep records of league tables, as in football or cricket, this program is ideal. Once the teams and the system of scoring for wins, draws and losses have been entered, all you have to do is enter the results and the league table is updated automatically.

The new league table can then be recorded on tape and called-up when more results are to be entered.

The system in this listing is that of English league football but the values for the results can be altered in lines 150 to 170. When entering the scores, the sequence can be halted by pressing S and NEWLINE.

If the league has been re-loaded from tape, the menu is displayed first, asking whether you wish to enter new teams or the results or display the league table.

There are two notes of warning. If the program has been interrupted by BREAK, do not press RUN or CLEAR as all the variables will be cleared. If an error has been made and put on file it is better to re-load the initial program and begin entering the information again.

The program uses almost 3.5K of memory and was sent by Stephen Cowlshaw of Nottingham. It was a runner-up in the May competition in our companion publication, *Sinclair User*.

The graphics include 10 spaces in line 200, 31 spaces in line 590, four spaces in line 600 and 32 spaces in line 730. In line 1340 there are 11 shifted 6s, followed by a shifted Q, two more shifted 6s, a shifted Q and so on.

THE Prime Number Calculator was written by Mark Colson of Horncastle, Lincolnshire as a quick program for working-out high prime numbers. He has incorporated parts of other similar programs to achieve his objective and the result is that, once run, a series of prime numbers is printed at the bottom of the screen with the others scrolling upwards.

The program will continue until BREAK is pressed. If very high prime numbers are required, alter the listing by the three instructions and the first seven-digit prime number will be worked-out in about 13 seconds. Unfortunately the program then returns to slow mode and the second number takes much longer. Perhaps someone could produce a slight adjustment to overcome that?

THE AIM of Tug is to make as high a score as possible before a line which moves from right to left across the screen reaches the end. To stop the line moving it is necessary to match a random number which appears on the screen. Each incorrect answer allows the line to advance.

The program has nine skill levels, running from one to nine, with nine being the easiest. The most difficult is almost impossible, as the time allowed for entering the number is so short.

Tug will fit into the 1K ZX-81 and was sent by Peter Brett, of Swindon, Wiltshire.

PIGEON RACE

IF YOU want a program to send you mad, **Pigeon** must be one of the contenders. It simulates a pigeon race with a set of three somewhat erratic pigeons which any self-respecting fancier would probably have put out of their misery long ago.

The object is to start with £100 and make more by backing the winning pigeon in each race. According to

the writer, Roy Kay, of New Ferry, Wirral, Merseyside, it is possible to be successful with a little intuition and a good deal of luck. The emphasis is on the luck.

The pigeons start the game at the bottom of the screen and are put to flight by the player first entering the bird which he will back and then the size of the bet. The game ends when one of the drunken birds

arrives at the corresponding coop at the top of the screen.

Because of the random element, some races can finish in a few seconds, while others seem to continue all day.

The graphics in line 100 are obtained by using the shifted E, eight shifted 7s and a shifted R, with the W and Q used in line 110, and it needs 16K to work.

COMPOUND INTEREST

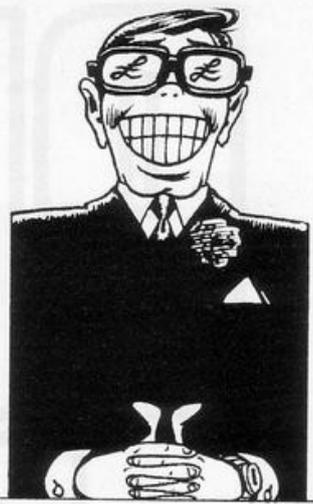

```

5 CLS
10 PRINT "ENTER PRINCIPLE IN P
OUNDS"
20 INPUT P
30 PRINT "ENTER TIME IN YEARS"
40 INPUT T
50 PRINT "ENTER RATE PER ANNUM
"
60 INPUT R
70 PRINT
80 PRINT "ENTER ""SI"" FOR SIM
PLE INTEREST"
90 PRINT "ENTER ""CI"" FOR COM
POUND INTEREST"
100 INPUT A$
105 CLS
110 IF A$="SI" THEN GOTO 150
120 LET I=P*((1+R/100)**T)-P
130 GOTO 200
150 LET I=(P*R*T)/100
200 PRINT "INTEREST=E"; I
202 PRINT
205 PRINT "TOTAL=E"; I+P
208 PRINT
210 PRINT "IS THAT ALL? Y OR N
"
220 INPUT B$
230 IF B$="N" THEN RUN

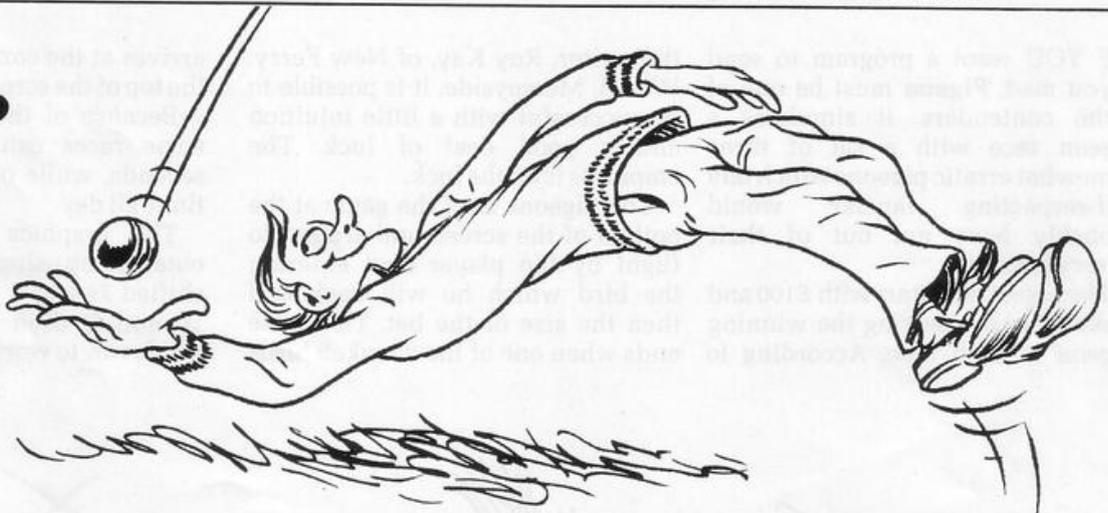

```

IF YOU detest having to work out compound interest, this program is for you. It works out the compound interest automatically once it has been told the principal, the rate of interest, and the number of years to be considered. It can also work out simple interest problems.

A short program, fitting into the 1K ZX-81, it was sent by Stephen Booth, of Barnsley, South Yorkshire. He said it is useful helping him with his homework.

Owzat

A SIMPLE GAME based on the famous cricket dice game, **Owzat**, simulates a simple form of the complex summer game. Once running, it runs automatically through until a team of 10 has completed its innings and gives the total score. The game is repeated to find the score of the opponents.

One problem which readers might like to tackle is to find a way of removing Owzat and not out once an appeal has been turned down. Because of this it is not known when another appeal has been made until one is allowed and the next batsman's score is shown.

Owzat fits into 1K ZX-81 and was sent by Nick Gray of Burton-on-Trent, Staffordshire.

THIS IS one of two programs included in this collection for ZX-80 users. It is a very simple, user-friendly program intended for young children.

B Spencer of Chatham, Kent, who wrote it, said he did it because after two years of owning a ZX-80 he thought it was time he bought a better machine, probably the Spectrum. He wanted to hand his old faithful to his children with something useful for them to do with it.

The listing includes lines to allow the person using the machine to input their name, lines 100, 640, 750. When run, it asks what kind of sum is to be attempted and then shows the required problem. An answer is given and that is judged correct or incorrect, giving the correct answer. Press **NEWLINE** for another attempt.

In the case of division, the answer is given in terms of a whole number and then the remainder, both of which are input separately.

COVER 1

THE BOX

A GOOD, interesting game, which takes slightly less than 3K of memory on the ZX-81 is sent by John Ellis, of Wimborne, Dorset. He says it is based on an old French game known as **Shut the Box**.

The aim is to eliminate each of numbers from one to nine by throwing two dice. The total thrown can then be used to eliminate numbers

which add to the same total. For example, if a three and a five are thrown, any combination of two numbers adding to eight can be eliminated.

The chosen numbers are entered together and the program checks for illegal moves. The game continues until it is impossible to make a move; no number can be eliminated twice. To end the game, press zero

and the total of the numbers remaining is displayed. After a number of plays a running average of the remaining totals is shown; Ellis says that after much practice his average for 10 games was 8.3. The program is user-friendly.

To help with the graphics, in lines 30 and 50 there are 27 inverse spaces; in 80 there are 23 spaces; in 240 there are 17 spaces and 26 spaces.

MULTIPLICATION TRAIN

A GOOD, simple game for testing a variety of abilities with multiplication sums has been sent by James Hurrell, of Knutsford, Cheshire. The aim is to take a train to the end of a track by giving the correct answers to multiplication problems given at random.

The program makes good use of the random function to produce different problems and it contains alternative levels of difficulty.

To start the game, press RUN and NEWLINE; the player is asked which level of difficulty is wanted, either one or two. A problem is then shown to which the player gives an answer. If correct, a train moves along a track with a puff of smoke from its funnel.

When the train reaches the end of the track, a buffer appears with "Well done".

Alternative difficulties can be obtained by changing the lines 50 to 80.

To help with the graphics in line 100 they are, all shifted, keys R, 3, unshifted space, 8 and unshifted space; in line 110 they are 8, three spaces, and 5; and in line 120 R, E, space, R, E. In line 130 there are 14 dashes.

```

ZOMBIES is a version of the lure type of game where a number of attackers converge on a target. As they approach it they can hit various obstacles. The attackers are Zombies, shown as Zs chasing the players, an X, with potholes, Os, as obstacles.

The difference between this and other games is that there is a random number of Zombies chasing the player.

When a Zombie falls into a pothole, the event is marked by an announcement on the screen "Splash goes a Zombie". Should you lure all of them to their doom you are told, cheerily, that you may have won on that occasion but you cannot win in the end.

When a Zombie strikes you the screen is filled with sickening munches, gobbles and burps. You can move in any direction by following the positioning of numbers shown in a box beneath the game display.

Zombies was sent by Christopher Smith, of Christchurch, Dorset and requires the addition of a RAM pack. In line 2 there are 25 spaces and 20 in line 524.

A SIMPLE sketching program has been produced by Stuart Foley, of New Duston, Northampton. Using the cursor keys, simple drawings can be made which still require a fair amount of skill and can be really entertaining.

Once started, by pressing RUN and NEWLINE, the blip in the screen begins drawing automatically. If you wish to erase anything or move to another design without leaving a

trail, press U, and a flashing blip erases anything it passes over. Pressing P will return the program to drawing mode.

One thing of which to beware is that if the blips hit the edge of the screen the program stops and cannot be re-started without losing everything which has been drawn. To avoid that, start by drawing a border round the screen. **Sketcher** fits into a 1K ZX-81.

SKETCHER

A PROGRAM for the radio enthusiast has been written by R S P Humpleby, of Heckmondwike, West Yorkshire. It involves inputting the alphabet in Morse code and then displaying the codes in random order and asking the player to give the correct letter.

After the whole of the alphabet, the total of correct answers is given. For anyone who does not know Morse, the codes in the listing are given in alphabetical order.

It is a simple but effective program which can fit into 1K RAM.

MORSE CODE

```

10 CLS
20 LET S=0
30 LET C$=""
40 FOR V=1 TO 26
50 LET A=INT (RND*25)+1

140 NEXT E
150 NEXT V
160 LET S=S+1
170 PRINT "CORRECT"
180 PAUSE 150
190 NEXT V
200 PRINT S;" OUT OF 26"

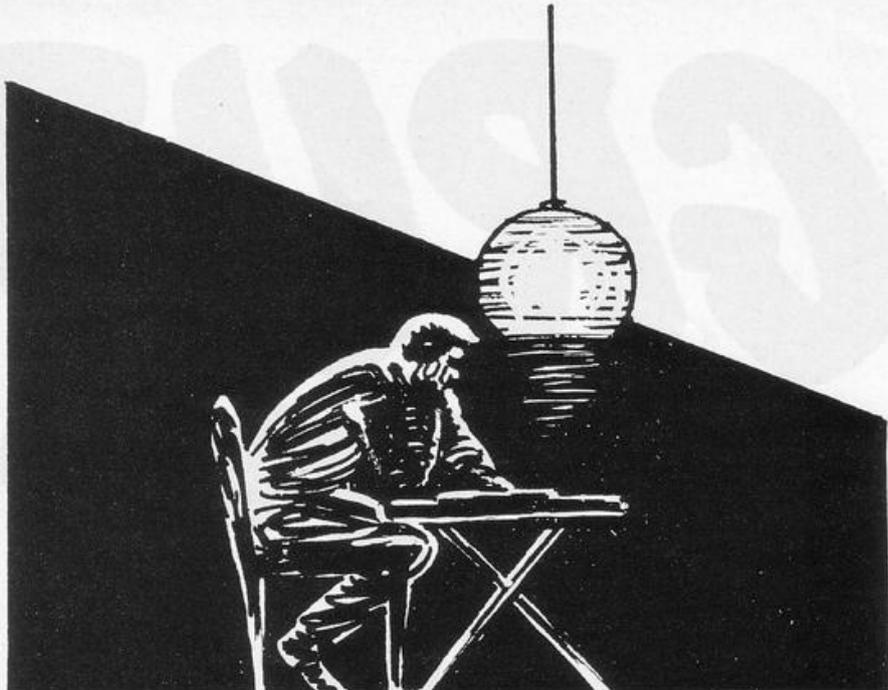

```

THIS is a 16K ZX-81 representation of the popular game of **Solitaire**, where the game begins with a number of pegs in a cross formation and one missing in the middle. The object is to clear the pegs by jumping over them and leaving one peg in the middle hole.

In this version, from Frank Webster, of West Kirby, Wirral, Merseyside, the pegs are shown by Os and the holes by stars. The board has vertical and horizontal coordinates and a move is made by entering the description of the peg being moved, with the vertical figure first and the description of the hole to which it is being moved, and pressing NEWLINE.

The program eliminates cheating by recognising invalid moves. When a player can no longer move the F is pressed to end the game.

GRUB RACE

GRUB RACE involves a race between three good representations of caterpillars. The progress of the race is decided by random elements in the program and the player places bets on the likely winner, starting with a total of £100.

The race is complicated by the fact that at any moment the caterpillars may turn into butterflies which, after fluttering on the screen for a time, return to being caterpillars and have to start again. Complete instructions are included in the program once it is run.

The graphics in lines 60, 70, and 80 are 30 shifted Ss and two shifted As and the butterflies in lines 1061, 1071 and 1081 include two shifted As.

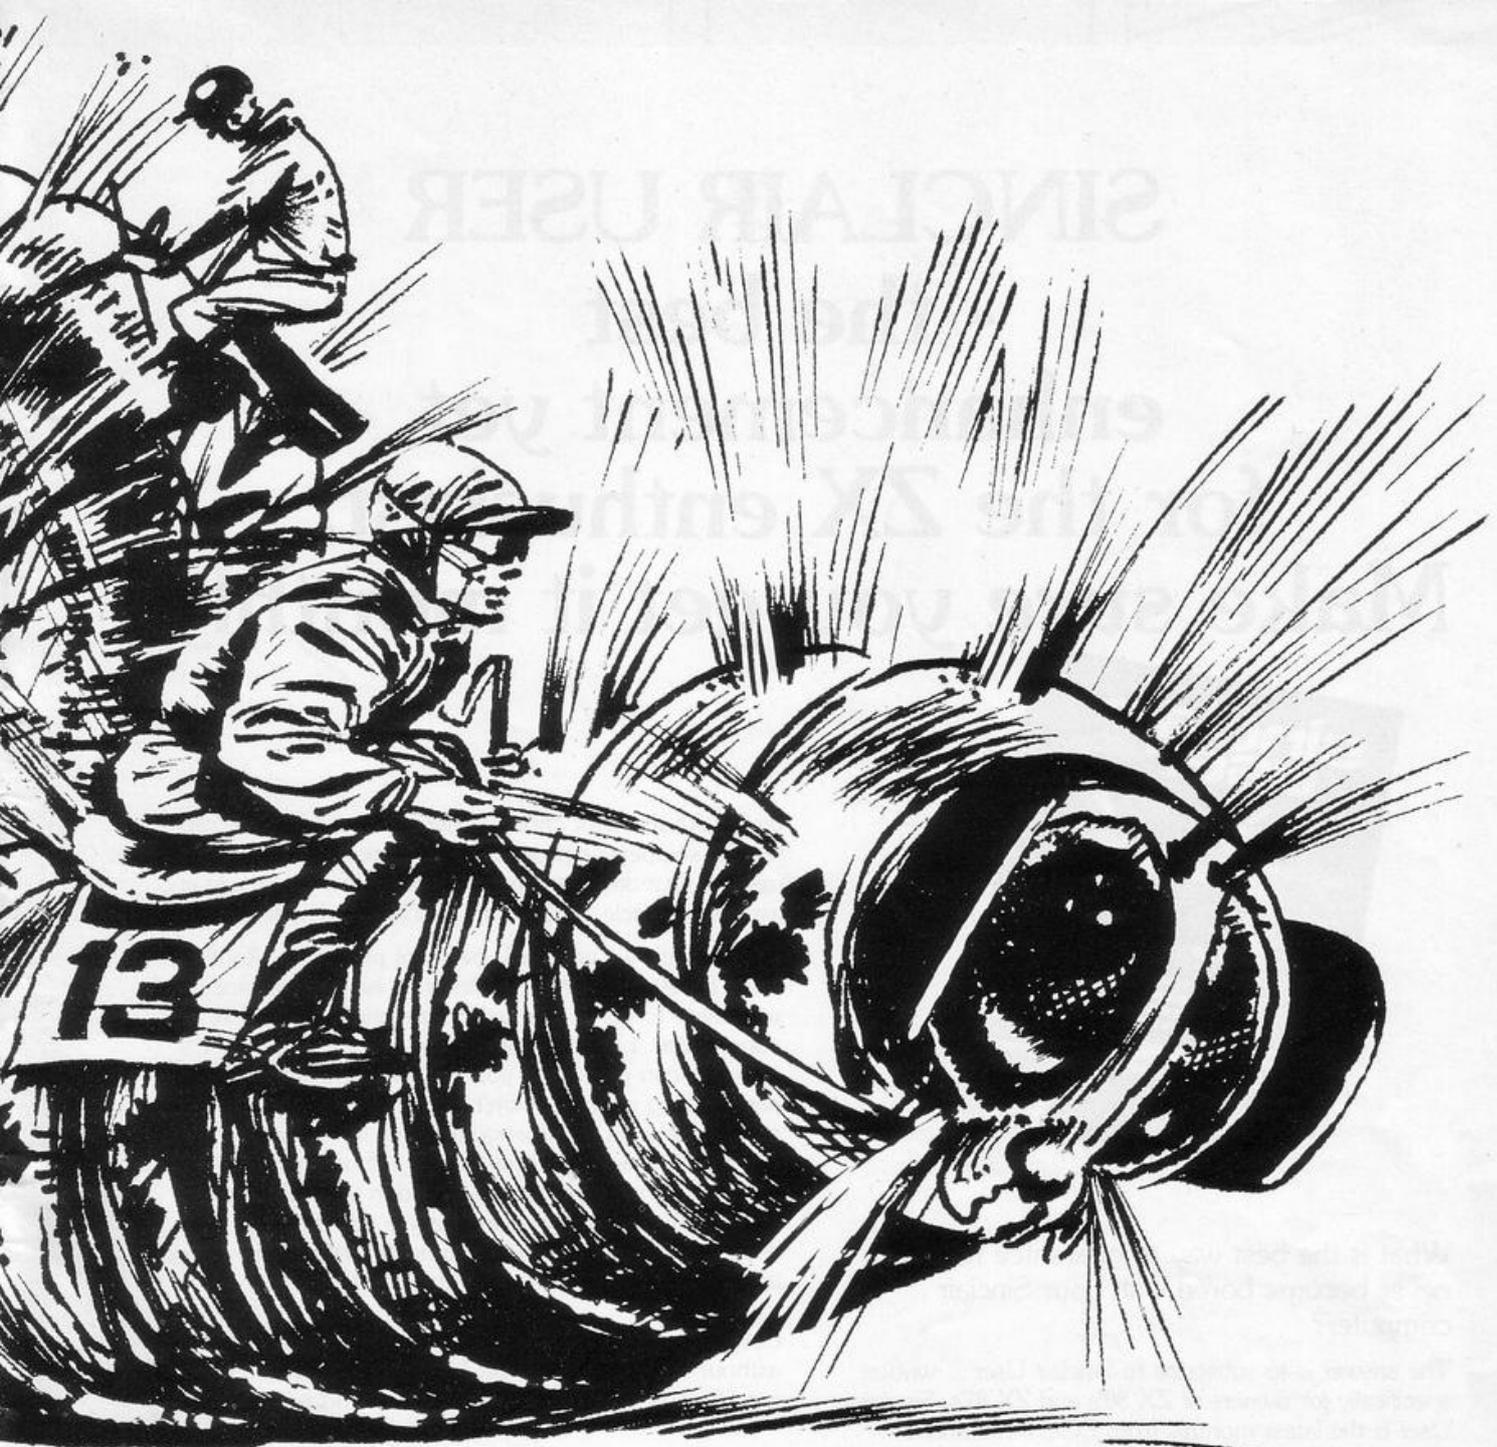

Grub Race was sent by Roy Kay of Wirral, Merseyside and requires a RAM pack.

SINCLAIR USER

- the best enhancement yet for the ZX enthusiast.

Make sure you get it monthly!

you make the right choice. There will be exclusive pre-release snippets on products which are about to hit the market. Our aim is to make Sinclair User invaluable and we will chronicle applications which are of special interest.

Each month we will carry pages of programs. Another must for every user is our first-rate helpline service. And we intend to carry as much information as possible about clubs. Last but not least let us say that the best way you can guarantee you like the magazine is by participating yourself. Don't forget to ask us your queries; send in your programs - for which we will pay £10 if we publish - and be sure to tell us if you are using your ZX 81 in a special way. Send in your club news and tell us of any interesting people out there in userland. And just in case you need further convincing, look at our forthcoming editorial plans.

What is the best way to guarantee that you never become bored with your Sinclair computer?

The answer is to subscribe to Sinclair User ... written specifically for owners of ZX 80's and ZX 81's. Sinclair User is the latest monthly from ECC Publications - pioneers of Practical Computing, WHICH COMPUTER?, and Computer & Video Games. Whether you bought your system yesterday or are an old hand, you are probably an enthusiast for your machine. And your biggest problem is likely to be obtaining all the information to satisfy your interest. We promise that Sinclair User will be devoted entirely to quenching your thirst for information.

As the name suggests, the content will be geared specifically to helping you, the user. There will be pages of information on available hardware and software. Our expert writers will analyse established products to help

Can you continue to get the most out of your ZX without reading the Sinclair User every month? So why not fill in the subscription order form **today**?

sinclair user

Learn all about computers through a remarkable new language.

Simple English.

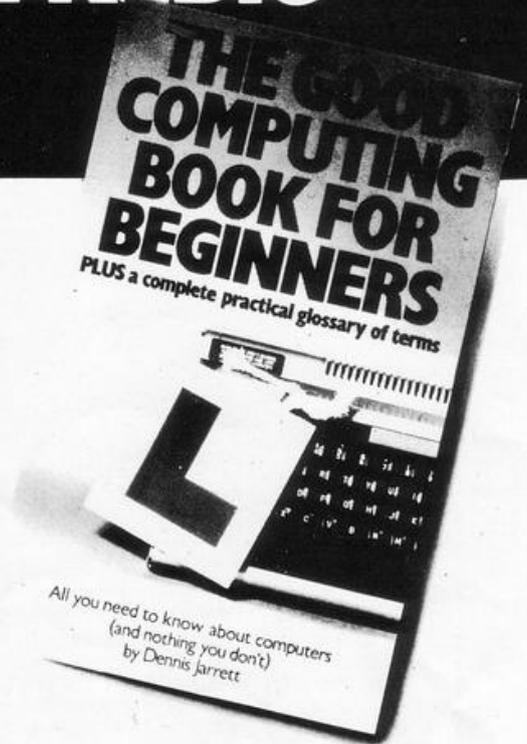

At long last, someone has written a book on computers that even Aunt Emily can understand.

That someone is none other than Dennis Jarrett: doyen of simple English and former Managing Editor of WHICH COMPUTER? and *Practical Computing*. And his book is called *The Good Computing Book for Beginners*.

If you're not a beginner, don't let the title put you off. Because this book provides a wonderful opportunity of clearing up any grey areas of your knowledge.

And a glance at the chapter headings down below may well give the impression that this book is fun to read. You would be right. It's the brightest way imaginable of learning all about computers.

There's also a complete language guide to

computer-jargon mumbo-jumbo in a glossary of terms that's as comprehensive as you'll find anywhere.

All in all, you'll find this book does for computers what Berlitz did for languages. In 304 pages. And at a modest £1.95.

Your course in computers.

- 1** Introduction to the introduction – computer myths, why they are being dispelled, and the truth about computers.
- 2** What goes on inside – a swift canter through the heavy technology, avoiding irrelevant and/or difficult ideas: processors, chips, memory, I/O.
- 3** Programmes – what makes the computer tick, or at least where the noise comes from: system software, applications, the pleasant and unpleasant faces of programming.
- 4** What's a personal computer? – new readers start here, because this is all you need to know: what can it do? What's available? And where do you buy a computer?
- 5** What to look for – how to buy a small computer, or at least how to avoid complete disappointment.
- 6** A practical glossary – facts, opinions, references and a few personalities.
- 7** Now read on – recommended reading, with notes.

Enrol here!

Please send me _____ copy(ies) of the Good Computing Book for Beginners at £1.95 each plus 50p for postage and packing.

I enclose cheque for £ _____ made payable to ECC Publications.
