Rivals in hot pursuit

SPRING is in the air and new micros are popping out all over. Meanwhile the high street stores are clearing out last year's dead wood and Commodore appears to be the first victim.

Sales of the C64 have been temporarily discontinued by Boots and Lasky, who blame Commodore's eccentric pricing policy for the decision.

"We currently have no 64s in stock," explains John Greengrass, head of Boots' computer department, "and we cannot afford to buy any more from Commodore at a loss."

If Commodore seems to be losing its grip on the market, both Amstrad and Atari are consolidating theirs. The new Amstrad machine, the CPC 664, looks set to be as successful

The new 130XE from Atari

as its predecessor, the 464. It is selling for £339, with a monochrome monitor, and £449 with colour.

Atari, continuing its bid for world domination, has

launched the 130XE, a 128K eight-bit micro costing £170.

The company has also unveiled its QL competitor at the Hanover Fair. The 520ST, the first in a range of 16-bit machines, will sell for £700. It will be available in September.

From Acorn comes the BBC B Plus, a 64K upgraded model B, selling for just under £500. Price reductions look likely for the model B now.

The problems presently suffered by Commodore will probably affect the launch of its C128 computer, scheduled for the late summer. Boots and Lasky have suggested that they will not be placing orders until the viability of the machine is

Commodore 64: on the way out?

assessed, and until Commodore adopts a sensible price strategy.

As for Sinclair, sales of the Spectrum continue to be very satisfactory, according to Boots. The QL, however, continues to show unremarkable progress, and the planned portable, called Pandora, is firmly scheduled for next year.

Births, marriages and deaths

BUG-BYTE, one of the original ZX-81 software houses which later gained fame with **Manic Miner** has gone into liquidation.

Buffer Micro has shut up shop and called in the liquidators.

The infamous **Automata** team of Christian Penfold and Mel Croucher has split up. Mel Croucher has set up a company to deal with new ventures.

In another blast from the past, **Virgin** has plans to relaunch **Rabbit Software** as a budget label.

Kempston Micro, manufacturers of joysticks and interfaces, is branching out. **Orpheus Software** has been chosen to develop its new range of titles.

Quicksilver, now part of the Argus Group, has been transferred from Southampton to London. Quicksilver's boss Rod Cousens has resigned and is setting up a new software house.

Activision has lost, and **Melbourne House** has gained, a managing director. The man making the news is Geoff Heath, formerly UK boss of Activision.

Another company to bite the dust is **Romik**. The news that the company is insolvent and has ceased trading follows a year in which little has been heard from Romik.

Channel 8, the company marketing **Digital Fantasia** adventure games has gone into liquidation.

Ariolasoft has recently pulled off a deal to licence **Ram Jam's** products in the UK and abroad.

Strange things are happening at **Fantasy Software**. Telephones are 'temporarily out of service' and Bob Hamilton, who owns the company with Paul Dyer, admits, "We have gone into dormancy for a while."

more news on page 6

Crackdown on pirates

SOFTWARE HOUSES are banding together to stamp down on piracy and a number of people have been taken successfully to court.

Rod Evans of New Generation took Anthony Yarnold, a London council worker, to court after seeing an advertisement offering well known games for a pittance. "I didn't like the look of it - this company, Leosoft, was advertising top-selling software, two for £5.00."

Evans ordered two games, **Knot in 3D** - one of New Generation's games, and Quicksilver's **Ant Attack**. "They were rip-offs," he

says, "with photocopied cassette inlays." He then got in touch with his local Trading Standards Office, which managed to trace Yarnold, who admitted copying cassettes.

Yarnold was fined £400 on two charges of false trade descriptions and ordered to pay £190.

A group of software houses, led by Artic, has also been active, bringing civil action against four people accused of pirating.

Damages were not pressed but they did admit to copying software and were bound by the court not to repeat their activities.

Micronet price increase

MICRONET has increased its subscription from £8.00 to £10.00 a quarter. This is the first increase since the database was launched two years ago and will commence on June 1.

The database has grown extensively from those early days in March 1983 and many services have been added, including the extension of local call access,

Mailbox, Chatline, Celebrity Chatline and Gallery.

Gallery allows subscribers to purchase one or more pages of the database - each page consisting of 26 frames.

They will be able to compose their own frames either with information or designs and edit them accordingly. In fact each subscriber will have control of their own

mini-database on Micronet.

The cost to purchase one frame for six months is 25 pence and the editing charge is four pence per frame.

Micronet will retain ultimate control over the content of subscribers' pages, and will not interfere unless the rules are contravened by libellous or obscene material and information such as hacking tips.

Pocket telly big in US

THE ill-starred pocket TV, which has been available in the UK for 18 months without anybody noticing, is going down extremely well in the US, according to Sinclair Research.

Sinclair claims the flat-screen TV, a long-cherished

dream of Sir Clive's, has been selling well through a promotion in the States involving the credit card giant American Express. Initial orders of 10,000 are quoted, with predictions of a further 10 to 15000 a month.

The TV, which can tune

itself to signals anywhere in the world, has not proved so popular in the UK. Nevertheless, Sinclair reports increased sales recently with regional distributors expressing interest as well as London stores.

No figures for sales are

forthcoming, but Bill Jeffrey, the overlord of Sinclair's TV operation, says research shows enormous potential in the UK, and "a high level of satisfaction among existing owners."

Meanwhile, Sir Clive has been talking to at least two companies over selling the rights to manufacture and market the product. If those moves are successful, the money raised should enable Sinclair to pay off a substantial proportion of its current overdraft.

On the other hand, the current reticence on UK sales figures must surely indicate that the world's first flat-screened portable TV has still fallen well short of the initial hopes Sir Clive had for the invention he has been pursuing for 20 years.

Beyond the new monolith

BEYOND Software is launching a new software label called Monolith.

Monolith and Beyond will be run as two autonomous companies. Each label will be targeting its games at different audiences; Monolith will be mainly arcade-style games as opposed to the detailed strategy/adventure programs like **Lords of Midnight**.

"Monolith is a marketing vehicle which allows us to produce software and to ac-

quire character licences from TV and film," says a Beyond spokesman.

The first two games to be launched by Monolith at the end of June will retail at £9.95 and are **Rockford's Riots** — a follow-up to **Boulder Dash** which will be on the B side, licensed from First Star — and **Quake Minus One** by Mike Singleton, of **Lords of Midnight** fame, and Warren Foulkes.

The game is set in the USA where there is a vast

mining complex under the sea run by robots. They threaten to cause an earthquake which will topple California into the drink and you have only one day in which to sort out the mess.

Characters licensed from TV and film will be a major part of the Monolith look, and a game to be released by Monolith in September will have an even larger character licence than **Ghostbusters** — obviously one to look forward to.

FREDERICK FORSYTH THE FOURTH PROTOCOL

New releases

IN **Cauldron**, from Palace Software, you play the part of a witch in an exciting arcade adventure. **Cauldron** is priced at £7.99.

A *View to a Kill* is the latest Bond movie and Domark is releasing the Spectrum version to coincide with the premiere. *A View to a Kill* will be stalking the streets on June 7, priced at £10.99.

Firebird has come up with **Don't Buy This** at £2.50 and is a compilation of five of the worst games submitted.

On the subject of Firebird, a gremlin appeared in the **Gyron** review — May, *Sinclair User* where we said that a Porsche 924 would be won by the first person to wrest the code from Necropolis. If by November 6 there is more than one correct entry, a play-off will be held for the prize. And if you are stuck for clues, look carefully at the face on the Cassette box.

The Fourth Protocol, based on the novel by Frederick Forsyth, has been delayed due to a programming hitch and will be released on June 20 for £12.95.

A new game from Hodder & Stoughton is called **Rats**, based upon the nauseating best seller by James Herbert. Due to be released in September, it will put you back £6.95, or £8.95 with the book.

Dun Durach, the prequel to *Tir Na Nog* is Gargoyle's latest release. Retailing at £9.95, it will be released on May 30.

Sinclair in trouble?

RUMOURS that Sinclair Research is in deep financial trouble have been flying around recently, with stories of a collapse in share prices from £34 to £11. A story in the *Observer* suggested there was no demand for Sinclair stock, and that Sinclair Research would experience problems raising finance for future projects.

"The *Observer* has a vivid imagination," says Sir Clive. "Sinclair Research has large stocks of Spectrums because the retail trade got their

calculations badly wrong at Christmas. We have 300,000 machines, and so we have rescheduled production."

Sinclair Research also has a £5m overdraft, against £8.5m cash at the same time last year. "We're all right for the time being," says Sir Clive, "but I'd rather not have one." It is not a disastrous situation for a company with stocks worth £34m, but neither does it inspire confidence among potential investors in future projects, such as the plan-

ned semi-conductor plant for waferchip products which requires £50m to set up.

Sinclair Research apparently made a small loss in January but improved sales in February and March. World-wide supplies of Spectrums are now said to be running at a little under 200,000 a month, the target figure for production.

On the subject of shares, and reports that large numbers of Sinclair shares have been sold, Sir Clive said he knew nothing of any share movements. A spokesman for Sinclair Research threw some light on the situation by explaining that one person had sold 50 shares for about £10 pounds each, and consequently a few hundred more were sold in another transaction. "That's out of four million shares," says the spokesman. It appears that reports may have been influenced by rumours in the City stemming from the one small transaction.

"I don't know much about financial markets," joked Sir Clive, "but they do tend to overreact."

Hackers in the dock

FOLLOWING the recent problems Prestel has experienced with hackers, Robert Schifreen, 21 from Edgware and Stephen Gold, 29 from Sheffield, have been charged with forgery under Section 1 of the Forgery and Counterfeiting Act, 1981.

Between them, Schifreen and Gold have been charged with allegedly forging electrical devices for recording information on the Prestel Gateway test computer, the Vampire facility of the Kipling computer and the Keats

and Dickens computers.

Police raided both men's homes on March 27 and confiscated computers and electrical equipment.

On April 3 both were remanded on unconditional bail until June 12 when the case will be heard at Bow Street Magistrates Court.

The maximum fine or term which Schifreen and Gold can be charged with under Section 1 of the Forgery and Counterfeiting Act, 1981, is £1000 or six months imprisonment.

C5 in advertising controversy

THE Sinclair electric trike has now come in for criticism from the Advertising Standards Authority, which has attacked the C5 advertising campaign.

According to a leaked draft of the report, the ASA criticises the claims made that the machine is "safer than anything on two wheels", and that it cruises at twice the speed of a bicycle.

Bill Nichols, a spokesman for Sinclair Vehicles, says the report is only a draft and the company has an opportunity to reply to the charges before the final judgement.

The revelations are clearly embarrassing to Sinclair Vehicles, since they follow stories in the press about Holland banning the C5 on safety grounds.

"The changes we are making to the C5 are simply to comply with local laws," says Nicholas. "We also have to put on a colour code to indicate the insurance

class of the vehicle."

Production of the C5 in Wales has been cut from 1000 a week to 100. Of the 100 workers, 90 have been reassigned to producing Hoover washing machines. Nichols blames the bad winter for poor sales in the UK.

The first prosecution involving a C5 has been thrown out of court.

It involved a Kent University student who was pedalling a C5 back from a charity ball. He was arrested by the police who alleged he was drunk and prosecuted accordingly.

more news on page 8

Congratulations

WELL OVER 4,000 entries were submitted for the **Monty is Innocent** competition in the April issue of *Sinclair User*. The 50 winners, who rescued Monty from cell B, after picking up the gun, key and potion, are printed below. Each receives a copy of the game, and in addition the first 10 have been made members of the Gremlin Gang.

A Caldwell, Braintree, Essex; David Miller, New Barnet, Hertfordshire; R Robinson, Dorking, Surrey; Mark Soutar, Forfar, Angus; Paul Brown, Worthing, Sussex; Darren Furnell, Swindon, Wiltshire; Jonathan Snape, Kidsgrove, Staffordshire; Ian Acreman, Wimbourne, Dorset; Scott Blackwell, Higham Ferrers, Northamptonshire; T Morgan, Hull, Humberside; Ashley Stoner, Crowborough, East Sussex; T Breckon, Skelton, Cleveland; Paul Presley, London SW3; Nicholas Bromley, Carlton-in-Cleveland, Middlesbrough; Matthew Bradford, Edenbridge, Kent; Matthew Chisholm,

Wokingham, Berkshire; I D Cannon, Ashford, Kent; George Welton, Branston, Lincolnshire; A J Philpott, Broadstairs, Kent; John Harragan, Chelmsford, Essex; Alexander Botten, Nuneaton, Warwickshire; E Stafford, Sleaford, Lincolnshire; Vince Teo, Hertford, Hertfordshire; Trevor Pawson, Toynton All Saints, near Pilsby; B Tongue, Northallerton, North Yorkshire; Lee R Hand, Harwich, Essex; Andrew Henry, Southampton, Hampshire; Mark Menzies, Birmingham; Kevin Roberts, Bishops Cleeve, County Durham; Nicky Gibson, Thornaby, Cleveland; Stuart Beeson, Kempston, Bedfordshire; Bevis Robins, Megavissey, Cornwall; David Grozier, Houghton-le-Spring, Tyne and Wear; Paul J Saunders, Gosport, Hampshire; M Austwick, Cowplain, Hampshire; Gregory McDougall, Birmingham; Nicola Milligan, Scarborough, North Yorkshire; James Wheeler, Orpington, Kent; Jon Goodheart, Witham, Essex; Trevor Pudney, Chelmsford, Essex; Craig Lovelace, Whelpstead, near Bury St Edmunds; J Horswell, Plymouth, Devon; Kenneth Ogden, Cardiff, South Glamorgan; D Stephenson, Cramlington, Northumberland; H

T Lawrenson, Billinge, near Wigan; Iona Pollard, near Shaftsbury, Dorset; James Wilson, Maidenhead; C M Clementson, Southport, Merseyside; Mark Rose, Lutterworth, Leicestershire; Mark Livingston, Irvine, Ayrshire.

The response to the Sinclair C5 competition in the April issue was also enthusiastic, with over 2,000 entries. The correct answer to the puzzle tree was MEM-

ORY and the first solution out of the hat came from J W Emmett, of Bradford, West Yorkshire, who is now the proud owner of a C5. The three runners-up, who each win a Sinclair pocket TV, are L R Gudalajtys, of Carlton, Nottingham; M Paice, of Berkhamsted, Hertfordshire; and R Hill, from Margate, Kent.

War in slow motion

NIDD Valley has released two joystick interfaces incorporating its Slomo invention, a device to slow down arcade games so you can get more time to think.

The Pace-Setter interfaces are said to give full control over the speed of games even while you play. There are two interfaces, a programmable one at £24.95 and a non-programmable interface at £14.95. Both incorporate an on-off switch and an LED to indicate the mode of speed being used.

Nidd Valley is anxious that other companies may be about to infringe the patent of the invention, which has been applied for. A spokesman for the company is concerned that potential customers should make sure the product they buy has the Slomo logo on it.

Serious business?

QL USERS looking for efficient ways to contribute to their bank balance will be interested in a new book by Arnold Handley.

Sinclair QL in Business is a racy, irreverent look at the possibilities of the machine.

It concentrates very much on the applications of software, but goes beyond the manual in describing numerous "unofficial" ways of using the Psion programs. It is published by Newnes Microcomputer Books, and costs £9.95.

Generating a standard

METACOMCO is about to release its version of Pascal for the QL. The package conforms to the full ISO international standard, according to David Sykes of Metacomco, and will cost £89.95.

"The price reflects the quality of the software" says Sykes. "It is a true single pass compiler which generates 68000 code directly."

That contrasts with the Computer One Pascal. The Metacomco version, if it lives up to the claims made for it, will be considerably superior.

Details can be obtained from Metacomco at 26 Portland Square, Bristol BS2 8RZ. Tel: 0272 428781.

QCOM alive and well

THE QCOM modem system is alive and kicking again in spite of the collapse of OEL, the company responsible for its design and production.

Sinclair Research has always seen the system as an important peripheral for the QL, essential for much business operation.

The demise of OEL was a serious blow to the QL, suffering as it was at the hands of an increasingly

sceptical UK market.

Tandata, a company specialising in communications equipment, has now bought the rights to manufacture and sell the system, as well as existing stocks of modems which were never released.

As yet there is no firm news on price or availability, but Tandata is expected to sell QCOM through its own distribution network. QCOM will probably be sold for slightly more than the

£79.95 originally quoted, whereas QMOD and QCALL will probably remain at the old prices.

Tandata is also likely to change the name of the whole system from QCOM to QLINK. The change is logical given that Tandata created the Homelink system in conjunction with the Nottingham Building Society and the Bank of Scotland, whereby new homes get a built-in computer terminal enabling banking transactions to be carried out from home.

Sinclair Research has played an active part during the negotiations, which have been conducted in the midst of persistent and frequently inaccurate rumours. "We're pretty pleased that QCOM has finally seen the light of day" says a spokesman. "What's that phrase the footballers use? We're over the moon."

Not so happy is Lawrence Cook of OEL, who designed QCOM. "When Prism and Oric went bust they owed us rather a lot of money," he says. According to Cook, had OEL been able to complete the finishing touches to the QCOM package it might have avoided liquidation.

Better super software

DIGITAL Precision, whose first QL products are reviewed elsewhere in this issue, has already released upgrades of its **Super Sprite Generator**, **Super Backgammon** and **Super Monitor** programs.

The improvements are said to have developed from a questionnaire sent out with mail order copies, in which customers were asked to criticise the programs.

We have not yet had an opportunity to investigate

the claims thoroughly, but our review of **Super Backgammon** does require some modification. Two new playing levels have been added, 'for really strong Backgammon players'.

Sinclair's QL armada

FOREIGN language versions of the QL are now coming into production, with software packages translated.

The first of the new machines, a Spanish version, has already been launched, and Sinclair Research is to follow that with French, Italian and Danish. Further planned launches include Turkish, Greek, German, Dutch, Portuguese, Norwegian, Swedish, Finnish, and Arabic.

"Some countries, such as Greece, require completely different keyboards, and others, such as France have different keyboard layouts," says a spokeswoman.

Market success

ENTHUSIASM for the QL in Europe is growing, according to companies involved in supporting the machine.

Cambridge Systems Technology, which produces the Q-disc controller and markets Computamate disc drives, has announced a mutual endorsement deal with software house Computer One, publishers of **QL Pascal** and **Forth** programs, with a particular eye on the European market.

"Over 75 per cent of our QL software is sold on the continent," says Paul Ives of Computer One, and with CST the company is developing a package of software and hardware.

Customers in the UK will also be able to benefit from the deal between the two companies, with a planned voucher scheme whereby purchasers of CST hardware will receive money-off vouchers for Computer One software.

Thinking so ... thi

THE TASWORD WORD PROCESSORS

The extensive features of the Tasword word processors are ideal for both the home and business user. Every Tasword comes complete with a comprehensive manual and a cassette or disc. The cassette or disc contains your TASWORD and TASWORD TUTOR. This teaches you word processing using TASWORD. Whether you have serious applications or simply want to learn about word processing, TASWORD and TASWORD TUTOR make it easy and enjoyable.

TASWORD TWO (Spectrum)

64 characters per line on the screen!

"Without doubt, the best utility I have reviewed for the Spectrum." HOME COMPUTING WEEKLY APRIL 1984

"If you have been looking for a word processor, then look no further." CRASH JUNE 1984

The cassette program is supplied with instructions for microdrive conversion.

TASWORD TWO* ZX 48K Spectrum
cassette **£13.90**
microdrive cartridge **£15.40**

TASWORD EINSTEIN

A sixty-four character per line display and the ability to hold over five hundred lines of text at any time are just some of the features of this, the most recent, of the Taswords. Full interaction with the disc system—e.g. Tasword detects the presence of added drives and allows their use.

TASWORD EINSTEIN Tatung Einstein
disc **£19.95**

TASWORD 464

"There is no better justification for buying a 464 than this program."

POPULAR COMPUTING WEEKLY NOVEMBER 1984

A particularly sophisticated yet easy to use program. Now available on disc. The cassette version is supplied with instructions for transferring to disc.

TASWORD 464* Amstrad CPC 464
cassette **£19.95**
disc **£22.95**

TASWORD MSX

With all the features of the Spectrum Tasword Two including the amazing sixty four character per line display. The Tasword MSX machine code program utilises the 32K of memory not normally available to Basic allowing over five hundred lines of text to be held in memory.

TASWORD MSX* 64K MSX Computers
Fully inclusive mail order price **£13.90**
(cassette/includes both disc and tape versions)

THE TASCOPY SCREEN COPIERS

The TASCOPY screen copiers print high resolution screen copies with different dot densities and patterns for the various screen colours. This gives the screen copies a shaded effect which presents on a monochrome scale the colours on the screen. With TASCOPY you can keep a permanent and impressive record of your screen pictures and diagrams. TASCOPY supports all the printers mentioned under TASPINT.

TASCOPY (Spectrum + Interface 1)

The Spectrum TASCOPY is for use with the RS232 output on ZX Interface 1. It produces monochrome copies (in a choice of two sizes) as well as copies with the shaded "grey scale" effect described above.

TASCOPY ZX Spectrum cassette **£9.90**
microdrive cartridge **£11.40**

TASCOPY 464

Adds two new commands to the 464 Basic to give both a standard shaded screen copy as well as a "poster size" copy which is printed onto two or four sheets which can be cut and joined to make the poster.

TASCOPY 464 Amstrad CPC 464 cassette **£9.90**
disc **£12.90**

TASCOPY QL

TASCOPY QL adds new commands to QL Superbasic. Execute these commands to print a shaded copy of the screen contents. Print the entire screen or just a specified window. TASCOPY QL also produces large "poster size" screen copies on more than one sheet of paper which can then be cut and joined to make the poster, and high speed small copies.

TASCOPY QL Sinclair QL
microdrive cartridge **£12.90**

THE TASPINT STYLE WRITERS

A must for dot-matrix printer owners! Print your program output and listings in a choice of five impressive print styles. The Taspints utilise the graphics capabilities of dot matrix printers to form, with a double pass of the printhead, output in a range of five fonts varying from the futuristic data-run to the hand writing simulation of Palace Script. A TASPINT gives your output originality and style! The TASPINTS drive all Epson compatible eight pin dot-matrix printers, e.g.

AMSTRAD DMP 1
EPSON FX-80
EPSON RX-80
EPSON MX-80 TYPE III
NEC PC-8023B-N

Five impressive print styles for your use:-

MANNESMANN TALLY MT-80
STAR DMP 501/515
BROTHER HR5
SHINWA CP-80
COSMOS-80
DATAC PANTHER
DATAC PANTHER II

COMPACTA - bold and heavy, good for emphasis

DATA-RUN - A FUTURISTIC SCRIPT

LECTURA - clean and pleasing to read

MEDIAN - a serious business-like script

Palace Script - a distinctive flowing font

Typical Taspint output. Please note that different makes of printer produce different sized output.

TASPINT (Spectrum)

Drives all the printer interfaces compatible with TASWORD TWO and can be used to print TASWORD TWO text files as well as output from your own Basic programs.

TASPINT 48K Spectrum cassette **£9.90**
microdrive cartridge **£11.40**

TASPINT 464

Can be used to print AMSWORD/TASWORD 464 text files in addition to output from your own Basic programs. Drives the Amstrad DMP 1 in addition to the printers listed to the left.

TASPINT 464 Amstrad CPC 464 cassette **£9.90**
disc **£12.90**

TASPINT QL

TASPINT QL includes a screen editor used to modify files created by other commercial software, such as QUILL, or by the user from BASIC. These modified files include TASPINT control characters and may be printed, using TASPINT, in one or more of the unique TASPINT fonts.

TASPINT QL Sinclair QL
microdrive cartridge **£19.95**

OTHER TASMAN PRODUCTS FOR THE ZX SPECTRUM

TASMERGE

The Mail Merger

Transfer data from MASTERFILE to TASWORD TWO! Letters and forms typed on TASWORD TWO can be printed with addresses and data taken from MASTERFILE. The mail merge facility allows, for example, multiple copies of a letter to be printed, each containing a different name and address taken from your MASTERFILE data. To use TASMERGE you must have one or more microdrives as well as TASWORD TWO and MASTERFILE by Campbell Systems. (version 9 or later).

TASMERGE ZX 48K Spectrum **£10.90**

TASWIDE

The Screen Stretcher

With this machine code utility you can write your own Basic programs that will, with normal PRINT statements, print onto the screen in the compact lettering used by TASWORD TWO. With TASWIDE you can double the information shown on the screen!

TASWIDE ZX 16K + 48k Spectrum **£5.50**

TASMAN PRINTER INTERFACE

Plug into your Spectrum and drive any printer fitted with the Centronics standard parallel interface. Supplied complete with ribbon cable and driving software. The user changeable interface software makes it easy to send control codes to your printer using the method so successfully pioneered with TASWORD TWO. The cassette contains fast machine code high resolution full width SCREEN COPY SOFTWARE for Epson, Mannesmann Tally, Shinwa, Star, and Tandy Colour Graphic (in colour!) printers.

TASCOPY, shaded screen copy software for this interface (value £9.90 -- see description on left) is included in this package.

CENTRONICS INTERFACE ZX Spectrum **£39.90**

COMPUTER PRINTER CABLES

RS232 for ZX INTERFACE 1 **£14.50**
MSX CENTRONICS **£16.00**
AMSTRAD CPC 464 CENTRONICS **£9.90**

All prices include VAT and post and packaging.

The world is your lobster

THE MAN himself was there at the launch of **Minder**, the DK'tronics/Thames TV spinoff. **Arthur Daley** spent much of the time smoking cigars and munching biscuits, however. Programmer **Don Priestley** did most of the talking.

That clearly worried the DK'tronics heavies, who lacked confidence in the garrulous pensioner. The minders stood at the back making signs to Priestley, in an attempt to guide his replies.

In any case the black box fatties needn't have worried. Most of the questions were bawled out by an imposing female from the *Daily Mirror*. "Everyone knows you have to get a game into the arcades to make any money," she insisted, asking if **Minder** was "the new Pac Man." "Is it a battle game or what?" ranted this refugee from a Surrey gymkhana. Nice to know the *Daily Maxwell* still has a finger on the pulse of Britain . . .

DK vendetta

Meanwhile, DK'tronics is suffering from the attentions of an ex-employee with a grudge. The character has been sending out press releases on photocopied

DK'tronics notepaper delving into owner **David Heelas'** private life.

Without going into the gory and irrelevant details, it appears David made a court appearance recently at which he announced he was selling the company and moving to Great Yarmouth. Not so, according to DK. Which leaves Gremlin pondering two questions. Who is penning the poisonous press releases, and why did Heelas tell a court he was selling up if he wasn't .?

Garbo on the Mersey

Software Projects superstar **Matthew Smith** is 'resting', according to his boss **Alan Maton**. The flabby maestro of animated toilets is distressed by the attention of the media and only wants to be alone . . .

Rivers of blood

Meanwhile, **Maton** is scouring Liverpool for someone to throttle. He's convinced a fellow Merseysider is behind rumours that Software Projects is going bust. "I'll punch him in the head, I'll *@#!£ kick his teeth in, I'll . . ." Words fail Alan as visions of blood-soaked slaughter fill his brain . . .

MP **Bob Dunne** does chair company **Balans** a good turn by obscuring their new product with his immense bulk. The awful truth about the **Blans Vital** computer chair is revealed in the inset.

Bill 'incorruptible' Scolding accepts money from Arthur Daley in return for putting him on the front cover. Note the grubby corduroys.

The wrath of Buzby

Incensed by a derogatory news item about **Gyron** in a rival comic, creators **Firebird** promptly threatened to withdraw 10 grand's worth of advertising if the subsequent review spat similar vitriol.

The rag in question, a slim publication catering mainly for the headbanger market, now features no review at all. . .

Kid's stuff

Brazen Backslappers of the Month Award goes to **Elite** for emphasising the extreme youth of the company. There are several extreme youths at **Elite**, and sales director **Steve Wilcox** reckons it means **Elite** is "meeting the needs of a young market - average age 10 to 15."

A long list of games is included, such as **Grand National** and **Dukes of Hazzard**. The one the Wilcox clan omits is **911TS**, an incredibly dull plug for Dunlop Tyres. Word from the kindergarten suggests the little lads are unhappy about the game. "Definitely the last of a breed," says one pre-pubescent mole . . .

Nuking US Gold

CND is worried about games like **Raid Over Moscow** where zapping aliens is discarded for the joys of nuking the reds.

Gremlin cherishes the comments of **US Gold's Geoff Brown**, who brought the venomous game to our shores. "A well-adjusted child is able to differentiate

fantasy from reality," he says. Quite. It's not the kids who worry us, it's what happens when they grow up and turn into Ronald Reagan . . .

Political virgin

Nick Alexander of **Virgin** is also getting into politics. 32-year-old Nick has been co-opted to advise **David Owen** of the **SDP** about the interests of youth. Nick is a proud founder member of the **SDP** and reckons his experience flogging records and **Sheepwalk** to kids will stand Dr Owen in good stead. The facts speak for themselves, really . . .

Old buffer complains

And finally **Mike Howard** of **Buffer Micro** (RIP) writes elsewhere to protest about Gremlin's hairy armpits story last month. Since the sexist comments were taken from an article written under his name in a trade paper, it seems odd.

According to Howard, the *Computer Trade Weekly* gang made it all up, and then read bits of it to him over the phone. "If Howard wanted any of it changed he could have said so," wails cub reporter **Simon Harvey** at CTW. "I did," says Howard. "They wanted to make a crack about Greenham Common, and I said no. So they put in hairy armpits instead, which was even worse."

CTW says that it has a duty to report the industry 'warts and all'. And if you can't find any warts, invent them, supposes Gremlin . . .

"YOU MUST BE THE BEST SOFTWARE FIRM IN THE WORLD"

(L. Hallard, London)

For nearly 3 years, we have been selling software as 'Software Supermarket'. But, because we have discovered at least two other companies (including Micronet!) using our name, we have changed it to Speedysoft. After all, it is the sheer speed of our delivery which our customers in over 40 countries seem to appreciate most. SPEEDYSOFT is a very different kind of software shop. First, we actually play all the programs ourselves and offer you only the best. Second, we send FREE with your order a 32-page catalogue which quotes all the reviews and even lists load times! (For a catalogue only, send £1.00 cash and we will send you a voucher for £1.00 off any order, plus your catalogue.) Third, WE ALWAYS TRY TO SEND OUT YOUR PROGRAM ON THE DAY WE GET YOUR ORDER. UK prices include VAT: export prices are the same, plus p&p. To order by VISA/ACCESS, call 01-789 8546 at any time, 24hrs a day. ALL PROGRAMS RUN ON BOTH SPECTRUM AND SPECTRUM PLUS.

BASEBALL Staggering, amazing and really pretty good simulation. DEMO teaches. But as you see the ground in 3D perspective you also see the giant video screen close-ups! Steal options, curved balls, pitcher throws, cheer leaders. 3, 6, or 9 innings: 3 skill levels: 1 or 2 players: 1 or 2 sticks: on-screen instructions. STICKS Kempston/Interface2/Cursor. (Imagine) CASSETTE £6.95

SORCERY "WONDERFUL . . . the graphics are beautifully designed to an incredible degree of detail." (PopCompWkly) "Stunningly sharp, colourful graphics and a truly infuriating and fascinating plot." (Micro Adventurer) Race against time to liberate your 5 sorcerer friends in one of the most playable and beautiful Spectrum games ever. Random start, different game every time. STICKS Kempston/Interface2 (VIRGIN) CASSETTE £6.95

SPYHUNTER "The superb arcade blast 'em, bump 'em, crash'em all-action shoot 'em up explodes onto your screen with this ace no-holds-barred conversion . . . a must for any shoot 'em up addicts collection." (ZZAP) You control the turbo racer/hydro spy boat, depending whether you're on land or water. You've missiles, machine-guns, oil slicks, smoke-screens. 2 skill levels. DEMO. STICKS Kempston/Interface2/Cursor. (U.S.Gold) CASSETTE £7.95

DRAGONTORC "A BRILLIANT PROGRAM ALL ROUND; excellent sound and graphics and a great addictive quality . . . well worth having." (PersCompToday) Over 250 locations and more than 80 individual creatures from over a dozen different races in this magical sequel to 'Avalon'. Wonderful follow-up to a great graphic adventure. STICKS Kempston/Interface2/Cursor. (Hewson) CASSETTE £7.95

FORMULA ONE "A really good strategy game . . . as management games go, it's one of the best." (PopCompWkly) 1 to 6 players. Full simulation of a Grand Prix Racing Season. 16 races. Invest your sponsors' money in drivers, pit-crews, cars: guess at the weather forecasts accuracy and choose your tyres. Then watch the races run in very good and big graphics. As enthralling as the same company's golf and cricket simulations. STICKS Most: (CRL) CASSETTE £7.95

PAINT PLUS "I've never had so much fun with a utility program." (ZX Computing) "If you've been looking for a Spectrum graphics aid, this seems like one of the best." (PopCompWkly) The reviews refer to the original PAINTBOX. This version has 24 new commands and an 88-page colour manual. MICRODRIVE and GRAFPAD compatible. UDG Editor, Drawing Board, Sketch Pad, Precision Plotter and Screen Planner. AMAZING DEMO on flipside. The very best Spectrum graphics kit. STICKS Kempston/Cursor. (Print 'n'Plotter) CASSETTE £9.95

SPACE SHUTTLE "Superb graphics, the cockpit vibrations during the launch really give the impression of taking off." (HomeCompWkly) Fly the Space Shuttle DISCOVERY. Launch, rendezvous and dock with an orbiting satellite 210 miles above Earth, then return to Edward's Air Force Base. Progressive difficulty. DEMO. Great graphics and a very well illustrated manual. Photograph the final screen to earn your free 'wings'. STICKS: Kempston/Interface2/Cursor. (Activision) CASSETTE £8.00

SUPERCODE 3 "This amazing collection brings the speed of m/code within the reach of any programmer familiar with BASIC." (PersCompToday) "An excellent collection of routines and utilities that no serious user should be without." (C.T.W.) Save/load to/from tape/Microdrive as you wish. 152 Machine-code routines. Helpful instruction manual. The ultimate Spectrum Toolkit. 100% menu-driven. On-screen training. If you're writing in BASIC or m/c, you need this fast! NO STICKS. (CP Software) CASSETTE £12.95

TECHNICIAN TED "Some of the liveliest, detailed and imaginative graphics I've seen . . . it must be a game to add to your collection. Truly amazing, truly difficult, truly wonderful. 96%." (Crash) "Has the same touches that made JETSETWILLY so clever and professional: precise collision detection, very carefully constructed screens, nicely designed sprites." (PopCompWkly) 50 SCREENS. Time limits; continuous music. It's got everything. STICKS: Kempston/Interface2/Protek. (Quicksilva) CASSETTE £5.95

MINI OFFICE "QUITE EXCEPTIONAL VALUE . . . the first affordable program suite I have seen . . . I strongly recommend beginners get this first." (PersCompNews) 4 programs on one tape, all working with EPSON-compatible printers. WORDPROCESSOR : DATABASE : SPREADSHEET : GRAPHICS . An amazing collection at an unbelievable price, no wonder we've sold so many! (Database) CASSETTE £5.95

GYRON "There is little to rival it in the entire world of Spectrum programs . . . utterly original, compulsive." (PopCompWkly) "An astonishing program which requires quick arcade responses, a great deal of thought and should provide hours of satisfying frustration . . . the graphics are breathtaking." (Crash) "A brilliant game combining strategy and arcade skills . . . a game in which brains and logic count, stands in a class of its own." (Sinclair User) WIN YOURSELF A PORSCHE 924! (If you solve Gyrion before 21/10/85. There may have to be a tie-breaker competition.) Simpler and harder games on different sides of the tape. 12 levels. ALL STICKS. (Firebird) CASSETTE £9.95

SHADOWFIRE "Graphically superb and seems very complex . . . it's going to be a game to savour for some months." (PopCompWkly) THE WORLD'S FIRST ICON-DRIVEN ADVENTURE. Makes your Spectrum seem a little like a Macintosh! The best yet from the 'Doomdark' company. Fascinating graphic adventure without words as you organise the Enigma team. 3 different missions. Stunning graphics. 20-page full-colour manual. You have 100 minutes to win! Demo helps. STICKS Kempston/Interface2. (Beyond) CASSETTE £9.95

Praise Clive!

I AM surprised that you bothered to print the letter from Dietmar Osman regarding Sir Clive Sinclair — letters, April.

Sinclair was the innovator of the hand-held calculator and the home computer.

The Spectrum was an enormous step in this field. The potential of this machine as a serious mathematical and scientific tool can hardly be appreciated by those people who use it for games only. The microdrives on my machines have, after a year of daily use, proved perfectly reliable.

The QL is a further step to serious computing and will accommodate a larger range of useage than most home machines.

One would not expect the writer of such a letter to understand the importance in transport engineering terms of the C5 tricycle and its attempt to establish at least one new thought pattern in social transport.

If Dietmar Osman would enter Sir Clive's dreamworld perhaps he too could become a multi-millionaire.

**J Talbot,
King's Lynn, Norfolk**

I WISH to reply briefly to Mr Osman of Farnham, Surrey who claims that Sir Clive 'is rapidly going downhill' and criticises the QL, the microdrives, the Spectrum Plus, and the C5 which he considers to be 'Clive's latest idiocy'.

Whether the C5 is a death trap or not remains to be proved, but if it is unfit for the road, the country's lack of cycle paths has something to do with it. I can only praise Sir Clive's spirit and I hope his dream of 'fast, quiet, astonishing family vehicles' comes true.

If it hadn't been for Sir Clive, there might never have been a British compu-

ter industry. So, to save the country from crumbling any further, why don't we encourage geniuses like Sir Clive Sinclair to achieve their highly humanitarian goals?

He's all the once-famous British inventive spirit has to hold onto. Why can't the nation and the Government realise that?

**J Paton,
Geneva, Switzerland**

Easy random formulae

SIMON North — Letters, April — was nearly right. Any experienced user will notice that the Spectrum will evaluate $RND * b$ before subtracting a . The formula should be capable of being used in a program with values being substituted.

The correct way to write his formula is

$INT(RND * (b-a)) + a$

Far better to say

$INT(RND * L) + \text{start}$

where 'start' is the start of the range, and 'L', one more than the length of the range. So, to give a random number between 10 and 20, the formula would read

$INT(RND * 11) + 10$

**Stephen Hutton,
Preston, Lancashire**

Entry Points in correction

GLANCING through Entry Point in April's *Sinclair User* I was surprised to see stated 'numeric variable names have the same length restriction as that of strings'. Actually, this restriction applies to numeric arrays, not numeric variables.

In fact, it can be helpful to use mnemonic multi-character variable names while programming, replacing them with shorter names when the program is working.

The statement, further on, that 'ROM is similar to RAM but anything which you store in it will not disappear when you switch off the power' implies that the contents of ROM can be altered; which is not so.

**John Foad,
Nottinghamshire**

Embarrassing front covers

I KNOW you try to appeal to a wide audience but if your cover pictures are anything to go by you are only appealing to schoolchildren.

I like your magazine but pictures of turtles, schoolteachers and certain characters on the front tend to make me feel embarrassed about buying it. I usually pick a time when the newsagent is nearly empty and I hurriedly hide it between the covers of the *Sun* newspaper.

**A Wilson,
Arbroath, Angus**

PS. Please don't tell anyone I read the *Sun*.

● *Oops! Sorry. I'm intrigued by 'certain characters', though. Could you mean Sir Clive? Ed.*

Indignant at hairy story

IT SEEMS that Gremlin has got his knickers in a twist — *Sinclair User*, May — by ignoring the first rule of journalism — check your facts before publishing.

Just for the record, I have never been discourteous to,

or thrown out, any woman customer from the Buffer Shop and the question of hairy armpits has never even crossed my mind. This whole silly story derives from the imagination of a *Computer Trade Weekly* reporter trying to write a humorous article about retail shops.

What a pity that the schoolboy who writes the Gremlin page did not notice that this magazine appeared during the week of April 1!

**M Howard,
Buffer Micro,
London SW16**

● *CTW claims that the story, published under Mike Howard's name, was cleared with him prior to publication.*

In view of Buffer's recent demise perhaps we should be generous and give Howard the benefit of the doubt. Ed.

Penpals are required

WE WOULD like to have some penfriends to swap hints, tips and games for the Spectrum 48K.

**Eirikur Gudmundsson,
Ogmundur Kristjansson,
Rettaeholt 5,
800 Selfoss,
Iceland**

MY sons — Milan, 15, and David, 14, and I would like to take up correspondence and exchange programs with British Spectrum users very much.

**Milan Stola,
PO Box 48,
66902 Znojmo,
Czechoslovakia**

Fonts changed

I read with interest your review of the **JASPRINT** program in the April issue of *SINCLAIR USER*. Unfortunately your reviewer has made an error in his review. He states that when using **JASPRINT** within **JASDOOR** the fonts cannot be changed in the middle of a line. That statement is incorrect as this letter shows.

The Jasprint manual states that the tilde character initiates the Jasprint style printing from the start of the next line. Once Jasprint has been initiated the fonts can be changed as and when required. A further tilde character will then cause the print to revert to normal.

**P. FORRER
TUIZORD
YON**

PERIPHERAL POWER

CHEETAH "SWEET TALKER"

Based on an allophone system, program any word or phrase, providing unlimited speech. Now make your Spectrum talk. Compatible with Interface I & II and Spectrum +

£24.95

CASSETTE/DATA RECORDER

For your home computer, will allow easy loading of even the most stubborn program. Features include single key record, mains/battery, accepts standard computer leads and 5 pin DIN connector. Also provides exceptional audio quality for fine listening.

(Batteries not included) £24.95

MEGASOUND

For 48K Spectrum and ZX Spectrum +. Achieve amazing sound capabilities that your Spectrum has been lacking. Just plugs into the user port at the rear of your computer and amplifies sound through your T.V.

£10.95

32K RAMPACK

Upgrade your 16K ZX Spectrum now! The Cheetah 32K Rampack simply plugs into the user port at the rear of your computer and increases the memory instantly, to 48K

£39.95

SPECTRUM JOYSTICK INTERFACE

Simply plugs into the user port at the rear of the computer and accepts any Atari style joystick including Quickshot and Kempston.

Comes without rear edge connector at

£11.50

or with connector which allows other peripherals to be stacked up at

£12.75

56 WAY EXTENSION CONNECTOR

Cheetah's 6" long extension cable enables Spectrum peripherals to be distanced from your computer

£7.95

AERIAL SPLITTER

Cheetah's neat splitter unit complete with self adhesive pad allows you to keep your T.V. and computer aerial leads plugged in without disturbing the picture

£2.25

R.A.T.

Conventional joysticks are dead! The Cheetah Remote Action Transmitter is the most sophisticated computer controller available! Infra red transmission - so there are no leads trailing across the living room. Touch control, extremely fast, can be used with Cheetah RAT/Kempston compatible software. Complete with receiver/interface.

£29.95

HI-STAK FEET

These instantly applied stick on feet for your ZX 81, Spectrum, New Brain, VIC, TRS etc. tilt the computer and make your keys easier to see and more enjoyable to use, allowing smoother programming.

£2.99

EXTRA LONG AERIAL LEAD

Over 15' long. Our super lead will allow you to sit back away from your T.V. and enable you to play games in the comfort of your armchair.

£1.50

All Cheetah Peripherals have rear edge connectors for compatibility with all Sinclair accessories.

Prices include VAT, postage & packing. Delivery normally 14 days. Export orders at no extra cost. Dealer enquiries welcome.

Cheetah, products available from branches of John Menzies WHSMITH Rumbelows WOOLWORTH Spectrum dealers and all good computer stores.

FORTNIGHT ENDING APRIL 25

A detailed illustration of a rocket launch serves as the background for the page. On the left, a rocket is shown in profile, ascending through a layer of clouds. On the right, the lower portion of the rocket is visible, showing the engine nozzles and the base of the vehicle, with flames and smoke emanating from the engines. The overall scene is set against a dark, starry sky.

Ted tipped off

I READ in May's *Sinclair User* that a certain Mrs Diff Usion was having a little trouble with Technician Ted.

Having popped into reception after that tricky job in the Silicon Slice store, Ted finds himself next to a fire extinguisher which some fool has let off, so he needs to somehow get to the ground. That done, he goes to hang up his jacket — after all, it's hot in the furnaces.

It's a risky job that he's about to do, so he makes a photocopy of his will, and takes it through to the Boardroom, which is underneath reception. However, in the Boardroom by the entrance to the furnaces — "Who built this place?", Ted wonders — there is a nasty executive who won't let him through.

Undaunted, Ted sees another way around and, waiting until a Bluebottle flies behind him, he jumps up on the foremost chair, then takes a running jump off the edge, avoiding the insect as it flies beneath his legs.

His body tucked well into the ladder, Ted twice jumps up and readies himself for the jump across the gap. Once that is completed, there is only the door between him and his goal, though what happens after that I have no idea.

R Miles,
Broadstone, Dorset

After typing in the program press RUN.

After running it you should get a 'STOP statement' message. If you get 'ERROR IN DATA' go back and check your data. If all's well, you can now take out line 25 and SAVE the program — next time you use it you can just run it.

Then enter 'GOTO 30' and put your fully reworded *Alien 8* tape in the cassette recorder and press PLAY.

Daniel Rose,
Tonbridge, Kent

Eyecatching high score

I CLAIM to be the Supreme Grand National King. I first finished the race on April 3. I have recently scored, after 28 career years, £999999, and 280 points with no fines or bans.

Most of my wins were on Eyecatcher.

Jon Rose,
aged 14,
Wallington, Surrey

The hidden message

SOME POKES for a few games. On *Cavelon*, instead of holding down all the

keys for a "Hi Chris . . ." message, how about typing in "J S Willy"?

On *Moon Alert*, POKE 42404,255 will give 100 lives. Fans of golden oldie *Horace Goes Skiing* will be glad to hear that POKE 29270,0 removes traffic from the road.

Finally, anyone having trouble with *Sabre Wulf*? POKE 44685,186; POKE 44676,255 and POKE 44677,80 will give Sabreman invincibility and keep him cyan.

Can anyone supply me with endless lives POKES for Technician Ted?

Derek Ribeirio,
aged 13,
Cheshunt,
Hertfordshire.

Cheating tips for Willy fans

HERE are some more pokes for *Jet Set Willy*.

MERGE the short loader program, stop the tape when loaded, insert the pokes you want into a new line 35, then run and start the tape again.

POKE 38240,0 — removes all moving objects; POKE 36477,1 — stops death when falling; POKE 37982,0 — allows you to walk through nasties; POKE 35899,0 — infinite lives; POKE 35123,0 — disable any moving object; POKE 38207,0 — disable Maria; POKE 36545,0 — banyan tree easier; POKE 36358,0 — extra zip when jumping.

Paul McCartan,
Chinnor,
Oxfordshire.

Lion and the wardrobe lift

I WOULD like to know if I am the first to complete *Wizard's Lair*. I completed it on April 13 at 8.10.

When you have found three bits of the golden lion either find a magic lift or a wardrobe lift and go to the lion's level.

Once there go to the right-hand door, go over the lion and go down. Turn right and get the yellow cross. Once you have picked that up go back over the lion and go up.

When you have found the fourth part of the lion fall down a hole. Then find a lift and return to the lion's level. Go over the lion to the right-hand door. Keep going right until you escape.

Paul Berryman,
Cambourne,
Cornwall.

Short cut to Kokotoni Wilf

KOKOTONI WILF is probably one of my favourite games and I know codes to reach the second and third time zones.

At the start, when the title screen is displayed, press 2 to enter time zone two (1066) or press 3 to enter time zone three (1467). It is not possible to reach the later time zones by the same method.

Simon Evans,
aged 12,
Clevedon, Avon.

Bruce leaps to Norway

I HAVE finished *Bruce Lee* 16 times, with a high score of 1,022,625.

Ingar Fuglevaag,
Angvik,
Norway.

High scores on the beach

I HAVE a personal high score of 7,640,700 on *Hunchback*, by Ocean. This took two hours.

I finished *Beach-Head* from US Gold on December 6 with a score of 132,500.

I finished *Ghostbusters* on December 16. Since then I have pushed my account to \$450,000.

Rik Davey,
Urmston,
Manchester.

Minder

WHO needs 30 packs of pure gold acupuncture needles? Hookey stuff, without a doubt, but that won't stop you from making a deal in **Minder**, based on the hit TV series.

Minder puts you in Arthur's shoes with a two grand stake and a fortnight to get rich. Visit the Winchester Club to make the contacts you'll need to buy your stock, or have a chat with proprietor Dave about the doings of the Old Bill, in the person of mean, moody, Inspector Chisholm.

When you've bought the goods you want, you'll have to try and sell them to one of the many shady dealers in the manor. If they're bent, Chisholm will be after you. And there's always the aggravation of trying to get hold of Terry to do the fetching and carrying. True to form, all Arthur ever does is count the money.

The game is played out through conversations with the many characters. There are up to 35,000, identified by an identikit style of graphics to build up their faces. You can use Arthur's own brand of cockney most of the time; the program recognises

much slang, although at times you have to use a specific phrase to clinch a deal. You can also play a more devious game, selling goods you don't own and then trying to pick them up cheaply before time runs out to make a killing.

It's all great fun and very much like the TV show, except in so far as Terry's life as a minder, with all the violence and confusion, is barely mentioned. Unfortunately the game is marred by the occasional bug in the interpreter, so that conversations can go off the rails, with words missed out or the wrong prices agreed on.

That tends to destroy the illusion and show up the program as rather more simple than it appears when things function properly. However, you will never get the old 'I don't understand' comments.

There is plenty of humour, particularly in the extraordinary goods you

will have to buy and sell. Chisholm can be a right pain at times, and you may have to cut your losses and dump bent stock to avoid being hassled on other deals. But the roots of **Minder** are still those of a fairly simple trading game, and although it may sustain itself for a while, it will ultimately become boring to play.

In all fairness, **Minder** could have been done extremely badly indeed, and to the credit of DK'tronics and Thames TV it is not at all bad. Just a bit more care at the final stages, with a touch more variety and depth to the conversations, and it could have been a classic.

Cats

MEET Deuteronomy, leader of the Jellicle cats in T S Eliot's poems and Andrew Lloyd Waller's musical.

The cats' enemies, the Pollicle dogs, have hidden an object known, for some reason, as the Heavyside Layer. It is the focus of the cats mystic powers, and the dogs intend to destroy it — if they can form a pack. Meanwhile ten kittens have strayed off the

astral staircase and must be collected and returned to the Heavyside Layer.

The whole heady brew of witchcraft and whiskers boils down to a basic **Sabre Wulf** style maze game. The playing area is very large, and a map is provided which can be consulted at will. The map shows the positions of dogs and kittens, thus enabling you to work out the best routes. Deuteronomy deals death in the form of fur-balls and carries stun powder.

The graphics are well-designed and attractive. The animation tends to be slow, particularly if you want to keep the sound effects, a wailing rendition of *Memory*.

Cats would be a sweet little number full of fun and novelty if it was not for one thing — the game is too easy. It was a good idea to allow sight of the

map, but a time limit on that might be appropriate. Deuteronomy starts off with too many stamina points so that, with the obligatory nine lives, he can easily afford to die and come back with a full complement of strength.

When 24 dogs are in the den the pack is formed and you lose. Again, even at the highest level, using a couple of lives to exterminate dogs should even the odds sufficiently to give you time to complete your task. We managed to play straight through all five levels for a grand total of 7953025 points. No game ought to be that easy, surely?

Starion

BATTLING with aliens in space to gain a jumble of alphabetical letters is an odd but original theme. Melbourne House has come up trumps with **Starion** where your powers at sorting out anagrams will be called to the fore.

Starion constitutes a series of word puzzles and anagrams and is a fine mixture of arcade style graphics combined with strategy and superb 3D effects. A good general knowledge of history and spelling is essential.

The idea is to re-write 243 events in earth's history over the last few hundred years. Killing off enemy space craft causes them to drop letters which

when collected form a word — though you have to unscramble it first to make sense. That word will change one event in history but it is up to you to choose the correct era.

The game is divided into time grids and time zones grouped in blocks of nine. In each zone, the letters have to be collected and a word formed to enable you to fly through the time warp — very tricky as its centre never remains still. Once through you reach the time grid, which allows you to choose the year to which your wordy cargo belongs and to head straight for Earth. If the word fits, you will then have to repeat the process in the remaining eight zones.

After re-writing history in all nine zones battle recommences taking you to a further eight time grids in the next block.

The screen shows the view outside the cockpit with your laser guns' cross hairs firmly centred in the middle. Aliens and flying debris hurtle towards you at great speeds giving the impression of flying forwards. It is no

mean feat to hit the aliens due to their speed and erratic movement. Debris should be dodged to avoid damage to the craft.

At the bottom of the screen is the instrument panel displaying speed, the letters collected and two radar scanners which scan both horizontal and vertical fields.

When picking up the letters, lock them into the centre of the cross-hairs and fly forwards. One gripe is the length of time it takes for the letter to travel towards you, although it can be appreciated that the letter has to be redrawn continuously as it gets larger.

Starion can be viewed either as a light educational adventure in time or purely as an arcade game. Whatever view, it's well worth buying if only for the pleasure of turning history upside down.

Grand National

AFICIONADOS of the turf will doubtless be queueing up for the latest Elite game, **Grand National**. If, however, you are seeking quick and easy reparations for your failure to back *Last Suspect* a few weeks ago, forget it.

The game is part simulation, part arcade in style. The first section involves choosing a mount for the race. You are offered a selection from the field, and information for the condition of the course.

Then it is into the arcade section for

the race itself. An overhead view of the course shows other horses attempting to get into position. A further screen in the corner shows a view of the horse from the side, to enable you to judge the jumps as they come. That is the difficult part. You have to jump at just the right point to clear the

fence, and must have built up a fair speed through constant use of the whip.

The graphics are a little lacklustre and the excellent animation does mean the horses, although realistic, move somewhat slowly. More of an amble than a gallop, one might say. The frustration of falling off your horse at the first fence 25 times in a row is off-putting, but you will eventually find it possible to complete at least one lap before your nag finally flops to the ground in total exhaustion. Body Works

JONATHAN Millar has popped up again, following his success with the TV series *The Body in Question* last year and has produced **Body Works** with Genesis Productions — a program which shows in clear and illustrated detail various functions of the body.

Cells, respiration, digestion, muscles, nerves, circulation are all detailed and a marathon simulation ties the

whole program together showing how each functions under stress.

So, if you have an overwhelming desire to know how nerves transmit messages to the brain — load it, sit back, look and learn. Each function is graphically illustrated for you and, as for straining yourself, all you have to do is press the space bar occasionally to move to the next stage.

There are two cassettes, a poster and booklet describing each process in the package, which probably accounts for the high price. The programs for each function are very short and slow.

If the message takes as long to get to the brain as it does on the program, you would be dead long before it got there.

Shadowfire

TEXT adventures may soon become a thing of the past if Beyond Software has its way.

Shadowfire is an icon-driven strategic adventure — the first ever on the Spectrum — where commands are issued through pictures and text is obsolete.

You join Enigma — a fierce and independent fighting force — whose mission is to storm the planet Zoff V and free Ambassador Kryxix. Once on Zoff V, Enigma has to search through the maze of corridors, fighting General Zoff's guards, locate the ambassador and transport him to safety.

Each member of the team is controlled individually — Zark, Syylk, Sevrina, Torik, Maul and Manto and each has its own skills, strengths and weaknesses. Those will need to be co-ordinated and decisions made accordingly. Sevrina is a lock picker and her skills will be needed on Zoff V — therefore she should be given a tool kit from the weapons screen.

You start with a screen depicting all six characters, each portrayed in a different colour to help identification — although on this first screen the graphics are so clear that each is instantly recognisable. Having

selected the character you want to move with a cursor, you then switch to the weapons screen to equip each with some mind blowing secret weapon.

The icons are many and varied. Each has a separate function and is selected with a scrolling cursor. Move the cursor to the function you want a character to perform — pick up — then along to a laser gun; press enter and that character will receive that weapon.

Each order is performed in a similar

manner throughout the game. Some confusion may arise as certain pictures are not clear. However, referring to the comprehensive illustrated booklet should solve any such problems.

The graphics deserve a mention. For the most part, they are clearly depicted and colourful though, unfortunately, their small size tends to make definition hard. Each screen is divided into a number of boxes, all containing control icons. The screen showing Zoff V and your route to Kryxix is almost lost in the top middle section. It is a pity that this space has been sacrificed to give more attention to the controls.

You are given 100 minutes to complete Shadowfire and a real time clock ticks away the seconds. However it

will take considerably longer to learn the game, especially if you keep breaking out of it by mistake. It is very easy to exit by accident. Accidental pressure on Enter when you go back to choose another character will take you straight back to the menu. It always seems to happen at some vital point of the game and is enough to turn you to drink.

Shadowfire is excellent value considering the programming expertise which has gone into the game. If you want a quick load-it-up and shoot-it-down then don't waste your money. However, if you want a fast and innovative game which may well take weeks to complete — buy it.

Varitalk

AFTER ALL those crashes and programming problems the last thing you may want to do is to make your Spectrum talk, but that is possible with **Varitalk** from ITS Software.

It works in a similar way to that old hardware warhorse, the Currah Speech Unit, but it is all done with software. The program is user-transparent — in other words you cannot see any results unless you do

some hard work — and gives the Spectrum a library of 52 phonetically encoded sounds. A list of those codes is given on the instruction inlay.

The codes are easy to decipher. You type in a two-figure code, which represents a sound, into your Basic program. If you want a specific 'A' sound you would look at the section of codes beginning with 'A'. Each section has six types of sound. If you needed that 'A' to sound like the 'A' which is in FAR you would find that type of sound — FAR — is third on the 'A' list making the code A3.

Next you can put the codes into a special variable T\$ and make one machine code call which enables the Spectrum to pronounce your message. For instance, 'TALK' requires the code 'T1A6H2K1'.

Varitalk is an excellent toy and we had a lot of fun playing with it. Unfortunately, all those codes can be a put off.

Worldwise: Nuclear Weapons

MENTION Peace Studies in some quarters and the reaction is likely to be paranoid with accusations of left wing indoctrination flying through the air. This is a shame because peace studies can help young people find a way through the propaganda which is put out by all sorts of organisations from both sides of the political spectrum.

Worldwise: Nuclear Weapons is a study of nuclear weapons around the world aimed at secondary schools. It is informative without being biased. The program is based on an atlas of the world and countries can be chosen and magnified if desired. Lists of each

country's nuclear capabilities together with fire power are shown and positioned on a map. After students have familiarised themselves with the maps and weaponry, they can play simulation games aimed at arms reduction and gradually remove weapons from the map.

For £2, users of **Worldwise** can join WUG (Worldwise Users Group), receive extra copies of the program for £2.50 and microdrive versions for £4.00. The database contained in **Worldwise** will be updated and members of the user group can update their programs at favourable part exchange rates.

Worldwise illustrates the problems surrounding arms negotiations, and above all the frightening amount of weaponry which exists to kill and

maim future generations. The bombs which destroyed Hiroshima and Nagasaki were damp squibs compared with current arsenals. Information such as this is necessary if the debate about nuclear weapons is to have any real meaning.

Brian Jacks' Challenge

A NAKED ATTEMPT to cash in on the popularity of **Daley Thompsons Decathlon**, **Brian Jacks' Superstar Challenge** pits your joystick-powered

body against he-man Brian Jacks in eight events drawn from the TV sports series in which athletes compete at a range of sports.

Each side of the tape contains four events. Those divide into two types. There are the ones like canoeing or cycling where you have to pump the joystick left and right as hard as you can, and there are others like archery or squat thrusts where skill at judging when to fire or change direction is paramount.

The animation is poor and only occupies a small part of the screen. The races are particularly disappointing as the competitors barely move at all and stay in the centre of the screen.

The football event where you must dribble round four cones and then

shoot at a goalkeeper we found unplayable and totally unrealistic. The other events bear some relation to their originals, but squat thrusts and arm dips are not the most exciting of activities to watch or perform, in the sweaty flesh or on screen.

It is fairly easy to beat Brian on the early levels of the game, and doubtful whether many would wish to continue to higher levels to receive their thrashing. You'll have more fun drinking glucose and pumping iron all day.

Komplex

IS **LEGEND** taking its revenge on the computer press for its opinions of the Great Space Hype? If so, it has the perfect weapon in **Komplex**.

To begin with, you have to plough through pages of miniscule and illegible instructions. The aim is to descend the many levels of an alien planet picking up the letters, K, O, M, P, L, E and X in order and storing them in a central computer.

Despite the title the game is simple. Target Sensors on your control panel turn from red to green as you approach a letter and pinpoint a telephone booth shaped object, called a

Rack. Docking with the Rack releases the letter into your cargo hold.

Docking with Service Tubes takes you through a tunnel to the next level. In this phase you control a single laser shield to fend off approaching aliens. If your craft sustains too much damage you will be unable to pick up a letter on the next level.

Sound is minimal and the graphics are basic and wireframe, though good 3D and masking techniques are used.

All this makes for mundane and plodding entertainment, considerably less fun than the arcade oldie **Battlezone**, of which it is but a thinly disguised version.

It is, however, the optical effects which really put this game in a class of its own. The screen flashes red on and

off continuously, as your ship is battered with a hail of laser fire. Head-bangers might enjoy this rape of the eyeballs but, frankly, it gave me a headache.

Wiggler

CRAWLING OUT from the dunghill of worthy utilities comes the Romantic Robot maggot. Romantic Robot has hitherto confined its activities to producing utilities and music programs, but its first arcade game demonstrates an appreciation of entertainment as well as a sound knowledge of byte lore.

Wiggler casts you as a maggot, big and white and squiggly, taking part in the four stage maggot marathon. First you must find your way out of the garden, then negotiate the scrubland, only to crawl underground into the tortuous labyrinth. Thence to the mansion itself and the final exit.

The game is essentially an extended

maze, with plenty of confusing exits and entrances which defy the laws of normal map-making. On the way you must avoid or destroy the marauding denizens of the lawn. Particularly revolting are the giant deathhead spiders whose spindly legs inch along the corridors and paths with deliberate menace. Some of those monsters are relatively harmless in that they stick to known routes. Others such as the wasps and termites, zero in on you and soon digest your weak, white pulsating body.

Graphics are large — two or three character squares at minimum — and although the movement is slow, maggots do not exactly shift like the clappers themselves.

A piece of electronic muzak titled *Moons of Jupiter* is thrown in on the B-side of the cassette — definitely

music to squirm to. **Wiggler** represents a good few hours of fun. It contains plenty of humour and challenge in a rather different setting to the normal hi-tech or low-fantasy scenarios we have come to expect of arcade-adventure generally. *Chris Bourne*

World Series Baseball

NOT MANY people play baseball outside the States, but to judge from the fervour accorded the game there, it must be exciting. Imagine, newly resurrected under the paternal eye of Ocean's David Ward, has brought out a simulation as its first release with the new regime.

The name Imagine gives rise to all sorts of suspicions, but we were gratified to see that **World Series Baseball** is not at all bad. You can play the computer or a friend, and the screen shows a representation of the baseball diamond with crowds and a giant screen for advertising and scores.

With loving attention to baseball hype, the game opens with the American national anthem and cheerleaders. Then the stick-like figures of the teams come onto the pitch. Control is simple enough. If you are batting you can use the joystick to adjust the strength and lift of your swing, and to hit the ball.

The pitching team may set a close or open field, and then adjust the speed and direction of the pitched ball while in flight. Control is then passed to the fielder nearest the ball, and the race is on to see if the ball can be brought to a base before the batsman reaches it.

The scoreboard adds to the realism by showing genuine advertisements and humorous announcements in between innings, although the wait could become irritating if you have

read them all before. Nevertheless, the game is fun and apparently realistic. Welcome back, Imagine. Keep up the good work. *Chris Bourne*

★★★

Death Star Interceptor

THERE MUST be a better reason for being in the computing business than **Death Star Interceptor**. The addition

of a strangled rasp of a voice in the take-off sequence and the splitting of a standard, wholly derivative shoot-em-up into three sections does not alter the fact that blasting alien spacecraft along the corridors of the giant space station is boring, boring, boring.

System 3 Software also bought the right to use the *Star Wars* theme on the game, where the thin story-line originated.

First you have to take off. When you hear the Spectrum talking to you the spacecraft is launched and you have to guide it through a small window into outer space.

You get to see a picture of the earth receding and the death star

approaching during the next section, but that is a mere visual bonus. The second stage is simply a matter of blasting or avoiding alien craft, which behave like stunted refugees from **Galaxians**. Once at the death star you get the time-honoured death-or-glory Luke 'make mine a milk shake' Skywalker run down the deadly corridor to plant a bomb in the exhaust port.

If you make it that far, why not toss the cassette in as well? *Chris Bourne*

Spectrum Software Scene

Confuzion

SHEER mental agony is the basic consequence of an hour playing **Confuzion**, the latest from Incentive. Deceptively simple, it will have you grinding your teeth and foaming at the mouth in minutes.

There is a tenuous plot to do with defusing bombs before they explode, but that is simply a peg on which to hang an unusual abstract maze game. You have to control a fuzzy ball which moves around a maze of interlocking lines and attempt to knock out the bombs at the edges before your time runs out. Rather than move the ball itself, you slide blocks of the maze about, creating new pathways, rather

in the style of those slide puzzles where you have to make words or rearrange numbers.

There are 64 mazes in all to negotiate, and although the first few are easy enough, the introduction of enemy balls, extra bombs, and holes in the maze plan soon turn the play into a frenzied nightmare. The time limit is tight, but the faster you play the less chance you have of working out a logical plan in advance.

The presentation is pleasant, with thick lines for the mazes and good, solid sound effects. But the strength of the game is entirely due to the novel strategies and techniques you must develop to win.

Conventional wisdom demands that games should have strong themes and plots to succeed. It would be a pity if

the abstract nature of **Confuzion** were held against it, as it generates more thrills and addiction than plenty of well-hyped intergalactic epics. 'Fun for all the family' as they say — give it a try and bend your brain to bits.

★★★★

Chuckie Egg II

SO YOU THOUGHT you had seen the last of it. No more **Chuckie Egg**, no more little yellow Harry to run up ladders and jump off platforms. You were wrong. **Chuckie Egg II** has arrived, and it's every bit as nauseating as the original.

Chuckie Egg was one of the earliest levels and ladders programs, a game which everybody loathed and nobody could stop playing. The sequel has Harry attempting to get a chocolate egg factory working again, and has a definite arcade-adventure feel to it.

Played across 200 odd screens of basic girder-plus-peculiar-monsters graphics, **Chuckie Egg II** requires much shinning up of ropes and jump-

ing over rats and lizards to complete. Objects which must be picked up along the way are used in other screens to delay monsters or achieve a particular exit.

There is little or nothing original about the program, which relies heavily on all the old conventions of the genre, although to be fair A&F can lay some claim to having established a few of those conventions themselves. The graphics are lurid and not of the best detail, but have that special **Chuckie Egg** quality all the same. An improvement is the abolition of the requirement to complete each screen before proceeding further. That is no longer necessary, and the resulting maze of exits and entrances to different screens is one of the more complex we have seen.

A competition with cash prizes for

the highest scores adds a little zest to the proceedings, and certainly A&F groupies will find **Chuckie Egg II** just as frustratingly addictive as their first encounter with the henhouse, those many moons ago.

Mighty Magus

HOW THE mighty are fallen. Quicksilver, which produced **Ant Attack** and **Fantastic Voyage**, has just released a platform and ladders game.

Entitled **Mighty Magus**, the game is packed with the usual complement of spells, traps, monsters, and dragons.

As the **Mighty Magus**, you have to descend all 30 levels to the depths of the Rising Sun Temple, battle with monsters en route, avoid dozens of assorted traps and kill your arch-enemy Faugy The Fierce and escape back to your starting point.

The screen scrolls left, right, up and down with staircases leading to each level. Walking along the platform is dangerous in the extreme as they feature hidden traps — each one waiting for the wrong step to hurl you across the screen, make you disappear

or to release a flight of poisoned arrows.

Treasure chests are situated throughout the levels which when searched bestow upon you magic which can be used to cast spells to open entrances and jump off stairs.

Mighty Magus is not a difficult game, frustrating perhaps and a far cry from the quality of **Fantastic Voyage**. The graphics are outdated, unclear and flickery — a pity it was not released a year ago.

Spy Hunter

ONE OF THE more successful arcade games of last year looks set to have potential double agents roaring up to their local shops in hot pursuit for a copy of the game.

Sega has recently licensed **Spy Hunter** to US Gold and continues the trend of arcade games crossing the Atlantic as computer software.

Shades of the movie *The Italian Job* creep into the game which places you in the key role of a spy trying to escape the country with a posse of double agents on your tail.

Luckily your turbo-charged car could have been built for James Bond and will become amphibious, taking to the water like a drought-stricken

duck.

The chase is fast and furious, skidding down stretches of icy road and hair-pin bends. You can shoot at the agents, try to bump them off the road, but blasting innocent civilian drivers will be to the detriment of your score.

You have a bird's eye view of the road which scrolls vertically downwards — the zig-zags are hair raising and do not leave much room for overtaking.

One innovative touch to the game is the weapons van. Just as in *The Italian Job*, the van drives past with ramps lowered. Should you be quick enough to drive in, the car will be re-armed with oil slicks, smoke screens and rockets — handy when shooting at the bomb-dropping helicopter. However, all weapons but the machine gun are lost if you crash.

The game is obviously not as fast as the arcade version, but in all other cases it is an almost exact replica — except that there is no gear stick or accelerator. Those features are, however, notoriously difficult to fit onto the Spectrum.

Video Pool

A GAME of pool usually entails consuming large quantities of beer whilst playing in some smoky pub.

OCP has come to the rescue of both lungs and liver and has produced **Video Pool**.

The screen gives an aerial view of the pool table with six pockets which you can change from small to large size. The game offers three variations of pool — none of which are played according to the rules. For starters, there are only six numbered balls with the corresponding numbers on each of the pockets.

The three variations range from easy — where you have to pot the balls in any order into any of the pockets; a slightly harder version where the balls have to be potted numerically; and lastly a game where you have to pot

the balls numerically into the correspondingly numbered pockets.

You gain an extra shot for each correctly potted ball and lose a life for a foul shot or wrong pot.

Video Pool is certainly worth playing despite the obvious dissimilarities with the real game. The movement of the balls is fast, smooth and flicker-free and the direction of the cue ball towards the cursor, positioned on the cushion, is accurate.

★★★

Archon

THERE IS a world of difference between the intellectual precision of chess and the imaginative power of good fantasy games. All the more peculiar, then, that veteran fantasy game designers Paul Reiche and Jon Freeman should have combined the two to produce **Archon**.

The game is played out on a chequered board with 81 squares. The opposing armies remind one instantly of chess, with pawn-like knights and goblins, and stronger, more mobile pieces on the back row.

When two pieces clash for a square the game shifts to arcade action, and the monsters fight it out, blasting with

fireballs or trying to close with fang or blade. White squares favour the forces of light, black squares darkness, and there are five power points with healing qualities and variable colour.

Although well packaged and presented, the graphics are predictable and seem old fashioned.

The problem is really that the abstract nature of the game serves to dissipate most of the creativity involved in producing interesting monsters. You rapidly lose any sense of involvement in the fantasy myths surrounding the struggle, and play the game mechanically.

The inclusion of magic spells for two of the pieces is a good idea, but again they are used merely as extra options in play, and have no real emotional force of their own.

Viewed as a board game, **Archon** is a competent invention, and clearly has strategic possibilities. But it is not ideally suited to the home computer, and we would have preferred to see Reiche turning the talent he used to good effect, with the creators of *Dungeons and Dragons* to more adventurous material.

Archon is a game for the collector of such things, not for those who want good entertainment at a fair price. The price is certainly not fair, and our rating would have been higher if Ariolasoft had charged less.

Snapple Hopper

MACMILLAN has previously collaborated with Sinclair Research in a number of educational programs but the new range is produced on its own account.

Snapple Hopper and **Tops and Tails** are two packages aimed at the four- to eight-year-old age range. Both are devised by Betty Root who is the 1985 President of the United Kingdom Reading Association.

The **Sunflower Number Show** is a game to practise mental arithmetic for

all ages. All the programs are flexible in that there is a choice of speed and in the maths program a choice of difficulty.

Snapple Hopper contains two routines to practise the initial two letters of a word in a Snap game for one or two players, and a game to practise matching rhyming. Both can be played by one or two players.

Tops and Tails has a snakes and ladders game with players moving according to the numbers generated on a dice, and receiving extra points for recognising the first two letters of a word on a picture square.

The graphics in the games are well

devised and the routines fun to play, at least for the younger members of the age range. Eight year olds may find it all rather unsophisticated. The only quibble I have is the price.

Jonah Barrington's Squash

SPORTS superstars endorsing computer games seems a trend that is likely to continue until all the superstars have been used up.

Jonah Barrington's Squash is endorsed by the former world champion and the score is called out in his own voice which has been 'accurately reproduced taking full advantage of the unique Reprosound system'.

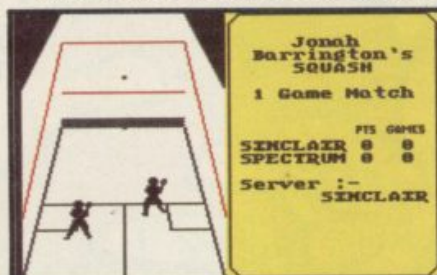

However, plugging Jonah into the MIC socket produced a fuzzy unintelligible gabble as if he was speaking from the belly of the whale. Better get that throat seen to, Jonah.

The screen is divided, one half

being the score table and the other a small 3D representation of a squash court.

The ball bounces off the walls in a convincing style and depending on the length of time the fire button is depressed, you can alter the angle at which the ball leaves the racket. The 3D illusion is effected by the use of a shadow on the ball, in much the same way as Psion's classic **Match Point**.

Hitting the ball can present a prob-

lem. It is very difficult. Whenever the ball comes within striking distance, press the firebutton and you will automatically play that shot whether forehand or backhand. Obstructing your opponent is a foul and a let is called, but unfortunately you can't assault him with your racket.

The game is an accurate simulation of the game and play is fast on the higher levels. Jonah seems impressed and says that it "is fun to play and will teach players at all levels to improve their game". Personally I would prefer to exhaust myself in the more conventional and sweaty way, actually playing the real thing.

911TS

"HEY GUYS, I just had a great idea in the bath. How about a game about a Porsche?"

"Triff, boss. And we could get a major tyre company like **Dunlop Tyres SP Tyres UK Ltd** to endorse it."

"Won't that cost greenbackwise?"

"No way. All we have to do is underline **Dunlop Tyres** wherever it appears on the insert and in the game. We could only allow players to use **Dunlop** tyres in the game. The possibilities hypewise are endlessville, boss."

"I like the way you're thinking. What do the programmers reckon on schedules? Can you do it for Monday, kid?"

"Uh, like, that's a bit heavy. I mean, I was going to take Sharon to the Motorhead concert tonight..."

"No sweat. Just lay down that old scrolling routine we used in all the other games."

"But the Porsche doesn't jump fences like the horses in **Grand National**, boss."

"So what? Put some bushes and

logs n' stuff in the middle of the road. I saw this great ZX-81 game a couple of years ago in a mag which scrolled up the screen with bushes and things. You remember — I was playing it in the bath when I got the idea for **Kokotoni Wimp**."

"Don't you think the punters will notice?"

"Punters? Shmucks. No more arguments, boys, or its P45 city for the lot of you. Besides, when they see **Dunlop Tyres** all over the cassette they won't bother about the rest. We're talking action, we're talking hype, we're talking spondulistani..."

911TS. Another great game from Elite. Don't buy it.

IN MACHINE CODE PROGRAMMING

Compiled by a **LEADING PROFESSIONAL PROGRAMMER** our unique twelve-lesson course is designed specifically to teach Spectrum 16/48K users – even as complete beginners – every aspect of machine code programming or to provide those with some experience with a valuable source of extra knowledge and reference. You will be **WRITING PROGRAMMES FROM LESSON ONE** and wondering why Machine Code seemed so complicated.

WHY MACHINE CODE?

Machine Code is the only language that your computer speaks! All other 'high level' languages such as BASIC have to be converted into Machine Code by your machine. By PROGRAMMING in Machine Code, you 'talk' to the microprocessor in your computer direct, with amazing savings in memory and a vast increase in the speed at which your programmes can run.

HOW ABOUT THE COURSE?

Simple! – and that's the keynote! Everybody works at their own speed, which is the great advantage of a postal course and with our twelve, absorbing, easy-to-follow, fully documented lessons, learning will be easy, at your own pace and in your own time and in the unlikely event that you have a query – our **'TELEPHONE HOT LINE'** (which is only available to subscribers to the course) will solve your problem direct.

Each lesson can be ordered and paid for individually with **NO OBLIGATION** to take the entire course. Each lesson is fully documented and is subject to our **NO-QUIBBLE, MONEY BACK GUARANTEE** if you are not fully satisfied with the value-for-money. Enrolment is free and each lesson is only **£4.49**.

Don't miss this opportunity to further yourself in the world of microcomputing. Fill in the form today for your first lesson* by return and get yourself into the **FASCINATING WORLD OF PROFESSIONAL PROGRAMMING.**

*Eighteen A4 pages, with Lesson Two (21 pages) and Lesson Three (28 pages) already available.

THE PEKER GUARANTEE OF CONFIDENCE

We are so sure that you will find this course to your satisfaction that we offer a money back guarantee if you return the product to us - in good condition, within 14 days of our despatch date - and this includes refunding your return postage.

QL Toolkit

SINCE the hurried launch of the QL, Sinclair Research has been promising a package of routines and programs which will provide a better interface between SuperBasic and QDOS. At the same time this would add commands and functions which are useful but which are not included on the basic machine.

QL Toolkit, written by Tony Tebby, is the result and provides a host of software extensions which are split into functions in the form of SuperBasic commands, machine code programs, SuperBasic programs, filters and founts. The extensions can be booted into memory on power-up, using the function keys as usual. Once loaded a digital clock is displayed in window #0 the time on which can be altered using other functions provided within the package.

Once loaded it is possible to toggle between command entry, performed in window #0 and a SuperBasic full screen editor which highlights SuperBasic lines containing errors.

Other SuperBasic extensions include commands to check, on QDOS, jobs currently running. Those allow the user to multitask machine code

jobs from SuperBasic and to alter their priorities. A set of demonstration routines is available for those who do not know how to use 68000 code but who want to see QDOS multitasking in action.

Other extensions deal with files and microdrives. One command gives a flexible 'read device directory' function which can be used to page through lists of files on microdrive rather than watching them go scrolling by at high speed.

It is also possible to use a form of random access storage with files on microdrive. Those react in a similar way to disc random access but recall of data is, of course, significantly slower.

Filters, if you did not know, are programs which perform single operations on input data before passing it to another program for output. **QL Toolkit** has seven of those including a conversion to upper case routine, and routines to copy, concatenate and split files into pages.

The machine code programs within the package are mainly examples for the multitasking extensions. They include a clock with hands, an alarm clock and some graphics demonstrations.

The SuperBasic routines, for the large part, consist of file copiers using one or two microdrives. It is possible

to make a full copy of all files on a microdrive in less than two minutes or to select files for one or multiple copies. The last two programs rely on the user putting the names of the files to be copied into data statements within the routine.

No toolkit package would be complete without its copy routines and these do their work with efficiency. As it is possible to trap software copying programs you will find that you cannot make a master copy of such products as Psion's **QL Chess** but that the copiers come in handy when you have a lot of raw data to duplicate.

Despite its heady price the Toolkit does the QL justice and should find a place in any QL owner's library because it accomplishes a variety of involved tasks quickly and efficiently.

Unfortunately, if you intend purchasing it you should also buy the **QL Technical Manual**. The documentation provided with **QL Toolkit** is excellent but if you want to exploit it to the full the technical manual should be at your side. Another first class product from Sinclair Research.

★★★★★

Super Sprite Generator

GRAPHIC sprites are suddenly in vogue and Digital Precision has released the **QL Super Sprite Generator** to ensure that it captures that part of the market which is interested in making the most of the superb graphic capabilities available.

Sprites are user-defined graphics which have been magnified two or even three times. The Kit provides a set of Superbasic extensions and two demonstration programs called Alien and Bird.

As the example titles suggest, the demos are simple but it is possible to move the sample graphics around the screen with the arrow keys. The examples also demonstrate how slow the sprites are when controlled by Superbasic in an animated display. The switch between sprite-frames is slow and the resulting image is jumpy and flickery.

But those are only examples, the idea of the kit is to set up the sprites and then deal with them as you wish. To design a sprite you load in the design program. The program runs in a similar fashion to those UDG generator programs of which you see so many in magazines. A grid is drawn on the screen and, using the arrow keys, you can move around the squares of that grid.

Once finished you can file the sprite frame. To make an animated display just create several frames, each one a progression in movement from the last. It is possible to reverse the direction of the sprite within the design program.

When you are happy with the result you can enter the construct program which asks you the frame order in which you want to put your sprite. It then puts the frames into a single file which can be called by your own programs.

The package contains everything which you will need to produce animated sprites but it is dramatically

over-priced. For a similar package on the Spectrum you would expect to pay £6.00. The excuse may be the price of microdrives but taking development costs into account, the price could be cut by at least a quarter.

★★★

GRAPHIQL

SUPERBASIC is not the ideal medium for producing good pictures on the QL, but the machine has the potential for graphics of great sophistication. Talent Computer Systems has now released **GRAPHIQL** to remedy the situation.

The program is an aid for developing graphic screens, and incorporates several features which make it easy to construct complex designs with a minimum of effort. The most impressive of those is a magnification facility, which allows you to blow up any section to 16 times actual size in order to make adjustments to artwork.

Eight colours are available, but stipple and airbrush 'splatter' effects are easily produced to give an almost infinite range of shades and combinations. That is done through the use of a doodle pad, which operates much as an artist's palette. By defining a small

box on the pad, you can then fill it with patterns, ranging from abstract shading to brickwork or even a small house or tree. That pattern, called a texture, can then be painted onto the main screen.

Freehand drawing is supported, but a variety of circles and ellipses, squares and rectangles can be produced using a 'rubber band' system where the shape can be stretched or compressed until it is satisfactory. You can recolour areas, rotate and reflect shapes about the screen and use a 'paint brush' of any thickness.

The manual supplied with the program is 60 pages long, but to their credit the writers have decided to assume users have no experience whatever and spell out each operation in great detail, with examples and suggestions. In fact, after reading through the manual once and trying the examples as you go, you should be able to remember most of the command keys available.

If the program has a fault, it is in

speed of operation, which is a little slow if you already know exactly what you want to do next. However, Talent has packed a great deal into the package, and uses it to produce its own title screens, which is surely one recommendation. Certainly anybody interested in computer graphics will want to own **GRAPHIQL**. *Chris Bourne*

Publisher Talent
Price £34.95
★★★★

Super Backgammon

FOLLOWING Chess, it was only a matter of time before Backgammon was written for the QL. The ancient game has taken a few knocks since computer programmers got their paws on it, and the Digital Precision version is about par for the course.

A Quill document included on the tape provides a description of the program and the rules of the game, for those who do not know or can only read words on a TV screen instead of the box insert. A copy facility allows you to make a backup of the various Basic programs which do the business.

The game is neatly presented, although nothing like as spectacular as it might have been if written in all-singing all-dancing 68000 code. To move, you type in the number of the two points involved. It would have been friendlier if the cursor keys could have been used to lift and move pieces.

Digital Precision might have been wise not to include certain features of the rules in its description. The QL is simply not interested in doubling dice and will not even recognise a gammon victory, where you get all your pieces off before the QL removes one. Its game is generally poor, even at the highest level of four, and any reasonable player should thrash it. Some of its moves are positively anile, especially at the lower levels.

Worse still, it cheats. According to the rules, you must play both dice if you can. It's no good moving one to make yourself unable to play the second. Digital Precision knows that, because it is on the insert. The QL clearly doesn't, and can smugly play accordingly.

A computer which cheats when, nine times out of ten, it ought to be able to beat most people at any remotely intellectual game, is an unlovely thing. Digital Precision should teach the QL good manners if they plan to continue producing software for it. *Chris Bourne*

Price £15.95
★★

Area Radar Controller

WHY air traffic control simulations should be regarded as sellable products to the micromarket is one of the great mysteries of the software industry. Shadowsoft has brought out **Area Radar Controller** for the QL, in which you can relive the worst nightmares of the Gatwick control tower staff.

The program is written entirely in Basic, and one hesitates to say it would not disgrace a Vic 20 because Vic 20 owners might get uppity. The screen shows two little runways and some squares around the edges of the screen which are the exit points for aircraft.

There are three types of plane involved — slow, medium and fast. They represent something quite new in aviation because they only move in ten directions, north, north-east etc, and up and down. You use a series of abbreviations to instruct various air-

craft to move.

By Klono's viscous frontal lobes, what on earth is going on? The QL is capable of stunning graphics, fast code, and has a spacious memory to exploit. Much more of this sort of fast-buck garbage and any mass market the machine might have attracted will be dead and gone before you can say Frogger. *Chris Bourne*

★

MicroPeripherals cut discs

THE MicroPeripherals QL disc interface marks a departure for the company, away from printers and into dedicated add-ons. It is also unusual in that it contains none of the **Toolkit** from Tony Tebby.

With the interface MicroP supplies a disc which contains a number of utilities. It can also supply QL dedicated — in other words painted black — 3½ in, 80 track, double sided, disc drives. Those give 1434 useable sectors when formatted.

Inside the interface, which has to be taken apart, are a series of jumper connectors. Normally the interface responds to the device name FDK but by connecting one of the jumpers — a connector is supplied — it can be made to respond on power up to MDV. In that way programs on microdrive can be transferred to the disc without alteration and will still run.

The instructions — those supplied with the review model were marked Preliminary — are brief but adequate. One criticism might be that the first thing the instructions tell you to do is to format a disc. As the only disc supplied contains the utilities that could be disastrous. A note of warning would be appropriate.

In operation the disc drives accept the same commands and perform in the same way as microdrives. In addition the interface supplies four new commands. FSET and MSET perform the same function as the jumper mentioned above, MSET gives the disc drives the name MDV, and FSET, FDK. The other two, DGET and DPUT, allow you to assign a sector, not the directory, on the disc to an array and then write it back. This addition allows

for simple disc editing.

The utilities disc contains nine programs, six of them multitasking routines. Those allow you to make backups of a disc; perform a string replacement on a disc file; obtain an extended directory, including the file length, and easily delete files; inspect a file on screen; and spool a file to another device — that is, you could

print a file while running another program.

The other three programs are DAME, a disc and memory editor which allows you to alter a disc or memory easily; Colprint, a screen dump program for colour printers; and repos_bas, a window defining program.

All programs are supplied on a 3½ in disc. With an 80 track, double-sided, 5¼ in

drive connected as drive one the system becomes rather temperamental. It will not reliably write to and read from it. It can read the directory of a CST disc, and in some cases load a program from it, but not one of its own discs.

The price of the system, £113.85, makes it the cheapest available so far and as such it is worth consideration. However, added to that is the need to use the MicroP drives, £194.35 for the first drive and £171.35 for the second. Those are reasonable prices but 3½ in discs are almost twice the price of 5¼ which adds to the cost.

MicroPeripherals Ltd, Intec Unit 3, Hassocks Wood, Wade Road, Hampshire Tel 0256-473232.

Taking a suite on board

QUEST, who was one of the first companies to announce QL hardware, has released four RAM boards ranging from 64K up to the full 512K.

When extra RAM is fitted to the QL it performs two functions. It is used as both additional buffer space for the microdrives, which makes access times quicker, and for the program data. In addition it allows programs to run much faster than normal.

That is due to the design of the internal hardware. Every 50th of a second the ULA in the QL takes charge of the bottom memory and uses the screen area to send the picture to the TV. The CPU cannot access this memory at the same time and has to sit, twiddling its thumbs, until the ULA has finished with the memory.

If you fit additional memory, over and above the standard 128K, the CPU

can access it while the ULA is dealing with the picture and so it is not slowed down. The increase in speed can be as high as 50 percent.

As a bonus a cartridge is supplied with a program which allows you to use some of this memory as a RAM disc; this works as though it were a normal disc

can be run from a RAM disc, plus the added space for data, transforms them into very professional pieces of software. The only problem with this extra memory space is that with a large amount of data it cannot all be stored on one microdrive cartridge.

While extra memory can be very useful the RAM disc facility is somewhat limited. The process to use them on, for example **Quill**, would be: 1 — load RAM disc software; 2 — format RAM disc; 3 — copy **Quill** to RAM disc; 4 — run **Quill**; 5 — copy data file from RAM disc back to microdrive.

All four upgrades — 64K £115, 128K £185, 256K £349 and 512K £579 — are more expensive than others available.

For further details, contact Quest Automation, School Lane, Chandler's Ford, Hampshire SO5 3YY. Tel: 04215-66321.

drive but, being in memory, access times are faster.

RAM discs normally use the device name RDV but this can be changed to be MDV. This makes it possible to run the version 1.00 Psion programs on them; version 2.00 can be configured to use any name.

The increase in speed of the Psion programs, which

AN IMPORTANT ANNOUNCEMENT TO ALL QL OWNERS

bad or changed medium

Your data is worth a lot to you. Source programs, text, scientific information, records, all represent hours of your time and effort. Losing a file could at worst cost you money – and it's **always** infuriating!

No storage medium is 100% reliable. That's why TALENT has developed the CARTRIDGE DOCTOR. It's a sophisticated machine code program which will, in most cases, enable you to:

- recover files from a bad medium
- recover files which have been accidentally deleted
- recover files with lost or damaged blocks using the 'block patch' utility.

It's very easy to operate and no knowledge of BASIC or machine code is required.

Can YOU afford to be without the CARTRIDGE DOCTOR?

Available only from:

£21.95

+ 50p postage & packing

THE SPECTRUM BASIC COMPILER

- ★ **BLAST!** is the first fully compatible OPTIMISING BASIC COMPILER for the Sinclair ZX Spectrum and Spectrum +.
- ★ **BLAST!** will compile ANY BASIC program, without alteration.
- ★ **BLAST!** will take your BASIC programs and transform them into super-efficient code running at up to forty times the speed of BASIC.
- ★ **BLAST!** can produce both native machine code and a compact p-code, for programs where space is at a premium.
- ★ When you have **BLASTED** your programs you are free to distribute or sell the results without any restriction.

SIMPLICITY ITSELF

Using **BLAST!** couldn't be simpler. Just load it with your BASIC program and press "C" to compile. In a few seconds the compiled program is ready. Just type RUN and see your software run up to forty times faster.

OPTIMISATION

BLAST! doesn't just compile your programs; it also applies a range of sophisticated optimisation techniques to enhance the performance of the compiled code. Any program can be compiled without alteration, but we think you will enjoy the wide range of extensions to BASIC built into **BLAST!** **BLAST!** features genuine integer variables, debugging facilities, program protection, and much more. It will operate in resident mode, or with tape or microdrive.

TOOLKIT INCLUDED

BLAST! provides the complete BASIC programmer's package. As well as a sophisticated compiler **BLAST!** includes a comprehensive toolkit with a full range of features including renumber, single-step, search and replace, and block handling operations. Use it to test and develop your BASIC programs before compiling them with **BLAST!**

Sinclair Surgery

Brother pin connections

I RECENTLY purchased a Brother M1009 printer to work with, in addition to a Newbury-type terminal, my Spectrum and Interface 1.

I have so far spectacularly failed to get the printer working. Unfortunately, I have had to make my RS232 lead as none appear to be available in the shops, and in spite of Brother advising me by telephone of the pin connections and internal switch settings — nothing.

Where can I buy the necessary serial connecting lead? In case I can't find a ready made lead, what are the pin to pin connections?

**Dave Postance,
Stockport,
Cheshire**

● In order to run your Brother M1009 from Interface 1 you should connect the following pins:

Spectrum	M1009
2	2
3	20
4	3
5	5
7	7
9	6

Any competent electrical shop should be able to make up a lead for you.

Modem price suspicions

I AM wishing to purchase a modem for the Spectrum and I had intended to buy the VTX5000.

I now note from the May edition of Sinclair User that the price has been considerably reduced and having suffered Sinclair's reductions almost immediately following the purchase of

various items of theirs, I have become suspicious of manufacturers who reduce their prices.

Is the VTX5000 a good buy or is there an alternative modem, in approximately the same price range?

Also, is it possible to obtain any hardware which will enable the Smith Corona Fastext 80 dot matrix printer to copy Spectrum graphics?

**J D Burton, Battle,
East Sussex**

● The VTX5000 is unlikely to come down any further in price — as far as we know — in the near future. It is very good value and the only Spectrum modem under £100.

To copy Spectrum graphics to a Smith Corona Fastext 80 you will need additional software. Contact the makers of your printer's interface or get hold of a Kempston 'E' as that has the necessary software built in.

ZX-81 linked to Spectrum

I HAVE had a ZX-81 for some time and have recently bought a Spectrum.

I would like to be able to connect the two machines so that I may utilise the ZX-81 memory for the Spectrum and possibly use the processor in the ZX-81 as a second processor. Is this possible?

**James Anderson,
Edinburgh**

● It is possible to connect a Spectrum and ZX-81. The easiest way would be by using an input/output port on each or, if you can write the code, via the cassette port.

It would be very difficult to add a second processor to the Spectrum, due to the design of the ULA.

Spectrum in the network

I HAVE a working RS232 interface for the 48K Spectrum, but hope that you can tell me what can be done to allow the Spectrum to transmit a program which it has in its memory, to be recorded in a data file of another, larger, micro.

At present all I can manage is the obvious, that of keyboard entries on one machine appearing on the screen of the other! I can of course record or print this, but it is not exactly a worthwhile occupation.

**David Storrar, Lydney,
Gloucestershire**

● It is possible to transfer data via an RS232 port. If you have Interface 1 fitted you simply have to Load and Save code via the 'b' channel. You could also print it to the port using the 't' channel which will omit any Spectrum control characters.

Getting it all on tape

WOULD you please tell me how to record programs onto tape?

I have only just got a Spectrum and I have read my manual but I can't understand it. It says 'then start the tape' and what does that mean — press Play and Record or just Play?

**Andrew McColl,
St Helens, Merseyside**

● In order to save a program enter SAVE "NAME"; SAVE is the keyword on the S key and NAME is whatever you want the program to be called. Now press ENTER once and 'Start tape, then press any key', will appear at the bottom of the screen.

Start the tape deck by pressing PLAY and RECORD, wait a few seconds, and then press any key — other than SHIFT — on the Spectrum keyboard. The program will be saved to tape in two blocks automatically.

Switching off a cassette

CAN YOU tell me what kind of switch I would need to put on line between a Spectrum and a cassette recorder to save the constant plugging and unplugging during SAVE and LOAD.

Someone has come up with a switch to save the power socket and I would like to do a similar thing to the cassette-Spectrum line.

**D A Richardson,
Frodingham,
Yorkshire**

● All you have to do is put an on/off switch in the MIC line; the earth surrounding it can be left as it is. Any switch will do, but preferably one with a low voltage rating as it is less likely to add noise to the signal.

Clearing up a heavy load

HAVING had my computer for nearly three years I have a problem loading some games like Gift from the Gods, Kung Fu, Avalon and Mad Martha. The problem seems to be with the CLEAR statement at the beginning. It gives the report 'RAMtop no good'.

**Gregory McDougall,
Birmingham**

● If you have Interface 1 fitted that could be causing the problem. Enter PRINT USR 0 to reset the computer before loading the program.

ZX Spectrum is a registered trade mark of Sinclair Research Ltd.

Lazer 62

WITH AN estimated 1.5 million Spectrums still in rubber keyboards, and more being produced for the overseas market, add-on keyboards are still selling well. The latest to be released is the Lazer 62 from Micro Board.

The 62 stands for the number of keys, the original 40 plus an extra 22 single key functions. Other extras are proper moving keys, not a membrane as on the Spectrum Plus, a full-sized space bar and a built in on/off switch.

Those extras are not without cost, £59.95 to be precise, and one or two corners

have been cut in the manufacture. Despite that, if you are careful when assembling it, it has a lot to offer in this already crowded market.

Assembly entails removing the circuit board from the Spectrum and then clipping it into the base. The top of the keyboard is made of plastic, with a suitable area to rest your hands when typing, but the base is metal and that presents the first problem.

As the keyboard is very thin, standing just over 4cm high, there is very little clearance between the PCB and the base. Although there is one strip of plastic

tape as an insulator that only covers a small area and it is not totally adequate. For piece of mind on the review model I added many yards of sticky tape.

The keyboard proper is clipped above the PCB, again a tight fit, and the top of the case over that. That is problem number two. On the review model the casing fouled the keys so that some of them would not spring

back after they had been pressed. A few minutes with a sharp knife cured this.

Once the keyboard is screwed together you then have to stick the legends on the keys, with 62 keys a long job. Later models should have a better fitting case and re-designed legends, the current ones being printed all in white.

Where the keyboard scores is the multitude of extra keys. Those are \$#()'-+;:=,.//* plus four shifted cursor keys, E mode, delete, Edit and Caps Lock. Unlike many keyboards with single key functions it will still work with programs that use Interrupt Mode 2 — such as Beta Basic.

With the availability of the Spectrum Plus upgrade — see elsewhere in Hardware World — at £20.00 the Lazer 62 represents a hefty investment, but if you want proper keys it has much to offer. The keys have a reasonable feel and a spot of grease works wonders.

Further details from Micro Board International, The School House, Station Approach, Woking, Surrey GU22 7UY. Tel: 04862 24567.

Tape decks only for the dedicated

JUDGING from our mailbag many users experience difficulty finding a suitable cassette deck to use with their computer. Ever ready to bow to your wishes we obtained two computer-dedicated decks for review.

The first, the Twillstar MC3810, priced £25.95, made us realise the sort of problems you are liable to encounter. The instructions are completely in German.

Special cassette leads are supplied for the Spectrum which terminate, at the deck end, in a six-pin and a

Twillstar MC3810

Binatone Data Recorder

seven-pin DIN plug. Why so many pins are required when only two are used is still a mystery.

The drive mechanism is held vertically and features full autostop and an air-damped door. It has a counter and there are five lights on the front which show if you are loading or saving, and if a signal is present.

The deck saved and loaded with no problems — you do not have to swop leads — and managed to load our specially-prepared poor quality tape.

Hoping to fare better we looked at the second deck, the Binatone Data Recorder, priced £29.95. This is more compact than the Twillstar unit and has the power supply inside — you have to add your own mains plug. It uses the Sinclair supplied cassette leads and the instructions, in English, even have a diagram of a Spectrum showing what to plug in where.

The deck mechanism is again held vertically and the door damped. To the right is a counter, on/off switch and monitor switch. On the side is a volume control,

although it features an ALC — Automatic Level Control — and a phase switch which inverts the signal. The whole thing is securely held in a beige plastic case.

We saved a program and then tried to load it back. This proved to be impossible. The tape would load on another cassette recorder and we could hear the signal using the monitor, but it just would not load.

Details from Twillstar Computers Ltd, 17 Regina Road, Southall, Middlesex UB2 5PL. Tel: 01-574 5271, and Binatone International Ltd, Binatone House, 1 Beresford Avenue, Wembley, Middlesex HA0 1YX. Tel: 01-903 5211.

Budding Pilot

KEMPSTON compatible joystick interfaces are popular at the moment and the latest to be released is the Bud Pilot, priced £9.95. The only difference between it and all others is the inclusion of a power-on LED and the fact that it uses a 23-way (ZX-81 style) edge connector. That enables it to fit

behind other add-ons, such as the ZX Printer and Interface Two.

For more information of this and other interfaces contact Bud Computers Ltd, 196 Milburn Road, Ashington, Northumberland NE63 0PH. Tel: 0670-856616.

more hardware on page 48

Kit Plus guarantee

IN ORDER to answer some of its critics Sinclair has released the Spectrum Upgrade Kit, which will turn your rubber keyed Spectrum into a Spectrum Plus. What is more, the kit only costs £20.00 and will not invalidate your warranty when fitted. If you do not want to fit it yourself Sinclair offers an upgrade service, for £30.00.

The upgrade kit is largely

the same as any other add-on keyboard but may require some soldering. As a bonus, however, you get a new Spectrum Plus manual and cassette. The manual merely demonstrates how good the old manual was.

Fitting is straightforward and helped considerably by the clear instruction sheet. A new heat sink is provided for Issues 1 and 2, which is slightly smaller than the ori-

ginal, to fit the new case.

Next is the reset switch, soldered into place. It can, if you are not used to soldering, be left out.

Now you can test the new keyboard. Not all Spectrums will work correctly at this point. The company tends to use the cheapest components which means that each Spectrum will vary slightly. To overcome that a resistor — provided — has

to be soldered onto the circuit board, a very fiddly operation.

You now have a Spectrum Plus. If you cannot get it to work Sinclair offers a fixing service, for £10.00. Send them the bits and they return a working computer.

As an add-on keyboard it offers 58 keys — 12 of them single key functions — and a half-sized space bar. Most useful are the shifted cursor keys and the only surprise is the omission of a colon key.

The keyboard feels cramped in use and is actually 0.5cm smaller across the Q and P keys than the rubber Spectrum. The caps are printed all in white which makes finding shifted functions difficult.

At £20.00 it is a bargain and, unless you are prepared to spend more than twice that, very good.

Write to Sinclair Research Ltd, Upgrade Department, Stanhope Road, Camberley, Surrey GU15 3PS.

Quality print at a low cost

WHILE the prices of dot matrix printers have been falling in recent years the price of daisywheel printers has remained fairly high, with only one at under £300. The Ibico LTR-1 is an 'impact band' printer which gives daisywheel quality print for only £169.95.

The low price means that it has a limited number of features, but surprisingly it has both Centronics and RS232C inputs as standard.

The printer is small, measuring 298mm by 63mm by 198mm, and is designed to take standard A4 sheets of paper. Tractor-fed paper can be used if the perforations are removed. There are no feed buttons provided, only a manual knob which, annoyingly, has to be pushed in and turned to feed the paper. You can only feed forwards.

Few control codes are available. The printer uses a buffer to store one line before it is printed. Carriage return and line feed operate as normal except that if they are received in reverse order double space printing is performed. Backspace deletes the previous character in the buffer, which means that you cannot use underscore to underline text.

Like a daisywheel the

printer is fairly slow. It operates at 12 characters per second, which is average for a daisywheel.

Despite those limitations we had no problems driving

it from both **Tasword II** and **Quill** or obtaining listings. The output is reminiscent to that from a portable typewriter and, apart from being uneven in places, was very good. If you are looking for a low cost daisywheel printer the LTR-1 represents value for money.

For further details contact Saga Systems, 2 Eve Road, Woking, Surrey GU21 4JT. Tel: 04862 22977.

Raising the standard

KEMPSTON has greeted the launch of the Spectrum Plus by redesigning all its hardware to be easily fitted to the new machine.

Kempston, of course, are noted for inventing the Kempston standard for joystick interfaces and the price is now down to £9.95. The instructions supplied with it contain a useful routine to convert Psion's **Flight Simulator** to the Kempston standard. The Pro joystick interface, which has three sockets — Kempston and Cursor on one and Sinclair on the other two — plus a ROM socket, is now £19.95.

The company has also brought out two new joysticks, the Formula 1 and 2. The Formula 2 is the cheap-

er at £11.95 and features three fire buttons, one on the stick and two on the base. It is similar to the Quickshot I, and has a similar sloppy feel, even down to the rubber suckers on the bottom.

The Formula 1, at £16.95, is a much more rugged joystick. It uses microswitches for the stick and leaf switches for the two large fire buttons. Kempston says that all internal parts can be replaced.

Another new addition is the Score Board joystick, priced £28.95. That is simply a joystick with a very large base, similar in size to a rubber Spectrum, with two fire buttons.

Further information from

Pro interface, Formula 1

Standard interface, Formula 2

DISCOVERY 1

The Dawn of a new beginning for your Spectrum

Introducing Discovery 1 – quite simply the most advanced and comprehensive disc drive unit yet developed for the Spectrum and Spectrum + computers.

Discovery is the breakthrough in design, performance and price which promises to make other Spectrum solutions obsolete. Just look at its advanced features:

- The very latest 3½ inch disc drive unit
- Peripheral through connector
- Parallel printer port
- Joystick interface
- Video monitor port
- On-board power supply

**But the biggest discovery of
all is the price – just £199.95**

Upgrading to a dual-drive system is simple with the 'Discovery +' upgrade package – £139.95, or choose a purpose-built twin-drive unit, 'Discovery 2' – £329.95.

THE DISCOVERY RANGE

- Available through the Opus dealer network nationwide – ring for your nearest stockist – or direct from Opus Supplies. For further details ring us on: 0737 65080 or post the coupon.

Please rush me the following (ALL PRICES INCLUDE VAT & CARRIAGE)
– Discovery 1 unit(s) at £199.95 each
– Discovery 2 unit(s) at £329.95 each

SPECTRUM INTERFACE

ond the Spectrum.

Four great new add-ons from Ram, Number One in everything for the Spectrum...

TURBO INTERFACE

Our unique Turbo Interface outperforms any Spectrum interface – it works with ROM cartridges, 2 standard joysticks, and there's a full expansion bus at the rear. The Turbo supports Kempston, Protek and Interface 2 software and loads from cassette – or instantly from a ROM cartridge. It really makes the most of the Quickshot II's rapid-fire action, and with a unique built-in power safety device, it's amazing value at just £22.95.

QUICKSHOT II AUTO RAPID-FIRE JOYSTICK

The famous Quickshot II is the top games joystick, with a sleek trigger fire button for quick reactions, an auto fire switch for continuous shooting and a new, improved grip. Revolutionary built-in stabilising suction cups mean a sure, firm grip – a snip at £9.95.

SPECTRUM INTERFACE

Boost the power of your Spectrum, or Spectrum +. This Kempston-compatible interface gets the most from your games – electrify your enemies with real power and lightning-fast reactions right under your fingertips. Costs just £9.95.

SPECTRUM UPGRADE KIT

If you've a 16K Spectrum micro, this handy and inexpensive add-in kit boosts the RAM memory to a powerful 48K, so you can run the latest and greatest software, the most exciting games around – and expand your own programming possibilities! Only £21.95.

Where can you get your hands on Ram's amazing Spectrum add-ons? You can see them at branches of Boots, Menzies, Spectrum Group computer centres, and good computer stores everywhere. Or return the coupon below.

To: RAM Electronics (Fleet) Ltd (Dept SU), 106 Fleet Road, Fleet, Hampshire GU13 8PA.

Credit Card hot line: 02514 25252. (Access & Visa).

SQUASH

All the speed and excitement of championship squash is now available at your fingertips in a game so realistic – you'll need a shower afterwards!

Written with the help of Jonah Barrington, former World Squash Champion, the game keeps to the International Squash Racquet Federation rules as far as is possible. You serve in a 3D glass-backed court to play against your computer, or, using the game's two player option you can challenge a friend.

There are 4 levels of difficulty, and depending how fit you are you can play 1, 3 or 5 game matches! Check your score with the on screen display, but as your eyes are too busy watching the ball, Jonah Barrington acting as marker calls out the score for you. All this is due to a programming breakthrough that enables your computer to accurately reproduce the human voice without any hardware add-ons!

The game also incorporates a User Defined Joystick/Keys option which means that you can set your keyboard to suit you, or play with just about any make of joystick.

So get in training for this high-powered action game now.

It's your service next!

CUMANA Special Price offer!

DOUBLE DENSITY DISK INTERFACE FOR THE SPECTRUM AND SPECTRUM+ FROM CUMANA

At last Spectrum owners can take full advantage of the speed, convenience and reliability of Cumana's 5 1/4" or 3 1/2" floppy disk drive systems with storage capacities of up to 1.4 MB available. The interface just slots into the back of the Interface 1 for networking enabling Microdrive and floppy to run in complete harmony! It comes complete with utility diskette and manual - and uses only 128 bytes of Spectrum memory!

Cumana are offering the following upgrade systems:-

SYSTEM OFFER 1:

Double density interface with Cumana's 5 1/4" slim line CCS 100 (40 track 180K drive) **£189.95**

SYSTEM OFFER 2:

Double density interface with Cumana's 5 1/4" slim line CDS 200 (2x40 track 360K) drive system. **£284.95**

SYSTEM OFFER 3:

Double density interface with Cumana's 3 1/2" CSS 351 (40 track single 180K) **£219.95**

SYSTEM OFFER 4:

Double density interface with Cumana's 3 1/2" CDS 352 (2x40 track 360K) **£309.95**

The above systems are also suitable for the QL. Please contact Cumana for details. Spectrum compatible cassette Data recorder complete with a box of 20 C15 Data cassettes **£29.95**

Limited offer, all products are subject to availability. All prices are inclusive of VAT. Delivery extra E&OE

The day of reckoning

Marcus Jeffreys continues his voyage into the realms of the Z80 and discovers a calculating machine

LAST MONTH, we looked at the 'load' instructions available using the Z80 instruction code. Now we will cover a few of the necessary evils — machine code arithmetic! We'll also use a couple of these arithmetic instructions to implement a high class screen clearing routine, which you'll be able to use in your own programs.

We have already seen an arithmetic statement in last month's routine:

INC HL ;HL = Next byte in file area

As you probably guessed, that has the effect of adding one to the HL register

already holds the number 255? If we look at this in binary,

$11111111b + 1 = 100000000b$ giving a result of nine bits. Since a register can only hold eight bits, the top bit is lost, leaving a result of zero. In other words, when a register is incremented over its maximum value, it wraps around to zero again — there are no helpful 'Out of range' messages like Basic.

Exactly the same thing happens when you increment register pairs, but here the allowed range is 0 to 65535. It is interesting to examine the lower byte of the register pair, because

	ORG	60000	
	LOAD	60000	
EA60 21D204	LD	HL,1234	;HL = 1234
EA63 3663	LD	(HL),99	;The contents of location ; 1234 are set to 99
EA65 34	INC	(HL)	;The contents of location ; 1234 now equal 100
EA66 23	INC	HL	;HL now contains 1235
EA67 C9	RET		
	END		

Figure 1

pair. Remember, we didn't use any brackets. So the HL registers are changed. Not the contents of the location which they address. The instruction:

INC (HL)

would have a different effect. The sequence of instructions in figure one may make this clearer.

We can increment the other register pairs in the same way, with:

INC BC

and

INC DE

but there are no instructions to change the contents of these addresses by surrounding them with brackets. In addition, there are increment instructions for all the single registers, so:

INC A

would add one to the A (accumulator) register.

As mentioned in the first article, each register can only hold a number in the range 0 to 255, so what happens if we try to increment a register which

it acts in the same way as a single register, wrapping around to zero. However, here the ninth bit is not lost, but carried over to be added to the high byte register. So

LD B,0 ;Top byte contains zero

LD C,255 ;Lower byte is set to the maximum value

INC BC ;BC should now be 256, which means B now contains the value 1 and C

has wrapped around to zero.

In much the same way as increment works, you can decrement registers, which subtracts one from the register contents. Values wrap around in the same way too, so

LD A,0 ;A = 0

DEV A ;A = 255

All of the INCrement and DECrement instructions are displayed in detail in figure nine.

Of course, it is not always the case that you only want to add or subtract the value '1'; you may want to add, say, five to a register. You could do that by forming a loop to add or subtract a certain number of times, but fortunately Z80 contains more generally useful add and subtract commands. The instruction:

ADD A,5

Figure 2

accumulator to itself with the instruction:

ADD A,A

If no wrap around occurs, then this will have the effect of doubling the contents of the A register.

Another useful ADD instruction is ADD A,(HL)

which will add the contents of the byte location addressed by the HL register pair to the accumulator. This may sound a bit of a mouthful, but to make it clearer:

LD A,8 ;A = 8

LD HL,123 ;HL = 123

LD (HL),5 ;The location 123 now contains 5

ADD A,(HL) ;A = 15 (8+5), not 131.

Finally, you can add register pairs together, as long as the result is in the HL register pair, using

ADD HL,rp (rp = BC, DE or HL)

Here again, you could double the contents of HL by adding it to itself.

As you might expect, most of these instructions, but not quite all of them, have similar SUBtraction instructions of the form:

	ORG	60000	
	LOAD	60000	
EA60 0608	LD	B,8	;B counts through 8 shifts
EA62 210040	NEXT LD	HL,16384	;HL = Start of screen memory
EA65 110018	LD	DE,6144	;DE = Number of screen bytes
EA68 CB3E	SHIFT SRL	(HL)	;Shift each screen byte right
EA6A 23	INC	HL	;Increment to next byte
EA6B 1B	DEC	DE	;Count the shifted locations
EA6C 7A	LD	A,D	
EA6D B3	OR	E	;Jump to label SHIFT if DE is
EA6E 20F8	JR	NZ,SHIFT	;still greater than zero
EA70 10F0	DJNZ	NEXT	;Repeat from NEXT eight times
EA72 C9	RET		
	END		

Figure 3

would add five to the accumulator. Most processing is carried out in the A register (accumulator — hence its name), so there are no equivalent instructions for other registers. You can add registers to the accumulator using the instructions

ADD A,reg (reg = A,B,C,D,E,H or L)

Yes, it's even possible to add the

THE CHARACTER 'A'

Figure 4

SUB A,17

which subtracts 17 from the contents of the A register. All of these instructions are shown in figure nine.

When a value exceeds the range of a register, we said that the ninth bit is lost: however, that is not quite true. In the first article, we referred to an F register, but we have not yet used it. The F register is a special register which holds YES/NO values, called Flags, which we may find useful.

So, when a result wraps around a bit — binary digit — in the F register is set to one. That bit is known as the carry flag, and can be used for operations on large numbers — that is, greater than 65535 — but we will leave that for another article, and instead cover something more interesting.

The Z80 instruction set does not have any multiplication or division instructions, so those have to be simu-

```
10 FOR i=1 TO 704
20 PRINT CHR$ (25*RND+65);
30 NEXT i
40 FOR j=1 TO 8
50 FOR i=16384 TO 16384+6143
60 POKE i,INT (PEEK i/2)
70 NEXT i
80 NEXT j
90 STOP
```

Figure 5

lated using repeated additions or subtractions. There are a few 'shift' instructions to make life a little easier.

If we were to shift all the bits in a register to the left, then we would in effect multiply the contents by two.

```
10 CLEAR 59999
20 GO SUB 1000
30 CLS
40 FOR i=1 TO 704
50 PRINT CHR$ (25*RND+65);
60 NEXT i
70 RANDOMIZE USR 60000
80 STOP
1000 REM HEX LOAD ROUTINE
1010 DEF FN p(x)=CODE h$(x)-48-7
*(CODE h$(x)>=65)
1020 LET byte=0
1030 RESTORE 2000
1040 READ start
1050 READ h$
1060 IF h$="*" THEN GO TO 1160
1070 IF LEN h$<>2*INT (LEN h$/2)
THEN PRINT "Odd number of hex
digits in: ";h$: STOP
1080 FOR i=1 TO LEN h$
1090 IF NOT ((h$(i)>="0" AND h$(i)<="9") OR (h$(i)>="A" AND h$(i)<="F")) THEN PRINT "Illegal hex digit: ";h$(i): STOP
1100 NEXT i
1110 FOR i=1 TO LEN h$ STEP 2
1120 POKE start+byte,16*FN p(i)+FN p(i+1)
1130 LET byte=byte+1
1140 NEXT i
1150 GO TO 1050
1160 PRINT "Code entered"
1170 PAUSE 150
1180 RETURN
2000 DATA 60000,"0608","210040"
2010 DATA "110018","CB3E","23"
2020 DATA "1B","7A","B3","20F8"
2030 DATA "10F0","C9","*"
```

Figure 6

So, if we take the binary number 00110100b = 52 ((1*4) + (1*16) + (1*32))

and shift all the bits to the left, we get 01101000b = 104 ((1*8) + (1*32) + (1*64))

We can do that in Z80 using the instruction

SLA reg (reg = A,B,C,D,E,H or L) SLA stands for Shift Left Arithmetic — not a particularly memorable mne-

```
42 LET p=INT(8*RND)
44 LET q=INT(8*RND)
46 IF p=q THEN GO TO 44
48 PAPER p: INK q
```

Figure 7

monic, I'm afraid. If a '1' — that is, a set bit — is shifted out of the top position, then it is lost — to the carry flag — and a zero is always shifted into

continued on page 56

continued from page 55

the lowest bit. The only other left-shift instruction is

SLA (HL)

which shifts the contents of the location addressed by the HL register pair.

We can do exactly the opposite of this using the SRL — Shift Right Logical — instructions. Just to confuse matters further, there are similar SRA — Shift Right Arithmetic — instructions. Those are almost the same as SRL, but instead of moving a zero into the top bit, that bit remains unchanged. Figure two may explain that better, and all the instructions are shown in figure nine.

So what can we use those instructions for? Well, they have obvious uses for multiplication and division, but the assembly code in Figure Three shows a more interesting application.

All the characters which you see in the display file are held in a series of bytes. Those start at location 4000h — h = hex, 16384 in decimal — and continue to location 57FFh, or for 6144 locations. Each character in this display area is made up from eight bytes.

Figure four shows the arrangement for the letter A. If we were to shift all the bytes in the display file to the right, then all the characters would be displaced by one bit. If we did that eight times, then the characters would slowly disappear!

A Basic program to perform this professional-looking screen clear is shown in figure five. Try this out first. When you run it, you may be forgiven for wondering why nothing is happening. The screen is in fact clearing, but very, very slowly.

Now type in the program in figure six which loads the equivalent machine code routine. If you typed in the Attribute Fill routine last month, then you will be able to modify it, because the data — line 2000 onwards — is all that has changed. This program works quite a bit faster.

If we go back to the assembly code — figure three — we can see how the program works. The B register is loaded with the value eight, because we want to shift the screen to the right eight times to clear it. The main loop then starts by loading the HL register pair with the first screen location, and the DE register pair with the number of bytes on the screen which need to be changed.

The loop from label SHIFT is then

RLC (Rotate Left Circular)

RRC (Rotate Right Circular)

Figure 8

executed 6144 times. This loop performs the necessary SRL instruction, then increments the HL register, so that HL eventually moves through the entire screen. Do not worry about how the loops work just at the moment — we'll be looking at those next month.

You can easily include the routine in your own programs. Not only does the screen clear in an unusual manner, but none of the attributes are changed. If you add the lines given in figure seven to the program, which just colour each character square, you will see that the colours are left unchanged. You could subsequently set those using PAPER and CLS, or even use last month's Attribute Fill routine.

The routine is easily modified to perform slightly different functions,

too. Change the data value "CB3E" (line 2010) to "CB26". That is the code for "SLA (HL)", which will perform a similar shift, but to the left.

Z80 has a couple of interesting instructions which will rotate bytes. They work in a similar way to the shift instructions, but instead of a zero bit being shifted into the byte, the 'lost bit' is used — see figure eight. Try changing the "CB3E" data to "CB06" or "CB0E", and change line 80 to "GO TO 70", and see what happens.

Next month we will see how the loops which we have been using are formed, then use that knowledge to implement a digital counter on the screen, where the digits rotate properly into their correct positions, just like a real digital clock.

Figure 9: New Z80 instruction codes

INC	reg	— add one to the specified register.
INC	rp	— add one to the register pair.
INC	(HL)	— add one to the location addressed by the HL register pair.
DEC	reg	— subtract one from register.
DEC	rp	— subtract one from register pair.
DEC	(HL)	— subtract one from the location addressed by the HL register pair.
ADD	A, byte	— add the given byte to the contents of the A register.
ADD	A, reg	— add the value of the given register to the A register.
ADD	A, (HL)	— add the contents of the byte location addressed by the HL register pair to the A register.
ADD	HL, rp	— add the value of the specified register pair to the HL register pair.
SUB	byte	— subtract the given byte from the A register.
SUB	reg	— subtract the contents of the register from the A register.
SUB	(HL)	— subtract the contents of the byte location addressed by the HL register pair from the A register.

In the following four operations, the bit shifted out of the byte goes to the Carry Flag, and the bit shifted into the byte is zero.

SLA	reg	— shift the contents of the register left by one bit.
SLA	(HL)	— shift the contents of the location addressed by the HL register pair left by one bit.
SRL	reg	— shift the contents of the register right by one bit.
SRL	(HL)	— shift the contents of the location addressed by the HL register pair right by one bit.

The next two operations are exactly the same as the SRL equivalents, except that the most significant bit is unchanged, rather than being replaced by zero.

SRA	reg	
SRA	(HL)

THE STRONGEST VERSIONS OF THE CLASSIC GAMES — from good retailers or by mail order

SUPERCHESS 3-5

GUARANTEED TO CONSISTENTLY BEAT ANY SPECTRUM OR COMMODORE 64 CHESS PROGRAM WHATSOEVER

STRONG — 100 times faster, 1500 times more intelligent
FAST — from 5 secs to the highest levels, all within tournament times
PENETRATING — at tournament levels it searches at least 7 moves deep, trying tens of thousands of lines of play
FRIENDLY — keeps you informed. Ideal for the expert or as a tutor for beginners
SAVES TO MICRODRIVE TO SAVE YOU TIME

£9.95 48K SPECTRUM

- ★ Save Game & Program to Microdrive
 - ★ On-screen clocks for tournament realism
 - ★ Unique new way of setting hundreds of levels
 - ★ All play within tournament time limits
- FEATURES**
- ★ Unique new way of setting levels by time gives you total control with three different options: tell the computer to match your response times, give it a time limit to play to, or give it an average time to make its moves. And you can force it to play its best move found so far...
 - ★ Change sides and levels during play if required
 - ★ Stop the game and change positions at any time
 - ★ Set up particular games you want to try at any stage
 - ★ Will recommend your best move when asked
 - ★ Can be set to solve problems up to mate in four
 - ★ Extensive library of opening moves
 - ★ Option to determine your own display and piece colours
 - ★ You can play blindfold chess
 - ★ Absolutely suitable for beginners; just set the minimum move time
 - ★ Fascinating self-play mode for you to study the game
 - ★ TOTAL INFORMATION about the computer's thought processes, including: best line of play found so far, number of positions evaluated, depth of search, internal scoring system, display of previous moves if required, help menu if you should ever get stuck.

DEDICATED TO EXCELLENCE IN THE GAME OF CHESS

NEW FOR 1985

BRIDGE PLAYER 2

THE STRONGEST BRIDGE PLAYER YET

BRIDGE TUTORs with full manual & set hands to teach you the game
Beginners £5.95 Advanced £5.95
SPECIAL OFFER
Bridge Player 2 & both tutors £19.95

£9.95 48K SPECTRUM WITH EXTENSIVE MANUAL

- ★ Play a realistic game of bridge against the computer
 - ★ Computer can play as defender or declarer
- At last, here is a program with everything the solo Bridge Player ever needed: The computer generates random hands, allows proper bidding in the ACOL system including the Stayman and Blackwood conventions, and then IT TAKES YOU ON, playing both your opponents' hands. Every feature that can be packed into the Spectrum has been included in this program to give you a really satisfying and enjoyable game of computer Bridge.

- FEATURES**
- ★ Versatile bidding routines give you a worthy opponent
 - ★ Study your game: post-mortem facility allows rebidding and replaying of any hand
 - ★ You can review the bidding or play to previous tricks while playing a hand
 - ★ Or input a hand or contract of your choice to test yourself
 - ★ **COMPREHENSIVE ON-SCREEN INFORMATION**
 - ★ **DISPLAYs:** contract, tricks won so far, cards played in current and last trick, score
 - ★ Option to **BIAS THE DEAL** to give you and your "partner" more high card points if you prefer to play as declarer

A REALLY STRONG OPPONENT FOR A REALLY GOOD GAME OF BRIDGE

NEW FOR 1985

ASTRONOMER

THE UNIVERSE OF STARS IN YOUR OWN PLANETARIUM

THRILLING command over the night sky from any time or place on earth
SERIOUS tool for the amateur astronomer — with excellent manual

"For those interested in the night sky it should prove fascinating"
 "User friendly"
 "Very good value" CRASH Oct 1984

£9.95 48K SPECTRUM

Astronomer has everything in one powerful program... See the night sky of more than 1000 stars from any time or place on earth. Watch it plot the planets or draw in the constellations for you. See close-ups from the Star Atlas of 362 charts. Watch animated detail of our Solar System in motion and see how it changes with the months. Calculate everything needed for serious astronomy to a high standard of accuracy and produce your own tables to save having to buy them. Anything can be transferred to a ZX Printer.

- FEATURES**
- ★ Comprehensive Manual with reference sections
 - ★ Suitable for serious astronomical study
 - ★ Night Sky views from anywhere on earth
 - ★ Works for past, present and future times
 - ★ Displays over 1000 stars
 - ★ Draws the constellations on your command
 - ★ Plots the solar system on the night sky
 - ★ Huge Star Atlas for detailed study
 - ★ Shows the motion of the solar system
 - ★ Calculates position for the Sun, Moon, Planets, Comets and Asteroids
 - ★ Then plots them on the Night Sky or Star Chart
 - ★ Displays the phases of the moon
 - ★ The distance from earth of any object
 - ★ Sidereal time and rising and setting times
 - ★ Ephemeris section: generate and print your own tables
 - ★ Fully-compatible with ZX Printer

NEW FOR 1985

PINBALL WIZARD

FOR COMMODORE 64 AND ANY SPECTRUM

Superb, colourful fast-action graphics and sound give this game the feel of a real arcade pin-table. Realistic launch, flippers, bumpers, high-score, bonus scores and freeball features. Be a Wizard!

"... I thought that a few minutes would suffice, and then found that a couple of hours had passed and I was still at it. Excellent... Pinball Wizard has it made."

"A brilliant idea that's totally absorbing and so addictive..."

"The display is well-designed and colourful and ball movement is very realistic."

SUPERCODE III

FOR 48K SPECTRUM & SPECTRUM+

150 ROUTINES
 100% MICRODRIVE COMPATIBLE

NEW FOR 1985

With 150 ROUTINES and 100% MICRODRIVE COMPATIBILITY this has to be the ultimate Spectrum toolkit. It gives you the power to do everything you always dreamed of with your Spectrum in your own BASIC or MVC programs. Born of the earlier Supercodes (which themselves received 5 star reviews) we can claim confidence that we have packed absolutely everything into this State of The Art development. With Interface 1 it transfers easily to microdrive and is recognised by Sinclair as fully compatible. Needs no special knowledge to operate and comes with a comprehensive manual.

- FEATURES**
- ★ Unique Access Program lets you INDEX/ LIST/TEST/TAILOR/RUN/RELOCATE/SAVE (to tape or microdrive with new or default name) /VERIFY automatically
 - ★ Options include EXAMPLE/REPEAT/JUMP/AGAIN/CONT/TIR/DEMO/ DIAGNOSIS/MOVE
 - ★ 100% menu-driven with on-screen training
 - ★ Brilliant user manual
 - ★ Routines guaranteed SHORTEST AND FASTEST for all applications

The Wally Guide to Mikro-Gen

WALLY programmers all live near the flight path of a major British Airport. Gatwick would be ideal because of its association with wally holidays, but the surrounding countryside is far too pretty for the machine-orientated wally minds. Hence the Mikro-Gen wallies hang about near Heathrow.

Choosing the correct site for a wally programming operation is of vital importance. Spacious air-conditioned hi-tech offices may lead to the Psion syndrome, where the very surroundings inhibit the creation of anything less cerebral than **Scrabble**.

Mikro-Gen programming is done in a large room over a high street shop in Bracknell. The approach is made from the back to save visitors embarrassment if their friends should spot them dropping in on the wallies. The rutted grass track is surrounded by dilapidated huts of the type erected by wally gardeners on suburban allotments.

A wrought-iron fire escape leads to

Chris Bourne reveals the awful truth about the growing power of wallies in the software industry

the Mikro-Gen office, sheltered from the rain by transparent corrugated plastic. Inside cardboard walls in tasteful pastel shades give onto the main room, which is full of computers and happy programmers. There are very few chairs, a wally management technique to keep production moving.

Wally computers

Any home computer is a potential wally computer, but the important thing for wally programmers is that all games should involve the use of at least one incredibly expensive piece of equipment which can be casually

shown off to visiting wally-watchers. Mike Meek, managing director of Mikro-Gen, has perfected the art.

"Incidentally, we don't allow smoking in the room because of *The Minstrels*," says Mike. Not the subtle use of the letter 's', implying there is more than one of the machines about. "We do the program development on the *Minstrels*," he explains, "and download into the Spectrum or Amstrad using cross-assemblers."

Then comes the kill. "Being engineers, we can maintain sophisticated machines, a great advantages." Like the folks who drive customised Ford Capris up and down Orpington high street on a Sunday afternoon, wally programmers

insist on the value of DIY maintenance.

Wally games

Mikro-Gen was formed in 1981 but it was with the appearance of Wally Week that the company fortunes took a dramatic turn for the better. Wally is the flat-capped, beer-gutted character who stars in **Automania**, **Pyjamarama**, and **Everyone's a Wally**.

It was not the first time Mikro-Gen had introduced a wally into its games, however. You may still remember the cult adventures **Mad Martha** and **Mad Martha II** in which Henry had to avoid his psychopathic wife for a night on the town and later a spot of infidelity on holiday with Spanish señoritas — definitely early wally territory.

Earlier still Mikro-Gen had been responsible for the creation of the Bomber-type game in **City Defence**, and a number of space games such as **Space Zombies**. But the shift from writing games for wallies to games about wallies has proved immensely successful.

Automania introduced two important wally concepts — penny-pinching and motor cars. Wally has to assemble the parts of a motor car, but the shelves in his garage are so old and rotten that bits keep falling off.

Pyjamarama took Wally into the home on an expedition for a midnight snack. Compulsive eating and the lurid primary colours of the graphics display wally domestic lifestyle in all its glory.

The third in the Wally trilogy, **Everyone's a Wally**, introduced a whole suburb of wallies involved in an intricate quest, and the title sums up the development of wally philosophy at Mikro-Gen.

*This is a wally caption.
It fills space.
Sort of.*

Wally graphics

Wally programmers are particularly interested in graphics — the more the better. Ultimate calls its **Knight Lore/Alien 8** graphics 'filmation'. New Generation has been known to talk about 'isometric' graphics while Hewson Consultants went through a period of calling everything 3D Space Wotsits. Mikro-Gen people talk about replacement graphics, which means Wally Week can move behind objects in **Everyone's a Wally**, whereas in **Pyjamarama** his legs and belly tended to change colour.

Here is technical director Andrew Laurie putting the phrase into context. He is explaining why Mikro-Gen games look better on the Spectrum than on the Commodore 64, which is supposed to have superior graphics.

"You can make the software outdo the Commodore hardware because every last bit of the Spectrum is used up with replacement graphics. The resolution of the multi-coloured sprites on the 64 is very poor."

Animation is an important factor in any wally game. Take **Herbert's Dummy Run**, the latest from Mikro-Gen. "Herbert has a six-stage walk on the Spectrum but only four on the C64, as there is a limit on the sprite pointers. We hope to double that. Those sprites are unacceptable to us on the Commodore and some people might get disappointed."

Seeking inspiration

Great wally games do not come unbidden to the mind during a Monday morning bath. They are the result of painstaking research in the backwaters of wally computerland. After all, as Mike Meek explains over a cheese sandwich and a pint of lager, he and Andrew did not go into computing for the simple fun of it.

"We started Mikro-Gen to make money," he states bluntly. The belief that somewhere out there are millions of pounds waiting for the first programmer to hack Matthew Smith's bank account is, of course, central to the wally software industry.

"We get various ideas from clubs," says Mike. "Andrew was a founder member of Sunbury Computer Club six years ago." Andrew then proudly describes how he once built a 256-byte micro with binary switches. That is the sort of pedigree which really sorts out the true wally from the run-of-the-mill Porsche poseurs and Hobbit hackers.

In fact, the Bomber game was written by a club member for the Commodore PET. "He helped us do it for the ZX-81," says Andrew.

It is only recently that Mikro-Gen started hiring full-time programmers. "Before **Automania** most of the programming was sub-contract," says Mike. He explains that by doing it that way you avoid having to pay programmers' salaries when they are not producing anything, or when the money gets tight. Other areas of inspiration are also utilised.

1 — ZX Microfairs. "We were at the first ZX Microfair," says Mike. He talks about the roots of the trade. Mike also used to run the Sinclair User Club — you can't get much rootier than that.

2 — The Shop. Mikro-Gen also runs a shop, part of the Spectrum chain of home computer stores. That allows the Mikro-Gen wallies direct contact with the wallies with the cash. "The Amstrad is outselling the Spectrum in our shop at the moment. It's very good value for money,"

says Mike. Hence Mikro-Gen plans to convert games for the Amstrad to cash in on the

continued from page 59

revolting machine's success.

"The problem with a software house being a closed group is that you can miss certain points or even be on the wrong path," says Mike. If ever there was a herd instinct, wallies have it. For a wally to be on the wrong path, isolated from his fellows, is to risk losing everything wallyhood stands for.

Chartbusters

Wallies are inveterate chart watchers. Sporting wallies love constructing World's Best teams with the aid of the obligatory *Guinness book of Records*. Mikro-Gen also follows the charts. "We were very chuffed to see **Everyone's a Wally** knock **Alien 8** off the top," crows Mike.

Such talk frequently leads to interminable discussions concerning which charts are the most reliable and what the figures signify.

"Overall, **Pyjamarama** has sold best, but **Everyone's a Wally** will probably surpass it. It surpassed our initial projections faster than any other program," Mike goes on to explain how the new game will 'ramp' shortly after its release.

Talk about 'sales projections' and 'ramping' may bore readers but they are essential parts of the vocabulary for wallies hoping to make a determined assault on the software charts.

The Forces of Evil

The latest addition to the wally stable is **Herbert's Dummy Run**, set in a gigantic department store full of the sort of fancy lampshades and other useless bric-a-brac so beloved of domesticated wallies. Herbert is Wally's infant son, who becomes lost in the department store. "**Everyone's a Wally** veers strongly towards adventure," says Mike. "Herbert veers towards arcade."

Promoting a game properly is an important factor in becoming a successful wally programmer. The Wally Week games had promotions involving a rally car, but Herbert is too young to drive.

Instead, Mikro-Gen hit on the idea of sending disposable nappies to important people in the trade with 'There's a big one coming your way' printed on them. Another legend reads, 'Only Herbert can fill this space'.

Mere charlies or berks cannot hope to achieve the heights of artistic taste

aspired to by true wallies.

Good taste is not enough, however, and plans are afoot for an even more spectacular game. Mikro-Gen has commissioned a non-wally to write a fantasy novel on which a game will be based.

"Things are fairly dynamic at this point," says Mike, meaning little has been decided for sure. He reckons the book will, "introduce a far greater depth of understanding into the program, building up pictures in the mind."

Since the average wally mind is supposed to be entirely empty of everything except Toby bitter and patent spray-on anti-rust liquid, the game is clearly not intended for the purist wally market. Instead it is aimed at the hybrid adventure market.

"It will be **Lords of Midnight**-ish but animated," explains Andrew, "with graphics to the same level as **Pyjamarama**."

Mike Meek acquires a wistful look in his eyes as he thinks of the moral possibilities. "It will be a battle against various evil forces. If it's successful it will be a classic."

The evil forces remain vague and undefined as yet, but may well include traditional enemies of wally software people such as US Gold or Jeff Minter.

"We represent enough force in the market now to make some people look at it," announces Mike, ominously.

Presumably if it is not successful it will not be a classic. The philosophy of wally programming is arguably encapsulated within that sentence.

Serious programs

It is important that wally software houses should have at least one 'serious' piece of software with which to counter accusations that they are only in it for the money.

Mikro-Gen have **Air Traffic Control**, programmed by former air traffic controller Dale McLoughlin, who freelanced for Mikro-Gen. Mikro-Gen claims the program is being used to train real air traffic controllers, and Dale goes so far as to say many play it when they get home from work.

Air traffic controllers are clearly wallies also, a comforting thought.

The Invisible Man

Chris 'Rudolph' Hinsley joined Mikro-Gen on January 1 1984. "He is always criticising me because he never gets mentioned," Mike admits.

All software companies have at least one person who does all the work and never gets the credit. Another such at Mikro-Gen is Anthony Lill, who has just joined the company and is "still thinking in binary" as opposed to not thinking at all.

Final thoughts

Herbert's Dummy Run uses 1250 user-defined graphics. A record?

...LET US BROADEN YOUR

HORIZONS

SPECTRUM

Digital Sound Sampling Technology. NOW Available on your Spectrum

Complete unit and Software Package
£49.99 POST FREE

• Digital Sound Sampling has only previously been available for large micros and costing at least 10 times the amount. • The Sound Sampler allows you to record 'Digitally' any sound into memory and instantly replay it at any pitch, forwards, backwards, ascending scale, compressed, expanded, with echo, endlessly looped etc. • Supplied complete with Software package to facilitate the above kit a whole symphony could be produced from a single Sample Sound. • This is a professional unit featuring 8 Bit D to ADC converters as used in Digital equipment now sweeping the music world. • Although the unit is not a toy, giving truly astounding results for the musically inclined, we have incorporated a games interface to allow you to use Sound Sampling in your own games etc., so the Sound Sampler would be of interest to everyone.

NOW! You can connect your Spectrum to a full sized printer...

ONLY **£34.99** POST FREE

- The Dattel Interprinter is a Centronics Interface which allows the Spectrum to be connected to a whole range of full sized printers.
- Comes complete with connecting cables and 36 way plug to fit most printers including Epsoms, Seikoshas, Star, Tandy, Shinwa etc.
- Complete with software to generate text copys plus additional software to facilitate hires screen dumps.
- The Interprinter plugs straight into the expansion port. • Available Now!

SPECTRUM

ONLY **£34.99** POST FREE
**THE ULTIMATE
SPEECH
SYNTHESIZER**
Plus built in
Joystick Interface

- Easily program any word from a unlimited vocabulary.
- Joystick Interface accepts any standard type (Kempston compatible) including Rapid Fire.
- Also boosts Spectrums sound through your TV.
- All in one unit, no messy wires. • Available Now!

NOW! ROBOTICS + MODEL CONTROL MADE EASY FOR YOUR SPECTRUM

ONLY **£29.99**
COMPLETE POST FREE

- The Dattel Robotek is an all in one controller which connects your Spectrum to the outside world. • 4 independantly controlled outputs can be connected to robots, models etc. to give full direction control. • 8 independant sensing channels give constant "feedback" to your micro making possible "artificial intelligence" and the ability to adjust to its environment. • Programming is very easy using only a few basic commands. • Other applications including sophisticated security and domestic uses are endless. • Supplied complete with connecting cables & full instructions. • Available Now!

SPECTRUM

Now you can create Superb Graphics easily with the New

Lightwriter

ONLY **£16.99**
POST FREE
Lightpen comes
complete with

Interface & Software

- Just plug in the Dattel Lightwriter and draw circles, squares, rectangles, make superb hand drawings, paint, fill, erase, choose inks, paper, colours. • Save your results into memory (48K) and use in animation or save onto tape to use in your own games. • All functions selected from screen menu with the lightpen.
- Unbeatable value. • Nothing more to buy.

Defining designing

This month our course for beginners is concerned with DIY characters. John Gilbert explains in graphic detail

USER-DEFINED graphic (UDG) manipulation is one of the most misunderstood aspects of using the Spectrum.

A UDG is an addition to the normal alphanumeric character set but one which can be created by you, the programmer. It can be used to create a plethora of aliens and space craft or, more usefully, to display foreign alphabets and symbols.

Last month we looked at how the computer represented information as numbers and how the letters of the alphabet, punctuation marks and symbols are stored in numeric form. The same is true and each of the UDGs has a character code which can be found in an appendix at the back of your user manual. The codes are 144 to 164 and in the manual they are shown as lowercase letters enclosed in brackets.

If you use a little of the knowledge that you picked up from last month's article you could use the CHR\$ function to display a UDG representation as it is when the Spectrum is first powered up. Type PRINT CHR\$(153).

A capital J should be displayed at the top of the screen as the Spectrum initially represents its UDGs as capitals. You will be changing them later.

The standard, non-changeable character set is stored in the unchangeable ROM. As it must be possible to change the design of a UDG each of those characters is stored in a special area of RAM. If you look at the chart labelled 'memory map' in your user manual you will see that the UDG area starts at the RAM address 32600. As shown in the character set table only the characters 'a' to 'u' area are stored there and it is usually possible to use only 21 UDGs at one time.

As with all data within the Spectrum, UDGs are stored as a series of ones and zeros. Figure one shows how

each character is made. Each box can contain a one or zero. If a one is present a part of the box is inked in. If a zero is shown then a space is put into the box.

Characters are formed of eight lines with eight boxes to a line and it is easy to represent them on paper in the way shown in figure one. That is not, however, the way in which UDGs are represented in RAM. Figure two is a simplified explanation of the layout of the first two lines of the character in figure one as they would appear in RAM.

There are three steps to creating and displaying a UDG.

1. Use the grid in figure one as a template for your new character. Ink in the squares which you want to be inked in and leave the others blank.
2. Reduce each of the eight lines to a number consisting of eight ones or

zeros, depending on where the black boxes lie. For instance, if there are two inked squares at the left of a line and the other boxes are blank the number would be 11000000. List the numbers on a piece of paper.

3. Time to introduce some new commands and program your character into the computer. I expect that you have had little use for the POKE command before but now it comes in

continued on page 64

10000001									129
11111111									255

Figure 1

continued from page 63

handy. We are going to use a special version of it which will locate the character which you want to change and set up the new character using it. The command format is:

POKE USR "graphic character" + offset

The 'graphic character' is the letter between A and U, entered when you are in GRAPHIC mode, which you wish to change into your UDG. The offset is a number between zero and seven and tells the Spectrum the number of the line at which you are looking. The top line is numbered zero and the bottom is line seven.

Let us take line one — the second line down — of figure one as an example. We will change the UDG to the square and the number for line one is 10000001. The finished command is:

POKE USR "A"+1, BIN 10000001

An extra function, BIN, has crept into that line. The number is a binary number, a system which was explained last month. We must tell the Spectrum that the value represented is not decimal so the function BIN is put before it.

It is, however, possible to convert the ones and zeros of the binary number to the decimal system and use it within the POKE USR statement. In order to do that you must be able to convert a binary number into a denary one as denary is base 10 — ie units, 10s, 100s — and binary is base two — 1,2,4 and so on.

To understand binary or denary you have to understand the way in which numbers are written. For instance, take the number 123. The three is in the units column so there are three units of the number one. The two is in the tens column so there are two tens in the number. Finally, the one is in the hundreds column so there is one hundred. All together that makes one hundred, twenty, three as the Americans would say.

Some denary numbers need more than three columns so after the hundreds position comes the thousands,

Program 1

```
10 CLS
20 RESTORE
30 FOR K=0 TO 7
40 READ A
50 POKE USR "A"+K, A
60 NEXT K
70 PRINT "DEFINITION COMPLETE"
80 PRINT "AAAAAAAAAAAA AAAAAAAA"
90 DATA BIN 11111111, BIN 01000010, BIN 00100100
100 DATA BIN 00011000, BIN 00011000, BIN 00100100
110 DATA BIN 01000010, BIN 11111111
```

Lines 10 and 20 clear the screen and make sure that the computer RESTOREs all the data in the program. It will start to READ data from the first DATA line at line 90 when requested.

Line 30 starts the loop, the contents of which will READ in the UDG definition and perform the transformation. The loop will execute eight times, zero to seven.

Line 40 READs in a DATA definition and line 50 puts, or POKEs, it into the relevant section of the character you are re-defining, ie 'A'.

Line 60 ends the loop.

Line 70 tells the user that the definition of the UDG is complete. Line 80 underlines the message. Remember that the 'A's should be entered in GRAPHICs mode.

Lines 90 to 110 define the DATA which is to be use in configuring the new UDG. Note that it is in BINary format. You could make line 50 read 50 POKE USR "A"+K, BIN A if you want. By so doing you could remove all those troublesome BIN words from the DATA statements as line 50 would convert the numbers to BINary automatically.

ten thousands and millions. The same is true of binary but, just as you cannot put a 10 into the units column in denary, you cannot put a two into the units — or one — column in binary.

The binary scale is shown at the top of the block in figure one, ranging right to left. The way to convert a binary number into denary is to look from right to left and every time you come across a one, or inked block, add the number of the column to a running total. For instance, the second line down in figure one has ones in the '1' and '128' columns so the denary value of binary 10000001 is 1+128=129.

If you do that for each of the lines you will end up with eight denary numbers. You can put them in the POKE USR statement without BIN. To store the second line down of figure one in the 'A' UDG space, type:

POKE USR "A"+1, 129

Type in the line as a direct command and when you go into GRAPHIC mode and type 'A' the result will be a mutated 'A'. Alternatively you could save having to go into GRAPHIC mode and use CHR\$ to

print out the new character.

PRINT CHR\$(144)

There are two programs this month and those show the two ways of entering UDGs within a programming environment. The first uses the long-winded BIN way and the second

Program 2

```
10 CLS
20 RESTORE
30 FOR K=0 TO 7
40 READ A
50 POKE USR "A"+K, A
60 NEXT K
70 PRINT "DEFINITION COMPLETE"
80 PRINT "AAAAAAAAAAAA AAAAAAAA"
90 DATA 255, 66, 36
100 DATA 24, 24, 36
110 DATA 66, 255
```

Lines 10 and 20 clear the screen and RESTORE the DATA.

Line 30 loop for character definition.

Line 40 reads the DATA for part of the character while line 50 creates that section and line 60 ends the loop.

Line 70 prints the definition ends message and line 80 underlines it with the new UDG.

Lines 90 to 110 contain the DATA. It has been converted to a denary format and there is no need to use the BIN statements either in the DATA lines or at line 50.

translates those long binary numbers into decimal.

We have not finished with UDGs. Next month we will explore the realms of animation with them.

New - the official Spectrum Upgrade!

Turn your Spectrum into a Spectrum+ for just £20

- Professional full-size keyboard – includes 17 extra keys.
- Responsive typewriter-style action.
- Accepts all current Spectrum software and peripherals.
- Complete with 80-page User Guide and Companion Cassette.

Here's some exciting news for 48K Spectrum owners ... the official Spectrum Upgrade Kit.

The £20 Kit has everything you need to turn your Spectrum into the stylish new Spectrum+. You don't even need an understanding of electronics, just the ability to solder a few wires together! The leaflet in the kit gives clear, step by step instructions.

If you're not sure about doing it yourself, don't worry. Simply return your 48K Spectrum to Sinclair and for £30 we'll upgrade it for you.

Whichever you decide on, you'll also receive the new 80-page User Guide and Companion Cassette.

The bigger, better Spectrum keyboard

The Spectrum+ measures 12½" x 6". It has a large typewriter-style keyboard, with hard, moulded keys.

You'll find the new keyboard has a smooth, positive action – ideal for touch-typing, word processing, simulation programs, and extended programming sessions. Two retractable legs give a perfect typing position.

There are 58 keys in all, including 17 new keys. Programmers will be pleased to see dedicated punctuation keys, a space bar, and separate shift keys for graphics and extended modes. And a reset button allows you to clear a program from your computer's memory without disconnecting the power supply.

The official Spectrum Upgrade
Naturally your upgraded computer will accept all the peripherals in your Sinclair system-Interface 1, Microdrives and so on-as well as all

Spectrum software.

Just as important, new Spectrum software and peripherals will be designed with the Spectrum+ in mind. So the Sinclair upgrade adds stylish looks, new capabilities ... and new potential for the future.

Included – the new Spectrum+ User Guide and Companion Cassette

The new User Guide has over 80 pages of information, including a handy BASIC dictionary. The Companion Cassette provides an interactive tour of the new keyboard, and includes three entertaining arcade games.

TO ORDER BY MAIL:

When ordering the Upgrade Service, send off your 48K Spectrum to the address below, carefully wrapped, together with the completed coupon and appropriate payment. (Please do not return the mains adaptor, manual or other ancillaries.) Your upgraded computer will be despatched to you within 10 days of receiving your order.

When ordering the Upgrade Kit, simply complete the coupon, enclosing the appropriate payment and post it to us at the address below. Please allow up to 28 days for delivery.

BY PHONE: Access or Barclaycard holders can call Camberley (0276) 685311 for personal attention, 9am to 5pm Monday to Friday. Only the Upgrade Kits can be ordered by phone.

Please note: the upgrade offer applies to working 48K Spectrum models in the UK only.

To: Sinclair Research Limited, Upgrade Dept., Stanhope Road, Camberley, Surrey, GU15 3PS.

All prices include VAT, post and packing, User Guide and Companion Cassette.

☐ Please send me the Spectrum+ Upgrade Kit. I enclose payment of £20.

OR

☐ Please upgrade my 48K Spectrum for me. I enclose my computer together with payment of £30.

I enclose a cheque/postal order

payable to Sinclair Research Limited for £ _____

OR

Please charge my Access/Barclaycard no. _____

Signature _____

PLEASE PRINT

Name: Mr/Mrs/Ms _____

Address _____

SUS 506

Sinclair Research Limited,
Upgrade Department,
Stanhope Road, Camberley,
Surrey, GU15 3PS.

The painless way to programming

We present a set of routines by David Wright to take the torment from Basic

PROGRAMMING in Basic can be torture if you are trying to write a long program full of subroutines and complicated little twists.

Perhaps there is not enough room between existing lines for that extra few instructions you need to get rid of an error. Perhaps you have forgotten where all the GOTO statements were for a line whose number you have changed. Such minor problems waste

Table 1. Available routines

#R — Renumber
#A — Add
#S — Subtract
#C — Copy
#D — Delete
#L — Lines Auto
#F — Find
#V — Variables

time and irritate the soul, leading to more errors through impatience and fatigue.

David Wright's **Easyedit** utility takes the strain out of programming by providing eight extra commands which complement the Spectrum's editing facilities. It occupies a little under 4½K of RAM and is stored above RAMTOP, set at address 60701.

Written in full machine code, it uses interrupt routines which enable each command to be accessed at any time during programming by pressing the appropriate keys. Each command starts by pressing #, and a full list is given in table one for easy reference.

Loading the code

Type in the Basic program in list one, and make sure all the data is entered using capital letters. Save the program before you RUN it, and then RUN the program. As each line of data is read, a check is made, the checksum being the last two digits of the line, which is the remainder of the sum of the first twenty-two items divided by 256.

When you finally receive the message "EASYEDIT now loaded" you can save the code with SAVE "EASYEDIT" CODE 60702,4664

and verify with VERIFY "EASYEDIT" CODE 60702,4664. If you have microdrives, type POKE 63132,4 beforehand to make sure there is always enough space to open a microdrive channel.

You switch the program on with RANDOMIZE USR 60702. When LOADING the code back into the machine, enter CLEAR 60701 first, to protect the code above RAMTOP.

What follows is a brief description of the various facilities offered by **Easyedit**. All the commands will prompt you for further input. The program also includes 31 new error codes to handle incorrect inputs to be found in table two.

Renumber

This rennumbers the program or part of it in regular steps. The size of the step, or increment, should be from 1

to 255, and you then enter the first and last line numbers of the block to be renumbered, and the number for the new first line.

By pressing ENTER instead of inputting a value the whole program is renumbered in steps of 10. The routine will handle GOSUB, GOTO, RESTORE, RUN, LIST and LLIST but not LINE. If you use something like GOSUB a*10, the routine will print out such expressions and tell you the new line number, but you must edit them in the normal way.

Add/subtract

This enables you to add or subtract a number from 1 to 9999 from every line number in a specified block of program. It is particularly useful if you have a program with many GOSUB expressions using variables instead of numbers, because the relative gaps between lines remain the same. In all other aspects, the routine works the same as the RENUMBER routine.

Copy

This copies one part of the program to another, enabling you to duplicate sections elsewhere in the program. Apart from the line numbers of the new block, the program is not changed.

continued on page 70

Table 2: New error codes

Routine	Error	Circumstance
LINES AUTO	01	first line = existing program line number
	02	next line number too large
RENUMBER	03	too many digits input
	04	more than three digits in increment
	05	increment greater than 255
	06	increment = 0
	07	line number = 0
	08	first line number greater than last line number
	09	no basic program found
	10	actual line numbers coincide
ADD/SUBTRACT	11	increment too large for available space
	12	new first line too small
	13	new first line greater than actual line number after last line
	14	new first line = actual line number after last line
	15	too many lines in block to fit into gap even with increment=1
	16	no default for increment
	17	add increment too large
	18	subtract decrement too large
FIND	19	more than 16 characters/tokens input
	20	no default for first line number
DELETE	21	first line number greater than last line number
	22	no lines in block or single line number does not exist
COPY	23	first line number greater than actual last line in program
	24	no default for new first line
	25	new first line coincides with actual program lines number
	26	new first line within block to be copied
	27	new last line number in block greater than 9999
	28	new last line number too large
	29	insufficient space to copy block
	30	free space becoming too small
RUN ERROR	30	free space becoming too small
	00	free space too small on calling routine

Note that some of the renumber errors occur with the other routines. The circumstances under which those errors occur are the same as those described.

Delete

This allows you to delete a block of program. It also asks you to confirm your choice, as the lines deleted cannot be recovered.

Lines auto

This generates new line numbers automatically when writing the program. To exit, press ENTER immediately after the new line number is generated. The routine will stop if it reaches a number where there are already existing program lines, to prevent you from inadvertently interlacing the new lines with the old. You cannot use the other routines in conjunction with LINES AUTO.

Find

An extremely powerful command. It allows you to input up to 16 characters, including keywords, graphics and tokens. All lines in which the chosen expression occurs will be printed on the screen with the relevant expression flashing. Use CAPS SHIFT and 9 to change the cursor mode when entering the expression, to get the appropriate characters or words.

You could use the routine to find all occurrences of a particular GOSUB statement which you had assigned the wrong number. Or you could use it to check that you had not used a particular variable earlier in the program.

Letters are printed in upper and lower case depending on whether CAPS LOCK was used before entering the routine. That does not matter as the routine does not distinguish between the two.

Variables

This tells you the values of system variables PROG, VARS, ELINE and RAMTOP if you know about such things. It also tells you the length of the Basic program, variables area, and the remaining free space.

New

The ordinary NEW command will deactivate the code routines, so Easyedit replaces it with a routine which deletes lines 1 to 9999 of any Basic program.

The Easyedit routines were assembled with the aid of the Zeus Assembler from Crystal Computing.

MICRO CHALLENGE...
the first computer-age
puzzle magazine

No, not another
computing magazine.

Micro Challenge is unique. Colourful and exciting,
it's packed with intriguing puzzles — and prize competitions
— devised specifically for microcomputer owners.

This is an example of one of the many types of puzzle to be found in Micro Challenge — but it's also your chance to win a superb JVC portable colour television with remote control. Solve the problem, using skill, judgement and your own micro, then send the solution, on one of the prize puzzle entry forms from the May/June issues of Micro Challenge, to the address given in the magazine, marking the coupon AP1. (A proper form must be used; no photocopies or facsimiles are permitted). The competition closes first post on June 17, 1985, and the first correct entry opened wins the prize.

TRIANGLE TANGLE

Brush up on your geometry to unravel the answer.

It is possible to find many examples of three different right-angled triangles which are all equal in area. Can you, however, find three such triangles for which every side is a whole number of units (an integer)? Try to devise a program to find the trio with the smallest possible area.

Moving at the speed of light you could still snap up our fabulous launch issue. Order a regular copy from your newsagent now. Details of subscriptions or postal deliveries contact:

MASTERFILE

HOME & BUSINESS FILING SYSTEM

The most versatile database for the 48K Spectrum.

- Up to 36 User-Defined screen/print formats per file, and each can display different selection of fields, in different sequence.
- High efficiency data packing, no wasted filespace.
- Super fast, multi-level file search, record selection capability.
- Up to 51 columns, and 22 lines per record can be displayed.
- From 1 to 22 records at a time can be shown on screen.
- Up to 128 characters per field, 36 fields per record.
- Compatible with Tasman, Euroelectronics and Kempston printer interfaces, and adaptable for most disc systems.

"... the best database for the spectrum is now even better." Sinclair User, Jan '85.

Design your own print layout with MF-PRINT.

For Masterfile version 09; increases the number of columns to 136+, and has numeric editing and column totals. Almost no reduction in space available for data!

- Masterfile version 09 £14.95
- MF-Print £6.95
- Masterfile with MF-Print £19.95

All available for the 48k spectrum (+) Also available from leading computer stores.

- Enhanced version available for Amstrad at £24.95

The programs are sent on cassette by return post, 1st class, with detailed manual. Prices include VAT and P&P anywhere within Europe.

Business Software

Business Bank Account £10.75

This program will enable you to enter debits under 17 different subheadings. Statements include totals of all subheadings.

Sales Day Book £10.75

For all your invoices, this program will enable you to prepare statements of outstanding invoices. Program will also calculate VAT.

Purchase Day Book £10.75

Keeps a complete record of all your purchases under 17 different subheadings. This program also calculates VAT.

Business Pack £25.00

Including all the above programs.

Stock Control £10.75

Handles 900 lines, including details of supplier. Program has full search facilities enabling you to search and update all lines from one supplier.

Invoicing £15.00

This program will print out invoices, calculates discounts and VAT. The program will calculate totals from unit prices. Up to 50 accounts with 250 outstanding invoices.

Word Processing by Tasman £13.90

Tasword Two is a powerful word processing program that will perform all the functions available on large processors. The program will give you 64 characters per line on screen.

Masterfile by Campbell Systems £15.00

This is one of the best database programs available for the ZX Spectrum. This program has many uses in a small business.

Dlan by Campbell Systems £7.95

Use your Spectrum to sell your products. Dlan will display messages in up to 11 different typefaces. Will scroll text in any direction.

64 Column Generator by Tasman £5.50

You can use this program within your other programs to display 64 columns on screen.

Payroll by Byte One £19.95

This payroll program will handle up to 40 employees and will calculate NIC, PAYE, superannuation and many other deductions. This is a very user friendly program and extremely good value.

NEW

Sales/Purchase Ledger Invoicing £25.00

This program is for use on micro-drive only. The program will print an invoice using a built-in price list and post the invoice to your customer's account. Will also print price lists, statements, labels etc.

Tasmerge £10.95

Allows you to transfer data from Masterfile into Tasword enabling you to use Tasword for mail merge. The program allows you to specify line and column of each field. For use on micro-drive only.

Superfile £14.95

This is a new database program that stores pages of text 64 columns x 22 rows. The program includes word processing and full search facilities.

Omnicalc 2 £14.95

This is the long-awaited micro-drive version of omnicalc complete with histograms and many other features.

Projector 1 £13.90

Business graphics program that will help you present your cashflow, sales expenditure in many different ways including pie line, and histogram charts.

Tasprint £9.90

Use this program with Tasword Two to produce 5 different fonts on a dot matrix printer.

MF-Print £6.95

Enables you to set a print format for your full-size printer within masterfile. Supplied complete with masterfile for £19.95.

Trans Express £9.95

Micro-drive utility program which will enable you to backup all your micro-drive cartridges.

Now in stock

Blank micro-drive cartridges £4.95

Continuous paper £12.99

Printer ribbons from £3.50

QL

Centronics Interface £39.95

QL Dust Cover £5.00

Transform can supply a wide range of printers, monitors, and leads for the QL. For further details send S.A.E.

The Transform Keyboard transforms your Spectrum into a fully operational professional machine.

- Will incorporate micro-drive interface and power supply
- 60 keys including fullsize space bar
- Large ENTER key
- Full stop, comma, semi-colon, colon, single delete and edit keys
- On/off switch with LED
- Easy installation – no soldering required
- Black anodised case
- Now with 3 colour printed key tops
- EMODE key

"Its price of £69.95 reflects the kind of use to which it will be put but it is certainly the top keyboard at the moment."

SINCLAIR USER JUNE 1984

Monitors

It is possible to connect your Spectrum to both Black/Green and composite Video monitors using high resolution monitors are particularly useful with programs like Tasword that use 64 columns. We supply complete instructions on how to connect monitors to both Issue Two and Issue Three Spectrums. These monitors can also be connected to your QL.

Phillips black and green £75.00

Kaga/Taxan black and green £99.95

Sanyo Med res for QL £273.60

Printers

All the software we supply runs on full-size printers (unless you are using interface 1) you will require an interface to connect your Spectrum to a printer, the interface we supply uses the graphics characters to set printer codes as in Tasword and prints a double size screen dump.

Centronics/RS232 Interface £45.00

Dot matrix printers

Brother HR5 £132.00

Brother M1009 £163.00

Star Gemini 10x £199.00

Epson RX80 FT £229.00

Epson FX80 £324.00

Daisywheel printers

Smith-Corona TP I £189.00

Silver Reed EXP500 £284.00

Brother HR15 £349.44

Please add £5.00 delivery plus VAT to the price of printers and monitors. All software prices include VAT, post and packing.

QL Cash Trader

SOME TIME ago I was impressed by an early copy of a program for the QL called **Cash Trader** from Accounting Software. Quest PLC, too, was sufficiently impressed to buy Accounting Software Ltd, and to defer work on **Tally**, its own program. **QL Cash Trader** is now available from Sinclair Research for £69.95.

Cash Trader has been designed to help keep the books and produce financial reports, such as profit and loss accounts, for businesses that pay and get paid, for goods and services as they are supplied.

The first thing that will strike most Sinclair users is the sheer size of the manual which consists of over 200 A5 pages, the majority of which is made up of examples and sample layouts. The manual has been well thought out but suffers from trying too hard to explain all eventualities. That detracts from the examples illustrated and would have been better consigned to a separate section of the manual.

Each time I tried to make the working — back-up — copies of the three cartridges which hold the program, the QL crashed with a 'format failed' message. No warm restart is available so the QL must be reset and the program rerun from the start. Finally, after two hours I had working copies. Then I had to work through a series of examples before I could use **Cash Trader**. This is a good idea and gives a useful introduction. However, I found it difficult at first to relate

money received shown as a debit against a bank account.

The basis of **Cash Trader** is the group. Each group links together up to 10 different analysis heads. Those can be thought of as account names. Of the 14 permissible groups, four have fixed names and the others can all be assigned by the user.

The groups are linked to six categories which are used to produce the profit and loss account and balance sheet. Five VAT rates have been built in and one of those is irretrievably linked to an analysis head when it is set up. The names and rates can be changed to suit any changes in legislation.

Three main windows make up the main display. Those are the report window, which is used to display the profit and loss account, balance sheet and other reports, the entry window, which is used to show the details of the current entry, and the help window used to display options and other useful information.

Entering data is easy as prompts are given in every case, and mostly it is a case of using the left and right arrow keys to roll from one option to another. The left-hand side of the window is used to show where money is coming into and going from the business. It consists of the document number, the date, whether the entry is a payment, receipt or adjustment and which of the four pre-selected groups it is assigned to, together with any reference.

The right-hand side allows items to be double-entered against the left-hand side. It consists of a group name,

analysis head, amount, VAT rate and a comment. Once that data has been entered the user is given an opportunity to enter the VAT himself or to let the program calculate the amount.

The ESC key is used to skip back to the last detail entered and F1 is used to delete individual characters from entries such as the comment or reference. When the correct details have been input there is a final chance to change your mind before the document is accepted.

Once the data is entered the report cartridge is used to give printouts of the various reports of documents' details: VAT report, profit and loss, balance sheet and trial balance. Calculating the VAT return is also offered as an option of the security routine which also allows the copying of data

Superfile

IF YOU are thinking of buying a database then you will probably be thinking about **Masterfile** from Campbell Systems. This is, arguably, the most powerful database available for the Spectrum. However, if you do not need all the features of a full database, a simple card index type, which is generally easier to use but less flexible may be a better buy. **Superfile** from Transform Ltd is just such a database. It costs £14.95 and will also double as a word processor. Although the program is supplied on tape it can be customised for any printer and saved to microdrive.

Superfile works exactly like a card

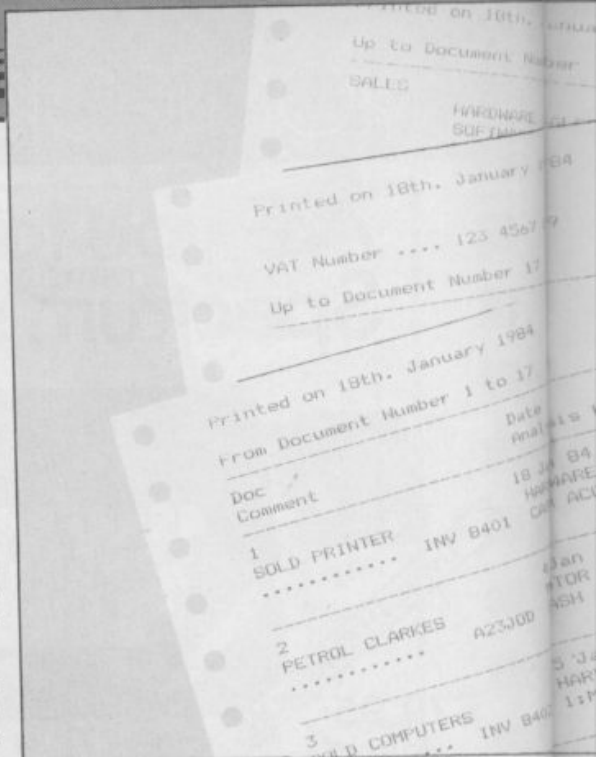

index. Each page is treated as a card of 63 columns and 22 lines. On the top line is a page number and space for a title. The remainder is free for notes. The cursor keys are used to move about the page and text is typed straight in at the cursor. If text is already there then it is overwritten.

Because the database is a series of 'cards' used to store information it can also be used as a word processor. As such it is competent without the extra features that are now expected. The features include wordwrap and left and right justification. Spaces and lines can be inserted and can then be overwritten to add new text into the existing text. 'Cards' and lines as well as characters can be deleted. Although no search facility exists in the word processor as such, the full search

facility of **Superfile** can be used to locate the card on which the string exists. Eyesight must then be used to find the string on the card.

Unlike most databases there are no variables or fields and the appearance of the card can be changed for each one. The cards are stored in the 30K of memory left free by the program until they are saved to tape or microdrive. They can be displayed later by specifying a string of characters, the title or the page number.

Searching for a string also has the effect of creating a separate list of cards which include the string. Such cards are known as being 'selected'. The selected and unselected lists of cards can be changed over or inverted and also reset so that all cards are selected. With no indication in the

The Unitrust Program

SOME TIME ago I reviewed **VaTrack 2**, a program that kept track of a portfolio of stocks and shares. This month a more specialised area of investment, unit trusts, is the subject of a review. **The Unitrust Program** costs £12.00 from Michael Slatford Software and is designed to monitor a unit trust portfolio by giving information on the current value of the portfolio and its individual trusts using a 48K Spectrum.

The program is supplied on cassette with a manual consisting of four single sided A4 sheets. You are expected to know the language and terms of unit trusts but apart from that, the manual adequately describes the function of each of the main menu options.

Data on up to 50 unit trusts can be kept. Unfortunately the number you intend to keep data on must be specified on the first run through the program. After that the only way to keep information on more trusts is to keep a separate copy or run the program again and re-enter all the data.

The program is run from the main menu and is based on the concept of a database of cards containing the name of the company and unit trust, the amount invested with the price when bought and the quantity. Also shown on the card is the value of the holding at the latest bid price entered and the date of that price, together with other information on how the trust has performed over the period.

The main menu has seven options which allow data to be entered for new investments, updates to be made to the portfolio, analyses and printouts of the information to be obtained and the program to be saved. Each option has a subsidiary menu with a more detailed choice.

Despite being a first offering from Michael Slatford the error trapping is of a high quality, even to accepting 29 February only in leap years. Although, at times, it seems to take an age before spotting an unacceptable entry. The screen displays, in general, are clear and readable although the card display does become cluttered when large amounts are used. In every case the clarity of the display is lost when it is printed. Unlike most business programs these days the data is

not stored as a separate file but is stored as variables within the program. Saving a new copy of the program each time the data is updated could be a problem. However this seems to have been anticipated by allowing different versions to be saved with different names.

The **Unitrust program** will not tell you when to buy or sell your units, nor will it help you sort out your Capital Gains Tax. Problems of this sort are for you and your accountant. What the program will do is give information on the state of your portfolio and individual trusts within it. For someone who is relatively new to this form of saving, perhaps there is too much information when all they may be interested in is how much the original investment is worth.

Since this article was written an improved and extended version has been released. The program is now called **The Investment Monitor** and now covers the whole range of investments including shares, gilts and investment bonds. New features include the ability to renumber the cards to suit yourself and high and low values of the investment. For current users of the program wanting to update, this can be done by returning the original version and including a £5.00 fee. Unfortunately you will also have to retype all your data into the new version.

Mike Wright

Publisher Sinclair Research
Price £69.95
★★★★★

manual I found it confusing at first that after a search the selected cards are not displayed on screen. If you want to see what they are you will print them out or use the update option to get them displayed.

Although I like **Superfile** I wonder about its use in a practical environment. Once the program and data file have been loaded it is probably as quick, if not quicker, to look up any single card with it as it would by using actual cards. However, if the program needs to be loaded each time then it will certainly be quicker and cheaper using cards.

Service Department
Unit 4, Leyland Close,
Thetford, Norfolk,
Tel: (0842) 65897

Why wait weeks to get your Spectrum repaired

We at Thetford Micros (Service Dept) have just put into operation a new fully equipped workshop to allow us to keep up our 24 Hours "Guaranteed" repair service on your Sinclair Spectrum computers. We have fully trained staff and our workmanship and repair work is fully warranted to give you the confidence that your micro is in the safest hands. Any first time repairs will be £16.00 + VAT + £2.00 postage and package = total £20.40 for any repair on your computer. We also specialise in the repair of the Spectrum microdrive, Interface I, II and ZX printers at the same standard charge. Payment maybe made by cheque, Barclaycard, Access, American Express, or Postal Order. So all you have to do is post your faulty Spectrum to us along with payment and we will do the rest, your repaired Spectrum will be back in the post within 24 hours (we never sleep!) and depending on the post office it will be back with you within 5-6 days. We have already undertaken repairs from all over England and the continent.

We also undertake repair work on Acorn, Commodore, Amstrad, Texas, Dragon etc., at the lowest of prices.

Any problems with your micro phone Pete on the above telephone numbers - I'll be only too pleased to assist.

*We also produce our own Spectrum "48K Upgrade Kits" complete with fitting instructions.
£24.00 (VAT+P&P) inclusive.*

Switchable UHF — composite video can be fitted to your Spectrum for only £14.00+VAT+£2.00 P&P.

engineers, mathematicians – and the Red Arrow pilots themselves.

Every ounce of power contained in the micro, and its enhanced sound and graphics capabilities, is used to give the utmost realism to re-creating the most spectacular aeronautical displays ever seen in the skies of Britain.

You start by practising take offs and landings. Then, once you have won your wings, you fly in formation as part of the Red Arrows team. There's no margin for error as you fly a mere six to 10 feet from each other – at speeds of between 300 and 350 miles an hour!

But the real drama begins as you plunge into the death-defying manoeuvres that have been thrilling crowds at air shows for the last 21 years.

On the panel in front of you are all the instruments you need – plus a screen giving you an external view of the complete formation you are flying. Slip out of line for a second and the eagle-eyed Red Leader will be on the radio ordering you back into position.

The program comes with a detailed flight handbook that will soon give you the confidence to take YOUR place alongside the ace pilots of the Red Arrows, even if you've never flown before!

Put yourself in the pilot's seat of the most manoeuvrable fighter in the RAF!

PROGRAM PRINTOUT

STEEL & FRENZY

FURIOUS arcade action in full machine-code sees you negotiating a network of ladders and steel girders to trap the vicious uglies.

The game was written by Eric Verlind of Apeldoorn in Holland and runs on any Spectrum. First enter Listing One and SAVE it. Then enter Listing Two and SAVE to another tape before you start with the code. RUN Listing

Two. You will be given a menu. Choose the Input option. When you have had enough, finish the block, type QUIT and save to tape. Then you can load what you saved later and start again but with the latest block as your start block.

Use cursor keys to move and 0 to dig a hole, 9 fills in a hole and H halts the game, SPACE continues it. The game is also Kempston compatible.

GRAPHICS INSTRUCTIONS

IN GENERAL, graphics abbreviations are enclosed in brackets, which should not be entered. A string of the same graphics character is represented in the form (3*A) which would be entered as AAA, where A is the graphics character. A space, where it is important to have the correct number of spaces, is indicated by (sp). Spaces in text will not normally be indicated. Where several graphics characters are used, they are separated by commas, which should not be entered. With Spectrum and QL listings the letter I has a flat top and the numeral 1 has a sloping top.

The above applies to all Sinclair machines. The following instructions are for specific machines.

ZX-81: ZX-81 listings are generally reproduced as they appear when you enter them, spaces and all. Where extensive graphics are used, REM statements will be inserted to provide a guide to the position of each character.

Spectrum: User-defined graphics are represented by underlined letters, without brackets. Type the appropriate letter while in graphics mode. The underline does not appear on the screen. Inverse characters have the letter i before them, e.g. iZ, iA, iP. Block graphic characters are indicated by g followed by the number of the appropriate key: g4 would mean the block graphics on key 4, ig4 the inverse of that graphic.

Control codes are indicated by cc before the character, and are obtained by pressing CAPS SHIFT while in extended mode. They do not appear on the screen but may change the colour of the cursor and will affect what is printed after them: cc3,i* would thus have the effect of printing an inverse asterisk in red.

QL: User-defined graphics on the QL are indicated by a description of the keys pressed to obtain them, underlined and in brackets. Thus (CTRL + 9) means press CTRL and 9 together. The same applies for unusual characters within the QL character set, which our printer is unable to reproduce.

Treasure Hunt

CREATE WEALTH with **Treasure Finder** by G Hadjimichalakis of Nicosia, Cyprus. You have a metal detector and must search for buried treasure. The metal detector beeps when you move, and the higher the pitch of the beep the closer you are to something. Watch out though, there are tree stumps around and if you hit one you lose a treasure. **Treasure Finder** works on any Spectrum, and contains full instructions.

PLAY DOMINOES in a full machine-code version which, amazingly, runs on the expanded ZX-81. Written by David Gist of Hastings, Sussex, the game is for two players. Instead of dots, the dominoes use symbols from the keyboard. After five dominoes have been played, a new game starts, and the winner is the player with the fewest penalty points at the end.

To enter the game, first type in Listing One, making sure there are at least 450 characters in the REM statement. Then run the program, and type in the number in Listing Two as you are prompted. You will be asked to input five numbers and then a checksum. The checksum is indicated in the listing by an asterisk, but you should not enter the asterisk, just the number.

When the code has been successfully entered you should delete lines 10 to 140 and substitute a line 100 RAND USR 16567. Save a copy of the program before you try it out, or you may lose the lot if there is still a mistake.

[illegible]

```

DISPLAY TEXT

PRODUCE display-size lettering on the 48K Spectrum with **Display Text** by C. Moore of Redcar, Cleveland. His machine-code routine searches for the variable **e\$** which contains the text to be enlarged. It then generates an enlargement and stores it in the printer buffer prior to transmitting it to the screen. Text can be printed in three sizes, and the routine checks to make sure there is room on the line and the screen, scrolling the screen if necessary.

HAVE YOU ever wanted to be really evil? Stick the handsome prince one in the gut or beat up the seven dwarfs? Now is your chance in **Vanity** by Peter Catherall of Deeside, Clwyd.

A 48K Spectrum text adventure, **Vanity** casts you as the evil queen in the Snow White story. You must set out with your basket of poisoned apples and attempt to become the fairest of them all. There are two methods of doing this — you can either increase your beauty through magical means, or simply slaughter anybody who looks prettier than you.

SET YOUR synapses whirling with **Brainbox** by Mike Sever of Sale in Cheshire. Based on a popular TV quiz game, you have to form words from jumbled letters and, given a set of random numbers, try and get as close as possible to a given total. **Brainbox** was written for the QL. There are two listings. The second should be saved with Save mdvL_count B.

Brainbox uses our special abbreviations for graphics characters so read the instructions on the first page of Program Printout before entering the listings.

PAPER and ink colours, flash and bright are all attributes of a particular character square. The details are held in the attributes file, which you can POKE and PEEK directly to find or change the contents.

Attribute Aid by Bill Davison and Mark Broomfield of Hornchurch, in Essex, runs on any Spectrum and can be used to discover the attributes of a particular combination of graphics information, or display the graphics corresponding to a particular attribute number. That can be useful since the four attributes are combined into a single number between 1 and 255, and thus the program saves you the trouble of working out the sums in advance and possibly making a mistake.

The program uses our special abbreviations for graphics characters, so please read the instructions on the first page of Program Printout before entering the listing.

NEW — FROM TALENT!

GRAPHIQL

Create superb colour pictures on your QL with TALENT's outstanding new graphics package. It's supplied on two microdrives — the first holds the master program and a printer dump utility, the second, three demonstration pictures. Backup copies can be made. GRAPHIQL comes with a detailed, clearly-written instruction manual, outlining the program's many facilities.

Features include:

- Freehand drawing, 8 colours, optional flash
- Rubber banding, rubber boxes, even rubber circles and ellipses
- Variable size texture definition
- Doodle pad
- Colour and texture fill of any shaped area
- User-definable paint brush — any colour or width
- Colour list for full colour control
- Re-colour facility
- Magnification with panning
- Mirroring and rotation of blocks of screen
- Air-brush effect
- On-line 'help' facility
- Full file-store access
- Printer dump utility

Text can be included in pictures. The characters can be single or double height with flash and underline.

GRAPHIQL pictures can be put into BASIC or assembler programs with the sample routines provided.

Available in March by mail order direct from:

£34.95
+ 50p postage & packing

HISOFT

for the ZX Spectrum

Hisoft is pleased to announce a new compiler for this popular and effective systems programming language. Not a tiny-C but an extensive, easy-to-use implementation of the language. Allows direct execution of compiled statements. Supplied with function library. Available direct from Hisoft for £25, or write for further details.

All prices, UK delivered, relate to 48K ZX Spectrum versions. Our software is available for many other Z80 machines e.g. Amstrad CPC 464, MSX, Memotech, SHARP MZ700, New-Brain, CP/M etc. Please write for details.

HISOFT

ULTRAKIT £9.45

The most powerful toolkit yet for ZX BASIC. All the features you will ever need; AUTO insert, full RENUMBER, block DELETE, CLOCK, ALARM, error trapping, break trapping. Full TRACE with single-step and much, much more. Makes ZX BASIC easy-to-use and powerful.

DEVPAK £14

An excellent assembler, an advanced line-editor, a comprehensive disassembler and a superb 'front panel' debugger all in one package. Used by many leading software houses to write their games. "Buy it!" Adam Denning 1984.

PASCAL £25

A powerful and almost full implementation of Pascal - not a Tiny Pascal. A valuable educational and development tool, programs typically run 40 times faster than a BASIC equivalent. Spectrum version includes Turtle Graphics package. "I haven't seen any other compiler that could match Hisoft's Pascal"

O'LEVELS

not just revision but also tuition
for the Spectrum 48K

Mathematics

8 programs TOTAL 150K

Fractions, square roots, decimals, logarithms, areas, sets, accuracy, bases, interest, volumes, indices, standard form, modulo, number set, pie charts, histograms, simultaneous equations, bar charts, averages, probability, algebraic laws, quadratics, matrices, vectors, transformational geometry, trigonometry, differentiation, integration, factors, angles.

Physics

7 programs TOTAL 140K

Reflection, wavelength and frequency, refraction, lenses, the eye and its defects, diffraction, colour, magnetism, motors, Ohm's law, amps, volts, series, parallel, electronics, heat, gas laws, energy forms, specific heat, kinetic energy, half-lives, atomic structure, radiation, isotopes, Newton's laws.

Biology

6 programs TOTAL 120K

Plant and animal cells, genetics, inheritance, reproduction in man, asexual and sexual reproduction, flowering plants, photosynthesis, osmosis, transpiration, transport, bacteria food classes, diet, alimentary canal, respiration, excretion, eye, skin, nervous system, ecosystem, food cycles, fungi, earthworm, amphibians, birds, mammals, response.

Computer Studies

7 programs TOTAL 140K

Data collection, coding, storage, processing, presentation, validation, d.p. systems, privacy, security, hardware, I/O devices, software, low and high level languages, machine-code, assemblers, interpreters, compilers, errors in programming, aids to debugging, microcode, machine organisation.

Chemistry

8 programs TOTAL 150K

Matter states, action of heat and electricity, reaction with air, water, acids, alkalis, halogens, oxygen, sulphur, nitrogen, phosphorus, carbon, hydrogen, alkali metals, alkaline earth metals, transition metals, organic chemistry, atoms, formulae, molar mass, equations, ions, periodic table, bonding, gases, metal extraction, polymers, fertilizers.

French

8 programs TOTAL 160K

Regular and irregular verbs, reflexives, indicative, subjunctive, passive, infinitive, agreement, pronouns, definite, indefinite and partitive articles, singular and compound nouns, adjectives and their forms, adverb phrases, comparatives and superlatives, conjunctions, prepositions, idioms, measurements.

Electronics

8 programs TOTAL 150K

Energy and its sources, power distribution, e.m.f. p.d., charge, current power, r.m.s. values, resistors, series and parallel, capacitors, time constants, inductors, transformers, resonance, microphones, loudspeakers, heat and light sensitive devices, diodes, transistors, logic circuits, multivibrators, meters, CRO, amplifiers, feedback.

each subject only £12.95 inc p/p

Available Soon

English Language

8 programs TOTAL 160K

Composition, Narration, description, discursion, letterform, transaction, expression, emphasis, sentence construction, paragraph, punctuation, argument, awareness of context, idioms, inference, summarising.

German

8 programs TOTAL 160K

Strong, weak, reflexive and mixed verbs, singular and plural, indicative active and passive, subjunctives, imperatives, infinitives, accusative and dative, articles, nouns, pronouns, adjectives, adverbs, conjunctions, prepositions, numbers, time, quantity, idioms, word order.

Economics

8 programs TOTAL 180K

Price level forces, changes in output, employment and growth, revenue and expenditure, financial institutions, international trading, population and its structure, market forces, supply and demand, price formation, industrial location, scale and forms of enterprise, mixed economy.

LOGO, FORTH PASCAL & C

Teaching versions of these languages, including a full text editor (screen editor) and a 48 page tutorial manual. Saving and loading of programs is a screen editor function. Trace facilities are provided for easy tuition and debugging. Availability: Pascal now, C now, Logo soon, Forth soon.

1 program Each 30K

each language only £7.95 inc. p/p

Acclaimed the best football simulation game...

"...after using it for several days I had to write and congratulate you on a really excellent program." - A.M. (Middlesex)

"The program is addictive. Last night I spent from 11.00a.m. to 11.30p.m. taking Leeds to win the championship by 1 point." - I.B. (Shropshire)

"I must congratulate you on an outstanding game well worth every penny. Thank you." - S.S. (Essex)

"My son and grandson in Australia are delighted...a gem...neither of them have stopped playing it. Thanks for a great game." - N.G. (West Sussex)

"I thought I should write because of your excellent game." - Mr. McD. (W. Mide)

Note the following true-to-life features...

- Full 11-a-side match action
- On-screen commentary showing current score, name of player in possession, time played
- Scale 90-minute game
- Individual player skills
- Full 22-team League
- 42-match season
- League table and results on screen and printer
- Save season to date on tape
- Also form any league of 22 teams and pick your own players!

Screen Machine.

If you're a 48K Spectrum owner, PAINTPLUS and SCREEN MACHINE can transform your graphics expertise in seconds! Just take a look at some of the things that are possible with a little practice!

YES they were all produced on a ZX Spectrum with no modification and using PAINTPLUS and SCREEN MACHINE.

These two packages are incredible... PAINTPLUS is a complete upgrade of our previous program Print'n'Plotter Paintbox but with more than 24 new commands and facilities to give you every possible graphic tool.

Some of the new commands are BOX DRAW, ENLARGE TO EDIT, PAPER WASH MODE, UDG GRABBING FROM SCREEN, AUTOMATIC MULTIPLE SCREEN FILES AND UDG BANKS ORGANISER and PAINT ROUTINES IN 5 PATTERNS AVAILABLE IN BOTH NORMAL AND OVER MODE!

SCREEN MACHINE allows you to take the results from PAINTPLUS and manipulate to save memory, recolor, enlarge and reduce, flip and relocate etc.

There's even a complete compiler for text!

Both programs now come with a copy of our 100 page colour book: PRINT'N'PLOTTER PICTURE BOOK and of course a fantastic Demo on side two of the cassette.

Everything is completely Microdrive compatible and easy to transfer to cartridge.

So if you want to produce superb graphics on your 48K Spectrum and you want to do it simply... simply send for a copy of PAINTPLUS and SCREEN MACHINE today or ask at your local computer shop.

Now with 100 page
 Print'n'Plotter Picture Book
 Full of Hints, Tips,
 Programs, Instructions
 and Colour Illustrations!

FORMULA 1

Ayrton Senna

on Di...ver Special

Sinclair User and CRL are giving away 100 classic Formula One simulations as prizes in our Grand Prix competition

GET IN GEAR for the Grand Prix championship with a copy of **Formula One**, the classic motor-racing simulation from CRL.

Take your team to the top through a full, realistic season of racing. First you have to choose sponsors and assemble your team.

Then and you must allocate funds for developing and maintaining your cars. Each race is portrayed either in full or with highlights, with leader boards, information about crashes and blowouts, changing weather, and even the Goodyear balloon travelling sedately across the sky.

Formula One is tremendous fun played just against the computer, but you can play with up to five friends as well, for a real battle of tactics and quick thinking.

Formula One was one of the first games to receive Sinclair User Classic status, reserved for those programs which set new standards for software. CRL is offering 100 copies of this classic program to the winners of our competition; and if you have already bought the game, there's a special competition just for you; detailed on the page opposite.

Drivers' championship

1st	Senna	14pts
2nd	Prost	12pts
3rd	Lauda	10pts
4=	de Angelis	6pts
4=	Rosberg	6pts
6th	Mansell	4pts

Constructors' championship

1st	McClaren	22pts
2nd	Lotus	20pts
3rd	Williams	10pts

THE TABLES above show the results after two Grands Prix in a game of **Formula One**. The scoring system is as follows: nine points for a win, seven points for second place, four points for third, three points for fourth, two points for fifth and one point for sixth place.

Each team has two drivers, and those drivers' scores are added together to arrive at the totals in the constructors' championship. All six drivers above scored points in both races.

All you have to do is answer the following questions. You have one clue to help you, but that should be enough to work out the answers.

Alain Prost won the South African Grand Prix.

Who won the Brazilian Grand Prix, and what make of car came second?

Write the answers on a postcard together with your name, address and telephone number and send them to us at Formula One Competition, *Sinclair User*, Priory Court, 30-32 Farringdon Lane, London EC1R 3AU to arrive not later than June 21.

Grand Prix video cassette to be won

IF YOU already have a copy of **Formula One**, you can still win a worthwhile prize. CRL is offering a handsome VHS video-cassette entitled **Grand Prix of the Decade** to the champion player of the game.

If you have beaten **Formula One** at expert level, a screen will appear with results and a code at the bottom. Take a photograph of the frame with the code. You must also provide photographic evidence of the game year in which you achieved the feat.

Whoever manages to win the Constructors' Championship at expert level in the quickest time will win the video. In the event of several people achieving that, the names will go in to the hat.

Send your photographs to Code Competition, *Sinclair User*, Priory Court, 30-32 Farringdon Lane, London EC1R 3AU not later than June 21. Don't forget to include your name and address.

The competition will be judged by CRL. Employees of EMAP or CRL, their friends and associates, are not allowed to enter.

Announcing the MIRAGE MICRODRIVER

At the touch of a button you can transfer all your programs onto Microdrive cartridge.

At last the full potential and speed of the ZX Microdrives can be realised by all 48K Spectrum and Spectrum+ owners, for only £39.95.

Features:

- ★ Transfer any program onto Microdrive cartridge or cassette.
- ★ Freeze any game at any point, save it, and restore it later.
- ★ Use the "POKE" facility to give yourself infinite lives etc.

The Mirage Microdriver consists of a RAM PACK style case which simply plugs onto the rear of the ZX Interface 1. An expansion connector is provided for the connection of other peripherals. The software has been designed to be easy to use and is menu driven. It resides on a 4K ROM contained within the Microdriver so there is no fussing with tapes to get it to run. All you need to do is press the button on the side.

Note: This unit is intended for software owners to transfer their own programs onto microdrive cartridges for speed and ease of access. Programs saved using the Mirage Microdriver are unreadable unless the Microdriver is present.

How to Order

Send a cheque for £44.95, including £5 for postage and packing, to the address below, or use your Access or Visa card by telephoning (0736) 48321 to place your order immediately.

Please allow 28 days for delivery.

MOUNT CHALLENGE

The story so far:

48K SPECTRUM

Earth, 1987. A strange protrusion emerges from shark infested waters amidst a group of islands in the South Pacific. Nobody has yet reached this object, which is possessed by an evil force and guarded by deadly plants, murals, pigmen, chasing ghouls and yellow horned demons.

Prof. Burk arrives on the scene, resplendent in his newly invented space suit and jet pack able to withstand the forces emanating from the green and red blocks which cover the Mount. He intends to be first to the summit.

Woefully the jet pack cannot withstand all of the effects of the coloured blocks and therefore great care has to be taken when jumping from block to block, so as to ensure correct co-ordination of the ENERGY LEVEL (On/Off) with the coloured block being stood on.

Ignoring all advice against attempting his objective, the fearless mountaineer states, "people risked their lives to conquer Mount Everest, why not this challenge?"

Your mission is to help guide the determined Prof. Burk to the top of Mount Challenge (you'll need to draw a rough map as you go along). Good luck!

Expiry Date:

MY FRIENDS, I write with heavy heart and grim foreboding. As I rested at Samarrak, intending to visit its fabled market, a weary and travel-stained Royal Courier rode in, his horse well-nigh dead beneath him.

I knew him well — 'twas Argivven of Ashron and he bore the message of his comrade Robert the Woodward, Courier of Northern Eshak and the Marches. Grievous tidings indeed the letter contained, thus he wrote:

"Gordo, a sorry state the Ogre is in, O stout one! I have barely escaped with my life from that troll hole. Only with some nifty swordwork and a smokescreen spell I learnt from Ragnak the Wizard could I escape. Uginnuk has filled the place with more of his kind and human bones litter the bar and floor. As I rest here in the woods that border your inn to the east, I hurriedly put quill to parchment before any pursuit ensues . . . but I see lights approaching through the trees and my nostrils fill with the smell of troll — I must flee."

Woeful news indeed and worse than I had expected. More than ever it reinforces the old saying that the only good troll is a petrified troll! I curse Lord Janga by all the bones of Ithukk for dragging me away from home — what may have become of my strongbox? How shall I survive my old age?

As I wandered disconsolate around the market booths I met Moranna of Yel, an acquaintance of my youth. My spirits rose when she agreed to travel north on my behalf. With her were three mercenaries of Urtuun, Brothers of the Axe. These are fell warriors and the lady more dangerous still. So they rode off that afternoon — with their purses heavier each by forty gold pieces and my pockets the emptier.

At the long table of The Damaged Dragon that night, I began to feel calmer. Fortified by many tankards of ale I talked with the gathered company. A large group had come from the land of

Tir Na Nog and were bewildered by its intricacies.

Anstey of Galashiels could not escape the empty lands of Tir Falahm. I could give him no easy answer, as the only way is to make a full map of the area. There is indeed a door but it will only be found by careful exploration and mapping.

A Sidhe Hater of Mirfield had become trapped in the great library — again no exit could he find. He told me that he had found some scrolls therein — those contain the answer. One is in a strange tongue and can be ignored, but the other two appear to be jumbled letters, perhaps a code. Code indeed — the smaller of the scrolls reads F4 B3. By moving the first letter of the longer text four letters forward in the alphabet and the next letter three backwards — and so on — a message will appear. There may lie Sidhe Hater's answer.

Now a number of those lost souls, including Drakkar Christiansen of Hvidavic and Guald of Tunbridge, could not pass the searing fire of the guardian serpent in Ceardac Callum.

This foul snake will destroy anything which it can see so, naturally, to slide past requires powerful magic and invis-

Gordo receives a despairing letter and meets some weary travellers

bility. On your journeys it may well be that some of you have found the severed halves of a torc. Once joined together they will confer the power of invisibility. But beware — the cauldron you may discover beyond the serpent is an object of power and will nullify the torc's power. Seek the back door and an egg for an N.

The Viking of Hvidavic was pleased with that but pressed me further on the doors marked F and C. F is an exit from another place and will generally work only one way, whilst C can be opened by listening to the sound of the letter. Can you hear the waves? Beside them is usually sand. Seek some amongst mouldering books and scrolls.

Remember too you weary ones who seek the Crown of Cernos — stags need antlers not metal crowns. There are red herrings even in the Celtic afterworlds.

Further into the night the talk turned to the mystery of **System 15000**. Like others, Dave the Desperate and Maynard of Barford had had difficulty in using the services of Selcra. Again I say — to gain

information, seekers must write SELCRA followed by the name of the company they are interested in on the System's message board. Those agents of darkness will only reveal information about a very few firms and you should not expect unlimited assistance.

It seems that many more have broken the System's spell and I thank Egbert the Edbanger of Bristol and George Forsyth of Kingston for the advice they have given me.

As the drink flowed the boasting began. Bagger Kerr of 49 Newton Crescent, Dunblane, Perthshire rose to say he had completed the **Hobbit and Hampstead**. He will offer full help if you send him 50 pence for postage and paper costs.

Rambo the Rover of 56, Broadmark Road, Slough, Berkshire has a fair knowledge of **Eureka**. He requests payment for his answers so you should contact him to negotiate terms. Rambo provided the answer to Orcslayer's plea for help in blowing up the bridge safely. First type D, then attach the dynamite, then type V,S and use the dynamite.

Alex the Messenger of Solihull followed me out for a breath of air and confided he could not leave his hotel whilst hunting **Valkyrie 17**. The window will provide an exit but Alex must first move along the ledge, explore the other room there and read a book he will find therein. Descent and escape should then be easier — do not use the front door.

Rawle of Witham joined us outside so we held each other up and complained he could not impress Pippa as he strove for **Hampsteadness**. Cease this pointless effort and be direct — go GET her, lad!

So to bed but sleep I could not. My thoughts fell ever on the Ogre. Moranna may be trusted, though, and I must save my strength for the long road ahead. There are many things I must purchase at the market before I continue and so little time, so little time . . .

'Til next moon, riders of the roads, farewell.

Greatbelly

Gordo Greatbelly, Landlord — perhaps.

If you have a tale to tell, or are in need of a helping hand, write to the Landlord of the Dancing Ogre c/o Sinclair User, Priory Court, 30-32 Farringdon Lane, London EC1R 5BH.

Nice Password. Shame about the Identity.

It's a unique combination.

Your Special Identity Number and Personal Password. The valuable key to huge databases teeming with activity, set on our Mainframes across the nation.

On Micronet 800, you're a valued individual, adding your own special flavour and personality to the database.

Take our exciting new "Gallery" - You control your personal screens for all to see. The intriguing "Chatline" public conversation service gives you freedom to express your views and meet some remarkable people.

All part of a tremendous Communications section that networks you to 50,000 Micronet and Prestel users across the country. Try Tele-shopping, or interview celebrities live on "Celebrity Chatline" every Wednesday night.

And there's FREE (& instant) National Electronic Mail, plus International Telex, and the Contact and SwapShop bulletin boards.

Get computer news first on Micronet's daily (and controversial)

"Newsflashes" and read up on the latest reviews and courses. Feast from our regularly changing menu of programs to download straight into your micro - absolutely free.

You also get access to Educational Computing's "School Link" and Prestel's huge 300,000 page database, including world news, business & share bulletins and optional homebanking. For only £16.50 per quarter, that's less than the price of a daily paper!

Micronet is unique amongst networks and bulletin boards as it keeps your phone costs very low with

special local* rate calls whenever you connect up - that's around 40p for a whole hours entertainment each evening.

The only accessory you need is a Modem, to get the best value for money around in micro communications.

Fill in the coupon for the full facts and send to Micronet 800, 8 Herbal Hill, London EC1R 5EJ. But be warned, Micronet 800 is a 'living' service with ever-expanding features. So maybe you'd be better to call in at your local Micronet 800 Action Station. There are thousands of Micronetters waiting to meet you!

To: MICRONET 800, Durrant House, 8 Herbal Hill, London EC1R 5EJ. Telephone 01-278 3143.
Please send me the full facts about Micronet 800.

Directory of Dealers appears on page 127.

IF YOU are like me, it may take something more than an electric cattle prod to get you to a movie about little furry creatures, however lovable or terrifying they may be. That being the case, I approached **Gremlins** with trepidation, a large bucketful of salt and a lack of any knowledge of the story behind the title.

Gremlins

It came as a surprise to find that those wee beasts were every bit as fearsome as the meanest orc or ill-tempered dragon. They make East End football supporters look like choirboys.

The game comes from the Adventure International stables and is a text adventure with graphics. The plot probably makes more sense if you saw the film but in essence it is simple — which is more than can be said for the solution.

The all-American township of Kingston Falls is bedevilled by a plague of gremlins, furballs gone bad. Led by Stripe, arch-apostle of ultra-violence, they threaten to overwhelm the town and destroy civilisation as Ronald McDonald knows it. All in all, the classic transatlantic fear of the 'other'.

You take the part of Billy, hero of the film, and must do your darnedest to save the town and neutralise the evil hordes. Gizmo the Mogwai — I presume he is a good form of gremlin — will assist you once you manage to find him.

The game operates on the standard verb/noun format and has a fast and friendly interpreter. You may even get

free hints if you labour too long over a particular task — helpful if you are not over-familiar with aspects of day-to-day reality in the US.

Finding myself in a kitchen full of appliances I could not get any to work. After I had dithered for a while the computer suggested I 'press button'. Enlightenment came to me as I real-

Watching out for Gremlins

Richard Price finds something nasty in the blender and goes to El Dorado

ised that the Peltzer remote control I had picked up ran the kitchen as well as TV. Have you heard of a Peltzer? I always thought they were dogs.

The pictures in **Gremlins** are not only pretty; they interact with the play and will show you the actions you have carried out if they affect your visible environment. Some are even partially animated. Once I had discovered the joys of the Peltzer I was soon watching a gremlin whizzing around in the blender.

Time is important to the play and you will have to flash around town to avoid roving gremlins. Leisurely exploration is not on — so, besides the need to solve problems you must always keep one eye open. That adds considerably to the excitement and urgency of your task and gives a feel of ever-present danger.

That combination makes for a classy and tense game, well made and full of action. Despite being repeatedly killed by Stripe's hooligans I enjoyed **Gremlins** a lot. My only criticism is that £9.95 is a high price to pay.

El Dorado

Heading south of Kingston Falls and slipping back several centuries in time you could find yourself sweltering in the tropical jungles of the Amazon basin. Being a bold conquistador with,

I'm sorry to say, the rather juvenile name of Pisartis, you travel in search of the fabled gold of **El Dorado**.

Whilst you are slashing your way through the steaming veg you encounter the statue of the great Lord of the Sun, the god Inti. He orders you to find his golden helmet, hidden in a lost valley. Magnanimously he will let you keep any other gold you find.

El Dorado is a reasonably priced

text adventure with added graphics — those are pleasant and fast though purely decorative. The interpreter bears remarkable resemblances to the **Quill**, though I am prepared to be corrected if I am wrong — no credit was given. Whatever the case, input is in standard **Quill** format.

The game is atmospheric, descriptions are full and produce strong images to relate to. The ruined city in the valley comes to life, giving a proper sense of place. The writer is

clearly interested in the Inca period and has tried to keep within historical boundaries.

The game has about 75 locations and the action is linear — you overcome one problem at a time and then go on to the next. That is not to say the game is boring; I found the search compulsive when combined with the moody descriptions.

Add twisting jungle tracks which take you in circles and confuse your sense of direction, a few sticking points where you need to pay close attention to 'Help' information, claustrophobic tombs and subterranean passages where jaguars and pythons roam and you will find you are playing an entertaining, moderately difficult game which is real value for money.

In some ways I would rather have less locations in a game and more general detail — far too many games with 150 plus locations rely on one line descriptions and lose as a result. **El Dorado** costs less than the average night out at the pictures and will keep your brain working a lot longer. Not bad at all.

The Jewel of Power

Then there is **The Jewel of Power** from Slogger Software. At £9.50 this

is another expensive game but it's big and complex. The problems are extremely involved and I suspect it would keep even veteran players struggling.

The story line is not new and revolves around your search for the missing fragments of a magic staff which will lead you to the great jewel itself. The once happy land is full of sadness and desolation as a result of its disappearance. This is a standard plot in adventuring these days and most of you who have played such games regularly will not need to adjust too much to the game's environment and rules.

The game has 'dynamic' graphics — that is, they show you the results of some of your actions and, as in **Grem-lins**, are partially animated on occasions. They are strikingly primary in their colours and dominate the screen. Beneath them is the input and response area.

The game has a large vocabulary and the interpreter is sophisticated and advanced enough to notice words it does not understand as you are typing them in. That is a very friendly feature and one example of the level of skill and care put into the programming.

The 125 locations cover the range of magical and fairy tale settings. There are thick woods, troll-infested landscapes, deserts, castles, mazes and dungeons. Few of the many objects have obvious uses and I thought that the puzzles were of the quality you might expect from companies like Level 9. Even the objective of the game is hidden and must be searched for right at the beginning.

This is a high-powered, high quality expert's game and, given the amount of time it will take to solve, justifies the relatively high price. It is custom-built and other adventure programmers would do well to note some of its features. The theme is not my personal cup of tea but I'm sure it will appeal to many hardened players.

Malice in Wonderland

The **Quill** boom goes on and there are no less than four adventures written on it this month. The first, **Malice in Wonderland**, comes from Sentient Software who now market former Lumpsoft products including a Doctor Who adventure, **The Key to Time**, reviewed a while back.

The game sticks to TV and casts you loosely as Steed, from *The Avengers*. That series was renowned for its odd plots and Sentient has obliged by linking a detective-cum-spy story with bits of Alice.

Your aim is to uncover the murderer of a high ranking diplomat at the embassy of an unpronounceable Central European country. Since you do not speak the obscure tongue you are armed with a phrase book which can be used to interrogate the usual suspects — butler, chauffeur, mad chef and so on.

The embassy is curiously like the Queen of Heart's palace, with rose garden, maze, gardener and even a large rabbit burrow — which I still cannot get into, snarl, snarl. There are mirrors which seem to alter space and time and bizarre sporting objects — womballs — reminiscent of the queen's croquet balls.

The program uses the **Quill's** resources well and is friendly and responsive. There is a good dose of tongue-in-cheek humour too — type 'Wait' and you will be treated not only to a series of observations on the nature of time but also adverts for Lumpsoft.

That quirky approach lifts **Malice in Wonderland** well above run-of-the-mill Quilled games. You do not need to follow a single line of play either and can go off at chaotic tangents if you like. Good design, great quality, grand fun.

The other three Quilled games are part of a series from Sentient Software. Those are 'back to back' tapes and feature Spectrum and CBM64 versions on either side of the cassette. They are all pure text games.

Scoop

Scoop, as you might expect, turns you into the intrepid newshound in search of the story of a lifetime. Getting to be

for the 48K Spectrum

Bumper Packs

Business Bumper Pack

C.0415
£24.95

The best in the business! Written by businessmen for businessmen, Gemini's board of Directors contains three Chartered Accountants, and their accounting software brilliantly maximises the potential of the 48K Spectrum for commercial use.

Containing a professional standard manual, the Bumper Pack is in fact a COMPLETE CASH BOOK ACCOUNTING SYSTEM replacing ALL manual records, and is ideal for the cash based business. You can transfer all receipts and expenditure records to the computer, together with Bank Account, Petty Cash records, and all VAT transactions. The system also supports 90 nominal accounts! Summaries are then prepared by the 48K, listing all the information which would normally take hours of tedious manual bookkeeping... in a fraction of the time. Gemini's Cash Book Accounting System is even used by Chartered Accountants for incomplete records.

Having prepared these summaries, and a Trial Balance, the software then allows you to add details of year end adjustments, such as Depreciation, Bad Debts, Creditors and Debtors, and prepares a full Balance Sheet and Profit & Loss Account. It even produces COMPARATIVE figures, such as budgets or previous years' results, alongside the current year's figures, together with notes to the accounts.

Written to the same specification as Gemini's widely acclaimed Accounting Systems for the BBC Micro and the Commodore 64, this BUMPER PACK for the Spectrum 48K represents quite remarkable value for money, and could easily save its cost in the first week of use! Business decisions can be made more quickly and profitably, based upon accurate, up to the minute, computer data, and vital management information is available from your 48K at the touch of a key.

Profit & Loss A/C and Balance Sheet

Home Software Bumper Pack

Contains the following programs, all cleverly and excitingly written to follow up to leisure software to truly exploit the Micro's potential for ALL the family (including Mother!).

C.0417 £24.95

Database: The Gemini Database Management System is a program designed to enable the user to store all types of information in similar format to a card indexing system. The program will ask you for the headings under which you wish to store the information on a 'card', i.e. for a record collection database these might be 'Artist', 'Song', 'Composer', etc., or for example in a database set up for a deep freezer, 'Use by date', 'Value', 'Type of food', 'Shelf', etc.

Having set up your fields, you may then add, delete or change information on the 'cards' under the headings you have elected. Gemini databases contain other important and useful utilities as well, e.g. alphabetical and numerical sorting, numeric calculations, finding records that meet specific requirements, line printer routines, browsing facilities, etc. For example a list of all recordings by a particular composer, calculate total value of freezer contents, etc.

Mailist: Gemini's Mailist program will enable you to keep a record of names and addresses and then print, examine, sort and find them, all with special selection techniques, containing our exclusive 'SEARCHKEY' system, giving you the option of creating your own dedicated coding system for each name on file. For example, on most mailing list systems, you are only given the standard heading such as name, street, town, country, postcode etc. With the Gemini searchkey system, you could find, say, all names on the file that are companies having a turnover in excess of '50,000' or all names that are subscribers who are behind in their subscriptions or all names that are eligible for a Christmas card this year!

A full and useful range of routines is included in the menu, and the program allows you to set up your own format for printing labels, i.e. the tab settings you require and spaces between labels, etc. Multiple copies can also be printed.

Graph Plot: Provides an easily assimilated visual representation of numerical data.

For example monthly sales statistics comparing two year's results may be instantly converted into two side by side pie charts, histograms or graphs... for easier visual comparison and assimilation. It is particularly recommended where any kind of mathematical plotting facility is required.

"Independent Press Comments"

"Remarkable software, friendly and well designed, a pleasure to use."

— Gemini Cash Book, The Scotsman 12/8/83

"Will enable business people with a moderate grasp of accounting principles to produce a set of figures that will satisfy both the bank manager and the Tax man."

— Gemini Cash Book, Micro User, August 1983

Home Accounts: Designed as a complete Home Accounting package, this program allows the user to set up a budget for items of household expenditure and compare actual expenditure with budget. A running total of all surpluses and deficits is available both as digits, and in the form of a bar chart. A complete Bank account routine is included, together with suggested expenditure categories such as mortgage, rent, rates, telephone, gas, electricity, etc. However, these may be deleted or augmented without difficulty.

Available from:

Larger branches of Boots and W.H. Smith and most good software dealers... or phone Gemini for prompt despatch quoting your Access, Visa, or American Express card number. Telephone (0395) 265165. Alternatively make your cheque or Postal Order payable to Gemini Marketing Ltd., and send to Gemini Marketing Ltd., 18a Littleham Road, Exmouth, Devon EX8 2QG.

continued from page 113

a legend in your own lunchtime means a lot of effort and a fair dose of trouble to boot.

You start by being roused by the shrill tones of your alarm and have to work your way through the day as you might in real life. Stagger out of bed, hunt for clean clothes, get washed, get breakfast, try to ignore the kids. Problems, problems . . . even your trusty, rusty old Anglia won't start.

Forget to wash and your better half will observe cuttingly that you smell rather high today. Get to the office and your boss is really unhelpful. Editors are like that, you know (I don't mean it Bill, honest . . .)

The game has a good kitchen-sink feel with plenty of unglamorous real-life stress and pressure. The interpreter could have been friendlier and more responsive to 'Exam' queries and it would have been nice to see less of 'You can't do that' on screen. I felt that was the case with all three programs.

The Crystal Frog

The other games are **The Crystal Frog** and **The Amulet**. The first is set

in a familiar magical world and you must seek out the priceless carved gem of the title. Eerie castles, stalking murderers and enraged animals will dog your tracks and the atmosphere is enhanced by effective descriptions and an attention to detail.

The Amulet

The Amulet was disappointing — the plot was very similar to Level 9's **Lords of Time** with seven time zones to be journeyed through in the search for the fragments of the Time Lord's amulet. That invited comparison, though, to be fair, **The Amulet** is only a third of the price of the Level 9 program.

Travel across the zones is random so planning can be quite tough. I also found that I was getting bumped off too often and for precious little reason.

In the medieval section, already protected by a shield, I picked up a sword only to be immediately offed by an irate Norman. Although I was armed I was given no chance to fight or flee — that sort of event did not endear me to the game, especially as the same sort of thing kept happening elsewhere.

Two out of three is not bad though and once again the programs are budget-priced so they are easy on the pocket.

POOLSWINNER

THE ULTIMATE POOLS PREDICTION PROGRAM

- **MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available - 22000 matches over 10 years. The database updates automatically as results come in.
- **PREDICTS** Not just SCOREDRAWS, but ALWAYS, HOMES and NO SCORES.
- **SUCCESSFUL** SELEC guarantee that Poolswinner performs significantly better than chance.
- **ADAPTABLE** Probabilities are given on every fixture - choose as many selections as you need for your bet. The precise prediction formula can be set by the user - you can develop and test your own unique method.
- **SIMPLE DATA ENTRY** All English and Scottish team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).
- **DISC/MICRODRIVE COMPATIBLE** All versions (except Apple and IBM) are supplied on tape, with simple instructions for conversion to disc/microdrive operation.

(This seasons results are supplied with the package so that predictions can start immediately.)

AVAILABLE FOR Spectrum (48K), Commodore 64, VIC 20 (+16K), AMSTRAD CPC 464, BBC B, Atari (48K), ZX81 (16K), Dragon, Apple II, IBM pc, ELECTRON

PRICE £15.00 (all inclusive)

Boxed, with detailed instruction booklet

FIXGEN 84/5

AT LAST! No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish fixtures for 1984/5. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner.

POOLSWINNER with FIXGEN £16.50 (all inclusive)

Fixgen alone £5.50 (yearly updates available)

COURSEWINNER v3
THE PUNTERS COMPUTER PROGRAM

Coursewinner is designed to allow you to develop and test your own unique winning system. Using information from daily newspapers or 'Sporting Life', the most important factors can be input and analysed. The program is supplied with a database detailing best trainers and jockeys, and effect of the draw for all British courses. (Flat & National Hunt.)

AVAILABLE FOR Spectrum (48K), Commodore 64, BBC (B), AMSTRAD CPC 464, Atari (48K), Apple II

BETA BASIC 1.8

ENHANCED BASIC FOR SPECTRUM 48K
FOR GRAPHICS - STRUCTURED PROGRAMMING
- DATA HANDLING

Release 1.8 is more powerful than ever! We don't have space to do this program justice - if you can't believe the ad, send us a large S.A.E. for further information.

Features: Commands are single-entry keywords in graphics mode. Syntax is checked on entry. Fully compatible with Spectrum Basic. Microdrive compatible. Comprehensive manual.

NOTE: Release 1.0 is still available for 16/48K Spectrum at £11.00.

ALTER screen colours (general or specific)
AUTO line numbering
BREAK out of code loops
CLOCK digital clock
CURSOR CONTROL CODES allow strings to have complex shapes
DEF KEY user definable keys
DELETE a block of lines
DO-LOOP structure
DPOKE double poke
EDIT specified line
ELSE used with IF... THEN
EXIT leave DO-LOOP

FILL enclosed area with specified ink or paper
GET wait for keypress
JOIN two program lines
KEYIN a string
KEYWORDS new keywords on/off
LISTALIST line TO line
USED used with GOTO, GOSUB
ON ERROR trap errors
ON LINE, STAT and ERROR
PLOT a string (may contain cursor control codes)
POKE a string
POP Basic's stack
PROC, DEF PROC, END PROC (for named procedures)

RENUM versatile renumber
ROLL all or part of screen in any direction by specified number of pixels, with or without attributes
SCROLL like ROLL, but without wrap round
SORT arrays (very fast!)
SPLIT program lines
TRACE program execution
UNTIL used with DO or LOOP
USING used with PRINT
WHILE used with DO or LOOP
XOS, YOS move PLOT origin
XRG, YRG change PLOT scale

FUNCTIONS

AND (bit-by-bit)
BINE decimal to binary
CHARS number to 2 characters
COSE fast cosine
DEC hexadecimal to decimal
DPEEK double PEEK
FILL fill area

HEX decimal to hexadecimal
INSTR string search
MEM free memory
MEMORY all of memory as a string
MOD modules
NUMBER 2 characters to number
OR (bit-by-bit)

RND fast RND
SCRN recognises user graphics
SINE fast sine
STRUNG repeats strings
TIMES current time
USING formats numbers
XOR (bit-by-bit)

Only £11.00 inclusive! (Upgrade price for Release 1.0 owners is £4.00. This includes a 12-page supplement to your manual. Please quote date of purchase. If you did not purchase from us, state supplier and return original cassette.)

Please send me:

Beta Basic, Release 1.8. Payment of £11.00 is enclosed.
(or £11.50 for foreign orders). Cheques payable to BETASOFT.

I don't believe it! Please send me full details of Beta Basic 1.8. I enclose a stamped addressed envelope.

IT'S 1985 — THE YEAR OF COMMUNICATIONS

Why buy programmes for your Spectrum when a world of free 'telesoftware' is open to you. Discover Prestel, Micronet 800, Viewfax, bulletin boards and open a whole new world. Even user to user.

Everybody's doing it — linking their home computers to giant mainframes and networking to thousands of other micro users via the phone and a modem.

A whole new world of mainframe games, electronic mail, free 'telesoftware', electronic notice boards, real time conversation, armchair shopping and home-banking will be at your fingertips! And at local and cheap rate, phone charges are only around 40p for a whole hour's entertainment.

Spectrum 16k, 48k, Spectrum + The VTX 5000 Modem comes complete with all the software (in ROM) required to access the world of electronic communications, networks, telesoftware and databases (both public and private.)

(User to user software on cassette £3.95 extra)

Terminal Emulation Software Package to link to commercial databases and bulletin boards which use ASCII format on cassette £6.95.

The VTX 5000 requires no external power and fits under your Spectrum to become part of the machine. Only one lead links your computer to the outside world.

FOR THE SPECTRUM 16K, 48K AND SPECTRUM + THE VTX 5000 IS AVAILABLE AT A VERY SPECIAL PRICE

£49.95 inclusive of VAT and P&P for a limited period only.

SPECIAL, SPECIAL OFFER

Order your VTX 5000 NOW and get a FREE quarter's subscription to Micronet 800 and Viewfax.

All modems provide 1200/75 baud, enabling access to Prestel, Micronet 800, BT Gold, Farmlink, Citiservices, Homelink, and some free bulletin boards (some databases and networks require a small subscription). Fully BT Approved.

Simply clip the coupon and send it with a cheque (payable to Modem House) to:

BACK IN TOWN FOR A GREAT NEW SHOW!

MICROFAIR

NEW HORTICULTURAL HALL
 Saturday 22nd June 1985 10am - 6pm
 Greycoat Street/Elverson Street
 (junction) London SW1
 Admission: \$1.50 (Adults)
 \$1.00 (Kids under 14 yrs)

If you have a Sinclair Computer this is the show you can't afford to miss!

The great day is June 22nd.

One day you won't forget if you own or use a Sinclair Computer.

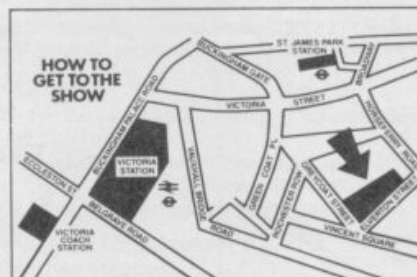

The Microfair is back in town.

See everything that's new and original for The Spectrum, Spectrum+ and the fantastic QL.

If it's just launched you'll find it at the MICROFAIR. If you want advice you can talk face to face with the manufacturers. If you can't find it in the shops you'll probably find it at the MICROFAIR.

It's the user-friendly show that has out-last-ed all the rest because everyone enjoys themselves . . . and you can always find a bargain!

Why not send today for cut-price advanced tickets.

Underground: Nearest stations are Victoria, and St James's Park.

British Rail: Victoria Station.

Bus Routes: 11, 24, 29, 70, 76 and Red Arrow 507.

Road: Signposted (RAC AA) Horticultural Halls.

POST TODAY

Send to Mike Johnston (Organiser), Dept SU, ZX Microfairs, 71 Park Lane, London N17 0HG.

Please send me Advance Tickets (Adult) @ £1.25

Please send me Advance Tickets (Child under 14) @ 80p.

(Prices at the door are £1.50 and £1.00)

Talking with Lisp

FOR THOSE of you who think that Lisp has certain oral connotations then *Lisp* — *The Language of Artificial Intelligence*, by Dr A A Berk, will be a re-education.

The book gives a general grounding in the language structure of Lisp and provides information on how it can be used to simulate artificial intelligence in any microcomputer.

The introduction to AI at

the beginning of the book is sparse and to the point. It starts with a definition of AI, describing it within the context of machine intelligence, and that hoary old computer chestnut, the Turing test of machine AI. A general description of Lisp is then given showing how its simple language constructs are flexible enough for the programming of AI applications, such as the

construction of coherent responses to user input and the manipulation of data to produce new output, or results.

The central section of the book is a list of the function types which can be used with Lisp and an explanation of how to use those to build your own functions.

You will find that in some ways Lisp's structure is similar to that of Forth. You can build several program routines — called functions — which can then be used in other function routines. You can even allow functions to call themselves into action. That is called recursion and, because of its importance to the usage of the language, has been allocated a long section towards the end of the book.

Finally, Dr Berk deals with the advanced features of the language and those which you can build into it. Some of those may not be available on your version of Lisp but the language should be so flexible, and easy enough to understand, that you should have no trouble in making your definitions of some of them.

An appendix at the back gives a list of standard Lisp functions so you can see just how your version of the language matches the original specification.

Dr Berk, or the publisher of the book, has made one error. Little information is given as to the origins of Lisp which was developed in the Sixties and has since been adapted to fit the needs of investigators into AI.

Despite that oversight, the book is a first-class tutorial on the subject and will be of use to anybody in language other than Basic, or in AI.

John Gilbert

Publisher Century

Publisher Collins
Price £9.95 (paperback)

The last word in Basic

IT WAS with a sense of déjà vu that we picked up the *Century Computer Programming Course for the Spectrum*.

We have reviewed the course before but this book edited by Professor Peter Morse and Brian Hancock, is a revised version of 544 pages. There are eight pages of contents which show that the book is split up into Basic programming, advanced Basic programming, and a series of applications programs, all of which are neatly explained using flowcharts and words.

For all its size the book only refers to Basic, so if you want to learn about machine code programming on the Spectrum then you should look elsewhere. That said the book contains just about everything you are ever likely to want to know about Basic structure and its usage. The editors have even included sections on different types of sort and search methods and one of the most understandable explanations of Spectrum graphics and screen displays ever to be published.

The two sections which really catch the eye are Memory Organisation and The Microdrive. The former gives a thorough explanation of how Basic programs are stored and manipu-

lated in memory.

The section on microdrives gives a simple explanation of how they work with Interface One using examples every step of the way. As well as all the explanations of its usage full documentation on both microdrives and Interface One is included.

The book's style is lucid, although not particularly sparkling, and there are enough programs to break up the text into manageable chunks.

John Gilbert

The computer book book

THE LATEST issue of *Computing in Print* has just been published. Its publisher, Neat Quest, describes it as 'an up-to-date computer bibliography' and contains 2200 entries across a broad range of subjects.

There are 19 sections in all, listing books on such subjects as languages, computer awareness, business, robotics and engineering. Book entries include the title, author, price, and the international book code, ISBN, should you ever want to order it.

Each entry takes a classification of the type of reader suited to the book, from beginners to A level

students, into account.

The information contained within the bibliography is up-to-date but, of course, only at the time of going to press. It is, therefore, not a complete list of books and if you want a text on a fairly esoteric subject you would be better off going to a book shop with a microfiche film reference machine.

Explore the world of Sinclair

Sinclair User, the monthly magazine, will ensure that all ZX81, Spectrum and QL users get the most from their computers.

Every month we include exciting games programs, reviews on the latest software, bench tests on hardware and peripherals, as well as technical advice and development news on Sinclair products.

Sinclair User interviews key people within Sinclair Research, authors of top selling games plus regular features on the developments in the fast moving computer industry.

We cover all aspects of Sinclair, for beginners to enthusiasts right through to business users — Sinclair User will keep you informed. So, don't miss out — place an order with your newsagent or complete and return the coupon below and we will ensure that your personal monthly issue is sent to you direct.

Please send me SINCLAIR USER each month for the next twelve months. I enclose a cheque/PO to the value of £15.00 (UK rate including p&pi). For overseas rate please contact Subscriptions Department.

LAST MONTH we discussed the entry of information into the computer using a format which the machine would recognise without difficulty. We then built a routine which would give instructions to the computer using a keyword system similar to that which the Spectrum Plus uses.

This month we continue the line of enquiry with a look at how we can enter full English sentences to describe what we want to do and who we want to talk to within our adventure scenario.

We will continue to use the example adventure built throughout the series in which a group of scientists, Kagan and Marla, have been looking for a clock, which controls time in the universe, stolen from their research laboratory.

They have entered an underground kingdom by way of a space warp and have been taken to the leader of the city of Carvad. Making an escape they have been captured and now face an audience with the ruler and thief of the Crysan time clock.

Our heroes have a choice. They can either try to escape snatching the clock from behind the ruler's throne, or they can try to reason with the ruler.

Sentenced to life in adventure

John Gilbert shows how to program routines to decode English into adventurespeak

Roughly translated into adventure speak those actions are GO, TAKE AND GO, and SAY TO. We will take each option in turn and discuss how they can be implemented within the adventure. First, however, we will take a look at how the structure of the game is affected.

Last month I said that the adventure could treat input in two ways. A large database could contain all the words which would be required throughout the game, thus making it easier to manipulate scenarios, or a word base could be built into each

scene. The latter is the most flexible in an AI adventure as you can tailor actions to a specific scenario. Unfortunately you will use more RAM space than the former method but, using machine or compiled code, that should not pose a problem.

In Basic and QL SuperBasic we will use the concatenation function TO to splice the input and examine strings. If we are looking at full English sentences we need to be able to pick out the salient instruction words. For instance, the player may type in 'Please go to the north'. We do not need all of that and we use the concept of Limited Event Patterns discussed in an earlier article to find the meaningful words.

Our example adventure will have three functions built in because that is all we need. They are GO, TAKE and SAY TO. There is a limit on the number of ways which you can say these things, TAKE may also be GET, SNATCH, PURLOIN. Because the responses of a player are limited to words which will get the job done — simple words — few people will use SNATCH or PURLOIN. If they do, the computer will inform them that it cannot understand the

continued on page 122

Adventure Programming

continued from page 121

sentence, in the way that **The Hobbit** does. In that way you are down to the words TAKE and GET.

In a similar way the points of the compass, up, down, left and right are all that is necessary for movement. The sentence above, 'Please go to the north', can therefore be pared down to 'Go north'.

The hard work begins. For the GO command you need a routine which will look at input to see if it is GO, find out which direction and see if there are any more directions.

Such a formula would enable the player to type in as a command 'Go to the north and then go east'. The work has been done for you as part of the listing but not for GO, as movement was dealt with in an earlier article. SAY TO is, however, illustrated.

In order to demonstrate the different techniques used for the three command-types I will show them in a form of phrase notation. For example, the GO type of instruction would be:

GO (... NORTH ...) (... AND ...) (... EAST ...)

The GO instruction is the main phrase, and the one you should look for first within an instruction. If it is not there then you should go on to look for another instruction-type. If it is, then you look for the first phrase which is a direction. Then check to see if there is an AND phrase after the first direction. If so there must be another direction phrase.

Translated into programming practice the computer must first look for the GO substring within the instruction using a string search routine, such as that in the listing. If it finds GO then it should GOTO a subroutine for GO, such as the one shown last month, which will then use the string search routine again to find which directions it should deal with next and whether they are legal. Once found and verified they can be executed and the next instruction entered.

The GET instruction acts in a similar way:

GET (... CRYSTAL CLOCK ...) (AND) (... TORCH ...)

If the main instruction is found then its sub-phrases are looked for and executed. In the above case, consisting of one main phrase and three sub-phrases, the clock and the torch would be collected by the player.

The fundamental part of the program is the string search routine. It can be called to find the main instruction and

its sub-phrases.

At first sight, the SAY TO instruction may seem to pose a problem. It does not, but it takes a bit longer to handle. To begin with you must think of the instruction in terms of three separate sections. First there is the main command and that can be dealt with using the same search routine as GO and GET. The computer then moves to the SAY TO subroutine where the rest of the instruction is deciphered.

The name of the character to whom you want to speak follows the main instruction. At that point the computer checks to see if that character is around and whether it can, or wants to, speak. If it does not, a message to that effect is printed and a return is made to the instruction entry routine.

If the character is willing to speak the next part of the instruction is decoded. It will probably be an instruction or a question. Again the string search routine will come in for some heavy use but the string within quotation marks can be treated as just another instruction. It is as simple as that and the instruction could be represented as:

SAY TO (... ALIEN ...) (... "GIVE ME THE CLOCK" ...)

That type of instruction is demonstrated in the listing.

Some players will want to type multi-clause instructions. There is no problem. All you have to do is build into the program a series of IF statements in the main loop which will execute your instructions one at a time. For instance, imagine the instruction GO EAST AND NORTH. GET THE ROPE AND SAY TO ALIEN "GIVE ME THE CLOCK".

You need to make the computer recognise the full stop as the terminator of an instruction. The computer executes a particular instruction type until it arrives at the full stop when it again looks for the type of instruction to be found in the part of the line.

While the full stop can be used to terminate a clause, the word AND can be used to join two actions together in one clause, as in GO EAST AND NORTH, or it can be used to join two clauses together, as in GET THE ROPE AND SAY TO ALIEN ...

To get the computer to recognise the two uses of AND you can use IF statements in the main loop. The computer will execute the first command, find an AND, use IF to determine the type of AND it is, then

either use the last command-type issued, or decode what follows AND as a new clause.

The program in the listing shows how instructions are decoded. It is an example of a SAY TO instruction during the audience with the ruler of Carvad. The REM instructions explain the Basic coding.

The ruler is not very talkative so it would be best after asking him where the clock is to TAKE it and help Kagan and Marla escape.

Next month, in the final part of this series, we take all the routines so far illustrated and show how they can be cemented together using an adventure master plan. Be ready to type in a lengthy listing, and learn the ultimate fate of Kagan and Marla.

COMCON

Programmable Joystick Interface for the Spectrum

Simple and fast programming: Plug the six function connectors into the required Spectrum key positions - Ready!

Supports joysticks with two independent fire actions: Photon Blasters and Neutron Bombs at the touch of your fingertips.

Extension port for combined use of peripherals.

Compatible with all Atari-type joysticks including Quickshot II (without rapid fire action).

Interface operates joystick parallel to keyboard. Joystick action compatible with any add-ons including microdrives.

Select key functions anytime - even when the game is already loaded.

£19.95
incl. VAT and P & P

NEW COMCON TWIN JOYSTICK INTERFACE

Two port version allows connection of two joysticks for sequential two player games using same key positions (non-independent!)

Andrew Hewson demonstrates a routine to provide functions at a stroke

Discovering the key to complex commands

OCCASIONALLY I receive a letter which appears to present an impossible challenge but on closer inspection yields a satisfactory answer. An example is this request from John Whitehead of Aylesbury: I note that some home computers, including the BBC, have so-called function keys on the keyboard. What are they and can I have some on my Spectrum?

I decided that I could answer John's first question but I was not at all sure that he could have function keys on his Spectrum, at least not without buying some special hardware. However, I showed the letter to a colleague, Keith Prosser, and he came up with a function key routine.

As the routine builds on some of the material which I have been writing about recently — in particular, it makes use of interrupt mode 2 which I wrote about last month — I knew that it would make first class material for this column.

So what are function keys? Well, put very briefly they are keys which can be defined to generate an entire string from a single press of a key. The string could be a command or group of commands so that your computer could, in principle, be directed to execute a complete sequence of commands from a single key press. For example, you might wish to execute the following command group every time you pressed the '1' key:

PAPER 7: INK 0: BRIGHT 0: FLASH 0

The BBC has 10 special keys, each of which can be defined in this way. Of course, the Spectrum has no special keys and so it is not possible to obtain a function key effect at a single keystroke.

The routine which Keith wrote simulates the desired effect by requiring the user to press SYMBOL SHIFT and SPACE at the same time — a combination which is not normally defined on the Spectrum — before the "function" key. Thus SYMBOL SHIFT and SPACE followed by 1

could be used to call up the PAPER/INK/BRIGHT/FLASH string suggested above.

Before describing Keith's routine in detail some recapping is in order.

Spectrum interrupts

The Spectrum normally operates in interrupt mode 1 and in this mode an external interrupt forces the Z80 microprocessor to stop what it is doing, save the register contents and jump to location 56 and execute the code

stored at that point.

The Spectrum hardware generates an interrupt 50 times every second and the main function of the routine at address 56 in the Spectrum ROM is to update the FRAMES system variable and scan the keyboard to see if a key has been pressed.

The Spectrum owner can take control of the interrupt system by setting interrupt mode 2. In that mode an external interrupt forces an indirect jump — a jump to an address deter-

Table 1. A Spectrum machine code routine to enable a key to be defined as a function key provided SYMBOL SHIFT and SPACE precedes the required keystroke.

mined by the contents of a location which has previously been set by the user. The machine will then execute the code installed by the user at that address, and providing it is terminated by a jump to the ROM interrupt routine, all will be well.

Scanning the keyboard

The Spectrum ROM interrupt service routine sets bit 5 of the flags system variable at address 23611 to indicate that a key has been pressed. The code of the key being pressed is stored in the LASTK system variable at 23560. It is a simple matter for the user to pick up a keystroke by monitoring the status of bit 5 of flags. It is of course important to clear the bit after a keystroke has been accepted.

Printing on screen

The function key routine makes ex-

tensive use of the ROM routine at address 16 — 10 hex — for PRINTing characters on the screen. The routine is entered with the code — as listed in the Spectrum Manual, appendix 1 — of the character to be PRINTed stored in the A register. The AF register pair is corrupted by this routine but all other registers are preserved. The routine is best called using the special RST 16 — RST 10 hex — instruction.

There is another ROM routine, at address 5633 — 1601 hex — which should normally also be used when PRINTing. The routine behaves as a sort of OPEN command except it is used from machine code. It directs subsequent PRINTing to the required location. Call that routine with the A register containing the number of the channel required, channel one being the lower part of the screen, channel two being the upper part of the screen

```
10 FOR I = 65279 TO 65535
20 INPUT J
30 POKE I,J
40 PRINT I,J
50 NEXT I
```

Table 2. A simple decimal loader for POKEing decimal numbers into high memory.

and channel three being the ZX printer. All registers are corrupted by this routine.

Now for the function key routine itself. The routine is listed in table one and can be entered either using an assembler or POKEd into place using the simple decimal loader listed in table two. The routine is designed to reside close to the top of memory starting at address 65279. The space above the routine is used to store the command definitions, and so on, to be attached to the keys required. The Basic editor in table three can be used to create these definitions.

Interrupt mode 2

The routine is entered at address 65442, equivalent to the 'go' label close to the end of the listing in table one. The opening subroutine loads the I register with the value 254 and sets interrupt mode 2. The number 254 placed in the I register, when combined with the 255 which is supplied automatically by the Spectrum hardware, forms the location from which the starting address of the new interrupt service routine is to be taken. Thus the location inspected is

$$254 * 256 + 255 = 65279$$

That address is right at the beginning of the main routine and it points in turn to the required entry point two bytes later at address 65281.

Thus the effect of the 'go' subroutine and the data stored in locations 65279 and 65280 is to cause all subsequent interrupts to force a jump to location 65281 — to the beginning of the new interrupt service routine.

Detecting a keystroke

The first thing the new routine at 65281 does is to check if bit 5 of flags has been set, indicating that a keystroke was detected on the previous interrupt cycle. If the bit is not set, a key has not been pressed so that there is no point in doing any more work. Hence the routine jumps immediately to address 57 at the beginning of the ordinary ROM interrupt service routine so that normal keyboard scanning can take place as usual.

continued from page 125

If the bit is set the next task is to determine if that indicates a normal keystroke or whether it is a special message from 'ourselves'. The latter occurs when the routine is part way through putting a function key string on the screen. The routine determines which is the case by inspecting the special internal variable called 'flag' which is stored at the end of the routine. If 'flag' contains two then a string is being PRINTed and the routine jumps to 'instr' to carry on the job.

If 'flag' equals one that indicates that SYMBOL SHIFT and SPACE were pressed at the same time so that the next keystroke must be interpreted as a function key. When that occurs a flashing 'F' is PRINTed and the routine reverts to interrupt mode 1 to avoid any confusion and waits for the next keystroke to occur.

When the next keystroke occurs the list of definitions is scanned for the chosen key and the 'ptr' and 'flag' variables are set appropriately. If the key selected has no definition attached to it some tidying up takes place.

Table 3. A Basic program to create the keystroke definitions required by the machine code routine listed in table 1.

Defining strings

The address of the key definitions is stored in the 'defs' variable. That in turn points to address 65247 so that there are 79 bytes beneath the top of memory in which key definitions can be stored.

The definitions are stored in the form:

first byte : key defined

bytes 2 to n : the characters required

byte n + 1 : zero

The entire list of definitions is also terminated by an additional zero.

The Basic program in table three will allow you to experiment with definitions of your own function keys. You save the machine code in a file called 'code1' and save the Basic program using line 300.

On running the program you will be prompted to press the key which you wish to define as a function key and the string which you wish to call up. You are not allowed to use SPACE as a function key because it is taken as an indication that you wish to stop adding key definitions.

FAST REPAIRS AND MORE REPAIRS

First company in all UK, to introduce while-u-wait service. Now first to offer an international repair service.

I have come across a firm that will be more than willing to advise you as to how to remedy your problem. They are called MANCOMP, and as well as repairing faulty Spectrums, are also quite willing to discuss your problems with you, and offer reasonably cheap, and (more importantly) correct cures.

PHIL ROGERS 'Peek & Poke'
"POPULAR COMPUTING WEEKLY"
January 1985 (Vol IV No 1).

"Prompt...
reasonably priced...
delighted".
C. TOWNEND
(KEIGHLEY)

"Thanks for your
speedy service".
I. J. TONKS
(PRESTON)

"Your service still
remains first class".
J. BOURNE
(BEXHILL-ON-SEA)

"I only posted it on
Tuesday and received
it back on Thursday...
two days later!
I've never
had such service".
K. I. CAIRNS
(LEEDS)

"Thank you for your
excellent service".
A. WALLACE
(BEDDINGTON)

"Excellent and quick".
B. P. ANDERTON
(MAIDSTONE)

"Fast service...
not too pricey!".
J. TANT
(WORKINGHAM)
