Free ZX-81, Spectrum and Vic flexidisc games

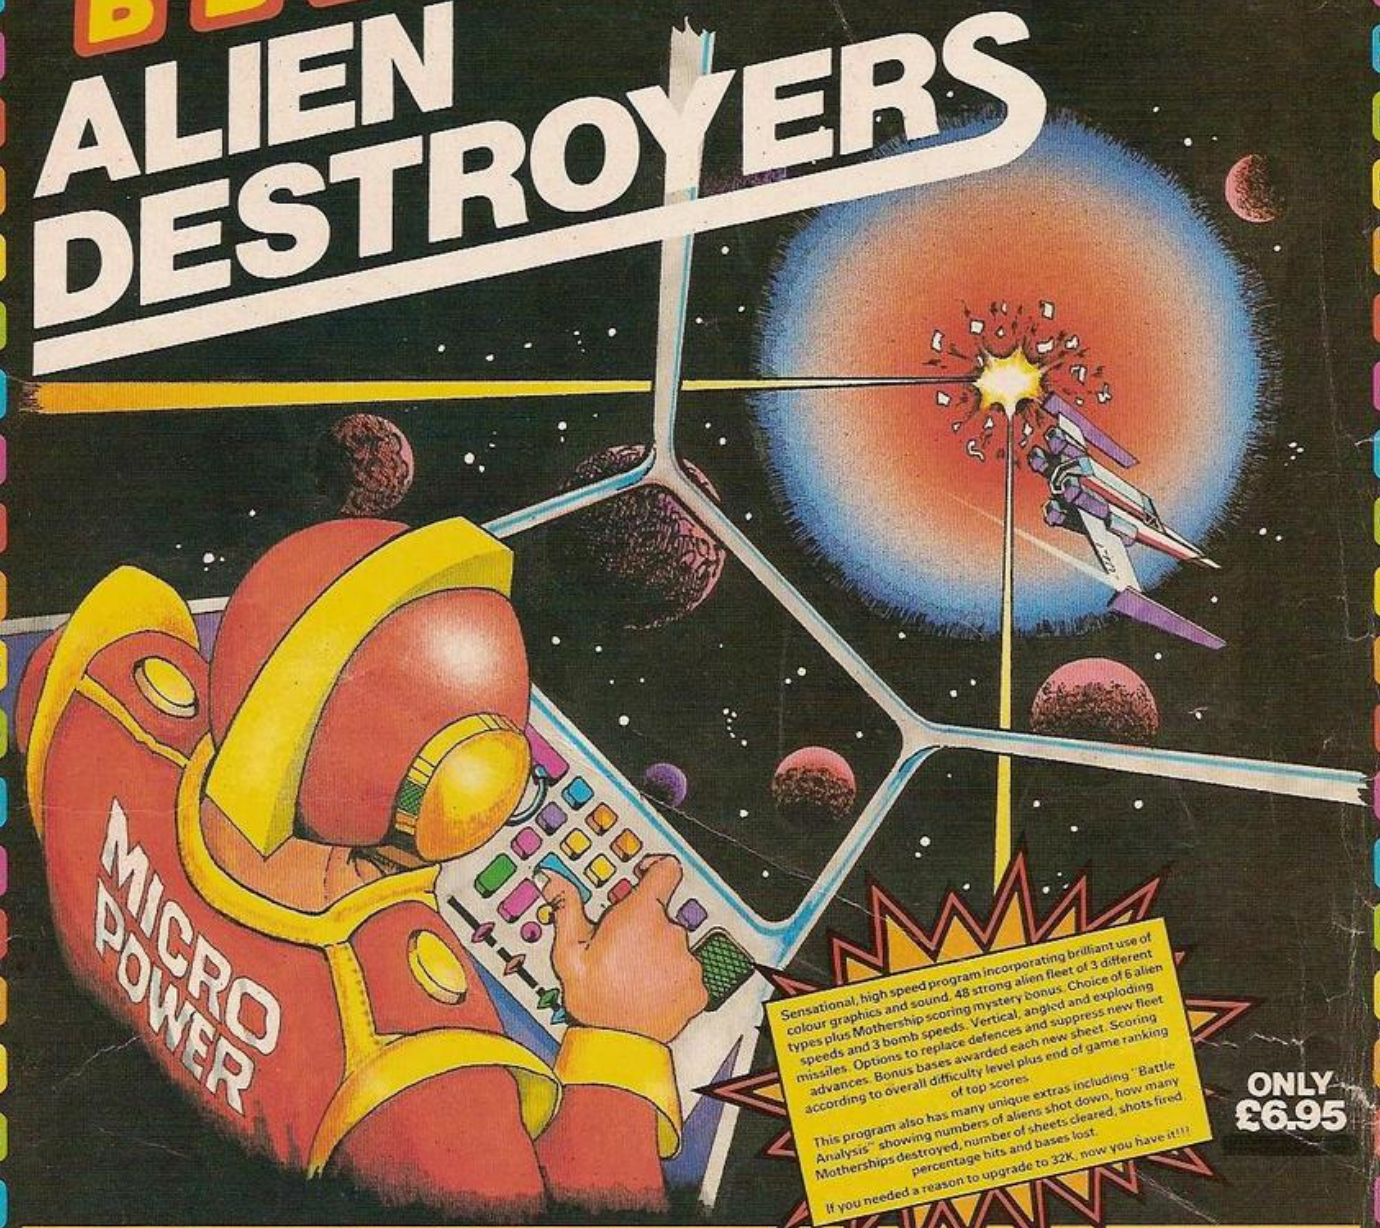

Inside: top-flight Atari, Atom, BBC, Dragon, MZ-80K, Vic, Spectrum and ZX-81 games

Win an Atari

PROGRAMPOWERMICROPOWER

NEW-DEVASTATING MODEL B (or 32K MODEL A) GAME FROM BRITAINS LEADING SOFTWARE HOUSE!

BBC ALIEN DESTROYERS

Sensational, high speed program incorporating brilliant use of colour graphics and sound. 48 strong alien fleet of 3 different types plus Mothership scoring mystery bonus. Choice of 6 alien speeds and 3 bomb speeds. Vertical, angled and exploding missiles. Options to replace defences and suppress new fleet advances. Bonus bases awarded each new sheet. Scoring according to overall difficulty level plus end of game ranking of top scores.

This program also has many unique extras including "Battle Analysis" showing numbers of aliens shot down, how many Motherships destroyed, number of sheets cleared, shots fired percentage hits and bases lost.

If you needed a reason to upgrade to 32K, now you have it!!!

ONLY £6.95

OTHER BBC PROGRAMS

MODEL A or B

CHESS (32K). Our excellent machine code program—now with superb MODE 1 graphics. Six skill levels, play back or white, illegal moves rejected, 'en passant', castling, 'take-back' of moves, and display of player's cumulative move time. Options include Blitz Chess, where you must move in 10 seconds, set-up of positions for analysis, replay of a game just played and saving of part completed game on tape. On loading a 1972 Spassky/Fisher game can be replayed. £6.95. Model A version still only £4.95. Graphics Upgrade exchange. £2.50.

ADVENTURE. All the excitement, intrigue and frustration of a main-frame adventure. Explore the tortuous forests, dark caverns and castle dungeons. Beware the maze of twisting tunnels and the desert wastelands. Outwit the predators. Rescue the Princess and carry off the treasures. Great skill and imagination are required to play this excellent game. You may never exhaust the possibilities. YES—this is our highly acclaimed ADVENTURE for the Atom!!

Other NEW 16K Titles: £8.95 FILER (Database). £5.95 each—ASTEROID BELT, SEEK (Adventure), Junior Maths Pack, Where (UK Geography). £4.95 Reversi I, £3.95 Mastermind (2-way).

MODEL B (or 32K Model A)

GALACTIC COMMANDER (Aptitude Test). Nine phase test for aspiring Space Vehicle Commanders. Begin by separating your craft from the command module and landing under acceptable gravity conditions. Then GRADUATE through combinations of lower gravities, circulating command modules, defended planets (some with homing missiles), and eventually to underground landing sites in cave systems with unfriendly inhabitants. The program presents a real challenge. The use of machine code and high-res. graphics give beautifully smooth action. Very good sound £6.95.

FOOTER. Exciting Advance in Computer Games. This is a TWO PLAYER football match, masterfully presented in HIGH-RES graphics. Out-run and out-dribble your opponent and finally blast the ball into the net. You will be amazed at the realism of this program! Newly designed graphics handling routines give a totally smooth movement to both player and ball. (See the players' legs in running action!) £6.95.

Other NEW 32K Titles: £6.95 each—METEOR BATTLE, LASER COMMAND. £5.95 each—MARTIANS, CONSTELLATION. £4.95 each—REVERSI II, MAZE INVADERS, ROULETTE. 'New Prices'—TIMETREK £6.95, ELDORADO GOLD £5.95.

PLEASE NOTE!

We now offer over 30 BBC and 60 Atom programs of the highest quality and at highly competitive prices. Order NOW or send for our full catalogue.

WE Guarantee THAT ALL OUR ADVERTISED PROGRAMS HAVE BEEN COMPLETED AND ARE READILY AVAILABLE

Please add 55p order P & P + VAT at 15%

EDITORIAL

THE FAIRY LIGHTS are going out all over Europe this Christmas as computing's over-zealous yuletide recruits find that such seasonal fripperies as Christmas trees take up too much valuable socket space. This year home computers will shatter the traditional Noel idyll. Families will no longer cluster around roaring hearths opening presents and arguing about which of the four channels to watch — from now on it will be channel 36 or thereabouts. For the first time, this Christmas, people have a real choice of machines for less than £200 and an even wider selection if they can afford to go as high as £350.

But those who have decided to treat themselves or a member of their family to a micro will know that choosing a computer involves a selection process which makes the rest of the Christmas shopping almost look like fun. Few of those who emerge from this ordeal clutching a gift-wrapped micro will have given any real thought to what they want it for — most will be only too pleased to have found one at all in time for Christmas. The first discovery the would-be buyer makes is that only half of the dozen or so most attractive machines advertised are readily available. Having swallowed this unpalatable fact the next question must be: "Do I really need a micro for Christmas? Would a machine like the Lynx or the Oric — both unlikely to be seen in volume this side of the Feast of Stephen — better suit my needs and my budget?"

Waiting a few months for a machine which has already been launched can be a wise decision — but only if you are sure that it really fits your bill. What you should never do is put off buying a micro because you are convinced a wonder-machine is just round the corner. At the rate that microcomputer technology is accelerating, you will just defer your entry into computing indefinitely. Talk to someone who already has a machine and decide which features you most want to have on your micro. When you have shortlisted some candidates with the power, flexibility and software you require and which are available when you want them, your next major consideration must be price. Minimum outlay can mean minimal computing but on the other hand there is no point spending hundreds if you are not sure how long your interest in micros will last.

The final word must, regrettably, be a word of warning. If you want a micro by Christmas Day, make sure that the machine can be supplied on time and get it in writing. After all, children believe in Santa Claus; adults believe in delivery dates. ■

step into the future:

VISIT MIDDLE EARTH WITH YOUR SPECTRUM.

Melbourne House Publishers, in association with the Tolkien Estate, are very proud to announce the release of THE HOBBIT, a super-program like no other before, for the 48K Spectrum.

THE HOBBIT is totally unique, with features never before seen on any computer, let alone on the Spectrum.

Based on the fantasy land described in J. R. R. Tolkien's brilliant novel, in this program you take on the role of Bilbo, the hobbit: danger, adventure, and excitement are all part of it, presented to you in words and graphics, but it is you who must confront and solve the problems this time.

You instruct the computer in completely ordinary English sentences!

THE HOBBIT program is capable of very sophisticated communications, including features not previously thought possible on a microcomputer: adjectives, adverbs, multiple sentences, are just a part of the power of this program.

You will meet all your favourite characters from J. R. R. Tolkien's book, and amazing as it sounds, they will all have an independent life of their own. They can make decisions and act on them! They react not only to what you do, but also to every other character in THE HOBBIT!

Because of this unique feature, you will find that each time you play THE HOBBIT, events will proceed in a slightly different way, and the further you get into Tolkien's world, the more different each visit may be.

THE HOBBIT also allows you to talk to the other characters! At last you can answer the questions they may put to you, or more importantly, you can suggest to them what you would like them to do!

THE HOBBIT program follows closely the plot of the book, and so a copy of the book is included as part of THE HOBBIT package at no extra charge.

THE HOBBIT brings to you the future of microcomputers in an exciting and challenging fantasy. A super-program that is a milestone in computer software.

Other cassette software includes PENETRATOR, a 48K state-of-the- art arcade game – £6.95 including VAT.
Spectrum books include: Over The Spectrum – £6.95.
Spectrum Machine Language – £6.95.
Understanding Your Spectrum – £7.95.

MELBOURNE HOUSE PUBLISHERS

TAKE THE DRAG OUT OF BUYING A DRAGON!

We give the best service
Why drag yourself from shop to shop or spend hours trying to find the best deal on a DRAGON 32?
It's easy . . . our way.

COMPUTERS FOR ALL are DRAGON specialists
Not only do we give you best value for money, we also give you a complete back-up after-sales service if, and when, required.

We know the computer inside out
Our knowledge of DRAGON 32 is probably the most complete in the country. We don't just sell them. We use them, play with them, analyse them, program them . . . enthuse about them!

We can show you how to use it professionally
Unlike some computers, DRAGON 32 is not just a toy!
It's fun, but it's also very professional.
Whatever you want to do with it, COMPUTERS FOR ALL can advise you at every stage, and as your knowledge of programming grows, you can always turn to us for the latest peripherals.

We have a wide range of hardware/ software
It doesn't do to stand still in the computer market.
That's why COMPUTERS FOR ALL are always looking for and stocking the newest hardware and software for the DRAGON 32.
Printers, Joysticks, ROM Cartridges, Cassette Software, Monitors . . . practically everything you will need now or in the future is available under one roof . . . our roof!

We look after our customers
Some dealers are content to take your money and forget all about you. We're different. We want you to have the very best service.
You needn't worry about contacting us if you need information or advice. That's what we're here for . . . and we'll help whenever we can.

We don't quibble
Needless to say, if you buy a DRAGON 32 from COMPUTERS FOR ALL it comes complete with a year's warranty.
But we go further than that: our service is completely "quibble-free" if, in the unlikely event of a complaint, you contact us, we will settle the matter immediately.
In short, COMPUTERS FOR ALL can take the DRAG out of buying a DRAGON.
You can call us with confidence . . . anytime.

HOW TO GET YOUR DRAGON IN TIME FOR CHRISTMAS

You don't have to go to the North Pole.
All you have to do is visit North Street ROMFORD or post the coupon!
As soon as we receive your order, it will be straight back in the post to you . . . but a word of warning – please allow enough time for the rush!
Do it now. WE'LL DELIVER THE GOODS!

STOP PRESS
New wide range of software now available. Send S.A.E for details.

SEND TODAY OR CALL AT OUR SHOP
For fast, efficient mail order post to COMPUTERS FOR ALL, 72 North Street, ROMFORD, Essex, or phone: (0708) 752862

FROM SILICA SHOP — WITH EVERY PURCHASE OF AN
ATARI 400 800

ATARI

ATARI PRICES REDUCED

We at Silica Shop are pleased to announce some fantastic reductions in the prices of the Atari 400/800 personal computers. We believe that the Atari at its new price will become the U.K.'s most popular personal computer and have therefore set up the Silica Atari Users Club. This club already has a library of over 500 programs and with your purchase of a 400 or 800 computer we will give you the first 100 free of charge. There are also over 350 professionally written games and utility programs, some are listed below. Complete the reply coupon and we'll send you full details. Alternatively give us a ring on 01-301 1111 or 01-309 1111.

ATARI 400 with 16K	£199
ATARI 400 with 32K	£248
ATARI 800 with 16K	£449

400/800 SOFTWARE & PERIPHERALS

Don't buy a T.V. game! Buy an Atari 400 personal computer and a game cartridge and that's all you'll need. Later on you can buy the Basic Programming cartridge (£35) and try your hand at programming using the easy to learn BASIC language. Or if you are interested in business applications, you can buy the Atari 800 + Disk Drive + Printer together with a selection of business packages.

Silica Shop have put together a full catalogue and price list giving details of all the peripherals as well as the extensive range of software that is now available for the Atari 400/800. The Atari is now one of the best supported personal computers. Send NOW for Silica Shop's catalogue and price list as well as details on our users club.

YC1282 — Your Computer — December 1982

Jupiter ACE

The Jupiter Ace personal computer runs in FORTH, an easily understood language, typically four times as compact and ten times as fast as BASIC. Before the Ace all personal computers used BASIC and FORTH was only available to a privileged few.

The Jupiter Ace also features a full-size moving-key keyboard, high-resolution graphics, sound, floating point arithmetic, a fast and reliable cassette interface and 3K of RAM.

If you own a personal computer you will be aware of the limitations of BASIC. You know how slowly your programs run and how quickly your computer's memory gets filled. The Jupiter Ace is your answer.

If you already know FORTH, the Jupiter Ace closely follows the FORTH 79 standard with extensions for floating point, sound and cassette. It has a unique and remarkable editor that allows you to list and alter words that have been previously compiled into the dictionary. This avoids the need to store screens of source, allowing the dictionary itself to be saved on cassette. Comprehensive error checking removes the worry of accidentally crashing your programs.

All inclusive price

For £89.95 you receive your Jupiter Ace, a mains adaptor, all the leads needed to connect to most cassette recorders and T.V.s (colour or black and white), a software catalogue and a manual.
The manual is a complete introduction to the world of personal computing and a course in FORTH programming on the Ace.
Even if you are a complete newcomer to computers, the manual will guide you step by step from first principles to confident programming.
The price includes postage, packing and V.A.T.
The Jupiter Ace is backed by a full 12 month warranty.

"The Ace is an excellent way of using FORTH"
Popular Computing Weekly

"FORTH is an easy language"
Byte

Available soon

Plug-on parallel printer interface.
For around £20.00 this will connect your Jupiter Ace to anything from high-speed dot matrix to letter-quality daisy wheel printers.

Plug-on 16K Memory Expansion
For around £30.00 you will increase the memory of your Jupiter Ace to 19K giving you instant access to enormous amounts of information.

Software
A catalogue will be sent with every machine, and includes, initially, programs for education and entertainment.

FORTH Finishes First!

Speed Comparison Chart showing times in seconds to perform one thousand operations.

Type of Operation	Jupiter Ace	BBC Micro	Vic 20	Spectrum	ZX81
Empty loop	0.12	0.67	1.3	4.2	17.7
Print a number	7.5	13.5	26	19	430
Print a character	0.62	1.3	3.1	7.5	24
Add two numbers	0.45	1.4	5.5	7.5	28
Multiply two numbers	0.9	1.6	6.5	7.5	32

Because of the difficulty in devising exactly equivalent programs, these measurements should only be taken as a guide.

only £89.95

Designed by Jupiter Cantab

Computer Designers Steven Vickers and Richard Altwasser played a major role in creating the ZX Spectrum and then formed Jupiter Cantab to develop advanced ideas in personal computing. The Ace is the result, another all-British computer to lead the world.

Memory mapped 32 column x 24 line flicker-free display with upper and lower case ascii character set.

Graphics
Chunky graphics (64 x 46 pixels) may be plotted, unplotted or over-plotted (XOR operation). Also, the entire character set (128 characters and their video inverses) may be redefined allowing intricate shapes to be drawn with a resolution equivalent to 256 x 192 pixels.

Control Structures
IF–ELSE–THEN, DO–LOOP DO–+LOOP, BEGIN–WHILE–REPEAT, BEGIN–UNTIL, all may be mixed and nested to any depth.

Cassette
Programs and data in the compact dictionary format may be saved, verified, loaded and merged. Blocks of memory can be saved, verified, loaded and relocated. All tape files are named. Running at 1500 baud, the Ace will connect to most portable tape recorders.

Expansion Port
Contains D.C. power rails and full Z80 Address, data and control signals. May be used to connect extra memory and other peripherals. IN and OUT words allow port-based peripherals to be addressed.

Data Structures
Integer, Floating point and String data may be held as constants, variables or arrays with multiple dimensions and mixed data types. There are no restrictions on names.

Sound
Internal loudspeaker may be programmed to operate over the entire audio spectrum.

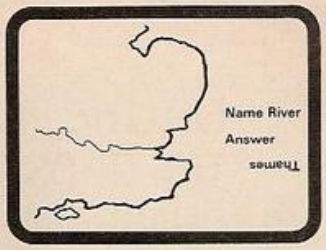

Programming in FORTH

Programming in FORTH
FORTH programs are constructed without line-numbers, as words which are defined in terms of other words that already exist. Consider the following definition of the word **STARS**. Comments are in parenthesis and have no action.

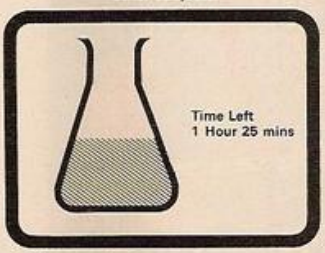

```
: STARS          (: starts word definition)
   " *** "       (print 3 asterisks)
   200 100 BEEP  (play a note for
                  100 mSecs)
;
```

The semi colon at the end finishes the word definition. Now, whenever you say **STARS** the computer will print out 3 asterisks and sound a short tone. (Notice how the word **BEEP** comes after the numbers it uses, 200 and 100. This characteristic occurs throughout FORTH so that you write, for instance, 28 76 + instead of 28 + 76.)

The Jupiter Ace already has 140 FORTH words defined in ROM.

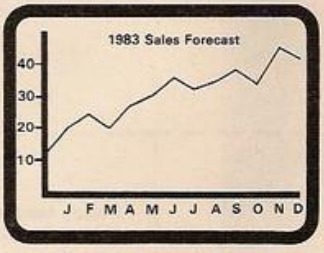

In Schools Teachers already know how quickly children take to computing, and the Jupiter Ace is an ideal introduction. FORTH is an easy and important language to learn and by making learning fun, the Ace can help to teach science, music and many other subjects.

In Laboratories For monitoring and controlling experiments, the Jupiter Ace has many advantages. The language is perfect, even the Jodrell Bank Radio Telescope is controlled in FORTH. The Ace expansion port enables it to be interfaced to almost anything, and the built in quartz timer allows experiments to run all weekend.

At Home The Jupiter Ace is powerful enough to play games as complex as Chess and with sound and high resolution graphics, action games written in FORTH will stretch your reaction speeds to their limits.

In the Office Stock control, Accounts and Financial forecasts are all possible on the Jupiter Ace. With a printer and extra memory attached you can do word processing as well.

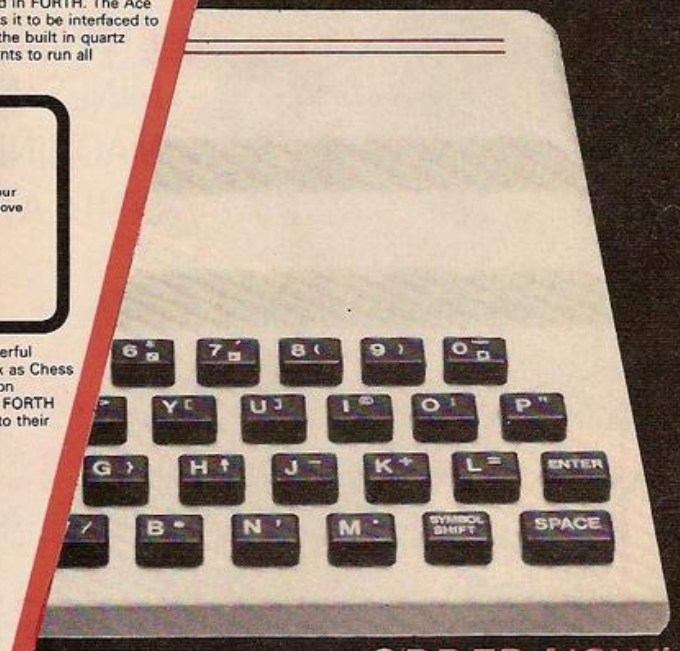

"FORTH is very flexible"

"FORTH is compact"

Electronics and computing

"FORTH is in general very much faster than BASIC"

ORIC-1™

TIMELESS TECHNOLOGY FROM ORIC PRODUCTS INTERNATIONAL

The Computer Challenge

16 colours professional keyboard full graphics real sound

- Superb styling
- Choice of 16K RAM or massive 48K RAM
- Ergonomic keyboard with 57 moving keys
- 28 rows x 40 characters high resolution
- Teletext/viewdata compatable graphics
- 6 octaves of real sound plus Hi-Fi output
- Centronics printer interface and cassette port
- Comprehensive user manual

OPTIONAL MODEM OFFERS COMPUTER PHONE LINK FOR:
● ELECTRONIC MAIL ● TELESOFTWARE ● PRESTEL

THE REAL COMPUTER SYSTEM FOR
£99.95
incl VAT

COMING SOON, TO COMPLETE YOUR SYSTEM: ORIC MICRO-DRIVE DISCS & SPEED PRINTER

FOR HOME: The ORIC-1 is the professional alternative for home computing. Superbly styled, the 57 key layout is based upon computers costing many times more than the ORIC, and will help the whole family to learn and understand computing, right from day one. The ORIC incorporates an improved version of Microsoft Basic for ease of programming and use. For the enthusiasts the computer has laser zaps, explosions, etc. pre-programmed for games use, with Hi-Fi output for incredible effect. The communications Modem will allow 'Telesoftware', message sending, and Prestel use.

FOR BUSINESS: The ORIC-1 is the answer to many day to day problems. Software is becoming available for payroll, accounts, stock-control, and many more systems to help your day to day business organising and control. In addition, the ORIC COMMUNICATIONS MODEM will allow you to access up to 200,000 pages of Prestel information, to send and receive 'electronic mail', to book hotels, and flights (and pay for them) and to look at the latest stock-market and share indexes.

In short the ORIC-1 is a must for all businesses large or small.

HOW TO ORDER YOUR ORIC-1: By phone: Just ring our telesales number Ascot (0990) 27641.

By post: You can pay by cheque, postal order ACCESS – BARCLAYCARD – AMEX – DINERS. (Please allow 28 days for delivery).

Money back if not satisfied.

TI's Home Computer. Unbeatable value. Unrivalled software.

When you choose a TI Home Computer you're choosing a "real" computer. A computer that can grow with you and your family. A computer that lets you play, invent, discover... that lets your imagination soar.

What makes this possible is our wide range of software. You'll find subjects as simple as "Early Reading" and as complex as "TMS 9900 Assembler Editor." Many of our programs are packaged in our unique Solid State Software™ Command Modules. Some have sound. Others have superb colour graphics. Simply plug them in and begin.

When you want to learn to program for yourself, the TI 99/4A is ready too. TI BASIC is built in. The programming manual is easy to understand, easy to follow every step of the way. You will be amazed to discover how much fun programming can be.

And when you're ready to expand your system, we're ready too. Our unique Peripheral Expansion System can house up to seven peripherals without extra cables or clutter. There is even a speech synthesiser that gives your computer a voice.

Sound impressive? Try the TI Home Computer for yourself at your nearest dealer. At around £200 you'll look no further.

WHAT THE PROFESSIONALS LOOK FOR IN A HOME COMPUTER

Feature	Texas Instruments TI 99/4A
Microprocessor	TMS 9900 16 BIT
Graphics	16 colour, high resolution
Languages	TI-BASIC (built-in), extended BASIC, UCSD–PASCAL, TI-LOGO, Assembler
Memory	16K RAM standard–expandable to max ROM/RAM of 110K
Keyboard	Full size, standard typewriter style
Software	1000 programs to choose from worldwide
Solid State Speech Capability	Yes

Sinclair ZX Spectr

16K or 48K RAM... full-size moving-key keyboard... colour and sound... high-resolution graphics...

From only £125!

First, there was the world-beating Sinclair ZX80. The first personal computer for under £100.

Then, the ZX81. With up to 16K RAM available, and the ZX Printer. Giving more power and more flexibility. Together, they've sold over 500,000 so far, to make Sinclair world leaders in personal computing. And the ZX81 remains the ideal low-cost introduction to computing.

Now there's the ZX Spectrum! With up to 48K of RAM. A full-size moving-key keyboard. Vivid colour and sound. High-resolution graphics. And a low price that's unrivalled.

Professional power – personal computer price!

The ZX Spectrum incorporates all the proven features of the ZX81. But its new 16K BASIC ROM dramatically increases your computing power.

You have access to a range of 8 colours for foreground, background and border, together with a sound generator and high-resolution graphics.

You have the facility to support separate data files.

You have a choice of storage capacities (governed by the amount of RAM). 16K of RAM (which you can uprate later to 48K of RAM) or a massive 48K of RAM.

Yet the price of the Spectrum 16K is an amazing £125! Even the popular 48K version costs only £175!

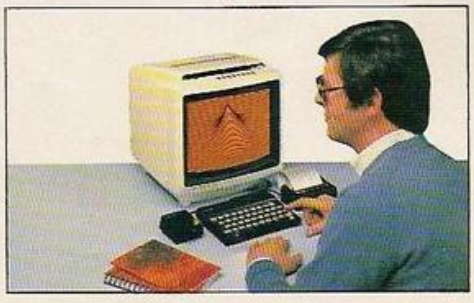

You may decide to begin with the 16K version. If so, you can still return it later for an upgrade. The cost? Around £60.

Ready to use today, easy to expand tomorrow

Your ZX Spectrum comes with a mains adaptor and all the necessary leads to connect to most cassette recorders and TVs (colour or black and white).

Employing Sinclair BASIC (now used in over 500,000 computers worldwide) the ZX Spectrum comes complete with two manuals which together represent a detailed course in BASIC programming. Whether you're a beginner or a competent programmer, you'll find them both of immense help. Depending on your computer experience, you'll quickly be moving into the colourful world of ZX Spectrum professional-level computing.

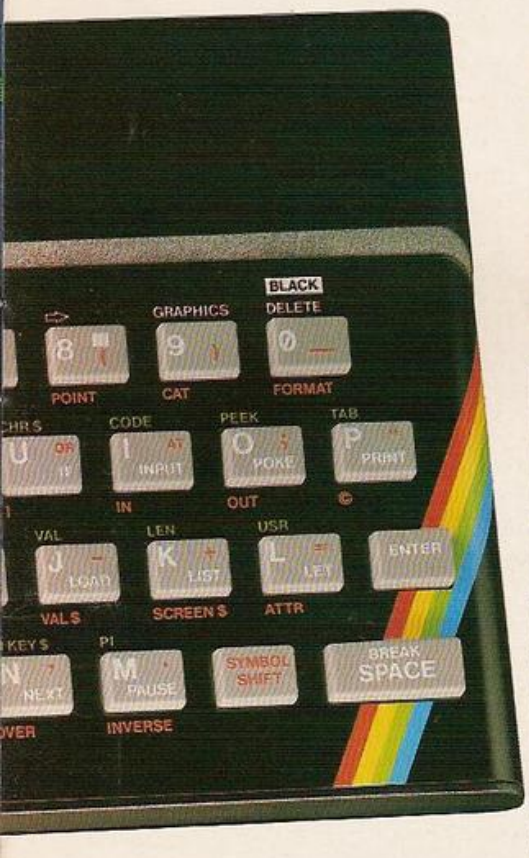

There's no need to stop there. The ZX Printer – available now – is fully compatible with the ZX Spectrum. And later this year there will be Microdrives for massive amounts of extra on-line storage, plus an RS232 / network interface board.

Key features of the Sinclair ZX Spectrum

- Full colour – 8 colours each for foreground, background and border, plus flashing and brightness-intensity control.
- Sound – BEEP command with variable pitch and duration.
- Massive RAM – 16K or 48K.
- Full-size moving-key keyboard – all keys at normal typewriter pitch, with repeat facility on each key.
- High-resolution – 256 dots horizontally x 192 vertically, each individually addressable for true high-resolution graphics.
- ASCII character set – with upper- and lower-case characters.
- Teletext-compatible – user software can generate 40 characters per line or other settings.
- High speed LOAD & SAVE – 16K in 100 seconds via cassette, with VERIFY & MERGE for programs and separate data files.
- Sinclair 16K extended BASIC – incorporating unique 'one-touch' keyword entry, syntax check, and report codes.

um

ZX Spectrum software on cassettes – available now

The first 21 software cassettes are now available directly from Sinclair. Produced by ICL and Psion, subjects include games, education, and business/household management. Galactic Invasion... Flight Simulation... Chess... History... Inventions... VU-CALC... VU-3D ...47 programs in all. There's something for everyone, and they all make full use of the Spectrum's colour, sound and graphics capabilities. You'll receive a detailed catalogue with your Spectrum.

RS232 / network interface board

This interface, available later this year, will enable you to connect your ZX Spectrum to a whole host of printers, terminals and other computers.

The potential is enormous. And the astonishingly low price of only £20 is possible only because the operating systems are already designed into the ROM.

sinclair

Sinclair Research Ltd, Stanhope Road, Camberley, Surrey GU15 3PS.
Tel: Camberley (0276) 685311.

The ZX Printer – available now

Designed exclusively for use with the Sinclair ZX range of computers, the printer offers ZX Spectrum owners the full ASCII character set – including lower-case characters and high-resolution graphics.

A special feature is COPY which prints out exactly what is on the whole TV screen without the need for further instructions. Printing speed is 50 characters per second, with 32 characters per line and 9 lines per vertical inch.

The ZX Printer connects to the rear of your ZX Spectrum. A roll of paper (65ft long and 4in wide) is supplied, along with full instructions. Further supplies of paper are available in packs of five rolls.

The ZX Microdrive – coming soon

The new Microdrives, designed especially for the ZX Spectrum, are set to change the face of personal computing.

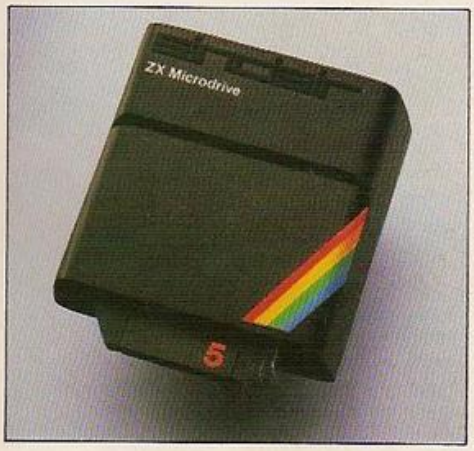

Each Microdrive is capable of holding up to 100K bytes using a single interchangeable microfloppy.

The transfer rate is 16K bytes per second, with average access time of 3.5 seconds. And you'll be able to connect up to 8 ZX Microdrives to your ZX Spectrum.

All the BASIC commands required for the Microdrives are included on the Spectrum.

A remarkable breakthrough at a remarkable price. The Microdrives are available later this year, for around £50.

How to order your ZX Spectrum

BY PHONE – Access, Barclaycard or Trustcard holders can call 01-200 0200 for personal attention 24 hours a day, every day. BY FREEPOST – use the no-stamp needed coupon below. You can pay by cheque, postal order, Barclaycard, Access or Trustcard.

EITHER WAY – please allow up to 28 days for delivery. And there's a 14-day money-back option, of course. We want you to be satisfied beyond doubt – and we have no doubt that you will be.

To: Sinclair Research, FREEPOST, Camberley, Surrey, GU15 3BR. **Order**

FREEPOST – no stamp needed. Prices apply to UK only. Export prices on application.

Sinclair ZX Spectrum–technical data.

Dimensions

Width	233 mm
Depth	144 mm
Height	30 mm

CPU / memory

Z80A microprocessor running at 3.5 MHz. 16K-byte ROM containing BASIC interpreter and operating system.

16K-byte RAM (plus optional 32K-byte RAM on internal expansion board) or 48K-byte RAM.

Keyboard

40-moving-key keyboard with full upper and lower case with capitals lock feature. All BASIC words obtained by single keys, plus 16 graphics characters, 22 colour control codes, and 21 user-definable graphics characters. All keys have auto repeat.

Display

Memory-mapped display of 256 pixels x 192 pixels; plus one attributes byte per character square, defining one of eight foreground colours, one of eight background colours, normal or extra brightness and flashing or steady. Screen border colour also settable to one of eight colours. Will drive a PAL UHF colour TV set, or black and white set (which will give a scale of grey), on channel 36.

Sound

Internal loudspeaker can be operated over more than 10 octaves (actually 130 semitones) via basic BEEP command. Jack sockets at the rear of computer allow connections to external amplifier/speaker.

Graphics

Point, line, circle and arc drawing commands in high-resolution graphics.
16 pre-defined graphics characters plus 21 user-definable graphics characters. Also functions to yield character at a given position, attribute at a given position (colours, brightness and flash) and whether a given pixel is set. Text may be written on the screen on 24 lines of 32 characters. Text and graphics may be freely mixed.

Colours

Foreground and background colours, brightness and flashing are set by BASIC INK, PAPER, BRIGHT and FLASH commands. OVER may also be set, which performs an exclusive-or operation to overwrite any printing or plotting that is already on the screen. INVERSE will give inverse video printing. These six commands may be set globally to cover all further PRINT, PLOT, DRAW or CIRCLE commands, or locally within these commands to cover only the results of that command. They may also be set locally to cover text printed by an INPUT statement. Colour-control codes, which may be accessed from the keyboard, may be inserted into text or program listing, and when displayed will override the globally set colours until another control code is encountered. Brightness and flashing codes may be inserted into program or text, similarly. Colour-control codes in a program listing have no effect on its execution. Border colour is set by a BORDER command. The eight colours available are black, blue, red, magenta, green, cyan, yellow and white. All eight colours may be present on the screen at once, with some areas flashing and others steady, and any area may be highlighted extra bright.

Screen

The screen is divided into two sections. The top section – normally the first 22 lines – displays the program listing or the results of program or command execution. The bottom section – normally the last 2 lines – shows the command or program line currently being entered, or the program line currently being edited. It also shows the report messages. Full editing facilities of cursor left, cursor right, insert and delete (with auto-repeat facility) are available over this line. The bottom section will expand to accept a current line of up to 22 lines.

Mathematical operations and functions

Arithmetic operations of +, −, ×, ÷, and raise to a power. Mathematical functions of sine, cosine, tangent and their inverses; natural logs and exponentials; sign function, absolute value function, and integer function; square root function, random number generator, and pi.

Numbers are stored as five bytes of floating point binary – giving a range of $+3\times10^{-39}$ to $+7\times10^{38}$ accurate to $9\frac{1}{2}$ decimal digits.

Binary numbers may be entered directly with the BIN function. =, >, <, >=, <= and <> may be used to compare string or arithmetic values or variables to yield 0 (false) or 1 (true). Logical operators AND, OR and NOT yield boolean results but will accept 0 (false) and any number (true).

User-definable functions are defined using DEF FN, and called using FN. They may take up to 26 numeric and 26 string arguments, and may yield string or numeric results.

There is a full DATA mechanism, using the commands READ, DATA and RESTORE.

A real-time clock is obtainable.

String operations and functions

Strings can be concatenated with +. String variables or values may be compared with =, >, <, >=, <=, <> to give boolean results. String functions are VAL, VAL$, STR$ and LEN. CHR$ and CODE convert numbers to characters and vice versa, using the ASCII code.

A very powerful string slicing mechanism exists, using the form a$ (x TO y).

Variable names

Numeric – any string starting with a letter (upper and lower case are not distinguished between, and spaces are ignored).
String – A$ to Z$.
FOR-NEXT loops – A-Z.
Numeric arrays – A-Z.
String arrays – A$ to Z$.

Simple variables and arrays with the same name are allowed and distinguished between.

Arrays

Arrays may be multi-dimensional, with subscripts starting at 1. String arrays, technically character arrays, may have their last subscript omitted, yielding a string.

Expression evaluator

A full expression evaluator is called during program execution whenever an expression, constant or variable is encountered. This allows the use of expressions as arguments to GOTO, GOSUB, etc.

It also operates on commands allowing the ZX Spectrum to operate as a calculator.

Cassette interface

The ZX Spectrum incorporates an advanced cassette interface. A tone leader is recorded before the information to overcome the automatic recording level fluctuations of some tape recorders, and a Schmitt trigger is used to remove noise on playback.

All saved information is started with a header containing information as to its type, title, length and address information. Program, screens, blocks of memory, string and character arrays may all be saved separately.

Programs, blocks of memory and arrays may be verified after saving to confirm successful saving.

Programs and arrays may be merged from tape to combine them with the existing contents of memory. Where two line numbers or variables names coincide, the old one is overwritten.

Programs may be saved with a line number, where execution will start immediately on loading.

The cassette interface runs at 1500 baud, through two 3.5 mm jack plugs.

Expansion port

This has the full data, address and control busses from the Z80A, and is used to interface to the ZX Printer, the RS232 and NET interfaces and the ZX Microdrives.

IN and OUT commands give the I/O port equivalents of PEEK and POKE.

ZX81 compatibility

ZX81 BASIC is essentially a subset of ZX Spectrum BASIC. The differences are as follows.

FAST and SLOW: the ZX Spectrum operates at the speed of the ZX81 in FAST mode with the steady display of SLOW mode, and does not include these commands.

SCROLL: the ZX Spectrum scrolls automatically, asking the operator "scroll?" every time a screen is filled.

UNPLOT: the ZX Spectrum can unplot a pixel using PLOT OVER, and thus achieves unplot.

Character set: the ZX Spectrum uses the ASCII character set, as opposed to the ZX81 non-standard set.

ZX81 programs may be typed into the ZX Spectrum with very little change, but may of course now be considerably improved. The ZX Spectrum is fully compatible with the ZX Printer, which can now print out a full upper and lower case character set, and the high resolution graphics; using LLIST, LPRINT and COPY.
ZX81 software cassettes and the ZX 16K RAM pack will not operate with the ZX Spectrum.

sinclair

Sinclair Research Ltd, Stanhope Road, Camberley, Surrey, GU15 3PS. Tel: Camberley (0276) 685311.

YOUR LETTERS

NOT A BUG

Concerning the "Spectrum Bugs" in the October *Your Computer* letter from Mr Dixon. He says that

```
CLS : PRINT CHR$ 8; "X"
```

produces two black squares. If he reads his manual the instruction CHR$ 8 means back space. Back spacing at the beginning of a line means moving into the address held for Newline. This corrupts the display file.

Secondly, when asked by the program Scroll?, normally one is expected to reply Yes or No, not with a Caps Shift. It is like saying my motor car has a bug, because although the road turns to the left I turn the wheel to the right and I do not make it round the corner!

I have found the Spectrum to be a good machine for its price.

B G Cornhill,
Aylesbury,
Buckinghamshire.

LOSS OF FAITH

It seems simple enough:— "Number on waiting list/weekly production = time in week of despatch". How, then, is it possible that the pioneer of the electronic calculator is unable to provide sensible delivery dates for the Spectrum?

My own order, after more than 16 weeks, is now cancelled. A telephone query after 14 weeks elicited "Any time now". After 15 weeks, I was back to "About another three weeks". After nearly 17 weeks, I was still at "2 to 3 weeks".

Like Mr Bloxham — *Your Computer,* October — I elected to order the Spectrum because of the expected Microdrive; also the wish to retain the use of my ZX Printer. Unlike Mr Bloxham, I do not believe in Sinclair any more, and the thought of going through the same hassle when the Microdrive is launched is too much.

Your leader postulating the possible decline of the British computer industry — in the same issue — is unfortunately both accurate and timely.

E R Keevy,
Pulborough,
West Sussex.

HANDICAP AID

We are a Cheshire Home for the physically handicapped and are building a library of programs for disabled computer users. We already have a number of Apple, Pet and TRS-80 programs. All of these programs will become available to anyone sending a stamped addressed envelope to the address below.

Most of the programs we have are operated using a two-switch system. For example: with the Apple we use the two switches on the games paddles. These switches can be used to mean anything from Yes/No to selecting from a menu where a flashing cursor scans from item to item and you press one button when the cursor is over the item you have selected. The other button can be used to correct errors or Escape.

If a scanning system is used the speed of scanning must be selectable.

Where possible one button should be available to Gosub to a scanning Help menu.

Any program you write must be easy for you to operate. Try it out on one or two friends first.

We would like to see any programs from adventure to chess, from databases to educational. The scope is unlimited, but please bear in mind that many handicapped operators have restricted vision and the display needs to be extremely clear.

If you have any programs to add to our Library or want a catalogue of the programs we have to date, or would like some further guidelines on how to write programs for the handicapped, please write, enclosing a stamped addressed envelope, to:

Robin Nixon,
Seven Springs Cheshire Home,
Pembury Road,
Tunbridge Wells,
Kent TN2 4NB.

WORD PUZZLES

I particularly liked the Word Puzzles program by Chris Callender on page 94 of your October issue. It has many educational applications. However there were a few errors in the program.

The following lines should be inserted to get it to run correctly:

```
43 SCROLL
45 PRINT T
75 SCROLL
```

it is also enhanced if line 530 reads

```
PRINT T$,, "FIND THE FOLLOWING HIDDEN WORDS"
```

Missing from line 620 is −1 which should appear as shown here:

```
620 IF S$(A)<>""THEN PRINT AT INT (A/16) ,A −16*INT (A−16) −1; CHR$ (CODE S$ (A) + 128)
```

The program also takes an interminable time to produce its letter grid. This can be speeded up considerably by adding the following lines.

```
185 FAST
585 SLOW
```

J Bourne,
Bexhill on Sea,
Sussex.

THE REAL STORY

I think it's about time you got the record straight. Contrary to popular belief, the BBC Model A can have eight colours on the screen at once. This is proved by the following program:

```
1 MODE 7: FOR 1 = 129 TO 135
10 PRINT CHR $(I);"Your Computer": Next
```

In the new almost-legendary Sinclair pamphlet, there is a table showing a list of computers and their specifications. This has to be the most biased and untrue table of all time. It states that the BBC can only have up to 32K RAM. This is not true. It can have 96K RAM via a second processor.

It states that the Vic and BBC do not have user-definable graphics; they do. The Vic can also have high-res graphics via a software routine. The BBC does have merge and verify facilities, which are under different names to the Spectrum.

The pamphlet does not state that the BBC has a built-in assembler, ROM expandable to 256K, a Plot command with 43 different functions, high-res graphics with 163,840 different points, a Pling command, and a microprocessor running up to five times the speed of the Spectrum.

J V Price,
Chorley,
Lancashire.

ZX-81 START

I have a 16K RAM ZX-81 and I have found the starting and finishing addresses for the screen. They are:

```
START 49340
FINISH 50066
```

Poke 49340, 38 would be the same as

```
PRINT AT 0, 0; "A"
```

Patrick Couser,
Berkhamstead,
Hertfordshire.

BBC FACTS

In Tim Langdell's article concerning the use of control keys on the BBC computer he says that where a VDU statement takes several bytes after it, the control version does not produce readily predictable results. It is not as bad as his article suggests. Consider his example, VDU19,1,4, 0,0,0 which changes logical colour 1 to show blue. First the CTRL solution, then the understanding.

Get something on the screen using logical colour 1. For example:

```
MODE4:COLOUR1 return
PRINT"This is logical colour 1" return
```

Now holding CTRL down while all of the next six keys are pressed, type SAD@@@. Nothing will appear on the screen, but as soon as the third @ is pressed the colour change takes place.

To know what to press after the first letter, use the left-hand two columns of figure 1 in the article: CTRL A has generated the 1, CTRL D the 4, the CTRL@, the 0.

Now the understanding. It will be helpful to find the diagram for keyboard codes on page 497 of the new manual and to type each of the following statements:

```
PRINT"01AB"
PRINT CHR$(48);CHR$(49);CHR$(65); CHR$(66)
VDU 48,49,65,66
PRINT CHR$(&30);CHR$(&31); CHR$(&41);CHR$(&42)
VDU &30,&31,&41,&42
```

Compare these hexadecimal codes with those in the keyboard code diagram. All these have the same screen effect as typing 01AB — without return — on the keyboard.

The reason is that whatever code is produced by the keyboard, it is sent to the VDU drivers. Codes 32(&20) to 126(&7E) cause the ASCII characters to be displayed. Codes 0(&0) to 31(&1F) are interpreted as control codes. However, if a control code needing extra bytes has just been received then the next keyboard codes received will be treated as the data bytes rather than their usual meaning.

CTRL S , 1 , 2 , of the article, then, is equivalent to VDU 19,44,49,44,50,44 — that is VDU &13,&2C,&31,&2C,&32,&2C. No wonder the VDU driver is confused and not producing readily predictable results! Notice the commas — code 44 — are treated as data, and those dummy zeros for later expansions are now far from 0.

What we needed was to create data of 1,2,0,0 and 0. Looking at the keyboard codes shows CTRL A creates 1, CTRL B creates 2 and CTRL @ creates 0. Because CTRL S always has five data bytes, the VDU driver knows to treat the CTRL A etc. as data — rather than the usual printer meanings.

For VDU statements with no data, Tim is correct, the CTRL equivalent is quick and easy; for VDU statements where data is always below 31, the left-hand two columns of figure 1 of the article enables predictable results with little effort; where data can go beyond 31, the keyboard code diagram — or the ASCII tables before it — and a knowledge of hexadecimal is needed: for data larger than 127, life can be even more difficult, though later operating systems allow Shift-Function, CTRL-Function, and Shift-CTRL-Function combinations to create whatever codes you like — see *FX225 to *FX229; page 439.

The principal advantage of these is for getting teletext control codes — ASCII 128 to 159 — input directly from the keyboard without wasting *Key definitions, rather than Print and Copy required by OS 0.1 users.

Finally, a couple of other points. Remember when defining a function key, the split vertical line preceding a capital letter indicates a CTRL code, so ¦B is "enable the printer". To get a teletext code use the fact that ¦! adds 128 to the next code so ¦!¦B is code 128+2=130, that is, "use green letters".

Codes 0 to 31 cannot generate user-defined graphics characters, but Acorn has used the syntax for redefining character 0 to give the user access to the registers in the CRTC — typical Acorn design philosophy — permitting custom-built modes, paged screens and more — see *BBC Micro Revealed* by Jeremy Ruston for more details.

Milton Keynes,
Buckinghamshire. ■

Christmas tidings cheer those micro Scrooges

PLUMMETING HARDWARE prices are a phenomenon of the micro market. *Your Computer* checked out just how cheaply you could buy a home computer this Christmas. All prices include VAT.

The Texas TI-99/4 is an extreme example. In 1980 it cost £750 — today it can be obtained for £150 under a cash-back scheme. Apart from its 16-bit processor and typewriter keyboard, the Texas has much in common with the Atari 400: both have 16K, three-tone sound, 16 colours, sprite graphics and plug-in software. The 400 is now £200. By shopping around you could find a 3.5K Vic-20 for less than £140 rather than £200 earlier in the year. Even Mettoy's 32K, 9-colour Dragon 32 costs £180 from some

stores, instead of the £200 official price. The 16K Colour Genie is still £200.

Multitech's MPF II Apple-impersonator costs £270 for 64K. Also chiming in at 64K is the £350 Commodore 64 although delivery before Christmas could not be guaranteed. Computers £225 Lynx which has 48K and will be capable of running CP/M will also be available in numbers in the new year as will the £100 16K Oric, one of the first machines to break the £100 colour and sound barrier. Sanyo's PHC-25 20K Spectrum basher is unlikely to be in the stores until February, while the Spectrum itself is still good value at £125 for 16K or £175 for 48K.

If you still see the world in black and white, Jupiter's monochrome Ace runs fast as a purpose-built Forth machine for £90, and of course the ZX-81 now costs £50 made-up or £40 as a kit for a truly basic approach to programming.

Love on a hot ZX-81

LOVE ON A ZX-81 sounds quite uncomfortable, but this Love is an adventure game with a difference for machines with the 16K RAM pack. It is written by women for women. Remsoft, the distributors, maintain it will take men a while to get the hang of it.

The scene is set at a country house in Devon where you encounter Tom, your lifelong heart-throb. The game proceeds on the basis of your emotional response to people and situations. The authors say they have written Love for people who are more interested in playing than winning. It is available at £5.95 post paid from Remsoft, 18 George St, Brighton BN2 1RH. Telephone 0273 602354.

Cunning Lynx avoids mail-order snares

YOU WILL NOT have to wait much longer for the Lynx. Sales Director Riva Gould is confident that at least 1,000 computer enthusiasts will wake up on Christmas morning to find Camputers' new £225 machine in their stockings. This is just as well because Dick Greenwood, Camputers' General Director describes the Lynx as "a modern-day train set plus the Encyclopaedia Brittanica." Just the thing for Christmas.

So far Camputers has resisted the temptation to sell the machine by mail order, partly because of the bad reputation that computer mail order has for late deliveries. The Lynx will go on sale in selected High Street stores later this month. In the spring Camputers will make available disc drives and CP/M for owners who want to upgrade their machines so that they can run packages like VisiCalc. Greenwood envisages owners building up to a complete system of computer, printer, disc drive, light pen, modem, and software for around £1,000 all told.

Rather than using a Microsoft Basic, Camputers used a custom-built language by Davis Jansons. Jansons modestly describes his creation as "maybe not the best in the world" and points out its shortcomings. "It does not scroll and

it has no string arrays." On the other hand Davis Jansons is confident that the ease with which his language can be adapted to the needs of particular users, the machine-code monitor, and what he describes as "maths overkill" makes the Basic more useful than on any comparable machine. He is also working on an extended Basic and a Forth, which will be available for the Lynx from the Spring.

Now Forth speakers will be able to consult the Oric in their own tongue

ORIC EXPECTS to break the £100 colour and sound barrier this month by delivering 1,000 16K machines before Santa gets his boots on. Demand has greatly exceeded Oric Products' expectations.

Plans to sell 50,000 units in the first year have been redrafted after receiving orders for 30,000 in the first two months.

Cynics might expect this to produce Sinclair-style delivery delays but Steven Mountford, Oric's U.K. sales manager says "We are going to be very careful not to oversell".

Prospective buyers will be encouraged by Oric's latest language packages, Forth and Extended Basic. Forth will be offered free on cassette with every 48K Oric. It loads into RAM and takes up around 10K.

The Extended Basic comes in a ROM chip which will replace the existing Basic. It will be launched in January together with the modem and the free telesoftware service and will cost £34.50.

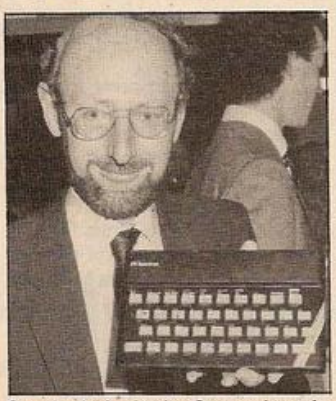

Peter Halford who has written the new Basic says that it is at least as powerful as BBC Basic. Like David Simons who has written Simons Basic for the Commodore 64, he has included all the commands found in other Basics plus some extra features such as a built-in assembler and disassembler. Full information from Oric Products International, Cosworth Park, London Road, Ascot. Telephone 0990 27641.

Wait for it — here comes the Microdrive

THE GOOD NEWS is that Spectrum delays are shrinking to reasonable limits, the bad news is that now you will have to wait even longer for the Microdrive. Despite repeated announcements that the Microdrive and RS-232 board for the Spectrum would be available by the end of this year, they are now unlikely to be launched before February 1983. The arrival of the first Spectrum Prestel adaptor of Spring is now not expected until the middle of 1983.

This news may confirm the view of some people that Sinclair Research operate on a different time scale from the rest of us. In Sinclair Time 28 days can embrace a period stretching from one to three or even four months.

Sinclair has recently been rapped on the knuckles by the Advertising

Standards Authority for consistently failing to deliver Spectrums within the advertised 28-day limit. The ASA was inundated with an unprecedented number of letters complaining about delays.

YOUR COMPUTER TOP 10

Game	Machine	Company
■ Flight Simulation	ZX-81	Psion
■ 3D Defender	ZX-81	JK Greye
■ Gulp 2	ZX-81	Campbell Systems
■ Orbiter	Spectrum	Silversoft
■ Meteor Storm	Spectrum	Quicksilva
■ Vic Panic	Vic-20	Bug-Byte
■ Amok	Vic-20	Audiogenic
■ Planetoids	BBC	Acornsoft
■ Defender	Atari	Atari
■ Ghost Attack	Dragon	Dragon

Artic has cracked it

RICHARD TURNER of Artic gives a wry smile if you try to make him give away the secret of Krakit — the Toronto based £10,000 competition which has caught the imagination of Sinclair computer riddlers in Britain and America.

The puzzle consists of 12 riddles, each of which contains the name of a country, a date, and a city. Richard Turner gives an example of how the riddles work.

"Look up 'Tour'. When was it first seen? No rhyme for hour but a rhyme for dance." The rhyme for dance is France, the 'Tour' is the Eiffel Tower in Paris and it was first seen when it was constructed — in 1889.

At £10.00 a copy, whoever wins, Richard Turner of Artic — which is distributing Krakit — is not going to lose.

Sharp sends PC-1251 to front line but keeps MZ-700 in reserve

SHARP PLANS to sell 250,000 a year of the new MZ-700 home computer launched this month in Japan. Sharp intends selling the MZ-700 world-wide but no date has been set for the 64K RAM colour computer's British launch yet. The price is unlikely to be as low as the £180 quoted in Japan where an optional colour plotter/printer costs £100.

Meanwhile in Britain Sharp is launching a new range of pocket computers distinguished by an optional integrated printer and microcassette recorder. The PC-1251 features an 8-bit CMOS CPU, 4K RAM and extended Basic for around £80. What makes the PC-1251 more interesting than most pocket computers though is the CE-125 printer and microcassette recorder which transforms it into an low-power lost-cost rival to the Epson portable computer. The whole unit is only 8in. wide, 6in. deep and 1in. high.

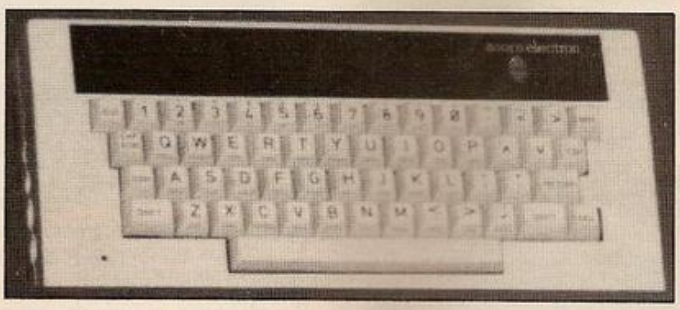

First glimpse of Acorn's Electron — the 32K £150 Spectrum rival

ACORN'S EAGERLY AWAITED Electron has joined the select band of micro-computers which are already late before they are even officially launched.

Until last month Acorn was still confident that the 32K Spectrum basher with full BBC graphics capabilities would be on sale before Christmas. Now the familiar ULA problems which have haunted Acorn in the past are again holding up production of the £150 Electron.

Acorn hopes to launch the machine early in the new year but if it becomes necessary to update the specification — for instance the single-channel sound capability or the relatively slow processor, further delays cannot be ruled out. The cream-coloured machine has a real typewriter keyboard and measures 13in. wide, 6in. deep, and 2in. high.

ZX Printer for 6502s

NOW 6502-based computers will be able to run the low-cost ZX Printer with Microtanic's new interface board. The board is suitable for machines such as the Vic-20, the Atom and the BBC Micro.

The £29.95 board is available now, and an interface for 6809-based machines like the Dragon 32 will be released shortly. Further details from Microtanic Software, 235 Friern Road, Dulwich, London SE22. Telephone 01-693 7659.

New ROMs for old is a common cry in computing. This Aszmic chip replaces the ZX-81/80's Basic ROM inside the case. Comprocsys claims it turns the ZX-81 into an Assembly Language Program Station. As well as a Z-80 assembler it supplies many other features, including an extensive screen editor, file handling system, and 255 by 144 graphics resolution.

Capital Computers, Comprocsys agent in this country, is developing a board which will take both the Aszmic and Basic ROMs and allow switching with a comprehensive manual from Capital Computers, 1 Branch Road, Park St, St. Albans AL1 4RJ. Telephone 0727 72917.

Chart-topping software makes games hit parade

AS THE SOFTWARE industry becomes more like the music business — complete with album covers for cassettes, *Your Computer* publishes its first Top 10, in no particular order based on sales from shops and manufacturers all over Britain.

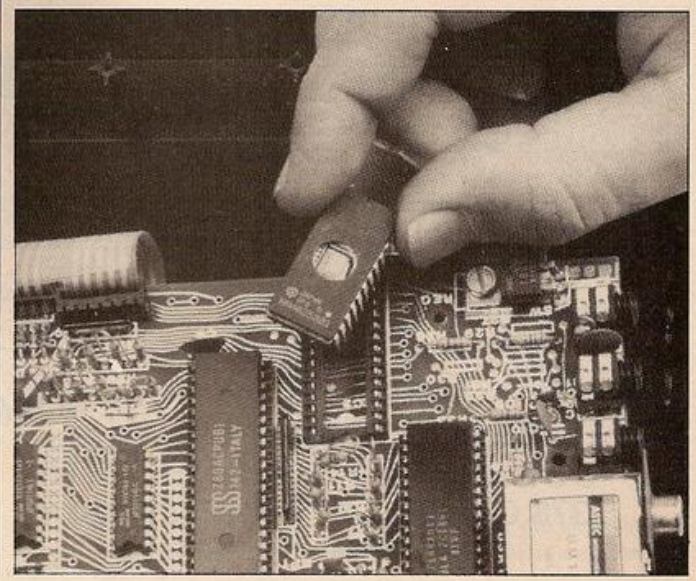

Top of the list for the ZX-81 are Psion's Flight Simulation, JK Greye's 3D Defender and Monster Maze, Trader from Pixel, and Campbell System's Gulp 2. Adventure games are steady sellers, in particular those from Artic and Phipps. Former high-flier Mazogs from Bugbyte is said to be slipping down while DJL's Frogger is tipped for a place in next month's top five.

In the Spectrum range chart leaders are Bug-Byte's Spectral Invaders, Silversoft's Orbiter and the Quicksilva games, Meteor Storm and Space Invader. New entry, Escape from New Generation Software looks promising. Also selling well are Chromasoft's Adventure 1 and Startrek from Abersoft.

Top of the Vic-20 stakes were Vic Panic, Cosmiads and Another Vic in the Wall from Bug-Byte, and Bonzo and Amok from Audiogenic. Also selling well was Commodore's Blitz.

Dragon software is thin on the ground at the moment although Dragon's own programs, Ghost Attack and Beserk are moving up the charts. On the BBC front Acornsoft's programs are still the most popular especially Snapper, Planetoids and Monsters. Defender is taking over from Pac-Man as Atari's topper seller.

Stay with us next month for a new top 20 survey.

COBRA TECHNOLOGY LTD.

THE CHEAPEST INTERFACES ON THE MARKET RS232C INTERFACE

At last a high quality 232C interface to allow you to connect your ZX81 to any 232C printer.
Look at these features:

* Baud rate variable by software control
* Upper and lower case printout
* Up to 120 characters per line
* Small and compact — fits on to the back of your ZX like a RAM pack
* Uses the ZXJ power supply
* Output via a small 3 pin jack.

CENTRONICS INTERFACE

Connects your ZX to any Centronics printer. Has similar features to the 232C interface — one exception is that output is via a 24 way socket. Both these interfaces offered at only **£29.90** each (inclusive of VAT)

MOTHER BOARDS

At last, inexpensive high quality mother boards at a price everyone can afford.

	ZX81	Spectrum
2 socket	£10.50	£12.00
3 socket	£12.00	£14.00
4 socket	£14.00	£16.00
5 socket	£16.00	£18.00

FLEXIBLE RIBBONS AND LEADS

Flexible Ribbon Connector	**£8.75**
Printer to Cobra 232 Interface lead	**£8.75**

Unit/Code	No	Price	Total
(P&P free on orders over £3)		£	

Please send SAE for brochure

COBRA TECHNOLOGY LIMITED
378 Caledonian Road, Islington, London N1 1DY.

COBRA 1000

THE COMPLETE BUSINESS SYSTEM FOR THE ZX81

High quality computer system which allows you to expand your Sinclair ZX81 into a powerful and efficient computer for the small business.

* Accommodates a full range of business hardware
* Capacity for up to 9-12 boards
* PCB slide guide systems ensure total stability
* All add-on hardware comes complete with leads and sockets — no soldering or drilling necessary
* Durable, lightweight metal case
* Fully professional keyboard — with space bar
* Mother board provided free

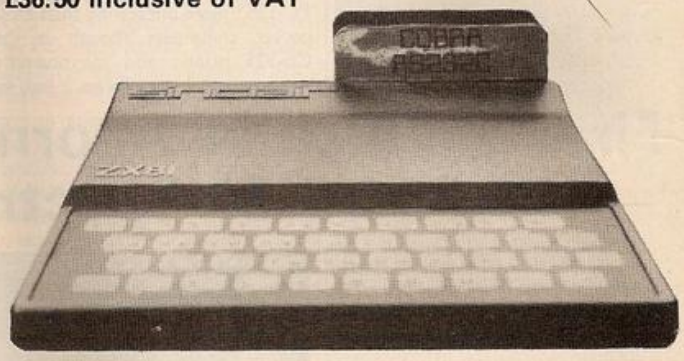

£71.30 inclusive of VAT

MICRO E.

SMALLER BROTHER OF THE COBRA 1000

Up to 6 boards may be connected inside this case. Same high quality keyboard fitted in smart plastic case. Connects to your ZX printed circuit board in minutes — no drilling or soldering necessary.

£36.50 inclusive of VAT

COBRA POWER SUPPLY BUFFER

Ever had hours of programming work lost in a moment owing to fluctuations in power or accidental switching of of the wrong mains plug?
The Cobra Power Supply Buffer prevents such occurrences.
It is fitted between the Sinclair power supply and the ZX81. During any loss of power to the ZX the buffer will continue to supply 9 volts to the computer for up to half an hour (with a fully charged battery). The unit will recharge itself during normal power conditions. When a mains loss situation occurs, a red light emitting diode will warn the user of loss of electricity supply.

£12.50 inclusive of VAT

COMING SOON!

Watch this space for details of the Spectrum Microdrive interface for the 2×81 and others

Computer Club is here to encourage you to start your own local computer club or, if one already exists, to join it and become involved. We would like to hear of anything which has made your club a success, or of any projects or programs you are developing.

THE READING CONNECTION

Simon Beesley finds the missing link between simple Sinclairs and the mighty Cray 1, at the Thames Valley Computer Club.

CAMBRIDGE MAY BE the hub of the microcomputer world but the Thames Valley has claim to be England's Silicon and Software Valley for mainframe and minicomputers. Scattered around Reading and Bracknell are many of the leading computer manufacturers.

This concentration is reflected in the membership of the Thames Valley Computer Club. Tim Moore, club chairman, estimated that almost 85 percent of the members work in the computer industry.

The club meets upstairs at the Griffin, Caversham, just a few yards from the Thames itself.

As the members powered upstairs at 7.30pm, pints in hand, *Your Computer's* representative was impressed by a turnout of at least 50 people. The club can be said to be in the heavyweight division of computer clubs. Meetings are very well organised.

They start with RAM time — a random access session in which anyone can offer or request information or advice. On the evening *Your Computer* visited the club a newcomer asked if there were any other Sharp owners — there were — while someone else mentioned that he had been offered a job lot of "really rather sexy" Pericom terminals, going cheap.

Following RAM time Dr Ron Mount gave an entertaining talk entitled "WB-1 to Cray 2½". The WB-1 — the Weeny Bitter One — was a home-brewed computer Dr Mount built with the ACC way back in 1975. His theme was that improvements in computing power were largely a matter of clever technique rather than new technology. From the WB-1 via the PDP-11 to array processors, he showed their hardware architecture to be recognisably similar and the technology almost the same. Yet while the WB-1 could perform 100,000 operations per second and the latest PDP-11s a million instructions a second — matched by some micros — array processors can handle up to 12 million a second.

Dr Mount finished by describing the Cray-1 which performs 167 million operations a second.

As many people attend the club's Special Interest Groups as their main meeting. These meet elsewhere on other days and include groups for the Z-80 and the 6502 processors. The Z-80 group has been working on a cassette interface to enable programs to be passed between different machines like the Nascom and TRS-80.

There is also a basic Basic group for beginners. Details from Phil Warn on Reading 594874 or Roger Bird on Newbury 43855.■

Local society news

ZX-Aid Walsall

ZX-81 AND Spectrum owners are invited to attend the meetings of ZX-Aid, a Sinclair users' club which meets on the first and third Thursdays of the month in a local church hall. Plans are afoot to for competitions, machine-code courses and hardware projects. Telephone Conrad Roe on Walsall 25465 after 6pm for details.

Bangor and District

BANGOR and District Microcomputer Users' Group meets fortnightly at the Bangor Community Centre, High Street, Bangor. Details from Dilwyn Jones, Fodol Farm, Hafod Lane, Bangor.

Micros in Perth

THE PERTH and District Amateur Computer Society has been formed recently and meets on the third Tuesday of each month at Hunters' Lodge Motel, Bankfoot. Meetings start at 7.30pm and include a talk or demonstration. Contact Alastair MacPherson on 0738-29633 for more information.

West Midlands group

THE WEST Midlands Computer Group was set up in August this year and has already produced two issues of their magazine, *Databus*. They will be holding monthly meetings in Birmingham. Details from Steve Walker on 021-422 7405.

HOW TO GROW UP TO A REAL COMPUTER

SEE US AT 5th ZX MICROFAIR
DECEMBER 18th
NEW HORTICULTURAL HALL, LONDON SW1.

If you're enthusiastic about microcomputing, sooner or later you'll ask yourself the question . . . "where do I go from here?"

This is particularly true if you own a micro with limited expansion and hardware peripheral options . . . like the ZX81.

Now your question can be answered in three short words:

BASICARE MICRO SYSTEMS

BASICARE are the inventors, developers and manufacturers of a totally unique microcomputing upgrade system.

It's the sort of system others have dreamed about . . . a series of separate modules that perform a whole range of microcomputing functions that simply (and firmly) stack together.

How BASICARE build into a complete computing package.

If you're confused . . . don't be . . . you only have to think of it in terms of the way Hi-Fi equipment has evolved.

You buy the hardware you want and add to the system! Each module may have a separate function or integrate functions. And when you want more . . . you add more!

In short you can develop a whole range of hardware options that fit together to form a complete package . . . "Computing" in the real sense of the word!

And what a package!

Apart from it's good looks and stability under working conditions, BASICARE MICRO SYSTEMS offers a fantastic range of micro options for ZX81 users.

Of course, such a system needs a starting point from which to expand. The heart of BASICARE'S system is a unique computer interface which we call PERSONA.

This one unit simply plugs into your ZX81 without modification and acts as the "brains" of the whole operation.

Thereafter you choose how you want to expand your micro by simply plugging-in more modules.

Look at the choice you have:

PERSONA — An interface module to enable an ORGANIC MICRO to grow on the ZX81.
MINIMAP — A memory mapping device to extend the address space of the ZX81 from 64K bytes to 1 M bytes.
RAM 08 — A low cost, low power memory expandable from 2K to 8K.
RAM 16 — 16K Add on memory at remarkably low cost.
RAM 64 — A TRUE 64K Add on memory.
DROM — Ultra low power memory backed by rechargeable battery for non-volatile storage of programs and data.
TOOLKIT — A module fully socketed to take up to 8K bytes of utilities in EPROM/ROM.
PERICON a — A general purpose, user programmable device providing 24 lines of input/output.
PERICON b — 24 lines of heavy duty output to access and control the outside world.
PERICON c — A module to drive 80 column printer with Centronics type parallel interface.
USERFONT option — User definable characters available for RAM 08, DROM and TOOLKIT.

Of course, there's lots more BASICARE Modules under development including joysticks, EPROM Programmer, Floppy Disc Controller and much more.

BASICARE is the sort of system that GROWS when you grow . . . and remember, when you change your micro, you will be able to change to a PERSONA unit to suit your new equipment!

In short, BASICARE will serve you forever . . . no matter how big you want to grow!

"As space is limited to describe BASICARE products, we have produced a fully documented brochure . . . send for it today (enclosing stamp please).

BASICARE MICRO SYSTEMS

BASICARE MICRO SYSTEMS are available by mail simply by sending today together with cheque/PO./Access or Barclaycard No. Please indicate clearly your exact requirements.

GAMES

FLEXIDISC

Three games are included on this month's *Your Computer* flexidisc, one for the ZX-81, one for the Spectrum and one for the Vic-20. Bill Bennett keeps you on the right tracks.

THE FEEDBACK we received after the first *Your Computer* flexidiscs revealed two facts. First, we discovered that you wanted us to provide software for a wider variety of microcomputer. We regret that it is just not possible to provide a disc for every machine on the market, but our latest disc does cater for three of the most popular home computers, the ZX-81, Spectrum and Vic-20.

The second revelation concerned people who could not get the first flexidisc to load: often they had not read the instructions. Some had even played the record upside down. This, then, is the first point to check. The software is recorded on the other side of the disc to the writing — so turn the disc over.

Make sure you select the right track for your computer. The first, and longest track is the ZX-81 game. To load it, you must have a 16K RAM pack. The program lasts over six minutes and is an adventure game based on *The Hitch-hiker's Guide to the Galaxy.*

At the end of the first two tracks is a special lock-groove. This is a groove which traps the stylus, and stops it from moving any further in towards the centre of the disc. The reason for this lock-groove is that it stops the accidental loading of the next track on the disc, which could have chaotic consequences.

To load either the second or third track, you must first position the stylus before letting the turntable move. On modern equipment, the best technique is to raise the recording arm, start the turntable and gently lower the arm into place. On older equipment try locating the stylus while holding the turntable still with your other hand.

If you decide to record to tape from the record player, rather than loading directly — the first option is the wiser — the best method is to turn the tape recorder on early. After you have recorded the software on to tape, wind it back and then listen to it. Make a note of where the actual program starts, rewind a fraction and load from there.

Having successfully loaded the program into your computer, you should once again copy it, to provide a back-up version.

The second two programs both last less than one minute. It is important that the instructions regarding locating the grooves are followed correctly, otherwise the program will not load. The Spectrum program loads in two halves, and is called Night Racer, the Vic program is called Antispace 2.

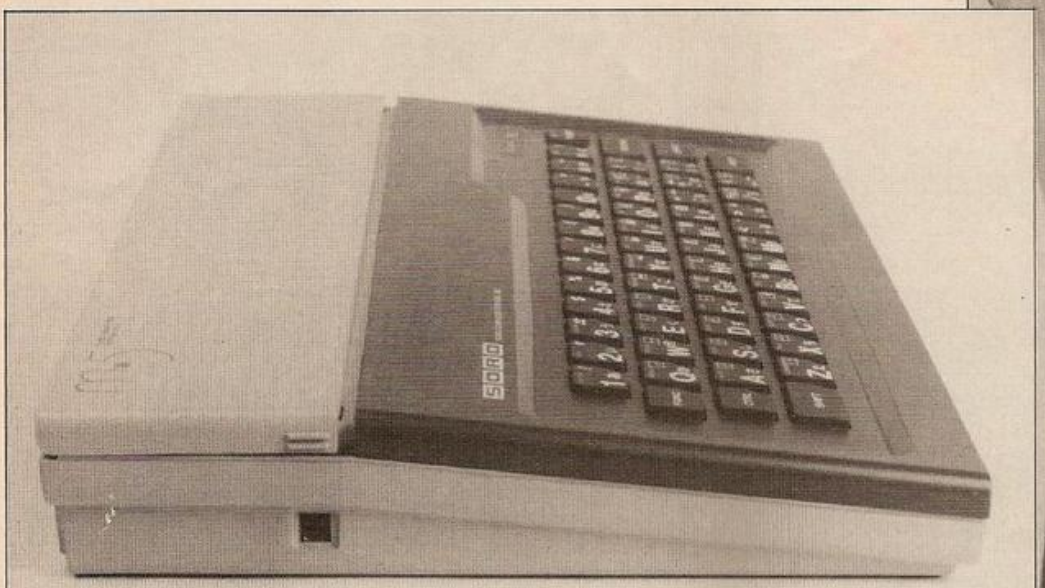

To load the Vic program, you must have the Commodore cassette unit.

Be prepared to spend some time loading the tapes; it is doubtful that you will get everything right first go. ■

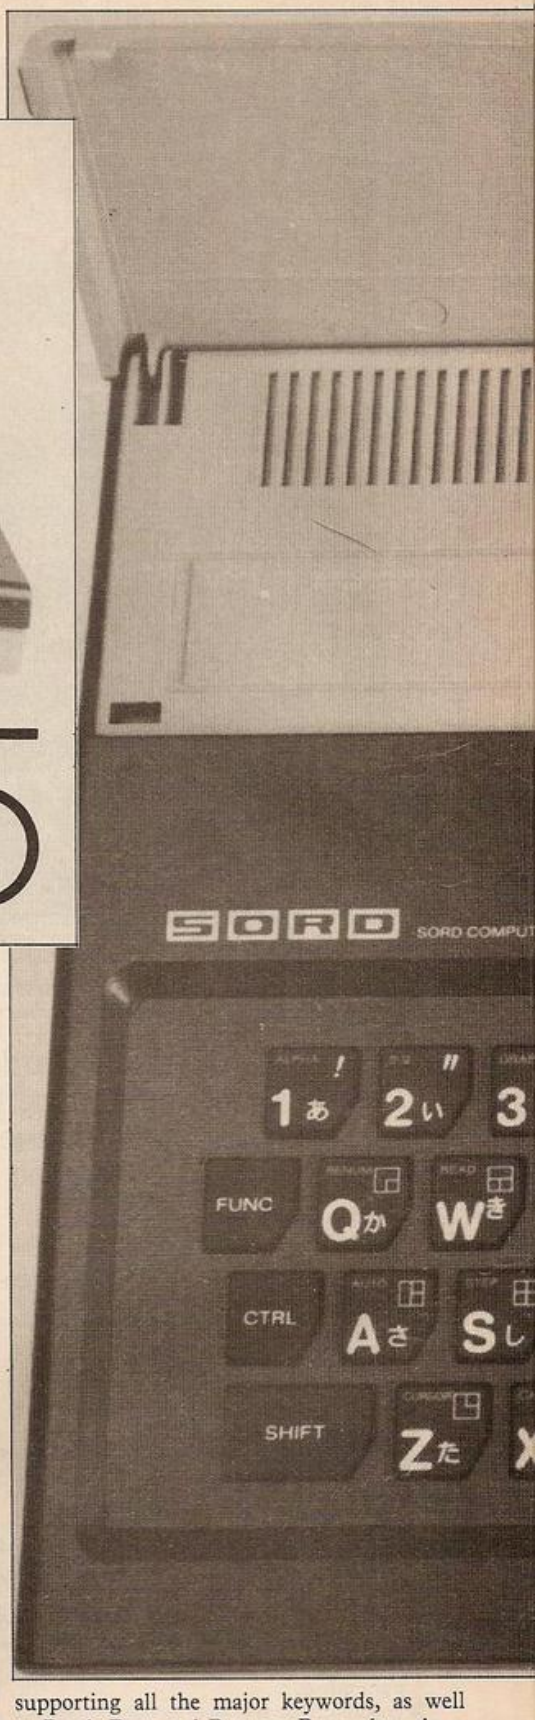

Sleeve notes

- The disc has been cut in mono. If you can, transfer it to a mono tape recorder. If this is not possible, record on one track only of a stereo recorder by turning one channel right down.
- Ensuring that the level is right is perhaps the most difficult stage. If your equipment has VU meters, set one channel right down, and the other to a point less than zero dB.
- Remember the speed is 33 rpm.
- If you can use a mono stylus then do.
- Record the software from the disc with the same tape recorder you intend to use for loading the computer with. Sometimes recording heads on different cassette records do not actually line up, and so many sounds do not play back exactly as recorded.
- Look at the patterns on the screen when loading to Sinclair computers. You should be able to judge if the level is too high or too low.
- It is easier to type LOAD "" on the Spectrum and ZX-81, and just LOAD on the Vic-20.
- Finally, remember that the Spectrum program runs directly from Load. Also, expect the ZX-81 screen to go blank for a while as soon as it is run. If nothing happens after a minute, Break and look at the listing. Sometimes individual bits of the program can be corrupted on loading, but these are easily debugged once the program has been loaded.

REVIEW

SORD M-5

Made in Japan, but can Sord's £100 colour and sound micro make it over here. Tim Langdell tests its mettle.

HARD ON THE HEELS of the Sanyo PHC range we reviewed in October comes this new micro from Sord — Japan's fastest growing computer manufacturer. The M-5 is a Z-80A based micro with 8K of internal ROM, 4K of user RAM, and 16K of video RAM. It can produce up to 32 different colours on the screen at once, with a variety of resolutions from 32 by 24 up to 256 by 196. All this for £100 sounds almost too good to be true.

Externally the M-5 is beautifully designed and made to the high standards expected of Japanese electronics. It measures 10.5in. wide, 7.25in. deep, and 1.5in. high, which makes it slightly bigger all round than the Spectrum. The two-tone grey plastic casing opens to reveal a bright yellow back, which houses the ROM cartridge slot.

Stable and portable

The M-5 is heavier than it looks which makes it extremely stable whilst still being very portable. The keyboard is similar to the rubber matting of the Spectrum, but feels better. The keys are dark-grey with the letters and numbers sharply contrasted in white. Graphic characters are in bright yellow on each key, and have been designed to be easily visible without making the keyboard seem too cluttered.

There are two shift keys — one on each side — and these, along with a space and return key, are all larger than the other keys on the board.

The keyboard also boasts a control key, a function key and a reset key. Looking more closely it becomes apparent that most keys have a Basic keyword on them in small light-grey letters. These are difficult to see, which might be a problem for the first-time user but the keyboard is easy to use once learnt.

On the negative side, the keys are not placed at typewriter pitch as the Spectrum's are — but are about three-quarters typewriter size. This undoubtedly makes typing harder — although considerably easier than on the calculator-style keyboards of pocket computers. The keys also do not have very much travel, making key presses a little less positive than they might be. An automatic keyboard beep partly makes up for this, but does nothing to remedy the lack of a full-size space-bar.

The Sord M-5 has single-key entry like the Sinclair. However, this is not its usual mode of operation, and far from all the keywords it recognises are on the keys. The M-5 responds like most micros, putting the letter or number on the key on to the screen rather than a keyword with the first key press. But single-key entry is quite easy by holding down the function key as the other key is pressed. The M-5 thus offers the best of both worlds.

What is puzzling, though, is why Sord has failed to put some keywords on the keyboard. For is there but To is not. Little-used keywords such as Auto, Renumber and Call are there, but If and Then have to be typed in.

The M-5 has 32 graphics symbols in ROM which speeds up games programming particularly.

The Sord's Basic is reasonably powerful supporting all the major keywords, as well as Read, Data and Restore, Renumber, Auto line numbering, Joy to read the joysticks, and Hex$ which converts decimal numbers to Hex. The Basic is supplied on a ROM cartridge rather than being resident inside the machine. This has the advantage that future enhancements can be sold in the form of a new Basic cartridge, but has the disadvantage that the unit is useless without a cartridge plugged in.

The Basic is more fussy than in Sinclair or

Microsoft-based computers such as the Dragon. Syntax checking is not done until the program is Run, and the error reports are very brief and hard to understand at first. They are of the form

ERROR 2 IN LINE 1

The keywords usually need a space after them, when Sord could have made the Basic automatically put them there. Let is understood but not necessary. However, it is added when a List is pulled. If you omit a space in a crucial spot the M-5 may assume it is dealing with a Let statement and insert Let in the program. This could be rather confusing for a beginner.

Minor criticisms aside, the Sord performed very well, being one of the fastest Z-80A-based micros I have seen in anything like this price range. The screen handling seems considerably faster than the Spectrum's for instance, and the demonstration ROM's fast-moving graphics confirmed this impression. One program showed an entire screen, full of information being smoothly scrolled at a fair rate, and large spacecraft being moved fast and smoothly across the screen which is not easy on many computers — even in machine code.

The Sord has at least two screens which can be written to independently. Up to 32 graphic shapes or sprites can also be defined and called at will to create cartoon effects and very smooth graphic movement. The M-5 has four modes of operation in addition to the sprite mode. The sprite mode allows the super-

(continued on next page)

(continued from previous page)

imposition of screens so that one is seen through another. In this manner the demonstration program showed a constant background of Mount Fuji with the letters comprising Sord moving smoothly around the screen.

The other four modes are:

- Text-only mode with no colours and a 40 by 24 screen display, each character made up of eight by eight character squares. This mode appears to be teletext-compatible in its format but not in its availability of colour.
- Graphics 1 mode in which the screen is mapped in eight by eight pixel character squares on a 32 by 24 grid with a possible 32 colours available.
- Resolution of 64 by 48 with 16 colours available. Each character square is a four by four dot matrix.
- Graphics 2 mode in which one has full graphics with a resolution of 256 by 192 and up to 32 colours. However, only two colours are available in any given character square.

There is only 4K of internal RAM, while the memory map is labelled in the Japanese manual with most of the remaining area as extra external RAM/ROM — which implies that Sord has extension RAM cartridges in mind. Certainly other languages such as Pips, Sord's equivalent of VisiCalc, are available on ROM.

The M-5 seems well equipped for the games player with joysticks and plug-in ROM games, but also well suited to the more serious user if the memory can be expanded. It has both a television output at the rear and a video and sound output. The joysticks simply plug into tiny DIN sockets, and there is a port for a Centronics printer. The power supply is external and rather cumbersome.

The M-5's sound capabilities are better than those on, say, the Dragon or the Spectrum. The Sord has three independent sound channels which can produce a variety of music and synthesised sounds. Again the demonstration cartridge showed off by depicting three animals on screen playing tunes in three voices complete with the striking of piano keys and bowing of a violin. The sound benefits from being sent via the TV or video system rather than from an internal speaker.

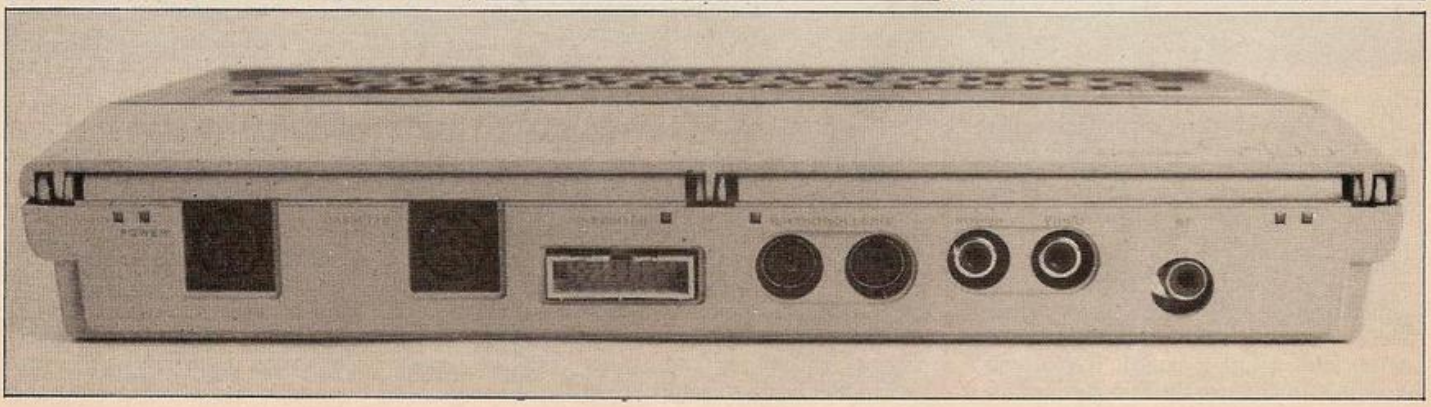

The M-5 supports Inp and Out in Basic to control Z-80A ports, but has no obvious connector to the external world other than the ROM cartridge slot into which the Basic must be inserted. This makes it unlikely that it could support a disc-drive or control equipment via I/O ports unless a custom-made unit will be made available to sit in the ROM socket.

CONCLUSIONS

- For £99.99 the Sord M-5 will be a strong contender in the home computer market when it becomes available next month.
- Stylish appearance and compact design could make it look attractive on the High Street.
- Games players will be attracted by plug-in software, joysticks, and definable sprites.
- The more serious user may be attracted by a fast Basic which has many useful characteristics such as Renumber and Auto, and by the presence of a Centronics interface and video outputs.
- 4K of internal RAM is inadequate. Sord would be well advised to consider a RAM upgrade cartridge to compete with the bigger memories of the Spectrum, Oric and the other colour micros in the £100 range. ■

SURVEY
VIC SOFTWARE

Neville Ash provides a yuletide round-up of all that is best in Vic-20 software

PROGRAMS FOR THE Vic come in two main types: cassettes which range in price from £5 to £10 and have the slight drawback of slower loading, or cartridges which give almost-instant loading — but can cost up to four times more than a cassette.

What about floppy discs for the Vic? They are available at just a couple of pounds more than cassettes, so they appear the perfect choice. The only problem is the price of a Vic disc drive — around twice the price of the computer.

However, once 3in. and 3.5in. discs arrive on the market, companies like Commodore may be forced to reduce the price of their disc drives in order to compete.

Audiogenic's games are supplied in both cartridge and cassette form and we had samples of games in each form. Three cartridges were supplied — one would not fit until pushed very hard into the slot at the back of the Vic; in fact it started to come apart. Even so its performance was not affected.

The three games supplied were Renaissance, a joystick version of the popular game Othello; Satellite, a game similar to Asteroids with excellent graphics; and Meteorite, similar to Defender but a well-implemented example of this type of game.

Audiogenic also supplied four games in cassette form. Cosmic Kamikaze, a game similar to Invader 4 — Space Invaders with mountains — is available in two versions, one for an extra 3K and the other for an extra 8K. This is a slow game that records the number of shots as you fire.

Amok is similar to Super Robots: you have to clear the space station of dangerous robots. You appear coloured purple and all the robots are green. It starts very simply, but once you reach the fourth level it is really difficult to win. Star Wars involved moving your space ship to the centre, then firing — not very challenging — and the last game — Alien — took longer to load than almost any other game and was still merely average.

Bug-Byte provided five different games in cassette form. Backgammon has three levels, with a realistic throwing of the dice, and could prove quite compulsive: good value.

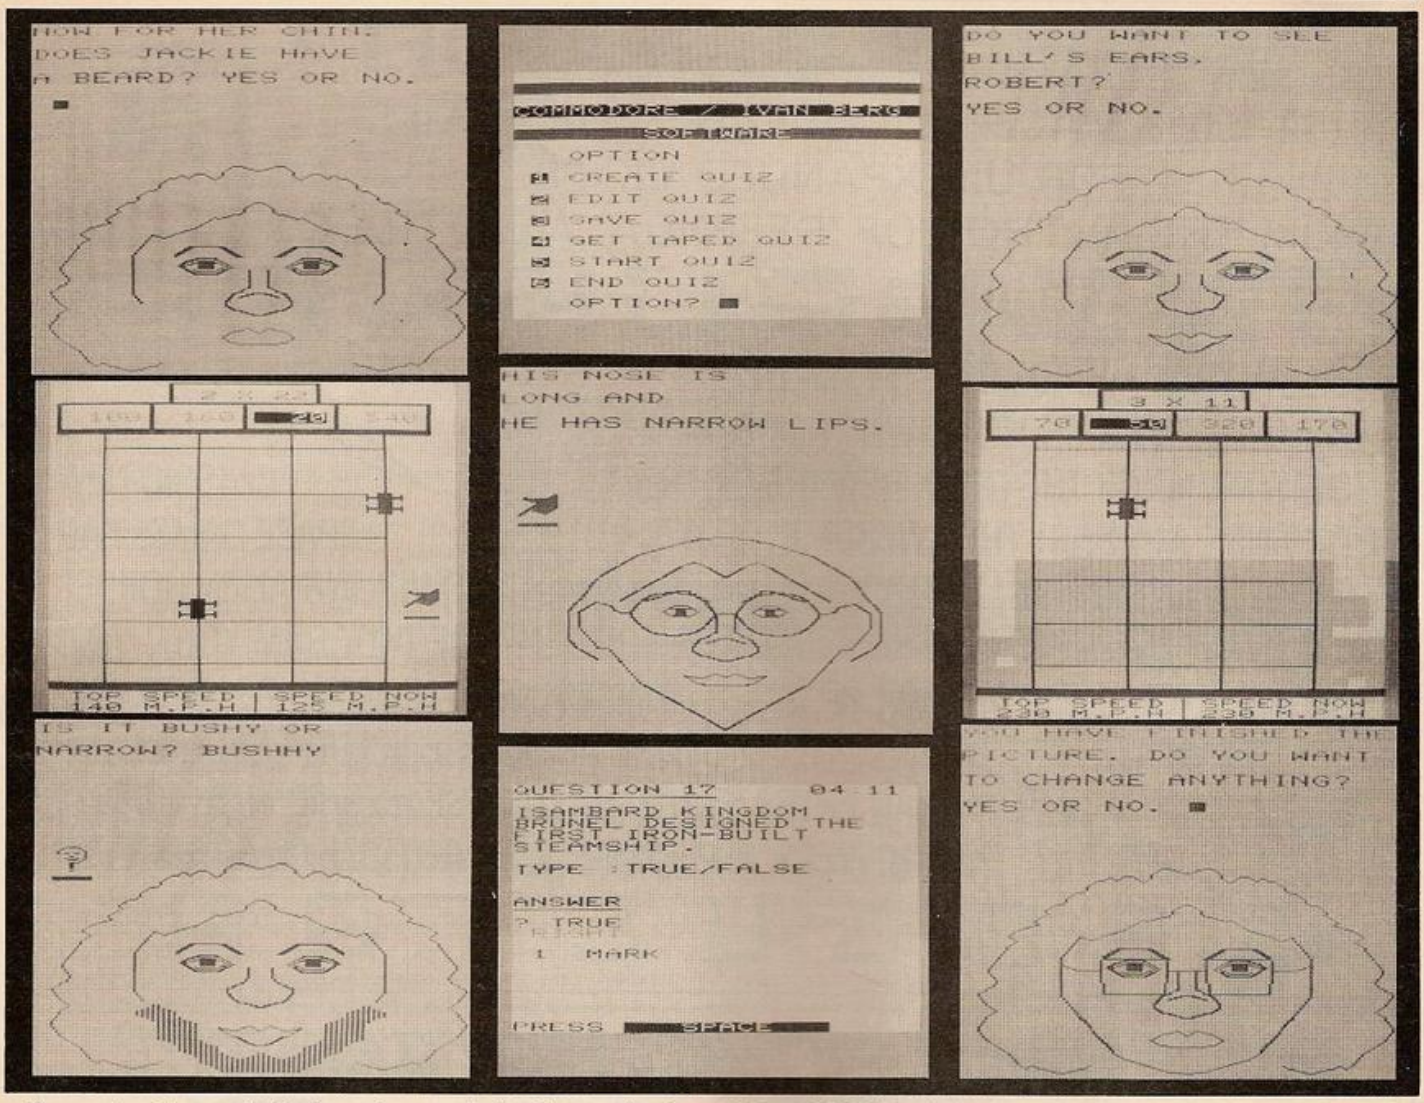

Vic Panic is as good as the arcade game, going up and down ladders at high speed and digging holes. It is very effective, a real fast-moving game. Bug-Byte's Cosmiads is really another version of that tried and tested game Galaxians and as these types of game go, it is slow.

Another Vic in the Wall is yet another version of Breakout, starting with a blue wall, then a yellow/green wall, it has left and right keyboard operation and paddles. Initially it seems far too slow, but as you progress it really speeds up. Asteroids is another old friend and is a good example.

Commodore itself had recently started promoting a wide range of packages for the Vic and we obtained a wide range, including three in cassette form and five in cartridges.

All the cartridges were Adventure games: Adventureland, Pirate Cove, Mission Impossible, Voodoo Castle and the Count. Each one gives you full instructions for saving a game, as you are unlikely to finish one the first time.

More important, you are given details of mapping — a logical approach to checking your progress by producing a flow chart. Mapping saves time and lets you complete a game in a shorter amount of time.

Commodore Mastermind is almost the same as the program, without Magnus Magnusson. Especially as extra cassettes are available for other specialised subjects. We were supplied with General Knowledge 4 and three specialised subjects: Sport and Games; Film and TV; Wine, Food and Music. Up to four people can play.

You first load the operating tape and start. You are asked how many players are involved, and their names and occupations — just like on TV. When they state their specialised subject, you must load the appropriate tape. After this part you repeat the process for each contestant.

The game comes complete with two cassettes, one for the operating system and the second for general knowledge questions. So if you want to play with four people, it is best to buy the extra specialised subjects cassettes which are only £1.99 each. An ideal family Christmas present.

Vic Quizmaster lets you create your own quizzes for teaching or your own entertainment. It comes complete with a data cassette demonstration and gives you a number of choices. A question with matched answer, true/false, multiple choice or if you want to create your own type of quiz just enter the last option. By creating your own quizzes this program could let you produce your own versions of Mastermind. Very good value.

English Language for the Vic, is squarely aimed at people who are facing GCE O-Level and CSE examinations. It does its job well. There is a choice of composition, spelling, grammar, general, summary and comprehension. Further options available are a timed test, questions and answers, or answers left until the end. You are supplied with two

cassettes, the program and a data cassette. When you need to rewind the data cassette an instruction appears on the screen.

ASK stands for Applied Systems Knowledge, and this company produces a range of six tapes for learning and fun at home. Each one needs a 16K RAM pack and the loading time is clearly stated on each cassette.

Facemaker is an interactive program with three levels of difficulty. It is intended to improve spelling and vocabulary, plus sharpening up observation. You actually draw the faces on the screen and the graphics are of an extremely high standard. Intended for 5-12 year olds, we showed it to some 10 and 12 year olds and they found it fun; they learnt too.

Number Chaser, as the name implies, improves skills that could have lapsed through the use of calculators — and micros. There are four levels. This one was also liked by the 10 and 12 year olds.

We Want to Count is aimed at the youngest audience — three-year-olds upwards and has excellent graphics with a four-part program that the children can use on their own.

Twister is a problem-solving program where a geometric puzzle must be rearranged so that no column or row contains a repeated colour. You can have from three to 10 columns and if you get stuck, there is a help facility. Once you have mastered Twister, then you can try Super Twister on the same tape.

Last of the six programs from ASK, Rainbow Towers, is a game concerning six towers, three of them with discs to be moved to the other ones. The discs are of different sizes and as they move the colours change. You must end up with each tower having a disc of a single colour arranged in a specific order.

It can be considered to be another version of the classic Towers of Hanoi, a puzzle which appears very simple in theory, but not in practice. Designed for eight-year-olds upwards; however, this game is one which would appeal to older people too.

(continued on page 33)

* NEW FROM LLAMASOFT *

ONLY **£6** EACH

2 100% MACHINE CODE ARCADE GAMES
FOR UNEXPANDED VIC-20
FROM THE AUTHOR OF 'DEFENDA' AND 'TRAXX'

ABDUCTOR

ARCADE QUALITY SOFTWARE FROM LLAMASOFT!!

by Jeff Minter

Spectrum ATARI 400/800 VIC-20 **ZX81**

SPECTRUM

GRAPHICS CREATOR (16K)
NOT just another character editor! This one allows you to define not only the 21 user definable characters, but also allows you to change the entire 96 character ASCII set. Creates BYTES files ready for you to load into your own programs. Includes advanced Reflect, Invert, Field commands etc. Complete with full documentation. If you are at all serious about SPECTRUM graphics, then bin the BIN statement and use Graphics Creator with its easy on-screen cursor editing. **£2.95 + 50p P&P.**

BOMBER (16K)
Yes, a full feature version of the popular game 'Blitz', supplied for the 16K or 48K Spectrum. **For only £2.95 + 50p P&P.**

ROX III (16K)
Blast the falling meteors as they invade your planet, cruise missiles are your only defence in this world of disaster. If they break through the crust of your planet then your life support systems will fail. A very addictive game with fast action and great graphics. 16K or 48K Spectrum **only £2.95 + 50p P&P.**

SUPERDEFLEX (48K)
The idea of this new game is to bounce "Sid", the space invader, around the screen into the power pods, keeping away of course from the devil who chases you around the screen. Steer with your Deflex shields, but beware the mines or you may be buried alive! Superb graphics and fantastic sound on the 48K Spectrum only. **Only £4.95 on cassette + 50p P&P.**

VIC-20

ANDES ATTACK
Fly your ramjet fighter over the Andes mountain range and protect your llamas from kidnap by hostile UFOs. Features 5 kinds of UFO, controls include up, down, reverse, fire, thrust and smart bomb. Entirely machine code. Requires 8K expansion and joystick. £8+50p p&p.

TRAXX M/C 8K+ EXPANSION
This is the VIC 20 version of the brand new arcade game 'Amidar', a cross breed between the now famed 'Packman' and the game 'Quix'. All in machine code, fast and fun with joystick controls, uses Hi-Res colour graphics. 8K or larger memory expansion needed. **Only £8.00 + 50p P&P complete with instructions.**

RATMAN!
Another amazing game from Llamasoft!! You are the man under attack by the deadly rats as they fall from the sky. You must dodge the arrows to get to the rats and then squash them with your hammer before they dig under the platform on which you stand, and mutate into devils. Fast action with really fun graphics to make an extremely addictive game. 8K or larger memory expansion needed. Uses Hi-Res colour graphics, in machine code. **Only £5.00 + 50p P&P complete with instructions.**

BREAKOUT/DEFLEX
Unexpanded package a full feature version of the popular arcade Breakout plus a new concept in computer games, Deflex!! Both programs on one cassette **only £3.95.**

BLITZKRIEG (3.5K)
As seen at the Commodore show and reviewed by the Daily Telegraph. Fly your Vulcan Bomber over the enemy city and destroy the buildings. 25 levels of play, uses Hi-Res colour graphics and plays Rule Britannia between waves. **Only £4.95 complete with instructions.**

GAME GRAPHICS EDITOR
Create your very own custom characters for the unexpanded VIC 20, up to 64 characters with facilities such as reflect and save on cassette etc.

SOFTKEY 24
This program, designed to run on the VIC 20 with any memory size gives you the facility of 24 key words on your function keys. Key words include peek, poke, run, save, list, for next etc. Both programs on one cassette **only £6.00 + 50p P&P with full documentation.**

ATARI 400-800

TURBOFLEX
Superb ultra-fast and totally new ball game unlike any you have seen before. Uses ATARI's unique features to the full. Incorporates superb colour/sound effects and uses Player/Missile graphics. Tables top 10 scores along with Scorer's name. **£6.00 + 50p P&P.**

GRAPHICS/CHARACTER CREATOR
Now you can define your very own custom character sets, or edit the existing sets. Results are fully displayed on screen in modes 0, 1, 2. Special features include reflect, invert, save character sets etc. Supplied on cassette with data sheet **only £8.00 + 50p P&P.**

ZX81

CENTIPEDE (16K ZX 81)
The ORIGINAL game from the ORIGINAL author. This is the identical program to that being sold by other companies for three times our price. The game has received ecstatic reviews in the computing press. Program has 30 speed levels and ever increasing Centipede hordes. Tables top 10 scores and their names. Why wait to pay more? **Only £1.95 + 50p P&P.**

LLAMASOFT SOFTWARE

Trade enquiries welcome.

Please add 50p P&P with all orders

(continued from page 31)

Llamasoft provided just the one game — Gridrunner — in cassette form. The lowest-priced of all the software in this feature, Gridrunner is one of the most interesting games, being a version of Caterpillar with a red grid. You have to try to chop the caterpillar into tiny pieces until it is destroyed. A very fast game and really effective use of graphics.

Postern Software provided two games in cassette form, Siege and Shadowfax. Siege is another popular game available in similar versions on other brands of micro. The idea is to try to stop the hordes of infidels climbing up the wall of your stronghold and taking over. In this version you throw blue objects down at the increasing numbers of infidels and when you think you are winning, they increase and move faster. A good value game.

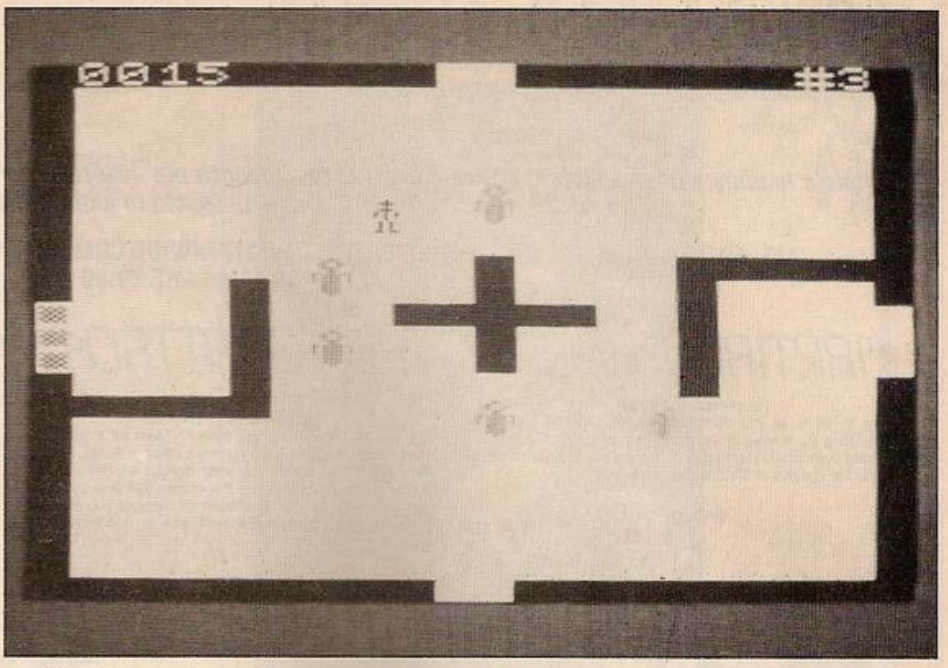

The second game from Postern, Shadowfax, is completely different from any of the games in this feature. You have two sets of horses and riders — one white, the other black — riding towards each other on a green background. A nice change from the versions of Space Invaders and Galaxians.

Rabbit Software of Harrow supplied five games on cassette and one of them stood out as being far better than most of the other games reviewed. Called Myriad, it needs an extra 3K and is one of the fastest-operating space games available. While lots of games have four, six or even ten levels, Myriad has almost 200 and a fantastic range of hazards — from ordinary bricks dropped by a builder to lethal bombs.

You can be attacked by a virus, but it takes three attacks to kill you. Dangerous reflectors send your beam back towards you, so you can wipe yourself out by mistake. On your side are shields, which last for just four and a half seconds and you get three of them for every 10,000 points — a compulsive keyboard or joystick-operated game.

Space Phreeks from Rabbit has 15 different phases before it repeats. You need to shoot down different types of alien and as you progress through the phases it becomes far more difficult.

Rabbit's Nightcrawler is a game like Centipede — a version of the one with the worm. Here you have 39 levels and you have to chop up this night crawler and destroy it. A version of Pac-Man goes across the screen at the same time to destroy it. This is a very fast game.

Hopper gives you the problem of crossing a busy motorway, then over a river full of logs running along it. You must dodge through the traffic, avoid being knocked down, then use the logs to cross the river. Another fast game.

Rabbit's Space Storm is really intended for young children. You are in space and must destroy the incoming aliens. You are given a long range view to see what will be coming towards you and if you are hit, a damage report in percentage terms is shown at the bottom of the screen. As you destroy the aliens the speed rapidly increases and you are given three lives.

Romik Software supplied five programs all designed to be used with the unexpanded Vic. Shark Attack sets you the objective of trapping the sharks before they can cause any damage. You control the net and the entire screen can be filled with nets. Your primary task is to separate each shark into its own space. The simplest way is to produce a lattice framework over the screen. Quite different from any of the other games, but quite simple.

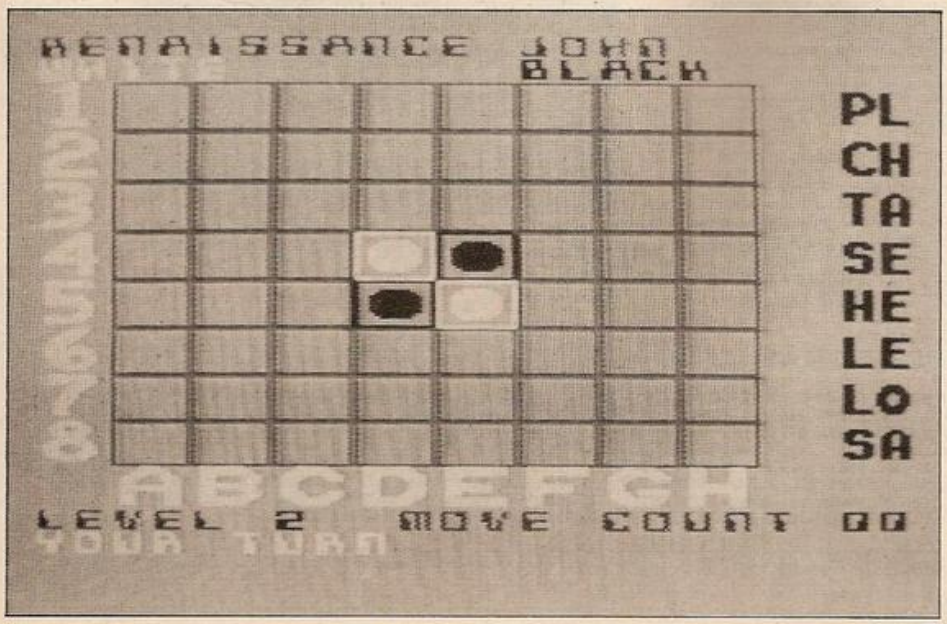

Sea Invasion from Romik frankly looked just like Space Invaders apart from the description on the cover of the cassette. A good example of this type of game, but nothing really different.

Martian Raiders would not load with the tape recorder and Vic I was using, so I gave it to someone else to use on their machine. Still no joy. The screen showed error 17184 plus run out of memory, but I could not see any indication of any extra memory being needed.

Mind Twisters shared the same problem as Martian Raiders. This one was also checked on another Vic, but still no luck.

Out of all the Romik tapes the best one of all must be the Music Synthesiser. Using the controls from Q to * and A to = it is possible to make music very quickly. You will be surprised how fast you can produce music for yourself.

Both Shark Attack and Martian Raiders have "Be Champion of the World" written across the packaging, so you have free entry to an exciting competition. It is a pity two of the programs would not run; however when lots of tapes are being copied you can find the odd ones that just do not copy properly. ■

CONCLUSIONS

- Owners of the Commodore Vic-20 have one of the most popular micros in this country. Out of literally hundreds of games available we have looked at a cross-section of 39 — these span the range from Space Invaders derivatives to the thinking man's Adventure games, not forgetting the educational packages.
- Cassettes have the edge in price over cartridges: discs are almost as cheap, but it may be wise to see if the prices of disc drives fall radically as the market alters.
- Price is no indication of quality: cassettes costing £5 stood up very well against far more expensive programs.
- Beware of super graphics on the packaging, it is rare for them to look the same on the screen of your Vic.

ROMIK SOFTWARE

24 Church Street, Slough SL1 1PT. Telephone: Slough (STD 0753) 71535

ROMIK PROMISE A MINIMUM OF ONE NEW GAME EVERY MONTH

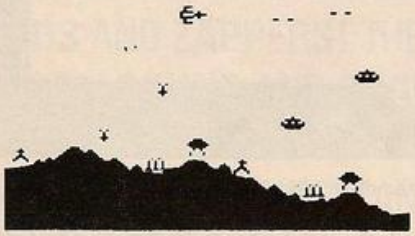

Britain's leading games software house are proud to announce our new range of exciting games and other software for the Vic20. (Games for BBC, Dragon, Spectrum and Atari available soon.)

ALL ACTION GAMES CARRY A FREE ENTRY TO NATIONWIDE COMPETITIONS WITH FANTASTIC PRIZES
ALL PROGRAMS ARE £9.99

MARTIAN RAIDER

For unexpanded Vic20

Skim as close as you dare to the surface of the planet, devastating the Martian cities, destroying ammunition dumps (gaining more time), shooting down the ground-to-air missiles and UFOs, dodging or blasting the meteorites.

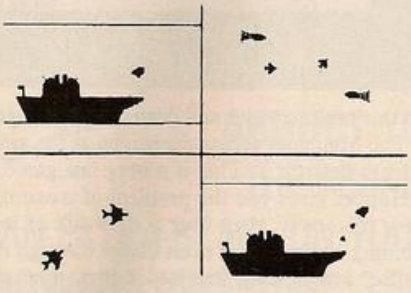

"A real action shot of the game"

AIR-SEA ATTACK

For expanded Vic20
You can use 3K or 16K RAM

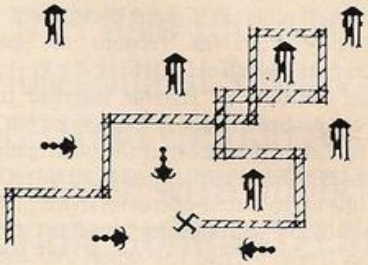

Can you plot a modern jet fighter? Take off from your aircraft carrier and engage enemy aircraft in battle. Shoot them down and then drop your bombs on the enemy aircraft carrier. Watch out — the enemy fighter is trying to do the same! If he gets past your air defence you are left to defend your own carrier with sea-air missiles. You each have three jets.

SHARK ATTACK

For unexpanded Vic20

You are in shark-infested waters after being thrown overboard from a pirate ship. Your only protection being an atomic net which you trail behind you, trying to cover all the visible ocean and ensnare the sharks at the same time. Beware of stopping or covering your tracks for too long, if you do, then the sharks will escape and come after you. Watch out for the ever increasing deadly octopi (somtimes the sharks will eat part or all of one!)

"A real action shot of the game"

MIND TWISTERS

For unexpanded Vic20
Four games to stretch your brain

Blackjack, Decipher, Four Thought and Teaser are our computerised versions of very popular home games and will test your mental agility and skill for many a long hour.

BLACKJACK

You start with £1,000, the objective being to break the bank, to do this you have to win (including your starting money) £20,000.

Instructions. You have to score nearer (but not over) 21, than the computer does. The computer deals your first card, you then place your bet and hit the return key, the computer then deals your second card. If you want another card hit the "C" key, if not hit the "S" key.

Points. Ace 1 or 11, Jack, Queen, King 10.

Scoring 21 points with 2 cards — you automatically win.

Scoring 21 points or less with 5 cards — you automatically win.

Draw — the computer wins.

Your kitty is automatically adjusted win or lose. If you lose all your kitty — game over.

DECIPHER

You have to guess what combination of colours the computer has selected — to enter a colour just hit the colour button on the computer, when you have entered your five choices of colour, the computer will display (a) Nothing at all — none right; (b) Black or white squares or both — for every black square you will have a correct colour in the correction position, for every white square you will have a correct colour in the wrong position. If you cannot find the complete combination, it will be displayed when you have had twelve attempts.

FOUR THOUGHT

You have to make a line of four squares — horizontally, vertically or diagonally BEFORE the computer does, taking turns to take a square (squares can only be placed at the bottom of the grid or on top of another square). **Keys.** Hit the number key of the column you want your square dropped in, then hit the return key.

TEASER

The aim of the game is to score "15" BEFORE the computer does, using any combination of three boxes. If you cannot score "15" then you must try and stop the computer from doing so and force a draw. **Keys.** Hit the number key of the box that you want (you can only select an empty box).

MULTISOUND SYNTHESIZER

For the unexpanded Vic20

The Vic Multisound Synthesiser is very flexible and can be played in more ways than can ever be explained here, to create music and special effects. For example, create any tune, up to 255 notes (after following appropriate instructions), then press "F1" or "F3", then key "9" and enjoy the added effect. Now hit "+", listen to the difference. For a surprise — hit "−". Now add a melody over the top — hit key "8" then "7" — now play a melody, or experiment. *Have fun!*

For the unexpanded Vic20

SEA INVASION

Fight off the attacking sea creatures for as long as you can. Shoot the whale for a surprise score, watch our for the crabs, starfish and octopi.

You are a commander of a fleet of destroyers. Looking on from the safety of Mother Ship, you send in one destroyer at a time to blast a passage through the **MOONS OF JUPITER.**

Your destroyers have to dodge and blast the UFOs . . . Watch out for the Gologs, they can smash your destroyers, but you cannot harm them.

MACHINE CODE
ARCADE QUALITY GAME

SPACE ATTACK is a game of skill. You as the pilot of an intergalactic battleship have to fight your way through wave after wave of various alien spaceships.

ONE FULL-TIME FULLY EXPERIENCED MACHINE CODE PROGRAMMER WANTED URGENTLY

SOFTEK

3D MAZENTURE

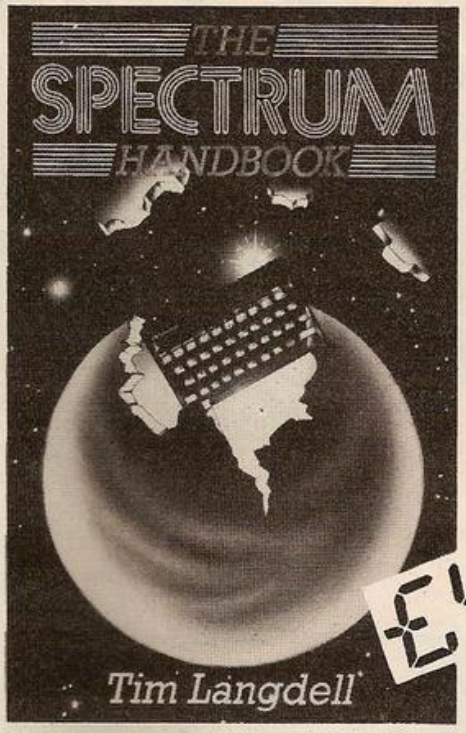

An exciting new 3D Maze game and Adventure all in one — with more than a hint of Dungeons and Dragons. Amazing machine code animation. Only £5.95.

NEW!

COMPILER

FOR 48K SPECTRUMS WITH MANUAL

Ever wished you could wave a magic wand and turn your BASIC programs into machine code ones? Now you can (well almost!). You type in your program in SPECTRUM BACIC, then in seconds "SUPER-C" turns your program into a machine code version! Compiled versions run at least 10 times faster than BASIC, and much faster than other languages such as PASCAL, FORTH etc. Amazing value for £9.95 (including a manual written by Tim Langdell)

£4.95

Just out from CENTURY PERSONAL COMPUTER WORLD and written by Tim Langdell — writer for Your Computer, ZX Computing, Practical Computing and Popular Computing Weekly. Whether you're a beginner or experienced in computing, if you're a Spectrum owner then this is the book to buy. The Spectrum Handbook is the most complete guide to the machine on the market — taking you from first principles in programming through graphic art, education, business and games writing to an introduction to machine code and hardware modifications. Packed with over 80 exciting programs and routines — including 3D ploting, a filing system and a maze game and offering a host of hints and tips.

METEOROIDS

Many hundreds of buyers have acclaimed this the fastest and smoothest version of the popular arcade game for the Spectrum — the only version with full colour, three meteoroid sizes, hyperspace, thrust, sheild, mothership, freeze-frame, high score, bonus ship at 10,000, etc. Even if you have another version, this one is a must for your collection. With machine code synthesised sound effects which left other software houses wondering how we did it, this has to be the best value around for only £4.95 (for 16K or 48K Spectrums) STOP PRESS: NOW WORKS WITH KEMPSTON ELECTRONICS' JOYSTICK! Available from us for only £19.50 inc.

WRITERS

Softek, now one of the leading software houses are looking for good programmers to join our team of experts. If you are interested in making typically several hundred pounds a month in your spare time and can write for ANY popular micro computer, then we'd like to hear from you. We offer the best royalties, have many retail outlets here and abroad, can offer assistance with programming (we have most machines), and, of course, can allow programs to be developed with our COMPILER (and we alone retain the right to sell programs created with it).

SOFTIME

This amazing program uses several machine code tricks to give you a real time clock continuously on the screen, even when you're developing or running another program! has alarm facility, and option of disabling the NEW and/or BREAK keys. Special offer £3.95

SEND A S.A.E. for our free catalogue detailing such new products as CALC-U-VU, BIZICALC, SCREEN KIT 1, TOOLKIT 1, and more. Also ask about our software for the BBC machines and DRAGON 32.

THE SPECTRUM ROM DISASSEMBLED:

A reference guide for the serious user. In 3 volumes, with a full disassembly in HEX and mnemonics with guides to using ROM routines. Vol 1 (0000-1000H) £5.00

Introducing...new from

YOUR COMPUTER CLASSIFIED ADVERTISING

From the February issue, Your Computer — Britain's largest selling home computer magazine is to introduce a classified advertisement section.

The introduction of this section opens up a new and exciting opportunity for advertisers to regularly, effectively and economically sell their products and services to the largest audience of potential customers offered by any home computer magazine.

It also provides an excellent "shop window" for private advertisers who wish to buy, sell or exchange equipment with other enthusiast readers of Your Computer.

To place a classified advertisement in Your Computer, simply complete and return the order form below.

SELL IT WITH YOUR COMPUTER

CLASSIFIED ORDER FORM

Classified Rates
Linage: 30p per word (Min 15 words) — prepayable
Linage advertisers should complete the form provided in BLOCK CAPITALS. Phone number counts as 2 words. Name and address to be paid for if used in advertisement. Box Number if required is £3.00 extra.

Display — rates per scc (Min 2scc)

One Insertion	:	£7.00
Three Insertions	:	£6.70
Six Insertions	:	£6.50
Twelve Insertions	:	£6.00

Display advertisers should provide separate copy and preferably reserve space by phone (01-661 3036).

Method of Payment
Cheques etc, should be made payable to Your Computer and crossed "& Co"
I enclose herewith cheque/PO for

GAMES SPECIAL

ZX SPECTRUM FL

Rod Hopkins applies his knowledge of multi-million pound pilot trainers to produce the most realistic simulator ever published for a home computer.

THIS FLIGHT simulator is a fairly elaborate program leaving little memory to spare in a 16K Spectrum. In consequence, a methodical approach to some resolute typing is demanded of the would-be pilot.

Firstly, type in the main program, listed in figure 1, Saving it in auto-run mode:

```
SAVE "BA 111"LINE 1
```

Having verified the recording, turn to the machine-code dump in figure 2. Enter this code by way of a short routine such as the following:

```
9990 FOR N=1 TO 236:PRINT 23295+n,:INPUT
     "Enter byte",i:POKE 23295+n,i:
     PRINT i:NEXT n
```

This procedure allows checking of each byte as entered. Once complete, the code should be saved immediately following the main program on tape:

```
SAVE " "CODE 23296,236
```

Again, verify the recording. Leave the tape set at the end of the code and type in the screen-plotting routine listed in figure 3.

Now type Run, switch the recorder to record, press Enter, and the display will be saved. In future, the screen will be loaded directly from tape by the main program; but to be on the safe side, save the plotting routine elsewhere.

Next, a little guidance on using the program. In the first place, do not expect flying an aircraft to be too easy. Figure 4 enumerates the controls used — familiarise yourself with them before running. Note that the method of keyboard decoding used means that a single, brief key-press will be read. Notice also that some controls operate as on/off switches.

Shortage of RAM precludes any attempt at making the program completely bombproof, though most of the silly possibilities which delight bug-hunters have been foreseen. For example, the undercarriage cannot be raised on the ground, and the brakes will not work in the air! Figure 5 gives a concise chart of the area around Edinburgh Airport, the arena of the simulation, showing beacons and two runways. This chart is available on a CRT monitor in the cockpit during run time. Navigation is by means of the beacons, which provide two types of information. First, radial: this is your bearing from the beacon in use; and secondly, DME: distance from the beacon — Distance Measuring Equipment.

Beacons EDN and UWB must be used to approach the runways. Radial and DME are displayed on the central panel of the cockpit, to the right of which a head-up display indicates the direction of the beacon by a flashing cursor in relation to the plane's heading.

The CRT monitor mentioned serves three purposes: it defaults to an artificial horizon display, the plane being viewed from the rear over a horizon which swings in proportion to roll, attitude, lift. Secondly, map: this gives beacon positions, and that of the plane if within the boundaries of the display — a dot within a flashing square. The latter is not updated while the map is accessed. Third, a view of the runway while landing.

Some final points about the cockpit. Warning lights are provided for brakes on, gear up when landing, emergency fuel, plane descending — Rate of Climb becomes Rate of Descent — and plane approaching out-of-control condition.

In connection with the last mentioned, remember to increase power/speed/flap, to

THE REAL INVESTMENT

NEW:
THE X-ROMCARD

FOR YOUR ZX81

WHAT IS *SO* SPECIAL ABOUT THE SPECIAL RAMPACK?

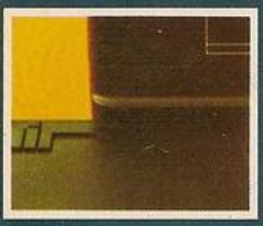

fig. 1

fig. 2

WHAT IS SO SPECIAL ABOUT AUDIO'S 16K SPECIAL RAM PACK?

THE SPECIAL RAM PACK (16K) is the latest design of its kind, following at least a dozen similar products. It has many of the good points of its predecessors, including packs manufactured by **Sinclair Research, Memotech, Bygbyte** and **Econotech** to cite a few of the best known.

With the experience we have gained with memories both for the **ZX 81** and a **wide range of other Micros**, we are also able to offer some **exclusive new features**:

THE CASE: **The SPECIAL RAM PACK** has been designed to overcome the infamous '**wobbling**' problem associated with many other packs, and does not resort to **temporary solutions** such as **Velcro, Blutak, adhesive strip** or a huge, unsightly case. It clamps positively to the ZX 81 by means of a special built in ridge aided by a **resilient spring effect** in the connection socket (see figure 1).

EXPANSIBILITY: **The SPECIAL RAM PACK** is not only compatible with all software and hardware produced for the **ZX 81**, such as the **ZX printer**, but it also has the edge over other packs with its **expansibility**. You will find it interesting that the **keyboard sounder** option is already included in the **SPECIAL RAM PACK**. It also has **expansion pins**, ready to receive **— in the same case —** the most advanced add-on ever designed for the ZX 81 **— the X ROM CARD** (see figure 2).

WHAT DOES THE X-ROM CARD OFFER?

1. **The X-ROM CARD has a built in autostart ROM.** Programs can be run automatically every time the ZX 81 is switched on. This will result in a huge increase factor for **ROM based software**, since all software houses are currently very aware of copyright piracy problems.
2. **The X-ROM CARD has a built in printer interface**, necessary if you wish to use a printer other than the XZ printer. **This is invaluable for any serious applications**, including **word processing**, where careful presentation is of the utmost importance.
3. **The X-ROM CARD has a built in EPROM burner.** This means that you can save Basic or Machine code programs onto silicon chips and play them back at any time.
4. **You may of course buy the X-ROM CARD to use with other Ram Packs** such as the **Sinclair Ram Pack.** However, when you purchase the X-ROM CARD with the SPECIAL RAM PACK, you will have the advantage of lower cost, greater reliability and neatness, since the whole system is nicely housed within a single case.

IN CONCLUSION, **The SPECIAL RAM PACK**, is the **best immediate investment** for your **ZX 81**. The availability of the **X-ROM CARD** opens the way to new software development such as **languages programming** and is the guarantee that your system will never be obsolete.

THE BEST GUARANTEE THAT YOUR ZX81 WON'T BE OBSOLETE FOR ONLY:

£ **19** .95

including VAT

TECHNICAL SPECIFICATIONS:

- SPECIAL RAMPACK:
  - **Memory capacity:** 16K bytes.
  - **Maximum speed:** 200 ns access time.
  - **Power requirement:** Use exclusively Sinclair PSU.
- X-ROMCARD:
  - **Autostart ROM:** 4K byte, exchange for 8K bytes and software switch possible. Displays memory size, checks for byte "00" (identifies ZX basic) @ 2000H. Loads program if found, checks for byte "C3" and jumps (2000H) if found. Checks for presence of ROM in socket n.3 and ROM catalog, displays catalog if found. Contains also machine code monitor and printer utility.
  - **Preprogrammed ROM:** Catalog available on request. Use only 2732 or 2764 ROM/EPROM.
  - **Blank EPROM:** Use only 2764 — 8K bytes per device — in socket n.3. 3 × 9V, PP3 size batteries are needed to burn EPROM.
  - **Printer connection:** 16 pin DIL output, use standard IDC ribbon cable. Outputs include DO to D7, Strobe, Reset, Inputs include No-fault and Busy.
  - **Documentation:** Schematic diagram included, full listings of Autostart ROM extra (only for X-ROMCARD user, £1.50 + large SAE)

(continued from page 38)

increase lift. Both ROC and ALT meters show thousands of feet in the top window, feet in the lower.

Take-off will not be achieved at speeds less than 100 knots, or with an altitude less than 10. For Landing, bearings are given on the chart. Try to approach on a glide path — insurance against engine trouble — losing height at around 6-800 feet a minute. The CRT will not indicate permission to land, that is when the runway is shown, unless your angular approach is viable ±10° of ideal. Once committed to landing, the attempt must be seen through. To practise landing, define your location at the prompts with:

Beacon?="EDN" ; Radial?= 70 ; Heading?= 250 ; DME?= 2. Increase flap angle to maintain lift as speed falls, and do not forget to brake fairly quickly after touchdown, when the altimeter shows 10 feet, as the runway is not indefinitely long.

Figure 6 gives a breakdown of the components of the program.

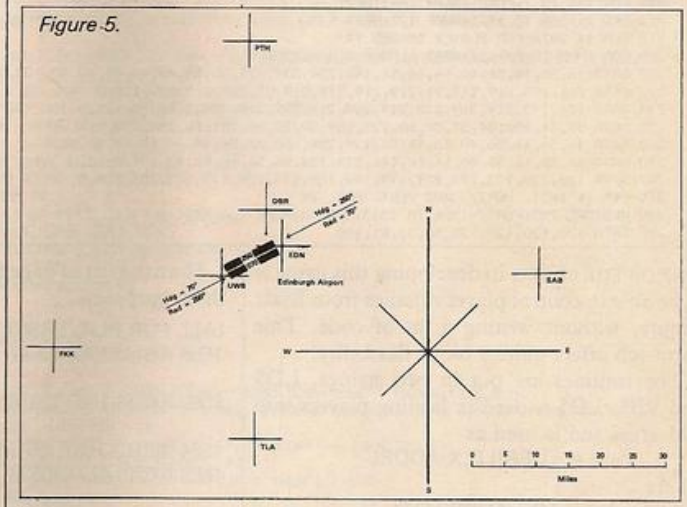

For the interested who do not have the stamina or the time to type in the simulator themselves, a cassette of the complete program is available for £3 from the author, Rod Hopkins, at 116 Pilmuir Street, Dunfermline, Fife, Scotland. ■

ONE OF THE objects in developing this game is to be able to control player missiles from Basic simply, without writing a lot of code. This approach offers quite a bit of flexibility.

The routines are put in two strings, LD$ and VB$. LD$ is used in loading players into PM areas and is used as

A=USR(LD,X,ADDR)

where

LD=ADDR(LD$)

X is the player number, 0-3, and ADDR is the address where player data is located. Data must end with a 0. VB$ is a routine inserted in the vertical blank routine. It is quite complicated and uses a number of locations in page 6. I will try to describe the approach used.

Each joystick is associated with one player. If you do not want to use the joystick to move a certain player, that player can be masked out. Individual directions of movement can also be masked. For example, a player can be made to respond only horizontally or only vertically to a joystick. Orthogonal movement — only vertical or horizontal — is also an option.

The orthogonal movement can be such that a player moves only when the joystick is pushed or the joystick can be used only to change directions of moving objects. Beyond movement by joystick, a continuous movement in a certain direction can be forced with or without joystick control on top of this background movement. Finally, the speed of the object can be controlled by Poking a single byte.

Here is a list of page 6 reserved locations and their purpose:

(ALL FOR PLAYERS 0 TO 3 IN ORDER)

1556 (0614)-1559 (0617)	HORIZONTAL POSITIONS
1560 (0618)-1563 (061B)	VERTICAL POSITIONS
1564 (061C)-1567 (061F)	DIRECTION BYTES
1568 (0620)-1571 (0623)	LOW-BYTE PLAYER AREA POINTER
1572 (0624)-1575 (0627)	HIGH-BYTE PLAYER AREA POINTER
1576 (0628)-1579 (062B)	REPETITIONS (SPEED)
1580 (062C)-1583 (062F)	MASKS FOR JOYSTICKS
1584 (0630)-1587 (0633)	FORCED DIRECTIONS

Direction bytes are like those produced by the joysticks. They could be Poked directly into locations 1564-1567. Values other than 15 give motion in the direction indicated. Position is updated every vertical blank period so at the slowest speed a player will cross the screen in about three seconds. To move faster Poke increasing numbers in the speed bytes. Motion can also be stopped by Poking zero in the speed byte.

Masks are Ored with bytes from the joysticks. Since a 1 bit represents a No for a particular direction, a 15 — hexadecimal 0F — will cut out all directions, that is, eliminate that joystick. Other useful masks are:

12 — ONLY VERTICAL MOTION
3 — ONLY HORIZONTAL MOTION
0 — NO RESTRICTIONS ON MOTION

Directions are also Anded with forced-direction bytes. Zeros represent Yes directions, so a 15 has no effect, and other directions are as those produced by the joystick.

Orthogonal movement cannot be handled by masks alone so a routine is included for this option. Line 54 tells the change necessary to skip this option. Also, when in the orthogonal mode, you can choose continuous motion with the joystick used only to change directions. Line 55 has the change required.

Working with interrupts is tricky. To ensure no conflicts, our VBI routine should be taken out before doing machine language routines other than single Pokes. A routine to do this is located in page 6

A=USR(1546)

A=USR(1536) inserts our VBI routine again. For sake of speed, the load player routine contains these other two routines at the beginning and end. This means loading the player routine automatically inserts our VBI routine.

I found out the hard way that a Load of players has to follow initialisation of PM graphics. In PM, graphics (line 370) has to follow any graphics mode change.

When getting out of the program to Basic, use the Reset key to take out the VBI routine. If you use the break key and do anything else before hitting Reset the system will crash.

Necessary page 6 data — masks, speeds, pointers, etc — could be read in as in lines 45-55 but some of this will depend on size of

KEN RUN

Why did the chicken cross the road? Play this game for the Atari written by Stan Ockers and you will find out. Be among the first to break into Atari Basic games-writing.

SPECIAL

memory and should be initialised separately as in lines 210-212. The pertinent sections — roughly lines 10-290 and 370-390 — can be Listed to cassette and Entered when starting a new program. If no player is required, it is still a good idea to clear the player area with

A=USR(LD,X,ADDR)

where ADDR points to a zero data byte.

Collision routines are meant to be placed at the end of our VBI routine. As it stands only a very simple routine is provided. More complex routines are in the works. The routine provided simply stops both players that collide by setting their speed to zero. Detection of collision — line 510 — and resetting of the collision register and speed bytes is done in Basic.

Enough of this heavy stuff — what about the game?

Why does a chicken cross the road? To score points of course! Just move him with joystick 0, watching out for passing cars. The car speed goes roughly with difficulty — DIF — and DIF will increase each time you get across. DIF will decrease each time you are hit.

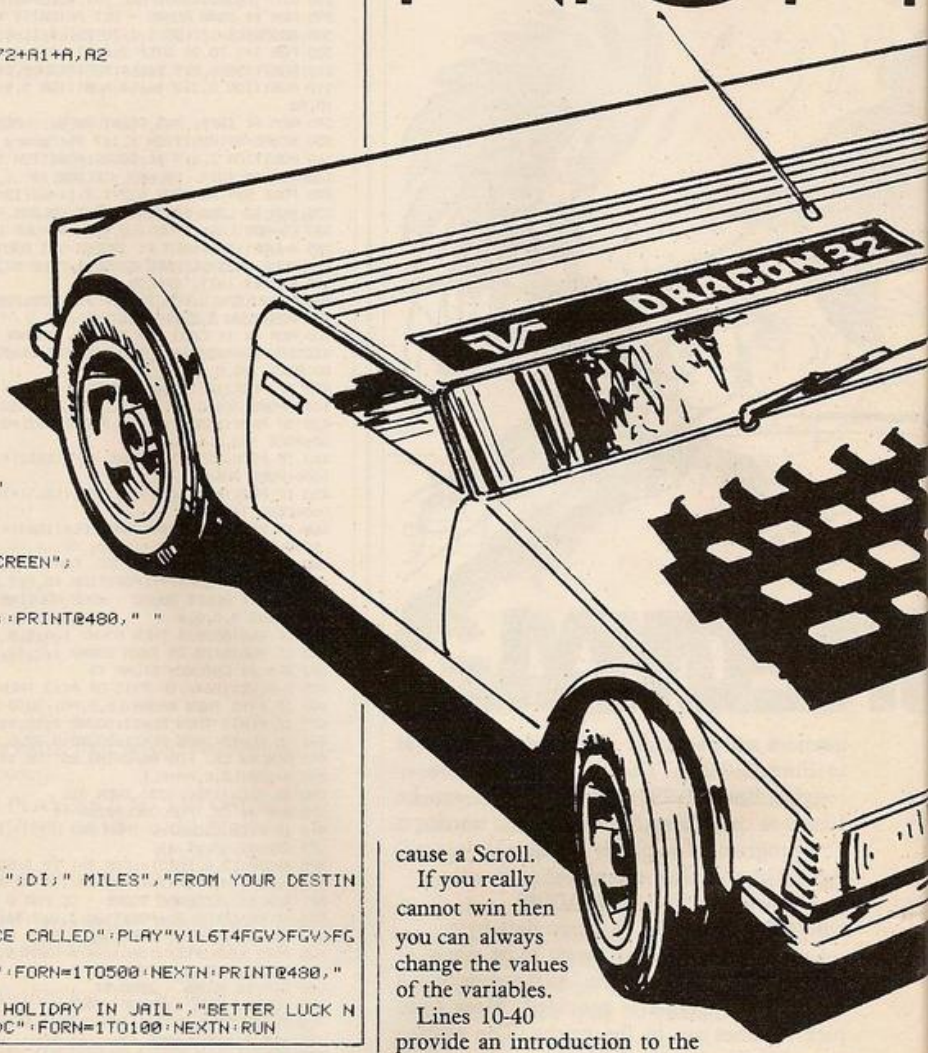

You start with 50 points and that score is increased by 10 times the DIF value each time you cross the road. Each time you are hit your score decreases by 20 points. You have about two minutes to start — each count is about four seconds — and 40 seconds will be added for each 300 points you score. Be the first in your clique of Atari gamesters to reach 10,000 chicken points! ■

With Keith Brain's Dragon disaster game you can blithely relish all the catastrophes that plague the holiday motorist without even setting foot on the ferry.

CHRISTMAS IS traditionally the time when everyone starts to think about next year's summer holidays but not, perhaps, the pleasures of holiday motoring. This program will sharpen up your driving skills and remind you of the sad consequences of bad driving.

As you are driving along a road which winds at random through the countryside you are confronted by various obstacles which have different consequences on the outcome of your journey.

Your joystick allows you to steer to left and right, accelerate and brake, whilst the fire button sounds the horn and may help you avoid a problem. With practice you will learn which obstacles must be avoided at all costs.

Your elapsed time and the distance to your destination are continuously displayed but can you get there before the ferry leaves? Did you remember to take those travel-sickness pills and check your tyres? Is it worth risking your driving licence when you already have two endorsements? How long must you wait for the traffic lights to change?

Try it out on your spouse — or your parents — and you might even persuade them that the holiday money is better spent on a new computer for the kids.

Here are some notes to explain the program construction and these will allow you to modify the program to include your own particular holiday terrors. Care must be taken when printing due to the automatic screen scroll on the Dragon. Remember to put the Print position back to where you want to print a new road section and that Poking does not cause a Scroll.

If you really cannot win then you can always change the values of the variables.

Lines 10-40 provide an introduction to the game and set the internal timer and distance to travel. Line 50 prints a blank road for you to start on.

Line 60 prints a new road section at a random Tab on the screen, increments the timer, and decrements the distance left.

Line 70 prints elapsed time and distance to travel in the top right-hand corner, then returns the print position to the bottom of the screen.

Line 80 determines the random Tab for the next road section. Lines 90 and 100 check that the road will not overflow the screen. Line 110 tests for the end of the journey.

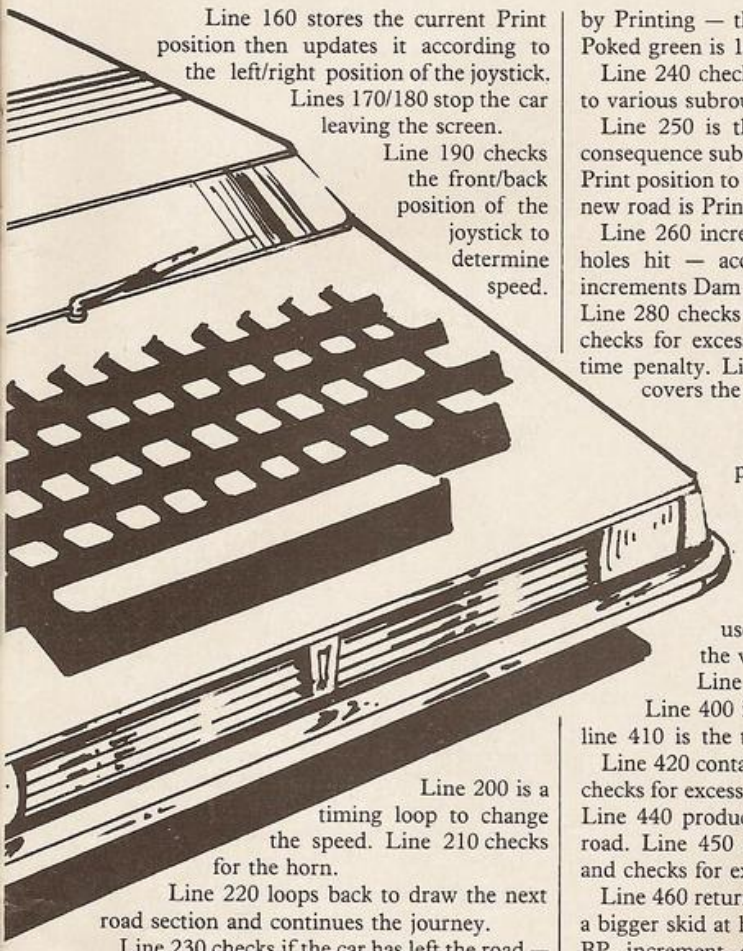

Line 120 Pokes black — 128 — into the current Print position to erase the car after each move.

Line 130 checks for the colour of the next Print position and, if it is not black, goes to the consequences subroutines.

Line 140 Pokes random colours in random positions on to the next road section. Line 150 Pokes the car on to the screen near the centre.

PECIAL

TMARE HOLIDAY

Line 160 stores the current Print position then updates it according to the left/right position of the joystick. Lines 170/180 stop the car leaving the screen. Line 190 checks the front/back position of the joystick to determine speed. Line 200 is a timing loop to change the speed. Line 210 checks for the horn.

Line 220 loops back to draw the next road section and continues the journey.

Line 230 checks if the car has left the road — note there are two identical greens with different codes on the screen; a green produced by Printing — that is, a space — is 96 but a Poked green is 143.

Line 240 checks for other colours and goes to various subroutines.

Line 250 is the pothole subroutine. Each consequence subroutine ends by returning the Print position to start of bottom line before the new road is Printed.

Line 260 increments Pot — the number of holes hit — according to speed. Line 270 increments Dam — damage — if speed is high. Line 280 checks for excess damage. Line 290 checks for excess potholes. Line 300 gives a time penalty. Line 310 resets Pot. Line 320 covers the consequences of excess Pots. Line 330 is another time penalty line. Line 340, the puncture subroutine. Line 350 checks for a previous puncture. Line 360, stop to change wheel. Line 370 records the SP — spare — used: time penalty. Line 380 is the washer subroutine. Line 390 is another time penalty. Line 400 is the bump subroutine and line 410 is the time penalty.

Line 420 contains the damage subroutine: it checks for excess Dam. Line 430 checks speed. Line 440 produces a random skid across the road. Line 450 increments BP — bumps — and checks for excess.

Line 460 returns to the road. Line 470 gives a bigger skid at high speed: line 480, a bigger BP increment at higher speed: check for excess. Line 490 returns to road.

Line 500, tyre worn out. Line 510, another time penalty line. Line 520 checks if the spare tyre has been used. Line 530 records that a spare tyre has been used. Line 540 is the collison subroutine — always fatal.

Line 550 starts new game. Line 560, accident subroutine: police called. Line 570, random chance of getting off. Line 580 signifies arrest, and starts a new game.

Line 590 is the traffic lights subroutine. Line 600, the random time for waiting on a red light. Line 610, amber traffic light. Line 620, green traffic light.

Line 630 is the crash subroutine; it increments Dam and checks for excess. Line 640 is the time penalty. Line 650, if the spare tyre has already been used, gives the distance covered before end.

Line 660 is the fall-apart subroutine and gives distance to walk home. Line 670 checks for time when the end of road has been reached. Line 680 if not excess, then congratulations. Line 690, new game. Line 700, the consequences of running out of time. Line 710, new game.

For those without joysticks, insert

```
1 D=10
```

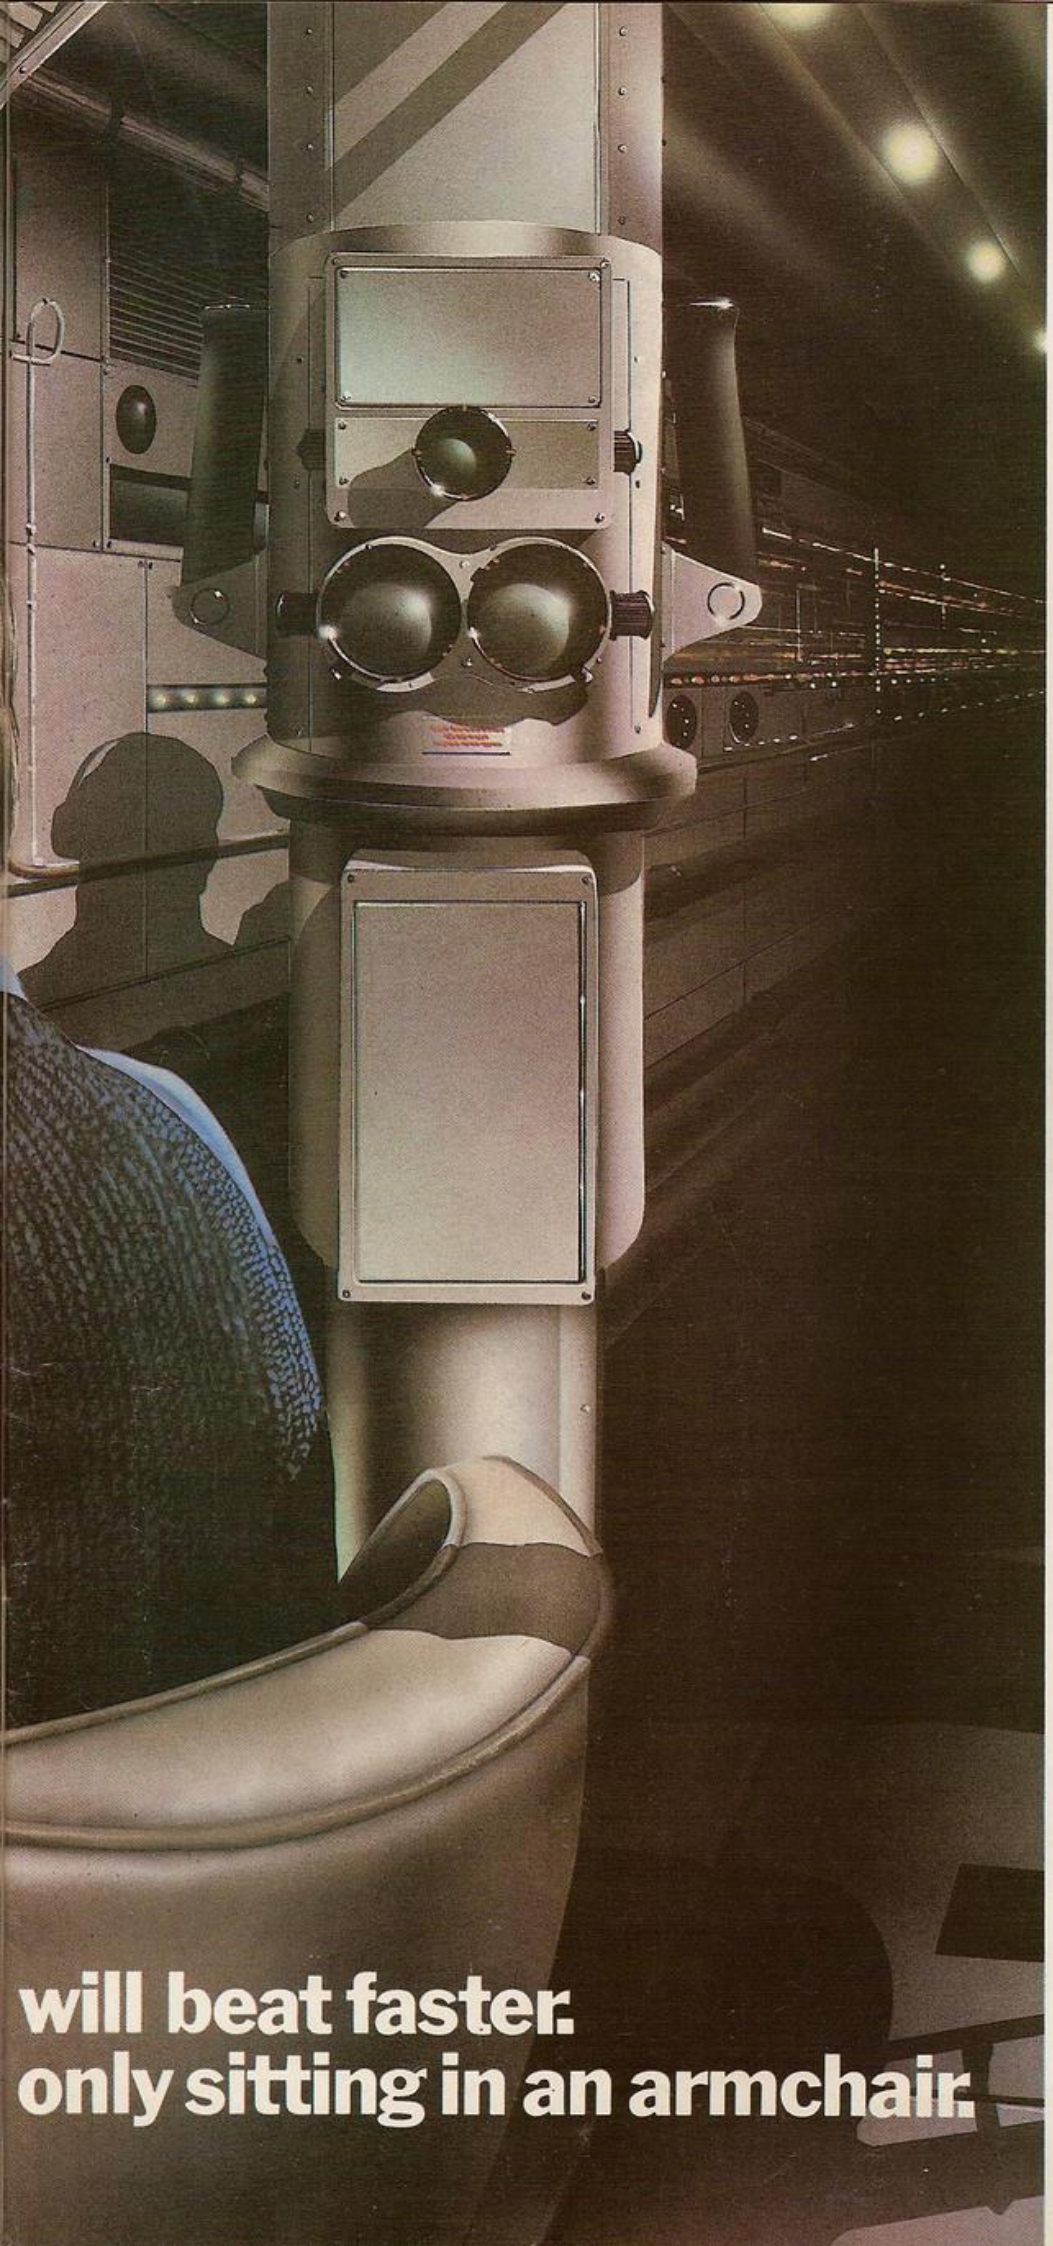

and alter lines 160, 190 and 200 to

```
160 Z=B:BA$ INKEY$: IF BA$="" THEN 170
    ELSE BA=ASC(BA$):
    B=B+((BA=8)-(BA=9))
190 SOUND C,1:D=D+(10*((BA=94)
    -(BA=10))):FOR N=1 TO D*5: NEXT N
200 IF BA=32 THEN PLAY"L4T10V31BCBC":
    BA=0:GOTO 60
```

The left and right cursor keys will now move you left and right, and the up and down cursors accelerate and brake. The space bar is the horn. ■

Your hands will sweat. Your heart
Your oxygen might run out. And you're still

will beat faster. only sitting in an armchair.

At seventy fathoms the only light comes from your Sonar, steadily tracking the advancing enemy fleet.

Suddenly they're above, dropping depth charges. You could dive. But how close is the sea bed? You could attack. But how many torpedos are left? And your oxygen. Isn't it dangerously low?

Submarine Commander. 12 K ROM. Cartridge. 3 screen modes: map, sonar and periscope. 9 skill levels. Controls: Fuel. Damage Indicators. Speed. Compass Bearing. Depth Gauge. Battery Charge. Oxygen. Hydrophone/ Engine Noise. Attitude. Clock. Depth below keel. Torpedos. Tonnage Sunk.

'Submarine Commander' is one of 21 challenging new home computer games from THORN EMI, for use with Atari 400/800 or Commodore VIC 20. Like our 'Jumbo Jet Pilot' it's more a real-life simulator than a game.

But our programs aren't all work and no play. 'River Rescue', 'Kickback' and 'Soccer' are all-action games. 'Pool' and 'Darts' will suit armchair sportsmen.

And whilst budding Beethovens play the 'VIC Music Composer,' would-be Chancellors can work on their budgets with 'Home Financial Management'. We also have educational puzzles for children that will puzzle adults at higher skill levels.

But there's one simple idea behind all our titles. They're designed for players who expect more of a challenge from a video game than creatures from outer-space can provide. Now, are you sitting comfortably?

THORN EMI VIDEO

The world's greatest TV games.

PROGRAMS FOR ATARI 400/800 (Trademark of Atari Inc. except where indicated).
*PROGRAMS FOR COMMODORE VIC 20 (Trademark of Commodore International).

Available from all branches of Laskys (Nationwide), Micro C at Currys, and all other leading Computer software outlets.

GA CO

Seize power in your own banana republic with Boylen and Harvey's game of subversion for the Sharp.

EL SHARPIRO is an independent country situated somewhere in the Caribbean. The capital, Diaz, is the only city.

The country is run by an evil dictator, Dr Emmanuel Jesus Ratok who runs the country for his own benefit. Ratok grows richer and the country grows even poorer.

He rules with a fist of iron in a glove of steel; all opposition is crushed by his sadistic army and police.

As leader of the newly-formed El Sharpiro Liberation Organisation — ELO — you have vowed to rid your homeland of this evil dictator and hold free elections for the first time ever.

As Dr Ratok has made himself president for life the only way to get rid of him is to stage a coup and depose him. To do this you must capture the army barracks and get a bazooka to knock out the only tank that guards his palace. To capture the barracks you must have automatic weapons and enough men to use them. The only place with the number of weapons you need is the police station. You must liberate the freedom fighters languishing in the state jail to get the number of men you need.

You can also capture the TV station and the bank. Until you capture the bank the president can use its funds to hire mercenaries. All these buildings are ringed by guard towers and it is very risky to attack the building without destroying its guard tower first.

To destroy the guard towers you need to buy some dynamite from your friendly, rich dealer in death and destruction, Adam Khagosshi.

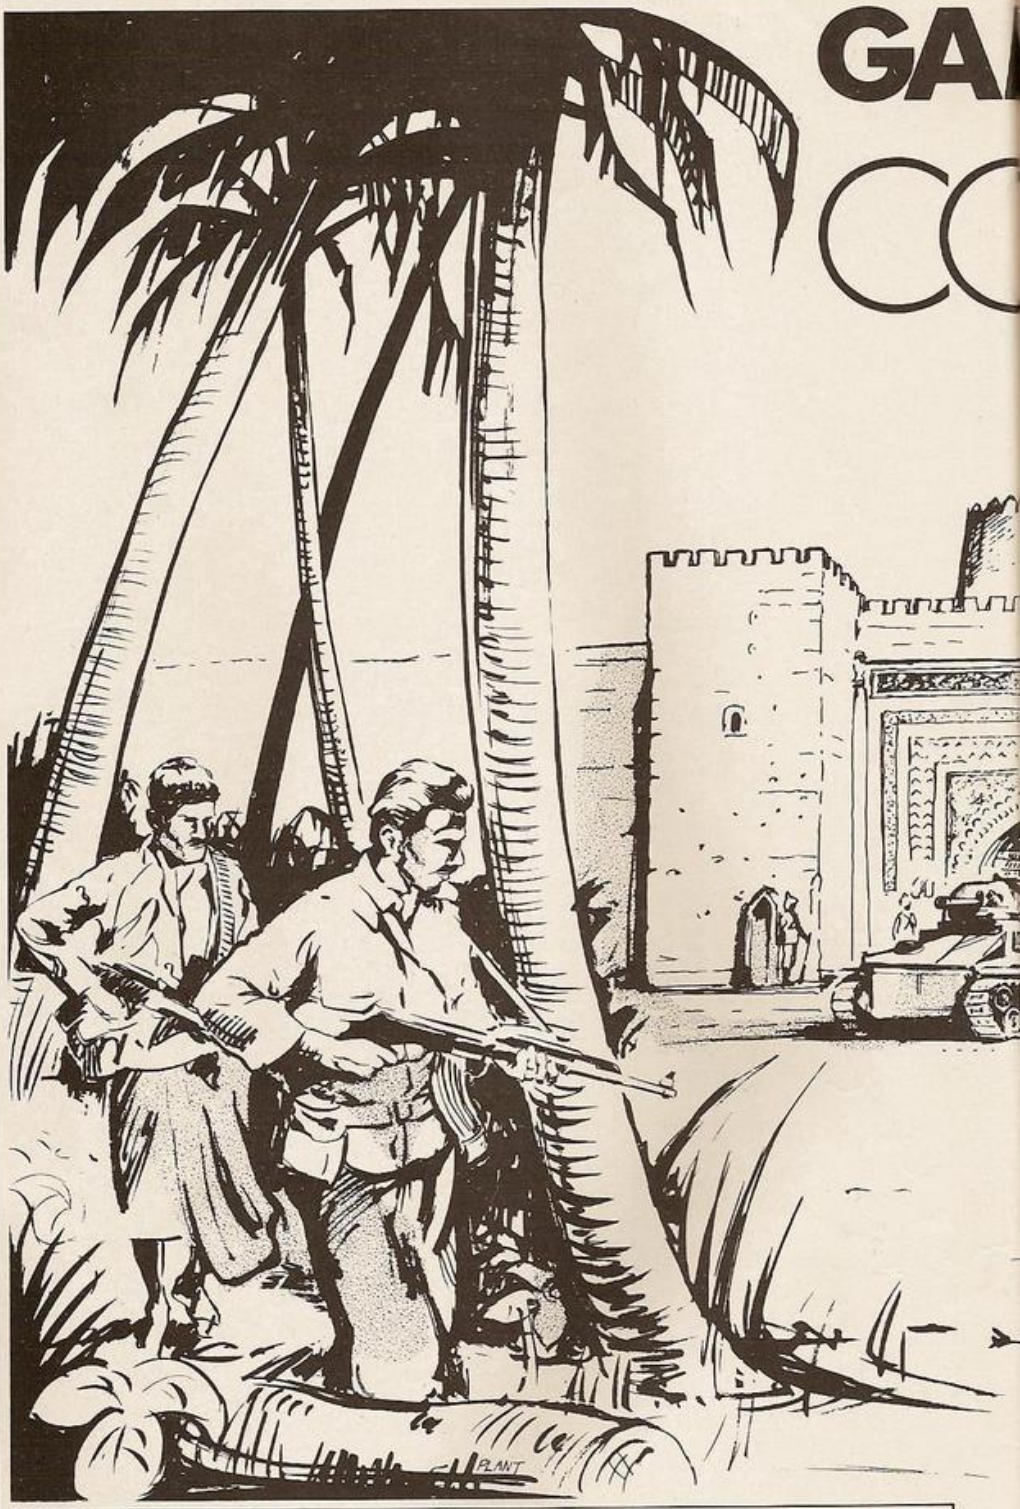

The towers are randomly numbered and, with luck, you may just get a quick look at a secret map with locations on it. It may help you get some of your men out of prison if you have a boat. You can also free some of your captured lieutenants who are held in the top-security wing by buying a helicopter if you can afford it. If you attempt an escape by sea a rope may come in handy.

Kidnapping is another way to free your friends and increases the fighting fund. If your popularity, U.S. backing, ELO membership or number of lieutenants fall below one your coup d'état has failed.

The opposition consists of: Dr Ratok — the president; General Jung — the chief of staff; Lt Lapidus — chief interrogator; and Sgt Sadoul — the executioner. There may be other characters that may become involved — they may help you or they may help the enemy.

ELO membership is restricted to a maximum of 300 until you liberate your men from prison. You may not have more than 20 lieutenants. The maximum number of safe houses is 30. You may purchase hand-guns and rifles, but the minimum order is 300 — in order to get your discount. These will increase your attacking power. You may not visit the same location twice in a row — bad for security.

You and your men face a powerful and ever-vigilant enemy, the fight will be long and hard with little chance of success. We, the people, wish you luck.

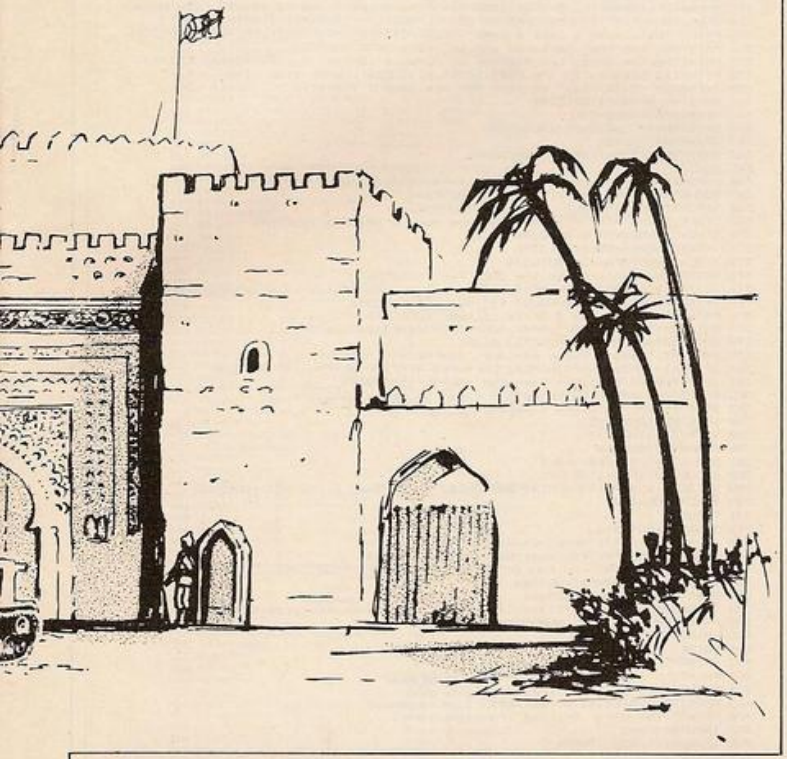

The main variables.

BZ	Bazooka
BA	Bank
BT	Boat
DT	Dynamite
DY	RND. Price of dynamite
EL	ELO membership
ES	Enemy strength
FA	Failure flag
FO	Food
GA	Prision guards
GB	Gold bars
HA	RND. Price of hand-guns
HD	Helicopter damage
HE	Helicopter
HS	Hostages
JP	Jeep
LO	Location
PH	Police station
PL	Police numbers
PR	Prison
PS	Popular support
MP	Map
MO	Input move
MY	ELO fighting fund
MV	Number of moves taken
NL	Number of lieutenants
NS	Number of safe houses
NX	Saves number of last move
RI	RND. Price of rifles
RD	Radio station
RP	Number of ropes
RS	Ransom
TK	Tank
TV	TV station
UF	United States friendship
VR	Video recorders
Y	Poke to screen
Z	Tabset then variable used to Poke screen address — introduction

GAMES SPECIAL FIND T

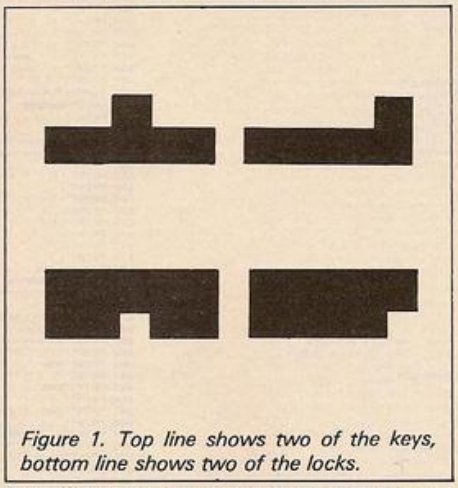

Figure 1. Top line shows two of the keys, bottom line shows two of the locks.

The object of this game is to fit seven keys in seven locks in as few goes as possible. How good a cracksman are you?

PROBE IS A game program for the ZX-81 with 16K RAM that requires equal measures of luck and skill for it to be completed in the minimum number of moves. The essence of the game is to fit seven keys, which are all different, into the correct locks in the minimum number of moves.

The game is original, and was first developed as a board game to rival the popular game of Mastermind. In its original form the keys consisted of a combination of pins mounted on a shaft, which were tried at various positions on the board to penetrate the locks which consisted of plates with holes in designed to fit specific keys. Its advantage over Mastermind is its self-scoring ability, that is, a passive opponent is not required to report the success or failure of each move.

A second version of the board game was also devised so that a second player could actively participate. This version had locks on the opponent's side of the board that were the reciprocal of the player's own locks. Unfortunately the screen size on the ZX-81 is too small for this second version of the game.

The basis of ZX-81 Probe is that a key with up to three pins on it, can have a possible seven combinations.

If we have seven keys we only need seven locks to complete the elements of a board game.

If it is imagined that the keys are pins and that the locks are holes, it will be seen that most keys will fit into more than one lock, as shown in figure 2. However, if all the keys are to be fitted, the correct key must be found for each lock.

C(H)	A counter used to locate the printing of copies of the key above the lock when it has fitted.
K(H)	A counter used to locate the printing of copies of the key below the lock when it was tried and failed to fit.
F(P)	Flag to indicate whether a particular key P has been placed on the board.
H(H)	The number of the lock in position H.
P(H)	The number of the key in position H.
L(P)	The last location of key P.
H	The lock position.
P	The key position.

Variables used.

The object of the game, therefore, is to fit each key into its correct lock. The game is initially set up on the screen like this. First, the keys are set out in sequence along the bottom of the screen and each one is numbered from 1 to 7. Next, the locks are shuffled by the computer, layed out across the centre of the screen, and then covered by a grid or shield so that the player cannot see the sequence. The beginner's game leaves the shield off.

A prompt — K? — appears at the bottom left-hand corner of the screen, asking for the number of the key to be played.

This is followed by a prompt asking which lock the key is to be tried in — L?. If the key fits — and remember it need not necessarily be the correct fit — the display will change as shown in figure 3.

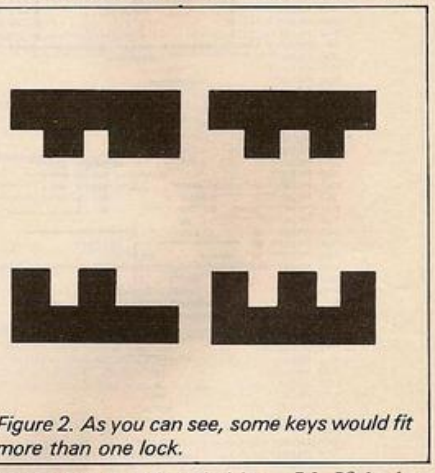

Figure 2. As you can see, some keys would fit more than one lock.

If a key does not fit, the key stays put.

Several moves later you may conceivably get to the stage where, say, key 2 has been fitted into lock 1 and key 3 into lock 6. Key 4 has failed to fit in any of the remaining unoccupied locks.

To find a home for key 4 it is necessary to move one of the other keys which must be occupying key 4's proper lock. The best chance of fitting key 4 is to try locks 1 or 6. Let us therefore try it in lock 1. To do this we must first move key 2 somewhere else, say lock 7. Therefore input:

K? 2 L? 7

This fits and therefore leaves lock 1 free to try key 4 in it. Therefore input:

K? 4 L? 1

The game continues in this manner until all seven keys have been housed. When this point

THE KEY TO ZX PROBE

is reached your score is printed at the top of screen; the lower score the better.

You cannot place a key into a lock that is already occupied. Keys always retain the number they are given at the start of the game, they do not adopt the number of the lock they are fitted into.

A key must always have a home either at the bottom of the board or in the board, it cannot be pulled out of a lock and left out, it must find a new lock to fit into before vacating its current position.

As for the program itself, lines 20 to 160 put the key, mask and lock shapes into their respective strings. Lines 170 to 190 allocate a position to each of the locks before they are shuffled by lines 200 to 250 into a random sequence. After shuffling they are sent off for the printing of the board, and all the keys, locks and key numbers.

Line 253 jumps the printing of the screen over the locks if the beginner's game is being played. Lines 500 to 520 ask you to enter the number of the key to be moved and the number of the lock it is to be tried in. Line 525 stops you trying to fit a key into a lock that is already occupied.

Lines 530 to 590 are a logic gate and judge the compatibility of key and lock. If they are compatible then you jump to line 620. Lines 600 and 610 are used, if the key and lock are not compatible in which case a counter K(H) is incremented by two so that the not-fit marker is printed in the correct position.

Line 620 increments the fit marker for printing. Line 630 checks the flag F(P) to see if the key P has previously been fitted. If it has, a different print routine has to be used. Line

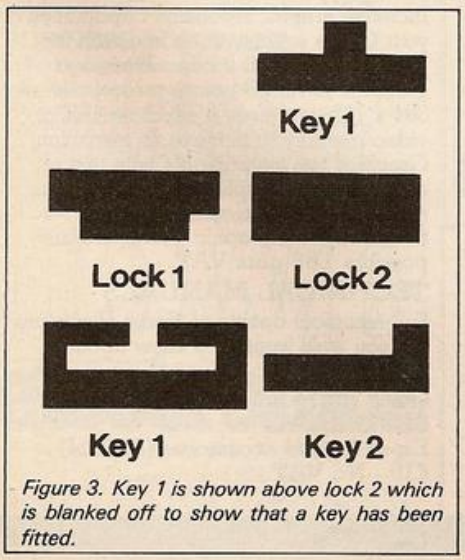

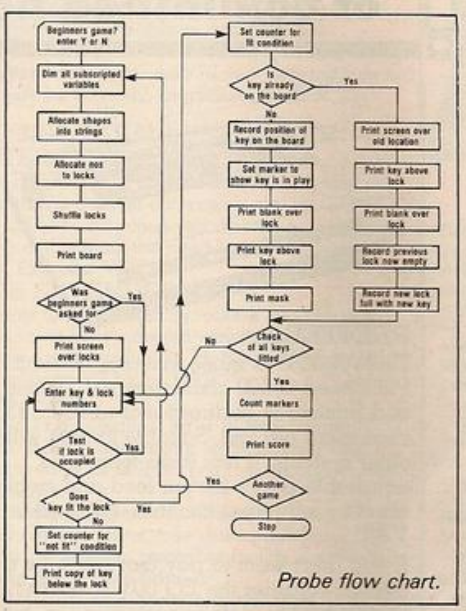

Figure 3. Key 1 is shown above lock 2 which is blanked off to show that a key has been fitted.

Probe flow chart.

640 sets the variable L(P) equal to the board position for key P.

Line 650 sets the flag F(P) equal to 1 for key P showing that from now on that key is in play. Lines 1010 to 1050 print the locks, keys and key numbers. Lines 1100 to 1125 are used when a key has been fitted. Line 1105 prints a solid blank over the lock to show that it is now occupied.

Line 1110 prints the key over the lock using counter C(H). Lines 1120 and 1125 print a mask in lace of the key that was at the bottom of the board. Line 1130 sends off for checking to see if all the keys have been fitted.

Lines 1200 to 1220 are used when a key was tried and failed to fit, in this case line 1210 prints a copy of the key below the locks to show that it was tried and failed. Lines 1300 to 1337 are used when a key is moved and fits into another lock on the board. Line 1310 prints a screen over the vacated lock to show that it is now empty.

Line 1320 prints the key above the new lock. Line 1330 prints a solid blank over the new lock to show that it is occupied. Line 1335 sets the variable P(L(P)) to 0 indicating that no key is fitted in that location.

Line 1337 sets the variable L(P) to the value of key P. Line 1500 to 1515 tests to see if all the locks are occupied. Line 1502 is used to up date P(H) with its new key. Lines 1505 to 1515 checks each lock in turn.

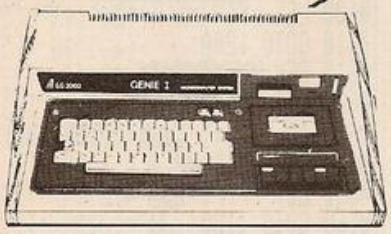

Lines 1517 onwards count the number of goes taken by adding up the counters C( ) and K( ) and dividing by two. Remember the counters are increased by two each time. ■

Why not spend Christmas with the Genie Family!

Our ingenious range of small computers, accessories and software make ideal gifts for 1st time buyers or committed hobbyists!

Genie I

Tried and trusted! – The Genie I is still one of Britain's best-selling small computers, with over 14,000 sold, and it's easy to see why! Software compatibility with Level 2 BASIC means there are literally 1000's of programs on the market ready to run on the Genie, including educational, leisure and small business applications. It's easy to expand, with a vast range of accessories to perform many functions – you only have to read this ad!

Genie I is the ideal computer for the first time buyer, to use at home, at school or at work. The simple BASIC language enables you to write your own programs with ease, and the Microsoft Extended BASIC offers many powerful extra features.

So, if you are not lucky enough to own a Genie I, or if you have a less powerful small computer and want to upgrade, go along to your local Genie dealer, or phone us for advice. It could be your first step into the enthralling world of microcomputers.

Genie II

Equally popular and totally reliable! – The Genie II is a breakthrough for small business computers. Harnessing all the advantages of the Genie I, including its low price, Genie II adapts perfectly to commercial functions with the addition of the following features:

★Numeric Keyboard ★Specific Business Commands ★Four User-Definable Function Keys ★Expandable via the same Genie peripherals ★Extension to BASIC.

Genie II is an ideal, first-entry, computer for the small business. Corner shops, professional practices and small manufacturers can all benefit from a Genie II business system. For further advice, see your local dealer, or contact us direct!

PRINTERS

The EG 3085 is quiet, fast and efficient. Printspeed is 100 characters per second and printing is bi-directional at 80 or 136 characters per line. Suitable for use with other systems, it has three typestyles, adjustable pin or friction feed and single sheet or roll paper facilities. **£425 plus VAT.**

If you don't want to pay that much for a printer, consider the EG 603. It doesn't match the EG 3085 in certain areas, but you will still get 100 c.p.s. bi-directional, a range of character styles, forward and reverse feed and pin/friction feed, with 96 characters and 64 graphic patterns. **£235 plus VAT**

BROTHER HR-1 Daisywheel Printer

You can now buy a superior daisywheel printer for a price only previously associated with dot matrix models.

The Brother HR is an enticing addition to your system. It has a print speed of 16 cps, range of 8 typefaces, and a choice of two models with either parallel or RS232 interfaces.

Reliability, durability and attractive appearance make the Brother HR-1 probably the best printer buy this Christmas!

£650 — VAT

EQUIPMENT COVERS

Beat the dirt, coffee spills and sticky fingers when your computer and monitor are not in use with these top quality black leather covers.

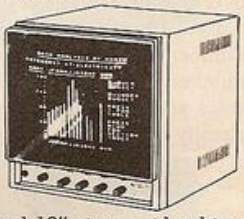

Genie CV1 **£5 plus VAT.**
12" monitors CV6 **£6.20 plus VAT.**
9" monitors CV3 **£4.20 plus VAT.**

GENIE MONITORS

Two good performance, low priced 12" monitors, either to match your Genie or compatible with a wide range of other systems. Good resolution and band width and, of course, they free your television set for the other type of programmes you like to watch!

The EG 100 12" in black & white costs **£69 plus VAT.**
The EG 101 12" with green phospher is **£79 plus VAT.**

A.V.T. MONITORS

Available in 9" and 12" sizes, with white, green or amber display, Lowe A.V.T. monitors are sturdy, attractive, easy to operate and feature an easy view screen with smoked anti-glare display filter. Compatible with most popular micros on the market. **From £75 plus VAT.**

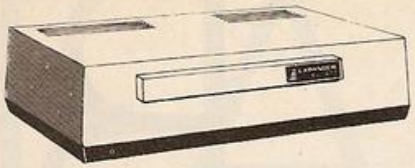

HIGH RESOLUTION GRAPHICS

Increase graphic resolution capabilities on your Genie seventy-three fold with the LE18 HI-RES unit. It offers bit image graphics of 73,728 points, a resolution of 384 x 192, and uses a separate 16K of video memory to achieve its resolution. Graphics are intermixable with text or existing pixtel graphics, and animation, reverse video displays and use of programmable graphic characters are possible. **£86 plus VAT.**

TECHNICAL MANUALS

Full technical details of Genie Hardware (all you ever wanted to know about Genie).

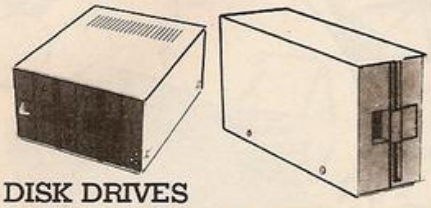

Genie I/II Technical Manual
£10 - No VAT.
Expander and accessories (EG3014)
£10 - No VAT.

EXPANDER BOX

The updated EG 3014 expander box allows for up to four disk drives with optional double density. It connects to a printer, or RS 232 interface, or S100 cards. Not bad value at **£190 plus VAT (16K version) or £200 plus VAT (32K version)**

*The EG 3014 will work with TRS 80 by using the EG 3023 Tandy Adaptor.

DISK DRIVES

If you want fast, reliable program storage, true random access file handling and access to many computer languages, we can meet your needs. The EG 400T provides storage of up to 184320 bytes per floppy disk and comes complete and tested, in a stylish colour matched cabinet. **£220 plus VAT.**

The EG 401 AT offers dual disk drive with 368640 bytes of useable storage and comes complete with a power supply ready to connect to an expander box. **£365 plus VAT.**

DOUBLE DENSITY ADAPTOR

Allows the use of standard minidisk drives in double density, with virtually double the storage capacity. The EG 3021 is equally at home in the Genie or TRS-80 expander boxes.

A double density disk operating system will be needed, such as smalLDOS provides. **£72 plus VAT.**

smalLDOS

Powerful, yet reasonably priced, the Genie smalLDOS contains 21 library commands, 7 utilities, LBASIC, disk basic and bags of information, including a reference manual and 40 page beginners guide to disk usage. **£35 plus VAT.**

BUSINESS SOFTWARE

Specifically written for the Genie II computer, with disks and a suite of packages from the renowned house TRIDATA. The suite includes SALES LEDGER, PURCHASE LEDGER, PAYROLL and STOCK CONTROL. Each package is a very reasonable £175 plus VAT. Full details on request.

EG 3203 TANDY-BASHER

If you are a TANDY user, read on! The EG 3203 is bus converted to allow Genie peripherals to be used with Tandy Model I computers. **£18.40** plus VAT.
(Just in case there might be a few strange souls who want to convert in the opposite direction, there is the 50/40 converter which generates a Tandy compatible 40 way bus from a Genie.) **£34** plus VAT.

FRED MUSIC SYNTHESISER

Beethoven might well roll over at this stereo music synthesiser, it can produce six simultaneous notes over the whole audio range and provide sound effects. FRED comes complete with a software compiler, full instructions and a demo tune. It is simply plugged onto the Genie 50 way bus and has two outputs for an audio amplifier. **£51** plus VAT.

EG 3016 PARALLEL PRINTER INTERFACE

The EG 3016 is a simpler interface allowing a Centronics parallel compatible printer (EG 603, EG 3085) to be connected directly to the Genie keyboard without the need for an expander box. **£38** plus VAT.

BUS EXTENDER

A most useful accessory, allows two bus using devices to be connected simultaneously to the Genie – when using the Hi Res and expander for instance. **£21** plus VAT.

EP1, EP3

Genie I and Genie II have ROMS offering 13.5K BASIC are custom written extensions contained in EPROMs. You can change these as follows:
EP1 Adds all Genie 1 software facilities to other Genies, lower case driver, machine language monitor, renumber facility, keyboard repeat and screen print.
EP3 Has HI-RES driver software with 10 extra HI-RES commands which prevent need to load HI-RES software from tape. All at **£12** plus VAT.
For Video Genie Systems, the LE-19 connects direct to the Genie bus and allows one of these EPROMs to be fitted externally. **£26.50** plus VAT.

SYSTEMS DESK

Even a compact modular computer system like the Genie benefits from being used on a custom designed system desk. The SD1 system desk is designed to accommodate a complete Genie System and has a special upper shelf to support the display monitor at the best level. The desk is flat packed for easy delivery and finished in attractive teak and charcoal colours. **£81.40** plus VAT.

SPECIAL TECHNICAL GENIE HOT – LINE ON 0629 4995
for all your technical advice and service back-up on any aspect of the Genie system direct from the experts!

Colour Genie is the latest piece of personal computer magic from Lowe Electronics. Remarkably compact in design, Colour Genie is a powerful piece of new technology which combines all the best features of the popular Genie I; 16K RAM, 16K BASIC ROM, and full size typewriter keyboard, with the addition of vivid colour, high resolution graphics, 3 channel sound and 40 x 24 screen format – a new dimension in home computing!
Put one in your living room, connect it to a standard colour T.V., and you will be amazed at the worlds that open up for you and your family!
For children and adults, Colour Genie provides an ideal introduction to computer programming. If you fancy a spot of intergalactic travel, or a battle for the planets, Genie will lay on the transport. When you get tired of the kids beating you at Space Invaders, you can always turn their attention to schoolwork. Genie makes that fun too! You can learn typing, a foreign language, or simply keep your household accounts in order.
Of course, Colour Genie is only one of a number of home computers you could consider buying; however, the £199 price tag gets rid of some of the opposition, as do the 64 present and 128 programmable graphic characters! 8 exciting colours leave a few more standing, and four function keys with a built in power supply put Colour Genie way out in front!

ACCESSORIES

Colour Genie can be supplemented by a large range of optional extras. There is an attractive matching cassette recorder on which to store your own programs, or play pre-recorded software. Joysticks are available for popular video games, and a position-detecting light pen to heighten your colour-graphic creations. If you want to put your machine to work in your business, it can be expanded by a 16K RAM card, and connected to a quality matrix printer via the printer interface and cable.

SOFTWARE

Colour Genie uses a Z80 central processing unit, and is fully programmable in Microsoft colour BASIC, the most popular home computer language in the Western World!

MUSIC

Colour Genie contains a FULL MUSIC SYNTHESISER, which will generate a remarkable range of musical sounds through your T.V. speaker, in a variety of pre-settable tempos.

GAMES SPECIAL

BR

You have to stay on the ball if you want to break through to higher scores in John Cullen's Vic-20 version of the famous arcade game.

IN THIS VERSION of Breakout, a machine-code subroutine has been used to move the bat. The mnemonics for the machine code are included so that if anybody wants to convert the game, they should be able to. Peeks and Pokes are all explained in this program.

The screen starts at location 7680 and finishes at 8185. The top right corner is 7701, and the bottom left corner is 8164. The colour memory map starts at 38400 and goes on to 38906. The top right location is 38421 and the bottom left location is 38884.

If any other Vic owners have memory expansion above the 3K RAM from Commodore, then they will know that the screen relocates to 4096. This means that using the character generator is not possible. To overcome this you must type the following:

```
POKE 648,30:POKE 642,32:POKE 36869,240:
POKE 36866,150:POKE 0,108:POKE 1,0:
POKE 2,192:SYS(0)
```

This relocates the screen to 7680, and Basic starts above it. This leaves the space from 4096 to 7679 free for the character generator. SYS58276 resets all variables including the memory pointers without altering the program.

In line 1, Gosub 4200 initialises the machine code: 0 and 1, the free locations in the zero page, contain the value of the key pressed. Location 673 contains a routine which checks for all the bricks gone. At 674 is the last position of the bat. The 675, 676 Pokes indicate the key pressed — 675 for Z key, 676 for C key. Peek (197) returns value of key pressed.

In line 2, R1 to R4 are screen control registers. The S3 designates voice number 3, V is for volume. In line 5, V + 1 sets screen and border colour to orange and red. The sixth line's T(I) colours the layers of bricks: it can be altered for random colours. Goto 2000: this is the start of instructions.

In line 10, Y gives the vertical position of the ball; DY gives direction, that is, -1 is up, 1 is down, SC is score and HI is high score. In line 11, SC is reset. The level prompt indicates the number of bats; level 1 is one bat and level 4 is four bats. A null input sets the level to 4. At line 12, C is the counter for the number of bats used. The top left-hand corner of the screen is 7680. Character 224 is a reversed space, that is 96 + 128. The border around the screen is dealt with in 13. A reverse graphic is indicated by 208. A% is used for random colour. Location 38400 is the first colour location on the screen. Graphic 207 is a reverse space.

In line 15, 8164 is the bottom left-hand location of the screen. The corresponding colour memory map is given by 38884. In line 19, the loop I determines how many layers of bricks and their position; in this case five layers starting four lines down from the top of the screen. The loop J determines how many bricks in each line, in this case 20. At line 30, the graphic character 204 is a reversed space. In line 75, X is the horizontal position of the ball — graphic 81 — and Y is the vertical position. The Y value is multiplied by 22, because the screen is 22 characters wide.

In line 110, SYS 680 calls the machine-code subroutine to check which key, if any, has been pressed, and if so, move the bat. Line 180 rubs out the ball. The lines from 190 to 220 work out the new position of the ball; line 200 checks if the ball is at either side of the screen, and if so, reverses direction. Line 220 checks whether or not you have missed the ball. Line 230 checks new position to see if it is occupied by a brick. Line 240 checks if the ball has hit the bat or got to the top of the screen. Line 250 turns off the sound. Line 255 checks to see if all the bricks have gone with SYS 736, the second machine-code routine. If all the bricks have gone, then location 673 will contain 1, otherwise a 0. Line 260 calls machine code to move the bat. The speed of the bat is controlled by the number of SYS 680 commands between lines 75 and 260. Line 300 controls sound effects if the ball is missed.

NB: Numbers after the hash are decimal

Mnemonics for the machine code.

BREAKOUT

Line 310 takes one off the counter and if you still have a bat, Resets direction counters Y and DY, X and DX. Line 320 gives control to line 465, when all the bats are gone. Lines 400 to 418 control the display if you get all the bricks. The registers R1 to R4 are used here, to give a display. P% is the extra bonus you get, depending on level and final score. Line 470 clears the input buffer — 198 — and lines 471 and 472 check your answer to the prompt.

Line 1000 generates random X and DX values. If DX equals -1, ball goes left, if DX equals 1, the ball goes right. The instructions are at lines 2000 to 2085. Line 3000 calculates the score per brick and can be altered to give different values as wanted. Data containing machine-code routines in hexadecimal are contained in lines 4000 to 4015. Lines 4200 to 4265 are the Basic loader for machine code. Machine code is stored in free memory locations from 680 to 755. Locations 673 to 767 can be used to hold short machine-code routines. ■

THE GAME in this article is a very enjoyable, and addictive, game for the 32K BBC Model B. It is slightly different from the arcade implementation in that there are only two ghosts who can go through walls and the function of the power pills is to stop the ghosts chasing the Muncher for a few seconds, giving him a chance to eat more dots and so get to the higher sheets. The player gets bonuses by totally clearing a sheet.

Every fifth maze is an invisible one, but the player must remember the pathways, in order to follow them. When playing such a sheet, the maze is made visible for about 10 seconds, when a power pill, or thunderbuster, is eaten. The following keys are used to move: A to go up, Z to go down, N to go left and M to go right. 10 points are given for the dots that it eats all the time and 100 points are given for*, which are thunderbusters.

A bonus of the value 1,000 multiplied by the number of sheets is given every time a sheet is totally eaten, thus 1,000 points are awarded for clearing the first maze and 13,000 points for clearing maze number 13.

An extra Muncher is given every time you score 10,000 points: you have three lives to begin with.

To begin with, you may think that the game is very easy, as the ghosts move very slowly, but they get faster every sheet, until they become half your speed on sheet 11, from then on their speed remains constant. Here are a

HERE COMES THE MAZE MUNCH

A deceptively easy game to start with, this BBC version of a well known arcade game written by David Griffin is definitely worth getting your teeth into.

few hints. It is a good idea to clear as much of the maze as you can without using the thunderbusters. On the lower sheets move straight to the middle of the maze, and clear that area first, as it is the most difficult.

When the ghosts are moving the fastest, clear the outer regions of the maze first, reserving the thunderbusters to help in clearing the centre. Try not to leave individual dots, but clear large areas of the maze at once. Don't hesitate or panic, it is quite easy to get out of most situations.

If you want to change the number of ghosts, change the value of NG% in line 11. I would advise against conversion to other computers because this program uses many special functions of the BBC. But in case anyone wants to try here is a list of some of the BBC peculiarities used in this implementation.

Envelope defines the envelope used in the Sound command — this can be ignored. Mode changes the display mode, Mode 7 is a teletext display 40×25, Mode 2 is a high-resolution display, with characters on a 20×32 grid.

VDU 23 defines characters on an eight-by-eight grid. The first parameter is the character number, the following eight define the shape row by row, with the decimal equivalent of the binary number representing the character row. The VDU in line 10 stops the cursor flashing.

Proc calls a procedure defined by DefProc; this should be replaced by a Gosub command on other computers.

Colour sets the current text colour. Print Tab (X,Y) positions the cursor at position X,Y on the screen. All the *FX commands can be ignored.

VDU 19 Xl, C2, 0, 0, 0 sets colour Cl to colour C2; this is used in making the maze invisible.

RND gives a random integer between 1 and the number inside the brackets. Sound A, B, C, D plays a note on channel A, of volume B, of pitch C, for duration D. Div signifies integer division.

The command Get$ waits for a key to be pressed and puts the string value of that key in the suitable variable.

Inkey$(n) waits for n cycles of the clock or until a key has been pressed, and puts the string value of that key in the suitable variable. The program puts the whole screen into array SC$ and can use this array to see if the man is trying to go into a wall, or has eaten something.

The highest score so far attained is 10,154,250 — achieved after playing continuously for several hours, and reaching sheet 999. ■

SOFTWARE FOR ALL

SOFTWARE FOR ALL presents programs for the people! Our list of original programs for the BBC, DRAGON, and SPECTRUM is growing every day! Reasonably priced. Ingenious use of programming. Excellent entertainment. These are the hallmarks of SOFTWARE FOR ALL.

Order now for fast delivery or visit one of our dealers. There's big things happening for all computer users... That's why we're called SOFTWARE FOR ALL!

PAIRS

A computerised version of the original card game with Hi-Res graphics.

£6.45

GALACTIC INTRUDER

BBC MICRO

Fast arcade-type action game with Hi-Res colour and sound. Machine Code. 32K

£6.95

J.R.

Two player game, features include exploration, drilling, employment and Price Wars. 32K

£6.95

AREA RADAR CONTROLLER

You're in the control tower at Heathrow and it's your job to control up to 79 aircraft, taking off, landing, or just passing through. VERY ADDICTIVE — HIGHLY FRUSTRATING!

DRAGON 32 **£7.95**

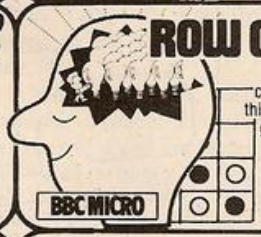

POLAR BEAR

Educational game for 8-12-year-olds incorp. simple maths tables.

32K **£7.45**

ROW OF FOUR

Try to outwit your computer opponent in this game of skill. Great graphics. BASIC and machine code. 32K

£6.45

PHARAOH'S TOMB

ZX SPECTRUM

3D Maze Game and Adventure rolled into one! 48K

£6.95

SPACE KINGDOM

Battle your way around the Planets to become ruler of the Galaxy! Excellent use of graphics and sound. 32K

£7.95

BBC MICRO

TIME TRAVELLER

Travel through over 100 rooms in different times, and find the key back to your own time. 32K

BBC MICRO

£6.95

Utility Pack I

£7.45

Envelope program, variable print-text scanner and memory dump. 32K

BBC MICRO

CAR WARS/ALIEN PLANET

Two addictive graphics games both BASIC and Machine Code.

32K **£6.95**

BBC MICRO

DANGER ISLAND

An adventure game in which you fight your way through many obstacles to escape.

DRAGON 32 **£6.95**

Utility Pack 2

£7.45

Disassembler, program crunch and text editor. 32K

BBC MICRO

ZOMBIE ISLAND

Fight for survival on an island inhabited by hungry, dangerous cannibals. BASIC and machine code program.

32K

BBC MICRO **£7.95**

BEEBTREK

BBC MICRO

Real time advanced Startrek Game. Extra facilities include "probe satellites", "damage reports" & "on-board computer".

16/32K **£7.95**

GAMES SPECIAL

ATOM QUEST

Beyond the drooling ghouls you'll find economy and complexity in Colin Comber's Atom labyrinth as you seek the chalice.

QUEST IS AN Adventure/Labyrinth game. The object of the game is to become strong enough to find and overcome an evil sorcerer, recover the magic chalice and return to the starting position. There are items scattered through the cells which may help in the Quest. Moves are made by typing the initial letter of the selected option. With luck the number of options will increase.

A magic wand is visible, but a lamp must be found before the other items can be seen. The keyboard scan is associated with a countdown which permits you to move, providing your reaction is faster than the reaction of the monster in that cell.

Using an article in *Your Computer* by Derek Haslam — Software File October 1981 — on storing strings in a string array enabled me to fit the game into the Atom's memory.

Strings can be stored in the upper text space using line numbers. To access the upper text space type

?18 = # 82

The string start locations are read into array BB, which is also stored in the upper text space. !21 = # 9100 — line 15 — moves all arrays from Top where arrays are normally stored to where you decide to store them. In this case it is # 9100, a safe distance above the last string.

Routine 950-995 reads the first character of string $?H into array BB. To identify the strings take the line number, divide by 10 and take way 100. Here are two examples:

$BB1 = line 1010

and

$BB105 = line 2050

The data for the cells in the Labyrinth is arranged in a 75 by 10 matrix. A conventional word array would consume too much memory, but it is possible to store the data in a byte vector since all the values are smaller than 255 and can be stored in single bytes. This matrix is represented using a one-dimensional array, and the position of an array variable is then calculated by J?n.

The Labyrinth array J?0 to J?749 is also stored in the upper text space J = # 9500 — line 15.

A move north, east, west, south, up or down modifies variable L ,J?L = X, and the nine features of a cell are stored thus:

X?0 = Cell number = L/10	
X?1 = Cell description	$BB 3-14
X?2 = North exit	$BB16-26
X?3 = South exit	$BB16-26
X?4 = East exit	$BB16-26
X?5 = West exit	$BB16-26
X?6 = Up exit	$BB31-35
X?7 = Down exit	$BB36-41
X?8 = Object in cell	$BB43-54
X?9 = Character in cell	$BB56-65

Initially all the cell features are zeroed — line 70. As a cell is explored, routine 1005-1050 checks for external walls and inserts stone walls to prevent the Adventurer falling out of the Labyrinth and being struck down by a Space Invader.

The internal walls, exits and stairs are generated by the routine 1085-1110, which takes a number from the sequence 1-12. This means cell features are determined by the Adventurer's exploration so, although the Labyrinth remains stable and retraceable, each Quest can be unique.

The variables.

A Adventurer count
B Spell flag
C Character seed
D Defence factor
E Sorcerer's location
F For-Next counter
G Pseudo On-Goto variable
H String counter H = # 8400
I Lamp flag
J Start of byte vector J = # 9500
K Key flag
L Location variable
M Monster counter
N Dummy variable in p routine
O Object seed
P Dummy variable in p routine
Q ?# 80
R Random number
S Seed for pseudo-randomise in p routine
T Take counter in t routine
U
V Gold pieces
W Wand flag
X X = J?L
Y Keyboard scan counter
Z 1000+ in p pseudo On-Goto

Outline of the program.

2-95 Set variables zero array s J-J?749 and CC Seed objects Character seed
100 o Options keyboard scan
105 j If character present, countdown, Goto a — attack routines
1000 p Describe cell Describe object
2820 Describe character
3600 s Character magically disappears
4000 a Attack routine
5000 t Take object
5200 f List objects, display strength
5300 Drop-object option
6000 Sorcerer defeated: find chalice
7000 b Bribe option
7060 Bribe for sorcerer's location
7400 Chalice safe: quest successful
?18 = # 82
890 Keyboard scan, assembler source code
910 Sound effects, assembler source code
940 If strings have been read once Goto 1.text p
950 Read string starts into array BB
1000 Goto 1.text p
1010 First string
2050 Last string

The memory map is as follows:

2800 Keyboard scan
Sound effects
2900 Main program
3C00 Main program
8200 Assembler source program assembled to # 2800
String-reading routine
String data
8E00 String data
9100 Arrays BB,CC,DD
9500 Byte array J?0
97EE to J?749

To test the program without continually getting killed off, Run the program. When the first cell has been described, press Escape, and then type

K = 1;W = 1;D = 1000;G.p;RETURN.ESCAPE,G.p

which is quite a useful way of cheating. Until the program has been cleared of typing errors, Save the program as two separate files with different names.

When the program is running it can be saved as one complete file. It is possible to load this 8K program in one go using the *FLoad command.

*SAVE"QUEST"2900 3D00

When it has completed, rewind and *Cat until 3B00 is displayed; allow this entire memory block to pass the recording head of your cassette recorder, listening for the brief carrier tone between memory blocks and stop the recorder before the header of 3C00 is displayed. Now Break, Old and *Save"Quest" 8200 8E00 and record, erasing the dummy memory block and replacing it with the upper text data. This fools the Atom into loading similarly named files to separate loading addresses.

abacus electronics

ZX 81 Spectrum

MONEY BACK GUARANTEE
CASSETTES DESPATCHED
WITHIN **48 HOURS**

ABACUS CONTROLLER

Developed to eliminate tedious swapping of plugs when LOADING or SAVING programs on cassette.
ZX SPECTRUM CONTROLLER: Single switch selection of SAVE, LOAD & AMP modes. Built in amplifier and loud-speaker boosts Spectrum sound output. Price **£14.95**
ZX81 CONTROLLER: Single switch selection of TALK, SAVE, CUE & LOAD modes. Built in microphone/speaker for fast and reliable program naming and cueing. Price **£9.95**

All items in this advertisement can be viewed before buying at the Buffer Micro Shop, London, and Jay Dee Communications, Water Street, Port Talbot.

AVENGER

AVENGER: This all action arcade-style game written in MACHINE CODE for the ZX Spectrum is fantastic! You are flying over a mountainous planet terrain. Your mission is to attack, using lasers and bombs, launch pads, buildings and missile silos. Alien craft attack you with missiles; guided missiles launched from the ground hunt you out. But what ever you do don't hit the atomic power stations!! Continuous display of time, score, shields and laser temperature. Five levels of play and high scores.
Price **£4.95** inc. Also available for the ZX-81 (16K) at **£4.95** inc.

SPECTRUM GAMES PACK 1

DESTROYER: Listen to the beeps of the sonar to locate and destroy the submarines before they sink the merchant ships.
ICEBERG: Steer your icebreaker through thickening pack ice to pick up survivors.
BATTLE: Destroy missile sites while avoiding mines and the computerised enemy tanks that are out to get you.
ANDROID PIT RESUCE: Rescue the miners before they are trapped in the flooding mines.

All four on one cassette at the incredible price of **£4.95** inc.

SPECIAL CHRISTMAS ZX MICROFAIR!

If you're interested in exhibiting please contact Mike Johnston

Saturday 18th December at the New Horticultural Hall, Greycoat Street, London SW1. One day - 10am to 6pm.

Thinking of buying your Christmas computer?
Looking for ZX hardware or software?
Want to meet local user-groups and ZX enthusiasts?
Or just want an interesting day out?
Then call along on Saturday, 18th December for the **Christmas Special MICROFAIR!**

It's full of Christmas Cheer — everything for the ZX81, ZX80 and ZX SPECTRUM under one roof!

Meet a wide range of manufacturers of all types — talk to interesting people — get advice — buy that last minute present.

There's plenty of room, there's a Bar if you get thirsty and a Buffet if you're famished!

There's even a bring and buy sale so you'll be able to pick up a bargain, and of course a complete showguide available on the day.

Make a note of the date or write for advanced tickets to Mike Johnston, 71 Park Lane, London N17 0HG (enclosing a S.A.E.).

Admission charges are 75p for adults or 50p for kids (under 14). Please make cheque, P.O. payable to ZX Microfair.

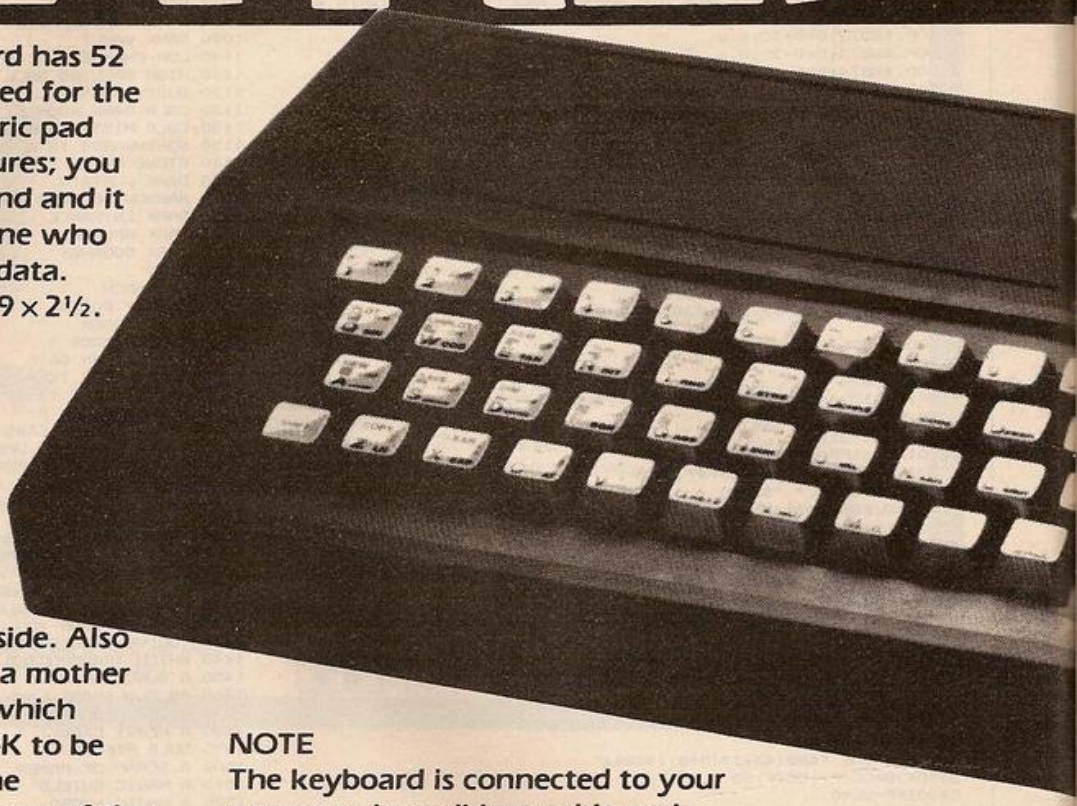

Do it now and make sure of a very happy ZXMAS!

ZX KEY

Our new cased keyboard has 52 keys, 12 of these are used for the numeric pad. The numeric pad offers some useful features; you can cursor with one hand and it will be a boon for anyone who enters a lot of numeric data. The case measures 15 × 9 × 2½. The computer (ZX81 or spectrum) fits neatly inside. Also fitted inside the case is a mother board (81 model only) which allows 16K, 32K and 64K to be fitted in the case. All the connections are at the rear of the case i.e. Power Mic, Ear, T.V. and the expansion port. The power supply could also be fitted inside. This means you have a very smart self-contained unit.

NOTE
The keyboard is connected to your computer by a ribbon cable and this has connectors fitted which simply push into the Sinclair connectors. It is a simple two minute job and requires no electronic skills or any soldering.

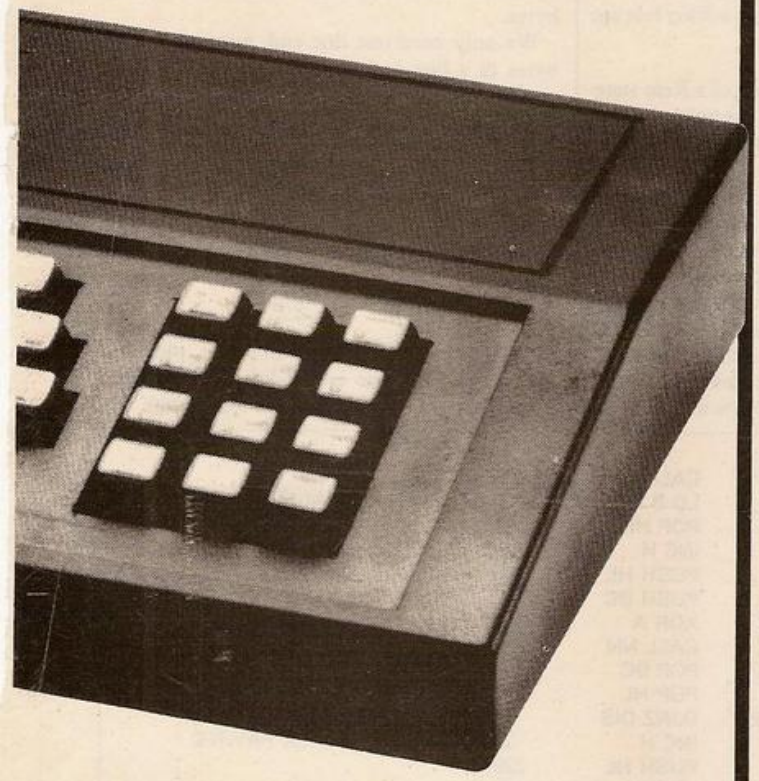

ZX81 ARCADE SOFTWARE
THE FOLLOWING EXCITING MACHINE CODE ARCADE ACTION GAMES ARE AVAILABLE FOR THE 16K ZX81 ★ CENTIPEDE ★ METEOR STORM @ £4.95 each

Fully cased with numeric pad £45
Uncased with numeric pad £30
Case £15

- ★ 16K Ram Massive Add On Memory Fully assembled and tested £19.95
- ★ 64K Memory Expansion £49.95
- ★ 4K Tool kit full of utilities to aid the programmer in constructing and de-bugging

dk'tronics

BOARD

4K GRAPHICS ROM £29.95

The DK Graphic module is our latest ZX81 accessory. This module unlike most other accessories fits neatly inside your computer under the keyboard.
The module comes ready built, fully tested and complete with a 4K graphic ROM. This will give you an unbelievable 448 extra pre-programmed graphics, your normal graphic set contains only 64. This means that you now have 512 graphics and with their inverse 1024. This now turns the 81 into a very powerful computer with a graphic set rarely found on larger more expensive machines. In the ROM are lower case letters, bombs, bullets, rockets, tanks, a complete set of invaders graphics and that only accounts for about 50 of them, there are still about 400 left (that may give you an idea as to the scope of the new ROM). However, the module does not finish there, it also has a spare holder on the board which will accept a further 4K of ROM/RAM. This holder can be fitted with a 1K/2K/RAM and can be used for user definable graphics so you can create your own custom character sets.

THE FOLLOWING SOFTWARE IS AVAILABLE FOR USE WITH THE GRAPHIC ROM@£4.95 each
★ ASTEROIDS ★ CENTIPEDE ★ DEFENDER
★ SPACE INVADERS ★ METEOR STORM

E.Prom version for use with graphics Rom £9.96
Cassette Version £6.95
★ Flexible ribbon connector £10
★ Spectrum Memory Upgrade to 48K £35

CHESS I

PROGRAM 1 WILL enable two people to play chess on an unexpanded ZX-81. The program, which uses Slow mode and Sinclair ROM routines, is not suitable for the ZX-80 or a new ROM Z-80.

This part deals with the general details of the production of the board. The program, which was part of a technical exercise to see how much could be squeezed into the Sinclair pint-pot, ended up with a playing 1K game of chess.

Follow the instructions carefully; with a machine-code program an error will cause the system to crash and you may need to switch the machine off and on to regain control, before reloading the program from tape. Always Save prior to running any new version of a machine-code program for the first time.

Figure 1 shows the playing board. It gives a nice, easily-read display. The first problem is to produce a Rem line containing 574 spaces. It is best to make one Rem statement and edit the line number to give Rems 1 to 5. You will have to type clear before you edit the lines.

Do not forget to use Fast mode. Next type in Rem 6, see figure 3. If this has been done correctly then Peek 17087 will give 32 and Peek 17088 will give 118. Now type in lines 9 to 15. Next type list 1 Newline and now:

POKE 16510,0 prevents you from editing first line
POKE 16511,64
POKE 16512,2

Then Save 1. As the production of a Rem statement of the correct length appears to be a major problem, let me explain what happens in a bit more detail.

The way Sinclair presents each Rem line is as follows: two bytes contain the line number, two bytes contain the subsequent number of bytes in the line, one byte stores the code for the keyword Rem, 100 is the number of bytes in line, one byte contains the line end. This gives 2+2+1+100+1 and provides 100 bytes of free space, but any subsequent Rem statement to be combined will be able to use all the bytes for data, thus 2+2+1+100+1 = 106 bytes.

We only need one line end, one number of bytes in a line and one line number, thus in our case we have:

1st	Rem	Statement	100 bytes usable
2nd	,,	,,	106
3rd	,,	,,	106
4th	,,	,,	106
5th	,,	,,	106
6th	,,	,,	50
			574

Now if we want 574 bytes in a line, plus one Rem code and one end-of-line code — that adds up to a total of 576 — we change the

N 1K MACHINE CODE

David Horne shows you how to cram a working chess program into just 1,000 bytes of memory — part 1 of a three-part series.

"number of bytes in line from here" figure to the two-byte equivalent of 576.

POKE 16512, INT (576/2).....2

POKE 16511, 576 –(256*INT(576/2)).....64

Returning to the program, List should give a display of a portion of figure 3, depending on how much memory is attached to your machine.

If you have an expansion attached, now is the time to Reset RAMtop:

POKE 16389, 72

then print USR 1040. To produce the board, type Run 10 and enter in the data in figure 4 from address 16514 to 16681. If you make a mistake, make a note of the number in the top left-hand corner of the screen and the correct entry that should have been typed, and then continue inputting the data. On completion Save 2 then make your corrections by Poking address + 1, correcting the entry and then Save again.

Now edit line 10 to read

FOR A = 16780 TO 16800

and Run 10. Enter data in figure 5 from address 16780 to 16800, now Save 3. If you have got it right, delete lines 10 to 15 and Run. This should produce the display in figure 1. If not, you have made an error. Check any errors with the following pointer.

16514 Table of pieces on board
16530 display
16540 black and white squares

If they go across the screen it means you forgot to reset RAMtop.

16570 grey background
16591 white pieces
16606 white pawns
16615 spaces
16629 black pawns
16637 black pieces
16652 letters and numbers

The above will I hope give you some idea where a fault may be. If you have a printer, use LList for comparison.

Your screen should look like figure 6 if you list; the amount of information depends on memory size. Temporarily try 9 Stop and Delete lines 10 to 15, enabling you to see more. You can also try the program in figure 7 after deleting all lines except 9 and the Rem statement.

```
10 FOR A=16514 TO 16570
13 PRINT AT 1, 0; A, PEEK A
14 STOP
15 CLS
16 NEXT A
```

Use Continue to step through the program until the error is found. The above seems a bit long-winded, but there are problems which sometimes arise when listing or deleting lines in a program which contains a very long Rem statement.

You can see what I mean if you get into Slow List and try to delete line 9. Your machine goes into an infinite loop. You will have to pull the plug and reload to get your machine operational again.

The following represents a brief technical outline covering the salient points of the machine-code routine so far. The disassembled listing and the accompanying notes cover the program up to the production of the board.

The machine code is entered at address 16570. The register bc is used by the Sinclair Routine — SR — at 245, 8 to set the Print At position. The a contains the colour, b the number of times it is to be printed, RST 16 is the SR for Print; this routine Prints 14 shaded characters across the screen.

Next the Print At register row is incremented, checked to see if we are at row 14, and if not, the next row is written, producing the backcloth. After row 14 we start the next routine.

Write the white pieces, here bc uses the SR at 245, 8 to set Print At position to row 2 column 4. The SR at 107, 11 is then used to print a String, the white pieces. A quick change of the Print At position, then subroutine at 16557 prints a series of a, b times, initially white pawns, four rows of spaces, then black pawns; HL holds the print position. Now return to the print-a-string routine and copy the black pieces.

At address 16652 we have a routine which annotates the board with horizontal letters and vertical numbers. Address 16678 calls the subroutine at 16540 to write the black squares. Here we find the start position of the board; then every even address to the end of the board is tested. If an address is empty, insert a black square, otherwise leave it alone. And there we have the board.

The routines at 16780 are used to point to the position of various board parameters. DP2 is the first square on the board, DP1 is the square holding the "current mover", DP4 is the position of "from" and DP5 is the position of "to". ■

ATOM

Bank managers in cupboards are a thing of the past. Nigel Haughton's bank account program helps monitor your overdraft.

WHEN IT COMES to arithmetic, I have long resigned myself to using my four-bit brain, which makes heavy weather of numbers larger than 15, and crashes at the sight of a £ sign.

In order to restore some cordiality to relations with my bank manager, I decided to transfer my financial records to a machine more reliable at handling figures.

This handles a cheque-book bank account, maintaining a continually-updated statement of 24 entries, and presenting a working page of the eight most recent entries on the screen. Daily transactions may be entered with a short note, such as a cheque number, for reference, and regular standing orders — debit — or transfers — credit — are included and inserted automatically as encountered.

The window in the screen page may be scrolled up the statement to view the previous 16 entries, as desired. At any stage a table of the standing orders and transfers may be displayed and optionally modified before transactions are continued.

The statement may be saved on tape and reloaded at a later date for further transactions. Any number of accounts may be handled individually in this way.

Machine requirements are an Acorn Atom with EPROM 5K text RAM and 6K graphics RAM.

The following syntax has been used to explain the following operation of the program: contents of {} parentheses are optional, and may be omitted. Contents of [] parentheses are mandatory keyboard entries. Contents of <> parentheses refer to specific keys, for example, <Break>.

Note that the parentheses themselves should not be typed.

Characters preceded by a ^ character for example, ^R, are typed as shifted keys, and displayed as inverse characters. Although the program as listed has a good sprinkling of spaces, it should be typed in with all unnecessary spaces omitted.

Type in, Save, and then Run the program in the normal fashion as explained in the Atom handbook. The screen will display the title

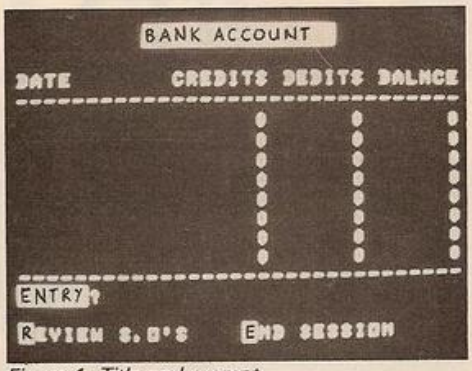

Figure 1. Title and prompt.

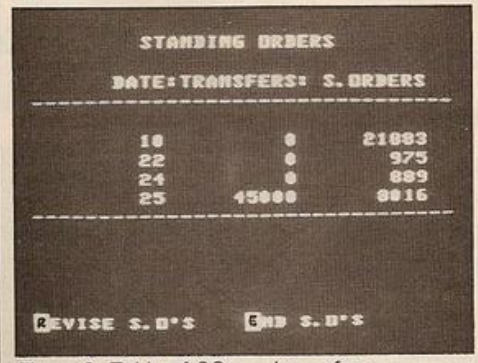

Figure 2. Table of SOs and transfers.

Bank Account and after a pause, the prompt Play Tape.

The first time an account is set up, answer the Play Tape prompt by typing <ESC> and [Goto 410 <Return>].

The statement page will be displayed with zeros in the Credit, Debit and Balance columns and a blank date at the top RHS of the statement — figure 1. At the bottom of the screen will be printed the prompts

^REVIEWS SO'S ^END SESSION

Type ^R to display an empty table of standing orders and transfers. Meanwhile at the bottom of the screen will be printed the prompts

^REVISE SO'S ^END SO'S

Type ^R again to display the prompt Date, Amount<^D/^C>? towards the top of the screen. At the bottom of the screen will be printed the prompt

^REVIEW SO'S

To enter a standing order or transfer, type the day of the month the transaction is to be made and the amount in the format

[Day Number,]{—}[amount in pounds]{^N}[^C or ^D]

The optional ^N code — for New — is a signal that the amount is to replace an amount previously assigned to that day. If omitted, the amount will be subtracted from or added to the current amount, depending on whether the {—} is included or not.

The terminating code ^C or ^D signals that the value is to be treated as a transfer credit or standing order debit respectively. Note that although entered in pounds, all amounts are displayed in pence. For example, to replace

ENTRY?26/9 SUZY,5.1D

REVIEW S.O'S     END SESSION
```

Figure 4. Suzy's cheque.

the amount credited on the 10th of the month with £10.50, type

[10,10.5^N^C]

To increase the amount debited on the 23rd of the month by £15.25, type

[23,15.26^D]

To overcome an error, type <@> and re-do the entire entry. The erroneous entry will be ignored.

To review the table of standing orders and transfers at any time, type ^E, as figure 2. Type ^R again to resume entering SOs and transfers. When all standing orders and transfers have been entered to your satisfaction, type ^E repeatedly until the statement page is once again displayed on the screen.

Answer the initial prompt Play Tape by starting playback of the appropriate data tape and immediately pressing an alphanumeric key. After a few moments the statement page previously saved will be displayed as in figure 3. Note again that all amounts are displayed in pence. New entries may now be typed in — note that entries must be in chronological order as the month number is not significant, and no sorting of the day numbers is done. For example, if an entry for 20/3 is typed in after an entry for 21/3, the 20/3 will be taken to refer to the following month and any standing orders or transferrs between the 21st and the following 20th will be inserted in the statement.

Entries are made in the formats.

{Day of month/Month number}{Note}[,amount in pounds][^C or ^D]

or

[amount in pounds][^C or ^D]

No <return> is neccessary.

If the optional date is omitted, the current statement date at the top RHS of the statement, which is also the date of the last entry made, will be adopted as the new date. This format should be used when a number of transactions are to be entered with the same date. The date and note together are truncated to 11 characters in total — allowing five or six characters for the note. If the optional date and note are both omitted, the second format should be used.

The terminating codes ^C or ^D signal whether the amount is a credit or a debit respectively.

For example, if you paid Suzy a cheque for £5.10 on July 26, type;

[26/7 SUZY,5.1^D]

as in figure 4. Or if you do not wish others to know about Suzy, type

[26/7,5.1^D]

If the previous entry was already dated the 26/7, type

[SUZY,5.1^D]

or

[5.1,^D]

respectively, instead.

Typing a <@> character signals that the entry typed so far contains an error and is to be ignored. A beep will sound and the entry will be erased — retype the entry from the beginning. If you complete an entry containing a syntactical error it will either be trapped and ignored — a beep will sound and the entry erased — or the entry will be entered on to the statement as a dummy zero amount with no effect on the balance.

Any standing orders or transfers encountered on the SO table between the previous and new entry dates will be inserted on the statement page before the entry just made.

You may review and revise the table of standing orders and transfers at your leisure by following the prompts at the bottom of the screen.

The screen window may be scrolled up the imaginary statement in blocks of eight entries at a time, by typing ^ . This is cyclic — that is, the window will be scrolled past the earliest entry on the statement back to the latest entry and then back to where you started from. A beep will sound to remind you that you are once again viewing the working page. If a new entry is made while an earlier portion of the statement is in the window, the screen will automatically revert to the working page before dealing with the new entry.

When the last entry has been made, type ^E to save the displayed statement and the table of standing orders and transfers on tape.

In answer to the prompt Record Tape, start the tape at the point where you wish to save the data and press an alphanumeric key. The values associated with the statement page and standing orders table will be recorded on tape and the message Statement Page Saved printed at the foot of the statement on the screen. ■

INTEREST FREE

On Atari, VIC 20, Commodore 64 and

If your order contains over £120 worth of computer hardware apply now for interest free credit by telephoning: Mail-order: (0702) 552911. London Shop: 01-748 0926. Birmingham Shop: 021-356 7292. Southend Shop: 0702 554000 or write to P.O. Box 3, Rayleigh, Essex SS6 8LR.

You pay 10% down, then 10% per month for a further nine months (to nearest penny). Example: VIC20 Colour Computer. Cash Price £169.99. Credit terms: £16.99 down then £17 per month for nine months: Total £169.99. Credit quotations on request.

THE NEW COMMODORE 64

The incredible new computer from Commodore comes with 64K RAM fitted! Plus 16 colours, hi-res graphics, 320 x 200 pixels, 40 columns by 25 lines, Z80 micro processor can be added — that means you can run CP/M software, 8 independently movable Sprites with collision detection, and a sound generator with 3 voices, 4 wave-forms, envelope and filter to rival some dedicated music synthesisers. And all this at the most incredible price ever.

(AF56L) Only £339.00

DRAGON 32

The amazing new British computer with a full-travel standard keyboard, a 16-bit microprocessor, 32K RAM fitted (expandable to 64K and later to 256K!!), 9 colours, hi-res graphics and Microsoft extended colour BASIC (the very best BASIC to learn with). It can be used with virtually any ordinary cassette recorder, it has a printer interface (Centronics-type), joysticks are available and it's incredible value for money. **(AF57M) Only £199.50**

THE AMAZING ATARI COMPUTERS

4 Consoles Available:

Atari 400 with 16K RAM (AF36P) £249.95

Atari 400 with 48K RAM (AF37S) £319.00

Atari 800 with 16K RAM (AF02C) £499.00

Atari 800 with 48K RAM (AF55K) £590.00

★All above with BASIC & handbooks

Other hardware:

Send sae now for our new software leaflet with details of all the above programs.
Order As XH52G — Issue 3.

Key: C = Cassette. D = Disk. E = Cartridge.
2C = 2 Cassettes etc. 8K, 16K shows minimum memory requirement.

Note: Order codes shown in brackets. Prices correct at time of going to press. (Errors excluded).

VIC20 COLOUR COMPUTER

Hardware

VIC20 Console	(AF47B)	£169.99
C2N Cassette Unit	(AF48C)	£44.95
VIC Printer	(AF49D)	£230.00
VIC Disk Drive	(AF50E)	£396.00
3K RAM Cartridge	(AF51F)	£29.95
8K RAM Cartridge	(AF52G)	£44.95
16k RAM Cartridge	(AF53H)	£74.95

Joysticks and Paddles

Single Joystick	(AC53H)	£7.50
Pair of Joysticks	(AC37S)	£13.95
Le Stick	(AC45Y)	£24.95
Pair of Paddles	(AC30H)	£13.95

Programming Aid Cartridges

Super Expander: 3K RAM and Hi-res graphics	(AC54J)	£34.95
Programming Aid: Additional commands, function Key programming etc.	(AC55K)	£34.95
Machine Code Monitor	(AC56L)	£34.95

Software (all 3K unless stated)

Introduction to BASIC Cassettes

Part 1	(AC57M)	£14.95
Part 2	(AC58N)	£14.95

MORE FROM BBC

Tired of composing symphonies on your pocket calculator? Last month Chris Melville defined some of the initial difficulties encountered in turning the BBC into a musical instrument. This month, his program takes the tedium out of tickling the keys.

NEARLY EVERYONE has seen a pocket calculator-cum-keyboard which allows the user to enter a tune and play it back at various speeds. Of course, to get the BBC Micro to play a tune the process would be much more laborious. First you have to define an envelope if required then each musical note must be changed to a corresponding integer for use in the pitch part of the sound statement. Next, each musical note must be given a duration parameter, as well as some number telling the computer when to sound it. All of these numbers need to be keyed-in by hand. The computer also needs a routine to sound the correct note at the correct time.

This is all very boring, repetitious and error-prone since the BBC Micro has no musical keyboard and all notes have to be entered as numerical data. To produce a tune-playing

MUSIC THE

computer without all of these problems, I have written the program Keyboard included in this article. The instructions are again separate. The user can enter the notes comprising the tune by means of a cursor which can be moved up and down a musical keyboard drawn in colour on a Mode 7 screen.

Once all of the notes have been entered, the user taps out the rhythm of the tune on function key. One can change the speed if required. This is useful for entering fast bits which would be hard to tap out correctly at the right speed. The computer matches up the notes to the rhythm and, at the touch of a button, plays the whole tune at the correct spacings and speed.

Because Keyboard uses Mode 7, thus only 1K video RAM, it will run on a Mode 1A,

NEW

INSTANT IMAGE TRANSFER TO ZX SPECTRUM

RD DIGITAL TRACER £49.95

(unretouched printouts)

The high resolution colour graphics of The ZX Spectrum permit accurate presentation of complex or irregular images – maps, technical drawings, even personalities. But entering individual co-ordinates for unusual shapes can be tedious and time-consuming.

The new RD DIGITAL TRACER cuts out much tedious plotting. It provides instant transfer from original to display file – for screen display in colour, ZX printer printout, or retention on cassette.

The RD DIGITAL TRACER is of immense benefit in many fields – for geographers and weathermen, for engineers, architects and technicians, even for budding Leonardos! Designed for use with the ZX Spectrum, the RD DIGITAL TRACER as supplied is compatible with ZX 81, although high-resolution colour graphics cannot be obtained on this machine.

The RD DIGITAL TRACER is available only from RD Laboratories. The price of £49.95 includes P & P and VAT. Send your cheque now for delivery in 28 days. (Cheques payable to "RD Laboratories".) The RD DIGITAL TRACER is supplied with tracing sheet, software cassette, and full instructions on use.

Please send me ..... RD DIGITAL TRACER(S) at £49.95 each. I enclose payment of £ _____. _____

Name: .....

Address: .....

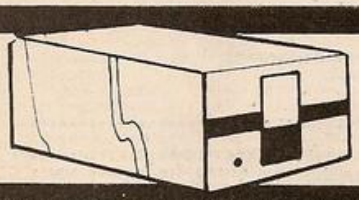

.....

Send to: RD Laboratories, Dept. YCN, 5 Kennedy Road, Dane End, Ware, Herts. SG12 OLU

RD Laboratories' policy is to bring sophisticated computer techniques to low-cost computing. RD Laboratories therefore maintain the right to amend specifications at short notice. Please send stamp for further details of the RD DIGITAL TRACER, and the RD 8100 SYSTEM for automatic monitoring, test and control.

(continued from page 75)

although it cannot store as many notes as a Mode 1B. Note that Keyboard is in two parts, the first of which Chains the second — they must thus be recorded consecutively on tape.

Although the BBC's Envelope and Sound statements allow it to produce a wide variety of sound, the tonal quality of these sounds is not rich. This is because the sound chip fitted, SN76489, produces only square waves. These are the fundamental working signals inside your computer.

I have used my micro to produce sawtooth, sine, triangular waves. This involves a little bit of electronics. Roughly speaking, the problem is to create a voltage, external to the computer, which varies in a wave-form the same as that which we want to hear and, since the user port gives eight-bit digital output, all that is needed is an eight-bit digital-to-analogue converter (DAC) connected to the eight PB lines of the user port.

The user port is memory-mapped at location &FE60 so if we place the correct numbers here, then the digital-to-analogue converter will produce the voltage wave-forms needed to drive a speaker circuit. So the overall method is as follows: first work out the values that are to be fed to the user port and use byte in direction to store them consecutively in a spare page of memory. This can be done in Basic since speed is not important and functions such as sine can be used. Next use a machine-code routine to cycle through the relevant page of memory byte by byte, outputting to &FE60 as it goes. Then, the eight-bit DAC and the odd OA will do the rest and the resultant wave-form will be heard.

Program Keyboard for 16 or 32K provides the BBC Micro with a facility which enables it to learn a tune as a series of notes with their correct rhythm, and then play it back at a selected speed — all at the touch of one key.

The program is in two parts. The first, which deals with entering the notes, should be typed in and then Saved on tape. The second part should then be Saved after it, since it calls the second part using a Chain command. Stop the tape machine after loading the first program, if it does not have computer control.

The program functions in three parts: first, enter all notes — this is a routine, with useful editing features, which sets up an array containing the codes of all of the notes to be sounded, and in the correct order. The method of entry is to move a cursor up and down a musical keyboard on the Mode 7 screen and use the function keys to perform miscellaneous operations to make the job easier. This is contained in the first listing.

Next, enter rhythm — the user now merely taps out the tune using key F0 and/or F1 and the computer matches up each note with its position and timing information in real time.

The third part, auto-sound, enables selection of a voice and the computer plays the tune in that voice.

The tune is restricted to one note at a time, no chords. The use of the function keys is as follows:

Program 1

F0 Enter note	Enters the note currently covered by the cursor on to the list of notes to be played.
F1 Delete note	Deletes the last note to be entered from the list.
F2 Repeat over	Enables a block of notes already in the list to be repeated again at the end of the list.
F3 Block Delete	Enables a block of notes already entered to be deleted.
F4 Echo	Echoes the last note to have been entered.
F6 CSR Beep	Enables/disables the cursor from echoing its position at every move.
F7 Review	Will show and/or sound all notes thus far entered.
F8 Insert	Enables notes to be inserted between others already in the list.
F9 Re-tune	Used to tune the BBC to a different instrument.
Escape Key	Sends you on to the next recorded program.

Program 2

F0	Enter Rhythm; F0 and F1 then become input keys.
F1	Commence auto playback.
F2	Select voice F3 — adjust duration of tune.

The maximum number of notes possible is set by the variable Maxnotes % in line 110. You can adjust this value in accordance with the amount of RAM you have. ■

GAMES V

HAPPY

Stuart Nicholls puts some bounce into ZX-81 games as he shows how to make your Happy Hopper move.

LAST MONTH'S article left you with the Frogger display on the screen but how do you make it move?

First of all, the simple problem of moving a character one square at a time along the top row of the display: program 1 shows how this can be done.

If you have saved on tape the program from last month's issue then reload and use it to Poke the program into the line 2 REM statement. To run each of the demonstration programs change line 10 to

RAND USR 16775

and delete lines 20 to 90.

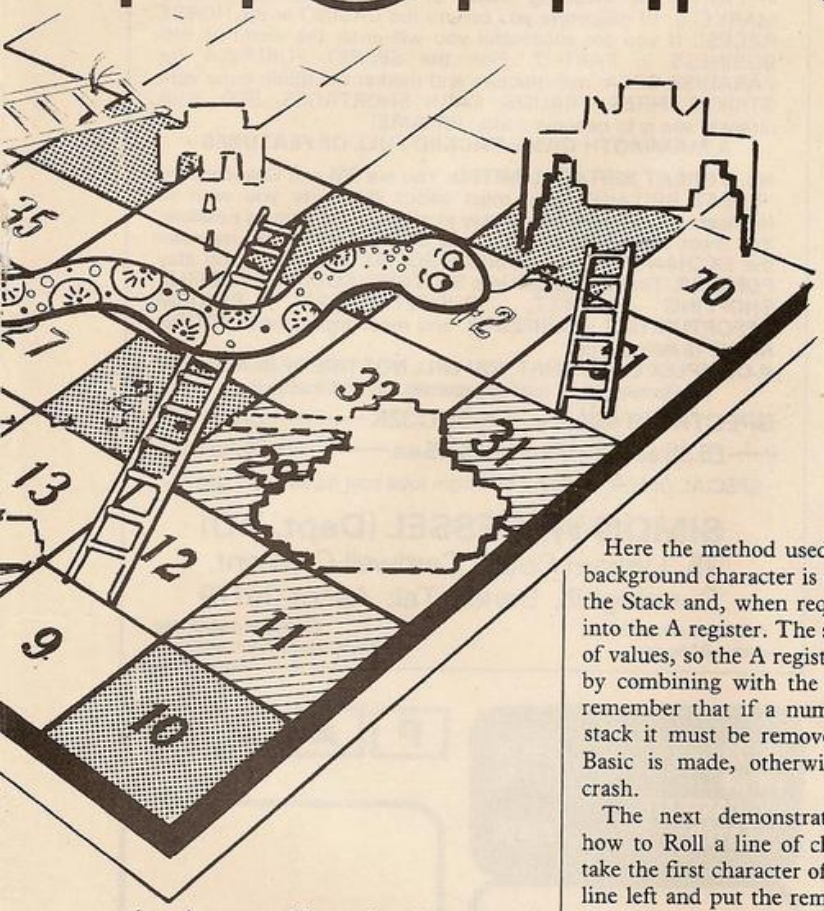

If you now Run program 1 you will realise how fast machine code really is. Did you see the asterisk move along the top row? You will now see that we need something to slow the computer down. The easiest way to do this is to tell it to count down from a high number to zero, which will take a second or two. This is similar to a For/Next loop in Basic. A high

Program 2.

To vary the speed of movement the value held in DE is changed.

```
16775   3E 80          LD A, 80
        06 20          LD B, 20
        D7             RST 10
        10 FD          DJNZ -3
        2A 0C 40       LD HL,(D/F)
        06 20          LD B,20
        23             INC HL
        36 17          LD(HL), 17
```

VRITING
/ HOPPING

number in a machine-code delay loop is around 4096/ 10 00 hex.

So program 1 can be rewritten as program 2 with the delay loop after print Chr$ 23 to hold the character on the screen for a second before erasing it and moving to the next position.

Now on to the problem of moving a character along a row with a background of differing characters and so overprinting the background, and then reprinting the original contents of each square as it moves. This is achieved by storing the contents of the background character before it is overprinted, and then retrieving the character and using it to erase the moving character, and is demonstrated in program 3.

```
                                    Delay loop
11 00 10    LD DE 10 00)            counts
1B          DEC DE      )           4096 to 0
7A          LD A, D     )           before
B3          OR E        )           continuing
20 FB       JRNZ -5     )           with
                                    program
36 80       LD(HL),80
10 F1       DJNZ -15
C9          RET
10 RAND USR 16775
```

Here the method used to store the original background character is to Push its value onto the Stack and, when required, to Pop it back into the A register. The stack only stores pairs of values, so the A register is made into a pair by combining with the flags register F. But remember that if a number is stored on the stack it must be removed before a return to Basic is made, otherwise the program will crash.

The next demonstration program shows how to Roll a line of characters left, that is, take the first character of the screen, move the line left and put the removed character at the right-hand end of the line.

And finally a program to demonstrate how to count on the screen — this is a useful routine for keeping scores or giving a time limit for a game. This is shown in program 5, where we ask the computer to count down — without delay loop — from 999999 to 0, again demonstrating the speed of machine language. The program takes 2.25 minutes.

Incidentally I find it good programming practice to use each of the registers for one purpose as much as possible. I use the HL register pair for screen address — D-File — and the DE register pair for adding to and subtracting from HL, to move the screen address up or down 1 row.

I use the B register for counting, For/Next loops and the C register for checking if subroutines are necessary, by either holding value of 0 or 1. The A register is used for holding contents of display file position and comparing the contents.

In this way it is easier to keep track of the contents of each register and to know which registers are free to use again later in the program.

We now move on to finish the Frogger program. Reload the program so far and check that line 10 reads

LET X = 16775

Change to Fast mode and enter the remaining codes as listed. After the last byte 41 at address 17027 is listed then enter S to Stop the Basic program. Change to Slow mode; change line 10 to read Rand USR 16701 and line 20 to read 20 Print "space End"; delete lines 30 to 90 and Save the program.

Line 20 was put in as an afterthought but could easily be added in machine code. I found after writing the program that there was sufficient memory left in 1K to add this line.

If you have 2K or 3K of memory available then more Basic can be added giving instructions on how to play the game and maybe even a best score/time facility.

All that is needed now is to enter Run and off you go. Happy hopping. ■

(Program 5 continued)

```
3E 25       LD A, 25
D7          RST 10
10 FD       DJNZ -3
2A 0C 40    LD HL D F       Get start of D-File and add 7 to find position
                            of last 9
11 07 00    LD DE 00 07
19          ADD HL, DE
7E          LD A,(HL)
A7          AND A           Check to see if D-File position is a space. If it
                            is, then end of count-down, so print six 0s
                            and RET
20 08       JRNZ +8

DOWNSWAY

ELECTRONICS (UK) LTD.

MORE MEMORY FOR YOUR ZX81 OR SPECTRUM!

NEW!

32K RAM FOR SPECTRUM

A full 48K of memory for the 16K Spectrum — simple D.I.Y. installation by just undoing 5 screws and plugging in! "State of the art" technology — advanced design using fewer ICs for high performance, reliability and economy.

ONLY £42.50 plus p & p.

MEMORIES FOR THE ZX81

The Downsway 64K Memory* slots directly on to the computer, without needing an additional power supply, or adding any extra load to the internal 5v regulator. Trade in your old 16K RAM Pack (any make, any age, any condition) for £12.50 against a Downsway 64K Memory to bring the price down to only **£47.45** plus p & p. Without trade-in, it costs just **£59.95** plus p & p — still incredible value!

If you only want 16K of memory for your ZX81, the Downsway 16K RAM Pack offers the same benefits of high quality and low price at only **£24.95** plus p & p.

Both memories measure only 2½ x 1½ x 1in. and are supplied with a foam cushion strip to provide added mechanical stability.

* Reviewed in ZX Computing Aug/Sept 1982 and Popular Computing Weekly 22/7/82.

Naturally Downsway add-on memories are fully tested and guaranteed, but should you be dissatisfied for any reason, just return the memory within 14 days for a full refund (and your old 16K RAM pack, where appropriate).

Please allow up to 28 days for delivery.

To: Downsway Electronics (UK) Ltd

MAJOR
FINANCIAL GAMES
for
SPECTRUM — BBC — ZX81

Remember those marvellous old board games you used to play? Hours of enjoyment are GUARANTEED with FINANCIAL GAMES

No. 1 INHERITANCE: A 2 Part game. Prove your financial acumen in PART 1 by investing wisely at the STOCK and METAL MARKETS; (If desperate you can try the CASINO or the HORSE RACES). If you are successful you will enter the world of BIG BUSINESS in PART 2. Find the SECRET FORMULA for PARADISE COLA; manufacture and market the drink; cope with STRIKES, FIRES, FRAUDS, CASH SHORTAGES, ETC. Your ultimate aim is to become a MILLIONAIRE!

A MAMMOTH GAME PACKED FULL OF FEATURES

No. 2 GREAT BRITAIN LIMITED: You are PM and Chancellor of "GREAT BRITAIN". You must select the Party you wish to represent and your AIM is to stay in office for as long as possible. You must control INFLATION and UNEMPLOYMENT, maintain the EXCHANGE RATE, introduce SOCIAL REFORMS and stay POPULAR. The game is split into SECTORS: COUNTRY PROFILE, SHOPPING BASKET, BUDGET DAY, REFORM OPPORTUNITIES, MANIFESTO, and most important ELECTION NIGHT (a telling time).

A COMPLEX GAME THAT YOU WILL NOT TIRE OF IN A HURRY

All Games are on quality cassettes with full instructions

SPECTRUM 48K — £5.95 ea. — BBC 32K — £5.95 ea. — ZX81 16K — £4.95 ea.

SPECIAL OFFER: Deduct **£1.50** from total cost if you buy 2 games.

SIMON W. HESSEL (Dept. YO)

BASIC DICTIONARY

This dictionary, compiled by Tony Edwards, will explain the function of common Basic words as used in popular machines, enabling you to work out your own machine's equivalent. A useful complement to our recent series on Basic dialect translation.

BASIC DICTIONARY

ENDPROC A BBC statement denoting the end of a procedure, see PROC. It causes all local variables to be restored and returns control to the line after the calling statement.

ENVELOPE A BBC Basic statement from the extended set. It has 14 parameters which are used as individual machine-code bytes by the operating system to control the sound generator.

EOF A function to test for the end of a file. The argument is the file channel-number and the function returns logical true, –, if the file has ended, otherwise 0.

EOR A logical operator producing the bit-wise integer logical exclusive OR between two 32-bit integers. It appears in BBC Basic's extensions.

EQ An equivalent of the = sign.

ERL A function which returns the line number in which an error occurs once it has occurred. It retains the line number value until the next error occurs. Its normal use is during debugging.

ERR A Microsoft Basic function which returns the Error code of the last error which occurred. Its normal use is in debugging.

ERROR This word can be used as a statement or a command. It has the effect of simulating an error. The specific type of error simulated is controlled by the argument following the statement. It is usually used during debugging to check error-trapping routines, but can also be used within a program to print out uncalled-for error messages.

EVAL This is a statement which applies the interpreter's expression-evaluation routine to the characters held in the string indicated by the argument. Its use is to allow a program user to input a function into a program by simply inputting a suitable string.

EXAM The function used by some computers to read the contents of a memory location specified by the argument. It is the equivalent of PEEK.

EXP A function returning e to the power of the argument. It is the inverse of the LOG function.

EXT A function returning the length, in bytes, of a file whose channel number is the argument.

F

F. An abbreviation for FOR used by Microsoft Level 1, and Palo Alto Tiny Basic.

FALSE A BBC function which returns the logical false that is, 0.

FETCH A function used by some computers to read the contents of a memory location specified by the argument. It is the equivalent of PEEK.

FILL A function which places its second argument in the memory location identified by its first argument. It is equivalent to PEEK.

FIX A function which removes the decimal part of a variable's value. With positive numbers this rounding down is identical to the INT function. However, with negative numbers it rounds them up by making them less negative.

FLASH A statement used in Apple-II Basic to cause the VDU display to flash.

FN The reserved letters to be placed at the start of a function name. It must first be defined following a DEF statement. Then it can be invoked as can any of the machine's built-in functions.

FOR The initialising statement of a For . . . To (NEXT) statement which is used universally to assign a range of numbers between two specified values to the specified variable. The loop is terminated by the NEXT statement. An ANSI standard word.

FRE A function which returns the number of bytes of unused string space available within the computer's reserved memory stack. The argument is a dummy with no significance. The same word is used on some other computers to return the total amount of unused memory available.

FREE(0) A function used to report the total amount of file memory available. Equivalent to the MEM function.

G

G. An abbreviation for GOTO used by Microsoft Level 1 Basic.

GCOL A statement used in BBC Basic to set the graphics foreground and background colours.

GE The TI-99 equivalent of the "greater than or equal to" sign.

GET A function which inputs a key input without requiring a Newline or Enter. On some machines execution will stop, awaiting a key depression, for example Apple, but on others the execution continues, unless a key is pressed.

GET# A function used in Pet and Atari Basic to read a character from a data tape.

GOS. Used as an abbreviation of GOSUB on Atom, and Microsoft Level 1 machines.

GOSUB The ANSI standard statement to cause a branch to a subroutine.

GOT A PDP-8E abbreviation of GOTO.

GOTO The ANSI standard statement to cause a jump to another part of the program. Also used in the form GO TO.

GOTO . . . OF A multiple-branching GOTO. The control will be passed to the line number following the OF which is in the numerical position of the argument, that is:

```
GOTO X OF 10,20,30
```

will branch to 10, 20 or 30 if X has the values of 1, 2 or 3. Some computers expect a space between GO and TO.

GR A function or statement in Apple II Basic which switches the screen display between different modes.

GT The equivalent of a "greater than" sign.

H

HCOLOR An Apple II command which, following HGR, identifies which colour is to be used.

HGR The Apple II command which sets the screen for hi-resolution graphics mode.

HIMEM A pseudo-variable which holds the address of the highest-numbered memory location available for use by the interpreter. Higher numbered addresses are effectively non-existent, as far as Basic is concerned, but can be filled with data or machine code which can be jumped to from Basic. Similar to MEM SIZE? and READY?

HLIN . . . AT An Apple II graphics command which draws a horizontal line from the first argument to the second, at the vertical position indicated by the third argument.

HOME A command which clears the screen and returns the cursor to the upper left corner of the screen. Identical to CLS.

HPLOT This command sets a high-resolution graphic block on the Apple II.

HTAB The command in the Apple II set which moves the next print position horizontally. Identical to TAB.

I

I Used in TRS-80 Level 1 and Palo Alto Tiny Basic as an abbreviation for INT.

IF Part of a multiple branching statement. For details of full statements see below. An ANSI standard statement.

IF. . .G Used in TRS-80 Level 1 and Palo Alto Tiny Basic as an abbreviation for IF . . .GOTO.

IF. . .GOS Used in TRS-80 Level 1 and Palo Alto Tiny Basic as an abbreviation for IF. . .GOSUB. ■

AMSOFT

ANNOUNCE

A NEW RANGE OF ZX81 AND SPECTRUM SOFTWARE PRODUCTS FOR THE DISCERNING USER

Amersham Software Ltd exists to provide software for those users who wish to develop the full potential of their ZX81 and Spectrum computers in the simplest and most effective way, without costly and unreliable hardware changes.

All **AMSOFT** products are designed to work using standard Sinclair equipment, but can be used to generate software for any other devices as well. The range will include assemblers, relocating loaders, compilers, etc. running under a standard monitor system, as well as file handling software to allow Basic users to handle data files.

The first two products are available now:

AM-ZXMON a superb machine code Monitor for the ZX81 allows entry, alteration, movement, verification and execution of machine code programs. The contents of any location or block of locations can be displayed on the screen or printer and user programs can contain breakpoints which allow examination or alteration of the Z80 registers and memory. A special feature allows individual program sections to be saved and loaded on cassettes, and merged together, providing machine code software library facilities. All **AMSOFT** compilers, etc. will be compatible with **AM-ZXMON**.

Superb value at £5.75 inc. VAT

AM-ZXFILE allows the Basic user to create and read back data files to and from cassettes. Users can specify the number of records per block written, the block sizes, and the length of the inter-block gaps. Records can be fixed or variable in length and are created in or transferred to a Basic string array.

Provides the facilities of a large machine at £3.50 inc. VAT

TO: **AMERSHAM SOFTWARE LTD, LONG ROOF, HERVINES ROAD, AMERSHAM, BUCKS. HP6 5MS.**

Please send me ..... ☐ AM-ZXMON

and ..... ☐ AM-ZXFILE

I enclose my cheque/postal order for £..... made payable to Amersham Software Ltd.

DRAGON 32

THE FAMILY COMPUTER TO FIRE YOUR IMAGINATION

Easy to Learn! Easy to Use!
Colourful! Graphic! Musical!
Well-made and Designed to Grow!

KEY FEATURES

** 32K RAM as Standard, Expandable to 64K
** Display:
9 colours available.
5 different resolutions from 16 x 32 to 256 x 192.
** Extended MICROSOFT Colour Basic as Standard.
Advanced graphics commands—set, line, draw, circle, paint, print using:
Advanced Sound
Full Editing—insert, delete, amend.
** Professional Typewriter Keyboard
(Guaranteed for 20 million key depressions).
** FREE 160 page 'BASIC' training manual.
** Simple 'plug-in' Connections for Joysticks, Printer, Games, Cartridges and 'auto-controlled' cassette.
** Software on Cartridge and Cassette already available (send for details).

PRICE ONLY **£199.50** incl. V.A.T.
MAIL ORDER—£7 Carriage
but FREE on cash/cheque orders.

This is a Forth simulation by R C Ranson for the ZX-81 enabling you to try out this structured language.

FORTH DIMEN

ESSENTIALLY, FORTH is a high-level language which retains much of the flexibility associated with assembly language. Program development time is short because of its interactive, modular construction and very simple program test arrangements.

In execution, Forth is fast because individual program elements are semi-compiled on entry and then linked together by a very fast address interpreter routine. However, unlike other compiled languages, for example Pascal, a Forth system is very compact — a complete Z-80-based system with compiler and dictionary could reside in 8K of ROM.

This article describes a ZX-81 Basic program designed to simulate some features of Forth so that you can try it out on a terminal. It illustrates the unconventional Forth syntax and the principle involved in the semi-compiled code operation. But do not mistake this for the real thing. Because it operates in Basic it is relatively slow and does not have the same flexibility as a dedicated Forth implementation.

Forth is a structured language in which the elementary programming units are words separated by spaces. Each word is defined in the system in a list — called the dictionary — by combining the operation of previously-defined words. Programs are developed in a top-down fashion writing words to do individual tasks, then words which combine these tasks and so on until the whole program is just one word.

At each stage the interactive nature of Forth allows words to be tested and debugged.

During execution the Forth system calls each address in turn, thus performing the desired task in terms of previous tasks. In principle there is no limit to the depth of this task subdivision process. The Forth system keeps track of each level of nested words by means of a return address stack just like calling subroutines within subroutines in Basic. Thus, words are defined in terms of other words within the dictionary, until words are encountered which actually perform machine-coded instructions. These lowest-level words are called primitives and a typical Forth system containing 400 words could have as few as 50 primitives.

All this nesting and stack work is performed by the address interpreter which in Z-80 code is only 20 bytes long and so very fast in operation.

The other main feature of Forth is the parameter stack which is used for data communication between words. For example, Forth words do not have formal parameter lists; each word operates on stack data, so the syntax follows reverse-polish notation popularised by Hewlett-Packard calculators. There is what is also known as postfix notation, for example 2+2 becomes 2 2 + where the spaces are significant as they define the end of each entry. In this example the word + takes two items off the stack.

The stack orientation is very flexible and means that very few named variables are defined; values are merely Pushed on to the stack by one word and Popped off by the next. It is however essential to keep track of the stack entries in order to ensure that the right values are passed on. In practice all this stack use is highly efficient in machine terms and also easy to use as Forth includes many powerful stack operators.

In the simulation program the Basic text is equivalent to the machine-code system, including primitives, and the line numbers are equivalent to addresses.

It contains three distinct blocks of code which roughly correspond to features in a real Forth system. Lines 10 to 450 contain the text interpreter which scans the input string I$, picks out individual words and executes them in sequence.

Listing 1.

ISIONS

Execution is performed by searching through the dictionary to find the word and then calling that word as a subroutine — lines 1000-9000. Space has been left at the top of the dictionary for the definition of new words — lines 460-999. There are two stacks defined by the arrays R and S with corresponding stack pointers M and N. These are the Return and Data stacks respectively.

Note that the Basic system subroutine stack is used for nesting words and this dual-return stack arrangement does lead to limitations in the compile mode of operation. It is also the reason for the rather clumsy-looking construction of Gosub followed by Goto instructions in the dictionary.

Using the program in listing 1, first check the operation of the text interpreter. Run and imput 33 2 to the prompt and then press return. The system responds with ■33■2 OK. This shows that the two words 33 and 2 have been picked out individually by the interpreter and executed correctly by the program; the inverse space shows the gap between words and OK means that the current instruction was understood.

To stop use the stop, entry key then return with other words — note that any extra spaces are ignored. If you are happy with the text interpreter operation, delete line 460. Continuing the example above, what happens is that each number is entered on to the stack; to confirm this use the word S? and the whole stack should be displayed.

All words are first looked up in the dictionary and if not found are converted to numbers using the Val function, lines 9000-9060. The dictionary consists of a user-defined part and the system part. The system words are all primitives — they are tabulated in table 1 for easy reference.

You can try words out just by typing them in but remember to include the necessary number of stack entries before each word. With 33 and 2 on the stack, type +, this adds the two entries and leaves the sum on the stack. The word . prints the top stack entry and deletes it and this gives the answer 350K.

Some words need no stack entries, for example Dup pushes the top stack value on to the stack creating an extra entry. The combination Dup will thus print the top of stack without destroying it. Alternatively if you cannot follow what is going on remember S? before and after each word shows all the stack operations.

The ability to create new words in the dictionary is the single most powerful tool in Forth. A full implementation has words specially designed to help do this but this simulation does not. However, it is possible to create new words by adding not only the definition but also a few lines of Basic to scan the dictionary, call the routine and pass control back to the text interpreter.

For example, lines 700-750 listing 1 add the word Poly1 to the dictionary. This evaluates the polynomial X^2+x+1 using x as the top stack entry and leaving the result on the stack. It could be done directly by typing:

3 DUP DUP * + 1 + .

The answer is 13 OK. Alternatively type

3 POLY 1 .

and the answer is the same. To see this in operation, add line 460 and repeat the above.

When Poly1 is executed, it appends the Dup Dup instructions to I$. These are then executed by the text interpreter just as if they had been typed in the first place. Other words can be added in the same way and note that new words can use other new words. The examples in listing 2 show the word star used by the new words Star2 and StarS.

The control words are best explained by example. The word ABS line 500 listing 1 illustrates the use of the If construction. A zero on the stack — that is, false — makes execution continue after the Else, otherwise it continues after If and skips from Else to Then. Else may be omitted and then no operation occurs for the false case. Examples are given in listing 3.

The word Count line 600 — listing 1 — illustrates the Do Loop configuration. Do marks the beginning of a loop and removes two stack entries, equivalent to the For and To values in Basic.

The Loop word is equivalent to Next but always increments the loop count by 1. The code between Do and Loop should not add or delete data stack entries and must not add or delete return stack entries. This is because you can loose control of the data stack and because the loop counts are held temporarily on the return stack. Hence the use of I to put the loop count on to the data stack. The example 5 Count is shown in listing 4.

Finally, in the Poly1 example, the printout from line 460 shows each word and the insertions being executed by the text interpreter. A great deal of time is spent matching strings and searching through the dictionary for words that are already defined. This is of course quite unnecessary and is included here for illustrative purposes only.

When a new word is defined all the words within it are in the dictionary and fixed, all that is necessary is to call each word in turn using its line number — address — and this saves the extra slog of dictionary searches. This compilation is done automatically by a proper Forth system, but in the simulation it must be done by hand.

The alternative Poly1 definition Poly2 illustrates a compiled word as it would appear in Forth. The construction is very similar to a primitive, except that the word definition — lines 830-895 — contains Gosub calls to line numbers. The line numbers are the address of the words in the Poly1 definition, see table 1. Line 870 inserts the number 1 string into A$ for conversion by the number routine.

If you now repeat the Poly1 examples, with line 460 again, you can see the instruction executed immediately and rather quicker.

In Forth most words are made up in this fashion with lists of addresses rather than the machine code and this is the reason for its compactness and its portability since only the system code and primitives are machine dependent. ■

Line	Word	Stack	Comment
			Printing Instructions
1130	.	n - -	Print and Delete top stack entry
1230	S?	- - -	Print all of stack
1330	Emit	n - -	Print top of stack as a character
1430	Space	- - -	Print a space
1530	CR	- - -	Print a Newline
			Stack instruction
2030	Dup	n, - n,n,	Duplicate top of stack entry
2130	Drop	n - -	Discard top of stack entry
2230	Swap	n,n_2 - n_2n,	Exchange top two stack entries
2330	Over	n,n_2 - n,n_2n,	Duplicate second stack entry on the top
2430	I	- - n	Copy top of return stack on to data
			Arithmetic and logic
3030	+	n,n_2 - n, $+n_2$	Use top two stack entries
3130	-		Deletes them and puts
3230	*		arithmetic result into the
3330	/		top stack entry.
3430	=		Uses top two stack entries
3530	<		deletes them and puts 1050
3630	>		on to stack for true or false.
			Control instructions
4030	If	n	If n is true continue execution
4200	Else		Otherwise skip to Else or Then
4300	Then		Continue execution
4400	Do	n, n	Save Instruction pointer loop limit n, and count n_2 on return stack
4500	Loop		Increment loop-count branch back if less than limit . . . Otherwise delete three return stack entries and continue.

"Thank you once again for your prompt service; yours must be the most user-friendly company in the business!" G.S. Yorks

"I must congratulate you not only on the quality of your goods but also on your excellent service." G.W. Solihull

Quality software
ZX 81 Spectrum BBC Vic-20

GAMES CASSETTES

ZX81 (16K) SUPER INVADERS £4.95
On-screen league tables, animated instructions. Game in machine code – "excellent . . . one of the two best . . . deservedly popular" (Pop. Comp. Weekly) "Great game!" S.F. Glos.
ZX81 (16K) LYNCHMOB £4.95
Exciting word game. 2-6 players. Excellent for the family. Great fun, educational too! Animation, on-screen scoring. Superb Xmas present.
Spectrum (16K) LYNCHMOB £6.50
As for ZX81 but with added excitement of colour, sound and hi-res animation.
VIC-20 (unexpanded) INVADERS £6.90
Machine code, colour, eight sound effects
BBC ("B") BRIDGEMAN £7.90
The popular gobbler game. Hi-res, colour, sound.

APPLICATIONS SOFTWARE on cassette

ZX81 (1K) GRAPHICS STARTER PACK £4.50
Four 1K Graphics programs on cassette with 12 pp. explanatory manual.
ZX81 (16K) MULTIGRAPHICS £6.90
A user-friendly package of procedures giving you full control of the ZX81 graphics functions to compose designs, drawings, adverts etc. Incorporates advanced sketchpad, 3 sizes of text (including power case), animation, printer output, SAVE displays etc. Businessmen use it to advertise at point-of-sale. 20 pp Manual.
Spectrum (48K) SPECTROGRAPHICS ..... Send s.a.e. for details
Another superb user-friendly graphics program – hi-res and lo-res sketchpads, multisize text, etc. etc.
ZX81 1K STATISTICS £4.00
Mean, SD, variance, correlation, regression, t and F tests. 8 pp Manual includes listings, test data etc.
Spectrum (48K) STATISTICS (price includes maintenance) £9.90
Mean, SD, variance, correlation, regression, t tests. Hi-res graphic displays, data manipulation procedures.
EPHEMERIS ZX81 (16K) ..... £6.90 **Spectrum (16K, 48K)** £7.90
Interested in heavenly bodies? Input date, time and your position, Ephemeris computes altitude, azimuth, phase etc. etc. for sun, moon and planets.

16K RAM pack made by Memotech **£28.50**

Send s.a.e. for details of our products
All-inclusive prices. First Class return-of-post mail in U.K.
European customers add 30p per item; 70p Worldwide (Air Mail)
Available by mail order or from leading computer stores. Trade enquiries welcome.

Bridge Software

ZX81 16K RAMPACKS

WHY NOT buy now, one of the super new RAM PACKS from GROUND CONTROL? The standard version gives 16K of user ram, while the (S) version is fitted with a keyboard sounder enabling much faster entry of programs and less eyestrain due to audible feedback every time a key is pressed. The well engineered case ensures a snug fit to the ZX81.

NOW WITH Access VISA

PRICES. (All inclusive for U.K.)

16K RAM PACK (S) £24.95
STANDARD RAM PACK £19.95

Euro post add £2.00

Availability is usually by return for credit cards, 5 days for cheques. There is a 14 day money back guarantee if not satisfied. Please send SAE or IRCs with all enquiries.

VISIT HULL AND THE HUMBERSIDE MICROFAIR
AND ZX VILLAGE

Home and Personal Microcomputers, Software, Books and Video Games to fill the £5 to £500 Xmas Stocking.

The ZX Village – a separate area for Sinclair ZX81 and Spectrum users.

The Venue – Central Methodist Hall, Prospect St., Hull.
The Day – Saturday, 4th December, 1982.
The Time – From 10.00 a.m. until 5.30 p.m.
The Price – Adults 80p, Children 40p.

VIC 20 DRAGON 32 ATARI sinclair BBC

Salamander Software

PRESENTS

Software from the south for the DRAGON and BBC Model B microcomputers.

WIZARD WAR
The mighty mages of the Tri-suns strive for supremacy in a fearsome battle of skill and strategy!

DRAGON RIDER
Can you destroy the enemies from the sky before your fiery steed runs out of puff

STAR TREK
A full version of this classic game, for the Dragon; features Faery Queen, hyperprobe, time travel, tractor beams and more!

VULCAN NOUGHTS AND CROSSES
Pit your wits against the Dragon or your friends in this three-dimensional game of logic!

TANKS!
Variable wind and terrain make this exciting two-player game a challenge for everyone!

GAMES COMPENDIUM
A selection of games for all the family, including Blackjack, Donkey Derby, Kingdom, Noughts & Crosses, Lunar Lander and Hunt the Wumpus!

All games £6.95 inc p&p.

RING NOW TO ORDER DIRECT!

27 Ditchling Rise, Brighton, E. Sussex. BN1 4QL.

Discount for bulk orders and retail: send SAE for catalogue.

All games guaranteed.

NOW YOU'VE GOT YOUR SPECTRUM, WE'VE GOT THE VERY BEST PROGRAMS

SOFTWARE SUPERMARKET

As soon as our Spectrum arrived, we set about playing all the available programs. And evaluating them. Did they work? Did they use the colour and graphics well? Were they programs that we enjoyed and wanted to play again and again? Were they worth the money?

We've chosen, from dozens, just eleven. Too many programs we tried made little or no use of the sound feature. Too many used the colour and graphics features indiscriminately. The eleven we've chosen will make your Spectrum work, will make you glad you've got it. The programs are exciting to look at and make intelligent use of the Spectrum features. To get the very best programs around, simply complete the coupon below. We're testing new programs all the time, and if anything exceptional turns up, we'll send you details with your order.

Our selection service costs you nothing. And it can save you £££s. Instead of writing to lots of different people, write to us. We'll send you all the tapes you want, usually within 48 hours of receiving your order.

Now... for the very best Spectrum programs, read on.

ZX SPECTRUM

S1. **GROUND ATTACK** Arcade game thrills based on 'Scramble'. Pilot your spaceship through up to 26 zones while destroying missiles and fuel dumps. As you get better, it gets harder. Staying power and quick reactions have kept us alive for 10 zones. M/C, sound and colour. 16/48K. Silversoft. £5.95.

S2. **METEOR STORM** Two different types of flying saucer and a bombardment of meteors in this Spectrum version of asteroids. The game has thrust and fire features - and it talks to you! "One of the best arcade simulations on offer" - *PCW*. 16/48K. Quicksilva. £4.95.

S3. **GULPMAN** "...is the one cassette that I would buy...an exceptional program" - *PCW*. In this all-machine code version you can choose from 9 speeds and 15 different mazes - each requiring a different strategy. Laser defence to help against the nasties and a demo run of any maze. 16/48K. Campbell Systems. £5.95.

S4. **INTRUDERS** "High quality invaders" - *Your Computer*. "Fun to play" - *PCW*. This version of invaders has good graphics, is very fast, has a hold feature and enters initials of highest-scoring player. 16/48K. Quicksilva. £4.95.

S5. **LYNCHMOB** This version of Hangman makes good use of spectrum colour and graphics. Great fun, educational, and a wonderful hanging! 16/48K. Bridge. £6.50.

S6. **MAZE OF GOLD** Amazing 3D perspective views as you search the maze for gold. Machine-coded for speed. Can you find the exit while still solvent? Good value. 16/48K. Gilsoft. £5.95.

S7. **SPECTRUM ARCADE PACK** Fantastic value. 8 really good games on one cassette, using good colour and graphics. City Bomber, Subhunt, Missile Commander, Lunar Lander + 4 other great games. 16/48K. C-Tech. £5.00.

S8. **ESCAPE** From the author of 3D Monster Maze and 3D Defender, Escape is a maze program - with a difference. The maze is inhabited by 5 very realistic dinosaurs and a Pteranodon that soars over the maze and swoops down on you. Different skill levels - the hardest is very fast indeed! 16/48K. New Generation. £4.95.

S9. **VENTURE** Great value this one - 7 linked games on one cassette. Can you survive all 7 sections and collect the gold? Good use of colour and graphics. 16/48K. Bobker. £6.00.

S10. **GREAT BRITAIN LIMITED** You are Prime Minister of Great Britain - choose your party and run the country from your armchair! Can you control inflation and unemployment, or will you have rioting in the streets? Watch the results come in on election night. **48K only.** Hessell. £5.95.

S11. **SPECCHESS** Clever graphics produce beautiful chessmen. From Artic, who game you the best chess program for the ZX81, Specchess has 7 play levels, all legal moves, position analysis for solving chess problems and recommended move option. **48K only.** Artic. £9.45.

ZX81 TOP OF THE PROGS

All programs require a ZX81 16K Ram

ZX1. **TRADER** Travel around 6 planets as an intergalactic trader. 3 x 16K chapters. Outstanding graphics. Pixel. £10.50.

ZX2. **ASTEROIDS** Good M/C version of the original arcade game. 10 play levels, great swivel action. Silversoft. £5.95.

ZX3. **ZX CHESS II** Simply the best chess game for the ZX81. 7 play levels, all legal moves. Artic. £9.95.

ZX4. **OTHELLO** A superb opponent. The best and latest version. 9 play levels. M of I. £6.95.

ZX5. **SUBSPACE STRIKER** You are captain of the spaceship Swordfish. Splendid graphics. Pixel. £5.50.

ZX6. **VENTURE** 7 linked games make this good value. Can you survive all 7 sections and collect gold? Bobker. £5.00.

ZX7. **FROGGER** Enchanting graphic frogs must survive moving cars, logs, diving turtles and alligators! DJL. £5.95.

ZX8. **ZUCKMAN** The first and still the best ZX81 version. High-score Hall of Fame. DJL. £5.95.

ZX9. **PILOT** Test your skill on this brilliant flight simulation program, written by a pilot with helpful demo mode. Hewson. £5.95

ZX10. **THE ZX ARCADE PACK** A brilliant collection of fast-moving machine-code arcade games. C-Tech. £4.95.

Please post to: **SOFTWARE SUPERMARKET, 87 Howard's Lane, London SW15 6NZ.**

CONTROL MPF-1

Even if by pest control you mean programming robot mice, the MPF-I should fit the bill

John Dawson reviews.

THE MICRO-PROFESSOR must be one of the machines offering the best value for money in single-board computers available in this country at present. For less than £90 you can acquire a Z-80-based computer with keyboard and display on one board, a powerful monitor program, space to wire additional circuits on the main card and as much expandability as you can handle.

Before I received the Micro-Professor for review I had read only one previous article in which the author moaned continually about the inappropriateness of teaching computing at machine-code level. He said that what the younger generation needed was a broad appreciation of computing based, where necessary, on the use of high-level languages and that machine code was irrelevant except to a very few systems engineers.

This black-box approach to computers and their application is adequate — so far as it goes. If the machine you use runs much faster than you need and if you have the resources to purchase all the modules that you need, and if you never need to stretch the high-level language you use, then all will be well. If, on the other hand, you want to explore, and if you want to use a computer for a new purpose, something beyond other people's experience, then you must understand more about how the black box is constructed and how it functions. You may not use machine code in your new application, but you are more likely to be successful if you understand something of the highways and byways of microprocessors.

The construction of a program in machine code is strictly comparable to using an ordinary Microsoft Basic. Both languages have facilities for taking information into the computer, processing data using conditional jumps, calls to subroutines, comparison and mathematical operators, and displaying the results in a form that is intelligible to the user.

The Micro-Professor computer is 6.2in. wide, 8.8in. deep from front to back, and just under 0.75in. thick. A 2.25in. loudspeaker is mounted on the board with the diaphragm at the rear. There are 36 hard plastic keys on the keyboard and the keys travel about 2mm. when they are depressed. The keyboard appears to be well-made and is pleasant to use with adequate inter-key spacing.

Information display

Information is displayed on six 0.5in. seven-segment Light Emitting Diode — LED — displays and the character set that can be achieved using seven segments is shown in figure 1. At the rear, right side of the board are two 3.5mm. jack sockets for connection to a cassette-tape recorder and a power-input socket.

A 7805 IC regulator is fitted on a heatsink and the manual says that the input voltage may be between 7 and 24V. A 230V mains power supply unit — PSU — is provided with generous leads about 6ft. long, and this provides 9V DC at about 500 mA.

The PSU was supplied with a 13A plug already connected. The PSU became cool-to-warm when the machine ran for several hours in the course of the review while the 7805 regulator heatsink became too hot to touch. The manual states that this will happen and explains that it is not a matter for concern.

In front of the power regulator is a breadboard area that may be used to hand-wire your own circuits. There is room for approximately eight 16-pin ICs or a mixture of the wider 24-pin packages with some 14- or 16-pin ICs and discrete components. 5V and ground rails are distributed throughout the breadboard area with convenient holes for a smoothing capacitor.

The Z-80 Central Processor Unit — CPU — is located at the rear left side of the Micro-Professor board and there are three 24-pin sockets for the Erasable Programmable Read Only Memory — EPROM — containing the fundamental operating program — the monitor, the RAM supplied with the machine, and one socket that may be used for either additional RAM or another EPROM.

Like the Apple computer, a number of jumper connections are available on the board. These must be either cut, or connected to alter the configuration to suit each of the various chips that may be plugged into the spare socket.

Unlike many other cheap — and not so cheap — computers, there is no need to fiddle about trying to connect wires to odd pins of other components — the options on the Micro-Professor board have been well thought out.

An 8255 Programmable Peripheral Interface — PPI — chip is used to drive the LED display and the keyboard. Two sockets are provided for a Parallel Input/Output — PI/O — chip and a Counter Timer Circuit — CTC — IC. Finally, and very important they are too, there are two standard, properly-designed, sockets on the extreme left of the board that carry all the connections to the Z-80 CPU and the signal lines from the PI/O and CTC chips.

The connections to the Z-80 form a bus that will, in theory, allow you to expand the Micro-Professor computer to a full 64K, twin floppy-disc, business-orientated system.

If you want to expand the computer, however, you will have to increase the drive capacity of the Z-80 bus. The data and address lines are not buffered on the main board. System buffering is carried out on the EPROM programmer board.

The printed-circuit board is well made with gold-plated connections, a green solder-resist on both sides and the component locations, and values silk-screened on to the top surface.

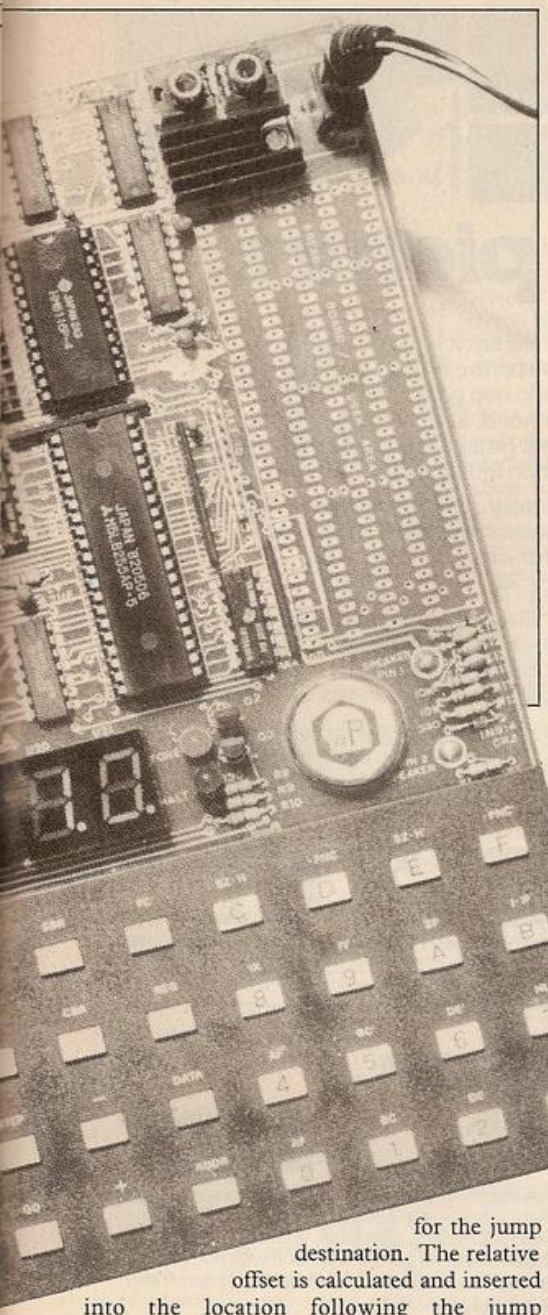

Two versions of the Micro-Professor computer have been marketed in this country. The original computer — MPF-1 — had a 2K monitor only and this was extended in the MPF-1B to include a 2K Tiny Basic. The MPF-1B is now the only version that is available and this costs £75 plus VAT. The 20 monitor commands represent a reasonably comprehensive set of facilities for entering, examining, running and correcting machine-code programs. In addition to the ability to enter data into a particular memory address you may load the Z-80 registers, and the alternative register set, with data before starting to run a program.

The SBR and CBR commands Set and Clear a single break-point to allow you to stop a program at a specified address to examine the status of the Z-80 CPU. The Move command is intelligent in the sense that the monitor calculates for itself in which direction data should be moved to avoid corrupting the memory. Other monitors of my acquaintance are not so smart.

Relative jumps

The Delete and Insert commands will move the data in the memory down or up one byte. The delete command removes the data at the address for which the command was entered and the Insert command enters a no-operation instruction — 00 Hex — at the address from which the instruction was entered.

Relative jumps can be calculated using the Rela command. The monitor assumes that the current address is the start of the jump, unless you enter a different number, and then asks

for the jump destination. The relative offset is calculated and inserted into the location following the jump instruction. If the jump is outside the range that the Z-80 can handle an error message is displayed. There is no consistent way of recovering from errors except to reset the computer; this is acceptable in the Micro-Professor as the Reset key does not destroy existing programs or data.

The tape Read and Write commands are easy to use and the method of setting the start and end addresses for the block you wish to save is consistent with other block commands in the monitor.

The level control for the tape recorder is excellent; there is either sufficient signal from the tape recorder or not enough. When the output level from the tape recorder is high enough, a Schmitt trigger in the computer operates and the input signal can be heard on the loudspeaker. When the volume is low, the trigger does not operate and there is no sound and no input to the computer memory.

Programs that you save on tape may have file names consisting of a number between 0 and 255, and the monitor will search through a tape until it finds the correct program. When you have loaded a tape file you simply press Go and the computer executes the program.

The monitor is easy to use and allows good access to the Z-80 flags and registers. For example, most of the other computers I have used print the CPU flag register as a hexadecimal value — E5 would be typical.

The Micro-Professor presents information about the flags in exactly the form you want it — in binary — 01100010, so that you can tell whether a flag is Set or Reset.

The Basic is pretty basic. I understand that it was added to the monitor EPROM in order to counter criticism about machine-code programming for young people. Well, it does that and it has two instructions that make it very useful for controlling the PIO and CTC chips.

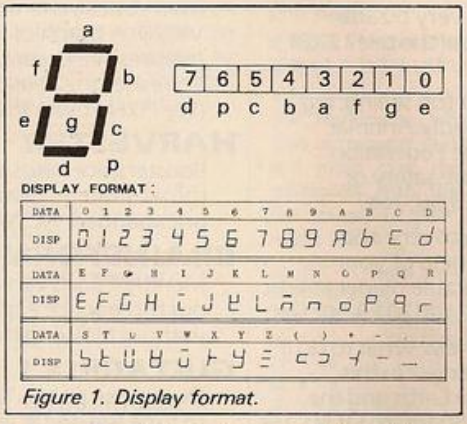

Figure 1. Display format.

Two variables are reserved to access the Z-80 ports and RAM locations:

```
LET M 3477 = 750
```

stores the value 750 at the decimal address 3477. The instruction works the other way in this form:

```
LET A3 = M 3991
```

which will get the value stored at RAM location 3991 decimal and store it in variable A3.

There are similar instructions for the P variable which relate to the Z-80 port addresses. The Micro-Professor instruction is only a convenient Deek and Doke alternative but the P instruction is an original and useful idea.

When you are programming in Basic the machine takes a single keystroke as the input for a whole instruction. The keywords are printed on to a template which slips over the original keyboard.

There are three manuals for the Micro-Professor computer and a fourth which describes the Tiny Basic. The Micro-Professor manuals total 300 pages of information about the hardware, the software, and a series of experiments and other programs. What is there left to say about Oriental English?

The Micro-Professor manuals are no worse than many others and it is usually possible to figure out what the author intended to say. They are unsuitable for a first-time user who needs the constant reassurance of accurate documentation if she or he is to cope with unfamiliar and complex concepts.

The monitor listing is a fully-commented source listing and it would be very easy to modify the monitor by changing bytes here and there before "blowing" it into another EPROM.

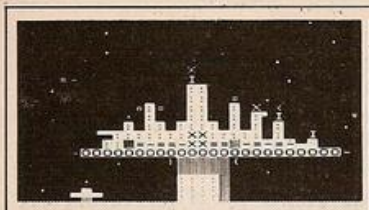

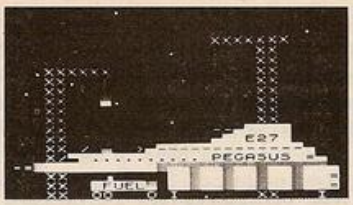

The listing takes 51 pages for 2K and most of the useful subroutines start with a description of the function of the routine, a note of the input that is required, the output in various conditions, which of the Z-80 registers are corrupted and which other subroutines are called. The monitor and its documentation is up to the standard of one of the original Intel evaluation kits — very good.

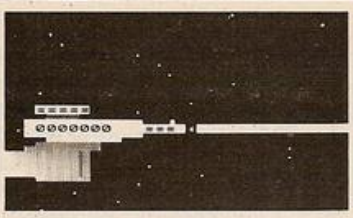

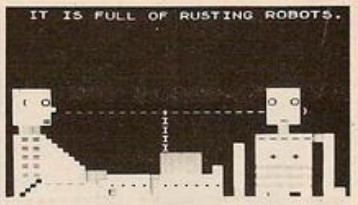

The Experiment Manual covers the software and hardware and includes a full description of the CTC chip and its use. The Japanese English is much less severe in this book and I think that large sections have been written for native English speakers. The Users' Manual includes a full set of circuit diagrams for the computer and an adequate and reasonably well set-out explanation for each of the monitor commands.

One of the options for the Micro-Professor computer is an EPROM programmer board. The board is constructed to the same high standards as the main computer. A 40-way flat cable connects the EPROM board to the Micro-Professor and there is an extension socket on the second board to allow the Z-80 bus, now fully buffered, to be connected to additional equipment. The EPROM programmer will handle six types of EPROM and changes to the pin functions are made by the software — there are no "customising" plugs to lose. Clearly, once you have written and debugged your program, you can fix it in an EPROM and plug that into the spare socket on the main board. The programmer has a separate PSU for both the ordinary 5V supply and the 25V used for programming the EPROM chip.

CONCLUSIONS

- The Micro-Professor hardware is excellent, provided you can manage with the single-location, six-character display.
- The Z-80 CPU is a good microprocessor to program in machine code as the high-level instructions for Block Move and Compare operations, and the 16-bit register operations, allow more productive programming than the 6502.
- The plug connecting the 5V supply to the board became intermittent a couple of times and I would want to replace that with something more solid. With that exception I have nothing but praise for the hardware.
- Someone must be writing a Tiny Forth for the Micro-Professor. Rather than attempt to fit a limited and elementary Basic into the remaining space in the monitor I would like a series of useful subroutines — delays, PI/O control, printer interface, interrupt-driven timers working in the CTC, simple maths operators using RPN, and so on — which could be linked to form more complex modules within a user's programs.
- The Micro-Professor is both a serious tool and a lot of fun for anyone with an interest in low-level, real computing. I hope to buy a Micro-Professor and use it, battery-operated, on my commuter train. ■

And now for the big picture.

TRADER A trilogy of 16K programmes that combine to give an epic 48K graphic adventure. As a galactic trader, you deal with some very bizarre customers indeed. Will you live to tell the tale? ZX81 £10.50. VIC20 £18.50 (tape or disc).

SUBSPACE STRIKER Our top selling, big screen graphic game. With your deadly Antimat torpedoes, you unleash havoc in the Federation spacelanes and try to dive back to the safety of subspace, fast. ZX81 £5.50. VIC20 £9.50. 16K.

STARQUEST A voyage of discovery and adventure in the cosmos. With the help of your onboard computer, you seek a habitable planet amidst the perils of deep space. ZX81 £5.50.VIC20 £9.50. 16K.

ENCOUNTER Would you know what to do if you encountered extra-terrestial beings? In this adventure, you are snatched off the Earth and the space invaders play YOU! ZX81 £5.50.VIC20 £9.50. 16K.

ZOR Battle of the robots. Fight for survival in this action-packed strategy game. Megajoules of destructive energy in a futuristic duel. ZX81 £5.50. VIC20. £9.50. 16K.

PIXEL POWER At last it is easy to create your own custom characters on the 8K plus expanded VIC20. A graphics workshop packed with useful features like Create, Amend, Save, View Set. £9.50. Refreshes the pixels that other programmes can't reach. (See Pixel Power in action in Trader and Subspace Striker)

HARVESTER Reap your reward in the Boosterspice fields around the planet Delta. A cut-throat strategy game for 2 to 4 players for the unexpanded VIC20. £4.50.

BRAINSTORM The telepathic emissions of the friendly Psions can wreck a human brain. Can you get our three space explorers across a river of nasty goo without blowing their minds. Unexpanded VIC20. £4.50.

GUITARPIX 1 For the VIC20 owner who wants to play the guitar. The first of a series that shows how to tune the guitar and demonstrates some elementary chords. Unexpanded VIC20. £4.50.

Send SAE for more details.

PIXEL

Pixel Productions 39 Ripley Gdns. London SW14 8HF

NEW! ATOM NEW!

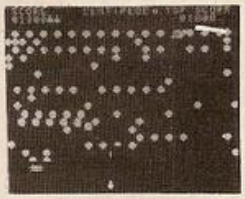

ALL ACTION PACKED M/CODE ARCADE GAMES

PROTECTOR £7

The most realistic version of this amazing Arcade game available for the Atom. Defend your humanoids from mutation and destroy the Aliens in this hyper fast, action packed game. Moving planetary surface, repeating lasers and smart bombs, thrust, space, increasing Attack Waves, 6 types of Aliens, Sound Effects, Top score and excellent mode 4 graphics are some of the features in this exciting game.

CENTIPEDE £6

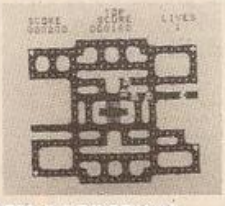

The first and only version of this popular Arcade game for the Atom. Shoot down the splitting centipede as it swirls through the mushroom field. Also inhabiting the game are Spiders, Bugs and Snails. The action increases until only skill and quick thinking can save you. Excellent high speed mode 4 graphics, Sound Effects and Top score.

OMEGA MISSION £7

The first and only version of the superb Scramble Arcade game. Moving landscape! fly over mountains, through caves and tunnels. 5 different stages, Ground to Air Missiles, Fire Balls, Space Craft, Mutants and the narrow twisting Tunnel. Movement in 8 directions, laser cannon, Excellent COLOUR graphics (give Black & White on monochrome T.V.) mode 3a, Sound Effects, Top score.

PUCKMAN £5

One of the best versions of this popular Arcade maze chaser game. Eat all the dots in the maze but watch out for the hungry ghosts! Eat an Energy Blob and the chase reverses. Each maze cleared brings a new one with faster ghosts. Excellent high speed mode 4 graphics, Sound Effects and Top score.

ALL 12K RAM

PRICES INCLUDE P&P. FAST 2 DAY DESPATCH!

14 LOWER HILL RD. EPSOM. SURREY.

Spectrum

Fast Action Games in Machine Code

ZX81

TREASURE HUNT (Spectrum) Explore one of the 29 mazes in search of treasure and grab as much as you can before the time limit. This game can be played with or without moving obstacles; with one player, two players in opposition, or two players in partnership; and with part or all of the maze visible. There are 144 variations of this fascinating game and even the game selector is fun to use.

HUNT (16K ZX81) A **ZX81** version of Treasure Hunt with 48 variations.

X-MEN (16K ZX81) The only Puckman type game with all these features: true gobbling action, bonuses, arcade type maze, 3 lives, graphic display of lives left, 4 monsters, a den, booster buns, high score, continuous on-screen scoring.

UFO (16K ZX81) A fast moving space game in which you must defend the Earth by destroying all the UFOs and spy satellites while your moving force field gradually gets worn away by the alien bombs.

TRAP (16K ZX81) You control a moving wall and try to surround your opponent (computer or human) before he surrounds you. There are 3 speeds and games can be played with a border or wrap around screen.

RESPONSE FRAME

Do you have a problem? Your manual is incomprehensible or you just cannot get the hang of that programming trick you tried — whatever it is, Tim Hartnell will do his best to answer your queries. Please include only one question per letter and mark them "Response Frame".

ATOM UPGRADE

■ **I am the owner of an Acorn Atom, and I am thinking of upgrading it to BBC Basic. If I did this, what could be done about the great difference in the keyboard?**

Would the upgraded Atom then be able to use BBC software, and above all, how much does it cost and is it worthwhile?

Andrew Barlow,
Wardle,
Leicestershire.

THE FIRST THING to remember is that adding a BBC Basic ROM to your Atom will not turn it into a BBC Microcomputer. The ROM will not allow your Atom to load BBC software, and is not compatible with BBC graphics and sound. It costs around £50, and whether it is worth it or not depends on if you wish to use the computer primarily for things like games, where sound and graphics are important, or if your interests are more in the line of things which will be catered for by BBC Basic. The upgrade ROM does not demand a BBC keyboard, but is designed to use the standard Atom keyboard.

HARD TIME

■ **I have been trying to work out a program for my ZX-81 to determine the time difference between two times such as 9.17 am and 3.34 pm, to work out which is earlier or later. I would be pleased if you could suggest an approach.**

Malcolm Young,
Dunedin, New Zealand.

IT IS IMPORTANT to remember, in any program in which you are comparing quantities which are made up of units with different values such as pints and gallons, or hours and minutes, that the values to be compared must be rendered down to a single unit. You must also establish a common input format, so the computer knows what to expect. This can be done fairly easily with the ZX-81, because of its simple string handling. My suggested program follows. It needs input in the form 09.37 am or 12.04 pm. It then — line 40 — works out the value — as a number with a decimal point — of the time, adds 12 to the whole number to the left of the decimal point if the seventh element of the input string is a P, and then converts the number into minutes, comparing the two minutes' totals. The original strings are then used to print out the final information. A similar approach can be used when comparing quantities made up from units which are not exact multiples of 10 of each other. You will see that this program also allows you to work out the difference in minutes between two times, simply by subtracting one A(Z) from the other, and taking the ABS of the difference. Here is the program:

```
10 DIM A$ (2,8)
15 DIM A (2)
20 FOR Z=1 TO 2
30 INPUT A$ (Z)
40 LET A (Z)=VAL (A$(Z) (TO 5))
50 IF A$(Z,7)="P" THEN LET A
   (Z)=A (Z)+12
60 LET B=INT (A(Z))
70 LET A (Z)=60*B+100*A (Z)
   -60*B
80 NEXT Z
90 IF A (1) >A (2) THEN PRINT
   A$ (1);" IS LATER THAN ";
   A$ (2)
100 IF A (1) <A (2) THEN PRINT A$
   (1);" IS EARLIER THAN "; A$ (2)
```

LOOSE PLUG

■ **In the August 1982 Response Frame, a letter was published from P Bradbery of Kent who wanted to know what to do about the loose 9V dc input plug on his Sinclair ZX-81.I have encountered this problem before, and solved it by opening up the computer and bending the metal strips on the input socket, so that the plug will fit into the socket. This repair will need to be carried out every few months, but is much quicker than buying a new socket as was suggested. I would also recommend that the plug should only be pulled out of the socket when necessary, because the more the plug is removed, the more often this repair will need to be carried out.**

David Bluxton,
Lesbury, Alnwick.

THANKS FOR THE suggestion, which we are pleased to pass on to other readers who may be facing the loose input plug problem. But remember, this may infringe your guarantee.

PET TO ZX-81

■ **I am trying to convert a program written for the Pet to run on my ZX-81. However, I have come across the following problem with a multi-line statement:**

```
240 IF T=1 GOTO 270: L2 L*PC:
    LET L1=MB2
```

How would this be translated into ZX-81 Basic, taking into consideration the possibility that the answer may be true or false. What happens?

Martyn Brinton,
Harwich, Essex.

IF THE FIRST statement — the If — is found to be false, the computer moves automatically to the next line, so the rest of that line is not executed. You can solve this by either having a string of If/Thens, repeating the condition before each one, or by inverting the statement, so it reads:

```
IF T <> 1 THEN LET L2=L*PC
IF T <> 1 THEN LET L1=MB2
```

You could also follow through the line, working out what each element does in response to the first If/Then, and jump over the non-operative statements with the first If/Then. For example, your Pet program might read:

```
20 IF T=1 THEN Z=4: X=5
30 Y=2*Z+X
```

The ZX-81 version could be:

```
20 IF T <> 1 THEN 25
21 Z=4
22 X=5
25 Y=2*Z+X
```

NO JOY

■ **I bought a Commodore joystick to use with my Vic-20, but to my disappointment, there was no information on how to use it with the stick. I went back to the dealer, but he was not able to help me. How do I rewrite my programs to use the joystick? I am unable to break into commercial software programs to see how they do it.**

Andrew Cunningham,
Coundon, Coventry.

COMMODORE HAS recently released a book, the *Programmer's Reference Guide* which explains on pages 246, 247 how the joystick works. It also gives a seven-line routine which reads the joystick, converting its output into numbers which you can add to Poke locations to move things on the screen. The book, which costs around £10, includes a wealth of other information, and would be a worthwhile purchase for anyone who is interested in serious programming on the Vic.

ADVENTUROUS

■ **Would you please recommend a book on writing Adventure games. I would also like to know if the ZX Spectrum, which I intend to buy, would be suitable for this type of game, and if it is really suitable for a first-time user?**

Gerard Hayes,
Finglas East, Dublin.

I DO NOT KNOW about any books primarily on writing Adventure games, although *Your Computer* runs articles on associated topics from time to time. However, there is one recently-published book *Dicing with Dragons* which explains the mechanics of role-playing games very well, and will give you many tips which you can convert to computer games. Other useful sources of ideas include the Puffin book *The Warlock of Firetop Mountain*, and the specialist magazines *The Gamer* and *The War Machine*. The latter is not a glossy magazine like *Your Computer*, but is photocopied each month, and you can get details from Emjay, 17 Langbank Avenue, Rise Park, Nottingham, NG5 5BU. The Spectrum 48K machine enables quite elaborate Adventure games to be constructed. The computer is suitable for a first-time user, so long as he or she is willing to take things slowly for the first few hours in finding his way around the keyboard.

VIEWDATA QUERY

■ **I have recently ordered a ZX Spectrum and would like to know if I can receive Oracle and Ceefax on it. If so, how much would it cost?**

A J Bolam,
Ryton, Tyne and Wear.

YOU CANNOT GET the BBC and ITV services that are transmitted along with the picture, via an external computer, without an extremely complex, and therefore unreliable and expensive, arrangement. There is little chance that anyone would bother trying to produce such a device, as you first need to receive the broadcast signal, interrupt it to extract and decode the Ceefax information, then feed it back into your television set. If, however, you are interested in Prestel, which is Ceefax-like information sent from a computer over the telephone lines, then the answer is "Yes, shortly". A number of firms, including Sinclair, are working on Prestel units.

COMBAT DURATION

■ **Could you please tell me how to access the timer on the ZX-81, so it can be used in games to work out how long, for example, a player has managed to fight off the aliens?**

John Maddock,
Holsworth, Devon.

THE FOLLOWING PROGRAM will emulate a stopwatch, and print the minutes and seconds elapsed. You can use parts of the program wherever needed. Note that the first two lines reset it, and must be included.

```
10 POKE 16436,255
20 POKE 16437, 255
30 LET TIME (65536 — PEEK 16436 —
   256*PEEK 16437)/50
40 PRINT AT 11, 12; INT(TIME/60);
   ":";INT(TIME−INT(TIME(60)
   *60);" "
50 GOTO 30
```

■

ZX SPECTRUM POCKET BOOK

160pp £6.50 Trevor Toms, best selling author of the ZX81 Pocket Book and the Sinclair Learning Lab, turns his attention to the ZX Spectrum — the book you have been waiting for! All the material in the book is totally new.

Programs

- Castle walls; boiling oil and lovely slurping noises
- Great Fire of London; try and change the course of history
- Chase; outwit the pursuing robots and lead them to their doom
- Truly amazing; generate a new maze puzzle every go
- Reversi; the classic oriental strategy game with board screen display
- 3D Maze; race against time and three dimensions to escape.

Also Available

ZX81 Pocket Book 138pp	£5.95
ZX80 Pocket Book 128pp	£4.95
Atom Business 110pp	£7.50

Hints & Tips

Discover new ways of using PRINT; INSTR functions, VAL, PRINT USING, hexadecimal conversion, upper case conversion, load and save arrays. BEEP with sliding tones, automatic scroll and how to use all the machine features within machine code.

Machine Code

All the tools you need to write machine code effectively. Graphics tool kit — debug monitor — symbol assembler (with labels, all ED commands, ORG statements, forward and relative jumps) — disassembler (with label assignment); now you can really dig into the Sinclair ROM! This section alone would be stupendous value for money!

Cassettes for ZX81

Prices include VAT

Spectrum games as opposite	£5.00
Spectrum machine code as above	£5.00

MICRO-PROFESSOR

YOUR GUIDE TO THE WORLD OF MICROPROCESSORS

A low cost tool for learning, teaching & prototyping.

Micro-Professor is a low-cost Z80 based microcomputer which provides you with an interesting and inexpensive way to understand the world of microprocessors and utilise their unlimited potential.

Micro-Professor is a complete hardware and software system whose extensive manual gives you detailed schematics and examples of programme code. A superb learning development tool for students, hobbyists and microprocessor engineers, as well as an excellent teaching aid for instructors of electrical engineering and computer science courses.

Technical specification

Z80 CPU, 2K RAM, 2K monitor, 24 1/0 lines, LED display, cassette interface, CTC/PIO facility, 2.25" speaker, three manuals, 36 keyboard. Options include; EPROM board, speech board and printer board.
Please send or telephone for full details.

Now includes 2K BASIC

FINGERTIPS

Fingertips is our regular calculator column covering calculator news, programming hints and examples of unusual applications. The column is written and compiled by calculator enthusiast David Pringle who is glad to hear of any of your ideas. *Your Computer* pays £6 for each of your contributions published.

LAST MONTH saw the first large scale meeting of the newly-formed U.K. branch of the Hewlett-Packard PPC users' club. As many of you know, the PPC users' club has been very active in the States for quite a few years. It seems appropriate that HP-nuts now have an avenue for venting their energy. I hope to report some titbits from the day-long meeting in the next issue. But, be warned: the conversation became very esoteric at points.

Until then, if you are interested in the club and its newsletter, the man to contact is: D M Birch, Astage, Rectory Lane, Windlesham GU20 6BW.

My request for a larger variety of programs getting away from the war games idea has caused a welcome flood of more novel approaches. Long may it continue.

Firstly, canny scot Andrew Simpson from Perth feels that the program we published in the October issue was a bit naive. This was an attempt to approximate any irrational number by a series of more and more accurate fractions of rationals.

The following TI-58 program generates successive convergents of the development of R = a/b as a continued fraction, according to Euclid. To run it, enter R, press RST R/S.

For each convergent, the program displays the actual error E. To see a and b, press RCL 04 RCL 05. To see q, the next element of the continued fraction, press RCL 07. To continue, press R/S.

Note that R represents Real. In this respect, Roy Sirl's program is, of course, a misnomer. Whatever the value of the input number, it is by definition a rational number — even the Cray 2 can handle only rational approximations to irrational numbers — and it may well be equally important to know, for example, that:

R = a/b = 21649/513239 = 3/71

with an error of $7.2393/10^5$.

Note: a.b = $(10^{11} - 1)/9$. So, the idea that, in computer terms, irrationals are somehow different, is erroneous and generally misleading.

Incidentally, the Euclidean algorithm is ideal for finding the HCF of two integers a,b; the following program uses only one register. To run it, enter a, press RST R/S, enter b, press R/S (a and b may be entered in any order):

```
LOC
000 STO 1 2/CP ISBR
004 ( CE - ( CE ÷ RCL 1 )
    2/INT × RCL 1 )
018 2/X=T 0 26 2/EXC 1 GTO 0 04
026 RCL 1 R/S RST
```

For example, (958 581 817, 543 065 519) → HCF = 47293, 12 seconds. It is also the basis of a method of finding the general solution to a diophantine equation ax + by = c, but that is another story.

An intriguing calendar program has been written for the Casio 602 by D Cass of Stockport. The user operates the program by pressing P0. A prompt "Year?" is displayed and the user enters the year required. Pressing EXE sets the ball rolling and you are advised to go and have a cup of tea as printing takes about nine minutes.

The program works like the calendars found on watches. A fixed format, as shown in figure 1, is used and the days of the week adjusted accordingly. The 31, 30 or 29 on the

(continued on next page)

Source: The Universal Encyclopedia of Mathematics (Pan)

Euclid's Algorithm: Every rational number a/b can be developed as a continued fraction:

$$a/b = q_0 + \cfrac{1}{q_1 + \cfrac{1}{q_2 + \cfrac{1}{\ddots + \cfrac{1}{q_{n-1} + \cfrac{1}{q_n}}}}}$$

where: $a - q_0.b = r_1$; $b - q_1.r_1 = r_2$; $r_1 - q_2.r_2 = r_3$; $r_{n-2} - q_{n-1}.r_{n-1} = r_n$; $r_{n-1} - q_n.r_n = 0$.

i.e. for all rational numbers — and all rational approximations to irrational numbers — the remainder tends to 0.

The Program:

Part 1 (000-015) initialises the variables:

$R_{00} = R$; $R_{01} = a_{n-2} = 0$; $R_{04} = a_{n-1} = 1$

$R_{02} = b_{n-2} = 1$; $R_{05} = b_{n-1} = 0$

$R_{03} = r_{n-2} = R$; $R_{06} = r_{n-1} = 1$; $R_{07} = q_{n-1}$

Part 2 (016-035) evaluates the nth term of Euclid's algorithm:

$r_n = r_{n-2} - q_{n-1}.r_{n-1}$ where: $q_{n-1} = \text{INT}\,(r_{n-2}/r_{n-1})$

Part 3 (036-064) evaluates the elements of the nth convergent:

$a_n = a_{n-2} + q_{n-1}.a_{n-1}$; $b_n = b_{n-2} + q_{n-1}.b_{n-1}$

Part 4 (065-end) calculates and displays the actual error of the nth convergent:

$E_n = (a_n/b_n) - R$.

The generations are updated during processing, i.e. a_n and b_n are in R_{04} and R_{05}, r_n is in R_{06}. The nth term of the continued fraction, q_{n-1} is in R_{07}.

Note that if R<1, $q_0 = 0$.

and that $b > r_1 > r_2 > r_3 > \ldots\ldots > r_n > 0$

TI-58 Euclidean convergence program by A M Simpson.
(Evaluates successive convergents a_n/b_n for Real number R)

Figure 1.

Zeller's Congruence is used to find the day of January 1, knowing the year. Knowing this P9 prints out the name of the day. The data for the printing of the actual month itself is held in memories 10-16. Each memory holds the information to print one row; there are seven rows in all — see figure 1.

The data is decoded by masking the integer part of the number, printing it, removing it from the original number, then multiplying by 100 to reveal the next number. For example, the first row is held in memory 10, that is, M10 = 1.08152229. Removing the integer part gives 1, subtracting from the original number leaves 0.08152229. The 1 is printed, and the remainder multiplied by 100, giving 8.152229. The process is repeated until zero is reached, and the next day and row dealt with. P2 takes care of the removal of the 29, 30 and 31 from memories 14, 15 and 16 respectively — depending on the month. Copies of memories 14, 15 and 16 are held in 17, 18 and 19 so the original contents can be replaced at the start of printing each new month. P6 and P7 takes care of printing the names of each month. P0 handles all the dirty work.

Finally, Albert Bale of Warrington appears relieved that we have programs for the more modest CBM PR-100.

This normal distribution program computes the area under a normal distribution curve from k to infinity, where k can take any value above or equal to the mean of the distribution. Since the curve is symmetrical about μ, and since the total area is 1, any area can be found.

If the distribution of interest has a mean and standard deviation, and the value from which the area is required is k as above, then load the program and calculate manually

$\left(\frac{k-\mu}{\delta}\right) \times \frac{331}{2}$ + 165 Enter the fractional part in M1 and the integer part in M2. Enter 4.3756634×10^{-2} in M3. This is $\frac{C_{166}^{331}}{2^{331}}$ the distribution using $(\frac{1}{2}+\frac{1}{2})^{331}$ — the values chosen to give the best accuracy without overflowing the machine capacity.

Run from 00. The required area is displayed when the program stops. If the required area was that up to k from −00 then subtract the result from 1. For a standard normal distribution $\mu=0$ and $\delta=1$ so $\frac{k-n}{\delta} = k$

The program is generally accurate to four places of decimals.

A population of manufactured items has weights which are normally distributed about a mean of 100gm., with a standard deviation of 10gm.

Find the proportion of items which have weights between 70gm. and 80gm.

Now the program only computes areas for values above the mean, but since normal distributions are symmetrical, a similar area lies between 120 and 130gm. So we compute the areas from 120gm. to 00 and from 130gm. to 00, and the required area is the difference between these areas.

For the first value, 120gm., k = 120, so computing

$\left(\frac{k-\mu}{\delta} \times \frac{\sqrt{331}}{2} + 165\right)$

gives 183.1934. The fractional part goes in M1 and the integer part in M2. A useful key sequence is

M 1 F INT M 2 MR 1 F FRAC M 1

Store 4.3756634×10^{-2} in M3 and run from 00. An area of 0.02277 is given. Repeating for 130gm. — no need to reload M3 or Goto 00 manually, the program does this — gives an area of 0.00134. Values far from the mean take a long time to run. Hence the required area is 0.0214, that is, a proportion of 2.14 percent.

PORTABLE COMPUTERS

SHARP MEANS BUSINESS

PC-1500 COLOUR COMPUTER

Probably the most powerful pocket computer on earth

THE HARDWARE

The PC-1500 approaches the personal computer in ability, with 16K of ROM extended BASIC language and 3.5K RAM user memory, expandable to 11.5K, all maintained during power off and battery change. Up to 36 separate programs are immediately accessible and there are advanced programming capabilities with PEEK, POKE, CALL etc., 1 & 2 dimensional arrays and variable strings. There is a full range of text manipulation and the QWERTY typewriter-style keyboard offers upper and lower case letters on the 26 character LCD which doubles as a 1,092 point mini-graphic display with BASIC program control. A tone generator and clock, calendar, alarm and stopwatch functions are built-in and, under BASIC control, can be incorporated in programs.

The CE-150 is a high resolution (500 × 200), 4-colour printer/plotter, with 8K bytes Graphics BASIC. The 9 type sizes allow a variable line length from 4 to 36 characters. The CE-150 can print virtually any drawing with full contrl of up, down, left and right printing. There are two cassette interfaces (for saving/loading) with remote control, allowing bulk storage.

The PC-1500 has a 50 hour battery life, with EA-150 mains adaptor option and the CE-150 has a built-in rechargeable battery and comes with EA-150.

PRICES (including VAT and FREE software voucher)

PC-1500 Computer plus £20 software voucher £169.95
CE-150 Colour Printer/Interface plus £20 voucher..... £149.95
CE-155 8K RAM Expansion module plus £10 voucher..... £79.95
CE-150 8K RAM/ROM with battery back-up plus £10 voucher £89.95
CE-152 Custom Cassette Recorder plus £5 voucher £39.95
CE-153 140-key Software Board plus £10 voucher £79.95
CE-158 RS-232C Interface plus £20 voucher £149.95

BASIC FOR BEGINNERS

CASIO PB100
£69.95
Learn as you go

LEARN with the beginners manual "An easy-to-follow introduction to the Personal Computer". FOLLOW the step by step examples and USE the programs supplied, or develop your own, for business or home use, including exciting games.

QWERTY keyboard, upper and lower case dot matrix display. Up to 544 program steps/94 memories, expandable to 1,568 steps/222 memories, all protected. A truly pocketable 9.8 × 71mm. Weight, 116g. 360 hours battery life.

OR-1 1K RAM expansion module £11.95. FA-3 Cassette Interface £22.95.

MICROL SOFTWARE for your SPECTRUM

USE AND LEARN Vol. 1. 25 BASIC PROGRAMS on cassette + 100 PAGE BOOK. Professionally written, packed with practical idea, hints and tips £9.95

USE AND LEARN Vol. 2. 30 MACHINE CODE ROUTINES for high speed graphics, games and serious programs. On tape + 50 PAGE BOOK.... £9.95

THE DATABASE PRACTICAL, POWERFUL, RELIABLE. Written in machine code and BASIC. Automatic sorting. 'Free Form' with one-key search. Capacity: Inside 48K. 30,000 characters = 1,000 screen lines = 45 full screens. With C-90 tape: Over 900 full screens of information, or over 7,000 names & addresses. Fully MENU DRIVEN with full HELP £9.95

THE SPREADSHEET Visicalc for £10? Not Quite — has all the main Visicalc capabilities and some improvements. Available November, 1982 ..... £9.95

Database and Spreadsheet require 48K Spectrums. Add-on options for the Sinclair Microdrive will be available early 1983.

MiCROL 14 day money back guarantee

CASIO — THE SCIENTIFIC ANSWER

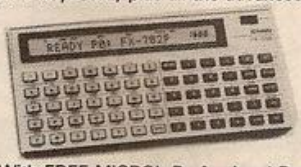

The future has arrived with the

CASIO FX-801P
£349

High speed computer with integral micro-cassette data control and hard copy printer monitoring.

Everything you need, in an area smaller than this page. This truly portable, complete system needs no peripherals on lengths of cable. Batteries last 250 hours (only display), or 5,000 lines (display and printing). Typewriter style QWERTY keyboard, plus all the advanced features of the FX-702P.

With FREE MiCROL Professional Programming Pack worth £9.95

The widest range of math, science and statistics functions (55 in all, including Regression and Correlation). BASIC programming. Up to 1,680 program steps, up to 226 data memories, up to 10 program areas, all protected. Subroutines: Up to 10 levels. FOR/NEXT looping: Up to 8 levels. Edit, Debug and Trace modes. 240 hours battery life. Dims: 17 × 165 × 82mm. Wt: 176g.

Peripherals

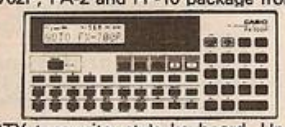

FA-2 Remote control cassette interface/adaptor £19.95
FP-10 Permanent hard copy printer. Mains or battery powered £44.95

MiCROL 702 PROCOS

Professional computing solutions on tape. Save up to 90% of programming time with this electronic equivalent of pen and paper. This 'Visicalc-type' system answers 'what if . . .' questions and analyses trends £24.95

FREE when you purchase the FX-702P, FA-2 and FP-10 package from us.

CASIO FX-700P
£79.95

BASIC programming on a QWERTY typewriter-style keyboard. Up to 10 program areas, up to 1,568 program steps, up to 222 memories, all protected.

Upper and lower case dot matrix display. Powerful editing functions. 25 scientific functions. Subroutines: Up to 8 levels. FOR/NEXT loops: Up to 4 levels. Numerical values — 6 levels. Calculation elements — 12 levels. Exclusive character variable stores up to 30 characters.

Dims: 9.8 × 165 × 71mm. Weight 118g. 300 hour battery life approx.

FA-3 Cassette interface £22.95. FP-12 Printer (December 1982) £49.95.

PROGRAMMABLE CALCULATORS

CASIO FX-602P

10 program areas, up to 512 program steps, up to 88 memories. Alpha/numeric dot matrix display, 10 + 2 digits. 50 scientific functions, including Standard Deviations and R/P & P/R conversions. 33 parentheses £69.95

CASIO FX-3600P

2 program areas, 38 steps, 7 memories. 10 + 2 digits. 50 scientific functions, including Integrals and Regression. Standard deviations, R/P & P/R conversions, 18 levels of parentheses £22.95

PRICES include VAT, post & packing. SAME DAY DESPATCH, subject to availability. Send cheques, PO, or cash (registered), or telephone your ACCESS/VISA, or BARCLAYCARD number to the Portable Computer Specialists:—

It will improve your ZX SPECTRUM graphics in ways you wouldn't believe possible.

Your new ZX Spectrum is literally packed with sophisticated graphics. Colour. High resolution. Plot. Draw. Circle. Border. Ink. Paper Colours. User-defined characters to name just a few!

That's why we have packed the new Spectrum Print 'n' Plotter Jotter with every facility to exploit your graphics to the full.

After the first few weeks of "playing" with your computer you will want to get down to serious programming and planning in which professional-looking graphics should play a major part.

What better way to work it out than with a Print 'n' Plotter Jotter?

The professional pad

Print 'n' Plotter is not just another programming pad.

Just look at the specifications:

BIG SIZE 16½" x 11¾". 100 Pages — 50 Print Grids and 50 High Resolution Plot Grids.

Printed on high-quality tracing paper, enabling you to overlay the pages for direct co-ordination between PRINT and PLOT or to copy from illustrations, maps, charts, photos etc.

PRINT Grids show all numbered co-ordinates for the 704 screen positions, plus INPUT lines.

PLOT Grids show every numbered co-ordinate for the 45,056 Pixels!

Each pad contains 600 user-definable grids for use with the BIN n, POKE USR "a" function.

And the whole thing is fully bound with fly leaf cover and complete with a set of seven colour pens!

The simple way to get serious

Spectrum Graphics can become very complex, so before you start to program the best way is to work it out on a Print 'n' Plotter and save all those errors!

Take for instance the common CIRCLE. With a Jotter you can establish the exact screen location for the centre in seconds, and it will stop you running out of screen because of a too large radius. Working our DRAW is similar: pre-determine DRAW lines and PLOT positions before you start. With a Jotter you can build-up graphics using every facility with a direct co-ordination between each.

For instance, correct PLOT OVER or PRINT OVER positions will be easy with a Jotter.

See the show for just 60p!

To demonstrate the graphic possibilities with the SPECTRUM JOTTER we have produced a cassette-based Demonstration program for only 60p (inc VAT and P&P). Why not send for a copy, or order it together with your JOTTER?

Just part of a range of ZX products

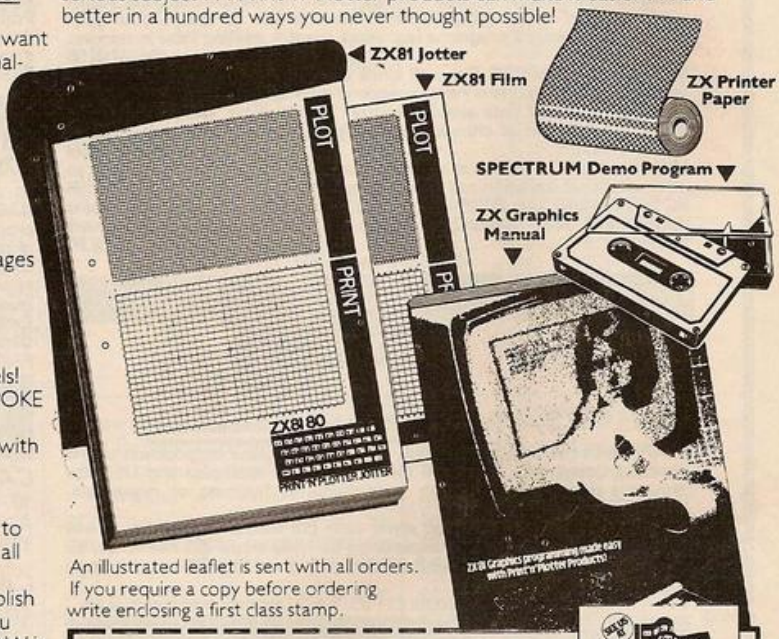

The Spectrum Jotter is, of course, an upgraded version of our popular *ZX81 Print 'n' Plotter Jotter and Film*. For ZX81 owners these are available by direct mail or through a growing number of retailers and compshops.

The ZX81 Jotter is a 100 page Graphics pad that exploits to the full the graphics facilities of that micro. ZX81 Film is a matt film version of the Jotter which is re-usable and ideal for 'copying' graphics.

Our manual: "*ZX Graphics programming made easy*" explains everything you need to know about using the ZX81 products, and when used in conjunction with the Spectrum cassette will prove to be the definitive guide to the subject.

And for ZX users (whether Spectrum or ZX81) we still market Printer Paper at £1 less than Sinclairs!

Why not write and place your order today? Graphics can be a very serious subject . . . Print 'n' Plotter products can make it easier . . . and better in a hundred ways you never thought possible!

An illustrated leaflet is sent with all orders. If you require a copy before ordering write enclosing a first class stamp.

To: Print 'n' Plotter Products (YL) 19 Borough High Street, London SE1 Please forward me the following products:

..... ZX SPECTRUM JOTTERS @ £9.95 each.
..... ZX81 JOTTERS @ £3.50 each.
..... ZX81 PLOTTER FILMS @ £2.25 each.
....."GRAPHICS PROGRAMMING MADE EASY" MANUALS @ £1.50 ea
..... PACKS OF ZX PRINTER PAPER (5 ROLLS) @ £10.95 per pack.
..... ZX SPECTRUM DEMO CASSETTES @ 60p each.

PLEASE NOTE ALL PRICES INCLUDE POST, PACKING AND VAT FOR U.K. DELIVERIES (Overseas should add 25% for additional Surface Mail)

Remittance enclosed payable to Print'n'Plotter Products.

Most Print 'n' Plotter products are available 'over the counter' from the following retailers: • Specialist branches of W.H. Smith • Buffer Micro Shop Streatham • Microware Leicester • Denny's Booksellers London EC2 • Georges Bookshop Bristol • Also represented in U.S.A., Canada and South Africa.

SOFTWARE FILE

Software File gives you the opportunity to have your programs, ideas or discoveries published. We will accept contributions for any personal computer provided they are submitted to *Your Computer* exclusively. Please double-check your listings before sending them, and specify the memory they require. Mark your letter clearly for *Your Computer.* We will pay £6 for each contribution published.

Three games

C G Brown,
Sutton Coldfield,
West Midlands.

ZX-81

HERE ARE three programs, Raid, Freedom, and Escape. Documentation and explanations on how each program runs, what to do and the object of each game, appear after the program's listing. They are all 1K games. First, Raid:

```
 1 LET S=0
 2 LET Z=13
 3 LET L=2
 4 LET C=1
 5 LET B=20
10 CLS
20 PRINT AT B,Z;"*";AT L,C;"Graphic
   Shift R,G,E.";AT 21,Z-1;"Graphic
   Shift W,F, Q.";AT 17,10;"Graphic Shift
   7,7,7,7,7,7,7,"
30 IF INKEY$="0" AND B < 17 THEN STOP
40 IF INKEY$ <> "0" THEN LET B=B-1
50 IF B < 0 THEN LET B=20
60 IF C=29 THEN GOSUB 200
70 LET C=C+1
80 IF B=L AND C+1=Z THEN GOSUB 190
90 IF L= > 19 THEN PRINT AT 0,0;S
100 IF L= > 19 THEN STOP
110 GOTO 10
190 LET S=S+1
195 LET B=20
200 LET L=L+1
210 LET C=0
220 RETURN
```

When the game starts, you must press 0. When you release 0, your missile will rise to the top of the screen. It will then reappear at the bottom of the screen. The object is to shoot each invader, so you have a high score when the invader finally reaches the bottom of the screen. You must not press 0 after your missile has passed the Graphic Shift 7s, or the game will stop. The game takes a fair amount of practice, before you know exactly when to release your missile, represented by an*. The second game is called Freedom.

```
 1 LET L=10
 2 LET C=13
 3 LET A=RND*21
 4 LET B=RND*28
 5 LET S=0
10 CLS
15 PRINT AT A,B;"Graphic Shift A,D,A."
20 PRINT S
25 LET S=S+1
30 LET C=C+(INKEY$="8")-
   (INKEY$="5")
35 LET L=L+(INKEY$="6")-
   (INKEY$="7")
40 IF RND>.5 AND(L=A-1 AND C=B
   +1)THEN STOP
50 PRINT AT L,C;"Inverse :"
55 IF L=A AND C=B+1 THEN GOSUB 100
60 GOTO 10
100 PRINT "SUCCESS"
110 STOP
```

You have been sent to rescue your leader, who has been taken captive by the enemy. He has been brought to the enemy's floating palace, the entrance to this being at the top. Press the arrows above the keys 5 to 8 to move. You must enter at the top in the middle. Finally, Escape.

```
 1 LET L=VAL "15"
 2 LET C=L
 3 LET A=VAL"3"
 4 LET B=VAL"12"
 5 LET S=PI-PI
20 PRINT AT VAL"15",VAL"10";"
   (11 Inverse Spaces)"
30 PRINT AT SGN PI,VAL"13";"Graphic
   Shift E,7,7,R"
40 PRINT AT L,C;"Inverse 0"
50 LET L=L+(INKEY$="6")
60 LET C=C+(INKEY$="8")-
   (INKEY$="5")
70 LET L=L-SGN PI
80 LET S=S+SGN PI
90 IF L < SGN PI THEN LET L=PI-PI
100 PRINT AT A,B;"Graphic Shift A,H,A,
   H,A,H.";AT A+1,B;"Graphic Shift
   H,A,H,A,H,A."
110 LET I=INT(RND * 5)+SGN PI
120 LET A=A+(I=1)-(I=VAL"2")
130 LET B=B+(I=VAL"3")-(I=VAL
   "4")
140 IF A > VAL "12" THEN LET A=VAL
   "13"
150 IF L=A OR L=A+1 AND (B=C OR C=
   B+1 OR C=B+2 OR C=B+3 OR C=
   B+4 OR C=B+5) THEN STOP
160 PRINT AT PI-PI,PI-PI;S
170 IF L=SGN PI AND C > VAL "13" AND
   C < VAL "16" THEN STOP
180 CLS
190 GOTO 20
```

You must escape through the goal at the top of the screen. You must dodge the set of characters moving randomly. You automatically move up. To counteract this you must press 6.

Sub attack

Paul Sellin,
Bristol,
Avon.

SPECTRUM

THIS PROGRAM takes 6.8K RAM including variables, and so will fit easily into the smaller version of the Spectrum. The object of the game is to steer the submarine through a narrow channel, with the use of the cursor left and cursor right keys.

You have five lives and must avoid the guns on either bank. Anti-submarine booms appear at random — it is occasionally possible to slip through them. Fuel is consumed at the rate of one unit per screen length. A lot is lost if you run aground, or if you are hit. The game will end when the fuel runs out.

In an emergency you can stop the sub, by using the cursor down key: number 6. This also uses up a lot of fuel. The player wins the game by travelling for 10 miles.

The small user-defined graphics loader program can either be run separately, or can be made a part of the main program. Lines 90-99 can be omitted, as can lines 5000-5300 which are only an introduction. If, when Saving, "Line 99" is typed after the program name, the program should auto-start on Loading.

Sorcerer's castle

Stuart Sly,
Walsall,
West Midlands.

BBC

THIS PROGRAM is a fairly simple but impressive demonstration of some of the sound and graphics capabilities of the BBC Micro.

The program draws a castle on a hill which, by use of the VDU19 command, is made to appear instantly. There is first a thunderstorm which illuminates the castle with lightning. At midnight the old clock chimes out the hours disturbing a bat which flies out of one of the towers.

Finally ProcEnd gives a dramatic sonic and graphic finale to the program but if you have enough memory you could extend the program.

Lines 40-110 draw out the castle but by setting all the colours to blue in line 30 this cannot be seen. Line 120 sets the normal colours and the castle appears as if by magic.

The VDU19 command is used again for the effects during the lightning. Line 160 uses sound channel 0 to give the thunder. Line 170 sounds the clock's chimes using the envelope defined in line 10.

Lines 180-290 give the logic for the bat's flight. Lines 300-360 are subroutines for the bat, the flashing light and the lightning. Both programs were written on a BBC Model A but should run easily on a Model B.

The real world

Michael Johnson,
London N16.

ZX-81

EVER SINCE I bought my ZX-81 and 16K RAM earlier this year I have been interested in discovering ways of using it to help me with the routine calculations and figure work associated with my job.

I have found that a number of routines and programs have proved to be very useful indeed: carry-outs, cash-flow projections and sales analyses are all much less of a chore than they used to be.

This routine may be of use to those who are interested in real world applications for the ZX-81. This routine allows you to enter any quantity of data as part of a single string.

The bits of data are separated by commas, following the convention of Data statements found in other Basic dialects. The machine uses the commas to identify the bits of data ready for subsequent operations.

The input as a string seems to me to have two advantages: there is no need to wait for the cursor to reappear before inputting the next piece of data, and secondly, the string assignment allows direct inputting of an expression such as *7 or /25 which can be applied to the original data. Of course this routine is only one building block in what can be developed into a customised "Intelligent Calculator" program. One suggestion which I would make is to convert the broken-up bits of string into a dimensioned array for later re-use.

I should point out that this use of concatenated strings in the handling of numerical data does present certain pitfalls for the unwary. The routine I have mentioned is in fact derived from a mini-routine which can be used to explore and experiment with strings and numbers:

```
10 INPUT A$
20 INPUT B$
30 PRINT A$,B$
40 PRINT VAL (A$+B$)
50 RUN
```

Note that 2 followed by +2 gives 4. A$ = "25", B$ = "/2" gives 12.5. A$ = "23+2", B$ = "−5" gives 20. Care needs to be taken with priorities and with bracketing. For example, A$ = "(4", B$ = "+4)/2" gives 4. As a point of interest, someone may care to ponder for a moment why A$ = "2+3", B$ = "3" results in 35 and A$ = "7+1", B$ = "4" results in 21.

```
10 REM INITIALISE DATA, M. JOHNSON
20 SCROLL
30 PRINT "INPUT DATA, SEPARATED BY
   COMMAS"
40 INPUT A$
50 SCROLL
60 PRINT A$
70 LET A$ = A$+",*"
80 LET B=1
90 LET C=1
100 SCROLL
110 PRINT "ENTER OPERATION AND
   EXPRESSION"
120 INPUT B$
130 CLS
140 PRINT AT 6,0;"DATA ";A$(TO LEN
   A$-2),, B$
150 PRINT
160 FOR N=1 TO LEN A$
170 IF A$(N) <> "," THEN GOTO 220
180 IF A$ (N) = "*" THEN GOTO 230
```

IMPACT SOFTWEAR

From Scotland's Capital comes quality software for the

ZX Spectrum and VIC 20

The Quest (48K–Spectrum only)

(One of the most exciting adventure games currently available). Fight your way into the depths of the complex in your Quest for the Holy Grail. Discover Gold and Precious stones, buy weapons and Magic wares from a trader. Battle with one of the many Monsters. Up to 1500 locations may be searched in the course of a game. Full sound effects and save game facility. – Only £5.00

Starfighter (16K–Spectrum only)

All action, full-colour, graphic machine-code, Space-battle with devastating explosions. On screen scoring and high score kept. The longer you survive the more difficult it becomes. – Only £5.00

Orb (48K–Spectrum ; 16K–VIC 20)

Make your way through the underground labarynth in your search for the dreaded Orb, which you must destroy. Encounter many Monsters, discover Treasure and try to remember your route so that you can get out again. Full sound effects and save game facility. – Only £5.00

Star Trek (16K–Spectrum; 8 K–VIC 20)

Save the Galaxy from the Klingons using your rapid-fire phasers and photon torpedos. Automatic short-range scan, Galaxy map and Star-bases.
Full sound effects and 10 levels of difficulty! – Only £5.00

Games Pack (Unexpanded VIC 20)

Alien * Road Race *
The Island * Pontoon *
– Only £5.00

(continued from page 99)

```
190 LET C=N
200 PRINT VAL (A$(B TO C-1)+B$)
210 LET B=C+1
220 NEXT N
230 GOTO 80
```

To conserve memory, delete lines 20,50, and 100, and change line 140 to Print B$.

The input for A$ needs to read for example "20,456,783,12.5,3". The input for B$ needs to be something like "*5" or "+200" or "/100*25".

Gripe cure

Julian Vincent,
Reading,
Berkshire.

SPECTRUM

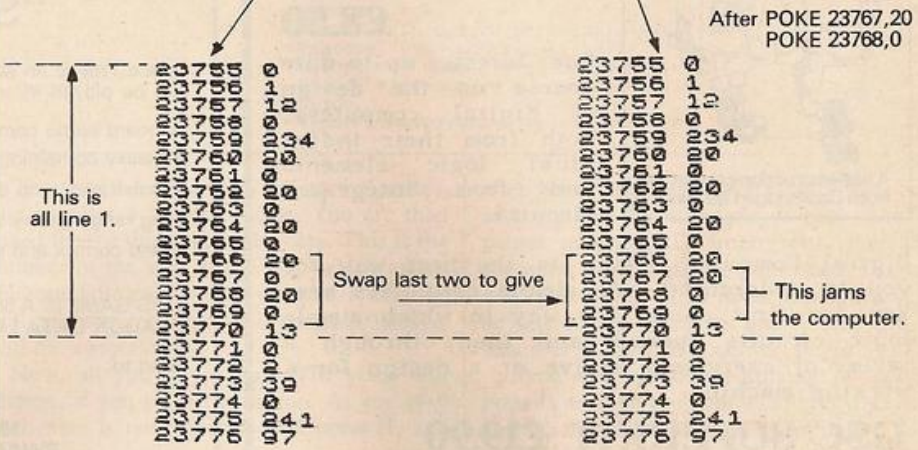

I HAVE JUST solved a problem which has been plaguing me on my Spectrum. It occurred after editing lines which ended in the inverted video mode. Occasionally I would edit such a line only to find that the Spectrum belched as if it were full and refused to list any more of the program. Also the cursor was very sluggish.

The answer seems to be due to the way Inv Video and True Video act. Inv Video puts 20, 1 into two memory locations in the line, although of course there is nothing on the screen to show this. If you press either key several times you fill up that program line two locations at a time.

If you happen to end an inverse video line with two presses of the True Video control, that is, 20,0,20,0 in RAM and make a hash of editing it later, you can end up with 20,0,0, at the end of the line, which the Spectrum does not like.

It is easily corrected but caused me some problems until I sorted it out.

```
  1 REM
  2 LET a=PEEK 23635+256*PEEK 2
3636
  3 PRINT a;" ";PEEK a: LET a=a
+1: GO TO 3
```

If you POKE 23767,0, everything works. You must have 20,0,0.

The hawk

Roy Pincott,
Mansfield.

ATOM

FLY AFTER the aliens, shoot them down and score 50 points. Try and beat the top score. Move left or right at the same time as you move up or down and fire.

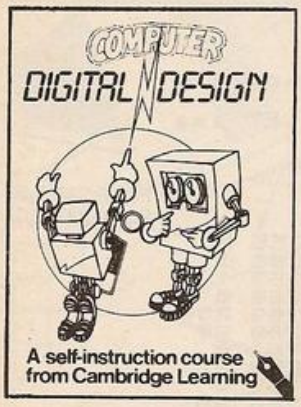

Do not crash into the aliens or into the stratosphere. You have to land to be able to reload your laser guns. All the controls are explained in the program itself.

CAMBRIDGE LEARNING

SELF-INSTRUCTION COURSES

★NEW!★

DIGITAL COMPUTER DESIGN £8.50

Our latest, up-to-date course on the design of digital computers, both from their individual logic elements and from integrated circuits.

Digital Computer Design is the best way for you to understand how simple computers are. You are first shown the way in which simple logic circuits operate and then, through a series of exercises, arrive at a design for a working machine.

GSC SUPERKIT £19.90

The original Cambridge Learning Superkit, a practical digital electronics kit for beginners, now re-written for the popular GSC EXP300 breadboard. The kit comes complete with an instruction manual, components, and breadboard to teach you all the basics of digital electronics.

DIGITAL COMPUTER LOGIC & ELECTRONICS £6.00

The theory course to support the practical Superkit, this 4-volume set covers basic computer logic; logical circuit elements; the design of circuits to carry out logical functions: flipflops and registers. No prior mathematical knowledge other than arithmetic is assumed.

GUARANTEE No risk to you. If you are not completely satisfied, your money will be refunded upon return of the item in good condition within 28 days of receipt.

CAMBRIDGE LEARNING LIMITED, UNIT 8I RIVERMILL SITE, FREEPOST, ST IVES, CAMBS, PE17 4BR, ENGLAND.
TELEPHONE: ST IVES (0480) 67446. VAT No 313026022

All prices include worldwide postage (airmail is extra - please ask for prepayment invoice). Giro A/c No 2789159. Please allow 28 days for delivery in UK.

DRAGON 32

NEW FROM

TROJAN

"SPACE TREK"

Space Trek is an absorbing space wars game in real time which can be played in any of four levels. Special features include:—

Onboard battle computer.
A galaxy containing 100 quadrants.
Impulse and warp drive speeds.
Long range galaxy scanning.
Shield control and status reports.

THIS GAME IS A MUST FOR DRAGON USERS. APPROVED BY DRAGON DATA LIMITED.

Send to:

TROJAN PRODUCTS
Dept. YC
166 DERLWYN, DUNVANT,
SWANSEA, WEST GLAM SA2 7PF

Please send me "SPACE TREK" for my DRAGON 32. I enclose cheque/P.O. for £7.50 which includes P&P.

ZX81 16K RAMPACK

TWO EXCITING GAMES FOR CHRISTMAS
(As reviewed by *Your Computer* Magazine, November Issue)

THE AMAZING 3-D MAZE GAME. £4.99 inc. p&p.
The year is 2030. The world is over-run by computers. You are held captive at the centre of a computer-generated labyrinth. Your only hope of escape is to find a way through the bewildering complex series of passages . . . Exciting 3-D full screen display gives the impression of ACTUAL MOVEMENT, only possible due to the extensive use of Z80 MACHINE CODE. We believe this to be the best maze game on the market!

BLASTOUT. £3.99 inc. p&p.
A new version of the classic arcade game. Features:—

- Z80 MACHINE CODE to give fast moving graphics.
- 4 speeds (beginner to world champion).
- Large format continuous score display.
- Moving wall to add on the excitement.
- Hi score displayed on screen.

Vic synth

Kevin Boyd,
Dreghorn,
Ayrshire.

VIC-20

FOR THE UNEXPANDED Vic-20, this program will convert your keyboard into a synthesiser. When the program is run it asks which voice you require from 1-4.

The first three are the Vic's normal voices, and number 4 is white noise. You are then asked for the duration of the note. This is the number of the step in the loop which makes the sound die away — so if you pick 1, the note will die away very quickly; if you pick 0.001, it will die away slowly.

Now, all you do is play. The voice will change, if you press the button. As you play each note is remembered. Just press f1, and after being asked to select a voice, you will hear your composition played back with all pauses removed. To insert rests, press the space bar when entering your tune. You can only have a tune of 99 notes, though this can be altered by changing line 1 and 135 to whatever number of notes you require.

If you wish to reset the duration of the note press 0, and the program will erase your tune and ask for voice and duration of note.

Visual recall

A J Hynd,
Hayling Island,
Hampshire.

BBC

THIS PROGRAM allows the contents of memory to be displayed and examined. I have used this on my BBC Model A to recover programs, which have become corrupted when saved or loaded, by examining the line numbers and line lengths in the stored Basic program. Errors can be calculated and then corrected by Poking new data into the appropriate addresses.

The start addresses can be entered in either decimal or hexadecimal form, but all displayed values are in hex. Lines 20 and 30 set page mode and print format, and line 130 resets these on Escape.

The input procedure first checks to see if the entry is a hex number otherwise it checks for valid decimal inputs.

I found the EVal function very useful for converting the string input to a hex number. The Shift key is used to give further pages of display, and the Escape key to exit.

The program has to be entered so as not to overwrite the memory contents you wish to examine. First Load the program to be examined but do not Run, then enter

PAGE = TOP +&100

Then Load this program which can be Run without affecting your first program; to reset enter

PAGE = &E00

which is where Basic programs are normally stored for conventional purposes.

New quirk

Deryck Brown,
Kilmarnock,
Ayrshire.

ZX-81

I DO NOT mean one of the frequently publicised ZX-81 quirks but a brand new one. Believe it or not the ZX-81 accepts the following commands quite happily:

```
10 LOAD "ANYNAME" (THEN) REM
  COMMENT
or 10 SAVE "ANYNAME" (THEN) REM
  COMMENT
```

The Then is in brackets as it can be deleted if wished after typing Rem or left in—it makes no difference. Possibly there are other statements which behave like this but I have not found any.

This additional Rem not only saves bytes but does not, of course, have to refer to the Save or Load instruction. This would be particularly useful in adventure games where the program may be saved from inside so that it restarts automatically or used when chaining programs. String variables can also replace the program name:

```
10  SAVE A$ (THEN) REM COMMENT
```

Bit bandit

S P Elliot,
Middlesbrough,
Cleveland.

ATOM

A SIMPLE "one-armed bandit", this program for the Acorn Atom requires 32K RAM. Floating point is not required. Instructions are included in the program. Note that, in the printout, £ means #.

VIC-20

THIS SHORT PROGRAM allows the user to draw in high resolution using a joystick on the unexpanded Commodore Vic-20 machine.

The first line sets the screen size to 16 by 10 and changes the Screen and Border combination to black.

Lines 1 to 4 set up the screen and draw a box around it to show the user the limits of the screen.

Line 10, which must be entered using Shifted keywords, converts the joystick port to X and Y values.

Line 20 allows the point to move and not draw by pressing the fire button. Lines 50 and 60 plot and calculate the point.

There are approximately 2,500 points to plot, quite adequate for most drawings although not true high resolution.

ZX-81

PROGRAMS THAT start automatically after Loading, and that are fully in machine code, like ZX Chess, can not be easily Listed. Here is a program which enables this.

Before writing in or loading this program

POKE 16389,127/NEW

must be done. After inputting program name, the ZX-81 starts looking for the program.

When the program is Loaded, C/170 will appear, and the program is ready for further manipulation.

```

Tape salvage

Paul Mudditt,
Jarrow,
Tyne and Wear.

BBC

IN ANSWER to many a BBC Micro owner's prayers I offer my own version of a tape salvage program. As many BBC owners will know the 0.1 operating system has two bugs in the cassette filing system. This program attempts to salvage a program which has had Block 0 corrupted due to one of these bugs. According to Acorn this bug would corrupt on average Block 0 of one program in 16.

There is now a well-publicised machine-code fix for both of these bugs, but these have

(continued on page 108)

SPECTRUM SOFTWARE

SPECTRUM TEXT MASTER (48K only) £5.95

Turn your Spectrum into a miniature word processor. Enter your text using the keyboard as a typewriter (features moving cursor and on screen editing). Your Spectrum then justifies the text ensuring no split words and inserting new paragraphs where indicated. After justification proof read text and make any final corrections, insertions or deletions, before saving letter on tape for future use. Special feature allows user to specify number of characters per line when sending text to printer.

SPECTRUM MAIL MASTERS (48K only)... £5.95

Enter into memory a data bank of names and addresses. When loaded program asks you to load pre-saved letter (ideally written using SPECTRUM TEXT MASTER). Then identify names in data bank letter is to be sent to. Leave the rest to your Spectrum, it will produce for every name specified a professional looking personalised letter. The program even caters for when you upgrade to a full size printer.

TEXT MASTER AND MAIL MASTER ORDERED TOGETHER £9.95

(continued from page 106)

arrived too late for many users.

My program will attempt to read in as many Basic lines as possible starting from any block number until the end of the program is reached. Errors in the format of the data coming from the tape will simply mean a missing line of Basic which the user will have to re-enter but at least you will not have to retype 10K of program lost because the first block is unreadable.

The data bytes are de-tokenised as they are read from tape using the crunch subroutine in the Basic ROM converting single bytes to Basic keywords so that a check can be made of the lines coming in. However I am de-tokenising all but the line number and the line length and consequently characters within quotes and Goto/Gosub statements will appear to be incorrect when in fact they are intact.

I suggest that the machine-code fixes are chained in before loading this program to ensure when you resave your salvaged program you do not have to repeat this process unnecessarily.

To use the program, type Run and position your cassette to just before the program to be salvaged.

Then, the program will list to the screen as it is found on tape and is stored above this program in memory. When the end of the program is reached or Escape is pressed the program will reset page to the start of the salvaged program. Typing List will display the salvaged program which can be saved in the usual way.

If you are not satisfied with the salvaged program, type Break then Old <CR> and repeat the process.

Error fix

C Cytera,
Mangotsfield,
Avon.

ATOM

HERE IS A way of removing an irritating quirk of the Acorn Atom. I am referring to the error message produced whenever a control code is used. The Escape key can, of course, be pressed after any control code is executed, but this should not be necessary.

The program works by intercepting OSRDCH. Routine LL0 saves the previous address of OSRDCH in location #90 and #91. It then installs the address of routine LL2 in #20A and #20B. This means that LL2 is called whenever the Atom requires an input from the keybord. LL2 firstly calls the usual routine to obtain the ASCII code of the key pressed. If this represents a character, or one of the control codes representing Escape, Cancel and Carriage Return, an exit occurs with the code retained in the accumulator.

This is necessary because other sections of the operating system must take action on these codes. If it is any other control code, the program loops back, executes it by calling OSWRCH, and waits for another key to be pressed.

The error remover resides in an otherwise unused area of memory: from #28D1 to #28FF. Once assembled it is executed by

LINK #28D

The machine code, which should be *Saved with the mnemonics discarded, can be reloaded and executed with *Run. The Plot commands in graphics mode 0 can be made to operate in grey instead of white simply by filling the screen with character #C0 after a Clear 0 command.

FOR S = #8000 TO #81FF STEP 4;!S = #COCOCOCO;NEXT S

Black-on-grey plotting can be achieved by

FOR S = #8000 TO #81FF STEP 4;!S = -1;NEXT S

The usual plot-in-black commands, for example, Plot 15, should be used there.

Music notation

Ashley Robinson,
Monks Risborough,
Buckinghamshire.

ZX-81

FOR THOSE who have a limited 1K ZX-81 here is a little program which helps you to learn notes in music. It does not play the notes, but displays them on a treble stave.

When it Run it shows a treble stave with a random blob or note somewhere on it. You have to press the correct note on the keyboard. It will then tell you whether you are right or wrong and if you press another key it will display another note.

It works by taking a random number and Printing At that number on the Y co-ordinate, a graphic square. It finds the answer by taking the code of that number, adding 34, and finding the CHR$, which should be a letter from A to G.

For those with 16K RAM packs you could make it play the note and display it.

```
  1 LET A=7
  8 PRINT
  9 PRINT
 10 FOR B=1 TO 5
 20 FOR N=0 TO 10
 30 PRINT "-";
 40 NEXT N
 45 PRINT
 46 PRINT
 50 NEXT B
 60 PRINT AT 0,0;"    "
 70 PRINT "  ▌ ▌"
 80 PRINT "-▌-▌"
 90 PRINT "  ▌ ▌"
100 PRINT "-▌-▌"
110 PRINT "  ▌ "
120 PRINT "-▌ "
130 PRINT "▌▌ "
140 PRINT "▌▌-"
150 PRINT "▌▌ "
160 PRINT "-▌ "
170 PRINT "  ▌ "
180 PRINT "  ▌ "
190 PRINT "  ▌ "
200 LET B=INT (RND*11)+1
210 PRINT AT B,A;"▌"
215 IF B>=8 THEN LET B=B-7
220 LET B=(11-B)+34
230 PRINT AT 15,10;"YOUR GUESS?

250 IF CODE A$<>B THEN PRINT AT
15,10;"    WRONG    "
260 IF CODE A$=B THEN PRINT AT
15,10;"    RIGHT    "
270 PAUSE 4E4
275 CLS
280 RUN
```

Long line

Andrew Houston,
Manchester.

ATOM

THIS PROGRAM will allow Acorn Atom users to edit lines up to 160 characters long — five lines on the Atom's screen. Copy, Delete, Repeat can be used as usual.

When the program is Run, or whenever Link Q is entered — for example, after pressing Break — the prompt will look like this:

#>

indicating that all is well.

The machine code can be assembled at any desired address by altering Q in the first line. By forgoing the cancel facility, Control-X, and omitting lines 150 and 160, the code will even fit into the free space at #21C.

The program works by tricking the Atom's input routine, located at #CD0F, into believing that there is always just one more space available in the input buffer. If anyone should want to experiment with even longer lines, try changing line 130.

```
 10 Q=#2800

Quick Peek

Alan Potter,
Glasgow.

ZX-81

IN MANY BASIC 1K games there is a line similar to:

LET A=PEEK(PEEK 6398+256*PEEK 16399)

This line tests to see if the next position in the display file to be Printed has anything in it, and, if so, what it is.

(PEEK 16398+256*PEEK 16399)

gives the address of the next position to be Printed, and this line Peeks into that address to see what is there.

This is a useful line, but time-consuming and heavy on memory. I have written a machine-code routine which duplicates this function, and is faster while using less memory, which, as any 1K user knows is a great help. This routine is:

Decimal	Hex	Mnemonic
42	2A	ld hl, (NN)
14,64	0E,40	16398
78	4E	ld c,(hl)
6,0	06,00	ld b,0
201	C9	ret

When this routine is called by a USR function, on return it will give the equivalent of the earlier Peek. To enter the routine, first of all write a Rem statement with seven characters. Then enter, as direct commands:

```
POKE 16514,42
POKE 16515,14
POKE 16516,64
POKE 16517,78
POKE 16518,6
POKE 16518,6
POKE 16519,0
POKE 16520,201
```

This will cause the Rem line to change, and the routine will be directly addressable using USR 16514. For those experienced in machine code, the routine may be stored anywhere since it contains no jumps.

I have written a short program to demonstrate this routine:

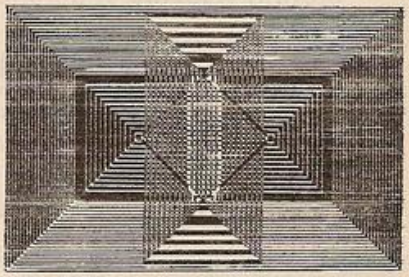

```
 1 REM (machinecode)
10 LET P=9
20 LET S=PI-PI
30 SCROLL
40 PRINT AT 12,P;
50 LET U=USR 16514
60 IF U<>0 AND U<> 118 THEN GOTO
   VAL "200"
70 PRINT AT 12,P;"V"
80 LET P=P+(INKEY$="P" AND
   P<25) - (INKEY$="Q" AND P>0)
90 PRINT AT 21, (RND*25)+1;"*"
100 LET S=S+1
110 GOTO 30
200 PRINT "SCORE:";S
```

Strange patterns

James Southgate,
Colchester,
Essex.

SPECTRUM

THIS SHORT program makes good use of colour high-resolution graphics on the Spectrum. When the program is run a pattern is drawn on the screen. This pattern continuously changes in shape and colour. ■

```
 10 LET y=INT (RND*70)+100: LET
x=INT (RND*80): LET z=INT (RND*
3)-4
 20 FOR r=y TO x STEP z
 30 PLOT r,r: DRAW 0,175-2*r
 40 DRAW 255-2*r,0
 50 DRAW 0,-175+2*r
 60 DRAW -255+2*r,0
 70 INK RND*5
 80 OVER 1
 90 NEXT r
100 GO TO 10
```

ZX81/ ZX SPECTRUM HARDWARE

TV stand removable for access to add-ons, wiring, etc. Can be used separately from the base.

Desktop console for the ZX81. It raises and tilts the TV to minimise eyestrain, holds in place the ZX81 printer, RAM packs (and other add-ons), power supply, tape recorder and hides most of the wiring. Provides storage space for cassettes.

Optional: Two built-in illuminated power switches. Similar unit for the ZX Spectrum also available which holds ZX Microdrive in place.

COMPETITION CORNER

A £15 book token will be awarded to the first correct solution drawn from the competition bag. All entries must be at the *Your Computer* offices by the last working day in December. The name of the winner, the solution, and a competition report will be published in the February, 1983 issue of *Your Computer.*

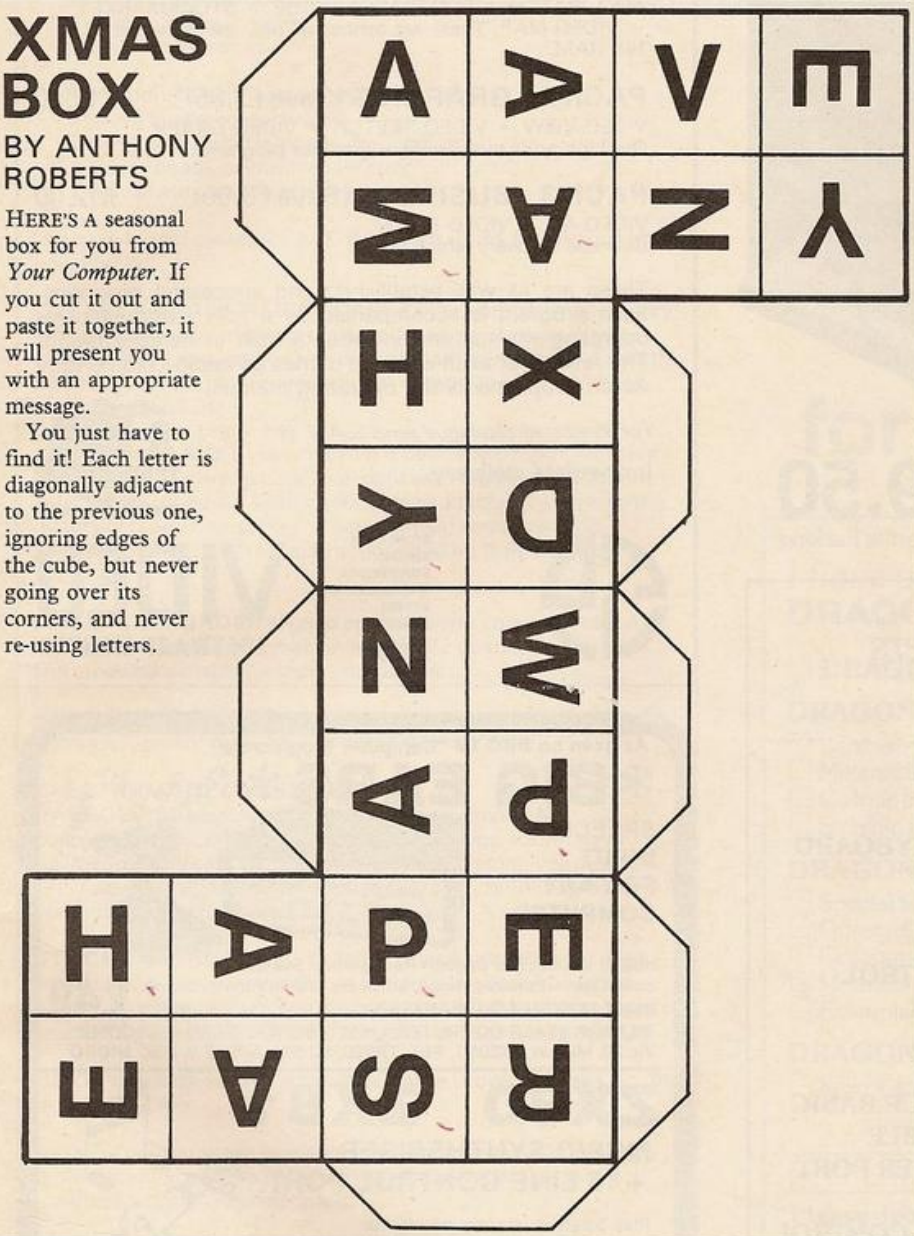

If you want to set a competition for Competition Corner, remember that the simplest solution should be calculable by a short program rather than by any other form of reckoning.

XMAS BOX

BY ANTHONY ROBERTS

HERE'S A seasonal box for you from *Your Computer.* If you cut it out and paste it together, it will present you with an appropriate message.

You just have to find it! Each letter is diagonally adjacent to the previous one, ignoring edges of the cube, but never going over its corners, and never re-using letters.

A B Smith's program to solve the Enigma Code problem.

Competition results

OUR PRIZE for the October competition, a Sanyo PHC-25, attracted a disappointing bunch of entries. The imminent Japanese invasion of the home-computer market was clearly not enough to release people's creative juices. Perhaps there was some confusion about the product. P McKenna said that he would use a Sanyo PHC-25 "to shave with".

With due apologies for picking yet another punster, we have awarded the prize to D Blakemore, 141 Bottleacre Lane, Loughborough, Leicestershire, who sounded a sceptical note with "take a Peek to see if it was a flash in Japan".

R Craig hoped to "get a PHD in hi-fi nance" and J Douglas wanted to "fulfil my yen for colour and sound".

We thought it was the Chinese, and not the Japanese, who are supposed to be unable to pronounce the letter "r"; but a number of people like C Hewitt thought otherwise. He

Solution to the October crossword.

suggested using a Sanyo to "reflesh the ports that no other miclo can leach".

Finally, Elizabeth Wright took a more personal line than most with her "bring a little colour into J Conway's life".

Many people found it easy to crack the Enigma Code for our October puzzle. The deciphered message read: "Beware gunpowder treason plot fifth November Parliament cellars". Only a few programs were submitted so we gave the £15 book token to the first entry picked from the bag, from C Davis, 31 Avondale Road, Palmers Green, London N13 4DX.

Here is Anthony Roberts' own explanation of the puzzle: "Each character is represented by three symbols, each of which may be in three states — missing, outline or black — so there are 3^3 possible codes — one for the letters A-Z and one for space. The instructions say that the codes and letters are in strict sequence, so all that remains is to see in which order to take the symbols and the three states. A simple group of nested For statements tried out in turn against the code would soon reveal the message: there are 3! × 3! that is, 36 possibilities, only one of which gives the message".

No-one supplied a program to print all 36 possibilities but the program on the left from previous winner A Smith, could easily be adapted to do so. ■

BARCLAYCARD VISA

Do your programs load from tape first time, every time? If not, you need...

(1) THE MICROCOMPUTER USER'S BOOK OF TAPE RECORDING by Hilderbay Ltd.

Contents:
PART I (for everybody; the 'how to' part):
1 How your system should work
2 choosing a tape recorder
3 testing and adjusting your tape recorder
4 keeping your recorder in good condition
5 the selection and care of tapes
6 making reliable recordings
7 loading 'difficult' tapes
8 useful accessories.

PART II (more for enthusiasts; the 'why' part):
9 how a tape recorder works
10 computer cassette interface waveforms
11 stereo heads, azimuth angle error
12 miscellaneous tape problems.

Price £3.15 incl postage; £2.90 from bookshops. Or ask for it at your library.

(2) TEST AND ALIGNMENT CASSETTE: a precision accessory which enables you to set up the azimuth angle of your cassette recorder head accurately using only a small screwdriver! Azimuth error is one of the commonest causes of tape troubles. With full instructions. £4.90.

(3) LOADING AID: if your recorder is basically OK, but you have trouble getting the playback level right with tapes from different sources, you need our Loading Aid! Also suitable for checking the quality of tapes, detecting and (sometimes) compensating for dropouts, etc. With full instructions and hints on tape use. £5.95

(4) TAPE RECORDER aligned and tested for computer use. A simple, but satisfactory, machine. £22 + £2 postage
(All products suitable for most computers)

SPECIAL TAPE OFFER!
Book + alignment cassette + loading aid for £11.90!

SPECTRUM SOFTWARE (48K)
PAYROLL (50 employees, all tax codes, pay levels, NI contributions; Hourly, weekly, monthly; payslips, summary of payments; Very easy to use; Amendments to employee details very easy right up to the last minute; Can also compute gross pay & deductions from net pay). £25

STOCK CONTROL (typically 1500 stock lines; prints list of all lines, or lines with given codes, or understocked lines; locate-by-name/add/delete stock line in under two seconds; prints values of stock. Program loads in one minute, data in less than three). £25

GOLD our best-selling adventure game, now available on the Spectrum! £8

All these programs are available from stock; we have interesting professional Spectrum software development, but we won't advertise it until we can supply it!

ZX-81 SOFTWARE (16-48K)
BEAMSCAN. Computers bending moment and shear force diagrams for a simply supported beam with 1-99 point, uniform, and uniformly tapered loads. £25.
TIME LEDGER for up to 17 employees, 200 clients. A great time-saver! £15
OPTIMAX. A powerful linear optimisation program. Up to 75 variables. <, =, > constraints. £40
PAYROLL. Similar to the Spectrum version, but 30 employees. £25
STOCK CONTROL: about 400 stock lines in 16K, 2000 in 48K). £25
CRITICAL PATH ANALYSIS. Enter & solve 500-activity network in 16K. Edit durations & costs, & repeat. £15
BUDGET. Keeps track of expenses & compares them with budget. 50 headings, 12 months (I) or 12 categories (II). £15 for budget I & II (together)
FINANCIAL PACK I. Contains three programs: MORTGAGE, LOAN, VAT. £8

GOLD. A tantalising adventure game! £6

Free GOLD (ZX-81 or Spectrum) with all orders of £22 or over postmarked before 1 December!

ZX99

AUTOMATIC TAPE CONTROLLER FOR THE SINCLAIR ZX81

● DATA PROCESSING

The ZX99 gives you software control of up to four tape drives (two for reading, two for writing) allowing merging of data files. This is achieved by using the remote sockets of the tape drives, controlled by USR statements or commands.

● RS232C INTERFACE

The ZX99 has an RS232C output allowing connection with any such printer using the full ASCII character code (you can now print on plain paper in upper or lower case, and up to 132 characters per line) at a variable baud rate up to 9,600

● SPECIAL FEATURES

There are so many special features it is difficult to list them all, for example:

AUTOMATIC TAPE COPY: You can copy a data file regardless of your memory capacity as it is processed through the Sinclair block by block.
TAPE BLOCK SKIP: Without destroying the contents of RAM
DIAGNOSTIC INFORMATION: To assist in achieving the best recording settings.

The ZX99 contains a 2K ROM which acts as an extension to the firmware in the Sinclair ROM. The ZX99's ROM contains the tape drive operating system and the conversion to ASCII for the RS232C output.

There is an extension board on the rear to plug in your RAM pack (larger than 16K if required). The unit is supplied with one special tape drive lead, more are available at £1 each.

Now only

£49.95

plus £2·95p+p

● ZX99 SOFTWARE

We now have available "Editor 99", a quality word processing program including mail-merge, supplied on cassette for £9.95. Also following soon:

* **Stock Control (October)**
* **Sales Ledger (November)**
* **Business Accounts**
* **Debtors Ledger**
* **Tax Accounting**

ZX81 & SPECTRUM KEYBOARDS COMPLETE WITH LUXURY CASE FOR ONLY £37.95 INC. V.A.T.

These highly professional keyboards incorporate executive buttons similar to those used on top-quality computers. A repeat key facilitates entering of characters much faster than is possible with a conventional keyboard, thus making it particularly ideal for cursor control and erasing. Attractive black plastic moulded case. Supplied with 12" flexible ribbon cable for connection into your computer. ***Not to be confused with toy keyboards currently on the market. Other attributes as reviewed by Tim Hartnell, ZX Computing/Interface.***

OTHER KAYDE HARDWARE/SOFTWARE

ZX81 4K GRAPHICS BOARD

The *KAYDE* Graphics Board is probably our best accessory yet. It fits neatly inside your ZX81. It comes complete with a pre-programmed 4K Graphics ROM. This will give nearly 450 extra graphics and with the inverse makes a total of nearly nine hundred.

The *KAYDE* Graphics Board has facilities for either 2K of RAM (for user definable graphics) 4K of ROM or our 4K Tool Kit Chips that will be available shortly. All the graphics are completely software controlled therefore they can be written into your progammes. Here are a few examples:

A full set of space Invaders — Puckman — Bullets, Bombs — Tanks — Laser Bases and Alien Ships

NO EXTRA POWER NEEDED

£29.95

16K GRAPHICS SOFTWARE

PECKMAN — The only true ZX version of the popular arcade game.

SPACE INVADERS — The best version available anywhere.

CENTIPEDE — ***"In all I think this is the best presented moving graphic programme I've yet seen" — Phil Garratt, INTERFACE***

£5.95 each

Graphic Software can only be used with a Graphics board

RAMPACKS . . . With a difference

Kayde Rampacks are exceptionally stable. They don't over-heat, lose memory, wobble or cause you to lose your program. They are fully compatible with all accessories and need no extra power, and therefore will run efficiently on existing Sinclair power supply. Simply plug them straight into the user port at the rear of your computer. Top quality massive add-on memory only:

£29.95 for 16K ZX81 Rampack and
£48.95 for 32K Spectrum Rampack

FLEXIBLE RAMPACK RIBBON CONNECTOR only £12.95

16K 81 SOFTWARE

3D/3D LABYRINTH — A cubit maze that has corridors which may go left, right, up and down. **£5.95**

"HENRY GOSUB MEETS THE CURSOR", for the unexpanded

VIC 20

A fantastic maze game for the 3.5K VIC. Can you outwit the Cursor and escape or will you be caught? Will you kill the Cursor with your blast bomb or will you use it to demolish a wall? Can you find your way through a labyrinth of walls and secret passages and matter transmitters, or will you wander around until caught?
We guarantee you won't escape the first time through, and there are NINE 'maze modules' on the tape, with others to follow. Believe it or not this fantastic game will only cost you £4.95!!
ALSO, for the 16K

ZX Spectrum

TAPE I: 5 colourful and noisy Spectrum games:
ZX Scramble, a version of the arcade game.
Bomb Run: Out of control over enemy lines, can you clear yourself a landing space without crashing?
Maze Craze: Can you find the key to the exit without being caught by the guardian robot?
Torpedoes: How many aircraft, subs and boats can you destroy without being hit by a mine?
Road Racer: Are your reactions fast enough to keep you on the ever narrowing road without hitting any cars?

ALL THIS FOR ONLY £4.95
WATCH THIS SPACE FOR FURTHER TAPES

SPECIAL OFFER

ON

ZX-81 & SPECTRUM ADVENTURES

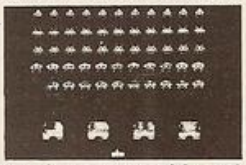

MINES OF SATURN: — "While piloting a routine orbit of SATURN, you are caught up in a radiation storm which forces you into the giant planet's rings. Your energy drained, you make a forced landing on the planet surface. Luckily you crash near an abandoned mining base and you set off in search of some Di-Lithium crystals to refuel your stranded space-ship. Can you succeed?
BE WARNED — THIS IS NOT EASY.
RETURN TO EARTH: — "Having escaped from your previous dilemma, you reach Earth Station 1, but fail to make radio contact. You effect a safe if harrowing manual docking with the orbital station. On entry you find it deserted, and the control room destroyed. You must explore the station and find some way to alert Earth of your predicament, BEWARE, many of the rooms are identical, there is extensive damage, and signs of Alien intruders. (The sequel to MINES of SATURN).

EAST LONDON ROBOTICS—THE OPTIMUM SOLUTION

The new Dragon 32. So well designed, you'll even understand this ad.

If you're already a computer expert, may we refer you to the box of technical specifications displayed opposite.

If you're not, may we refer you to the new Dragon 32 Family Computer. A computer so easy to understand, you won't understand why all the others seem so difficult.

And the new Dragon 32 costs under £200.

32K RAM FOR UNDER £200?*

When you're comparing computers, the first thing you need to know is the size of the memory. In plain English, the Dragon has approximately 32 thousand units of Random Access Memory. (32K RAM for those who prefer to be blinded by science.) This means that the Dragon's memory is at least twice as powerful as its competitors.

With a memory this powerful, the amount of information the Dragon can store is literally vast. But the Dragon doesn't just make it easy to store information. It makes it easy to use, too.

USER-FRIENDLY?

You may have heard of the term 'user-friendly.' Reverting to plain English once more, this means simply that the computer will go out of its way to understand you, rather than vice-versa.

The Dragon 32 is so user-friendly, it practically licks your hand.

You tap (literally) its vast resources through a beautifully-designed keyboard that's as easy to use as a typewriter.

On this keyboard, you type in a language which is surprisingly close to the English you talk every day. The Dragon 32 will receive your order. Understand it. Send it to the appropriate section of its massive brain. And then display the appropriate information on your screen. All before you can say 'gobbledygook.'

*TV not included in price.

SPECIFICATIONS
6809E MICROPROCESSOR. Pet, Apple, Atari 400, BBC Micro, and VIC 20 still have the less powerful 6502.
32K RAM (as standard). At least twice the power of similarly priced machines. Expandable to 64K RAM.
EXTENDED MICROSOFT COLOUR BASIC (as standard). Featuring: ADVANCED GRAPHICS (set, line, circle, paint, print, draw, rotate and print using). ADVANCED SOUND 5 octaves, 255 tones. AUTOMATIC CASSETTE RECORDER CONTROL. FULL EDITING with INSERT and DELETE.
9 COLOUR, 5 RESOLUTION DISPLAY.
USE WITH ANY U.H.F. TV and/or separate P.A.L. monitor.
PROFESSIONAL QUALITY KEYBOARD. Typewriter feel. Guaranteed for 20 million depressions.
PRINTER (Centronics parallel).
JOYSTICK CONTROL PORTS.

FIRE YOUR IMAGINATION.

Learning how to use the Dragon 32 won't cause you to experience any problems. Learning what you can use it for will cause you to experience something entirely different.

Delight. Surprise. Fascination. And challenge.

The Dragon offers a range of some of the most popular computer games in the world. From those celebrated space battles to mind-boggling adventures in seemingly unfathomable dungeons and caves.

As if by magic, a simple typed message will command the Dragon to create your own drawings. Then it will colour and paint them in 9 colours.

And it's clever enough to create virtually any image you want - circles and arcs as well as straight lines.

The Dragon will also play and compose music with you, with a range of 5 octaves. And it works with any UHF TV or PAL monitor.

LEARNING THROUGH PLAYING.

All of this makes the Dragon the ideal machine to build your children's interest in the world of computers as they become increasingly more vital. School-children already enjoy using computers.

The Dragon is the first computer specifically for the family - so by enjoying yourselves at home, you and your children can soon become expert enough to create your own programs.

BRILLIANTLY SIMPLE GUIDE.

The Dragon is living proof that you don't have to be an expert in computerspeak to be an expert in computers. It comes with the easiest-to-understand instruction manual ever written for a home computer.

Every step, every explanation, is made clear - even if you're a beginner. In minutes, it will show you how to write a simple program. Within hours, you'll be fascinated. And from then on, you'll continue to be astounded by the new world which the Dragon's power and versatility will open up to you.

See the new Dragon 32 in your High Street. At under £200, it's not just the first family computer. It also has all the features an expert could wish for.

Except perhaps the jargon.

DRAGON 32

The first family computer.

To: Jean Webster, Dragon Data Ltd, Queensway, Swansea Industrial Estate, Swansea, Glamorgan SA5 4EH.
Tel: 0792 580651.

Please send me further information about the Dragon 32.

Now available from J.P. GIBBONS A.I.B.

(Author of The Best Banking Programs In The World!)

The PBS Bank reconciliation is believed to be the first such program to be available for the Sinclair ZX81 and ZX Spectrum

- AUTOMATICALLY MATCHES BANK STATEMENT ITEMS WITH TRANSACTIONS RECORDED IN YOUR **'PERSONAL BANKING SYSTEM'**.
- LISTS ALL OUTSTANDING ITEMS SUCH AS UNCLEARED CHEQUES, FUNDS RECEIVED BUT NOT ADVISED TO YOU, BANK CHARGES – HIGHLIGHTS ALL DISCREPANCIES. NO MORE 'SCRATCHING AROUND' TO TRY AND FIND OUT WHY YOUR STATEMENT BALANCE IS DIFFERENT TO WHAT YOU EXPECTED.
- FULL SEARCH FACILITY, ALLOWING ON-SCREN CORRECTION OF ANY ITEM.
- SAVES AND LOADS DATA TO AND FROM TAPE (ZX81 VERSION, AT DOUBLE SPEED). EXCHANGES DATA WITH THE MAIN PBS PROGRAM. NO NEED TO SAVE PROGRAMS.
- SINGLE KEY OPERATION – USES MACHINE CODE KEYBOARD SCAN FOR SINGLE LETTER COMMANDS (ZX81 VERSION).
- EXTREMELY EASY TO USE. NO JARGON TO WADE THROUGH BEFORE YOU GET STARTED. DEMONSTRATION PROGRAM INCLUDED.
- ALL ITEM LISTS, SEARCHES (WITH TOTALS), CAN BE OUTPUT TO YOUR ZX PRINTER.
- FULL INSTRUCTIONS INCLUDED.
- UNIQUE AFTER SALE MAINTENANCE PROVIDED.
- OPERATES IN CONJUNCTION WITH THE **'PERSONAL BANKING SYSTEM'** (FULL INPUT & CORRECTION FACILITIES PLUS AUTOMATIC POSTING OF STANDING ORDERS ON DUE DATES AND FULLY DETAILED STATEMENTS).

SO BANISH THE HEADACHES, MAKE LIFE EASIER FOR YOURSELF, SEND £15 FOR THE **PERSONAL BANKING SYSTEM + PBS BANK RECONCILIATION** AND USERS MANUAL.
EXISTING CLIENTS NEED ONLY SEND £5 FOR THE **PBS BANK RECONCILIATION** WHICH WILL OPERATE WITH THEIR PRESENT PBS.
THE **PERSONAL BANKING SYSTEM** (AS REVIEWED IN POPULAR COMPUTING WEEKLY – 1ST JULY) IS AVAILABLE SEPARATELY FOR £9.95 FOR CASSETTE & USER MANUAL. ZX81 PBS OWNERS CAN ORDER THE SPECTRUM VERISON FOR JUST £5.
PLEASE SPECIFY WHETHER ZX81 (16K) OR ZX SPECTRUM (48K).

Guaranteed Software available from:
J.P. GIBBONS A.I.B.
14 Avalon Road, Orpington, Kent, BR6 9AX

Your PBS is never out of date!

SOUND with ZX-81!

MAKE AMAZING SOUND EFFECTS WITH YOUR ZX-81

£25.95 THE ZON X-81

incl p&p & V.A.T.

- The ZON X-81 SOUND UNIT is completely self-contained and especially designed for use with the ZX-81. It just plugs in – no dismantling or soldering.
- No power pack, batteries, leads or other extras.
- Manual Volume Control on panel – ample volume from built-in loudspeaker.
- Standard ZX-81 – 16K Rampack or printer can be plugged into ZON X-81 Sound Unit without affecting normal ZX-81 operation.
- Huge range of possible sounds for games or: Music, Helicopters, Sci-Fi, Space Invaders, Explosions, Gun-shots, Drums, Planes, Lasers, Organs, Bells, Tunes, Chords etc., or whatever you devise!
- Uses 3-channel sound chip giving programme control of pitch, volume of tones and noise, all with envelope control.
- Easily added to existing games or programmes using a few simple "BASIC" lines.

FULL instructions with many examples of how to obtain effects and the programmes, supplied. Fully Guaranteed.

BI-PAK Dept. YC 12 P.O. Box 6, 63A High Street, Ware, Herts.

Access & VISA accepted

MACHINE CODE

ZX Spectrum – ZX81

In 1981, ACS Software published ACSEMBLER and DIS-ACSEM. These are now generally regarded as quite simply the best assembler and disassembler programs available for the ZX81.

"The disassembler . . . is really fantastic." A.M., London
"I am very pleased with the assembler and I feel that you have a real winner in this program." R.B., Gloucester
Your programs are first class. Looking forward to more." A.J., Norway.
". . . the single biggest step to proficiency in machine code programming." SINCLAIR USER

Now, with the superior facilities of the ZX Spectrum, ACS Software have done it again. **Ultraviolet** and **Infrared** are assembler and disassembler programs that will extend your Spectrum. Look at the facilities that Ultraviolet offers:

Works entirely in decimal (no hex problems); all Z80 instructions correctly assembled; supports the pseudo-instructions EQU, ORG (multiple ORGs allowed), DEFB, DEFW and DEFS; code can be assembled at one location and then relocated; allows alphanumeric labels of any length; full listings of assembled code and mnemonics can be output to the printer; full error trapping with faulty instruction clearly indicated; comments can be included in the source file.

So now there is no need to be intimidated by machine code - with Ultraviolet and Infrared it's child's play! Buy them from the machine code specialists - ACS Software.

ULTRAVIOLET - £7.50 **INFRARED - £6.75**

The following programming aids are available for the 16K ZX81 at £5.50 each. SAE for details. Prices include postage and packing for UK orders, overseas clients please add appropriate postage.

ACSEMBLER: DIS-ACSEM: ACS DEBUG: PROGSTORE: TOOLKIT: PROGMERGE (version 2): TAPEKIT
PROGMERGE and TAPEKIT won't make a Spectrum out of your ZX81 but they will give it some interesting new facilities!

ACS SOFTWARE 7, Lidgett Crescent, Roundhay, Leeds LS8 1HN

Victagraph plot window.

An essential aid to all computer owners with Plot, Draw, Draw to a plotted co-ordinate, and medium/high resolution graphic capabilities, VICTAGRAPH gives you a fully adjustable window from plot 0,0 to plot 320, 200.

Higher resolution is possible by simple multiplication X2, etc., or reduction by division. Plot 0,0 in each corner to suit your requirements.

Place your drawing, tracing diagram etc., on a single sheet of paper and position in the VICTAGRAPH, AND you are ready to plot all the points quickly using the movable window AND easy to read scale.

Made from high quality plastic sheets, 17" × 12" approx.

Ideal for multi-graphic resolution computers such as Atari etc. Not suitable for Spectrum.

Total price £7.00. Cheques payable to: Victa Ceramics and crossed. SAE for Details. UK only.

MEMOTECH Explores the Excellence of your ZX81

Access Barclaycard Holders
Please Tel. Oxford
(0865) 722102

NEW Memotech's Plug-in ZX81 Keyboard

- Plugs directly into the back of your ZX81
- Keys have durable Sinclair legends
- High quality typewriter keys
- Does not inhibit other add-ons
- Automatic hold-down repeat
- Complete with buffered interface
- Fast and easy data entry
- Moveable between configurations

Memotech's Memopak Range

Current Memopaks
16K
32K
64K
HRG
Centronics Interface

MEMOPAK 64K MEMORY EXTENSION

The 64K Memopak extends the memory of the ZX81 by 56K, and with the ZX81 gives 64K, which is neither switched nor paged and is directly addressable. The unit is user transparent and accepts commands such as 10 DIM A(9000).
Breakdown of memory areas...0-8K Sinclair ROM. 8-16K This area can be used to hold machine code for communication between programmes or peripherals. 16-64K A straight 48K for normal Basic use.

MEMOPAK 32K and 16K MEMORY EXTENSIONS

These two packs extend and complete the Memotech RAM range (for the time being!) A notable feature of the 32K pack is that it will run in tandem with the Sinclair 16K memory extension to give 48K RAM total.

MEMOPAK HIGH RES GRAPHICS PACK

HRG Main Features — • Fully programmable Hi-Res (192 × 248 pixels) • Video page is both memory and bit mapped and can be located anywhere in RAM. • Number of Video pages is limited only by RAM size (each takes about 6.2K RAM) • Instant inverse video on/off gives flashing characters • Video pages can be superimposed • Video page access is similar to Basic plot/unplot commands • Contains 2K EPROM monitor with full range of graphics subroutines controlled by machine code or USR function

MEMOPAK CENTRONICS TYPE PARALLEL PRINTER INTERFACE

Main Features — • Interfaces ZX8I and parallel printers of the Centronics type • Enables use of a range of dot matrix and daisy wheel printers with ZX8I • Compatible with ZX8I Basic, prints from LLIST, LPRINT and COPY • Contains firmware to convert ZX8I characters to ASCII code • Gives lower-case characters from ZX8I inverse character set

ZX Spectrum
20 Programs £6.95

The ZX Spectrum has brought advanced computing power into your home, The Cambridge Colour Collection, a book of 20 programs, is all you need to make it come alive.

No experience required. Simply enter the programs from the book or load them from tape (£2.95 extra) and run.

Amazing effects. All programs are fully animated using hi-res graphics, colour and sound wherever possible.

Entirely original. None of these programs has ever been published before.

Proven Quality. The author already has 30,000 satisfied purchasers of his book of ZX81 programs.

Hours of entertainment

- **Lunar Landing.** Control the angle of descent and jet thrust to steer the lunar module to a safe landing on the moon's surface.
- **Maze.** Find your way out from the centre of a random maze.
- **Android Nim.** Play the Spectrum at the ancient game of Nim using creatures from outer-space.
- **Biorhythms.** Plot the cycles of your Emotional, Intellectual and Physical activity. Some would say this is not a game at all.

Improve your mind

- **Morse.** A complete morse-code training kit. This program will take a complete beginner to R.A.E. proficiency.
- **Maths.** Adjustable to various levels, this program is an invaluable aid to anyone trying to improve their arithmetic.

Run your life more efficiently

- **Home Accounts.** Keeping track of your finances with this easy-to-use program will enable you to see at a glance where the money goes and plan your spending more effectively.
- **Telephone Address Pad.** Instant access to many pages of information.
- **Calendar.** Displays a 3 month calendar past or future, ideal for planning or tracing past events.

ZX81 GAMES
from
J.K. GREYE SOFTWARE LTD
THE NEW GENERATION SOFTWARE HOUSE

"Without question the finest machine code games available today!"..... J.N. ROWLAND Product Manager for W.H. SMITH.

GAMESTAPE 1 for 1K _____ **only £3.95**
10 Games incl. ASTEROIDS, UFO, CODE, BOMBER, GUILLOTINE, KALEIDESCOPE, etc.
PROBABLY THE BEST VALUE 1k TAPE AVAILABLE.

We've done in 1k, games which some of our competitors require 16k to do!

GAMESTAPE 2 for 16K _____ **only £3.95**
***STARFIGHTER** Superb machine code Space Battle. Set against a background of twinkling stars, with stunning explosions – if you can hit the enemy!
PYRAMID Can you move the Pyramid? Make a mistake and it will collapse! A Thinkers game.
ARTIST The ultimate Graphic Designers aid. 8 Directions, 10 Memories, SAVE, COPY, RUBOUT, CLS, etc.

GAMESTAPE 3 for 16K _____ **only £4.95**
***CATACOMBS** A Multi-Level Graphics Adventure. Each level can contain up to 9 Rooms, 8 Passages, 7 Monsters, Food, Gold, Traps, Phantoms, an Exit (to the next level), and there's an infinite number of levels.
NOTE. . . . This is NOT one of the necessarily limited text Adventures as sold elsewhere.
"An excellent addictive game which will keep you amused for hours.". . . . *COMPUTER & VIDEO GAMES.*

GAMESTAPE 4 for 16K _____ **only £4.95**
***3D MONSTER MAZE** The Game to Top All Others. Unbelievable Graphics! Can you find your way through the Maze? The EXIT is there somewhere, but then so is a T.REX, and its after YOU! All in 3D (the T.REX will actually run towards you in full perspective!), you've never seen anything like this before!
"3D MONSTER MAZE is the best game I have seen for the ZX81". . . COMPUTER & VIDEO GAMES
"If I had to choose just one programme to impress an audience with the capabilities of the ZX81, then J.K. Greye's 3D MONSTER MAZE would be the one without doubt" . . . . ZX COMPUTING. *"Brilliant, brilliant,brilliant!"....POPULAR COMPUTING WEEKLY*

GAMESTAPE 5 for 16K _____ **only £4.95**
***3D DEFENDER** The Ultimate Space Game. Super fast Machine Code 3D version of the Arcade favourite. You have to save your home planet from the marauding Alien Spacecraft. This is all in 3D, your viewscreen shows you the view out of your fighters cockpit window. The backdrop moves when you turn, or fly up or down (8 flight directions), just as if you were really flying it! But then YOU ARE! The Enemy Saucers will actually zoom towards you in 3D, and shoot you if you let them! Your display includes Score, Shield Strength, Altitude, Proximity, Forward Radar and your viewscreen, which shows your rotating home planet, backdrop of Stars, Meteors, Explosions, Plasma Blasts, your Photon Beams, up to 4 Enemy Saucers and of course its all in full 3D!
"Another 3D winner"..... *SINCLAIR USER*

GAMESTAPE 6 for 1K _____ **only £1.95**
***BREAKOUT** Super Fast Full Screen Display Game. Your all time favourite with an added twist. See how much Money you can win and watch the pounds convert to Dollars. All in Machine Code for Fast Action with 3 Speeds, 2 Bat Sizes and three angles of rebound! The best BREAKOUT around and at this price you can't go wrong!
"The best of its kind" ..... *WHICH MICRO & SOFTWARE REVIEW*

GAMES MARKED * INCL. MACHINE CODE.

ZX81 Workstation...

... is a stylish and ergonomic plinth for the ZX81. It raises and tilts the TV to avoid eyestrain, holds the 16K RAM in place and hides the wiring and power supply. This very professional unit costs £15, a built-in power switch is £3, plus postage at £2.00, inc. VAT.

Peter Furlong Products, Unit 5, South Coast Road Industrial Estate, Peavehaven, Sussex BN9 8NA.
Telephone 07914-81637 for C.O.D. and Credit Card Sales.

AND NOW!

Spectrum workstation

Following the success of our ZX81 plinth we have introduced a workstation for the Spectrum. This stylish ABS plinth raises and tilts the TV for better viewing whilst angling the Spectrum and making typing easier. The PSU is hidden underneath, the printer and cassette may still be used, and a matching, stackable unit for Microdrives will be available.

Peter Furlong Products, Unit 5, South Coast Road Industrial Estate, Peacehaven, Sussex BN9 8NA. Tel. (07914) 81637.

PRESENTING THE NEW...

KEMPSTON (Micro) ELECTRONICS

ZX SPECTRUM HARDWARE

We are proud to announce that we have developed for the ZX SPECTRUM a new 24 line programmable peripheral Interface using MOS technology with the following features:—

- 3 × 8 bit ports
- Port mapped, using IN and OUT commands
- I/O via 16 pin DIL sockets
- I/O also via 28 way edge connector
- Can be used in BASIC or Machine Code

The port is available fully built with a detailed set of instructions and control applications. The port can either be used with out motherboard, thus allowing a further card to be used, or with a stackable connector. Either way, it means that Micro-Drives, Printers, etc., can still be used with the port.

Please note that this is DEFINITELY NOT a ZX81 MODIFICATION but an exclusive design for the new ZX Spectrum.

ZX Spectrum PPI port.....£16.50
ZX 2 slot Motherboard.....£16.95
ZX Stackable connector.....£ 5.50

All prices inclusive of VAT, but postage must be added at 70 pence for a single item, 100 pence for 2 or more items. Available by mail order only. Cheques, P.O's made payable to:

KEMPSTON (Micro) Electronics
60 Adamson Court, Hillgrounds Road, Kempston, Bedford MK42 8QZ.
Please allow 21 days for delivery. S.A.E. in all correspondence.

WHAT PEOPLE ARE SAYING ABOUT OUR . . .

BBC MICRO GAMES

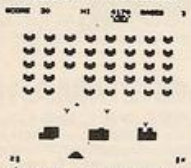

". . . I bought all your tapes to date for the BBC Micro and I think they are just super, especially STAR TREK, and the sound effects in CANDY FLOSS really made me sit up! Well done and keep them coming".
J. S., Paisley

". . . I was very impressed, not only with the cassette, but also at the speed at which it came!"
— R.L., Cheshire

". . . I must congratulate you on your MUTANT INVASION cassette. I have had it for two weeks now and it is really superb. Incidentally, I have beaten your high score of 4,500 — mine is 7,580!"
— S.L., Berks

AND NOW LOOK AT OUR LATEST CASSETTES!

PRO SOFTWARE

BBC MICRO (A&B)

* NEW * SPACE ADVENTURE (Mode 1) Machine Code - Model B only £8
Our best selling game for the Atom now re-written and enhanced for the BBC. Intriguing mixture of Space Invaders, Maze and Adventure.

MIDDLE KINGDOM (Mode 7) Basic & Machine Code. £8
Original real time adventure with over 300 rooms to find and explore. Fight (or avoid!) the many different monsters and retrieve the lost treasures of Hylem. Many different scenarios and characters.

SPACE INVADERS (Mode 5) Machine Code. £8
Fast action, full-feature version of this popular game. Outstanding high resolution colour graphics plus sound.

REVERSI and GOMOKO (Mode 5) Machine Code. £8
Response time under one second for the first 3 levels. Many features, graphic board, problem solving, etc. Both games are very absorbing and challenging.

GAMES TAPE 1 (Mode 5) Machine Code. £8
Moving Wall Breakout, Snake and Hunt are fast moving addictive games, very colourful. Three quality games for the price of one.

MICRO MAN (Mode 2) Machine Code - Model B only - Fast moving, excellent colour graphics with sound. £8

* NEW * Now available. Word Processor package only £19.95
Written in machine code for speed and versatility. Easy to use with full on-screen editing and justification (more useful and powerful than a text editor), insert, delete, move, copy, variable tab setting, margins plus many more features. Complete with instruction manual. Large SAE for further details.

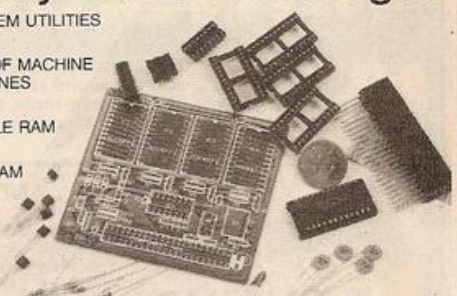

All programs supplied on quality C-15 cassettes. All prices are inclusive, no extras. Buy any two cassettes and deduct £1 from total. SAE for catalogue.

ATOM software also available. Space Adventure Invaders, Air Strike Only £6 each. SAE for details of our full range.

Extend your ZX81 System: Add Memory that won't Forget!

- ADD YOUR OWN SYSTEM UTILITIES
- BUILD UP A LIBRARY OF MACHINE LANGUAGE SUBROUTINES
- UP TO 8K NONVOLATILE RAM
- USE HM6116P CMOS RAM OR 2716/2732 EPROM
- COMPATIBLE WITH 16K RAM PACKS

£19.95 INCL.VAT

INTRODUCTION

This memory board is designed to fill the transparent 8K block of memory (from 8 to 16K) in a ZX81-16K system. This area of memory is an ideal place to store, either permanently or temporarily, machine language routines or data which are to be used by the BASIC system. Such routines could be, for example:

- fast graphics routines
- custom mathematical or statistical functions
- Sinclair code/ASCII conversion tables
- octal/decimal/hex conversion routines
- interrupt servicing routines
- I/O servicing routines for control applications
- a disc operating (DOS) or other development system
- speech synthesis routines
- additional BASIC commands
- EPROM programming and verify routines

A sample rapid display routine and procedures for storing utilities on tape are included with the kit.

The use of HM6116P 2K CMOS RAM memory IC's with their own reserve power supply means that routines stored in the RAM are nonvolatile — the RAM retains its memory even when the ZX81 is switched off or reset. Moreover, being RAM, the routines you store in the memory are easily modified. The lithium cell supplied with the board will maintain sufficient reserve power for about ten months for 2K or for about two months for a fully populated board. A connector is made available for an alternative external supply.

With this board it's no longer necessary to place your machine language routines in REM statements, in string variables, or beyond RAMTOP. You can build up a resident library of machine utilities for use by your BASIC system.

Once your system utilities and other machine language routines are established you can, if you wish, replace the 6116P CMOS RAM's with 2716 or 2732 EPROM's.

OTHER OPTIONS

The board can be jumper programmed to occupy any one of the four 8K blocks of memory in the first 32K. You can, for example, modify the SINCLAIR operating system. Alternatively the board can be used as system/user RAM.

ASSEMBLY

Complete step-by-step instructions in a 16 page manual make assembly of the board easy. Construction takes between one and two hours. The kit (pictured above) is complete with a silkscreened solder-masked printed circuit board, all capacitors, resistors, transistors, sockets, connectors, integrated circuits, and the lithium cell. The board is supplied with one 2K CMOS 6116P-3 RAM — it will accomodate three more for a total of 8K.

HUNTER ELECTRONICS,
KENWAY, RAYMONDS HILL, AXMINSTER, DEVON

Send check or money order for £19.95 plus £1.95 shipping and handling to the address below. The printed circuit board with the instruction manual is available separately for £10.00 post paid.

HUNTER ELECTRONICS, P.O. BOX 5, AXMINSTER, DEVON EX13 5AS

Christmas Space action with . . .

SPECTRUM STORM-FIGHTERS

. . . explosive machine code space action

They come from deepest space.
An alien fleet whose skill is matched only by its ruthlessness.
They hide and manoeuvre in the cover of asteroid clouds . . . showers of cosmic rubble that spell death on collision to the commander of the lone space ship that protects Earth.
You are that commander.
In one of the toughest challenges the Sinclair Spectrum can offer your mission is to destroy the aliens and avoid the asteroids before they destroy you.
Your weapon is a twin firing laser canon. Double bolts of pure energy that mean instant annihilation to on-target aliens. Its responsive. Its fast. But only as fast as you are.
Put yourself at the controls. On the thrilling edge of adventure . . . the STORM-FIGHTERS await you.
All machine code action . . . full colour graphics . . . full sound sync . . . progressive difficulty . . . comprehensive scoring . . . high value mother-ship . . . runs automatically on both 16K and 48K models:

Available on quality cassette atom £4.95 (post free in U.K.) from

ZX SPECTRUM & ZX81 EDUCATIONAL SOFTWARE

Spectrum Junior Education **£5.50**

Use your Spectrum to help your children with their school work. This cassette contains eight attractive, easy-to-use programs for the 7 to 11 age group.

Topics include English comprehension, spellings, homophones, junior science, maths and history.
* Entering your own questions and answers allows you to adapt two of these programs for exercises in any subject area.
* Moving colour graphics and sound are extensively used to improve motivation.
* Use the "draw" program to produce pictures, maps and diagrams.

Suitable for the 16K or 48K Spectrum. Program notes are supplied.

O-Level Chemistry (C1) **£5.50**

This cassette contains four clearly presented revision/tutorial programs. The subject matter has been carefully structured to cover the most important aspects of:

* Elements, compounds and mixtures.
* Structure, bonding and properties.
* Redox, electrolysis and the activity series.
* Acids, bases and salts.

48K Spectrum and 16K ZX81 versions of the cassette are available. Please specify which you require.

Professional Computer Assisted Learning materials from:

CALPAC COMPUTER SOFTWARE
108 Hermitage Woods Crescent, St Johns, Woking, Surrey GU21 1UF.

Overseas orders: £6.50 ($11.60) per cassette; includes AIRMAIL postage.

ANDREW HEWSON'S BOOKS FOR THE SPECTRUM

20 BEST PROGRAMS for the ZX SPECTRUM WITH EXPLANATORY TEXT

Mr HELPLINE — the man who answers your ZX queries in his column in Sindair User, the author of HINTS & TIPS FOR THE ZX80 and HINTS & TIPS FOR THE ZX81 now presents:

★ 20 original programs for you to load into your Spectrum.

★ 20 interesting programs for you to enjoy and learn from.

★ 20 great programs to teach you about fixed and variable length records, binary searches, bubble sorts, graphic displays and much, much more . . .

Program titles include:

Machine Code Editor — Write, modify, extend and load machine code using this all-basic program. No need to use an Assembler when you have this program.

Index File — Learn about fixed length records, save numerio and string information, add to, sort, modify, delete and print your records. Ideal as a computer based filing system.

Duckshoot — Learn how to manipulate the attributes file *and* have fun at the same time.

Graphix — Construct up to 210 graphics characters with the full on-screen editing facilities, enhance and modify them and recall them later to build a detailed display to save on cassette.

Spiromania — A program to stretch your artistic talents, imagination and ingenuity. Draws a limitless variety of curves and spirals.

Plus: FOOTBALL, DIGITISER, DIARY and many more.

Available through Computer Bookshops and W.H. SMITH.

40 BEST MACHINE CODE ROUTINES FOR THE ZX SPECTRUM £5.95

by Andrew Hewson and John Hardman.

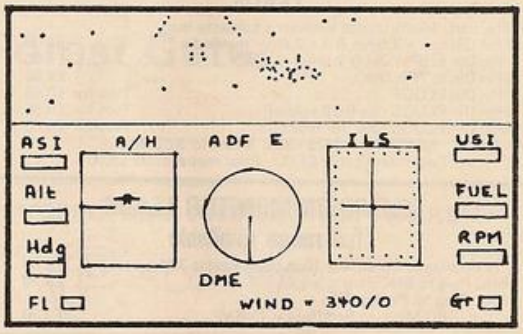

Section A: Three chapters explaining what you need to know about Z80 machine code on the Spectrum.
★ How to load and save machine code.
★ How to use the system variables.
★ How memory is organised.
★ How program lines are stored.
★ How to use the stack, the display, the attribute files.
★ How to call ROM routines — where they are and what they do.
★ The structure of Z80 code — plus a valuable glossary.

Section B: 40 routines including,
★ Scroll — up, down, side to side by pixel or by character.
★ Search and replace, token swap, string search.
★ Rotate character, invert character — horizontally and vertically.
★ Line remember — including GOSUBs, GOTOs, RUN etc.

All routines are relocatable (except 'line remember')

This book teaches the beginner all he needs to know in a simple, easy-to-learn form and its an invaluable reference work for the expert too!

NIGHTFLITE FOR ZX SPECTRUM £5.95

Fly your own aircraft from take off to landing via navigational beacons, over mountains and using a fully detailed direction finding and instrument landing system. *You are the Pilot of a light aircraft flying at night. *You must use your skill and judgment to fly your aircraft accurately over radio beacons and then land safely on the runway *Hazards are mountains and cross winds *Instruments: Artificial Horizon, Non Directional Beacon, VHF Omnidirectional Range, Instrument Landing System *Readouts: Gear, Flap, Air Speed, Distance Measuring Equipment, Vertical Speed, RPM and heading *Visual display of runway on approach *5 Modes from Take off to Autopilot *Happy landings *

Z80 OP CODES £1.45

A must for the beginner and the experienced programmer alike. This hand ready reckoner lists all 600 plus Z80 machine code instructions in decimal and hexadecimal with their mneumonics. Each Op Code is succinctly explained and cross-referenced. Supplied in a protective transparent wallet for easy reference and durability.

PILOT ZX81 £5.95

Essentially the same as Nightflite but without the hi res graphics.

PUCKMAN ZX81 £5.95

All action display. Best score to date, scour the maze for food, dodge the ghost, eat a strawberry and attack the ghosts.

HINTS & TIPS FOR THE ZX81 £3.95

Available by direct mail order or through computer bookshops and W.H. Smith.

THE PROGRAMS

The programs advertised here are available from computer bookshops with a software stand, and many independent micro-computer shops.

RETAILERS

We are continually on the look out for new outlets. If you are interested in stocking the items advertised here, write to us for our trade rates.

URGENT

We require high quality Spectrum and Dragon software. Good royalties paid. Send your samples today for fast evaluation.

HOME COMPUTER USERS

PRODUCT INFORMATION SERVICE

Do you want the right computer for you? Do you want the right hardware? Or the right software? At the right price? If you're thinking about making a purchase but aren't sure just which product will suit you best why not seek a swift overall picture of what's around from us? Simply let us know what you're interested in and we'll send you a personal summary of what's available: facts, figures, suppliers, details. We'll also enclose as much manufacturers' literature as we can and add whatever related data we think might be worthwhile for you. We'll tell you of any special offers we're aware of, and even help you with your order is you wish. If we don't know how to answer your enquiry we'll try to find out: if we can't we won't take your money. Try us — we're here to help you make the right decision.

SECONDHAND COMPUTER REGISTER

We can also help if you want to buy or sell secondhand. We keep a register of currently available used computers and peripherals and send appropriate details from it to every interested enquirer. This advertisement appears in many computer magazines, which means a lot of people will read it. So, if you're looking for secondhand value write and ask us. If you want to sell, send us full details of what you have to offer and we'll do the rest. Registration costs £4 (or £3 if the total asking price is under £100), and will be maintained until you've sold. Each registration will be acknowledged.

ALL ENQUIRIES COST £1

Please send enquiries/registrations (including cheque/PO) to:

DAVID HEARTFORD
91 High Street, Evesham, Worcs WR11 4DT

SUPPLIERS: If we haven't contacted you please write to us.

Campbell Systems

The very best in machine code for **SPECTRUM** and **ZX81**

Spectrum 16K GULPMAN game of the xxxMAN variety, with 15 mazes, 4 chasers, laser defence, 9 grades, 9 speeds, demo mode, choice of joysticks control. "An extraordinarily good program" raves Boris Allan for *Popular Computing Weekly*. We think you will agree. £5.95.
Spectrum 48K MASTERFILE business/domestic filing and reporting system. So flexible it is equally usable for your mailing-lists, catalogues, stock control, text extracts . . . applications are endless. Fully user-defined data and report display formats, dynamic variable-length file, records, and data items. Fully menu-driven, with powerful search facilities, sorting, total/average, update, multiple independent files, printing. Yes, we aim to support Microdrive when Uncle delivers. Nearly all the 8K we use is machine code, so you get 32K per file. Comes with example file and 12-page manual. £15.00.
Spectrum SPDE 16K Disassembler and Editor, as used by other ZX professionals, and we used it to develop the above. £5.95.
ZX81 16K GULP II almost identical spec to GULPMAN, £4.75.
ZX81 16K to 64K THE FAST ONE is the predecessor to MASTERFILE and is in use all over the world now. Specification is very similar to MASTERFILE. £12.00.

All programs supplied double-recorded and mailed 1st class by return. Prices include VAT and postage within Europe. SAE for full list.

SiMON MICRO-SOFT

FULL COLOUR, SOUND, HIGH RES. & U.D.G. PROGRAMS

FOR THE

16K ZX SPECTRUM

COLLECTION ONE £4.95

CAR CHASE
Similar to the popular Arcade game "Dodgems" but with a unique and exciting difference.

FRUIT MACHINE
This game offers gamble, hold and super nudge and is possibly one of the most realistic versions available.

COLLECTION TWO £4.95

PLANET DEFENDER
New moving landscape space game for the Spectrum. If you can retrieve the Plasma Bombs then stand by to defend yourself.

U.D.G. Toolkit
User defined graphics made easy! Auto-load, Auto-save data display (printer optional), rotate. Binary or decimal number accepted without the need to use the awkward BIN key.

Our computer programs are recorded on quality cassettes and are guaranteed for one year. Each collection of two programs costs only £4.95 and all four may be purchased at a special discount rate of £7.95.

PROGRAMERS DREAM (SPECTRUM)

P.D. is an advanced TOOLKIT adding the following extra features to the standard SPECTRUM.

(1) RENUMBER (INCLUDING THE FEATURES OF RENUMBER DELETE).
(2) BLOCK MOVE AND RENUMBER.
(3) BLOCK OR LINE ERASE.
(4) CHANGE STRINGS (AS SELECTIVE AS REQUIRED).
(5) DUMP (VARIABLE NAMES AND VALUES).
(6) DISPLAY PROGRAM AND VARIABLES SIZE.

If you need a speedy M/CODE program that will RENUMBER, CHANGE all or some of your variable or string names. Change commands, string contents, MOVE whole blocks of program and RENUMBER them to fit into available gap. Print to the screen the final or developing values of the program variables, inside a FOR NEXT LOOP if required, to display the size of your program with or without variables. To erase instantly lines or blocks of text then you need PROGRAMERS DREAM. The whole program is just 1450 BYTES of fast M/CODE and requires only a single line of BASIC to control it. Furthermore this powerful debugging tool is complete with explicit instructions and costs just £7.00.

SPECTRUM RENUMBER DELETE

Just 600 BYTES of fast MACHINE CODE. Controlled by a single line of BASIC (A 9999 REM) into which the START, NEW START, INTERVAL & STOP NUMBERS are entered. A BLANK REM gives an AUTO 10 RENUMBER. Resolves leading jump numbers in expressions and non-existent jump numbers if affected by a renumber pass. All GOTO, GOSUB, RUN, LIST, LLIST, RESTORE JUMP NUMBERS ARE CATERED FOR. NO EXTRA WORK. The last altered jump number can be flagged by listing after a pass. Full legality checks and ERROR REPORTS. DELETE simply requires a start and stop number and it's ready. Call from BASIC or immediate mode. Quick, clean and easy. "You won't buy a better RENUMBER program for the SPECTRUM." £5.00. inc VAT and post.

SPECTRUM DISASSEMBLER

Your flexible friend. By using the printer buffer for temporary storage this program allows you to format output as required. Its output is a clearly defined 12 CHARACTER mnemonic although 9 will suffice. This can be printed to the screen in one or more columns, or to the ZX printer, into an array for later printing, or use it with your M/CODE loader program. All 1,2,3 and 4 BYTE Z80 op-codes handled. Also included are the calculation of both absolute and relative addresses plus SPECTRUM RST literals. Switch literals on and off to print TABLES and other FLAGS. Complete with a demo program in order that you may extract the best from this excellent program. This may be the key to your understanding of the SPECTRUM. JUST 1500 bytes of fast M/CODE it's flexible and will even disassemble itself. JUST £5.50. INC.

DI-LOADER

All the features of the disassembler and more. Disassemble CODE as you load it. Backtrack. INSTANTLY create an insertion gap, or DELETE any amount of CODE. Use LITERAL SWITCHES, RESTARTS or STOPS. Auto RAMTOP setting loads CODE at given address. Display features ADDRESS, CODE, Z80 MNEMONIC AND ASCII. Program holds M/CODE in BASIC to preserve RAMTOP for the loaded CODE. Only 4692 BYTES. Speed your understanding of M/CODE PROGRAMMING. Full instructions. £7.00.

ALL THE ABOVE M/CODE UTILITIES ARE POSITION INDEPENDENT FOR LOCATION. ABOVE A RAMTOP OF YOUR CHOICE.

WORK FORCE
140 WILSDEN AVE, LUTON, BEDS.

Send for details of under-the-keyboard board for ASZMIC & BASIC.

ZX.ASZMIC rom transforms ZX81 into an
Assembly Language programming unit

£ **39.95** total

ø FULL~SCREEN EDITOR

Sixteen shift keys take you into a world with a word processor feel. A blink cursor moves at your command to control insertion, rubout, line or string deletion, auto-scroll & page flip up or down. Text block operations. Ultra-fast editing.

ø MULTI~FILE SYSTEM

Declare as many files as you like, with any names you like, & they are automatically handled by the Operating System. Merge them, delete them, print, save & load them, & edit them by name. Superb flexibility with a simple but powerful system.

ø TOTAL ASSEMBLER

Full Z80 mnemonics, unlimited length labels, ORG & EQU directives, proper assembly listings with errors flagged on screen or printer. Relocatable object code & options to facilitate cross-assembly. Interpretive immediate execution available.

ø POWERFUL DEBUG

All the usual dump, modify, fill & copy commands; plus breakpoints, single stepping, context control, the convenience of interpretive execution mode, full use of the names in your program, Command Macros, autodump, and full operating system interface.

ø HI~RES GRAPHICS

255 x 144 resolution under program control to give you truly convincing graphics. With the power & flexibility of assembler you can really use this high definition.

ø MUCH, MUCH MORE

Repeat function on all keys. Double height titling on printer. Lots of extras. But more important than all these features, attractive though they are, is the fact that ZX.ASZMIC is an integrated development system in which everything fits together to give you a tool which can satisfy the professional programmer by simplifying all stages of the program development process. It is excellent for those who are taking the first steps into real programming but the more expert you become the better you realise just what ASZMIC can do for you. If you are at all interested in machine code it will be worth your while to find out more.

Envelope and Character Definer. (32k)

Together these utility programs offer a complete character and sound envelope defining package for the BBC Micro. Even if you fully understand both the envelope and character defining commands, these programs will make their definition quicker and more accurate.

Side 1

ENVELOPE DEFINER
* Excellent use made of graphics windows and colour to display pitch and volume.
* Database containing 20 predefined envelopes of everything from phasers to explosions.
* Example graphs and step by step prompts allow easy defining of your own sound envelopes.

Side 2

CHARACTER DEFINER
* 'A very nice VDU23 character definition program' — *Computer Users Club (GB).*
* Shows both magnified and true size characters as they are defined.
* All other definable characters can be called up for display.
* Easy to use and check performed on all input.

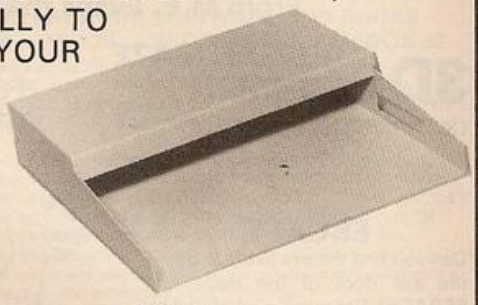

Recorded on quality cassettes, sent by first class post

VIEWPOINT

THE PROGRAM THAT YOUR ZX SPECTRUM HAS BEEN WAITING FOR!

Draw complex 3-dimensional objects. View them after rotation in any or all of 3 dimensions.
Features:

1) Rotation in 3 dimensions about a single point.
2) Rotation about a line between two points.
3) Generation of stereo pairs.
4) View from one point towards another point.

Objects can be stored separately on tape and copied to the ZX printer.
Written in BASIC for you to modify to your own requirements.
Ideal for computer modelling, molecular modelling, CAD etc.

Viewpoint - with full instruction and examples £6.50

Just starting to write machine code programs? The ideal assembler for beginners is Ultraviolet. Look at the facilities that it offers:

Works entirely in decimal (no hex problems); all Z80 instructions correctly assembled; supports the pseudo-instructions EQU, ORG (multiple ORGs allowed), DEFB, DEFW and DEFS; code can be assembled at one location and then relocated; allows alphanumeric labels of any length; full listings of assembled code and mnemonics can be output to the printer; full error trapping with faulty instruction clearly indicated; comments can be included in the source file.

The ideal complement to Ultraviolet is Infrared - an easy-to-use disassembler.

So now there is no need to be intimidated by machine code - with Ultraviolet and Infrared it's child's play! Buy them from the machine code specialists - ACS Software.

ULTRAVIOLET - £7.50 **INFRARED - £6.75**

All our Spectrum programs will work in both 16K and 48K models. Please send sae for details of ZX81 programs.

ACS SOFTWARE 7, Lidgett Crescent, Roundhay, Leeds LS8 1HN

QCP-FORTH!

***FULL FIG-79 STANDARD (NON-DISK)**
***FASTER THAN BASIC**
***EASIER THAN MACHINE CODE**
***SUPPORTS ZX-PRINTER**

Forth, for those who are not already converts, is perhaps the closest yet to the ultimate all-purpose computer language. It is designed to be fast, portable and *extremely* flexible. A FORTH program consists, largely, of definitions of new FORTH words, enabling a user to develop a unique, application oriented, vocabulary. It is even possible to alter the syntax to suit your application (or just your style of program!).

***TAPE & DOCUMENTATION . . . £10**

GAMES PACKS 1&2

TOP QUALITY MACHINE-CODE * PROGRAMS *

FOR THE BBC MICROCOMPUTER

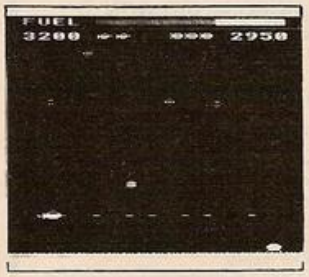

GALAXIANS (32K) £6.50

Fast action version of the popular arcade game. 4 types of Galaxians (in 3 initial screen formations) swoop down individually or in groups of two or three. 6 skill levels, hi-score rankings, bonus laser bases and increasing difficulty. Superb sound effects and graphics.

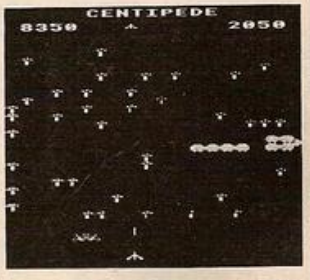

INVADERS (32K) £6.50

Superb version of the old classic arcade game with a few extras. 48 marching invaders drop bombs that erode your defences, and 2 types of spaceship fly over releasing large bombs which penetrate through your defences. Increasing difficulty, hi-score, superb graphics and sound.

SPACE FIGHTER (32K) £6.50

Arcade-style game based upon features from DEFENDER and SCRAMBLE. 5 types of menacing aliens fire at you and may attempt to ram you. Separate attack phases, fuel dumps, asteroids, repeating laser cannon, smart bombs, hi-score, rankings, 6 skill levels, sound effects.

CENTIPEDE (32K) £6.50

Another incredible arcade type game featuring mushrooms, snails, flies, spiders, and centipedes of course. Excellent graphics and sound. 6 skill levels, hi-score, rankings, bonuses, and increasing difficulty as the spiders become more active and the number of mushrooms increases.

All programs feature FULL COLOUR GRAPHICS. The above pictures cannot show the true quality of these graphics.

WHAT PEOPLE ARE SAYING ABOUT OUR . . .

BBC MICRO GAMES

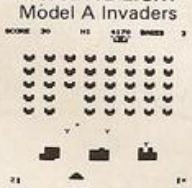

". . . I bought all your tapes to date for the BBC Micro and I think they are just super, especially STAR TREK, and the sound effects in CANDY FLOSS really made me sit up! Well done and keep them coming".
J. S., Paisley

". . . I was very impressed, not only with the cassette, but also at the speed at which it came!"
— R.L., Cheshire

". . . I must congratulate you on your MUTANT INVASION cassette. I have had it for two weeks now and it is really superb. Incidentally, I have beaten your high score of 4,500 — mine is 7,580!"
— S.L., Berks

AND NOW LOOK AT OUR LATEST CASSETTES!

YC.12.82

MICHAEL ORWIN'S ZX81 CASSETTES

The best software (by various authors) at low prices.

QUOTES

"Michael Orwin's £5 Cassette Two is very good value. It contains 10 stolid well designed games which work, offer plenty of variety and choice, and are fun."
from the ZX Software review in Your Computer, May '82 issue.

"I had your Invaders/React cassette ... I was delighted with this first cassette."
P. Rubython, London NW10

"I have been intending to write to you for some days to say how much I enjoy the games on 'Cassette One' which you supplied me with earlier this month."
E. H., London SW4

"I previously bought your Cassette One and consider it to be good value for money!"
Richard Ross-Langley
Managing Director
Mine of Information Ltd.

CASSETTE 1

(eleven 1K programs)

machine code:
React, Invaders, Phantom aliens, Maze of death, Planet lander, Bouncing letters, Bug splat.

Basic:
I Ching, Mastermind, Robots, Basic Hangman. PLUS Large screen versions of Invaders and Maze of Death, ready for when you get 16K.
Cassette One costs £3.80

CASSETTE 2

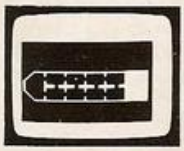

Ten games in Basic for 16K ZX81

Cassette Two contains Reversi, Awari, Laser Bases, Word Mastermind, Rectangles, Crash, Roulette, Pontoon, Penny Shoot and Gun Command.
Cassette Two costs £5.

CASSETTE 3

8 programs for 16K ZX81

STARSHIP TROJAN

Repair your Starship before disaster strikes. Hazards include asphyxiation, radiation, escaped biological specimens and plunging into a Supernova.

STARTREK This version of the well known space adventure game features variable Klingon mobility, and graphic photon torpedo tracking.
PRINCESS OF KRAAL An adventure game.
BATTLE Strategy game for 1 to 4 players.
KALABRIASZ World's silliest card game, full of pointless complicated rules.
CUBE Rubik Cube simulator, with lots of functions including 'Backstep'
SECRET MESSAGES This message coding program is very txlp qexi jf.
MARTIAN CRICKET A simple but addictive game (totally unlike Earth cricket) in machine code. The speed is variable, and its top speed is very fast.
Cassette 3 costs £5.

CASSETTE 4

8 games for 16K ZX81

ZX-SCRAMBLE (machine code)

Bomb and shoot your way through the fortified caves.

GUNFIGHT (machine code)

INVADERS (machine code)

GALAXY INVADERS (machine code)
Fleets of swooping and diving alien craft to fight.

SNAKEBITE (machine code)
Eat the snake before it eats you. Variable speed (very fast at top speed)

LIFE (machine code)
A ZX81 version of the well known game.

3D TIC-TAC-ONE (Basic)
Played on a 4×4×4 board, this is a game for the brain. It is very hard to beat the computer at it.

7 of the 8 games are in machine code, because this is much faster than Basic. (Some of these games were previously available from J. Steadman).

Cassette 4 costs £5.

Recorded on quality cassettes, sent by first class post, from:
Michael Orwin, 26 Brownlow Rd. Willesden, London NW10 9QL *(mail order only please)*

ECR 81 DATA RECORDER SAVES AND LOADS YOUR PROGRAMS EVERY TIME!

The ECR81 Enhanced Certified Recorder from MONOLITH is a major advancement in cassette recorder technology which minimises the problems associated with standard audio recorders. The unit is a high reliability program store for ZX computers based on a modified, proven cassette mechanism. The two sections of data recording circuitry automatically ensure precise levels are written onto the tape and that optimised signals are received by the computer.

THE ECR81 IS NOT SUITABLE FOR AUDIO REPRODUCTION
NO MANUAL VOLUME OR TONE CONTROL ADJUSTMENT PROVIDED

- Each ECR81 comes complete with its own individual certification tape, tested and serial numbered to prove your machine reliability.
- Mains Operation only.
- Mains & DIN connector leads provided.
- Certification of tape head alignment - height and azimuth.
- Certified tape tension, torque and speed.

ZX81/ SPECTRUM/ DRAGON 32

A fantastic range of 16K games,
each complete with fully comprehensive instructions from:

M.C. LOTHLORIEN
ENTER THE DRAGON!

1. TYRANT OF ATHENS

Can you survive long enough to turn Athens into the most feared state in the Mediterranean? Train troops, build warships, fight battles by land and sea against hostile Greek States and the vast Persian Empire. Many more features in this very addictive game.

Price: DRAGON £6.95 ZX81 £4.50 SPECTRUM £5.50

2. ROMAN EMPIRE

Your aim is to conquer the hostile countries surrounding Rome. Build armies, appoint Generals and fight campaigns. This challenging game takes full account of morale, fighting efficiencies, leadership ability, etc. 3 levels of play.

Price: ZX81 £4.50 Spectrum £5.50

3. PELOPONNESIAN WAR

Set in Ancient Greece from 431-404 BC, covering the Great War between Athens and Sparta. Your goal is a final victory over the Spartans but you will need all your skill in a combination of diplomacy and military force before you even stand a chance. 3 levels of play.

Price ZX81 only £4.50

4. SAMURAI WARRIORS

How would you have fared as a Samurai in 13th Century Japan? Face challenges from Samurai and bandits. Are you a survivor? Or will you be forced to commit ritual suicide? 7 levels of play, a most fascinating game.

Price: DRAGON £6.95 ZX81 £4.50 Spectrum £5.50

5. WARLORD

A challenging game of analytical skill set in 13th century Japan. You control a village and must meet attacks form other armies, combat challenges from other warlords and their Samurai, attack and defeat pirates, make raids for gold or slaves and feed your village.

Price: ZX81 £4.50 DRAGON — AVAILABLE DECMEBER

Cheques and PC's please, made payable to: M.C. LOTHLORIEN

To Order send Cheque/P.O. £7.95 made payable to:—
ADDICTIVE GAMES
at: Dept. Y.C. P.O. Box 278
CONNIBURROW,
MILTON KEYNES MK14 7NE
PLEASE STATE COMPUTER

We're tired of telling you how good our game is..... let our customers tell you

I received F.M. about 10 days ago, and have played about 23 hours so far — addictive is the operative word. —
D. BLAIR, FIFE

I think your game is fabulous since starting with Port Vale in the 4th Division, being promoted, winning the F.A. Cup, and being promoted again to the 2nd Division.—
C. DICKENSON, CANTERBURY

I recently bought your F.M. program and was very pleased indeed. I found it very good value for money and played it all day the day it arrived — I own a ZX81 which is now only used for F.M.—
Yours addicted, M. FRAMPTON, CANVEY ISLAND

I felt that I had to write and congratulate you on your program F.M. I found the game very compelling and exciting, really just like the real thing — keep up the good work and standard.—
N. LAWRENCE, FULHAM

ORIGINALS CAN BE SEEN ON REQUEST

PASCAL FOR THE ZX SPECTRUM

Hisoft are pleased to announce the availability of Hisoft Pascal 4 for the 48K ZX SPECTRUM.

No longer do you have to put up with the slow execution speed of BASIC programs; Hisoft Pascal 4 produces programs that run between 40 and 100 (yes 100!) times faster than the equivalent programs written in ZX SPECTRUM BASIC. For example, a program to sort a 100 element array of numbers into ascending order takes 60 seconds in BASIC, while HP4 produces a program which does the same thing in 0.6 seconds!

NOW you and your children can learn to program in an efficient and structured way by using Pascal, the favoured language in schools and universities.

NOW you can write games programs etc. which run as fast as you need them to without having to resort to assembler or machine code.

NOW you can use a language which requires minimal re-learning when you move from your SPECTRUM to another computer; Hisoft Pascal 4 has all the essential features of Standard Pascal as detailed in the Pascal User Manual and Report — by Kathleen Jensen and Niklaus Wirth, the man who designed Pascal.

Hisoft Pascal 4 is a professional piece of software designed by a team who have been writing Pascal compilers for many years — you will find it to be powerful, flexible and very easy to use.

To top it all, we are offering the package (which includes a 60 page manual), for a limited time, to 48K ZX SPECTRUM users at an INCREDIBLE price of:

ONLY £25 INCLUSIVE

Write for more details TODAY to:

SPECTRUM 48K : ZX81 16K SIX PART ADVENTURE

BLACK CRYSTAL

THE QUEST IS ABOUT TO BEGIN

The ultimate role-playing adventure for the SPECTRUM/ZX81. You can become a warrior, elf or wizard on a quest to find and use the rings of creation: to destroy the Black Crystal and defeat the Lords of Chaos. Held within six programs lies a land of fabulous treasures and mythical monsters. Journey through the land of Beroth, explore the castle of shadows, descend into the Shaggoths lair, search for diamonds in the sea of sand but beware of sand sharks! Confront the fire demon in his temple, battle against the Lords of Chaos and win your way to the Black Crystal.

By splitting Black Crystal into six programs we can provide more variety and detail than any other adventure for the Sinclair computers.

Real time monster battles. Superb graphics. Save game feature. All six parts are supplied together on cassette, boxed with instruction booklet.

SPECTRUM 48K: 180K OF PROGRAM IN SIX PARTS – ONLY £7.50
ZX81 16K: OVER 100K OF PROGRAM IN SEVEN PARTS – ONLY £7.50

UNIVERSITY COMPUTERS
5 ST BARNABAS RD, CAMBRIDGE CB1 2BU

COMPUTER RENTALS PRESENTS . . .

GALACTIC PATROL*
Galactic Patrol is the "State of Art" ZX-81 "Star Trek". 729 levels of play, Phasers, Torpedos, Automatic sights, Scanner with on/off, distance, number, vector, Shields, Starbase vector, Warp drives (speeds 0-8), damage control, fuel counter, flight vector, repair facilities, control key reminder facility, stardate and kills counter. Completely Machine Code offering a simulation of the Enterprises screen with passing stars, dazzling speed and dramatic kill and damage effects. You must destroy as many Klingons as possible and dock with the Starbase before you run out of energy, but be careful you can lead the aliens onto the Starbase and they will destroy it.

COLLECTION CASSETTE VOLUME 1*
This Cassette contains Five Original Arcade-style games called ALIEN CAPTURE, ALIEN GOBBLER, LOONY BALLOON, MAZE SURVIVAL and POT HOLE. Tired of Flash and Bang Invaders? You will have to plan ahead in these FIVE action games. So come to grips with these exciting programs and let your mind control your reactions.

NORTH SEA TRAWLER*
Sail out from Aberdeen and plot your course on a map of the treacherous North Sea. Hunt the roaming shoals of Cod, Plaice and Herring and learn where the hazards lie. Mind the Oil-rigs and return to Port with your catch. But which Port? Aberdeen, Inverness and Wick each have different prices for fish and the supplies you need. Can you stay in business in such a harsh industry.

THE KEYS OF GONDRUN
What is the Secret of the Dancing Daises? What is the Skeleton trying to tell you? Can you avoid dying in combat against Orca, Trolls or the dreaded Giant Jubjaroo? Will you pick up the right objects from the cavern floors? How will the Magic of the tunnels affect you? Will you ever be able to find the Keys of Gondrun? Who can tell! The perils are numerous, but your skills may suffice.

Titles marked contain Machine Code.*

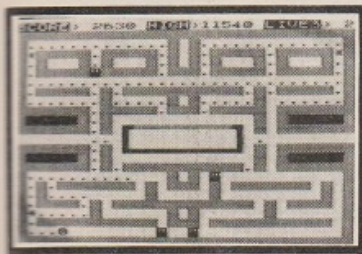

POPSTAR
Can you take the twelve steps to fame and emerge a Millionaire. Barter with your record company, trade off popularity for wealth, give back-handers, go on Tour, cut a record, go on TV or act in a Film. These are some of the options, but can you pick the best one? Remembr, your Bank Manager is relying on you.

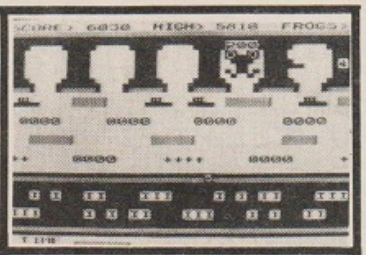

ALIEN REACTOR*
Beamed into their complex, the Aliens Androids are alerted. They multiply through the building to make the reactor inaccessible, which also has two surrounding force fields. You must steal energy from their stores to break through them. The high energy Supercharger is the key, can you reach it? Three levels of play, hall of Fame and hidden rules only play will reveal.

ASK THE ASTROLOGER
The only SERIOUS Astrological Oracle to be produced for the ZX-81. Written by a Professional Astrologer it condenses Astrology's complex mathematics and relations into a program that advises you on the Auspices of a "Shall I . . ." type question. It is not a game, but gives a serious prognosis.

Each cassette £4.95 including VAT & P&P. Send cheque P/O to:

Spectrum & Dragon Software

SPECTRUM ARCADE PACK

CITY BOMBER, POLECAT, BREAKOUT, SUBHUNT, CRAZYRACE, FRUIT MACHINE, MISSILE COMMANDER, AND LUNAR LANDING.

We now present our ZX Spectrum album. This brand new album contains no less than 8 superb games for the ZX Spectrum and is the best available for both quality and quantity. These are the games which appear on the album . . .

BOMBER . . . a fast action game making clever use of Spectrum graphics. The game involves the destruction of cities as your plane flies lower and lower towards the buildings until it finally crashes if the buildings have not been destroyed quickly enough. This is a very addictive game for the Spectrum.

FRUIT MACHINE . . . this is similar to the familiar one-armed bandit with very realistic graphics. A very enjoyable game for everyone.

POLECAT . . . this is a very entertaining game with interesting and colourful graphics. It is a completely original and ingenious maze program in which you are a rabbit and the computer is a polecat. The plot involves the rabbit collecting carrots and bringing them back to his burrow whilst avoiding the attentions of a ravenous polecat.

BREAKOUT . . . this is a colourful bat and ball game with great sound effects and constitutes a very addictive game for the Spectrum.

CRAZY RACE . . . this is an amusing game involving a car being driven around a racing track by you knocking down as many objects as possible whilst avoiding other cars. It is fast and uses detailed graphics.

SUBHUNT . . . as a pilot of a helicopter you have to fire down at submarines whilst avoiding their missiles. The user-defined graphics are superb.

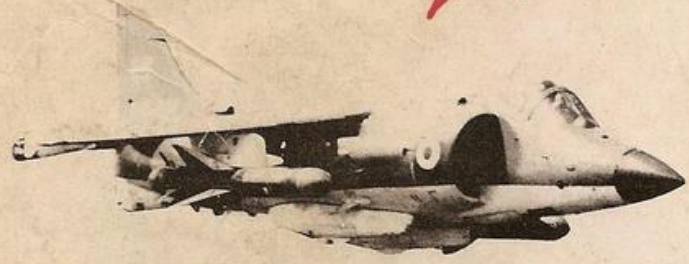

MISSILE COMMANDER . . . this game involves defending your city against alien attack. It has 10 skill levels and is noisy and colourful.

LUNAR LANDING . . . by making full use of your limited fuel and time you have to land your spacecraft on the surface of the moon without crashing and killing all the crew. This program makes full use of hi-res graphics and programmable characters.
