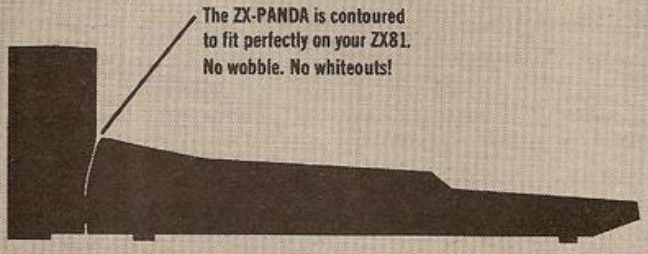
THE RAM PACK FOR ZX81 USERS.

The uniquely expandable ZX-Panda. Starts at 16K and expands to 32K in seconds!

The ZX-PANDA is aptly named.
Not only is it an excellent 16K RAM PACK for the ZX81, but it is uniquely expandable at any time to 32K by the addition of an expansion module!



So you can start with 16K . . . and grow bigger later!
ZX-PANDA gives you everything you need from a professionally produced RAM PACK:—

Full 16384 bytes of extra Random Access Memory.
Expandable further to 32K by simple 'plug-in' module.
Custom made case contoured to fit snugly on your ZX81.
Power-on LED.
No additional power supply needed.
Compatible with most expansion systems.
Designed and built in Britain.
Fully tested and guaranteed for 1 year.

ZX-PANDA is the RAM Pack to choose for your ZX81 expansion, because, when you want to grow bigger than 16K . . . it couldn't be simpler!

The ZX-PANDA 16K Expandable RAM Pack is available through the following retailers:

Available in the U.K. at:
Greens at Debenhams (all branches).
Wigfalls (all branches).
Artic Computing (Hull).
Data-Assette (London).
Afdec Electronics (Basingstoke).
Fox Electronics (Basingstoke).
Microware (Leicester).
RAM Electronics (Fleet).
Buffer Micro Shop (Streatham).
and other local dealers.

* Don't pay ATARI prices for ATARI quality!

Super Quality Software from * LLAMASOFT *

(DESIGNER — JEFF MINTER)

J = JOYSTICK CONTROL

VIC 20

ABDUCTOR NEW J

A classic new space game! ZAP the swirling alien hordes before they ram you — and abduct your humanoids! Survive the assault for long enough and you'll get an extra stage on your spaceship with double firepower! Awesome unexpanded Vic Action. **£6.00 + 50p P&P.**

GRIDRUNNER NEW J

Finally, true arcade quality on the unexpanded VIC! Shoot down the segmented DROIDS invading the grid. Beware of the pods and zappers! The awsome speed, sound and graphics gives you the best blast available for unexpanded Vic. **£6.00 + 50p P&P.**

ANDES ATTACK (8K) NEW J

Your spacecraft must attack the descending aliens and frustrate their evil intent. Fly your Ramjet fighter over the Andes mountain range and protect your llamas from kidnap by hostile UFOS. Features 5 kinds of UFO, controls include up, down, reverse, fire, thrust and smart bomb. Entirely in machine code. Requires 8K expansion and joystick. **£8.00 + 50p P&P.**

TRAXX M/C (8K + EXPANSION) J

This is VIC 20 cross breed between the now famed 'Packman' and the game 'Quix'. All in machine code, fast and fun with joystick controls, uses Hi-Res colour graphics. 8K or larger expansion needed. **Only £6.00 + 50p P&P complete with instructions.**

THE VERY FIRST COMMODORE 64 GAMES

ATTACK OF THE MUTANT CAMELS J

Planet earth needs you! Hostile aliens have used genetic engineering to mutate camels from normally harmless beasts into 90 foot high, neutronium shielded, laser-spitting death camels!! Can you fly your tiny, manoeuvrable fighter over the mountainous landscape to weaken and destroy the camels before they invade the human stronghold! You must withstand withering laser fire and alien UFOs. Game action stretches over 10 screen lengths and features superb scrolling, scanner, 1/2 player actions and unbelievable animation! Play this game and you'll never be able to visit a zoo again without getting an itchy trigger finger! Awesome m/c action! **£8.50 + 50p P&P.**

ROX-64

Rox is a challenging game involving the defence of your lunar base from a deadly meteor shower. Rox-64 includes amazing sprite graphics displays and spacy sound effects, and an awesome 'mothership' display if you win the game. Top 10 scores are tabled along with their names. This program shows just what can be achieved using only Commodore-64 basic. Study the listing and learn how to use sprites and sound on this outstanding machine. **£4.95 + 50p P&P.**

GRIDRUNNER 64 J

The No. 1 best game for the Vic has been improved for your COMMODORE 64! Gridrunner is a smash hit in the USA. Now experience the lightning-fast challenge of the grid on the 64. Features 31 skill levels and excellent sound and graphics. Sore trigger finger *free* with every game! **£8.50 + 50p P&P.**

SPECTRUM

GRAPHICS CREATOR (16K)

Not just another character editor! Allows you to define not only the 21 user definable characters. Also allows you to change the entire 96 character ASCII set. Creates BYTES files ready for you to load into your own programs. Includes advanced Reflect, Invert, Field commands etc. Complete with full documentation. Bin the BIN statement and use Graphics Creator with its easy on-screen cursor editing. **£2.95 + 50p P&P.**

BOMBER (16K)

Yes, a full feature version of the popular game 'Blitz', supplied for the 16K or 48K Spectrum. **For only £2.95 + 50p P&P.**

HEADBANGER (48K)

Colourful new game starring Chico the headbanger who you must guide to riches through an increasing shower of heavy metal. Gain bonuses for headbanging but be sure to take an aspirin when the pain gets too much! Basic + m/c to speed up action. Great graphics, nice animation. Will even drive William Stuart system's voice synthesiser to produce speech output. Can you attain the grade of 'Rocker Class One' or will you be "Barry Manilow Class 5"? Start headbanging to-day and find out. **£4.95 NEW.**

SUPERDEFLEX (48K)

Bounce 'Sid', the space invader, around the screen into the power pods, keeping away of course from the devil who chases you around the screen. Steer with your Deflex shields, but beware the mines or you may be buried alive! Superb graphics and fantastic sound on the 48K Spectrum only. **Only £4.95 on cassette + 50p P&P.**

ATARI 400-800

TURBOFLEX

Superb ultra-fast and totally new ball game. Uses ATARI's unique features to the full. Incorporates superb colour/sound effects and uses Player/Missile graphics. Tables top 10 scores along with Scorer's name. **£6.00 + 50p P&P.**

GRAPHICS/CHARACTER CREATOR

Now you can define your own custom character sets, or edit existing sets. Results are fully displayed on screen in modes 0, 1, 2. Special features include reflect, invert, save character sets etc. Supplied on cassette with data sheet **only £8.00 + 50p P&P.**

ZX81

CENTIPEDE (16K)

the ORIGINAL game from the ORIGINAL author. This is the identical program to that being sold by other companies for three times our price. The game has received ecstatic reviews in the computing press. Program has 30 speed levels and ever increasing Centipede hordes. Tables top 10 scores and names. Why wait to pay more? **Only £1.95 + 50p P&P.**

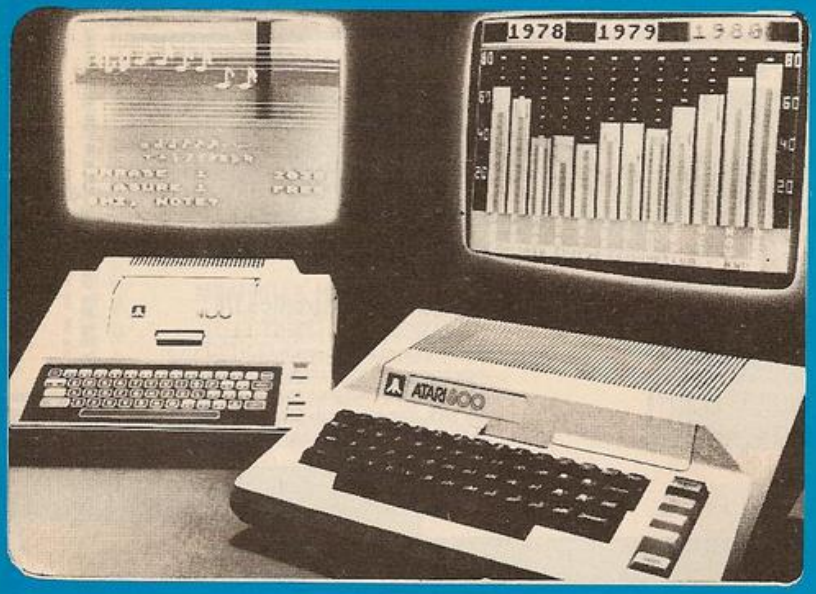
ATARI



ATARI PRICES REDUCED

We at Silica Shop are pleased to announce some fantastic reductions in the prices of the Atari 400/800 personal computers. We believe that the Atari at its new price will become the U.K.'s most popular personal computer and have therefore set up the Silica Atari Users Club. This club already has a library of over 500 programs and with your purchase of a 400 or 800 computer we will give you the first 100 free of charge. There are also over 350 professionally written games and utility programs, some are listed below. Complete the reply coupon and we'll send you full details. Alternatively give us a ring on 01-301 1111 or 01-309 1111.

ATARI 400 with 16K	**£199**
ATARI 400 with 32K	**£248**
ATARI 800 with 16K	**£449**

400/800 SOFTWARE & PERIPHERALS

Don't buy a T.V. game! Buy an Atari 400 personal computer and a game cartridge and that's all you'll need. Later on you can buy the Basic Programming cartridge (£35) and try your hand at programming using the easy to learn BASIC language. Or if you are interested in business applications, you can buy the Atari 800 + Disk Drive + Printer together with a selection of business packages.

Silica Shop have put together a full catalogue and price list giving details of all the peripherals as well as the extensive range of software that is now available for the Atari 400/800. The Atari is now one of the best supported personal computers. Send NOW for Silica Shop's catalogue and price list as well as details on our users club.

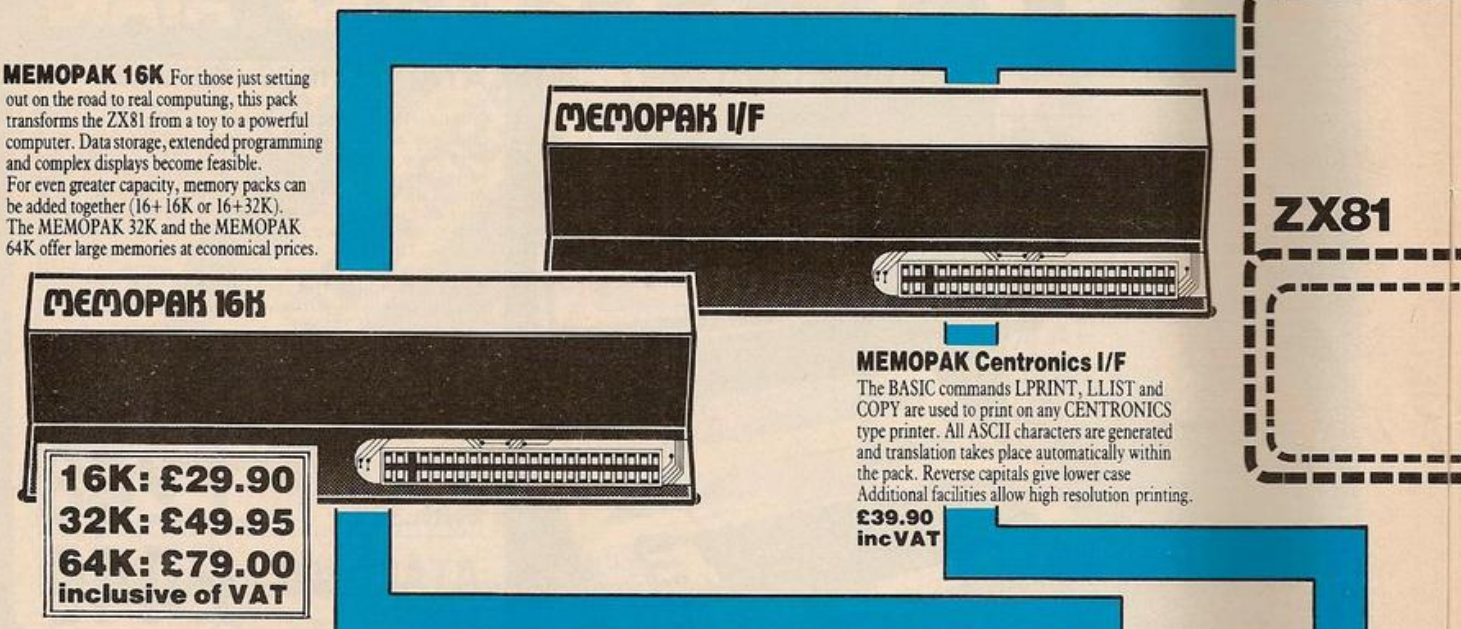
YC0283 — Your Computer — February 1983

At Mem
we realise the poten

MEMOPAK 16K For those just setting out on the road to real computing, this pack transforms the ZX81 from a toy to a powerful computer. Data storage, extended programming and complex displays become feasible. For even greater capacity, memory packs can be added together (16+16K or 16+32K). The MEMOPAK 32K and the MEMOPAK 64K offer large memories at economical prices.



MEMOPAK Centronics I/F
The BASIC commands LPRINT, LLIST and COPY are used to print on any CENTRONICS type printer. All ASCII characters are generated and translation takes place automatically within the pack. Reverse capitals give lower case Additional facilities allow high resolution printing.
£39.90 inc VAT

It all adds up to an efficient, modular computer system

The **Memotech** approach to microcomputing is to take the well-proven and popular ZX81 as the heart of a modular system. This small computer houses the powerful Z80A processing unit and acts as the central processor module through which the **Memopaks** operate.

Memotech has a reputation for professional quality, producing units which are designed to fit perfectly, to look well-balanced, and to work efficiently and reliably.

The modular approach gives ZX81 owners the freedom to design the system they really need. Furthermore, the intercompatibility of the modules ensures that later additions will click straight in, to give you a system that grows with your ambitions and abilities.

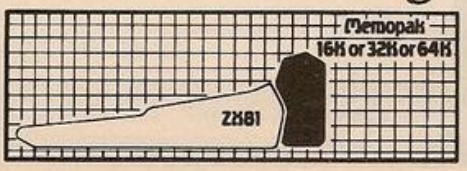
To ensure that your expectations are realised, care is taken at every stage to design features into the system to anticipate your needs. For example:
1) Memories are cumulative e.g. 16K and 32K can be added to the **Memopak 16K** or even to the Sinclair 16K RAM pack. 2) The **HRG** firmware allows commonly used constructions (such as scrolling, shading and labelling graphs), to be called by a few simple commands. 3) The **Centronics I/F** converts ZX81 character codes into ASCII and extends the print line to the width of the printer, still using the LLIST, LPRINT and COPY commands.

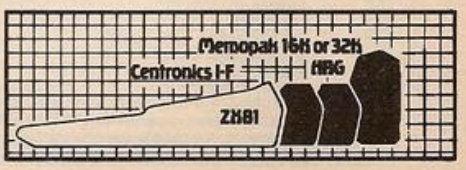
As one example, a system with 16K of memory and **Memocalc** is all that is required to perform the same sophisticated numerical projections as a computer at 10 times the price. The problem may be as complicated as a cash flow or production schedule, or as simple as household accounts or pocket money budgeting. If your bank manager wants to see a cash flow, then a single print instruction to the **Centronics I/F** will give a printout which is more than acceptable.

The example system which is shown, on the other hand, would satisfy the needs of someone who wanted to enter data

How it all fits together

You can see from the diagrams how various Memotech/Sinclair units can be combined.

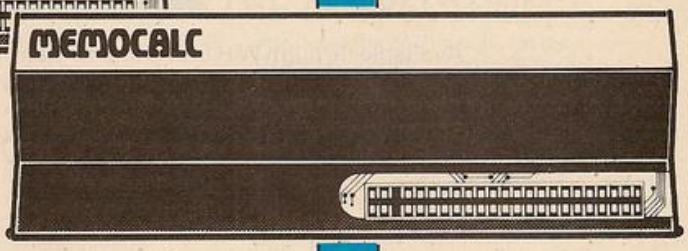




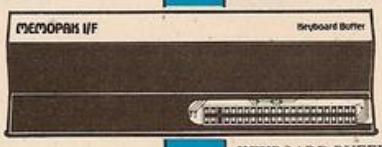
otech,
tial of your ZX81...

MEMOPAK HRG This pack breaks down the constraints imposed by operating at the ZX81 character level and allows high definition displays to be generated. All 248 × 192 individual pixels can be controlled using simple commands, and the built in software enables the user to work interactively at the dot, line, character, block and page levels. Scrolling, flashing and animation are all here.
£39.90 inc VAT

MEMOCALC The screen display behaves as a 'window' on a large sheet of paper on which a table of numbers is laid out. The maximum size of the table is determined by the memory capacity, and with a MEMOPAK 64K a table of up to 7000 numbers with up to 250 rows or 99 columns can be specified. Each location in the table can be either a number which is keyed in or a formula which generates a number.
£29.90 inc VAT



MEMOTECH KEYBOARD
The Memotech plug-in Keyboard plus buffer pack takes the effort out of data entry for ZX81 users. The Keyboard has a light professional touch and is housed in an elegant aluminium case. The simple plug-in system means that you are not obliged to open up your ZX81, use a soldering iron or invalidate your ZX81 warranty.
£49.95 inc VAT



KEYBOARD BUFFER PAK
The Buffer Pak performs a "housekeeping" function for the Keyboard, interfacing directly with the port at the back of your ZX81.

via a light-touch keyboard, construct and label graphs, and then copy the screen to an 80-column printer. Only 16K of memory is shown here but with additional memory, more than one video page can be stored. Up to 7 pages can be displayed in rapid succession to give animated displays.

Looking forward, **Memotech** will continue to back the ZX81 through 1983 with fast storage devices, pressure sensitive electronic drawing boards and more software packs including a **Wordprocessor,** an **RS232 Interface** and a **Z80 Assembler.**

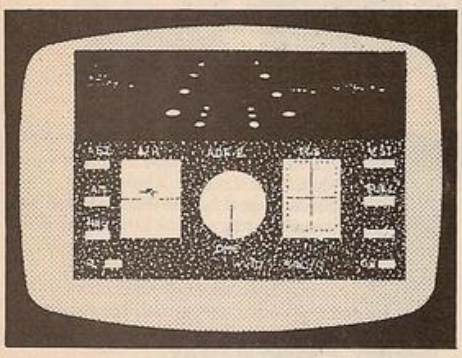
We proudly announce our 1983 range of

SPECTRUM CASSETTES



NIGHTFLITE 16 and 48K FLIGHT SIMULATOR

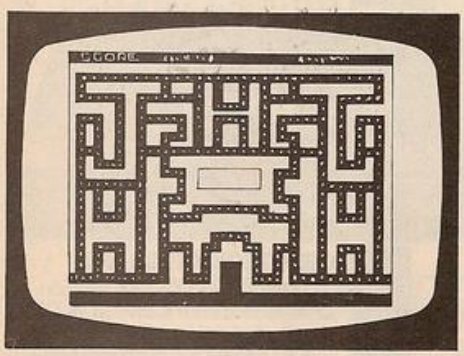
NIGHTFLITE puts you at the controls of a light aircraft flying at night. You can:
Climb, descend, take off,
Land, bank left or right,
Navigate between beacons,
Raise/lower the flaps,
Raise/lower the undercarriage,
Adjust engine rpm,
Raise/lower the nose varying amounts.
Runway lights appear on approach.
5 modes including Autopilot.
Written by a qualified light aircraft pilot.

A/H – artificial horizon
ALT – altitude in ft
HDG – heading in compass degrees
FL – flaps up/down
GR – gear up/down
VSI – vertical speed indicator
WIND – wind direction/velocity
DME – distance measure equipment
ADF – automatic direction finder
ILS – instrument landing system
VOR – VHF omni directional range

£5.95 our runaway best seller

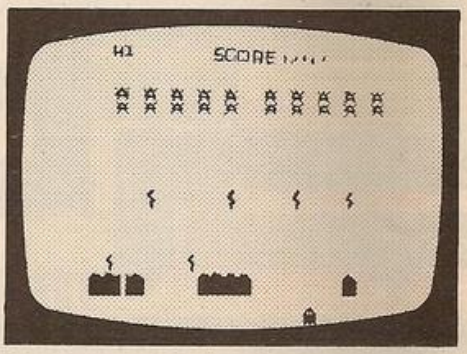
Available through W H SMITHS and many independent micro-computer shops

COMING SOON:– **AIR TRAFFIC CONTROL** – Puts you in command at Heathrow Airport **£5.95**



£5.95
All action game

£5.95
Are you fast enough?



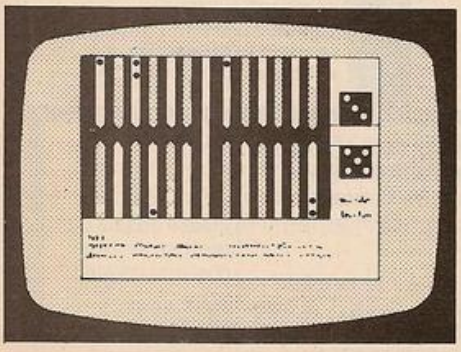
MAZE CHASE
16 and 48K

4 or 8 Mazes, Highest score to date,
4 independent guardians, 3 lives,
Full colour, Fast machine code action.

SPECVADERS 16K

Defeat each squadron of Beeple Zaps and another appears only closer.
Cyrian mothership with ejecting Zeetle Baps.

5 levels of play from Orions snails pace to close your eyes and hope.
Real time scoring. 3 lives. Pan galactic gargle blaster for highest score.
Descending asteriods.



£5.95
A real challenge

£5.95
Another first

BACKGAMMON 16K

8 Levels of play from novice to expert.
Full colour display of tables and dice.
Gamble on a single game or a series, double or quits. All the features of the ancient game.

COUNTRIES OF THE WORLD

16 and 48K on one cassette
Countries of the world is an educational package designed to give an appreciation of the location of all the main countries and some information about them.
16K version displays a world map, shows the position of each country and names its capital.
48K version; all the above plus prints the population, size, currency, and main languages of each country, and statistics on largest and smallest countries etc.

Hewson Consultants
SPECTRUM BOOKS

Available through Computer Bookshops and W H SMITH.

40 BEST MACHINE CODE ROUTINES FOR THE ZX SPECTRUM £5.95

By Andrew Hewson and John Hardman

Section A: Three chapters explaining what you need to know about Z80 machine code on the Spectrum.

- How to load and save machine code.
- How to use the system variables.
- How memory is organised.
- How program lines are stored.
- How to use the stack, the display, the attribute files.
- How to call ROM routines – where they are and what they do.
- The structure of Z80 code – plus a valuable glossary.

Section B: 40 routines including,

- Scroll – up, down, side to side by pixel or by character.
- Search and replace, token swap, string search.
- Rotate character, invert character – horizontally and vertically.
- Line renumber – including GOSUBs, GOTOs, RUN etc.

This book teaches the beginner all he needs to know in a simple, easy-to-learn form and its an invaluable reference work for the expert too!

20 BEST PROGRAMS FOR THE ZX SPECTRUM £5.95

By Andrew Hewson

Program titles include:
Machine Code Editor – Write, modify, extend and load machine code using this all-basic program. No need to use an Assembler when you have this program.
Index File – Learn about fixed length records, save numeric and string information, add to, sort, modify, delete and print your records. Ideal as a computer based filing system.
Duckshoot – Learn how to manipulate the attributes file *and* have fun at the same time.
Graphix – Construct up to 210 graphics characters with the full on-screen editing facilities, enhance and modify them and recall them later to build a detailed display to save on cassette.
Spiromania – A program to stretch your artistic talants, imagination and ingenuity. Draws a limitless variety of curves and spirals.
Plus: FOOTBALL, DIGITISER, DIARY and many more.

If your order contains over £120 worth of computer hardware apply now for interest free credit by telephoning: Mail-order: (0702) 552911. London Shop: 01-748 0926. Birmingham Shop: 021-356 7292. Southend Shop: 0702 554000 or write to P.O. Box 3, Rayleigh, Essex SS6 8LR.

You pay 10% down, then 10% per month for a further nine months (to nearest penny). Example: Atari 400 48K. Cash price £299. Credit terms: £29.90 down, then £29.90 per month for nine months. Total £299. Credit quotations on request. This offer subject to approval which can take up to 48 hours (APR = 0%).

THE NEW COMMODORE 64

The incredible new computer from Commodore comes with 64K RAM fitted! Plus 16 colours hi-res graphics, 320 x 200 pixels, 40 columns by 25 lines, Z80 micro processor can be added — that means you can run CP/M software, 8 independently movable Sprites with collision detection, and a sound generator with 3 voices, 4 waveforms, envelope and filter to rival some dedicated music synthesisers. And all this at the most incredible price ever.

(AF56L) Only £339.00

DRAGON 32

The amazing new British computer with a full-travel standard keyboard, a 16-bit microprocessor, 32K RAM fitted (expandable to 64K and later to 256K!!), 9 colours, hi-res graphics and Microsoft extended colour BASIC (the very best BASIC to learn with). It can be used with virtually any ordinary cassette recorder, it has a printer interface (Centronics-type), joysticks are available and it's incredible value for money.

(AF57M) Only £199.50.

Lots of new Dragon software available.

"THE SHOP WHERE PEOPLE MATTER"

ANIROG SOFTWARE

KRAZY KONG **16K VIC 20**
All the thrills of the arcade game have been brought to life on this expanded screen, extra large characters and multi-screen presentation. Rolling barrels, hammer etc. are featured in the action inside King Dong's lair as you try to rescue the boy he has abducted. K.B./J.S. £6.

ZOK'S KINGDOM **16K VIC 20**
An afternoon stroll turns into a nightmare. A footslip and you fall down the biztual hole leading to the middle earth kingdom of ZOK. A harsh and cunning ruler by any standards. You are challenged to a battle of wits and endurance as the battle for survival starts in earnest.
K.B. £6

DRACULA **3K VIC 20**
Count Dracula is asleep somewhere in his castle. He rises at mid-night and you must find him and drive a stake through his heart before he rises. A multi-screen graphic adventure.
K.B. £6.

HOPPER **16/ 48K SPECTRUM**
SPECTRUM version of FROGGER with same features and brilliant graphics. K.B. £6.

PHARAOH'S TOMB **16K VIC 20**
A graphical adventure game set in a pyramid. Once you enter, the only way out is with the aid of a key which unlocks the mystery of the Pharao's tomb. Beware of the mantraps the ancient Egyptians so painstakingly built. One false move and you will meet the same fate as befell other tomb robbers over thousands of years.

FROGGER **UNEXP. VIC 20**
Popular arcade game. All machine code with brilliant colour graphics and sound effect. Features include snakes, crocodiles, lady frogs, turtles, cars, lorries and logs
K.B./J.S. £6

CAVERN FIGHTER **UNEXP. VIC 20**
All M/C version of SCRAMBLE. Lasers, bombs, continuous scoring and sound effects give all the thrills of arcade game. Pilot your space ship through the tortuous tunnels and caverns destroying enemy missile launchers, fuel dumps and airborne fire saucers. Four ships to complete mission. 10 skill levels. K.B./J.S. £6

CRAWLER **UNEXP. VIC 20**
Armed with a laser gun, you must destroy the centipede. Destroy his mushroom cover and his allies mushroom laying flea and the homing spider. Fast and furious game.
J.S. £6.

SEVEN PROGRAMS (VOL 1) **UNEXP. VIC 20**
This exciting collection of seven games, all in Hi-Res graphics include popular board game Othello plus Bomber, Slalom, Bounce Out, Snake, Memory and Lunar Docker.

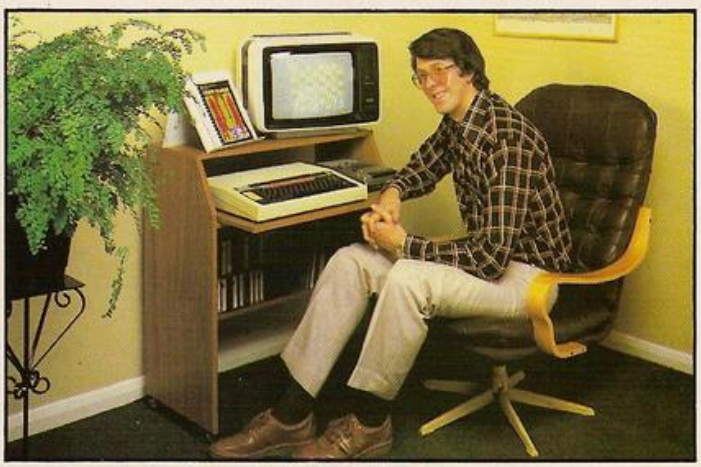
THE IDEAL HOME FOR YOUR HOME COMPUTER

The System Care Desk - made specially for home computer systems. Designed as a neat, smart piece of furniture for your home.

£49·95



Exhibited at the P.C.W. Show and the Northern Computer Fair

And now including design features based on our discussions with home computer users. Send for yours TODAY.

- Supplied as a flat-pack. Easily assembled. Full instructions provided.
- Smart teak effect finish.
- All cables can be neatly and safely 'hidden.'
- Ergonomically designed. Sliding shelf positions the keyboard at the right distance from the screen to suit you. Slides away after use. Saves space.
- Easi-glide castors allow you to move your computer installation where you want it.
- Houses computer, disk drive / cassette recorder and monitor, with ample space for tapes, books etc.

Overall height - 0.83m.
Computer shelf height - 0.70m.
Width - 0.70m.
Depth (with shelf closed) - 0.38m.

Three out of every four computers going into schools are BBC Micros. Is there a lesson to be learned by every user?

As part of the current government subsidised scheme aimed at introducing micros to schools, the Department of Industry undertook a survey of machines available and made recommendations to education authorities all over the country.

The BBC Micro met their priorities exactly: it is economical yet fast and powerful, and it can justify the investment involved, through its capability to grow with the needs of the user and with the rapid changes in technology.

Teachers and education authorities agreed, and today it represents over three-quarters of all micros being ordered for schools across the country under the DOI scheme.

The BBC's choice too.

In choosing a machine to put their name to for their massive Computer Literacy Project, the BBC had the same set of priorities as the DOI. The BBC Micro is now an integral part of that project, which includes books, software, courses and a number of major television series, one of which, "Making the Most of the Micro" is now being broadcast.

All this for only £399.

The BBC Micro is light and compact. It generates high resolution colour graphics, and is capable of synthesising music and speech using its own internal speaker. The keyboard uses a conventional layout and typewriter feel.

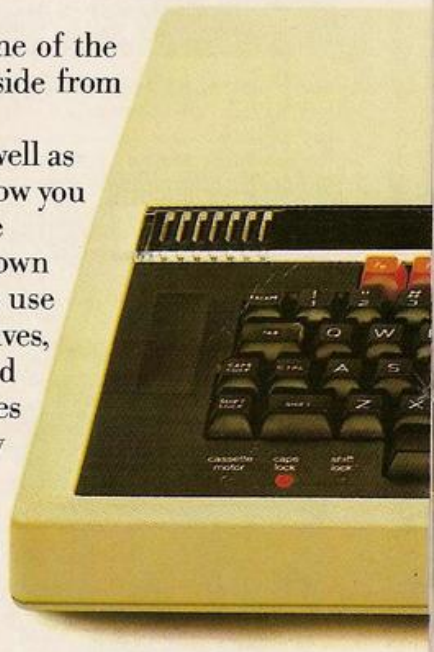
The most sophisticated version (called Model B) is available for only £399. (There is also a basic model available, the Model A, at £299.)

Designed to grow.

Last year the magazine "Which Micro?" said that the most attractive and exciting feature of the BBC Microcomputer was its 'enormous potential for expansion'.

This is indeed one of the features that sets it aside from the competition.

For example, as well as interface sockets to allow you to connect to a cassette recorder, and to your own television, you can also use video monitors, disc drives, printers (dot matrix and daisy wheel) and paddles for games or laboratory use.



You can also plug in ROM cartridges containing games with specialist application programs.

The Tube. A unique feature.

The Tube, which is unique to the BBC Micro, provides for the addition of a second processor via a high speed data channel. The possibilities are enormous. For example, the addition of a second

3MHz 6502 processor with 64K of RAM doubles processing speed. While a Z80 with 64K of RAM opens the door to a fully CP/M* compatible operating system, with all the benefits for business applications.

Linking up with other computers.

The BBC Micro also offers a facility of immense potential value to schools, colleges and businesses. It's called Econet® – a system which uses telephone cable to link with other BBC Micros. A number of machines can then share the use of expensive disc drive and printer facilities.

Make full use of Prestel & Teletext.

With special adaptors you will not only be able to turn your TV set into a Prestel terminal and Teletext receiver, but you can also take data and programs direct from these services. (The programs, which are known as telesoftware, are already being broadcast by BBC's Ceefax service.) This is another first for the BBC Micro.

BASIC plus.

A sophisticated version of BASIC has been chosen for the BBC Micro, which incorporates features normally found only in more advanced high level languages. However, there is also a facility allowing access through a simple command to another language – for example, PASCAL, FORTH and LISP.

*Trademark of Digital Research.

A full range of software.

Applications software for the BBC Micro already cover a very wide field. Packages covering games, education and business applications are available on cassette. All developed to the same high standards set by the hardware.

The best possible back-up.

Your BBC Micro comes with the backing of the BBC and an extensive dealer and service network.

Each approved dealer is able to offer advice and carry out expansion work and repairs.

BBC Microcomputer – Model A and Model B.
2MHz 6502A Processor.
32K ROM; 16K RAM Model A, 32K RAM Model B.
Full QWERTY keyboard with 10 user-definable function keys.
Mixed high resolution graphics and upper and lower case text.
300 baud and 1200 baud interface for standard cassette recorders.
Three-voice music synthesis with full envelope control feeding internal loudspeaker.
Interface sockets (Model B only) – RS423, for analog inputs centronics and user port.
6502, Z80, 16032 second processors.
Single and Dual Disc Drives with 100 and 800 K-bytes storage.
Teletext unit.
Speech synthesis.
Networking facility – via Acorn Econet®

How to buy your BBC Micro.

If you are a credit card holder and would like to buy a BBC Micro B, or if you would like the address of your nearest stockist, just phone 01-200 0200.

Alternatively, you can buy a Model B directly by sending off the order form below to: BBC Microcomputers, c/o Vector Marketing, Denington Estate, Wellingborough, Northants, NN8 2RL.

All orders are despatched by fully insured courier and come complete with easy to follow 500 page User Guide and Welcome cassette.

☎ 01-200 0200 credit card holders.

To BBC Microcomputers, c/o Vector Marketing, Denington Estate, Wellingborough, Northants NN8 2RL.

Please send me_____BBC Model B Microcomputers at £399 each, inc. VAT and delivery. I enclose PO/cheque payable to Acorn Computers Limited Readers A/C or charge my credit card.

The BBC Microcomputer System.

Designed, produced and distributed by Acorn Computers Limited.

Let Commodore expand your horizons.

VIC 20 is the finest home computer that money can buy.

And the better you get to know it, the more confident, adventurous and ambitious you'll become.

You'll want to take advantage of the vast range of VIC software: a superb and constantly-growing selection of programs, embracing business systems, entertainment, education and many applications in the home.

Every program in the series has been designed by experts, and chosen for its quality and value for money.

VIC business software covers a wide range of applications, including spread-sheet analysis, stock control, information handling and word-processing.

A mind-blowing range of games including Scott Adams' world-famous 'Adventure' series.

Advanced space games, including the sophisticated 'Omega Race'.

Learn subjects as diverse as English Language, programming, and biology.

And 'home' software ranges from IQ tests to Robert Carrier menus.

In addition, there is a range of VIC software, like programmers' aids and graphics packages–

to add to your understanding and enjoyment of computers and computing.

There's even a special 'VicSoft' Club for VIC 20 enthusiasts, with many advantages including special offers to club members.

VIC software will expand your horizons. And your mind.

PRICES RANGE FROM £4.99 to £24.95 INC. VAT.

For the best hardware, the best software.

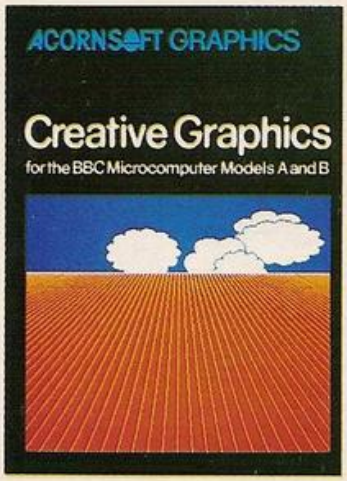
The BBC Microcomputer system is generally regarded to be the best micro in its price range you can lay your hands on. So, if you're thinking of buying one or already own one, you'll want to know about the software that's been specially designed for it.

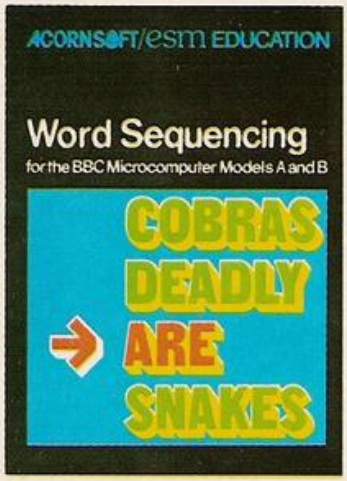
Not surprisingly, it's made by Acornsoft, the software division of Acorn Computers Ltd., who designed and built the BBC Microcomputer. So naturally you can expect the highest quality software with the built-in ingenuity to fully exploit the BBC Micro's potential.

Further education for everyone.

Creative Graphics, which includes the book 'Creative Graphics on the BBC Microcomputer' (price £17.45), provides 36 programs on cassette producing a spectacular range of pictures and patterns in full colour, including animated pictures, recursively-defined curves and three dimensional shapes.

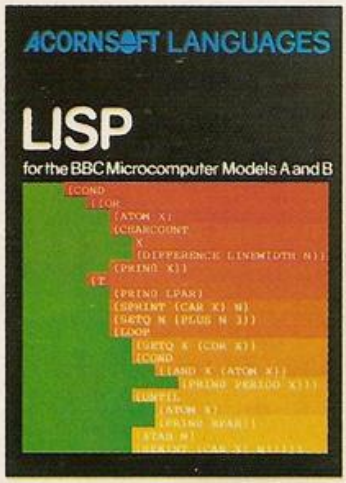
Word Sequencing (price £11.90) contains three word sequencing programs on cassette. Each program presents a series of jumbled words which must be arranged on screen to form either a proverb, nursery rhyme title or a sensible sentence.

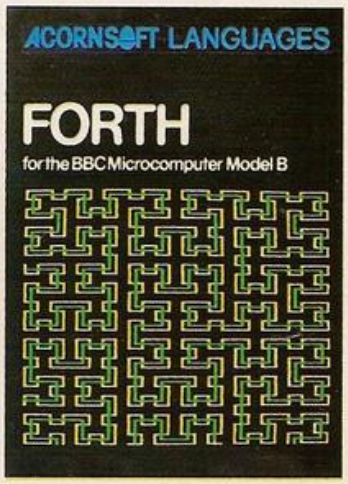




Learn more languages.

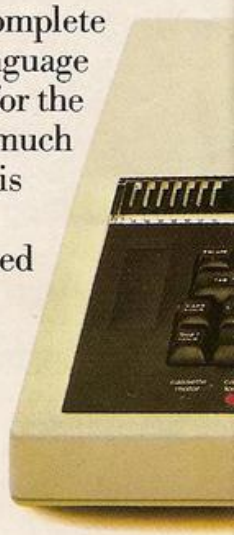
LISP (price £24.35) is the fundamental language of artificial intelligence research.





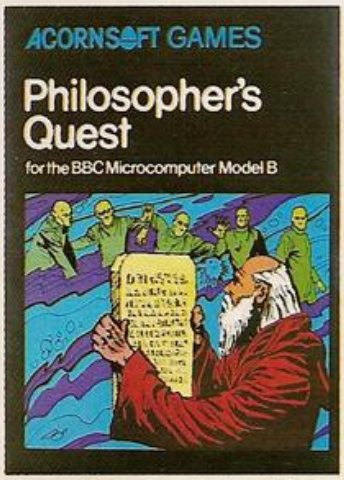
It consists of 5.5K of machine code interpreter, plus 3K of initialised LISP work-space containing utilities and constants. It comes complete with a book that introduces you to programming in LISP, as well as some fascinating applications.

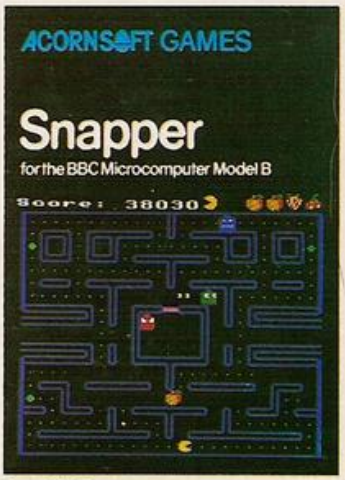
FORTH (price £24.35) is a complete implementation of the FORTH language to the 1979 standard specification for the BBC Microcomputer Model B. This much acclaimed programming language is also accompanied by a specially written book explaining all you need to know.

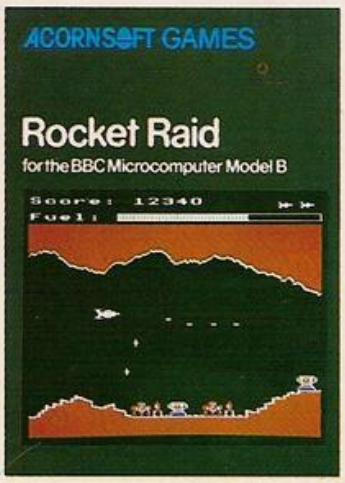


Mind-boggling games.

Philosopher's Quest (price £9.95) is an advanced adventure in which you tell the computer what you want to do and it







describes back in plain English your progress through a fascinating world of fiendish puzzles to be solved.

Snapper (price £9.95) is a colourful game where you guide your 'snapper' through the maze, eating dots and fruit and avoiding the creatures that chase you. Complete with full sound effects, score and a ladder of high scores.

Rocket Raid (price £9.95) sends you on a mission to raid a heavily guarded Martian fuel depot. You must fly your rocket over mountains and through caverns, avoiding enemy missiles and dodging convoys of deadly fizzers.

Increase your business acumen.

Desk Diary (price £9.95) is an indispensable program that can hold a file of several hundred names, addresses and telephone numbers.

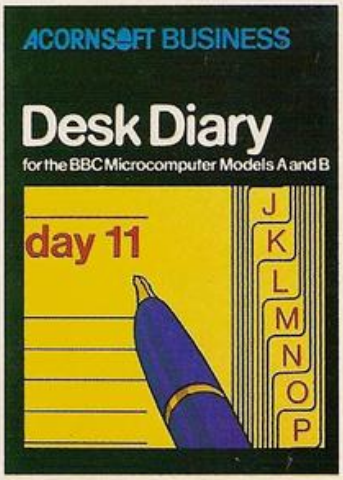
And View, a program that enables your machine, together with a printer, to operate as a fully operational word processor. (The program is in ROM, but can easily be fitted to most BBC Micros by your local dealer.) You can find out more by sending for our free catalogue.

How to get Acornsoft programs.

If you're a credit card holder and would like to buy cassettes of the programs shown in this advertisement, or if you would like to know the address of your nearest stockist, just phone 01-200 0200.

Alternatively, you can buy the cassettes directly by sending off the order form below to: Acornsoft, c/o Vector Marketing, Denington Estate, Wellingborough, Northants NN8 2RL. Also use this form if you would like to receive the current free Acornsoft catalogue.

Please allow 28 days for delivery.



☎ Credit Card Holders. Ring 01-200 0200.

To: Acornsoft, c/o Vector Marketing, Denington Estate, Wellingborough, Northants NN8 2RL.
Please send me the following:–

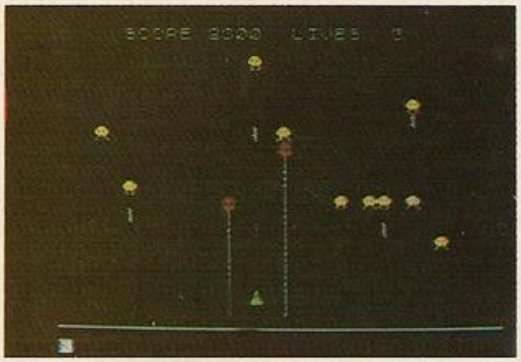
ACORNSOFT

THIS IS THE AGE OF

C☆TECH

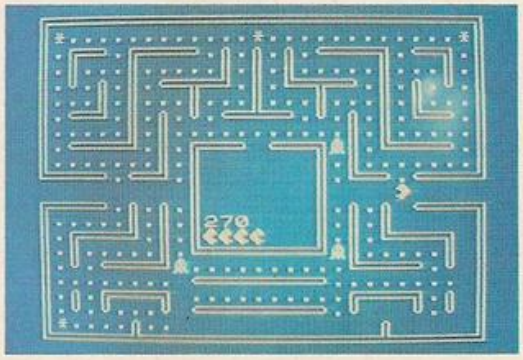
HOME COMPUTING



ZX Spectrum SOFTWARE

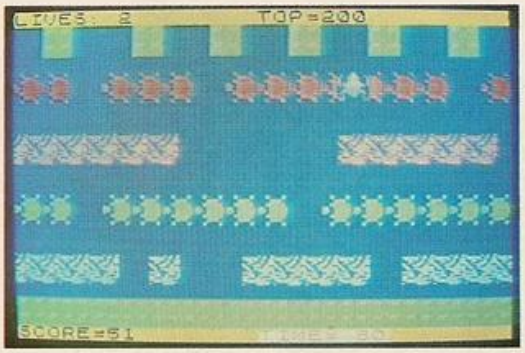
GORFIAN

GORFIAN INVADERS, A Superb 4 screen machine code program with Invaders, Galaxians, Firebird and Flagship. Multicoloured Hi-Resolution graphics and Sound Effects.
For the 48K Spectrum, price £5.00



KRAZY KONG

KRAZY KONG, Another 100% machine code program, featuring 3 Screens of Hi-Res Gorilla, Barrels, Fireballs, Lifts and a Running and Jumping man who must rescue his girlfriend from the enraged KONG! For the Spectrum, price £5.00



SPECMAN & FROGGER

FROGGER AND SPECMAN, two excellent games for the price of one! SPECMAN is probably the best version of it's type with great machine code graphics and sound effects with 3 to 5 ghosts, power pills and a real munchie man who munches away in all directions unlike cheaper versions!
Frogger, is a 2 screen superb representation of this arcade classic and has full colour Hi-Res Frogs, Cars, Roads, Logs, Turtles and Riverbank. Plus Super sound effects.
Both on one cassette for the Spectrum, price £5.00.

CENTIPEDE

CENTIPEDE AND PAINTER
By the time you read this our latest release for the Spectrum should be available . . . . . .
Centipede is a full colour machine code arcade game where the object is to defend yourself with your Laser against a fast moving centipede which weeves in and out of the mushroom patch. There are other versions of this game but we think you'll prefer ours because we always strive for an extra dimension of realism, which makes all the difference!
Painter, is another well loved Arcade game here you must paint in between the numbers on a multicoloured screen before you have to overlap.
Price for SPECTRUM is £5.00.

HOW AND WHERE TO GET C☆Tech Software PRODUCTS
There are three ways to get the tape that you require, firstly you can go to one of around fifty retailers in the UK and some more overseas, there is at least one in every town and several in major cities.
Secondly you can ring our Telesales on 061-366 8223 and Alison or Shirley will take your order and tell you of any other games you might be interested in.
Last the most popular way is to simply clip the coupon and send it to us at:
C☆Tech, 184 Market St, HYDE, CHESHIRE, SK14 1EX.

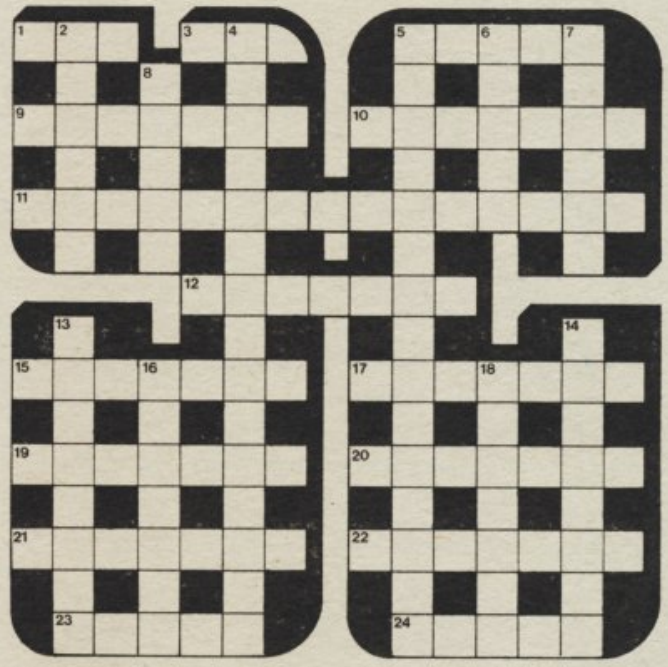
WIN A CAMPUTERS LYNX

A Lynx will be awarded to the winner of the *Your Computer* Camputers competition. To enter the competition, all you have to do is complete the crossword below and finish the sentence "A Lynx would bring out the animal in me because. . ." in 12 words or fewer. All entries must be sent to the *Your Computer* offices by the last working day in March 1983.

Name: _____

Address: _____

_____



Complete this sentence in 12 words or fewer. "A Lynx would bring out the animal in me because . . . _____

Your Computer **Lynx competition**

RULES:

- The winner of the competition will be the person who enters a correct solution to the crossword and, in the view of the editor, completes the unfinished sentence in the most interesting way.
- The name of the winner will be printed in the May issue of *Your Computer.*
- All entries must arrive at the *Your Computer* offices by the last working day in March 1983.
- Each person may enter the competition only once.
- Entries to the competition cannot be acknowledged.
- No employees of IPC Business Press or their relatives may enter the competition.
- The decision of the editor is final.
- No correspondence on the result of the competition will be entered into.
- IPC Business Press assumes no responsibility or liability for any complaints arising from this competition.

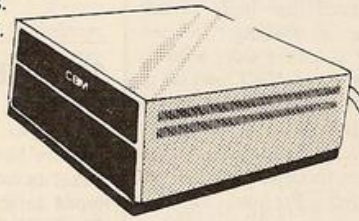
DAMS OFFICE EQUIPMENT
Not Simply a Computer Dealer

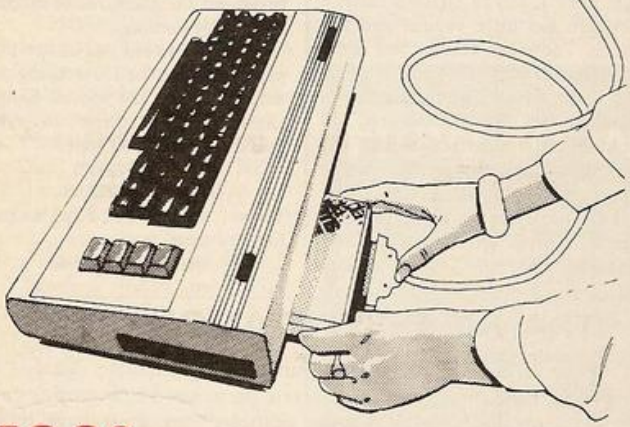
VIC 20/ COMMODORE 64 IEEE 488 CARTRIDGE

A breakthrough for all VIC/64 users. The DAMS IEEE is a simple, plug-in Cartridge interface which slots into the back of your VIC/64 and links it to disk drives, language packs, printers and other peripherals. Run several VIC/64's. from one disk drive.

£49.95 + VAT.

(Price including VAT. £57.44).





VIC 20 RAM'N ROM BOARD

Doubles the memory capacity of your VIC and gives you the facility to fit extra functions (VIC AID, VIC MON etc). Comes complete with specially designed cover.

£22.95 + VAT. (Price inc. VAT. £26.39).

Technical leaflets available on all products.

'CLEAR-VIEW' ANTI-GLARE SCREEN

This exciting new product from DAMS is the answer to eye fatigue, headaches and migraine - symptoms regularly encountered by VDU operators. The 'Clear-View' screen can be fitted in seconds to most leading brands of computer monitors or microcomputer screens, and immediately reduces unwanted glare and reflection to a minimum. Suitable for use with mono or colour displays.

up to 12" £19.95 + VAT. (Price inc. VAT. £22.94).
Suitable for Commodore 4032, 8032, etc.

13" to 20" £24.95 + VAT. (Price inc. VAT. £28.69).
20" and larger by special order.

VIC AID

Commodore 64 version available on disk or cassette

Vic Aid is a chip which slots easily into the DAMS RAM'N ROM Board, and offers two sets of Utilities in one for the keen programmer:

Programmers Tool Kit
Gives extra commands: Auto, Number, Help, Delete, Change, Trace, Step, Light Pen, Break etc.

Machine Code Monitor
Gives Save, Memory. Display, Load, Verify etc. (similar to TIM on PET).

£19.95 + VAT. (Price inc. VAT. £22.94).

VIC MON

Commodore 64 version available on disk or cassette

Another fine product to enhance the machine - code capabilities of the VIC, VICMON is the ultimate programming aid, incorporating: Assembler, Dissassembler, Fill, Re-Locate, Identify, Printing, Display Status Register, Display Memory with pause facility, Full Screen Assembly Edit, Software re-set from loops, Single step with variable speed etc. Slots into the DAMS RAM'N ROM board or similar.
If similar please state type.

£19.95 + VAT. (Price inc. VAT. £22.94).

YOUR LETTERS

SCHIZOPHRENIA: DIVIDED VIEWS

I was rather surprised at the pompous and totally unhelpful reply to Bradd France in Response Frame in January's issue of *Your Computer*. Coming from a magazine that publishes advertising for a computer known not to be available for months on end, that is, the Spectrum, a high moral tone does not seem entirely appropriate.

What right has Tim Hartnell to assume that someone wanting to stop an auto-run machine-code program must be also wanting to contravene copyright? There have been a couple of occasions when I have unthinkingly made a machine-code program with a bug in it an auto-run version, and then Saved it to be safe. A lot of typing would have been avoided by having an ability to stop execution and rescue the item. Secondly I have found it a very valuable way of learning programming techniques in machine code. I do hope that Tim Hartnell is not proposing to have the copyright laws changed to make even study illegal.

If the user of a stopper program does in fact intend to infringe copyright, then what business is it of yours anyway? However, if you do feel that "it would be highly irresponsible to publish" a program intended to break into machine code then perhaps you would care to explain why you did publish one in the December Software File? Gino Gracin's very useful "list self starter" was just what Mr France needs, but as I imagine that your curiously-mixed morals will prevent you publishing this to let him know then I can only hope that he found it for himself.

While I am at it can I suggest that your contributor to Response Frame sticks to answering questions about computing — which he is evidently competent to deal with. I have in past issues seen some entertaining replies to TV and tape recorder queries.

A Jaques, Urmston, Manchester.

BUG SPOTTER

You only do it to annoy, because you know it teases! All those errors in published machine-code programs. Three recent corrections, which may be helpful to your other readers, are as follows: first, Hopper, January 1983, addresses 16854 to 7 were left out and should be 22 D3 40. 16974 should contain B3, and 16975,6 should read 20 FB.

Second, Snake, February 1983 Software File, addresses 16574 to 16581 omitted, putting all subsequent addresses out by eight bytes. These addresses should contain 01 12 13 11 01 00 18 16.

Third Maze Chase as listed, also February Software File, gives a set of bars but no maze. Address 16564 should contain 00. All the above codes are hexadecimal numbers. I know it is good for us to debug machine-code programs, but this can take longer than entering them.

J R G Nash, Botley, Oxfordshire.

RAM WRINKLE

When the BBC Basic conversion board is fitted to an Acorn Atom, it disables the Atom's bus buffers for addresses in the range 4000-7FFF. This is sensible when in BBC mode, as this area of memory is then used for I/O, the utility ROM, and the graphics RAM. But when in Atom Basic mode, this area could otherwise be used by external RAM to extend the text space.

Luckily, a simple modification to the BBC Basic conversion board will enable the bus buffers for this address range when in Atom mode. It involves bending pin 11 of IC14 up so that it no longer makes contact with the socket, then connecting this pin to pin 12 of IC 12.

Readers may also be interested to note that with the extra 2K bytes of RAM provided on the BBC Basic conversion board, the total RAM in the system becomes in the BBC mode:

8K from 0000 to 1FFF
6K (graphics) 4000 to 57FF

and in the Atom mode

1K from 0000 to 03FF
7K from 2000 to 3BFF
6K (graphics) 8000 to 97FF

Mike Lord, Basildon, Essex.

FAST SLIDE

Stewart Stallworthy obviously went to a great deal of trouble to prepare the Z-80 Slide Show code — Software File, January 1983. The essence of the job can be done with the single instruction LDir, and roughly three times faster, as follows:

Code	Assembly	Comment
21 A4 9C	LD HL,40100	first byte of saved display, the same as the published example.
11 00 40	LD DE,16384	first byte of display file proper
01 00 1B	LD BC,6912	byte count
ED B0		LDIR block transfer until BC=0
C9	RET	

12 bytes of code, versus Stewart's 48, and relocatable! The whole thing really does operate with astonishing speed; it takes about six milliseconds to execute the whole routine once on my Spectrum. Try alternating between two Saved displays — it is enough to make your eyes water!

Incidentally, I detected a bug in Stewart's listing; address 40029 should contain 239, not 238 as shown. Fortunately it does not matter; the JR points to the last byte of LD HL,nn at 40010 which decodes as LD B,B.

D W Albery Fleet, Hampshire.

BUZZING

ZX-81 users may be interested to know that one reason for loading problems may be the close proximity of TV set and tape recorder. Check by running the recorder on play without a cassette or with a blank tape and with the volume turned up high. When placed near a working TV set, particularly at either side, a harsh buzz will be heard. If a ZX-81 set to Load is then connected, a pattern of bright bands reminiscent of correct loading but closer and narrower will be seen even though no program is being played. Previous to this discovery I had to strike a balance between too little volume and too much. Too much volume was really interference from the scan coil in the TV. Now with a cassette player two to three feet distant, I can use full volume and get perfect loading.

A second discovery is that an edge connector with the trade mark UECL has a contact design which I consider gives much more positive contact with the ZX-81 circuit board. I have also carefully removed the thick layer of solder from the ZX-81 contacts. I can now deliberately rock my home-made memory board back and forth without losing memory; previously even a slight vibration could cause a maddening crash.

Could I suggest that computer reviews be aimed rather more towards the user like myself who has little interest in games. For example, a computer without Arc Sine and Arc Cos is an anachronism to me. Accuracy of working can be of interest since 8 figures is sometimes insufficient for one of my interests, astronomical calculations. A point which I have never seen mentioned is the resetting of variables — that is, data to zero — if a program line is altered. This is most frustrating when debugging a program, but with my ZX-81 I can go along happily editing and restarting at the corrected line.

B Manning, Stakenbridge, Worcestershire.

1K CHESS

The code presented for the three articles on chess is correct. If you are having problems then I'm afraid an incorrect number has been typed in and you are finding out first-hand the pleasures of machine-code programming.

I did omit to tell you of two Pokes prior to saving the 1K working game which provide the moved King or Queen's pawn. Prior to typing RAND USR 18542 type

```
POKE 17241,0
POKE 17252,53
```

STRANGE DISSERTATION

Time is envisaged by some thinkers as particulate. That is to say, time is composed of discrete particles. These particles are known as chronons, and being particles they must have mass. Since they have mass it follows that they must occupy space.

The rate of flow of time is demonstrably the same in all parts of the universe — except when very high speeds are considered — so much is common knowledge.

I am convinced that this state of affairs does not apply to the space in the vicinity of microcomputers and their associated paraphernalia. My theory is that microcomputers interfere with the space-time continuum in such a way that the density per unit area of chronons in the vicinity of these objects is very much reduced: it can be seen that in a volume of space where there are few chronons, the amount or quantity of time will be less than in a normal volume of space.

A few minutes near a microcomputer may be equivalent to an hour or more in a normal atmosphere, so that when your wife/husband/girlfriend/boyfriend calls you away from your computer, and you reply, "five more minutes", is it surprising that an hour or more of normal time passes?

This theory also explains the 28 days phenomenon. For example, it is not widely known that Clive Sinclair is convinced that the whole world is playing an immense practical joke on him — he believes that all his computers were delivered within 28 days. What he is unaware of is that the 28 days were measured in the rarified chronon atmosphere surrounding his computer factory.

Dominic Purdue, North Jesmond, Newcastle-upon-Tyne.

and Save this on to tape or type:

```
POKE 17242,128
POKE 17253,53
```

moves Queen's pawn forward.

These Pokes move Queen's pawn forward then:

```
RAND USR 18542
```

and Save on to tape.

If you give up, but still would like the game, you can probably obtain a 1K chess by either Artic or Sinclair from your local supplier. If in difficulties write to me enclosing £3 and I will return a tape of the playing program.

David Horne,
Crowborough,
Sussex.

CREEPY LIFE

Some errors crept into my ZX-81 life program in the January 1983 issue of *Your Computer*. In the machine-code list, figure 1, the code at location 16603 should read 6,32. Also in the Basic listing, line 135 should read Goto 40.

P J Whittle,
Chobham,
Surrey.

ZX RAND

The Rand statement on the ZX-81 and the ZX Spectrum is very useful. It is used to call a lot of machine-code routines in the form:

```
20 RAND USR 16514
```

However, the Rand statement can be used for a lot more. When Rand is used; the number following the Rand statement is placed in locations 16434 and 16435 — see page 178 in the ZX-81 manual. On the XZ-81 these locations can be used to pass numbers to machine-code routines or for a quick conversion routine.

Suppose you wanted to Poke N into locations 16514 and 16515, normally the program

```
10 REM XX
20 INPUT N
30 POKE 16514,N-INT(N/256)*256
40 POKE 16515,INT(N/256)
```

would be used, using Rand the following could be:

```
10 REM XX
20 INPUT N
30 RAND N
40 POKE 16514,PEEK 16434
50 POKE 16515,PEEK 16435
```

This saves 13 bytes on the original and takes about half the time to execute. One word of warning. Having N=0 will not work as unpredictable results will be put into locations 16434 and 16435. The same technique can be used on the Spectrum but the locations that Randomise sets will need to be looked up.

Finally a four-line program to set RAMtop. The RAM size is held in N that is N=1 for 1K

```
10 RAND 1024*(16+N)
20 POKE 16388,PEEK 16434
30 POKE 16389,PEEK 16435
40 NEW
```

Each line can be entered as a direct command.

Tim Griffith,
Coventry,
Warwickshire. ■

EDITORIAL

WHEN THE finely-worded comparison tables of the micro-makers trawl for new buyers, only the computing-wise slip through the net. They make sure that when they are eventually caught it is because they wanted to be: they know how to read between the lines. The rest of us swim blindly into those grids which compare the features offered by the new wonder micro with its competition. Naturally, only the advertised machine has a tick in every box.

Occasionally we may wonder about the importance of the green plastic securing screws which the table tells us only the touted micro can boast. But usually we swallow claims for speed, memory and resolution hook, line and sinker.

Of course, these claims are rarely untrue, but they are often only relative facts and depend largely on the knowledge of the would-be buyer for correct interpretation. You might not be hugely impressed by a car whose adverts major on the fact that it features a complete internal combustion engine. On the other hand, a total newcomer to computing might be awed by the promise of a silicon-wafer central processor.

Sometimes the glossy brochures can be unhelpfully obscure. Just how many beginners really needed to know that the ZX-81 offered a full 26 For-Next loops?

Against that, facts which are genuinely useful are frequently omitted. The amount of RAM remaining after the operating system and high-resolution graphics have helped themselves is the kind of information that can sway a buying decision.

This is because it is the type of fact that can reduce the 48K Lynx to an 11K machine, and the 32K BBC Micro to an 8K one. The £50 Microdrive promised in the Spectrum adverts seems to offer mass storage at a micro price, but for the last six months there has been no reference to the £30 interface you will need to drive it.

The modern buyer must also be a student of relativity to be able to understand the "high" in high resolution, the "low" in low cost, or the "fast" without which Basic would no longer seem complete.

Although "advanced" in the context of graphics presumably means user-defined, a smattering of semantics comes in handy when trying to decide what "professional" means when applied to a plastic-capped rubber keyboard. Descriptions of sound and colour facilities contain the same sort of ambiguities — ambiguous, at least, for the beginner. One of the solutions to these problems is increased computer literacy. With a buying public as well informed as in the car market, the home-computer manufacturers will be obliged to be even more precise in their publicity machinery. It will also mean that the buyer will recognise which features are common to all micros and which are specific to the one advertised. Being told that Basic is resident in ROM does not have quite the same glamour if you know that this is the rule rather than the exception.

After years of complaints about the misleading claims of motor companies for their cars' petrol consumption, legislation was needed before independently-assessed mileage figures were introduced.

Unless the industry can come up with a set of mutually acceptable standards by which micros can be judged, it may find similar measures forced upon it. ■

How to write for *Your Computer*

We called this magazine *Your Computer* precisely because we welcome your views, tips and hints and even your criticism of machines and software in general. If you would like to see your name in print, whether on a Software File program or a full-blooded article, here is how to go about it. Ideally, all articles should be typed double-spaced on one side only of uniform sheets of paper. If listings can be dumped directly from a printer — you can always use a friend's or user group's — this minimises the risk of error. In a perfect world a cassette would accompany the article. That considerably speeds up the checking process. Not only do you get to air your own discoveries and opinions, but we will even pay you for the privilege. We pay £35 per published page — that's as it appears in the magazine and includes illustrations.

Why not give it a try? You have nothing to lose but your postage.

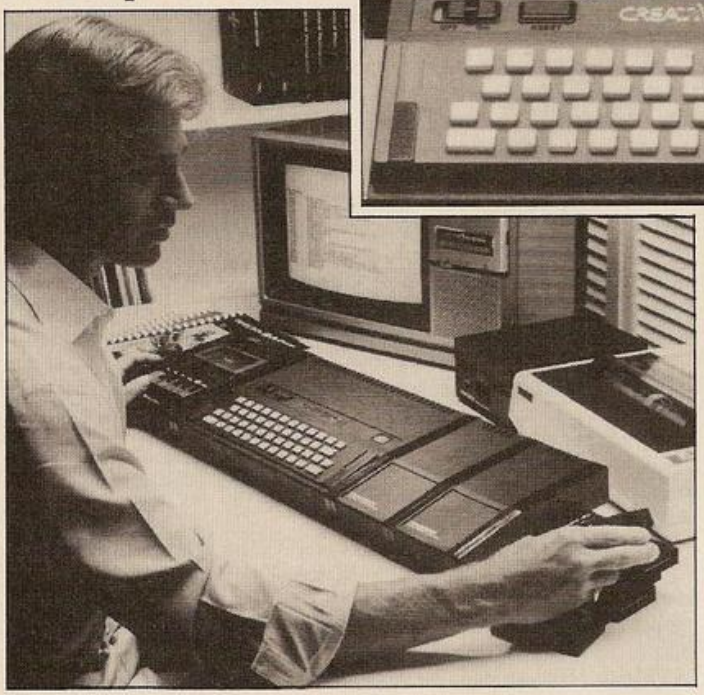
£99 Creativision is one up on rival computers



COLOUR, SOUND, and 16K for £99 is rapidly becoming an industry standard, but the Creativision goes one better — literally — it has 17K of RAM.

Although the standard Personal Computer unit looks more like a video game than a home micro, the unit contains a 6502 processor as found in the BBC Micro, the Vic and the Oric and is capable of being expanded to 64K RAM. Resolution is 256 by 192 with 16 colours three sound channels and a noise channel. The 12K ROM includes a Microsoft Basic.

The standard keyboard combines the idiosyncratic layout of the MZ-80K with the feel of a ZX-81 with the cunning innovation of a half-inch gap splitting the board in half so that the two joysticks can be lifted off the front panel.

The optional keyboard — illustrated — is at normal typewriter pitch but it still lacks a full-size spacebar. The screen display is 28 columns of 24 characters each composed from a five-by-seven fount.

A purpose-built cassette recorder, memory expansion units and Centronics and RS-232 interfaces can be plugged into the side of the standard unit. Every 16K of additional memory costs £39 as does each interface.

A Modem and a disc drive will also be available when the machine goes on sale in June, along with printers and acoustic couplers.

ROM cartridges will offer Extended Microsoft Basic and games ranging from old arcade standards such as Sonic Invader and Crazy Chicken to the intriguingly named Police Jump.

Forth of Firth first for BBC

R Q FORTH, written by Roger Q Firth for Level 9 Computing, is a Forth compiler for the BBC Micro. It fits into the model A's 16K, leaving space for about 200 lines of user program. Major features include a full screen editor, 260 predefined Forth words, and an unusual provision for using recursion.

Firth Forth programs run up to 10 times faster than BBC Basic — itself probably the fastest version of Basic on any home micro.

The compiler comes on cassette together with a 70-page manual and costs £15 inclusive. To go with it, Level 9 Computing supplies a Forth toolkit which adds a further 200 new functions and includes such utilities as a 6502 assembler, turtle graphics and five decompiler routines. This too is accompanied by a full manual and costs £10.

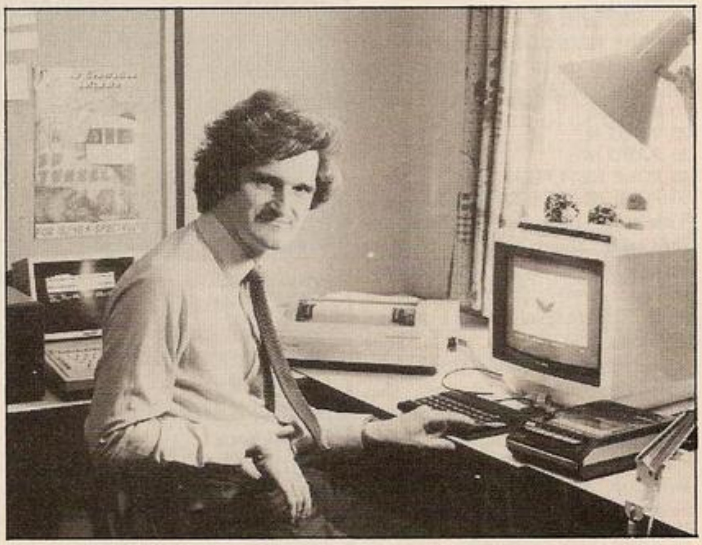
Light at the end of the Tunnel for Evans the Top 20 games writer

WITH MORE AND MORE of the sales of home computer games concentrated in the hands of a few large software companies it is unusual to find a highly successful company run by a staff of two. Malcolm Evans writes the programs for New Generation Software and, assisted by his wife, also handles production and marketing.

All his games have sold in large numbers and he has even had the distinction of having two hit programs in *Your Computer's* Top Twenty at the same time. 14,000 people have bought his Spectrum program, Escape, and his latest release, 3D Tunnel, looks set to have the same success; already WH Smith has ordered 10,000 copies of the game.

He wrote his programs for the ZX-81 — 3D Defender, 3D Monster Maze and Full Screen Breakout — for J K Greye Software. At the time he was employed by Sperry in Bristol as head of the Microprocessor Applications Group. When Sperry offered him the choice of moving elsewhere or redundancy he decided to strike out on his own with New Generation Software.



3D Tunnel took Malcolm Evans three months to complete. He developed the program on a Sharp MZ-80B before downloading the machine code into the Spectrum.

Like Escape, 3D Tunnel follows an original idea and is not just another version of an arcade favourite. The player has to pass through five stages, destroying bats, rats, toads and spiders before meeting the final obstacle, a London underground train. The game costs £5.95 and will run on both the 16K and 48K Spectrums.

Texas TI-99/2: a new frontier

TEXAS INSTRUMENTS has now released details of the TI-99/2 described in last month's news item. It will be launched in September for around £75. The screen display is monochrome but with the same text format and pixel resolution as the TI-99/4A — that is, 24 by 32 and 192 by 256.

In addition Texas is introducing new low-cost peripherals and software for the TI-99/2 that will also work with the TI-99/4A. These will be on the market in May this year and include a four-colour printer/plotter for £150 and a £120 digital tape drive with a data transfer rate of 8,000 baud.

Most peripherals for the new system will plug into a Hex-bus, a peripheral interface connector, at the back of the machine. At the initial launch 20 programs will be available.

This £700 silver ring — the first prize along with £1500 worth of Acorn hardware and software in the Your Computer/*Acornsoft Castle of Riddles competition — is still looking for an owner. Early-birds received their cassettes in the post on the morning of February 16. Acornsoft's managing director claims that the Castle of Riddles adventure game is extremely difficult and that people entering the competition a few weeks after the opening date would probably still be in the running. A winner must be found by March 31.*

Tomy the toy-maker's 16-bit micro is not just a Japanese plaything

TOY TOWN has already moved into games machines and is now heading in to home computer land. Tomy, the Japanese toy manufacturer, is launching the 16-bit Grandstand Computer with 16K ROM and 16K RAM for around £170.

The standard machine offers only 19 Basic commands and its main strength lies in its graphics facilities. A built-in character generator allows the user to define a character on an eight-by-eight grid in the lower part of the screen and then position the character with the cursor in the main display.

16 colours are available in a resolution of 256 by 192. Up to four sprites can also be designed and moved by program commands or under joystick control.

Games cartridges can be plugged in and there is provision for further ROM cartridges to extend the Basic and to handle a printer and a floppy disc. The Grandstand Computer has a full 56-key keyboard and will be supplied with two games paddles.

Quicksilva fast to spot new software talent

QUICKSILVA IS AMAZED at the number of new programmers out there just waiting to be discovered. A series of advertisements for new talent drew such a good response that it was able to commission new programs for the whole range of home computers.

As a result new Vic and Atari games have now been released along with new titles for the Spectrum and ZX-81. Coming shortly are games for the Dragon, BBC Micro and Lynx.

Quicksilva has also taken on the marketing of the Pixel range of games for the Vic-20 and ZX-81. Production director, Mark Eyles, says that the company seems to be turning into more of a publishing house than a software company.

He added that Quicksilva felt that programmers were very important and should be given the same credit for their programs, in advertisements and on the packaging, as authors receive for their books. Enthusiasts who enjoy a particular program could then look out for the author's next release.

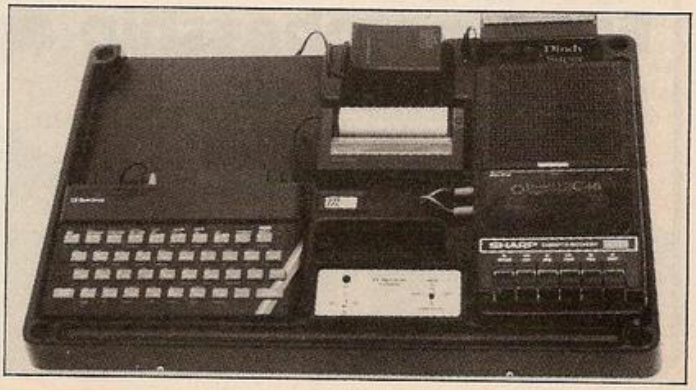
Quicksilva now has distributors all round the world. Mark Eyles jokes that if the company continues to expand at its present rate it would achieve multinational status and "we will all be tax exiles before long."

£49 Modem widens net

MICRONET 800, the Prestel database for personal computers, was technically opened on February 21. Networking interfaces are being offered to the first 10,000 subscribers for £49. These include all the hardware and software needed to link the computer up to Prestel via the public telephone system — an acoustic Modem, powerpack, cables and the necessary software.

Adaptors are now ready for the BBC, and Tandy Colour Computer with the necessary software supplied on tape or disc. The Spectrum and Dragon adaptors which should be released in March will be in the form of plug-in cartridges and contain the software in ROM.

The Spectrum Desk Console is designed to house a Spectrum and all its peripherals. There is room for a printer, a cassette recorder and the power unit as well as an RS-232 interface and up to two Microdrives. Made from heavy-gauge ABS plastic, it is available from Traffic Technology, PO Box 2, Warminster, Wiltshire, BA12 7QX, for £42.18 inclusive.



THE MicroComputer SOFTWARE CLUB

FOR OWNERS OF VIC, ZX81, SPECTRUM, BBC, OR DRAGON MICROCOMPUTERS

Buying software for your computer is a gamble. Apart from the occasional review and, perhaps, a recommendation from a friend, you have precious little information upon which to base your purchasing decision.

Advertisements and clever packaging can make the the worst programs appear tremendous. It is not until you have 'gambled' your money that you discover how good they really are. Some are only slightly different to others you may already own; many are not as good as you would be entitled to expect; and others are just a complete waste of money. Of course, there are some excellent programs around, and many more appear month. Now there is a safe way of finding out about them.

- free membership -

THE MICROCOMPUTER SOFTWARE CLUB was started to make software purchasing easier, cheaper, and less risky. Membership is completely free of charge, as is the monthly Newsletter. Every month members receive full details on the best and latest programs available for their computer and, simply and confidently, are able to order any of the programs they choose at substantially less than normal prices.

— large savings — on top software

All programs are, at least, 10% cheaper than normal and, each month, the best of the most recent software is made available to members at 20% less than normal. Postage and packing is free on orders of two or more programs for delivery within the UK; ordering and payment are simple, and quality is guaranteed.

— no obligation —

Members are not obliged to buy a fixed number of programs from The Club. They buy what they want when they want. Whether it is one program in a year or one a month, they know that when they buy from THE MICROCOMPUTER SOFTWARE CLUB they are buying the best programs at the best prices.

— free Newsletter —

Our latest Newsletter offers programs from most leading suppliers - and from a few that, perhaps, you do not yet know. A program has to be good, very good, before it is recommended to members. It also has to be reliable and, even before the members' discount, it has to be good value for money. Subject coverage includes adventure, arcade, education, strategy games, household applications, family games, business, utilities and programming aids.

Remember, membership is completely free of charge and you are under no obligation to buy anything from The Club unless you really want to. If you own or use a ZX81(16K), Spectrum(16K or 48K), BBC (A or B), Dragon 32, or VIC (expanded or unexpanded), you should join THE CLUB.

JOIN TODAY

THE MICROCOMPUTER SOFTWARE CLUB
P.O.Box 166, Oxford, OX2 9BJ, England.

Free membership application

Please accept my application and enrol me as a member of The Microcomputer Software Club. I understand that membership is free of charge.

As a member I will receive the Club Newsletter free of charge and will be entitled to benefit from any savings offered to members on selected programs for microcomputers. I may cancel my membership at any time.

When completed, return form to:-

Mattel's new age dawns with Aquarius — the 16-colour micro

AT LAST the big American games-machine makers have realised that people prefer to play games on proper computers that they can use for other purposes. Mattel — which makes the Intellivision — is no exception. Not only has the company now launched the Aquarius computer in the States — Britain will have to wait until September — but it has also launched an upgrade kit for the Intellivision.

At less than £100 the 4K, 16-colour Aquarius will be a strong rival to the Timex 2000 in America but the planned £120 British price tag will not frighten Sinclair or Oric. The rubber keyboard does not have a full-size spacebar but a keyboard overlay allows you to make use of a single-key entry option.

The British version will probably have three sound channels and the screen will have 320 by 192 resolution. The Z-80A based machine will run Microsoft Basic.

In America an extra £150 will buy you a tape recorder, thermal printer, joysticks and an expander. A similar package will be available here though the price will be higher.

A built-in RS-232 should encourage Aquarius buyers to consider the Modems and floppy disc drives which Mattel will also be supplying. Mattel claims that the Aquarius will be able to run CP/M.

Meanwhile, anyone who thinks their Intellivision is not too bright will welcome the Intellivision Computer Adaptor. This plug-in keyboard also boosts the machine's memory by 2K and makes Microsoft Extended Basic available along with a six-channel sound generator. The price will be around £80. An £80 piano-style 49-key keyboard incorporating a synthesiser also plugs into the adaptor.

Both the Aquarius and the brighter Intellivisions will be able to run a Logo cartridge, a Basic teaching package, and games based on Scooby-Doo and the Flintstones.

Texas boldly goes to school

COMPUTER literacy is big business in the United States and the new Texas TI-99/2 is aimed squarely at this market. No colour, no sound, but a 16-bit computer whose programs and peripherals are compatible with the established TI-99/4A.

It comes with 4.2K of RAM and 24K ROM and is available in the States for around £60 — for U.K. details see page 31. Expandable to 32K RAM with a rubber keyboard and full-sized spacebar, this is a very real competitor to the American ZX-81, the Timex 1000.

Japan's JR steps in for Panasonic and NEC launches PC-6001

THE JAPANESE have entered the U.S. micro arena. Panasonic's £150 machine boasts 32K of RAM and 16K of ROM, with 2K separate video RAM and 2K character RAM. It has a full-size spacebar and separate cursor control keys. The CPU is a Panasonic chip — the MN-1800A — which is equivalent to the 6802, not a chip that many will be familiar with.

The JR-2000U, which employs its own brand of Microsoft-type Basic, has a choice of eight colours, RGB and TV outputs. Where Panasonic's new baby may be at a disadvantage is in its relatively low resolution of 64 by 48 in the graphics mode.

NEC has also launched its PC-6001 which sells for around £200. It has a rubber keyboard, 16K RAM, 16K ROM, and can be expanded up to 48K. Nine colours are usable and text and graphics can be freely mixed.

Spectra Video's new micro — below — costs around £250 and claims to be CP/M compatible. It has 32K RAM and 32K ROM, offers 16 colours, sprite graphics and pixel-addressable colour. RAM can be expanded to 144K ROM to 96K. It has rubber keys, full spacebar and a joystick on the console.

Low U.S. price for Spectrum

THE TIMEX Sinclair 2000 — alias the American Spectrum — sells over there at around £95 for the 16K version and £125 for 48K. Air vents on the back, a different ROM, a three-voice sound chip and provision for two joysticks are new features, plus a more rugged printer. Do the U.S. prices hint at future U.K. prices?

Tonight On Your Micro

CAN YOU SURVIVE PENETRATOR?

PENETRATOR is the most amazing and sophisticated arcade game yet devised for the 48K Spectrum. Features include training mode, unique customizing, superior graphics, excellent sound and more! Cassette £6.95.

RESCUE A VIC PRINCESS

A multi-part adventure for the standard VIC 20! All you have to do is find the castle, defeat the dragon, find your way through the labyrinth, kill the wizard and rescue the Princess. And that's not half of it! THE WIZARD & THE PRINCESS cassette only £5.95.

CONVERT YOUR VIC INTO AN ARCADE MACHINE

Amazing arcade action for the standard VIC 20 with 5 new exciting games from Clifford Ramshaw: ALIEN BLITZ*, INVADERS*, GROUND ATTACK, STORM and SPACE ROCKS* (games marked * contain machine code). You must have the VIC GAMES PACK cassette - only $5.95.

THE HOBBIT IS HERE!

Experience the fantasy of J. R. Tolkien's "HOBBIT" on your 48K Spectrum. Danger, adventure and excitement are all part of it in words and graphics, but it is you who must solve the problems. Special features never seen before. THE HOBBIT is the program everyone is talking about £14.95.

MELBOURNE HOUSE PUBLISHERS

NOW . . . FOR ZX SPECTRUM USERS EVERYWHERE

THE FULLER BOX...

A NEW DIMENSION IN SPECTRUM CAPABILITY

It's easy to see why the ZX Spectrum is outselling all the other small colour computers, it really is a marvel of new technology.

Equally marvellous is the new 'Fuller Box' for your Spectrum. Sound Quality is improved enormously with the built in *Audio Amplifier* which works with all Spectrum programs. *The Sound Synthesiser* will make any sound you want to design: explosions, laser blasts, trains, birds etc. It's based on the popular G1-AY-3-8912 chip, and is supplied with a demo program. Finally, the *Joystick Port* enables you to use any low-priced Atari/Commodore joysticks with your programs.

The Fuller Box fits neatly on to the back of your ZX Spectrum,and does not interfere with any peripherals, including the new Spectrum microdrives.

PRICE (INC. VAT)
£29.95 + 80p p&p

But the story doesn't end there! The Fuller Box has been designed to perform many other functions, and extra, expanded versions are already available.

The Fuller Orator turns the Spectrum sound effects into speech! It plugs easily into the Fuller Box, and can say anything typed on the keyboard or from your programs, via the ALLOPHONE synthesiser. Complete with Demo cassette:

£39.95 + 80p p&p

Fuller Sound Amplifier Box, including Audio Amplifier (non-expandable) **£6.95 + 80p p&p**

Fuller Orator upgrade kit – to fit inside Fuller Box **£24.95** (postage free, does not include Fuller box)

Fuller 'Master Unit' – including Orator, synthesiser, amplifier and Joystick port in Fuller Box **£54.95 + 80p p&p**

Fuller FD42 System NOW FOR ZX81 or ZX SPECTRUM

This famous, best selling product immediately converts your ZX Computer into a sturdy, attractive and professional unit, with full size typewriter keyboard. A tough plastic case encloses the keyboard, P.C.B. and power supply. It has 42 keys including all the ZX81/Spectrum graphic characters printed on them. The full travel key switches have gold plated contacts and guaranteed life of 10^6 operations. IT'S SO EASY TO INSTALL! You simply unscrew the ZX PCB from its case, screw it to the FD case, and plug in the keyboard. No soldering or technical knowledge required.

NOW ALL ONE PRICE! £29.95 (inc. VAT) + £2.50 p&p

16K Expansion. Fits onto back of case or inside using a RAM Adaptor Board. **£9.75 extra.**

Fuller FDS Keyboard for the ZX81 or ZX Spectrum

Our new advanced keyboard has the same, fine specifications as the FD42 system, but with a new, re-designed case, space bar and double-sized shift and enter keys. A must for the discerning ZX81 or Spectrum user.

SPECIAL LOW PRICE £39.95 (inc. VAT) + £2.50 p&p.

Fuller ZX Spectrum Upgrade Pack

16K Spectrum owners – upgrade to 48K with a Fuller Spectrum Upgrade Pack – Complete with full assembly instructions. Model 2 or 3 only. **£34.95** (inc.VAT) p&p FREE!

COMPUTER DEALERS!

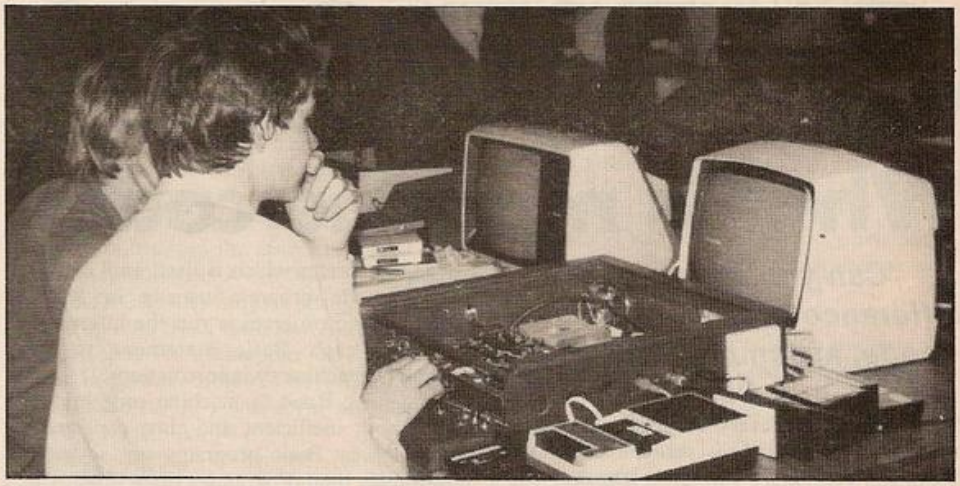
COMPUTER CLUB

Computer Club is here to encourage you to start your own local computer club or, if one already exists, to join it and become involved. We would like to hear of anything which has made your club a success, or of any projects or programs you are developing.

Simon Beesley encounters the micro generation gap and a naked Nascom at the West Midlands Amateur Computer Club.



Nostalgia versus the new microcomputers

A NEWCOMER TO computing who wandered into one of the West Midlands Amateur Computer Club meetings would probably be struck by the number of machines present which have long since been out of the spotlight. In this respect the West Midlands Club is typical of most computer clubs of several years' standing.

Until recently the Nascom and other kit-based computers such as the UK101 held sway in computer clubland. Although the Nascom was, and is still, available ready-assembled, most owners preferred to build it up from a kit. In the process they needed to develop a greater level of hardware and software expertise than is required if you buy, say, a Vic across the counter. The Nascom is designed for expansion and dedicated owners often end up running CP/M and twin disc drives on their machine.

When the ZX-80 appeared, as the Model T of home computing it introduced a new type of enthusiast to computer clubs. Whereas the kit builder had to be prepared to wield a soldering iron, a Vic or Spectrum owner is unlikely to want to dabble inside the machine.

A fully-fledged Nascom, circuit boards and wiring exposed to view, can be an unnerving sight to the owner of a sealed and packaged mass-produced micro. Many of the new members at computer clubs are now more interested in software than hardware and particularly in games.

Both camps are well represented at the WMACC. The club has been running for five years and has over 150 members. These include 40 Nascom owners as well as a host of Vic, Spectrum and ZX-81 owners. A further 35 members own Pets. As treasurer Malcolm Sparrow explained, the club rarely organises talks or demonstrations but prefers to let members follow their own pursuits.

Naturally interests and activities are diverse. Chris Kitson moved from Nascoms 1 and 2 to a Gemini board. He has written programs to display fast-moving three-dimensional perspective views at 512 by 512 resolution by linking the Gemini up with a graphics-display processor.

In common with most clubs many of the members are interested in exchanging and copying programs. One of the hazards of visiting computer clubs for a magazine is that the visitor is confronted with the magazine's readers. David Hardwick made a vehement but good-humoured attack on computer magazines in general for publishing error-ridden listings. He appeared to be pacified however by the news that *Your Computer* is setting up an even more rigorous checking procedure.

The club meets twice a month on the second and fourth Tuesdays at Elmfield School, Love Lane, Stourbridge. Full membership costs £4 a year and as an unusual facility, members are offered cheap insurance rates on equipment brought along to meetings.

Local society news

London Computer Fair

THE ASSOCIATION of London Computer Clubs promises fun for all the family at its 4th London Computer Fair on April 14-16. After three years at the North London Polytechnic, the Fair has now moved to Central Hall Westminster. The admission fee is £1.50 for adults and 75p for children. Bargain hunters should attend the bring-and-buy sale held on Saturday only.

Gravesend computing

GRAVESEND Computer Club meets on the first and third Tuesday of every month at 7.30pm in the School Room of the Extra Tuition Centre, 39 The Terrace, Gravesend. Kent. For more details ring Steve Janday on 0474-50677.

BBCs in Wales

WALES, first BBC Microcomputer club has been formed in Cardiff. Meetings are held on alternate Wednesdays in the Applied Science Lecture Theatre of University College, Newport Road, Cardiff. Available facilities include four 24in. elevated monitors and full audio-visual equipment. The club has more than 60 members and also runs a Beginner's Corner. Further information from Geoff Barker on Penarth 701023.

The New Mills boom

IN JUST three months the New Mills and District Personal Computer Club has outgrown its existing premises at the New Mills Youth Centre and now meets at New Mills school on the fourth Monday of the month. Members' machines include most makes of home computer. Games enthusiasts are well catered for and competitions are held to develop programming skills. Further details from John Eary on New Mills 43870. ■

FIRST BYTES

Starting out in home computing? First Bytes is for you. Just write to *Your Computer* with any hardware or software problems, no matter how small or simple.

QUESTIONS

What is machine code?

'Can you tell me the difference between machine code, assembly language and Basic?'

AT THE HEART of every microcomputer is a microprocessor, which is really a computer inside the computer. The only language the microprocessor understands is machine code instructions. Each instruction takes up one byte — a set of eight bits of ones or zeros. Since a machine-code program just consists of a list of numbers, writing a program in machine code itself is tedious.

Assemblers are designed to make the programmer's task easier by allowing you to enter mnemonics rather than the numbers themselves. A mnemonic both stands for a machine code instruction and serves to indicate what it does. For example the code 248 in 6502 machine code tells the processor to increase one of its storage locations, the Y register, by one; the mnemonic for this in assembly language is INY.

Disassemblers convert machine code to mnemonics and can be used if you want to examine a machine code program already in the computer.

Whereas assembly and machine code are low level languages Basic is a high level language and needs to be converted to machine code by a Basic interpreter or compiler. Most micros use an interpreter which is itself an 8 or 16K machine code program usually in ROM. When a Basic program is run the interpreter translates each Basic statement to the equivalent machine code instructions.

Converting Basic to machine code line by line is both inefficient and time consuming which is why Basic programs run so much more slowly than programs written directly in machine code.

STRING

THOSE DOLLAR SIGNS which litter Basic programs represent strings. A string is a line of characters which the computer will treat as

Which computer d

'Should I buy a computer with a large memory, and which is the best micro for games?'

IT IS DIFFICULT to give any one feature priority over another without knowing your interests. Obviously, if you are interested in graphics you will rate a high screen resolution above an extensive version of Basic or a powerful sound generator. Like cars, some home computers undoubtedly offer better performance all round but cost proportionately more.

As a beginner it is unlikely that you will need more than 16,000 bytes of memory — 16K RAM — unless you want to store a large amount of data. Most of the best games programs fit into 16K. But figures for the amount of memory a computer offers can be deceptive. An advertised 16K of RAM rarely means that 16K is available for programs.

Every home computer has an operating system. This is the machine code program which — as the term suggests — co-ordinates and runs operations such as printing to the screen, or reading in instructions from the keyboard. Although the operating system is permanently embedded in ROM it needs variables in RAM to keep track of what is happening. Consequently it reserves space in

BEATING THE BUGS

HOW TO CHECK ERRORS

FEW PEOPLE can key in a long program without making any errors. Run the program after an hour or two's hard typing and it invariably crashes. However, you can save yourself a good deal of frustration if you interpret the error messages correctly.

Although the message indicates an error at a particular line usually the fault lies elsewhere in the program. One of the most common error reports occurs when a variable has not been assigned a value. The exact wording of the message varies from computer to computer but it will probably read something like "undefined variable".

The problem here is that you cannot use a variable without having given it a value beforehand. If, for example, a line such as

```
100 LET A=B
```

throws up an error report it means that B has not been set earlier. Look through the listing and check that you have correctly typed in every occurrence of B in the rest of the program.

Another likely message is

```
OUT OF DATA
```

which will be reported at a line with a Read statement in it. Again the error is usually to be found somewhere else in the program. It indicates that the computer has not found enough items in a data statement. Either you have left out an item or you have missed a comma between them.

Syntax errors are not difficult to spot. Sinclair owners are fortunate that the computer checks each line for syntax as it is entered: on other machines it is usually sufficient to retype the line checking for missed colons or spaces. Most Basics will accept a program line without any spaces but there are a few exceptions and, of course, spaces greatly improve the legibility of a listing.

These are just some of the most frequent problems. Other bugs are more subtle and harder to detect. But if you understand the cause of an error message it is usually possible to track down the error without poring over the entire listing line by line.

S AND THINGS

single unit, or string, unless it is told otherwise. If you input

```
A$ = "FIRST BYTES"
```

and then ask it to print A$ it will print

```
FIRST BYTES
```

Many useful things can be done with strings, but string manipulation often results in knotty problems for the novice, so here is a quick explanation of string functions and their uses.

LEN(A$) gives the length — number of characters — in a string. This is useful when you need to look at each part of a string in turn by means of a

```
FOR N = 1 TO LEN(A$):NEXT N
```

loop, or want to add something to the end of the string.

VAL(A$) converts the character representing a number into that number, that is, it converts a string into a numeric variable. This is particularly useful when INKEY$ has been used for input, as INKEY$ always produces a string. Note the VAL of anything other than a number is 0.

```
10 A$ = INKEY$:IF A$ = ""THEN 10
20 A = VAL(A$):IF A<1 THEN 10
```

This rejects anything other than a number from one to nine. ASC(A$) gives the ASCII code of the first character in the string. This can be used to select a group of adjacent characters, such as the numbers one to five.

```
20 A = ASC(A$):IF A<49 OR A>53THEN 10
```

STRING$(N,A) forms a string of length N made up entirely of character A. A may be the ASCII code for a character or the character itself in quotes. Both STRING$(10,65) and STRING$(10,"A") will form a string made up of 10 letter As.

String slicing is carried out by three functions: LEFT$(A$,N) gives the first N characters, RIGHT$(A$,N) gives the last N characters, and MID$(A$,M,N) gives the middle N characters, starting from character number M. If

```
A$ = "THIS IS A LONG STRING"
```

then LEFT$(A$,4) = "THIS", RIGHT$(A$,4) = "RING", and MID$ (A$,11,4) = "LONG". The line

```
FOR N = 1 TO LEN(A$):B$ = MID$(A$,N,1):
NEXT N
```

will make B$ = each character of A$ in turn.

When adding strings the second string is always put after the first string.

```
A$ = "LONG":B$ = "STRING":C$ = B$ + A$
```

will make C$ = "STRINGLONG" and not "LONGSTRING". Note that when adding strings you often need to add spaces as well.

```
C$ + A$ + " " + B$
```

gives "LONG STRING".

STR$(A) is used to convert a numeric variable into a string which can then be added like any other string.

```
A = 1:D$ = STR$(A) + C$
```

gives "1 LONG STRING".

To insert into a string it must first be divided into left and right portions at the appropriate point, and the various pieces added back together in the correct order.

```
E$ = "VERY":F$ = LEFT$(D$,2) +
E$ + " " + RIGHT$(D$,11)
```

will now give "1 VERY LONG STRING". This type of string manipulation is important in text editing, and also often in sound and graphic functions which are handled as strings.

String searching is carried out by INSTR(N,A$,B$) which will search A$ for B$, starting from character N. If B$ is not found the result is 0, otherwise the position at which B$ starts is returned.

One of the most straightforward uses of INSTR is in checking for valid entries. All valid keys are included in G$, and each INKEY$ value is compared with this.

```
10 G$ = "ABCDEFG"
20 H$ = INKEY$:IF INSTR(1,G$,H$) = 1 THEN 10
```

o I need?

RAM and uses it as its own storage area.

On the BBC the O/S takes up 3.5K RAM and even the unexpanded ZX-81 has to surrender a hundred bytes to the O/S.

The screen memory also consumes RAM. Most computers map the display on to a section of RAM. Generally there is a trade-off between RAM and resolution: the greater the graphics resolution and the more colours on screen, the less memory available.

A 16K RAMpack for the ZX-81 does indeed offer a full 16K user RAM but the ZX-81 does not provide high-resolution graphics.

The best computers for games at the moment are probably the Atari and the BBC Model B. Features like graphics and sound make some computers more suitable for games programs than others. But just as important a factor is how long the machine has been around and how much software has been developed for it.

Neither the Spectrum nor the Vic can match the BBC or the Atari in their hardware specifications, yet the games for these machines are almost as good and far more varied.

It takes programmers time to discover how to make the best use of a computer — the quality of software for the ZX-81 is still improving.

The Dragon 32 arrived shortly after the Spectrum but there is a flood of programs being produced for the Spectrum and only a trickle, as yet, for the Dragon. One of the reasons for this is that it was easy for the software houses which had been concentrating on the ZX-81 to move on to the Spectrum, since it uses the same processor — Z-80 — and was assured of a large market.

Most home computers are suitable for playing games on, but buyers of new machines should expect to wait some months before the appropriate software appears.

I could do that....

Travel agents' windows often feature a moving advertising display. First Byters can win £15 by sending us a program moving up to 10 characters across and down the screen, starting at the top, passing left to right, feeding into the line below, then scrolling backwards and up to the top. We are looking for simplicity and elegance.

ASCII CODES

EVERY CHARACTER on the keyboard is represented by a code and when the computer stores a character, it stores the code in a single byte. Almost all computers adopt the same set of codes — the ASCII set — pronounced askey, as in Arthur Askey. A notable exception is the ZX-81, which uses its own set of Sinclair codes.

Since one byte can hold a number from 0 to 255 the set can contain up to 256 codes but only those for the keyboard characters are standard. The other codes are usually specific to each computer and could be used for user-defined characters or predefined graphic characters or as control codes.

If you type in and run the program you can see which codes stand for which characters, on your computer. The Basic keyword CHR$ generates a character from its numerical code.

```
10 FOR N = 32 TO 255
20 PRINT N, CHR$(N)
30 NEXT N
```

You will notice that the For-Next loop starts at 32. This is because codes 0 to 31 are usually reserved for control characters. When the computer encounters one of these instead of printing a character it carries out an instruction. Control codes can be used to tell the computer to do such things as move the cursor up, clear the screen or change the colour.

Using CHR$ with control codes can be very useful for printing a number of characters to the screen quickly — enabling you to speed up games written in Basic considerably. For example, if 8 is the code for cursor left and 9 the code for cursor down,

```
PRINT "EE";CHR$(9);CHR$(8);"E"
```

would print one "E" on top of the other. But it is more useful to insert control codes in a string first, as in:

```
A$ = "E" + CHR$(9) + CHR$(8) + "E"
```

followed by PRINT A$.

This is a rather simple example. To discover what further uses control codes can be put to look them up in the ASCII table in your manual and try experimenting with PRINT and CHR$. ■

THE S
ORIC

Even ice-cool Clive Sinclair is feeling the nail-biting tension. Kathleen Peel asks whether the proven virtues of the Spectrum and massive availability of software will be enough to stave off the challenge of the Oric which appears to offer more for £25 less.

EARLY ORICS were plagued with a shaky display. Now the problem has been solved with an Astec modulator but the Oric's picture is still not as good as the Spectrum's.

Both machines exhibit dot-crawl. The Oric has two modes of operation. Text, which allows the user more of the 16K for Basic programs — 12,288 bytes — and Hires — 5,120 bytes. Actual bytes free for Basic programs are calculated by reference to the Oric memory map.

The Spectrum only has 8,846 bytes free but can mix text with Hires without resorting to calling ASCII codes. The Oric picture always retains a black border and this can be a disadvantage.

Ink and Paper

If you wish to provide the effect of a green playing surface, the Spectrum permits a green or any other colour border. Both systems use Ink and Paper commands, although the global effect on Spectrum is only achieved after a CLS command. The colour resolution of the Oric, in Hires, is greater than the Spectrum.

The Oric uses a six-by-eight character cell size which produces noticeably lower character definition on a television display; the Spectrum has a eight-by-eight character cell.

The Spectrum Beep command has always been limited in use within a Basic program, being a single channel. The Oric uses the AY-3-8912 sound chip which provides three channels capable of producing a multitude of different sounds, plus white noise. The oddity of it all is that the Spectrum is rather quiet and the Oric's built-in commands of Zap, Ping, Shoot and Explode are rather noisy.

Both keyboards have a calculator feel. The Spectrum keys are reasonably large and the "feel" can be improved by typing Poke 23609,50. This provides audio indication of a key being pressed. The Oric keys are much smaller and spaced slightly closer together, but at least the Oric has a full-size spacebar. The keyboard plays a more important part in using the Oric as almost all words must be typed in full and therefore, require the user to be accurate in typing commands.

Oric Basic enables the user to use integers

SPEED

Spectrum on left. Oric on right.

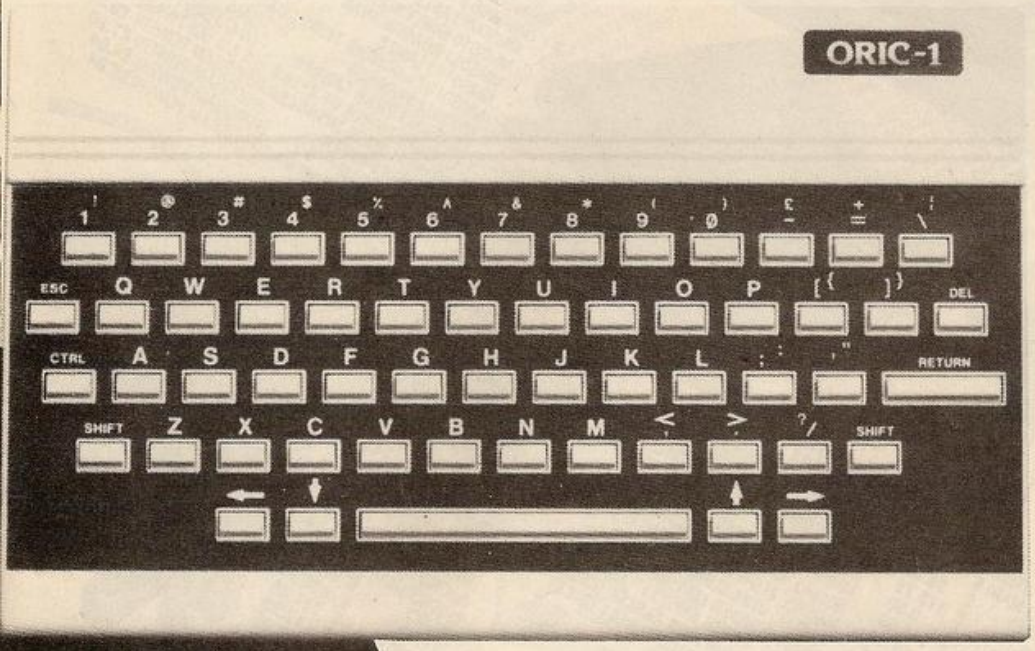
5 NEXTA
```

Spectrum : 4.51s. **Oric** : 6.1s.

SHOOT-OUT: V. SPECTRUM



and does mean that the Oric memory requirements are smaller and that more can be packaged into a Basic program. I suggest you look at the program listings carefully; if you are new to home computing, the fact that the Spectrum spaces the text for easy interpretation with an excellent line syntax checker may be crucial. If, however, you have already mastered the fundamentals of programming, then you may prefer the additional potential of the Oric.

Relatively bug-free

It is worth bearing in mind that Spectrum Basic was developed on the ZX-80 and is now relatively bug-free. Even the IBM Personal Computer had some errors. The Oric may suffer in so far as it is a substantial step away from Microtan Basic, Tangerine's old Basic.

The Oric limits the length of a line of Basic code to 77 characters. At 75 characters, the first of three warning Pings is emitted, on the 78th character the line is deleted. There is no line-length limit on the Spectrum.

Oric's editor is worse than the Spectrum's. Edit X brings line X to the bottom of the screen. Typing Control A over characters in the line writes the characters into a duplicate line which on pressing return replaces the original line. Cursor keys delete characters, while typing a character then backspace cursor inserts characters. Unfortunately the amended line is not visible while changes are being made.

Saving and loading

Saving and loading is not without problems. The Spectrum has a printer which is a low-quality, low-cost machine and will produce screen dumps and listings very quickly.

The Oric uses a Centronics interface which operates with Strobe and Acknowledge only. This should allow you to use a wide range of printers but it has not provided satisfactory results with the printer I used.

The Sinclair manuals have been gradually refined and are now very good. The latest Oric manual is a vast improvement on the provisional offerings sent out in December and January but is still not as comprehensive as the Spectrum manual.

Last summer some micro enthusiasts had to wait 20 weeks before the Spectrums they had ordered were delivered. It is early days yet but if demand is high as Oric has stated, I wonder what delivery time scales will be achieved.

CONCLUSIONS

- When comparing machines, it is always assumed that any innovative or exceptional function of one machine shows up as an inadequacy in the other. This is not the case, both of these machines are or will be excellent value for money. If you have £125 to spend, then the Spectrum is perhaps ideal for the beginner or someone who has outgrown his ZX-81 or ZX-80 and wants a machine now. The Oric is likely to be of more use to somebody who already knows a little about computing and who will be able to break the syntax barrier.
- There appear to be many problems still remaining with the Oric's ROM, and perhaps the interface control. It is too early to talk about an extended version of Oric Basic when this particular ROM has not yet been fully debugged. It is a great pity as the potential of the Oric is far greater than that of the Spectrum, and this will obviously appeal to the more technically adventurous micro enthusiast.
- Missing commands include ACS — Arcosine — and ASN — Arcsine. They can be evaluated using Cos Sin and Arctan. Other useful commands not implemented include Copy, Verify, Merge, Flash and Double: these can be simulated using control characters. There are no disc file-handling commands which may mean a new ROM required à la BBC.
- It is important the Oric replaces the EPROMs in the early machines delivered as soon as possible and free of charge. ■

CGP-115 LISTS IN

TANDY'S NEW four-pen Colour Graphic Printer could have the same dramatic effect on printing as the change from black and white to colour screen displays has had on computing. It is a direct descendent of the CE-150 2.25in. colour printer produced by Sharp for the PC-1500.

The printer, complete with RS-232 and Centronics interfaces, costs £149 including VAT but not including any connecting cables. It comes with a power supply, operation manual, three black pens, one each of blue, green and red, and a roll of plain paper 4.5in. wide and 180ft. long. The machine is a healthy 8.5in. square by 3in. high and weighs 1.75lb. It is coloured silver-grey, with a black top cover which is raised to gain access to the pens and their holders.

The printer can print either 80 or 40 characters per line. The ASCII character set from code 32 to code 127 is implemented, although unfortunately there is no pound sign. A switch marked special characters provides for Japanese script.

The characters are not produced by a dot matrix or burnt into aluminised paper. In either case, present technology would not permit 80 characters within a space of a little over 3.75in. The characters are formed in the machine's internal ROM and written on to the paper using ink pens. The effect is similar to high-quality type-written text. Except for the lack of proportional spacing of characters, and paper width, the performance is as good as many professional printers.

The printer has two modes of operation, text and graphics. The Graphics mode permits character size to be varied from 80 characters per line to one character per line, in 63 steps retained on return to text mode. Characters can also be rotated in 90° steps. Also available is the facility to draw 15 different types of dashed line. Colour can be changed and a return to text initiated with very simple commands.

Axes are specified in terms of X or Y with a defined step and interval. The step is a multiple of 0.008in. between 1 and 999, positive and negative, and the interval, the number of repetitions of the step, is between 1 and 255.

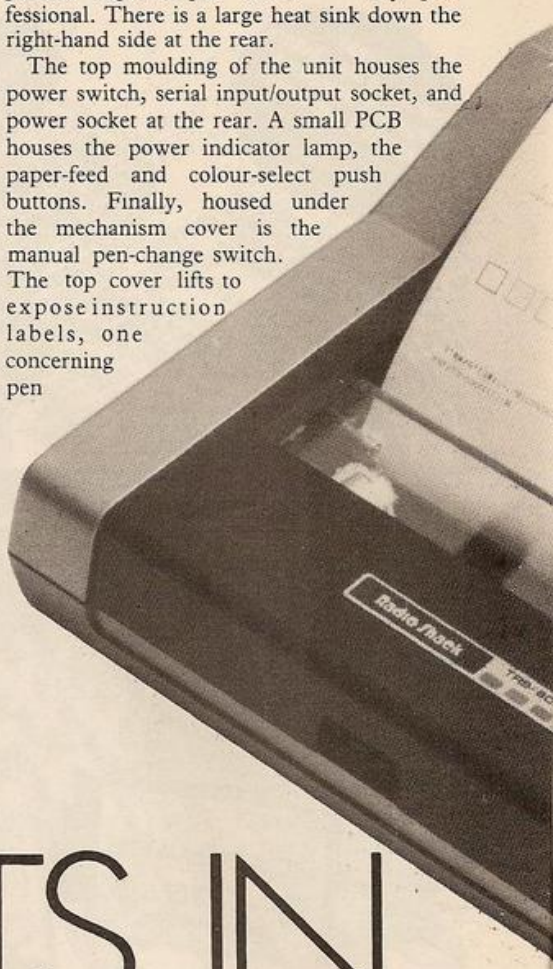
The effective X-axis resolution of 480 steps and equivalent vertical resolution draws convincing circles, without annoying steps on the edge.

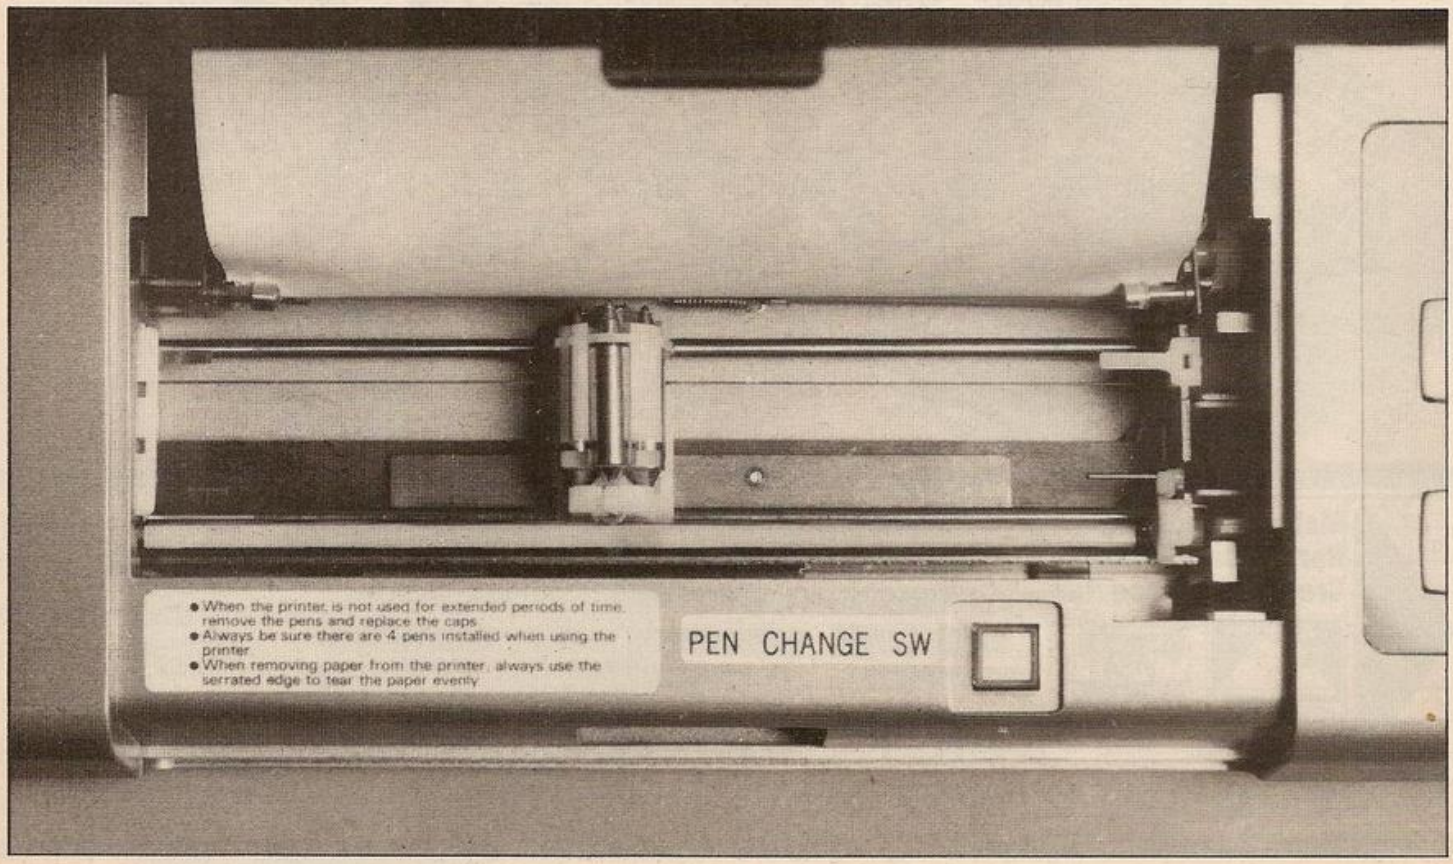
The printing speed is a slow 12 characters per second. At present screen dumps of graphics are not possible.

The machine is opened by undoing five screws in the base and releasing four locking tabs to release the top moulding. The base holds the print and feed mechanism at the front. The paper drive is friction-fed by a full-length rubber compound roller and side pressure rollers which also prick the edge of the paper at 0.156in. steps. This gives the effect of tractor drive and has the advantage of providing the Y axis with a quoted accuracy of one percent coupled, with a repetition accuracy of 0.008in.

The PCB is screened from interference and the major integrated circuit components are encased in a screened box shaped around the parallel input/output socket — very professional. There is a large heat sink down the right-hand side at the rear.

The top moulding of the unit houses the power switch, serial input/output socket, and power socket at the rear. A small PCB houses the power indicator lamp, the paper-feed and colour-select push buttons. Finally, housed under the mechanism cover is the manual pen-change switch. The top cover lifts to expose instruction labels, one concerning pen





REVIEW

If your listings are listless and your printouts are plain, the CGP-115 could be what you are looking for. Kathleen Peel checks it out.

replacement and the other noting how to look after your printer.

The 50-page manual is well laid out and clear, but there are some omissions. The appendices provide some Basic programs which produce pie charts, sine and cosine curves.

It is surprising that there is no indication of the connections on the four-way DIN socket masquerading as an RS-232 interface. Only pins 2, 3 and 4 are wired. Table 1 gives the connections. The serial interface operates at 600 baud with no parity and two stop bits.

The parallel interface is via a Centronics-type plug but the only connections used are busy — Pin 11, strobe — Pin 1 acknowledge — Pin 10 and the data lines.

Loading the paper was initially a bit of a problem. A protrusion in the centre prevented the paper from being entered into its loading slot completely, and so take up, by pressing the paper-feed button, could not take place. The answer was to cut a strip of paper 6in. long by 1in. wide and load this into the slot close to one edge, such that it could be fed through by hand. The strip was then slid across into a central position and the full paper width loaded over the top of the strip. As soon as take up was established the strip was removed. I only used this procedure twice as, whatever the obstruction was, it disappeared. Loading the pens was straightforward if a little fiddly. Neither operation is likely to be required very often.

ORIC-1™

TIMELESS TECHNOLOGY FROM ORIC PRODUCTS INTERNATIONAL

The Computer Challenge

16 colours professional keyboard full graphics real sound

FREE FORTH with every 48K model.

- Superb styling
- Choice of 16K RAM or massive 48K RAM
- Ergonomic keyboard with 57 moving keys
- 28 rows x 40 characters high resolution
- Teletext/viewdata compatable graphics
- 6 octaves of real sound plus Hi-Fi output
- Centronics printer interface and cassette port
- Comprehensive user manual

THE REAL COMPUTER SYSTEM FOR £99.95 incl VAT

OPTIONAL MODEM OFFERS COMPUTER PHONE LINK FOR:
● ELECTRONIC MAIL ● TELESOFTWARE ● PRESTEL

COMING SOON, TO COMPLETE YOUR SYSTEM: ORIC MICRO-DRIVE DISCS & SPEED PRINTER

FOR HOME: The ORIC-1 is the professional alternative for home computing. Superbly styled, the 57 key layout is based upon computers costing many times more than the ORIC, and will help the whole family to learn and understand computing, right from day one. The ORIC incorporates an improved version of Basic for ease of programming and use. For the enthusiasts the computer has laser zaps, explosions, etc. pre-programmed for games use, with Hi-Fi output for incredible effect. The communications Modem will allow 'Telesoftware', message sending, and Prestel use.

FOR BUSINESS: The ORIC-1 is the answer to many day to day problems. Software is becoming available for payroll, accounts, stock-control, and many more systems to help your day to day business organising and control. In addition, the ORIC COMMUNICATIONS MODEM will allow you to access up to 200,000 pages of Prestel information, to send and receive 'electronic mail', to book hotels, and flights (and pay for them) and to look at the latest stock-market and share indexes.

In short the ORIC-1 is a must for all businesses large or small.

HOW TO ORDER YOUR ORIC-1: By phone: Just ring our telesales number Ascot (0990) 27641.

By post: You can pay by cheque, postal order ACCESS – BARCLAYCARD – AMEX – DINERS. (Please allow 28 days for delivery).

Money back if not satisfied.

YC3

(continued from page 45)

When the printer is switched on, the pen carrier traverses to the left-hand edge and rotates the pens to ensure that holder number one is in the top working position. The printer then draws four boxes produced sequentially by the pens in holders 1, 2, 3 and 4. This is to ensure that the user is aware of any dried-up pens.

Pressing the paper-feed button at switch on sets in motion a self-test procedure that also prints the character set in the four loaded pen colours.

CONCLUSIONS

- Tandy's new printer will transform data presentation and allow the computer to interpret results fully, for ease of reading, varying colour, indentation, and print size as necessary.
- The graphics capability provides for considerably better resolution that available to the majority of micros. The lack of a screen-dump facility is likely to be temporary as users will soon develop software to produce screen dumps in colour.
- This high-quality printer can only be faulted on paper width, and slow speed which may make it unsuitable for word processing. ■

BBC MICRO (A & B)

SPACE ADVENTURE (Mode 1) Machine Code - (32K)
Our best selling game for the Atom now re-written and enhanced for the B.B.C. Intriguing mixture of Space Invaders, Maze and Adventure. All in one game. £8

MIDDLE KINGDOM (Mode 7) Basic & Machine Code.
Original real time adventure with over 300 rooms to find and explore. Fight (or avoid!) the many different monsters and retrieve the 10 treasures of Hylem. Choose from 6 different characters and scenarios. £8

SPACE INVADERS (Mode 5) Machine Code.
Fast action, full-feature version of this popular game. Outstanding high resolution colour graphics plus sound. £8

REVERSI and GOMOKE (Mode 5) Machine Code.
Response time under one second for the first 3 levels. Many features including graphic board, problem solving, etc. Both games are very absorbing and challenging. £8

GAMES TAPE 1 (Mode 5) Machine Code.
Moving Wall Breakout, Snake and Hunt are fast moving addictive games, very colourful. Three quality games for the price of one. £8

MICRO MAN (Mode 2) Machine Code - (32K)
Fast moving, excellent colour graphics with sound.

*** NEW * Word processor package only** £19.95
Written in machine code for speed and versatility. Easy to use with full on-screen editing and justification (more useful and powerful than a text editor), insert, delete, move, copy, variable tab setting, margins plus many more features. Complete with instruction manual. S.A.E. for further details.

All programs supplied on quality C-15 cassettes. All prices are inclusive, no extras. Buy any two cassettes and deduct £1 from total. S.A.E. for Catalogue.

ATOM
Software also available. Space Adventure, Space Invaders, Air Strike. Only £6 each. S.A.E. for details of our full range.

THE VERY BEST IN MACHINE CODE FOR THE **ZXSPECTRUM** & **ZX81**

SPECTRUM 16K **GULPMAN** - game of the '.....man' variety with 15 mazes, 4 chasers, laser defence, 9 grades, 9 speeds, demo mode, choice of joystick control. "An extraordinarily good program" raves Boris Allan for Popular Computing Weekly. We think you will agree. £5.95

SPECTRUM 48K **MASTERFILE** business/domestic filing and reporting system. So flexible that it is equally usable for your mailing lists, catalogues, stock control, text extracts ..... applications are endless. Fully user-defined data and report display formats, dynamic variable-length file, records and data items. Fully menu-driven with powerful search facilities, sorting, total/average, update, multiple independent files, printing. Yes, we aim to support microdrive when Uncle delivers. Nearly all the 8K we use is machine code, so you get 32K per file. Comes with example file and 22-page manual. £15.00

SPECTRUM 16K **SPDE** Disassembler and Editor, as used by other ZX professionals, and we used it to develop the above. £5.95

ZX81 16-48K **THE FAST ONE** is the predecessor to MASTERFILE and is in use all over the world now. Specification is very similar to MASTERFILE. £12.00

ZX81 16K **GULP 2** almost identical spec to GULPMAN. £4.75

All programs supplied double-recorded and mailed 1st class by return. Prices include VAT and postage within Europe. SAE for full list.

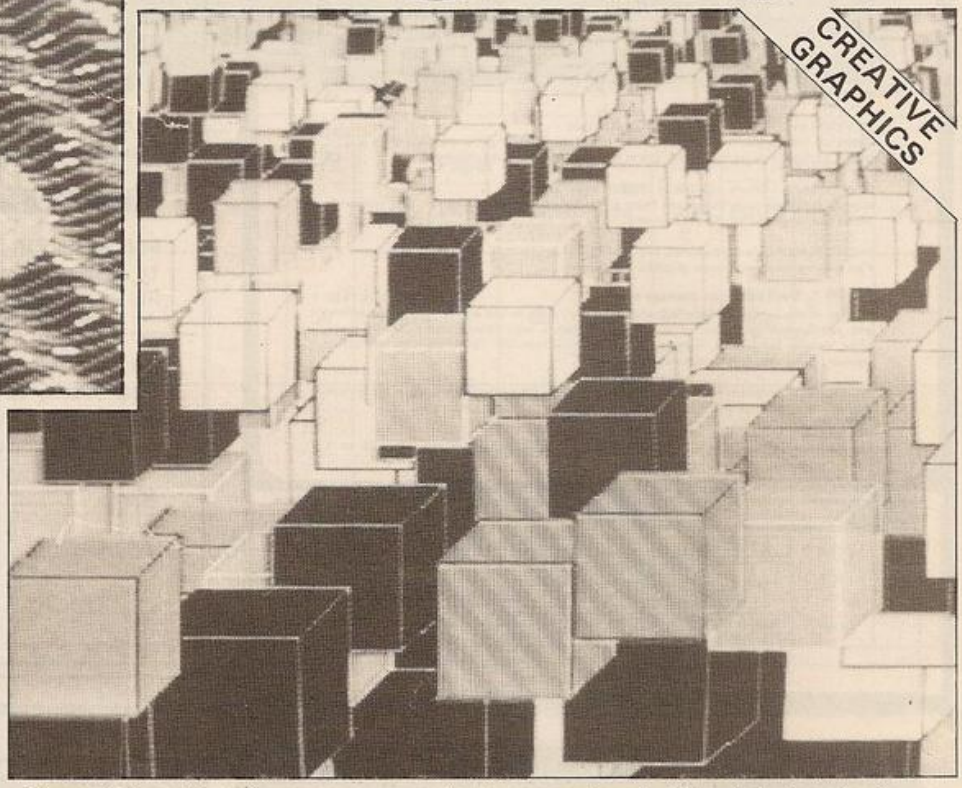
If you are all at sea when it comes to choosing programs for your BBC Micro don't gamble — consult Peter Connor's software guide.

BBC SOFT



SOFTWARE FOR the BBC Micro is still pouring down like invading aliens in a video game. Most of it is improving rapidly in presentation, if not originality. Nearly all the games reviewed here have good graphics and sound, and nearly all are the close relatives of a standard arcade game. Like racehorses, arcade games produce many offspring; "by Defender out of Invaders". Unfortunately not all of these games are thoroughbreds.

Superior Software has produced several games, all based on old favourites. The most interesting on offer is Centipede, apparently the only available version of this popular game. You have to try and destroy a fast-moving and very unfriendly centipede which snakes down from the top of the screen. There are other hostile creepy-crawlies, including a spider which menacingly bounces up and down above or on you. Visually this game compares well with the arcade version, being colourful and clear. Unfortunately, it is not possible to fire as rapidly and this can lead to many an untimely death.

Invaders and Galaxians are also produced by Superior Software. These two games, as their names suggest, are standard issue. Both, though, are well-produced, with colourful graphics, responsive controls and the usual bunch of extra-terrestrials.

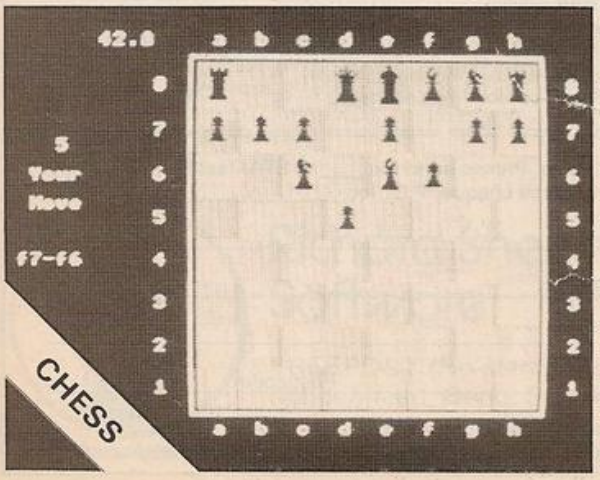
Space Fighter, from the same company, is advertised as a mixture of Defender and Scramble. However, it is not as exciting or as complex as either of these games. There is a curious effect to the display; you seem to be underwater spearing fish rather than blasting baryons and mutants in the lonely sky.

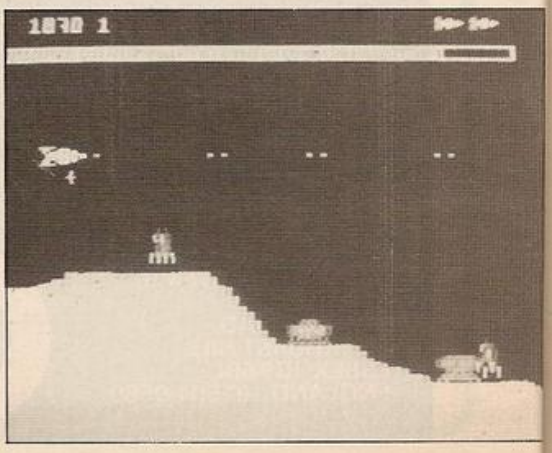
Alien Dropout, again, from Superior Software, has nothing to do with spaced-out hippies. Instead, in another variation of the Invaders and Galaxians theme, you are attacked by killer moths. Do not be fooled by their placid purple appearance — these moths are out to get more than the clothes in your wardrobe.

Alien Dropout is not as fast or as furious as Invaders or Galaxians, but it does have a certain homely charm.

The last program under review from Superior Software is Fruit Machine. This gives you a fruit machine on your screen. You can nudge or hold, collect or gamble. It is just like the real thing — except, of course, that there is no money. The program generously gives you a credit of 20 to begin, and when it has cleaned you out you can start all over again. It is difficult to image who this program will appeal to; are there fruit machine addicts who play for the sheer fun of it? If so, then this is their program. The graphics are very good and with a little imagination you might be able to convince yourself you are in Las Vegas. Perhaps it will help to wean compulsive gamblers.

From Program Power come Alien Destroyer and Laser. Both have good, colourful graphics and a range of skill levels. The first is an Invader-style game with a variety of bombs and attackers. An engaging detail is the little yellow man who leads you back to the starting position when you have been destroyed. Another bonus for connoisseurs is the Battle Report you receive after each game; percentage of hits, number of torpedoes fired, and so on. Laser is a version of Missile Command, and quite a good one. All the familiar features are there and the player has a





SURVEY WARE

wide range of options — perhaps too many *unless you are as familiar with the keyboard as a touch-typist.*

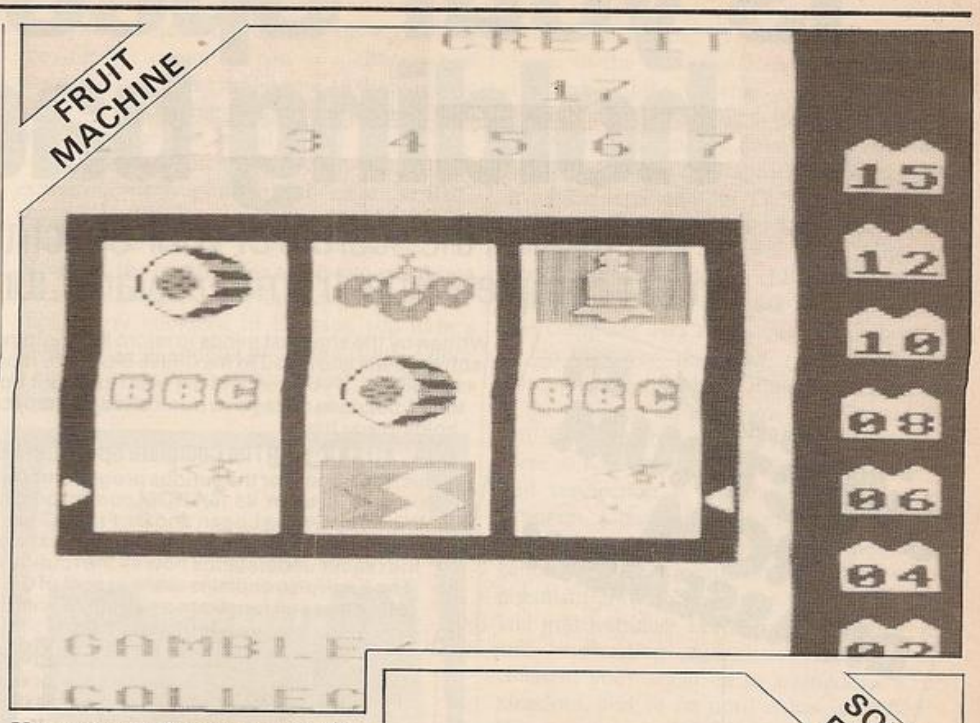
The new version of Chess by Program Power is a great improvement, mainly because it is now in colour. The board is very clear — in bright red and green — and the pieces are well-defined. It plays a vigorous attacking game at level 2 and makes its moves very quickly. It is prone to commit a computer's version of human error — that is, losing its queen — but obviously plays a more thoughtful game at the higher levels.

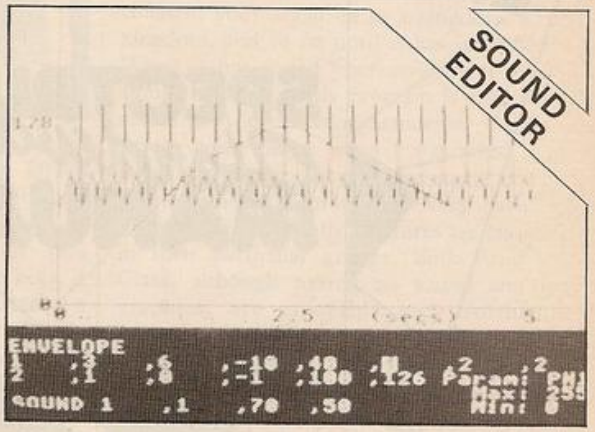
In contrast to games of death and destruction, BBC Software have produced a tape called Games of Strategy. If there's anything left of your brain after a few hours of Galaxians you might like to try Galaxy, Gomoku, Masterbrain or Reversi.

In Masterbrain you have to discover a four-figure digit the computer is "thinking" of, and it has to discover yours. Reversi and Gomoku are both well-known territorial possession board games. Galaxy is another territorial game, pitting you — on board the starship *Endeavour* — against the invading Kryons. By plotting co-ordinates on the screen you can destroy the invaders by firing phasers and photon torpedoes. None of these games is particularly interesting graphically, but that's not the point. If you like board games or logical games, you might enjoy them.

Acornsoft's version of Galaxians is called Arcadians and is written by someone calling himself Orlando. Perhaps he really is called Orlando. Pseudonymously or not, Orlando has written a very good program; definitely the best available Galaxians-style game for the BBC. A jolly little tune announces the beginning, after which you are rapidly destroyed. But you soon get the hang of it, and the game improves as you proceed through the pages.

Although not written by Orlando, Acornsoft's Super Invaders is also the best of its kind for the BBC. It has three levels of difficulty. The first two, A Mild Encounter and An Uncomfortable Situation, are in the traditional mould with the invaders and their missiles encroaching more quickly on your position. In the third level, rather exaggeratedly called A Terrifying Experience, the invaders' bombs float down and home in on you. They do not often miss. This is an exciting and well-executed version of a game which had almost lost its interest.

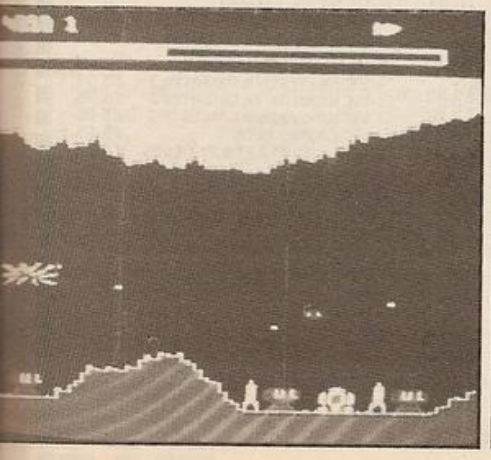


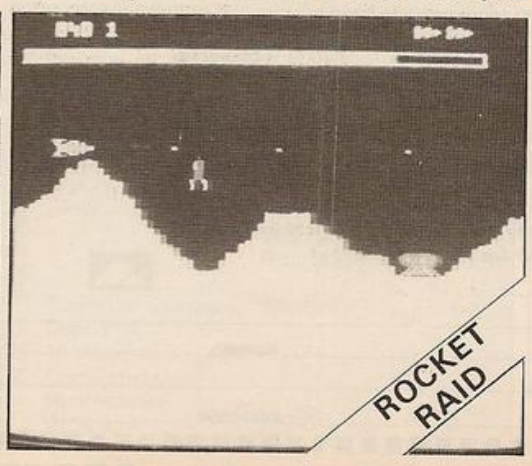


Better than both these games, though, is Rocket Raid, Acornsoft's answer to Scramble. You must pilot your ship over jagged landscape, bombing the fuel dumps and blasting the rockets. The controls are similar to the ones used in Defender but are more conveniently positioned on the keyboard. This first stage is deceptively simple.

No sooner have you successfully negotiated these paltry obstacles than you are confronted by one of the most awesome sights in home computer games; the cavern. Grown men have screamed in anguish as, time after time, their ships has been destroyed by the viciously oscillating green yo-yos called phizzers. Eventually of course, you get through, only to be confronted by the meteorites — approaching at different altitudes, they cannot be destroyed but must be avoided. With your nerves shot to pieces by the ordeal of the Cavern you do not last long here. So you go back, to the beginning, to the Cavern and the phizzers and . . . When you have flown about a hundred missions you might get through to the skyscrapers, or the maze, or even the fabled deserted city. Then you can start all over again.

All three games have excellent graphics and sound quality and are probably worth the extra money as they are definitely the best on the market.





Level 9 have produced two adventure games; Adventure Quest and Dungeon Adventure. These two programs seem to be an attempt to exploit the vogue for fantasy and role-playing games such as Dungeons and Dragons. Add a touch of Tolkien and just a hint of *Conan The Barbarian* and you have the scenario; quaintly-yclept wizards and knights encounter evil and violence — but no sex — in steaming primeval forests and war-ravaged wastelands.

Beneath the odd vocabulary and exotic props they are, of course, ordinary adventure games. As such, they are as good as any other. You are an apprentice wizard who, in order to save Middle Earth has to seek out and destroy the evil Lord Agaliarept in his dark tower. When I was an apprentice wizard I was quickly eaten by ravenous wolves but the program kindly resurrected me and I received the blessing of Typo, God of Adventures. It

(continued on page 53)

Is your Spectrum holding back?

Unlock all the secrets of your Spectrum with the most complete Spectrum Software Library available.

Written by the sharpest minds in micro technology today, this comprehensive library of software will allow you to maximise the entire range of your Spectrum's impressive capabilities. If you demand the best from your Spectrum, cut out and mail the coupon today, because once you've unlocked all the secrets of your Spectrum – there'll be no holding you back.

NEW RELEASE: The Complete Spectrum ROM Disassembly

This is the book for the serious programmer who wants to get right to the heart of the Spectrum system; its 16K ROM control program.

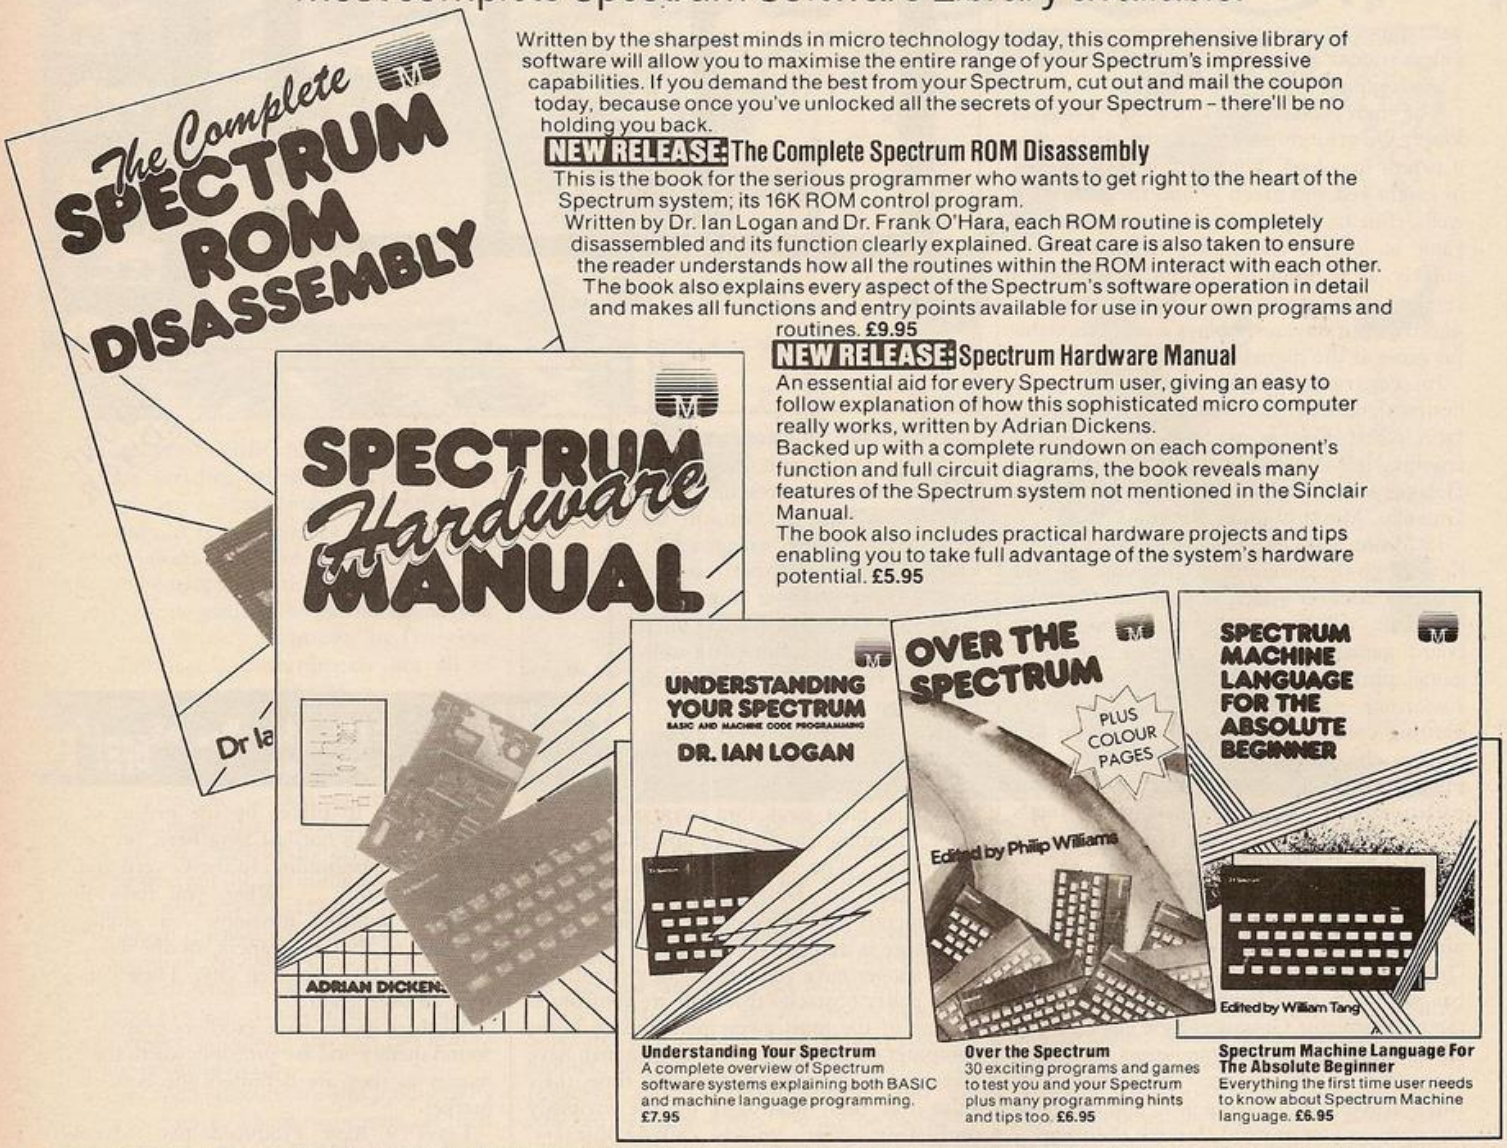
Written by Dr. Ian Logan and Dr. Frank O'Hara, each ROM routine is completely disassembled and its function clearly explained. Great care is also taken to ensure the reader understands how all the routines within the ROM interact with each other. The book also explains every aspect of the Spectrum's software operation in detail and makes all functions and entry points available for use in your own programs and routines. **£9.95**

NEW RELEASE: Spectrum Hardware Manual

An essential aid for every Spectrum user, giving an easy to follow explanation of how this sophisticated micro computer really works, written by Adrian Dickens.

Backed up with a complete rundown on each component's function and full circuit diagrams, the book reveals many features of the Spectrum system not mentioned in the Sinclair Manual.

The book also includes practical hardware projects and tips enabling you to take full advantage of the system's hardware potential. **£5.95**



Understanding Your Spectrum
A complete overview of Spectrum software systems explaining both BASIC and machine language programming. **£7.95**

Over the Spectrum
30 exciting programs and games to test you and your Spectrum plus many programming hints and tips too. **£6.95**

Spectrum Machine Language For The Absolute Beginner
Everything the first time user needs to know about Spectrum Machine language. **£6.95**

MELBOURNE HOUSE PUBLISHERS

(continued from page 51)
did not do me much good, and for all I know the Middle Earth is still waiting to be saved by a brave and ingenious adventure game fan.

Dungeon Adventure is related to the previous game; now you must find the dead demon lord's treasure in his black tower. Both these programs have a Save facility and come with an explanatory booklet. Enclosed is a stamped addressed envelope which entitles you to one clue from Level 9.

It was encouraging to see that software houses are now producing more programs of a practical or educational intent. Program Power offer Constellation, which enables the user to view the stars from any point on the Earth's surface, on any date and at any time. You enter latitude and longitude, date and time and telescope elevation; and, behold, on the screen is displayed a map of the heavens!

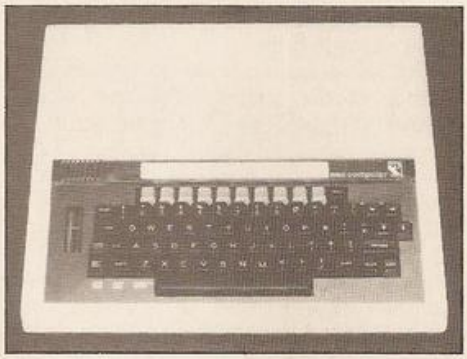
You can zoom in or out, thus allowing you to have a close-up of one particular constellation or a broad view of the whole area. This program will probably appeal mainly to budding astronomers as an easy method of finding their way about the stars before going on to the real thing.

If you are more interested in money than the mysteries of the cosmos, then Compute-a-draw from Davansoft will be more to your taste. Its manufacturers claim that by using it carefully you can predict draws with about 20-30 percent more success than picking them with a pin. They do not promise you a fortune; only the opportunity of winning several smaller dividends each season.

This program comes in two parts; the prediction program, £4.95, and the database, £13.50. The latter is, obviously, essential and the work that has gone into it justifies the price. It contains the results from about 6,650 matches over the last three seasons, up to January 15 of this year. If you do buy this program, then you will have to be prepared for a fair amount of work; adding information to the database, running the program before making selections, reading the copious explanatory notes.

Perhaps the most difficult commands to master in the BBC Micro's repertoire are the Sound and Envelope commands with their 18 parameters. Davansoft's Sound Editor is designed to make them easier to use. It draws the graphs of the pitch and amplitude envelopes over the same axes; the parameters are printed below and can be easily entered by moving the cursor. When you alter one of them the program enables you to discover the effect by redrawing the envelope shape and producing the new sound.

BBC Software has produced two programs exploiting the graphic capabilities of the BBC computer; Painting and Drawing, both by Brian Smith of the Royal College of Art. Although the controls for these two programs are rather complex, they both come with clear explanatory booklets. In Painting you have a good variety of colours to choose from. There is also a choice between brush and airbrush — which "paints" in a cluster of dots. Other



options are to vary the width of brush, use hatching or vary background colours. Drawing allows you to create circles, polygons and other shapes with different sizes and effects. In both of these programs brush or line movement is controlled by the cursor keys; it is thus rather difficult to draw, for instance, a curve. If you want to explore the BBC's graphics these programs could be useful. If you want to learn how to draw then you should buy pencil and paper.

Anyone who is interested in making the most of the BBC Micro's graphics might be better advised to take a look at Acornsoft's Creative Graphics. Best described as a compendium of graphics techniques and ideas, the tape contains 36 Basic programs which produce a variety of pictures and patterns. These include rotating 3D shapes, animated pictures and elaborate and constantly-changing designs.

One of the most impressive things about this collection is how short the programs are. Few of them would take long to key in; yet they achieve the sort of effects that are only available with machine code, if at all, on most other home micros. This reflects both on the scope of the BBC Basic and the ingenuity of the author, John Cownie.

To extract maximum benefit from these programs the aspiring computer artist should buy the Creative Graphics book, which is available separately for £7.50.

Acornsoft's Tree of Knowledge is an educational game in two parts. The first, Fruit, is intended for children of primary school age. Either they ask the computer, or the computer asks them, questions whose aim is to discover the fruit thought of. The computer might ask "is it a citrus fruit?" and if the children do not know what this is they will find out, thus placing citrus fruits on the Tree of Knowledge. This idea of classification and connection is continued in the second program, Class, which is meant to increase a knowledge and understanding of the classification of living creatures. You think of an organism and the computer asks "is it green and multicellular?" From your answer to this and succeeding questions the computer consigns your organism to a kingdom, a sub-kingdom, and so on until it has identified it. When it has found your creature it gives a smug "Ho-ho". This program is specifically aimed at A-level biology students — a point driven home to me when I was asked if my organism was diploblastic, coelomate and had a notocord. For them it will be very useful as a means of learning why creatures are classified in their particular groups. Both Fruit and Class, although having no sound and few graphics, are enjoyable and worthwhile educational games.

Wordwise, a word processor on a ROM chip from Computer Concepts, is considerably more sophisticated than most of the word processors available on tape.

The advantage of having software in ROM is that it can occupy the memory space that would otherwise be filled by the Basic interpreter and so does not take up any user RAM. This means that there is room for 24,560 characters to be stored — about 4,500 words. Wordwise, incidentally, keeps a count of the number of words typed in, which it displays in a status line at the top of the screen.

Another bonus is that a program in ROM is instantly accessible. To switch from Basic to Wordwise you simply type in *Wordwise, and *Basic to switch back.

On some word processors the screen can be horizontally scrolled over a much wider page of text. With Wordwise text must be entered and edited in Teletext mode. It can then be viewed in a formatted state at 80 characters to the line.

There is an extensive range of editing facilities most of which are easy to use. Sections of text can be readily deleted, shifted and copied; previously-Saved text can also be inserted from tape or disc. A search option allows you to replace every occurrence of specified string of characters by an alternative string.

These are just some of the features Wordwise offers. At the moment it is probably the most useful word processor on the market and is the only one on a chip. It will be interesting to see how Acornsoft's View — which will also be in ROM — compares. ■

MOZART LIVES

YOU CAN COMPOSE instant Mozart with a little known opus called the *Dice Waltz*. In effect, this was an automatic generator of minuets. This claim holds true in spite of the fact that Wolfgang Amadeus never heard most of the theoretically possible 4.6E16 variations! It was constructed in this manner: Mozart assembled 176 musical bars of two types, suitable for the two parts into which each "minuet" would be divided. The two groups of 88 bars were arranged into tables of eight columns and 11 rows, each element of a column representing a single, three-eight bar.

In each column the bars were written or selected such that any bar in one column could be played after any bar taken from the column to its left, and before any bar taken from the column to its right. In the first table, a sequence of bars selected in order from the first to the eighth columns would combine to form a minuet beginning in the key of the tonic, and modulating by the last bar to the dominant — for example C to G. Providing the normal symmetry, though not that of the traditional AABA minuet, the second table contributes bars opening on the dominant and working their way back to the tonic. Each half would of course be repeated, giving a total of 32 bars per minuet.

As the title of Mozart's work suggests, the bars to be played were chosen by throwing a pair of dice. The range of numbers possible from a pair of dice is two to 12, and so the rows of the two tables were labelled accordingly, 16 throws in all generating the required bars in a hopefully random fashion. Loaded dice would definitely have been a disadvantage in this context.

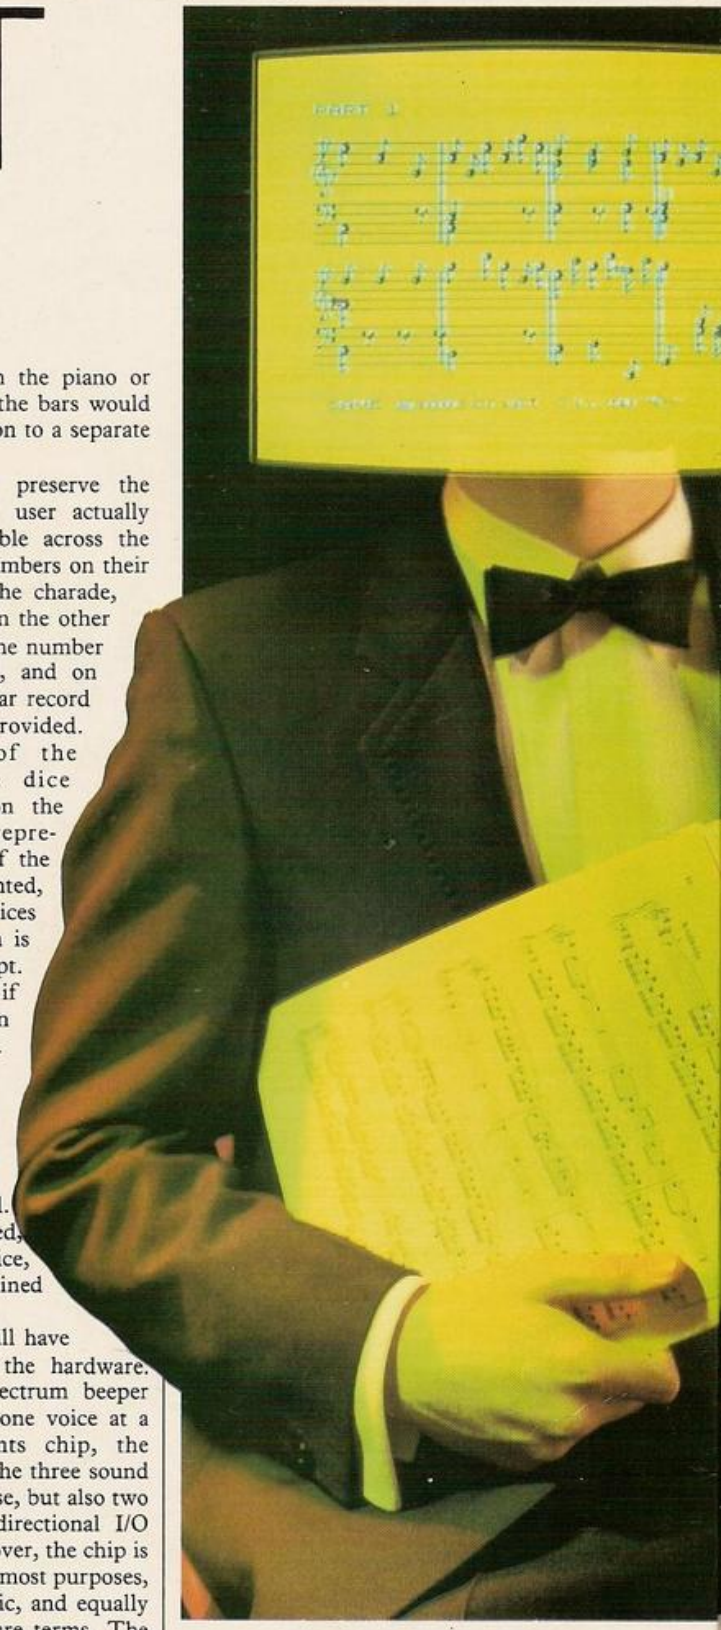
In practice, Mozart compiled three tables. The first two were organised in the manner just described, each cell containing a number from one to 176, pointing to one of the bars written out on full double staves in the third table. One cannot help feeling that he conceived the whole thing with computers in mind; the manuscript table of the bars was a serial table, and so presumably, if a sequence was to be played through on the piano or clavichord with any comfort, the bars would have to be transcribed in full on to a separate sheet of manuscript.

Our program attempts to preserve the flavour of the original. The user actually throws the dice, which tumble across the screen to reveal the desired numbers on their ten faces. And to complete the charade, appropriate numbers appear on the other two visible faces. A count of the number of throws made is displayed, and on completing 16 throws, a tabular record of the dice numbers is provided. Next, the manuscript of the music generated by the dice sequence may be printed on the screen in two sections, representing parts one and two of the minuet. After each part is printed, like the original, in three voices and on two staves, the option is given to Save the manuscript. This will be as hard copy if a printer is connected, or on tape as a named Screen if not. Then, after prompts for volume and tempo, and in one of two keys, the music will be played through in three-part harmony, and of course, may be repeated if desired. Other refinements are included, such as the ability to fix the dice, and so generate a predetermined sequence of bars.

By now the astute reader will have realised the *raison d'être* of the hardware. Valiant though it is, the Spectrum beeper cannot cope with more than one voice at a time. A General Instruments chip, the AY-3-8910 provides not only the three sound channels needed for our purpose, but also two entirely independent and bi-directional I/O ports, each of eight bits. Moreover, the chip is simplicity itself to program for most purposes, either in machine code or Basic, and equally convenient to drive in hardware terms. The spare appearance of the PSGIO board — Programmable Sound Generator and Input/Output — will bear the latter out.

Having said that the Spectrum beeper is not man enough to handle full-blooded, three-part Mozart, some readers will no doubt be relieved to hear that the software can be largely proved using the beeper before any hardware is actually connected. In fact, the program will automatically detect the lack of the interface and default to beeper. It must be stressed however, that the beeper routine gives only a very crude foretaste of the real thing.

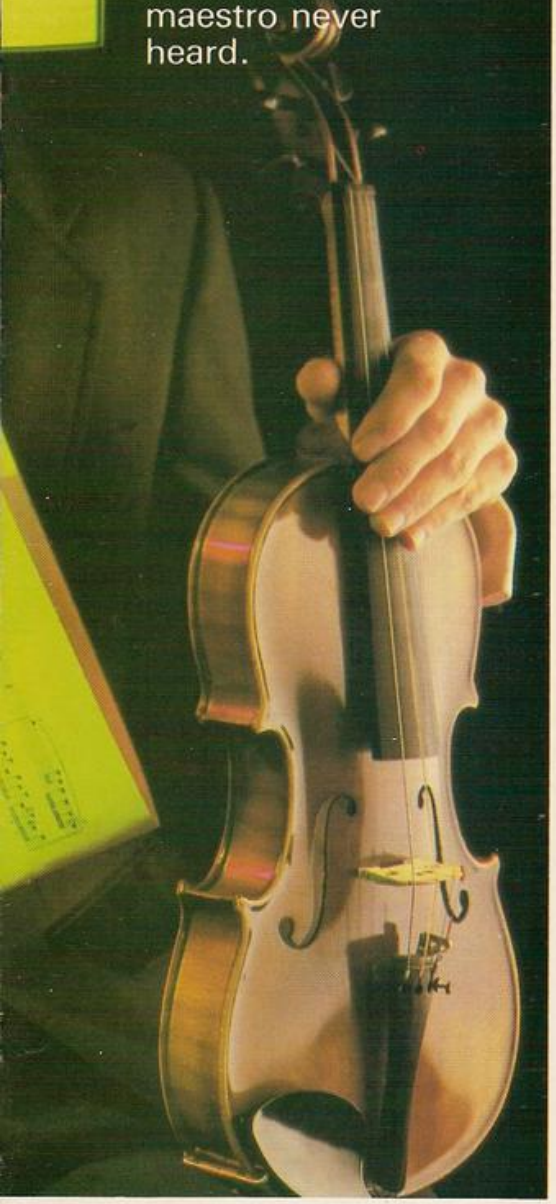
Figure 6. Sample stave.



The circuit of the PSGIO board is very straightforward, using only the AY-3-8910, two cheap 14-pin LS TTL integrated circuits, a common eight-pin audio amplifier chip and a small handful of discrete components.

It lays out naturally on 0.1in. pitch Vero board, with very little in the way of track-cutting or wiring involved. A ZX-81 type connector should be used, since this allows the simultaneous use of a ZX Printer. This connector has 23 pins per side, as opposed to the 28 boasted by the Spectrum; the shell of the printer extender will only admit a 23-way

Roll those dice and set Mozart spinning in his grave. Rod Hopkins applies the power of a Spectrum to the *Dice Waltz* to compose millions of genuine Mozart minuets that the maestro never heard.



connector. Taking this course also has the advantage that the board might be used with a ZX-81.

It is recommended that the connector be mounted on the board itself, and the whole plugged directly on to the Spectrum or printer connector without intervening wiring. The Spectrum is frustratingly sensitive to the loading caused by even the shortest of cables.

All of the components used in the circuit are readily available from the majority of suppliers advertising in the electronics monthlies.

Communication with the PSG is register-orientated. In practice, this means that the programmer first tells the chip which register he wishes to alter or read, and then sends or retrieves the relevant data to or from the register specified. All functions are controlled internally by the PSG, and may persist thus while the controlling program is busy with other matters. To perform these functions, the PSG makes use of the data programmed into its register array, numbered 0-15. Table 1 summarises the signal requirements of the two control pins of the 8910 that are used.

Table 1.

BDIR	BC1	
0	0	Inactive
0	1	Read from PSG
1	0	Write to PSG
1	1	Latch PSG Register Address

They are met by decoding two I/O addresses — that is, eight-bit addresses combined with the CPU signal IORQ — to talk to the chip, namely 221 and 223. The former address plays a dual role: OUT 221,X will prepare the PSG for a data transfer involving register X. On the other hand, IN 221 will have as its result the contents of the register last pointed to by an OUT 221 instruction: for example, PRINT IN 221 will print those contents. The other I/O address used, 223, is the output data destination address, if you like. OUT 223,Y writes the value Y into the register last referred to by an OUT 221 instruction.

All of the PSG registers are eight-bit registers, although some of them are handled as pairs. Note that Bit 0 is the least significant bit — LSB — while Bit 7 is the most significant — MSB. If two registers are combined, the register with the higher address — number — constitutes the most significant byte, the summed value of their contents being the low-register value plus 256 times the high-register value.

The value of each register bit, of course, can only be either a logic 1 or a logic 0; but, in their proper positions, the bits collectively form a binary number whose decimal equivalent can be calculated by adding together the weighted values of any bits set to 1, thus:

BIT 7	BIT 6	BIT 5	BIT 4	BIT 3	BIT 2	BIT 1	BIT 0	
1	1	1	1	1	1	1	1	=255
128	64	32	16	8	4	2	1	
1	0	1	1	0	0	1	1	=179
128	0	32	16	0	0	2	1	

If, for instance, a register contained zero, all bits would be reset, that is logic zero. And, to set a particular bit to logic 1, simply write into the register the decimal value of that bit, plus those of any other bits required set. Conversely, if a register were to contain 255, that is, all bits set to 1, and the need were to reset to zero bits 0,1 and 2, it would be necessary to write into the register:

(255-4-2-1) = 248

Now to move on to the PSG registers. Remember first of all that the chip has three sound channels, referred to as A,B and C; and note further that the two highest registers, 14 and 15, are used to transmit and receive data via the two I/O ports available. The PSG registers are utilised as follows:

Register

0, 1	Set Channel A Tone Period
2, 3	Set Channel B Tone Period
4, 5	Set Channel C Tone Period
6	Set random noise period on all channels.
7	Enable noise and/or tone on all channels. Control direction of I/O transfers for both ports.
8	Set Channel A amplitude
9	Set Channel B amplitude
10	Set Channel C amplitude
11	
12, 13	Set Envelope period and shape according to same pattern.
14	I/O Port A data
15	I/O Port B data

Channel tones are set by writing values into registers 0-5, each voice using two registers.

(continued on page 57)

..the name of the game

Imagine Software, Masons Buildings, Exchange Street East, Liverpool, Merseyside L2 3PN. Telephone: 051-236 0407

(continued from page 55)

Of each pair, the higher register only uses the four lowest bits. This means that the highest combined value that can be programmed for any channel is:

$$255 + 256 * (8+4+2+1) = 4095$$

An external oscillator or clock frequency is applied to pin 22 of the PSG chip. As a preliminary, this frequency is divided by 16 before being directed to the three channels, where it is further divided down by the numbers stored in the relevant tone period register pairs, producing the output frequency for each channel:

$$\frac{\text{CLOCK frequency}}{16 * \text{Tone Period Value}}$$

Amplitude Control is set by ignoring envelope control and writing into registers 8,9 and 10 any value from 0 to 15, the resulting volume being proportional to the number programmed.

To enable the channels and the I/O individual bits of register 7 are used for this purpose as follows:

1 = O/P 0 = Channel ON
0 = I/P 1 = Channel OFF

BIT 7	BIT 6	BIT 5	BIT 4	BIT 3	BIT 2	BIT 1	BIT 0
I/O	I/O	C	B	A	C	B	A
		B	A	NOISE		TONES	

Writing (255−4−2−1) = 248 into register 7 would thus switch on the tone outputs of all three channels, switch off noise on all three, and set both I/O ports to output mode. These bit switches are active when zero.

When you have built or acquired a PSGIO board, try the following routine, which simply demonstrates how to output a tone from channel A, and then switch it off. It is as easy as that; and the most complicated sound programs are little more than collections of similar instructions:

Program line	Rem
10 OUT 221,0	Point to channel A register 0.
20 OUT 223,200	Set tone period to 200. Leave register 1 at zero
30 OUT 221,8	Point to register 8.
40 OUT 223,10	Set channel A volume to 10.
50 OUT 221,7	Point to register 7.
60 OUT 223,254	Switch on channel A only bit 0 now equals 0.
70 INPUT "Press ENTER to switch off",A$	
80 OUT 223,255	PSG still pointing to register 7. Writing 255 to it sets bit 0 to 1.

Do not bother typing in the remarks; they are only included to make you feel quite certain as to what the routine is doing. Try adding extra lines in between lines 10 to 50 to program tones or noise for channels B and C. Remember to set the volume for each voice used, and to change line 60 to switch the required voices on.

First the Basic program — see figure 1. The only points to watch are that the length of line 1 remains unaltered; music manuscript file names are Poked into the Save expression in the following line, so that any additions to line 1 could cause havoc. Also, be careful with the machine-code addresses set up at the beginning of the program. Save the Basic at

The Working Spectrum

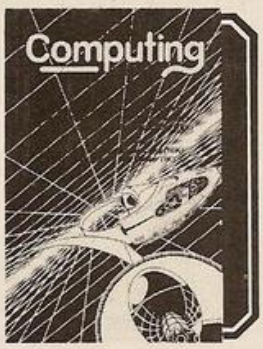
(228 page book)
The first well-documented collection of serious programs for the ZX Spectrum. Programs include a Basic Renumber which can handle Gotos and Gosubs, a character dictionary, a file-handler, several utility programs and a few games. Each program is built up out of re-usable subroutines.

£5.95

The Working Dragon 32

This is a companion volume to The Working Spectrum and includes several new features such as a Text Editor and a Music Composer and Editor. Other programs help you use the Dragon 32 as an accountant, for more advanced high resolution graphics, as a home tutor for education and for playing games. Each of the programs and subroutines is explained line by line to help develop your own programming skills.

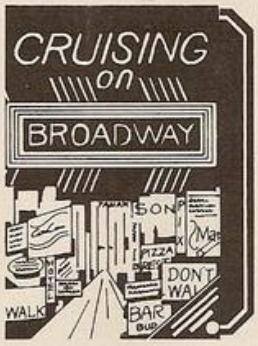
£5.95



Best of Popular Computing Weekly

Cassette
Four of the top Spectrum and ZX81 games from Popular Computing Weekly are recorded on this one cassette. The games are Laserchase for the 16K & 48K Spectrum, Kong's Revenge for the 16K & 48K Spectrum, Robot Control for the 16K ZX81 and Alien Attack, a Space Invaders type game for the 1K ZX81.

£4.45



Cruising (on Broadway)

cassette
Play Cruising, a new, fast, machine code game of skill for the 16K or 48K ZX Spectrum computer. You won't be able to beat it – the more you practice the faster it gets. Cash prizes are being offered for the highest recorded scores. See Popular Computing Weekly every Thursday for details.

£4.95

Please send me
Qty:

- ☐ **The Working Spectrum** at £5.95 each
- ☐ **The Working Dragon 32** at £5.95 each

A New Range From Sunshine Books Ltd

(continued from page 57)

the beginning of a tape by typing:

SAVE "MINUETZ"LINE 1

This allows it to AutoRun on loading, Line 1 fetching the tables and machine code from their final position on the tape immediately following the Basic.

Second, the bar table, figure 2, embodies the main data bank of the program, holding Mozart's 176 bars. 18 bytes of RAM are used to store the information for one bar. Since all of them are in three-eight time, and since the shortest note used was a semiquaver, the obvious time-slot of a sixth of a bar was chosen as the building block of the music. There is, in fact, one byte per channel per time slot. Figure 2 reveals something of the identity of the data by grouping them in bar "dominoes", with one time slot occupying a single domino row.

Using ASCII characters to represent the bytes has allowed a very compact table with a meaningful appearance and easy points of entry. Use the routine given at the end of figure 2 to enter the data. It mimics the printed listing on the screen as the bytes — in the form of strings — are entered, and allows you to start at any row of dominoes. If you wish to save the code at some stage prior to having entered it completely, type:

SAVE "MINUETZCODE"CODE 28930,3642

Before entering any code at all, always type Clear 28929. To continue with a half-entered table, type Clear 28929, Load in the code from tape, and again use the routine at the foot of figure 2, returning the appropriate bar to the prompt.

Third the machine-code routines and tables — figure 3. Having completed the bar table and Saved it on tape, type in the little loader at the end of figure 3. Type Clear 28929, and Load in the bar table, since the material in figure 3 will be part of the same 3,642-byte block of RAM. Run the figure 3 loader, and enter each block in turn, making sure you get the start address right, and of course, the number of bytes. The start address is the first address given under each block and the number of bytes is clearly marked.

Follow the same procedure used for figure 2 to save intermediate stages. Note that the figure 3 loader also mimics the layout of the printout on the screen to make checking of entries easier.

In the Basic program, lines 36-200 encompass the dice loop, generating the random numbers for the dice and drawing the dice themselves in their first two positions. But as you might imagine, there is a fair amount of work involved in drawing the dice. This could be handled only with the aid of machine code, which had the added advantage of economising on rapidly shrinking text-space. It may be of interest to point out that the final dice are drawn initially in "invisible" ink; this avoids flicker since the operation of converting the ink colour is a lot quicker than that of performing the calculations and drawing the dice with dots. Machine-code routines used are Dicemain, Drawdice and Prtdots, with their associated tables. Another subterfuge used for reasons of speed is that the monitor Circle routine is avoided.

Line 9890 — this short subroutine is called after the dice have been thrown to convert the

(listing continued on next page)

(continued from previous page)

dice numbers into equivalent bar numbers.

Lines 9916-9925 draw the blank manuscript, and lines 8530-8775 — see figure 6 — actually print out the music. Each voice is printed out in full before moving on to the next voice. The appropriate data is fetched from the bar table by the machine-code routine Notesort. Lines 8771-8775 actually print the notes, U being a flag to determine the direction in which the tails are drawn, Z being another flag indicating whether leger lines are required.

Line 9900 is a subroutine to print out the record of dice numbers.

Lines 9800-9835 play the music. The PSG is initialised in Basic before calling the machine code which actually outputs the music. The first entry point to the subroutine is at line 9830, the routine re-entering itself from line 9800 if a repeat is desired. Which machine-code routines are called depends on whether a PSGIO board is connected. If it is then Playmain is called, which in turn uses Playslot and Out. If no soundboard is detected then Musicbox is called, which simulates a musical box playing through the top voice only; even the clicks of the wards are included. Seriously though, the Musicbox routines — including Part and Beepout — are really only intended to verify the software as a whole if you have not yet got hold of a PSGIO board, and though fun, is no substitute for the real, three-voice original. On the PSGIO board, an output socket is provided to allow you to plug into the Aux input of your amplifier: this arrangement really does justice to the music.

Lines 207-253 call the manuscript drawing and play subroutines when required, and handle Saving of manuscript, as well as setting up volume and tempo variables.

Line 253 changes key each cycle, according to the factor KY.

Finally, a note on I/O: the two registers, 14 and 15 in the PSG give 16 bits of TTL-compatible I/O capability to the PSGIO circuit. As pointed out earlier, the ports can be driven completely independently of the sound generation; while sound is being output, I/O operations can be performed. The ports are bidirectional. Bits 6 and 7 of register 7 are used to dictate which direction is operational for each port; if either is set to one then the corresponding port is in output mode, if a zero setting, then the port is in input mode. The possibilities are endless.

There is nothing to stop anyone substituting his own bars for the Mozart using the information given in the text, and with the limitations that with the current arrangement only triple-time music can be accommodated.

Those familiar with machine code should find it relatively easy to cope with duple times by changing the number of slots and the cycle counters which handle them.

Some programmers will be unwilling or unable to deal with the effort of punching in the whole of Minuet2, or building the programmable sound generator and input/output board. If they wish, they may write to Rod Hopkins at 5 Greenside, Leslie, Fife KY6 3DD for a copy of the program at £3.25, or the fully-built PSGIO board together with the program for £19.75. Both prices include postage and packing.

Fast and tricky, M Percy's Maggots will soon have you wriggling at the keyboard.

THIS ADDICTIVE high-resolution game for the Dragon 32 does wonders for the reflexes and gets away from the era of laborious games with a ready-set maze.

Due to the amazing speed with which the Dragon works in Basic, this game — in which a red maggot runs around the screen and searches for food — can be very hard. A speed option is offered: this is done by setting the internal timer to a running speed of 1.8 MHz instead of the default of 0.9 MHz.

The idea is to move the maggot — which starts off in a random direction, but always from the centre position — round the screen, to the clumps of food which are represented by green dots. Movement is achieved by the use of the arrow keys. When a clump of food is eaten the maggot increases by a length or two.

Turning should be kept to a minimum because the maggot sloughs its skin. If the maggot hits this or the border then the game is lost. As more and more corners are turned the screen fills up with red lines. The bigger the maggot the longer the barricade of dead skin will be.

When the maggot has reached a length of 40 the game stops for five seconds. The screen then clears and play starts again, but instead of starting off 10 segments long, it starts with two so that more epithelia will be descarded, making the game harder than before. When three sets have been cleared the internal timer is set to Fast mode so that the game, if started in Slow, will now be fast. The game then continues with a new set appearing each time the maggot attains a length of 40 units.

Due to the way the end of the maggot is preset to keep it at the length specified by ML and the variables I and O a skin or skin segment immediately behind the maggot may disappear. This will only happen when turning and may be used to an advantage to reach food which was inaccessible — but be careful that the food is not erased as well.

Lines 20-30 clear room for the strings and set all necessary variables; lines 50-60 determine speed; and lines 70-120 set display.

In line 130, the Gosub moves to the food routine: the Goto is for starting the game.

Lines 150-200 place a clump of food in a random position with line 170 checking to see if the point is already set to read, and if so starts the routine again. Up to four blocks of food may appear in one clump or as little as one — variable M determines this. Line 150 places the food in the yellow area of the screen only. Line 230 starts the maggot moving in the appropriate random direction by the variable SM, and goes to the appropriate line number; lines 240-280 send control to the appropriate line number, and line 290 checks to see if any of the arrow keys have been depressed.

If none has been depressed or if the reverse key has been pressed, then the maggot carries on moving in the same direction or else goes

back to lines 240-280 for the next direction.

Line 300 checks to see if the next point to be PSet is red and if so moves the losing routine at 580. Line 310 checks to see if the next point is food and if so goes to the appropriate routine.

Lines 330-350 subtract the length of the maggot from the PSet position and preset these points so that the maggot does not appear as one continuous line.

Line 590 speeds the routine up and 700 slows it back down. Lines 790-850 search for food in an area of three by three around the maggot's head and for each little block found five points are added to the score. Line 840 then presets these points so that no food is left in that area. Line 860 goes to the routine for placing some more food in another random position. Line 870 adds two to the length of the maggot. Line 880 checks to see if it is 40 in length and if so goes to the routine at 900.

Lines 900-950 clear the screen and add 1 to the amount of sets cleared. Line 940 makes the game fast if a fourth set is reached. Line 950 gives the maggot a length of two and continues the game. Variable ML can be changed in line 880 to make the game easier or harder.

CHATTERBOX!

"OK Spock, you win *this* time....

NEW!

SAVE £££s

for

ZX81 SPECTRUM

NASCOM, VIC, PET, BBC, APPLE, TRS80, IBM, CRAY, ETC. (Please state)

ONLY £49

At last! Genuine phonetic synthesis at a sensible price. Gives your computer an *unlimited* vocabulary (nothing more to buy!). Self contained speaker/amplifier, Sinclair connector etc, **PLUS** Expansion socket for BIG EARS **AND** Monitor socket for Music Board. Full instructions, technical notes and programme examples supplied with this outstanding educational unit.

OR COMPLETE D.I.Y KIT £39

DEALER ENQUIRIES WELCOME

As seen on BBC TV "Computer Programme"

BIG EARS

STOP! GO! LEFT! RIGHT!

SPEECH INPUT FOR ANY COMPUTER

Hugely successful Speech Recognition System. complete with microphone, software and full instructions.

BUILT TESTED & GUARANTEED ONLY **£49**

PLEASE STATE COMPUTER: UK101, SPECTRUM, ATOM, NASCOM2, Vic 20, Micron, ZX80/81, PET, TRS80, MZ80K, APPLE II, BBC MICRO

NEW: FAST MACHINE CODE FOR ZX SPECTRUM £7.40

ZX81/SPECTRUM

MUSIC SYNTHESISER (STEREO)

+ 16 LINE CONTROL PORT

Play 3-part music, sound effects, drums etc. Full control of attack, decay and frequency. Input/Output lines provide control and monitor facility for Home Security, Robot Control, Model Railway etc. etc. Works with or without 16K RAM.

Add keyboard to make a live performance polyphonic synthesiser! Full instructions/software included.

AMAZING VALUE AT ONLY £19.50 (KIT)

Extra 23 way connectors at £2.60

£25.50 (BUILT)

THE COMPOSER

Music Programme for above synthesiser.
Enter and play 3 part harmony.
Includes demonstration tunes. Recommended **£7.40**

COLOUR MODULATOR KIT £15
RGB in, PAL/UHF out (not for ZX) BUILT £20

SPECIAL OFFER I.C. £18
SPEECH OUTPUT CHIP SX-01
Phoneme Speech Processor DATA £0.60

Please add VAT at 15% to all prices.
Barclay/Access orders accepted by telephone

BBC Micro SOFTWARE

FROM

FERNLEAF MICROSYSTEMS

1. **WORD-EDITOR £12.50 (p+p inc) model B**
   4 pages of text to write, delete, save, load, insert, draw tables, print etc. Package includes Manual. Ideal for almost all writing needs. Drives any printer for frilled printing & special formatting by embedding ASCII codes in text, to printer.
2. **HOME-FINANCE £12.50 (p+p inc) model B**
   Another must for the BBC micro owner. Package manipulates 10 separate accounts; handles direct debit, standing orders, financial forecasts plus printouts, includes manual.
3. **SKY-BIRD £9.00 (p+p inc) model B**
   Incredible game in fast real time graphics, exciting sounds & multi coloured graphics. Guide the flight of the sky-bird behind mountains, avoid the lazer hawk but watch out for unknown dangers behind the hills. Employs skill and returns untold enjoyment for all.
4. **SCREEN-DUMP £6.00 (p+p inc) models A+B**
   Superfast machine code program. Auto adjusts to any mode of user's screen display and dumps screen in 3 selectable sizes with colour discrimination. Includes instructions to use any printer.

We offer quality software to compliment the quality of this micro.
We also write software to order.
Enquire in writing.

VOLCANIC DUNGEON CHAMPIONSHIP

CARNELL SOFTWARE

WIN A FABULOUS 'WINGS' HOLIDAY FOR 2 TO FLORIDA.

VISIT THE AMAZING NEW EPCOT CENTRE

Volcanic Dungeon, the addictive adventure. People have been known to venture into its maze of caverns to rescue the Princess Edora again and again. If you are one of them, or wish to be, then you could find yourself lying on a **sun-drenched beach in Miami for a week. Followed by a further week at Orlando**, visiting **Disney World** and **Epcot**. So what do you have to do for all this? **Just be the best Volcanic Dungeon player in the UK, that's all!** Ten finalists will battle it out in the championship at the London Computer Fair, Earl's Court, in June 1983. **But first you must prove you are worthy.**

Volcanic Dungeon is available on the **16K ZX-81, 48K Spectrum and Dragon 32.** An entry form is supplied with every game. (Anyone who already owns the original ZX version can enter by sending a SAE for an entry form.) **Order your copy NOW** from **CARNELL SOFTWARE, 4 Staunton Road, Slough, Berks. Only £5.00** including P&P. **Also available from good microcomputer stores.**

The 'Judges' decision is final and no correspondence will be entered into. All business associates of Carnell Software, and their relatives, are disqualified from entry. A copy of the rules of the Volcanic Dungeon championship will be supplied with the entry form.

FORTH: ACE

Ralph Hilton gets his teeth into Forth games. Have an Ace munch.

WITH FORTH now available for home computers and the release of the Jupiter Ace, users suddenly have a machine and a language ideally structured to games that are fast, involved and without the relative complexity of machine code. Forth's compact programming means one can develop and test each of the elements of the whole program as one builds it up.

The disadvantage of not being able to code from the top down, as in Basic, is overcome easily by either flowcharting the proposed program or doing a simple logical list of its component parts.

The Jupiter Ace I used for this program has an actual memory availability for user Forth words of less than 1K. This may seem very little but it gives one sufficient space to create versions of popular arcade games that contain the main features of the originals and run very close to their speeds. In fact, I found that Pac-Man written in Forth actually runs faster than the game played at the local amusement centre. As it is one of the more popular games and contains many of the building blocks one would use in other games I chose it as the example for this article.

I have included all the main points of the arcade version, except for the power pills which would take up an extra 500 bytes at a rough estimate.

I have assumed that you understand the basic words used in the Ace but include an explanation of the specific techniques involved. To conserve memory the variables and words used have short names but I comment on each separately.

The sequence for the game is as follows. First, the graphics used for the man, ghosts, dots and wall are defined and the screen created. Next the variables are initialised and the man and ghosts placed in their starting positions.

The way the man moves is broken down into the following steps. First, a check to see if an appropriate key has been pressed, and the program continues with this sequence if it has.

The Inkey function on the Ace returns to the stack the ASCII value of the key pressed. This has to be converted into a number giving the change in position in the display file. The Ace display file is laid out in 24 rows of 32 columns, each at addresses 9216 to 9984. An up or down movement changes the memory location by 32 and a left or right movement changes it by 1. I have used these numbers to give the new location of the man.

Next the program checks to make sure the man does not bump into a wall and continues only if there is no risk of this.

Then a space is put in the man's last position, and the new position is checked to see whether or not it contains a dot. If it does, the score is incremented. If this score means that all the available dots have been eaten, the screen is refilled.

Now the man is moved to his new position which is stored in the appropriate variable. The ghost-moving section comes next. I found that this was most easily done by having a separate variable for each ghost's position which is put into the variable used by the subroutine as each ghost is moved.

The sequence for each ghost starts by checking whether the ghost should move up or down or neither according to the relative position of the man, and then makes sure that it does not hit a wall. A random generator is used to allow the ghost only limited movement — the game would be impossible if the ghost was always correct, and boring if its movement were fully predictable. When a ghost moves, the space it leaves is replaced with a space or dot as appropriate. This is done by a method which is explained fully in the actual coding. The same procedure is used for left and right movement of the ghost. If the man now occupies the same position as one of the ghosts the game ends.

Obviously all these procedures need additional subroutines to generate the random numbers and refill the screen with dots when required.

The game is loaded in three sections to make full use of the memory but no reloading is necessary to replay.

First, the graphics section is prepared. I have assigned user graphics for the wall and dots as this makes it far easier to type in the screen itself. The graphics are placed into a section of RAM which is calculated as starting at 11264 plus the ASCII code of the character one is defining multiplied by 8. As typing in a list of binary digits is tedious I have converted all the values to decimal.

Here is the listing for the graphics section:

```
: NM 36 126 219 90 126 255 126 36 ;
```

This word puts the values used for the ghost on to the stack. It is a separate word because it is needed several times.

```
: GR 8 * 11263 + DUP
     8 +
     DO
        i C! -1
     +LOOP ;
```

This word takes nine numbers from the stack; the first eight define the character and the ninth is the ASCII value of the character. It makes a loop, using as its limits the sections of memory at the beginning and end of the space we want to fill. It then puts each of the numbers into its appropriate place. It is taken from the Ace manual.

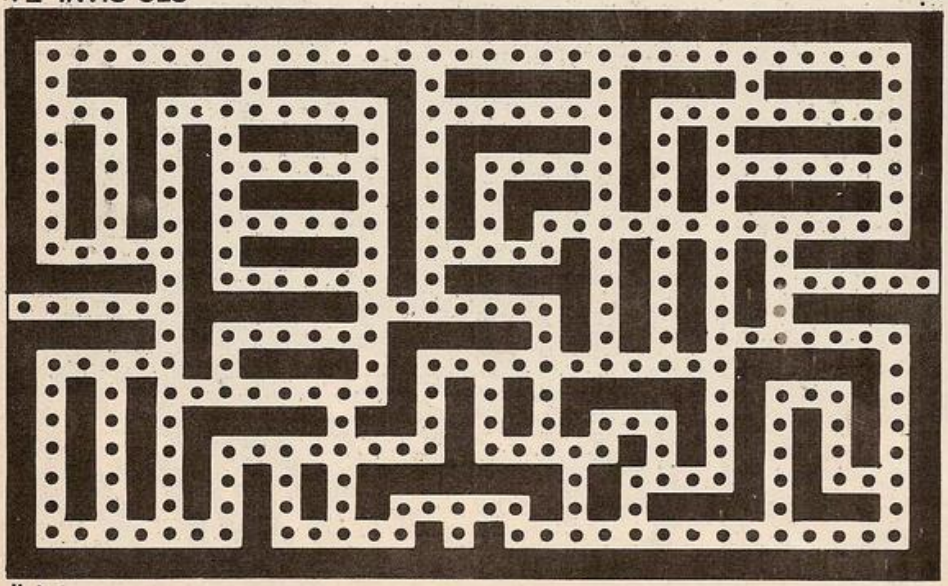
```
: A 85 170 85 170 85 170 85 170 1 GR      Wall
    0  0  0  24 24  0  0  0  2 GR         Dot
   28 20  8 127  8 20 34 65 3 GR          Man
   NM 5 GR
   NM 35 GR ;
```

When you have typed this in, A will run the routine and store the characters appropriately. This section should then be saved on tape by starting the tape player then entering

SAVE GRAPHICS

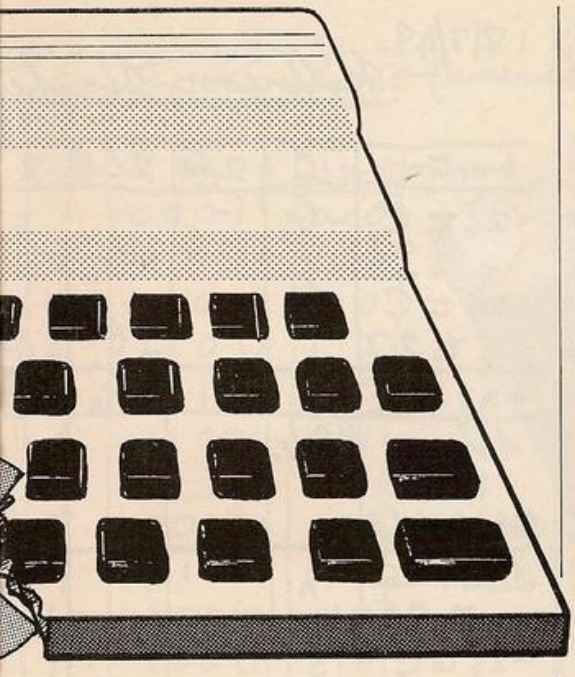
The maze display: snappers and gulpers thrive in this sort of environment.

```
: Z INVIS CLS ."
```



```
" ;
```

FOR GAMES



You can then verify it as explained in the manual and delete it from memory using

FORGET NM

to leave space for the next section, the game itself.

For this section first enter the variables;

```
0 variable A     The score.
0 variable X     The man's position.
0 variable W     Used for the position of the
                 ghost being moved. Y and Z
                 are moved to W as needed.
0 variable Y     The positions of the two
0 variable Z     ghosts.
```

Only two ghosts have been used — a third would fit in the memory but with the speed at which the program runs would make it almost impossible to win.

```
0 variable SD This holds the random number.
0 variable K This sets the difficulty level.
```

The subroutines used by the main words need to go in next so that the compiler recognises them when called from the upper words.

```
: B This fills the screen with dots wherever
    there is no wall and is used whenever the
    dots are all eaten.
    9856 9216
    DO Sets a loop to go over the whole
    screen.
    i c@ 1 = 0 = Checks that the space does
    not contain a wall.
    IF
      2 i c! Puts a dot there if it does not.
    THEN
LOOP
5 Y @ c! 5 Z @ c! Puts the ghosts back on
                  the screen.
Y @ Z @ = IF 8 Y @ c! THEN
```

When a ghost leaves a position then 3 is subtracted from the ASCII value of the character so that it is left as it was; dots use 2 and spaces 32 so the ghost is given values 5 and 35, and 3 is added to the ASCII when the ghost is moved there. Here if the two ghosts are in the same place when all the dots are eaten then 2 + 3 + 3 has to go in that space giving a dot when they both leave.

```
K @ DUP 2 > IF 1- THEN K ! Increases the
difficulty level if it is not at maximum;
: RND This is taken from the Ace manual and
      covered there.
      SD @ 75 u* 75 0 D+
      OVER OVER u< - - 1-
      DUP SD!
          u* SWAP DROP ;
: CPS
```

This is used to add 3 to the position that the ghost moves into and add 253 when it leaves. Adding 253 achieves the same as taking away 3 as one is using a single byte.

```
      SWAP OVER c@ + SWAP c! ;
```

Next the main routines are typed in. M is the routine for moving the man complete with associated checks and score changing. The comments could be typed into the machine but would take up valuable memory and so should be omitted.

```
: M
  INKEY DUP DUP
  52 >SWAP 57 <AND
  This checks that the key is one of the cursor
  control keys 5 to 8; these have ASCII values 53
  through 56.
IF
  52 - DUP Puts the number into the range 1
       to 4
  4 MOD 1 > 31 * 1+ MOD gives the
    remainder after dividing by the preceding
    number so cursor keys 6 and 7 will leave
    32 on the stack while keys 5 and 8 leave 1
    on the stack.
  SWAP 3 < -2 * 1+ * This multiplies the 32
                     or 1 obtained by -1 if
                     keys 5 or 6 were
                     pressed.
  X @ + DUP c@ DUP Leaves on the stack
    the new value of X and two copies of
    what X currently contains.
  1 = 0 =
  IF Continue only if one will not collide with a
    wall.
    32 X @ c! Put a space in the old position
              of the man.
    2 =
    IF Check if the man is eating a dot.
      A @ 1+ DUP DUP A ! 21 0 AT .
      326 MOD 0= IF B THEN Add 1 to the
      score; print the score; check whether all
      the dots have been eaten and refill
      screen if more left.

    THEN
    3 OVER c! X ! Put the man in the new
                  position and store the value
                  of X.
    99 40 BEEP
  ELSE
    DROP DROP Removes unused numbers
              from stack.
  THEN
ELSE
  DROP
THEN ;
```

The routines G and H are used together. H is used twice by G to actually move the ghost. H should be typed in before G.

```
: G W @ DUP X @ 16 - <32 * Compares
    the values of X and W to see whether or
    not the ghost should move down. It puts
    32 on the stack if it should.
    SWAP X @ 16 + > - 32 * + H puts - 32
      on the stack if the ghost should move
      up, and then uses H to move it appro-
      priately.
    W @ 32 MOD X @32 MOD > - 2 * 1+ H
    Puts 1 or -1 on the stack after comparing
    the horizontal positions of X and W to
    move ghost left or right.
: H W @ + DUP c@ Finds the new position
                 of the ghost.
  1 = 0 = Makes sure that it is not in a wall.
  K @ RND 0= AND Uses the difficulty
                 variable K and RND to
                 limit the probability of
                 the ghost's movement.
  IF
    253 W @ CPS Puts a space or dot where
                the ghost was.
    3 OVER CPS Puts the ghost on the
               screen.
    W ! Stores the new position of the ghost
  ELSE
    DROP
  THEN ;
```

The routines are now linked together by the program word which is Run.

```
: RUN FAST
  9249 X ! 9339 Y ! 9479 Z ! Sets initial
                   positions of man and ghosts.
  0 A ! Zeros score. 6 K ! Sets initial difficulty.
  B                Fills the screen with dots.
  3 9249 c!        Puts the man on the screen. B
  ;B               puts on the ghosts.
  BEGIN            The main control loop.
    M                Move man.
    Z @ W ! G W @ Z !  Moves the ghost Z by
      putting its value into W which is used by H.
    Y @ W ! G W @ Y !  Does the same for Y.
    X @ DUP Y @ = SWAP Z @ = OR
  UNTIL Compares X to Z and Y. If either
        equal X then the procedure ends
        otherwise it goes back to Begin.
  SLOW
  999 999 BEEP ;
```

The game is stored entering

SAVE RUN

The screen is created and, then saved as a series of bytes. Enter

: Z INVIS CLS."

leaving enough space between the CLS and ." so that there is only one space left at the end of the line. Use Shift 9 to put the Ace in graphics mode then, using A for the wall and B for the dots, type in the 20 lines of screen per the attached diagram. On the next line type " ;

Entering Z will now give you the screen in the correct position and it can be saved on to tape by entering

8192 768 BSAVE screen

Start the tape and press enter.

Clear the memory with

FORGET Z

The program is now loaded with

LOAD GRAPHICS

A

FORGET NM

Enter these three together and then start the tape. Stop the tape when you see the cursor.

INVIS LOAD RUN 0 0 BLOAD SCREEN

Enter this and then restart the tape. Stop it when the screen is full. You can now play the game by entering Run.

If you have queries about the program I can answer them. Write to me with stamped, addressed envelope at 23 Grimston Avenue, Folkestone, Kent. ■

INCREDIBLE S

IF YOU ARE buying an Oric 1 computer, you are acquiring a piece of microelectronic equipment that is the state of the art in home computers. Inside the Oric case is a 6502A central processor unit, CPU; two 2764 read-only memory — ROM — chips;a 6522 versatile interface adaptor, VIA; and eight 4164 dynamic random access memory — RAM — chips as well as a number of other integrated circuits.

All these circuits are mounted on a printed-circuit board and there are inputs and outputs to connect the computer to the outside world. That hardware specification produces a computer that will calculate using one or more high-level languages, control a printer or some other peripheral piece of equipment, interface with a Modem for communicating via British Telecom telephone lines or store and retrieve information from a mass-storage unit called a floppy disc. The Oric computer must contain nearly one million transistors and uses perhaps five watts of power.

You may be forgiven for having a blasé attitude towards "the chip". Although home computers continue to develop at breakneck pace, a number of small machines with a built-in Basic interpreter have been available for three or four years in this country.

But compare, for a moment, the Oric with the Mark 1 computer built at Manchester University in 1948. Like the Oric the Mark 1 used dynamic memory. Flip-flops, the electronic circuit at the heart of static memory devices, had to be constructed out of EF-50 pentode valves and the quantities that would have been necessary were simply not a practical proposition.

So Professor Williams, the head of the development team, invented a way of storing binary numbers using a 12in. diameter cathode ray tude, CRT, roughly similar to the tube in a portable television. He found that it was possible to detect the presence or absence of a pulse by the charge generated in a plate held against the front of the CRT — where the picture would normally be displayed. The charge decayed in about 0.2 seconds but if it was refreshed within that time, it was possible to store 2,048 bits for a period of several hours.

The memory for a stored-program electronic computer was the most troublesome problem at that time. Other groups worked on the development of memory storage using mercury delay lines in which a vibration, or sound wave, was put into one end of a trough of mercury and recovered some time later at the other end.

This technique was also dynamic because the impulse had to be recirculated constantly if the information was not to be lost. One advantage of the Williams tube over the mercury delay line was that it allowed random access, while the mercury store was a serial device where one bit chased another down the trough.

The Mark 1 computer had a 32-bit word length compared to the eight-bit bytes that are now standard in the Oric and other home computers. The main store of the machine consisted of a single Williams tube storing 32 words, and — as far as one can make any comparison — that is matched by the 48,000 bytes available in the full Oric.

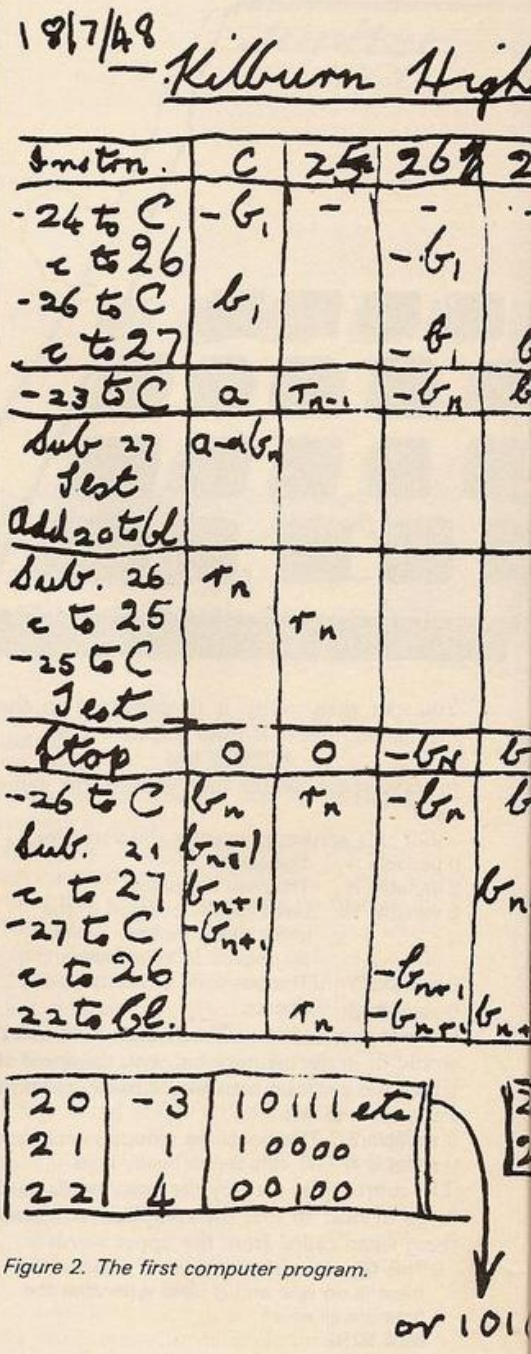


Figure 2. The first computer program.

Figure 3. Memory circuits get cheaper.

John Dawson fixes the microscope on the market that grows as its commodites get smaller and cheaper -thanks to less costly integrated circuits.

COMPUTERS

The arithmetic logic unit, ALU, simply a part of the CPU in the Oric, consisted of a subtractor built from valves and an accumulator and was made — once again to save cost — out of a Williams tube. The Mark 1 took 1.2ms. to carry out each instruction — about 800 instructions per second.

Figure 1 is taken from *History of Manchester Computers,* National Computing Centre, and shows the instruction set for the Manchester Mark 1 — the world's first stored-program electronic computer. Figure 2, from the same publication, shows a revised version of the first computer program, the first program actually ran in June 1948.

Some 18 months later an enlarged version of the Mark 1 was doing useful work for the University and IBM was negotiating for the use of the Williams tube under licence in its 701 series computer.

Magnetic drums were built to increase the quantity of information that could be stored during a program's execution, and Ferranti marketed its Mark 1 computer, based on the Manchester design, with a drum backing store that would hold 3,750 words. The drum store could be extended to hold 15,000 words.

Remember that this was a computer that was sold both in this country and abroad and which provided a "computing power far in excess of the University's own requirements". Hardware was an accurate term for these machines. The weight of the valves and other components meant that rigid metal frames were required to support the circuit boards.

As one small part of the whole machine, a computer of the late sixties using a ferrite core store with a capacity of 4,000 bits would have a frame about the size of a single-bed mattress with driver amplifiers and read circuits to store and recover the state of each core in the small block in the centre of the chassis. Contrast also the 25 kilowatts consumed by the early Manchester computers with the power requirements of the Oric.

Later, in 1959, Manchester started the design and construction of Atlas, which was to be the world's largest computer. The Manchester Atlas was formally brought into service in December 1962. The machine had a 48-bit word, 16K of main store and 8K of read-only store. Interrupt handling, which you now take for granted, was a notable feature of the machine and allowed the connection of up to 512 peripherals. An Atlas computer was used at the SRC laboratory at Chilton until 1974.

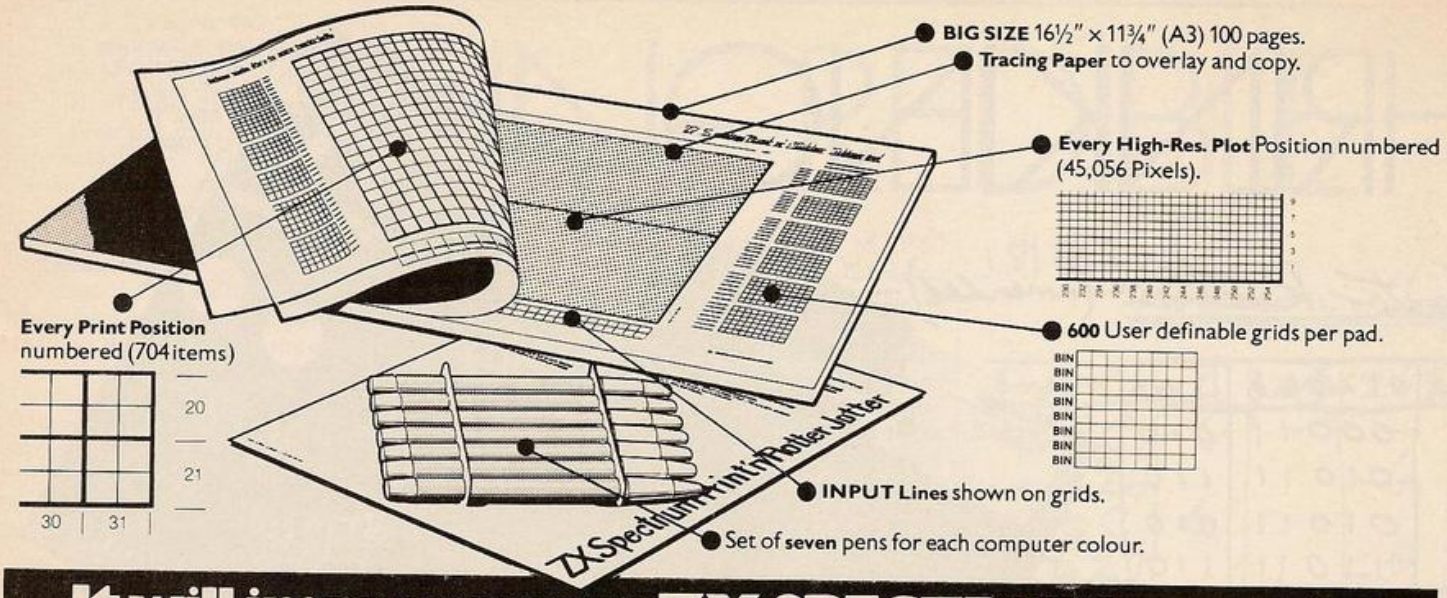
The development of the transistor around 1947 took some time to percolate through into the design and construction of computers. Early point-contact transistors certainly saved power when compared to valves, but had rather unstable operating characteristics. Nevertheless computers were the ideal market for transistors and for the solid-state integrated circuits that followed.

The reason for the success of the transistor in computer circuits is that digital designs require large numbers of active devices in comparison to the analogue designs used for communications equipment and the entertainment market. A six-transistor radio was an advanced piece of equipment in the early sixties and if it had a radio-frequency amplifier employing another transistor, it was definitely upmarket and advertised as such.

On the other had, a central processor unit such as the 8085, marketed by Intel uses about 6,200 transistors and that takes no account of the memory for the computer or the other control circuits.

It would be comforting to think that the development of microelectronics for the

(continued on page 73)



It will improve your ZX SPECTRUM graphics in ways you wouldn't believe possible.

Your new ZX Spectrum is literally packed with sophisticated graphics. Colour. High resolution. Plot. Draw. Circle. Border. Ink. Paper Colours. User-defined characters to name just a few!

That's why we have packed the new Spectrum Print 'n' Plotter Jotter with every facility to exploit your graphics to the full.

After the first few weeks of "playing" with your computer you will want to get down to serious programming and planning in which professional-looking graphics should play a major part.

What better way to work it out than with a Print 'n' Plotter Jotter?

The professional pad

Print 'n' Plotter is not just another programming pad.

Just look at the specifications:

BIG SIZE 16½" x 11¾". 100 Pages — 50 Print Grids and 50 High Resolution Plot Grids.

Printed on high-quality tracing paper, enabling you to overlay the pages for direct co-ordination between PRINT and PLOT or to copy from illustrations, maps, charts, photos etc.

PRINT Grids show all numbered co-ordinates for the 704 screen positions, plus INPUT lines.

PLOT Grids show every numbered co-ordinate for the 45,056 Pixels!

Each pad contains 600 user-definable grids for use with the BIN n, POKE USR "a" function.

And the whole thing is fully bound with fly leaf cover and complete with a set of seven colour pens!

The simple way to get serious

Spectrum Graphics can become very complex, so before you start to program the best way is to work it out on a Print 'n' Plotter and save all those errors!

Take for instance the common CIRCLE. With a Jotter you can establish the exact screen location for the centre in seconds, and it will stop you running out of screen because of a too large radius. Working our DRAW is similar: pre-determine DRAW lines and PLOT positions before you start. With a Jotter you can build-up graphics using every facility with a direct co-ordination between each.

For instance, correct PLOT OVER or PRINT OVER positions will be easy with a Jotter.

See the show for just 95p!

To demonstrate the graphic possibilities with the SPECTRUM JOTTER we have produced a cassette-based Demonstration program for only 95p (inc VAT and P&P). Why not send for a copy, or order it together with your JOTTER?

Just part of a range of ZX products

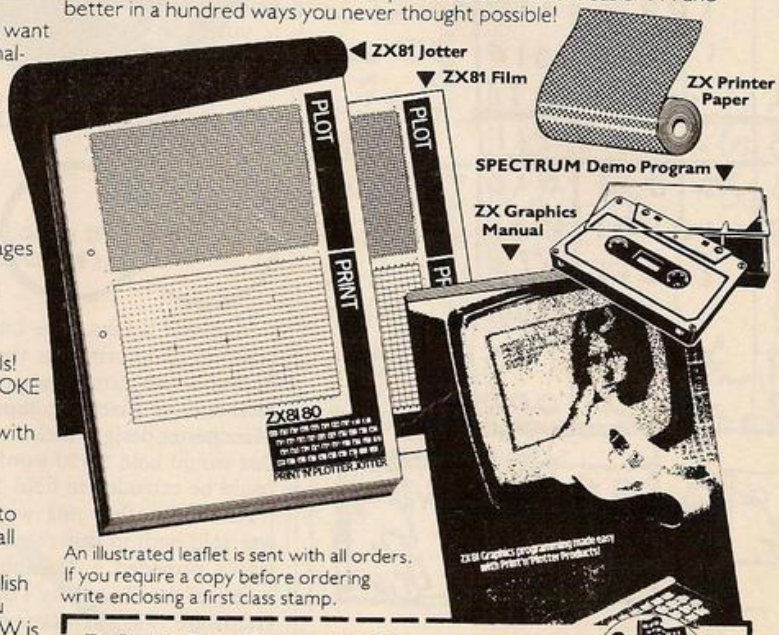
The Spectrum Jotter is, of course, an upgraded version of our popular *ZX81 Print 'n' Plotter Jotter and Film*. For ZX81 owners these are available by direct mail or through a growing number of retailers and compshops.

The ZX81 Jotter is a 100 page Graphics pad that exploits to the full the graphics facilities of that micro. ZX81 Film is a matt film version of the Jotter which is re-usable and ideal for 'copying' graphics.

Our manual: "*ZX Graphics programming made easy*" explains everything you need to know about using the ZX81 products, and when used in conjunction with the Spectrum cassette will prove to be the definitive guide to the subject.

And for ZX users (whether Spectrum or ZX81) we still market Printer Paper at £1 less than Sinclairs!

Why not write and place your order today? Graphics can be a very serious subject . . . Print 'n' Plotter products can make it easier . . . and better in a hundred ways you never thought possible!



An illustrated leaflet is sent with all orders. If you require a copy before ordering write enclosing a first class stamp.

To: Print 'n' Plotter Products (YB) 19 Borough High Street, London SE1 Please forward me the following products:

..... ZX SPECTRUM JOTTERS @ £9.95 each.
..... ZX81 JOTTERS @ £3.50 each.
..... ZX81 PLOTTER FILMS @ £2.25 each.
....."GRAPHICS PROGRAMMING MADE EASY" MANUALS @ £1.50 ea
..... PACKS OF ZX PRINTER PAPER (5 ROLLS) @ £10.95 per pack.
..... ZX SPECTRUM DEMO CASSETTES @ 95p each.

PLEASE NOTE ALL PRICES INCLUDE POST, PACKING AND VAT FOR U.K. DELIVERIES (Overseas should add 25% for additional Surface Mail)

Remittance enclosed payable to Print'n'Plotter Products.

6th ZX MICROFAIR FEBRUARY 25th NEW HORTICULTURAL HALL, LONDON SW1

Print 'n' Plotter Products

Most Print 'n' Plotter products are available 'over the counter' from the following retailers: Branches of W. H. Smith ● Buffer Micro Shop, Streatham, London ● Denny's Booksellers, London EC1 ● Georges Bookshop, Bristol ● Telford Electronics & Computing, Hollinswood, Telford ● Personal Computer Services, Darwen, Lancs.

(continued from page 71)

computer market came about because of the opportunities for enhancing the lives of individuals or even for commercial reasons. Not so — microelectronics was spawned by missile and satellite programs and promoted by military and space agencies in the United States.

Integrated circuits became possible only after someone conceived that transistors, resistors, diodes, and so on, could be separated by insulation on the same piece of silicon rather than the physical separation which previously had been the rule. In 1964, Gordon Moore, the director of research at Fairchild, predicted that integrated circuits would continue to double in complexity every year. In 1977 some circuits that were commercially available contained more than 260,000 elements and Moore's law has continued to hold true.

The cost of integrated circuits has declined consistently. Figure 3 illustrates the downward trend for memory circuits. Changes in technology have helped to keep the trend running according to Moore's prediction. X-ray lithography is a form of contact lithography which allows the production of integrated circuits with finer "wires" — strips of metal that connect one circuit element to another — than was possible with ultraviolet or visible light lithography. Gallium arsenide offers much higher switching speeds than silicon and the Josephson Junction, operating at temperatures close to absolute zero, may be the fundamental component of the future.

We may have swapped the expensive, heavy, power-consuming, air conditioning of the past for a similar refrigeration plant in the future to allow a few cubic inches of silicon to run at BIPS speeds. BIPS? — billions of instructions per second, of course. A few cubic inches? Well, the speed of light starts to slow a computer down when different parts of the machine are some distance apart. Josephson Junction machines will operate most efficiently if the computer can be kept within a total dimension of a few inches in any direction so that electrical impulses do not have to travel even a few metres from one part of the micro to another.

How does all of this reflect on the little Oric — the state-of-the-art machine? The Oric uses essentially the same architecture as the first Manchester machine. John von Neumann set out the principle of a computer in which the instructions are combined with the data, the Harvard architecture separated the two.

The beginners' all-purpose symbolic instruction code — Basic — high-level language supplied with the Oric is beyond the dreams of the first pioneers in the North of England. After all, it was those connected with the earliest computers who thought, as they gazed at the machine in almost religious awe, that four computers would be sufficient for the world's computing needs. ■

Decimal value of function bits	An early notation	Modern mnemonic	Explanation of operation
0	s, C	JMP S	Absolute indirect unconditional jump: set the control register equal to the contents of address S.
1	c+s, C	JRP S	Relative indirect unconditional jump: add the contents of address S to the control register.
2	-s, A	LDN S	Load negative: set the accumulator equal to the negated contents of address S.
3	a, S	STO S	Store: copy the contents of the accumulator to address S.
4 or 5	a-s, A	SUB S	Subtract: set the new value of the accumulator equal to the former contents minus the contents of address S.
6	Test	CMP	Compare against zero: the value in the accumulator is tested. If it is less than zero, one is added to the control register thus causing the next sequential instruction to be skipped.
7	Stop	STP	Stop: cease automatic mode, and await manual commands from the operator's keyboard.

Figure 1. The Manchester Mark 1 instruction set.

THE SPECTRUM POCKET BOOK

160pp £6.50

Trevor Toms, best selling author of the ZX81 Pocket Book and the Sinclair Learning Lab, turns his attention to the ZX Spectrum — the book you have been waiting for! All the material in the book is totally new.

Programs

- Castle walls; boiling oil and lovely slurping noises
- Great Fire of London; try and change the course of history
- Chase; outwit the pursuing robots and lead them to their doom
- Truly amazing; generate a new maze puzzle every go
- Reversi; the classic oriental strategy game with board screen display
- 3D Maze; race against time and three dimensions to escape.

Hints & Tips

Discover new ways of using PRINT; INSTR functions, VAL, PRINT USING, hexadecimal conversion, upper case conversion, load and save arrays. BEEP with sliding tones, automatic scroll and how to use all the machine features within machine code.

Machine Code

All the tools you need to write machine code effectively. Graphics tool kit — debug monitor — symbol assembler (with labels, all ED commands, ORG statements, forward and relative jumps) — disassembler (with label assignment); now you can really dig into the Sinclair ROM! This section alone would be stupendous value for money!

ZX-81 EDITOR

Trevor Hill sets out a more comprehensive and user-friendly machine-code monitor for the Sinclair ZX-81.

MANY machine-code routines suffer, in my opinion, from some deficiency, typically not disassembling all Z-80 instructions; not dealing correctly with RST 08 and RST 28 instructions; not easily allowing the loading of other programs while the routines are in memory; not providing facilities for expansion; not being particularly user-friendly.

These routines have been written in an attempt to overcome these difficulties. The first three routines and operating system occupy just under 2K of memory and present a formidable task to input and get working in one go. I would therefore suggest that the program is broken down into several stages.

The machine-code utility program is intended to provide routines that are particularly user-friendly. The routines are tucked away in memory so that their presence is not noticed until they are actually required.

Figure 1 details the Basic program which is loaded into the computer in the normal manner. Once loaded the program runs automatically placing the machine-code routines — initially held in a string in the variables area — at the top end of RAM. A reduced value for RAMtop is then automatically set and the program commits hari-kari by executing New. This brings into operation the revised value of RAMtop so protecting the machine code, and wipes out the loading program, giving what appears to be a completely empty RAM.

Any other program on which you may want to use the routines can then be loaded in the normal way. To access the routines the following lines of Basic are added to the program:

```
9996 STOP
9997 POKE 16417, 0
9998 RAND USER 32598
9999 GOTO 9996
```

The menu is displayed by Run 9999. You will see from figure 2 that the menu has been designed to accommodate up to 16 routines. The program now waits for you to select a particular routine by input of the appropriate hexadecimal digit. The digit is displayed and once checked the routine may be executed by Newline.

This first routine is a disassembler routine which deals correctly with all the Z-80 instructions as used on the ZX-81. In particular it recognises that the instruction RST 08 is required to be followed by one data byte and that RST 28 may be followed by any number of data bytes terminated by 34. When executed you are asked for the start address, finish address and dump details, one to printer — any other hexadecimal digit to screen.

Figure 3 illustrates the format used whenever input is required: a prompt message followed by a question mark.

The routines have been designed to protect the user as far as possible. For example if the routine is requesting an address it will only accept hex digits and these have to be of exactly the right length.

Once you have input the data, the question mark will remain until you confirm it is correct by typing Newline. Should you make a typing error this may be corrected, as in Basic, by using the Rubout key — Shift 0.

In this, and any of the other routines, whenever input is being requested the routine may be terminated by using the Break key.

The bottom section, figure 5, is a typical output from the disassembler. The first column gives the start address of the instructions, the second the instruction code and third the mnemonic.

Since this is a one-pass disassembler, labels are not included, therefore all jump-relative instructions give, as part of the mnemonic, the absolute jump address.

If the output is to the screen then Screen Fill will generate the usual message — report code 5. Display may be continued, as in Basic, by use of Cont.

The features detailed for the previous routine apply to the Print Data routine. The output is now data rather than instructions.

This Write routine enables code or data to be Input. The start address is requested and then code or data may be input. It is intended that each line of input should correspond to one instruction so the maximum number of bytes that will be accepted is 4. The program knows that each byte occupies two hex digits, so it will not allow an odd number of digits to be input.

Figure 4 lists a suitable Hex loader. Run 100 to list code, Run 300 to write code, and Run 500 to execute code.

As it stands the code in the line 1 Rem statement — figure 5 — will wipe out the Loader program so the following modification is necessary during development.

Change byte 40A7 to C9. This is the Ret instruction code and will stop the routine executing New. Now while you are developing the program you will have to manually set the reduced value for RAMtop each time the computer is switched on and before loading the partially completed program. This can be done by direct commands:

```
POKE 16389, 116
NEW.
```

The menu operating system, first three routines and data occupy just under 2K of memory and the string variable has been set to make the top 3K of RAM available. Therefore 1K is spare for further routines, but the program may be easily modified to make more memory available if necessary.

The machine-code listings have been taken directly from the program using the disassembler and therefore should contain no errors but be careful not to confuse 8,B 6,5 and so on.

If you do not relish writing such a large machine-code program then I can supply a tape and full loading instructions for £3. They may be obtained from Trevor Hill, 1 Highcroft Close, Yardley Gobion, Northants.

HOW TO GROW UP TO A REAL COMPUTER

If you're enthusiastic about microcomputing, sooner or later you'll ask yourself the question . . . "where do I go from here?"

This is particularly true if you own a micro with limited expansion and hardware peripheral options . . . like the ZX81.

Now your question can be answered in three short words:

BASICARE MICRO SYSTEMS

BASICARE are the inventors, developers and manufacturers of a totally unique microcomputing upgrade system.

It's the sort of system others have dreamed about . . . a series of separate modules that perform a whole range of microcomputing functions that simply (and firmly) stack together.

How BASICARE build into a complete computing package.

If you're confused . . . don't be . . . you only have to think of it in terms of the way Hi-Fi equipment has evolved.

You buy the hardware you want and add to the system! Each module may have a separate function or integrate functions. And when you want more . . . you add more!

In short you can develop a whole range of hardware options that fit together to form a complete package . . . "Computing" in the real sense of the word!

And what a package!

Apart from it's good looks and stability under working conditions, BASICARE MICRO SYSTEMS offers a fantastic range of micro options for ZX81 users.

Of course, such a system needs a starting point from which to expand. The heart of BASICARE'S system is a unique computer interface which we call PERSONA.

This one unit simply plugs into your ZX81 without modification and acts as the "brains" of the whole operation.

Thereafter you choose how you want to expand your micro by simply plugging-in more modules.

Look at the choice you have:

PERSONA — An interface module to enable an ORGANIC MICRO to grow on the ZX81.
MINIMAP — A memory mapping device to extend the address space of the ZX81 from 64K bytes to 1 M bytes.
RAM 08 — A low cost, low power memory expandable from 2K to 8K.
RAM 16 — 16K Add on memory at remarkably low cost.
RAM 64 — A TRUE 64K Add on memory.
DROM — Ultra low power memory backed by rechargeable battery for non-volatile storage of programs and data.
TOOLKIT — A module fully socketed to take up to 8K bytes of utilities in EPROM/ROM.
PERICON a — A general purpose, user programmable device providing 24 lines of input/output.
PERICON b — 24 lines of heavy duty output to access and control the outside world.
PERICON c — A module to drive 80 column printer with Centronics type parallel interface.
USERFONT option — User definable characters available for RAM 08, DROM and TOOLKIT.

Of course, there's lots more BASICARE Modules under development including joysticks, EPROM Programmer, Floppy Disc Controller and much more.

BASICARE is the sort of system that GROWS when you grow . . . and remember, when you change your micro, you will be able to change to a PERSONA unit to suit your new equipment!

In short, BASICARE will serve you forever . . . no matter how big you want to grow!

"As space is limited to describe BASICARE products, we have produced a fully documented brochure . . . send for it today (enclosing stamp please).

BASICARE MICRO SYSTEMS are available by mail simply by sending today together with cheque/PO/Access or Barclaycard No. Please indicate clearly your exact requirements.

Table 1. Memory map showing main routines only.

Address	Mnemonic	Comments
07BD	Decode	Finds keyboard character code; ROM.
0A2A	Cls	Clears screen; ROM.
0B6B	Print Str$	Prints mnemonic string: ROM
0C0E	Scroll	Moves display up on line; ROM.
4021	Flag Y	Bit 0-change print position; Bit 1-Print Newline Bit 2-dump to printer; Bit 7-change restart address.
407B	Restart	Contains restart address following full screen and cont command.
7400		Spare
7822		bytes
7823	Routine 0	Disassembler
78E7		Spare
78FC		bytes
78FD	Start/finish addresses	Print request for input and then call input address routine.
7902	A addresses	Print request for the number of addresses specified by register A then call input address.
7909	Check printer	Sets Bit 1 of FLAGS – 4001 – if printer required.
7920	Routine 1	Prints data.
7953	Routine 2	Write.
7983	DEFB	prints data associated with RST 08 and RSt 28 instructions.
79C7	Data	Calculates absolute address for JR instructions and adds number and addresses to mnemonic.
7A14	Input address	Input one address and store in memory.
7A2E	Initial	Sets data at commencement of disassembling each instruction.
7A3D	Next address	Prints next address in Hex.
7A4F	Octal	Converts binary number to octal.
7A62	Cont RST	Called if screen full during decoding of RST 08 or RST 28
7A72	Next byte	prints a byte of instruction.
7A9D	Offsets	Various routines to find mnemonic data. Called from control.
7AD4	Control	Master routine in disassembler.
7B0B	Transfer	Moves data around memory.
7B53	Print string	Main print routine.
7B81	Check finish	Used to determine end of routine.
7B93 7B9E		Data for input prompt messages.
7B9F	Add String	A number of routines to built up mnemonic.
7C00 7CFF		Data for mnemonics.
7D00 7DFF		Data and data pointers for disassembler.
7E00 7EFF		Print data for menu and routines
7F00 7F1F		Addresses of routines
7F20	keyboard	Reads keyboard.
7F56	menu	
7FA5	input string	heart of all input routines.
7FE0 7FEF	mnemonic string	holds instruction mnemonic as it is built up.
7FF0 7FF7		Spare bytes.
7FF8	next	Contains next address for routine.
7FFA	finish	Contains finish address for routine.
7FFC 7FFF		Spare bytes

SPECTACULAR GAMES AND UTILITIES

— FEATURING FULL COLOUR AND SOUND

SPECTRUM 16/48K

TRACK-N-ATTACK

Shoot down the enemy carrier based helicopters using your laser beams. Complete with on-screen scoring and full graphics.

SUPERSCRIPT M.P.F.

Enhance your programmes with this magnified print facility. (MPF). Features full positioning and character size selection.

BLACKJACK

The classic card game (21s/Pontoon). Full colour on screen presentation of bets, wins and debts — with your Spectrum as the croupier.

CHAR-WALLAH

Over 40 ready defined characters for you to liven up your own programmes. Includes — Airplanes, Helicopters, Space-Ships, Faces and Card-Suites.

GET THE BEST NEW PROGRAMS AND THE ALL-TIME GREATS, SPECTRUM OR ZX81

AT SOFTWARE SUPERMARKET NOW

We started Software Supermarket with just one idea. To play all the Spectrum and ZX81 games we could find, to select the very best, and to offer only those to our customers.

Judging by our mail from all over the world, you're very pleased with our free selection service. It's impartial (we produce no programs ourselves) and it saves you £££'s on stamps and mistakes.

And it's fast. We usually despatch your order within 48 hours. Here's the best of the new and the best of them all for your Spectrum. Plus some great ZX81 games. Full detailed catalogue sent free with every order. Or send large SAE for catalogue only.

ZX SPECTRUM: 16/48K

Our latest Top 10 Programs for your Spectrum. They run on both 16 & 48K.

3D TUNNEL Brilliant NEW 3D graphic game by Malcolm "Escape" Evans. Fly down the winding 3D tunnel shooting bats, spiders, frogs and rats! Demo mode: 3 speeds: training program for each phase. And (48K only) watch out for the Tube train! (New Generation) £4.95

3D TANX NEW game with stunning graphics. Shoot the enemy from your 3D tank turret. 3 play levels: accurate ballistics: 1 or 2 players: hold feature: demo mode: training program. And choose your own control keys: even plays 'God Save The Queen'! (DK'Tronics) £4.95

WINGED AVENGER *"One of the best...covers all the stages of the arcade original...a game to come back to." Pop:Comp:Wkly.* Very fast 'PHOENIX'. 7 play levels: 3 attack waves: laser shield: mothership with smart bombs. (Work force) £4.50 (16K ZX81 version, £4.50)

GROUND ATTACK *"Best Spectrum version of the arcade game" Yr:Comp: "Very absorbing" E&C: "Extremely good" Pop:Comp:Wkly.* Thrilling SCRAMBLE'. Pilot your ship thro' 26 zones: up, down, brake, thrust: smart bombs: as you get better, it gets harder. (Silversoft) £5.95

CENTIPEDE The first - and fast - Spectrum version of the famous arcade game. Full arcade movement - left, right, up, down, fire - as you attack the centipede. Great graphics. Watch out for the jumping spider! 3 lives: hold feature. (DK'Tronics) £4.95

ESCAPE *"One of the best and most original games we have seen" S.User.* 5 very real dinosaurs chase you round the maze as you search for the axe to escape. Different maze every time. 5 play levels: 9 speeds: Hall of Fame. (New Generation) £4.95

GULPMAN *"The one cassette that I would buy...an exceptional program." Pop:Comp:Wkly* 15 mazes, each with demo mode: 9 speeds: laser gun helps against 4 chasers. Program your own control keys: personalise/save your very own game. (Campbell) £5.95

COSMOS NEW! Fantastic graphics. Loads in 2 parts (instruction manual first). Protect your 9 ships against 18 aliens, warp mines, asteroids. Your graphic on-board computer helps with elaborate displays. Our favourite new game. (Abbex) £4.95

FAUST'S FOLLY The first adventure we've seen that's worth playing in 16K. It's great and it's got graphics! Loads in two parts: clear instructions first. Then a smashing adventure with directions, inventory, look, score, save. Amazing! Abbex) £4.95

OTHELLO *"Recommended without reserve...a superb opponent" Yr:Comp.* The great 19th Century power game. Surround your opponent: capture his territory. Millions of different games: maximum 60 moves each. 1 or 2 players: demo game: 9 skill levels: print. (Mol) £7.95

ZX81 OWNERS!

Special 16K ZX81 versions of 6 of these programs are available:

WINGED AVENGER	**£4.50**	**PIMANIA**	**£8.00**
OTHELLO	**£6.95**	**CHESS 2**	**£9.95**
BLACK CRYSTAL	**£7.50**	**GREAT BRITAIN LTD**	**£4.95**

Use the coupon to order. Free detailed catalogue of our best ZX81 games with every order. Or send large SAE for catalogue only.

48K SPECTRUM ONLY

These programs use nearly all the Spectrum's 48K. They will not run on the 16K Spectrum. But there are versions of Black Crystal, GB Ltd, Pimania and SpecChess for for 16K ZX81.

PIMANIA *"The best adventure game we have reviewed" S.User. "An adventure enthusiast's dream" C&V Games.* Best use of Spectrum graphics and music we've seen. A wonderfully witty adventure - and you could win the £6,000 Golden Sundial of Pi. (Automata) £10. (ZX81 16K version: £8)

TIMEGATE *"The best graphical game I have seen on any micro" Interface. "Excellent graphics...one of the best" Yr:Comp: "Fast and furious...required playing for any Spectrum owner" Which Micro?* 5 skill levels: training program: Hold: Hall of Fame: keyboard overlay: 26-page on-screen manual: (Quicksilva) £6.95

THE HOBBIT *"Superior to any other adventure game available for the Spectrum" Yr:Comp:* Free 285-page illustrated book of The Hobbit contains clues to help solve the adventure. 30 beautiful full-screen pictures: 500 word vocabulary: 16 page instruction manual: save: print: pause. It took 4 people 18 months to write! (Melbourne House) £14.95

GREAT BRITAIN LTD *"A colourful and sophisticated management game" Pers:Comp:wld: "Difficult and challenging" ZX Comp:* Even plays 'Rule Britannia'! Choose your party and run the country. Will inflation and unemployment come down or the rioters come out? It's up to you. Then watch the results on election night! (Hessell) £5.95 (16K ZX81 version, £4.95)

SPECCHESS *"The standard for ZXChess" ZX Comp: "The strongest chess program" Pop:Comp:Wkly.* Full graphic chessmen: 7 play levels: all legal moves: position analysis for problem-solving: recommended move option: print game history. (Artic) £9.45 (ZX81 non-graphic 16K version £9.95)

BLACK CRYSTAL Take the adventure of your life. 180K of program to unravel, on two double-sided cassettes! You must solve each of the 6 stages to defeat the Lords of Chaos. Real-time monster battles: 16 command keys. (Carnell) £7.50 (16K ZX81 version: Over 100K loads in 7 parts. £7.50)

These driving barrelhouse boogies, penned by Adam Macielinski, take you for a stomp through the Vic's three music channels and show you how to orchestrate a full polyphonic sound to suit your musical tastes.

PLAY THAT BOOGIE

THE VIC has three sound generators: one bass, one tenor, and one soprano. Each generator can be used independently or together. Most of the time, only one, or even two generators are used. One good example of two sound generators working together is in Bug-Byte's Vicmen.

Here we shall delve in to the art of using three sound generators at the same time without creating discords. People with a musical ear should understand the method used very clearly. The method adopted is to set up a fixed left-hand section of the keyboard using the bass and tenor sound generators.

The notes for the left-hand voices are stored in a Dim statement. To make the left-hand less boring and monotonous three different keys have been used, but the chord played is still the same. Therefore a total of 12 different notes will be stored. In the first demonstration program — which includes a humorous animation — the set of chords is played twice and the third chord is in the same key as the first chord.

With each key played, four notes may be played to accompany the left-hand chords. In the key of C-major the notes for the right-hand are as follows — the right-hand column gives the value in the Vic manual.

```
10 HERE ARE SOME OF THE GRAPHICS AND CONTROL
20 CHARACTERS USED IN THE PROGRAM
30 "Q" - COURSOR DOWN
50 "]" - CURSOR UP
60 "]" - CURSOR RIGHT
70 "]" - CURSOR LEFT
75 "S" - CURSOR HOME
77 "]" - CLR

190 "\" - SHIFT + M
200 "●" - SHIFT + Q
```

(continued on next page)

(continued from previous page)

Note	Value
C	225
E	231
G	235
top C	240

In both demonstration programs the right-hand notes are handled by a Dim statement and are played randomly by using

INT(RND(TI)*4) + 1

The TI ensures that a totally random number is produced. This method then produces a totally random tune together with the main left-hand chords, using all three sound generators.

The second demonstration program uses a more complicated set of chords which produces a mixture of two or three sound generators going on at once. This is because the first four notes in the left-hand Dim statement were all more than 0, whereas the rest of the Dim contained half 0s and half proper notes. This creates an interesting effect and the contrast between two-part harmony and three-part harmony shows well.

With a lot of experimentation — unless you have a piano or a similar instrument — you could produce your own tunes and left-hand chords. Perhaps you could even add a little white noise to the tune to give it an alien, sinister quality.

I would advise against turning up the volume too far: quite apart from the neighbours, the faithful old TV cannot stand the wear and tear that multi-harmony tunes can produce. So just remember to play it cool.

The second demonstration program.

Make much more of your computer!

More memory for your ZX81!

ZX-PANDA.
The uniquely expandable 16K RAM pack

The professionally produced 16K RAM Pack that is expandable to 32K simply by plugging-in our expansion module.
Start with 16K . . . expand later to 32K!
Solidly built, attractively cased to fit perfectly on to a ZX81 without wobble!
Includes LED power indicator.
The RAM pack that won't become redundant when you want more than 16K!
16K Expandable RAM **£32.95**
16K Expansion Module **£19.95**

More sound from your ZX Spectrum!

Echo

Not only more sound, but better sound and a wide range of other facilities!
Control Volume, and adjust tone of sound!
Load and Save without switching leads!
Audible cue facility for tape programs!
DIN compatibility!
No additional power supply needed!
Attractively cased – looks good – SOUNDS GOOD!
Only £23.50

More memory for your Jupiter Ace

Pacer

The uniquely expandable 16K RAM pack

New

Similar concept to ZX-PANDA but for the incredible Jupiter Ace.
Attractive, solidly built 16K RAM pack with the facility of expanding to 32K by plug-in module.
For more power to faster FORTH . . . you need a PACER!
16K Expandable RAM **£29.95**
16K Expansion Module **£19.95**

More memory for your VIC-20

Vixen RAM Cartridge for the VIC-20

Switchable between 16K or 8K + 3K.
Gives you the option of full 16K RAM or 8K and 3K RAM in one package. When added to a Standard VIC-20 gives 16384 bytes of extra memory in memory blocks 1 and 2 or 3092 bytes of extra memory into the 3K memory block AND 8192 bytes of extra memory switchable between memory blocks 1 and 3.

Fully compatible with available motherboards/modules.
Simply plugs into the rear expansion port of computer.
No re-addressing of existing BASIC programs needed. **Only £44.95**

Tandem

Expandable Expansion System for the VIC-20
Gives 4 expansion slots for VIC-20 cartridges.
Custom-designed case. Plugs directly into computer. Further expanded by using TANDEM System!
ROM socket for expansion.
No extra power supply needed.
Only £34.95

Figure 1. A listing of routines used in the machine code with the Start addresses. The machine code is in the form of a decimal dump in blocks of six bytes with the Start address of each block given.

Start address	Routine
29666	Check and accept 0-255 and Print keys pressed in Input lines.
29859	Pause until key pressed. Uses Halt command.
29871	Check last key press.
29900	Check number selected with menu options 1, 3 and 6.
29951	Main typewriter calls for un-shifted and single shifted keys.
29971	Double-shifted key calls.
29978	Print 8 × and 1 × size redefined characters.
30076	Print Spectrum and "new" redefined characters.
30157	Print "decimal-number" prompt.
30182	Print screen format for Redefine Mode.
30364	Print instructions routines.
30774	Data for sub-menu.
30821	Restore character mode in use.
30831	Print sub-menu.
30855	Data for menu.
30986	Print menu.
31013	Set screen and input lines bright.
31027	Erase-a-page start.
31038	Next page.
31067	Data for double-shift alternative character set.
31083	Store character mode in use.
31097	Normal and single-shifted key calls
31177	double-shifted key check and calls.
31214	Justify.
31242	Erase part of a page.
31293	Find cursor.
31316	Rubout.
31350	Justify subroutine.
31493/4/5	Spare.
31496	Data for Justify.
31500	Insert/delete.
31599	Spare.
31600	Find page.
31624	Erase a complete page.
31636	Print a page.
31664	Squeek.
31684	Buzz.
31710/11	Spare.
31712	New character set codes.
32481	Set parameters of page to be printed and call print page.
32489	Spare.
32490	Tap.
32500	Check character to be plotted.
32534	Plot character.
32573	Set Spectrum character mode.
32580	Set new character mode
32587-91	Spare.
32592	Set Over 1 for cursor.
32600	Plot cursor.
32651	Data for cursor position X,Y top left = 1,1.
32653	Cursor handling for Newline, Space, and put character plotted into x$ array.
32692-32767	Cursor keys check and move as required. Uses In function to read keys being pressed instead of Peeking Last Key 23560.
Data	
31616	Page number in use.
32501	Character code of key to be Plotted.
31529	Number of characters to be inserted or deleted.

THIS PROGRAM for the 16K Spectrum started out as a straightforward typewriter program in Basic with approximately 30 bytes of machine code to plot characters on to the screen in such a way as to give 42 characters per line. But the program was slow and used too much RAM, leaving little free for data storage.

The solution was to convert all the routines into machine code and maintain a minimum of four pages of data with 42 characters per line, this being the equivalent of five and a quarter pages of text if the normal 32 characters per line were used.

Up to this point I had been using the Spectrum character set, but the upper-case letters were touching each other and making the text illegible. I added a new character set with all the characters redefined on a six-by-eight pixel format. This created the option of using the Spectrum set or the new typewriter-mode set.

The program starts with the main Menu, which has six options.

The Start option takes you into the typewriter mode. It begins by asking for the page required and printing the selected page. This is done to avoid accidental overtyping of an existing page of text. A cursor is placed in the first character position at the top left of the screen, and can be moved to any position by means of Caps Shift and cursor controls: keys 5-8.

The cursor always indicates the position of the next character to be typed. If the cursor is moved over existing typing the character will change to white Ink and show through the cursor. If a character is overtyped, then it will be printed on top of the existing character, but the last character typed is held in the memory of the computer.

All Spectrum characters are available, using Shift keys as necessary, and all but the double-Shifted ones are auto-repeat.

Incorrect entries can be quickly erased by the use of Caps Shift and Delete. This will erase the character behind the cursor and backspace the cursor over the deleted character. At the start of a line it will erase the last character on the previous line and backspace on to that line. This function is also auto-repeat.

A Newline is obtained by pressing Enter, and this function will also auto-repeat. If the cursor is on line 22 then Enter will move the cursor to the end of line 22 where it is split into two, bracketing the last line, to indicate that the end of the page has been reached.

This method is used to erase the last character on a page, the cursor being in effect after the last character. There are several options available in this mode and, as a guide, these are indicated on line 24, with the keys necessary for each option shown in inverse video. The next options require both Shift keys to be pressed before the option letter. First, n(ext) will scroll the page off the screen and replace it with a copy of the next page. This can be used after finishing typing a page or to read through the pages. If you are on page 4 then the next page will be page 1. Second, m(enu) will take you back to the main Menu. Third, z is the copy key and, as it suggests it will copy the page on the screen to the printer.

A further facility is the Edit mode. This is accessed by Caps Shift and Edit, and when selected will give you five options. These will be printed on line 24 of the screen with the key presses for each option shown in inverse.

Insert — when selecting this option the cursor must be over the first character in the block to be Shifted right. You will be asked how many characters you require to be inserted; this must be in the range 0-255. The decimal number can be entered either with leading zeros like 032 or 006, in which case the Spectrum will atuomatically accept the number without the need for Enter, or as a "normal" number, that is, 32 or 6, in which case, if it is less than 100, the use of Enter is required. Each key press is checked, a buzz will sound if the entry is not valid and three questionmarks will be printed. A zero entry will skip this routine.

The Basic program.

The maximum number of characters that can be inserted is one less than the number of characters from the cursor to the end of the page if this is less than 255.

Any character pushed off the page by this routine will be lost. After a number has been accepted the page will scroll off the screen and be replaced instantly with the modified page and the cursor, still in its original position, so that the required information can be typed in.

Delete — this option is similar to Insert in that the cursor is placed over the first character in the block to be deleted, and you will be asked how many characters you require deleting before the page is scrolled off the screen and reprinted with the correction made.

The Erase option will erase part of a page reaching from the end of the page to the line below the cursor. So the cursor must be placed on the last line of typing that you wish to keep before this option is called. The erased part of the page will scroll up and off the screen; the retained part stays in position.

Justify — there are two Justify options, with both you have a further choice of justifying the whole page or the cursor line only. So if only the cursor line is required, be sure to place the cursor anywhere on the required line before this mode is selected. Justify left will scroll the page off the screen and reprint it with the line or page shifted to the left-hand margin. Justify left/right will scroll the page off the screen and reprint it with the line or page shifted left and the space between words padded out so that the last letter of the last word in each line is at the right-hand margin.

These last options can be skipped if the Edit mode is accidentally selected by pressing any other key. The Edit mode cannot be selected with the cursor at the end of the page.

The Stop command stops the program with the usual report and a message that "Continue will restart at Menu". If the program is broken then Goto 9000 will also restart at the menu. If Run is used then all existing typing will be erased.

The Erase-a-page option will ask which page is to be deleted. Any choice other than 1-4 will take you back to the menu. The page selected will be instantly erased.

Pages can be Loaded and Saved on tape with appropriate options. You will be asked to name the pages when Loading and Saving; the usual rule of 10 characters maximum applies.

The Change-typeface option will give you three options: Normal, New and Redefine.

Normal gives typing with the Spectrum characters, but because of the squashed look of the eight-by-eight pixel format, certain characters will look odd.

New: because of the problems outlined above, a new keyboard has been defined to give a six-by-eight character set. When this mode is selected, all typing on the Spectrum will use the new characters, the program listing may be shown in the new characters, but instructions and menus will still use the Spectrum set.

Redefine: any character in the new set can be redefined with this option. The Spectrum will require the character to be redefined and the decimal number of lines 1-8 of the new character. A display will be given showing the Spectrum character selected with the new character beside it; above this will be a grid with lines 1 to 8 and columns a to f indicated. As each decimal number is entered the character will be shown magnified on this grid and the actual size character will alter its shape accordingly.

The character grid is in two colours, yellow and green; the yellow area indicates six columns a to f, and any redefined character should stay within this area as it is only this part of the character that is plotted on the screen.

With this routine the whole keyboard could be redefined to suit your needs. If you want to retain your redefined keyboard then the word processor program will need to be reSaved with the command Goto 9900.

The Spectrum will either buzz if an

(continued on page 88)

Now's the time to tackle that long-deferred oeuvre with Stuart Nicholls' fast machine-code word processor

ZX KEYBOARD FOR USE WITH 80/81 SPECTRUM

Our new cased keyboard has 52 keys, 12 of these are used for the numeric pad. The numeric pad offers some useful features, you can cursor with one hand and it will be a boon for anyone who enters a lot of numeric data. The pad is a repeat of the 1-9 keys plus it has a full stop and a shift key. The numeric pad keys are coloured in red, the normal keyboard keys are grey, with the case being black which makes the whole thing very attractive. The case measures 15 x 9 x 2½. The computer (either 80/81 or spectrum) fits neatly inside. You will have to remove the computer from its original case, it is then screwed to the base of the case. The case had all the bosses already fitted and the screw holes are marked. Also fitted inside the case is a mother board (81 model only) which allows 16K, 32K and 64K to be fitted in the case. All the connections are at the rear of the case i.e. Power, Mic, Ear, T.V. and the expansion port. The case is large enough for other add ons also to be fitted inside. One of these could be the power supply, then you could very quickly fit a mains switch, or a switch on the 9V line. This means you have a very smart self-contained unit. This case does not stop you from using any other add-ons that you may have e.g. Printer etc. We are convinced that this is the best keyboard available at present. It offers more keys and features than any other keyboard in its price range.

£45

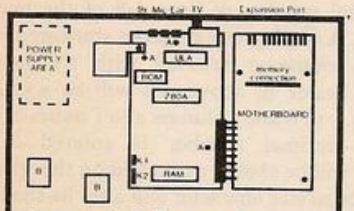
KEYBOARD (SPECTRUM/81)

NOTE

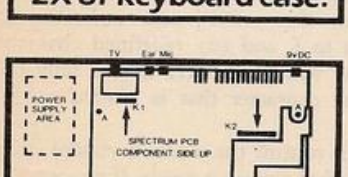
The case can be purchased separately with the keyboard aperture uncut, so if you have one of our early uncased keyboards, or in fact any other suppliers' keyboards, these could be fitted. The keyboard is connected to your computer by a ribbon cable and this has connectors fitted which simply push into the Sinclair connectors. It is a simple two minute job and requires no electronic skills. This keyboard does not need any soldering. Please specify on order whether you require the ZX 81 or Spectrum case.

SPECTRUM MODEL

This is supplied with spectrum legends, and a slightly different base for fitting the spectrum inside, again all the connectors are at the rear of the case and there is plenty of room for the power supply (and other add-ons). Should you want to change, we can supply both the Spectrum legends and details of updating your case which will enable modification from the ZX 81 to spectrum. PLEASE specify on your order whether you require the ZX 81 or spectrum case.



Internal fixing for ZX 81 keyboard case.



Internal fixing for spectrum keyboard case.

SPECTRUM LIGHT PEN

The pen enables you to produce high resolution drawings on your own television set, saving a vast amount of time over using basic programming statements, such as Plot, Draw etc. You can erase, modify and save drawings and it comes complete with software program. The superb light pen is available from D.K. tronics.

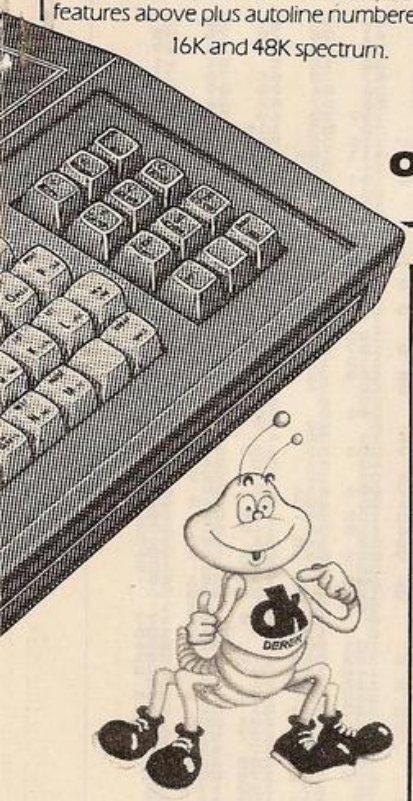
ZX 80~81 Spectrum HARDWARE

SPECTRUM/81 TOOLKIT

This is the toolkit which won acclaim in the feature in the August 1982 issue (pages 29 and 30) of Sinclair User. "It is the most impressive program, fast in execution with clear and full instructions...it stands out from the rest of the field." The ZXED is a powerful editor for use on the expanded ZX81. It is intended for use by the serious BASIC programmer and offers several useful and time saving features most helpful during all stages of program development. The facilities provided are as follows: ALTER, BYTES, COPY, DELETE, FIND, HELP, INSERT, KEEP, MOVE, RENUMBER AND VERIFY. The Spectrum Toolkit contains most of the features above plus autoline numberer and append, and will run in the 16K and 48K spectrum.



Both at only £6.95

4K GRAPHICS ROM £24.95

The DK Graphic module is our latest ZX 81 accessory. This module unlike most other accessories fits neatly inside your computer under the keyboard. The module comes ready built, fully tested and complete with a 4K graphic ROM. This will give you an unbelievable 448 extra pre-programmed graphics, your normal graphic set contains only 64. This means that you now have 512 graphics and with their inverse 1024. This now turns the 81 into a very powerful computer with a graphic set rarely found on larger more expensive machines. In the ROM are lower case letters, bombs, bullets, rockets, tanks, a complete set of invaders graphics and that only accounts for about 50 of them, there are still about 400 left (that may give you an idea as to the scope of the new ROM). However, the module does not finish there, it also has a spare holder on the board which will accept a further 4K of ROM/RAM. This holder can be fitted with a 1K/2K/RAM and can be used for user definable graphics so you can create your own custom character sets.

WHY WAIT?
ORDER TODAY FOR FAST DELIVERY

FLEXIBLE RIBBON CONNECTOR

If you have ever had whiteouts or system crashes this could be the answer. It stops the movement between the computer and the RAM expansion, it is supplied with a ribbon, 6 inches long, with a male connector at one end and a female at the other, at only **£10**

16/64 MEMORY FOR ZX 81

16K Memory £22.95
16K (uncased) £19.95
64K Memory £52.95
64K (uncased) £49.95

The above illustration shows the casing for the 16K or massive 64K.

UM MEMORY

ansion £22.95

Dynamic Ram Chips. We use the dynamic as they are much denser than upy less space. They are also much cheaper than the equivalent product m. The Ram is manufactured with high quality materials, and uses high ams. It is supplied ready-built and only needs to be plugged into the rear of the components are fitted into holders. This massive add-on memory ou fully assembled and tested is the cheapest 16K memory available any- memory from 16384 to 32768. (Same as the Sinclair memory.)

16K (UNCASED) £19.95

ansion £52.95

rmation on the 16K also applies to the 64K Memory Expansion, but the he 64K giving nearly FOUR times the memory. This advanced model has ory. In addition, the block from 8K to 16K can be switched out to enable d-ons. The graphics ROM is to be used in this area. Position in Memory: ock From 8192-16384 is switchable.

64K (UNCASED) £49.95

y Expansion £35.00

trum to 48K of user Ram. The Spectrum memory expansion is simple to fit, nside the case, and then only requires plugging in. Full fitting instructions he only tool you will need is a screwdriver and just two minutes of your quires no electronic skills. Position in memory from 32768 to 65536. (The pgrade to 48K).

Please state type of machine, which Rom memory size, quantity and place when ordering.

New colour brochure now available, send SAE for quick return

(continued from page 85)

incorrect option is chosen, or repeat the prompt, or skip the routine being called. A squeak will sound each time a menu option is chosen and valid entry made. In the Typewriter mode a key tap will sound with each key press.

To load the program Enter the Basic program and Save it by Goto 9900; this will auto-run the program when complete. Stop the tape at the second Start tape prompt and Verify the Basic before Newing it.

Enter your favourite machine-code loader, Clear 29665 and enter the machine code. Save this immediately after the Basic program using

```
SAVE "spc."CODE 29666,3102
```

and Verify.

Rewind to the start of the Basic program and Load "type". This will then load the Basic, the machine code and auto-run. The first thing to appear on the screen will be the main menu.

If any section of the program fails to run then, using the list of routines and addresses, you should be able to check the machine code. I have purposely kept some of the program in Basic so that you may follow it more easily. It would be a simple task to convert all of option 1 and option 6 to machine code.

The routine starting at 29666 shows how to clear the Input lines 23 and 24 and which channel to open so that printing can be displayed on these lines. The Basic input Inkey$ can be replaced by a call to the ROM routine to clear the input lines, and the Basic

```
PRINT # x;"********"
```

can be replaced by Open Channel and Print String ROM calls. The rest of option 1 is then a straightforward case of checking which keys are being pressed by Peeking the variable Last Key at address 23560 and making the necessary jumps, and calls. For example, line 230:

```
      LD A, (23560)
      CP "n"
      JR NZ,NEXT
      CALL 31038
      JR LINE 50
NEXT  CP "m"
      RET Z
      JR LINE 60
```

The only time a Ret to Basic would be made is when the Menu option is chosen, so line 1000 would become;

```
1000 RANDOMIZE USR 'START ADDRESS' : GO TO m
```

and lines 50 to 780 and 8000 to 8040 could then be deleted. This would also have the benefit of making the Break key inoperable in the typewriter mode which can be annoying if Caps Shift and Space are pressed by mistake.

The machine-code dump.

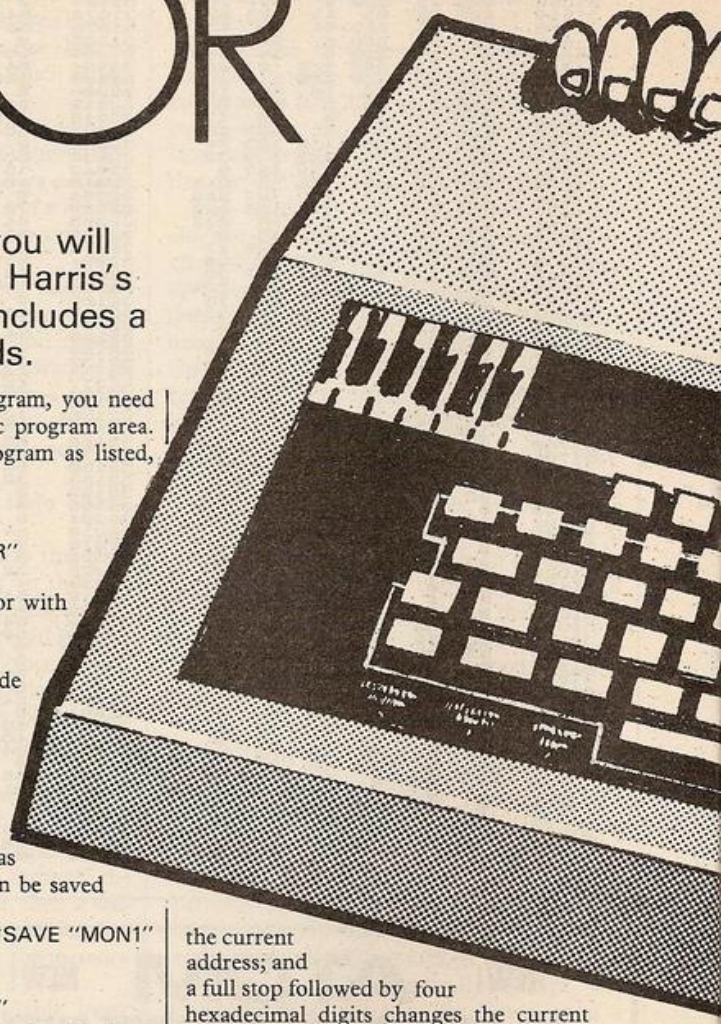
MONITOR



If you want to make the most of your BBC you will have to do battle with machine code. Richard Harris's monitor which tucks into just 2K of RAM yet includes a full disassembler should even up the odds.

WHY MIGHT you need a machine-code monitor? It could be that you want to investigate the machine-operating system, to see how programs and data are stored, or to test and change machine-code programs. Perhaps you wish to investigate screen layout, or even to recover corrupted Basic programs.

Whether you want to explore the workings of the BBC Micro or develop your own machine-code programs, this BBC monitor will fit most of the features of a good monitor into less than 2K, including a disassembler which — since it is written in machine code — runs a lot faster than some of the BBC disassemblers available commercially.

Six facilities

The monitor offers six facilities. It allows you to: display and change the contents of memory; display a block of memory; move a block of memory; run a section of machine code; disassemble code; and set the values of 6502 registers, run a subroutine and display the values of the registers on exit.

The published listing contains the assembly program which assembles the machine code for the monitor. It is not necessary, of course, to type in the comments and the preceding backslash.

Before running the program you must decide where you want the machine code to be assembled. Two of the most useful locations are below Page or above Himem. The version given here takes the first option and locates the monitor at 3600 — E10 in hex. To prevent it overwriting the assembly program, you need to move the start of the Basic program area. Once you have saved the program as listed, type in:

```
PAGE=&1500
NEW
LOAD "MONITOR"
RUN
```

You can now enter the monitor with

```
CALL &E10
```

If you prefer to store the monitor above Himem in Mode 7, set P% in line 30 to &6000 and type

```
HIMEM=&5FFF
LOAD "MONITOR"
RUN
CALL &6000
```

After the assembly program has been run the machine code can be saved as follows:

*SAVE "MON1" E10 1500 or *SAVE "MON1" 6000 6700

and loaded with

```
*LOAD "MON1"
```

Once in the monitor the screen should show

0000	FF 255	?
hex address	hex and decimal values	prompt

How to command

The monitor accepts the following commands: pressing the space bar increases the current address by one, and Return decreases it by one.

Entering two hex digits alters the value of the current address; and a full stop followed by four hexadecimal digits changes the current address. Entering the letter G displays an eight-by-eight block of data and addresses; entering R runs machine code from the current address; Z returns to Basic; and P enters the disassembler with the option of printer output. Press the space bar to continue disassembly and Return to leave it.

M moves a block of machine code. It expects three addresses in the form of four hex digits each — the Start and End address of the block to be moved, and the Start of the new block.

```

NEW SPECTRUM AND ZX81 SOFTWARE

"WINGED AVENGER"

Fast and furious. SPECTRUM version has SOUND and USER GRAPHICS. 7 LEVELS, 3 WAVES, MOTHER SHIP, HIGH SCORE, RE-FUELLING, RAPID FIRE, SMART BOMBS and LASER SHIELD. PCW "ONE OF THE BEST SINCLAIR GAMES YET". Only £4.50. All SPECTRUM + 16K ZX81.

"SPECTRUM SCRAMBLE"

MORE M/CODE ARCADE ACTION. "SO GOOD THE REVIEWERS DIDN'T REACH THE FINAL STAGE" (NOT BAD EH!!). NO LESS THAN 8 DIRECTIONAL KEYS for a SMOOTH MOVE. Full ARCADE features including, LASERS, BOMBS, INSTANT RESPONSE, CONTINUOUS SCORING, ROCKETS, SOUND, FUEL DUMPS, RED METEORS, DEFENDER CRAFT and HIGH SCORE. Beware CONDITION RED. With this one you MOVE, FIRE and BOMB AT THE SAME TIME. RELEASE PRICE of £4.95. 16K or 48K SPECTRUM.

"DO NOT PASS GO"
NOW THE 48K SPECTRUM VERSION IS READY

A COMPLETE SIMULATION of the BEST SELLING BOARD GAME, you know PARK LANE and all that. Up to SIX PLAYERS can compete with the MICRO doing all the WORK. Acts as DICE THROWER, BOARD, RENT COLLECTOR, UMPIRE, BANK, RULE BOOK, ACCOUNTANT and PROPERTY RECORD. SUPER GRAPHICS by Gary Kennedy (thanks mate). GAME SAVE with winner so far report. COMPLETE with INSTRUCTION BOOKLET. The ULTIMATE in FAMILY GAMES. Don't MONOPOLISE YOUR MICRO. AMAZE all your friends and family. (Can you see your GRANNY on a MICRO?) ONLY £6.95. 16K ZX81 VERSION ALSO £6.95.

"BASE INVADERS"

The ONLY ARCADE GAME EVERYBODY SHOULD HAVE. The SCREEN'S the same, THE INVADERS are the same, BUT you get a SHIELD and a CHOICE of THREE SPEEDS, (O.K., FAST or INCREDIBLE). GOOD SOUND, a HARD GAME, and GREAT GRAPHICS. COMPLETE your software collection for just £4.50. 16K and 48K SPECTRUM only.

"AUDIO SONICS"

WINNER of WIZZ KID 82. For the SPECTRUM. A.S. writes sound effects for your own programs. 26 PRE-SELECTED SOUND EFFECTS include TELEPHONE, POLICE SIREN, FROG, SPACE EFFECTS and OUTBOARD MOTOR. GO into MODIFY and you are presented with a display of SLIDER CONTROLS to adjust PITCH, RISE, FALL, BRISKNESS, DECEL, ACCELL, TONE, REPEAT RATE, STUTTER and DELAY. ADJUST the SLIDERS then INSTANTLY hear the SOUND CREATED. Call "THE SOUND ONE" and a program line will appear that is ready for insertion into your own programs. Hours of EXPLORATION. YOU WILL BE AMAZED what BEEP can DO. We are proud to offer this at £4.99. 16K or 48K SPECTRUM.

"SPECTRUM RENUMBER DELETE"

All M/CODE RENUMBERS ALL NOT PART. "YOU WON'T BUY A BETTER RENUMBER PROGRAM FOR THE SPECTRUM" JUST 600 BYTES. At £4.95. ALSO ZX81 VERSION.

"HIGH NOON"

When YOU'VE SAVED the GALAXY, SCRAMBLED or whatever else you do on your MICRO, what about a GUNFIGHT? Play the SPECTRUM or YOUR PALS. THREE LEVELS. FULL FEATURES, CACTI, COFFINS, WAGONS, RAPID or SINGLE SHOTS. SUPERB GRAPHICS. GOOD SOUND including DEATH MARCH. ESCAPISM on TAPE for JUST £4.50.

"DISPLAY"

Takes over when BIN and the DEMO tape left off. How would you like 273 different user defined GRAPHICS on a 16K SPECTRUM or a GRAND 336 for a 48K. All of these can be displayed on the screen at the SAME TIME. UDGs are stored as PAGES and any TWO PAGES may be exchanged in memory. FILES can be LOADED FROM or SAVED TO TAPE. LOAD into any page location. TURN a UDG ¼ turn, ½ turn, FLIP a SHAPE over, REVERSE a SHAPE, EXPAND ¼ of a CHARACTER into a full character, UP, DOWN, LEFT or RIGHT by one PIXEL. 5 SHAPE FILES are included on TAPE. INCLUDING a 64 CHARACTERS per LINE DISPLAY. COMPLETE with DEMO PROGRAM and INSTRUCTIONS. JUST RELEASED at £7.00. 48K or 16K SPECTRUM only.

"TRaceON"

BASED on a FILM (GUESS WHICH). TRaceON is a REAL TIME ADVENTURE for those of you who can't handle ARCADE GAMES. Your TASK is to COMPLETE a TRILOGY of GAMES successfully. A poor PERFORMANCE will result in a RESTART as may CHEATING. MASTER the DISKS and YOU get to nde a LIGHT BIKE and then RUN the CORRIDORS of DEATH to reach the MASTER CONTROL. REALLY GOOD FRUSTRATING FUN. 48K SPECTRUM £4.50 (16K coming soon.)

"MATCALC"

For BUSINESS and PROFESSIONAL use. Ideal for WHAT IF situations, CASH FLOW FOREC STS and analysing RELATED figures. 64 character display option. FORMULA may be MATHEMATICAL or LOGICAL. MENU of FUNCTIONS. SAVE and LOAD DATA to TAPE. FULL instructions included. LITERALLY HUNDREDS of USES. BOTH 48K and 16K SPECTRUM PROGRAMS on ONE TAPE. JUST £7.00. EXCELLENT VALUE.

"PROGRAMMERS DREAM"

A SPECTRUM TOOLKIT. Position independent and just 1450 BYTES. Facilities RENUMBER lines or blocks any increment or start. BLOCK OR LINE MOVE including a RENUMBER into place if required. BLOCK OR LINE ERASE. CHANGE SELECTED STRINGS (NAMES OR CONTENTS). DUMP variable names and values (usable in a loop). DISPLAY PROGRAM or PROGRAM plus VARIABLE SIZE. INSTANT and CLEAN. JUST £6.95 with explicit instructions.

WORK FORCE

(continued from page 91)

status register. On return from the subroutine it displays the contents of the registers. This is very useful in exploring *FX and other operating system calls.

The program listing is well annotated which should make it relatively easy to follow for those who want to understand exactly how it functions. One improvement they could try is to insert a routine into the disassembler to print out the ASCII characters for each bytes.

To put the monitor through its paces, you might like to try the following procedures. Enter the monitor with Call &E10 and then change the current address to &E10 by pressing the full stop key and typing 0E10.

Viewing versions

Remember that the monitor only accepts four-figure hexadecimal entries. If you now press P you will see the same disassembled version of the monitor that you keyed in earlier.

Press M and then enter 0E10, 1500 and 4000. This will copy the monitor to &4000 and if you press R it will call itself.

Finally you could try the facility for testing a subroutine by calling OSASCI. This is the operating system routine which writes a character from the Accumulator to the screen.

First change the current address to &FFE3 and press S. Set the X and Y registers to zero and the A register to 72, the ASCII code in hex for lower-case R. When run OSASCI will print a lower-case letter R to the screen in front of a display of the contents of the X register.

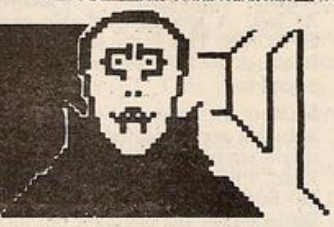
ZX81 & 16K

THE TOMB OF DRACULA!



3D HORROR ADVENTURE GAME!

Occupying over 13½K of memory, a superb 3D graphics adventure game for the ZX81 with 16K RAM, **for only £3.95! Enter** Dracula's tomb at 30 minutes to sunset ... **wander** through the tomb's pre-mapped 300 vaults in search of the fabled Vampire's Treasure ... **pick up** valuable silver stakes and use them to defend yourself against the lurking horrors ... ghouls, zombies, pits of primaeval slime ... **See** them all on the ZX81's plan of the tomb ... when it will let you! **Take** a chance on a Mystery Vault ... if your dare! And all the time the minutes are ticking by to sunset ... when **Dracula** rises from his coffin and comes after **you!** Each of the infinite levels of the tomb has its own 300 vaults ... go as deep as you like, the Prince of Darkness will seek you out in his blood-lust! **WARNING:** people of an exceptionally nervous disposition should play this game only during the hours of daylight! Special facility enables a game in progress to be saved on tape so you can continue it whenever you choose.

Price of only **£3.95** includes ready-to-load cassette with library case and inlay, full instructions, postage and packing. Order today! Money refunded if not delighted! Send cash, P.O. or cheque to:

STOP PRESS
Colour, Sound version now available for 48K Spectrum **£4.95** inc. P&P.

SINCLAIR OWNERS READ THIS FROM

You've probably heard about MACHINE CODED PROGRAMS and thought "so what! How can they help me?"

Well now you can find out and taste the very real difference by purchasing our latest MACHINE CODED application program. This emulates features of the most modern professional computers (12 years writing machine coded programs for IBM, ICL, UNIVAC and Sinclair means we know what we're talking about).

Just read the specification and you'll see what we mean.

ADDRESS MANAGER.....

Works on the 16K and 48K Spectrum, in 48K it will store, file, select and retrieve over 400 full addresses (over 1500 individual names); Dynamic Memory Management and compression techniques makes all this possible and there's a lot more:

- **FULL SCREEN INPUT and EDITING —** see it as a page as it happens with insert, delete and TAB Commands.
- **MULTIPLE INDEXING —** 3 way user-defined index enables you to define, catalogue, select and print entries as needed, (essential for the more sophisticated applications.)
- **INSTANT RESPONSE —** yes, this program is very very fast.
- **SUPER FRIENDLY —** crash-proof, extremely easy to use and efficient in a way that BASIC can never be.

MANY USES

- **AT HOME —** (storing addresses, printing out Xmas Card lists etc.)
- **AT WORK —** for mail-order work, internal telephone directory, sorting customers into types, areas, size . . . you choose.
- **CLUBS —** print-out members list, sort different categories etc.

This program contains over 3000 MACHINE CODE instructions, yet uses little valuable memory space . . . a very powerful recommendation.

OR IF YOU WANT TO WRITE YOUR OWN MACHINE CODE PROGRAM

MACHINE CODE TEST TOOL

The ultimate professional tutor and de-bug program, we wrote this to help us write our own programs.

- **TEST** and display machine code instructions as they're written.
- **IDEAL** for both the novice and the expert.
- **FULLY** documented with a 32 page tutorial
- **HEX:DECIMAL** conversion as standard.
- **CHARACTER GENERATOR —** of unbelievable quality!!! supplied free with the Spectrum version.

Available for the 16K ZX81 and 16/48K Spectrum. If you're looking to write machine code this is THE program, we know we use it ourselves.

MACHINE CODE..IT MAKES ALL THE DIFFERENCE.....

Post order to: Oxford Computer Publishing Ltd., P.O. Box 99, Oxford.

Please rush me: ADDRESS MANAGER at £8.95 each. ☐ Spectrum only.

MACHINE CODE TEST TOOL at £9.95 each.

Tick box for edition required: ☐ ZX81 ☐ Spectrum

Send cheque, postal order or ACCESS No. to above address. Or telephone order with ACCESS No. to (0735) 888866 (Ansaphone available) **YC3**

CAMBRIDGE LEARNING
SELF-INSTRUCTION COURSES

GSC SUPERKIT £19.90

Learn the wonders of digital electronics!

This practical kit for beginners comes complete with an instruction manual, components, and EXP300 breadboard to teach you all the basics of digital electronics. The course needs no soldering iron; the only extra you need to buy is a 4½V battery.

Using the same board you can construct literally millions of different circuits.

The course teaches boolean logic, gating, R-S and J-K flipflops, shift registers, ripple counters, and half-adders.

It is supported by our theory courses

DIGITAL COMPUTER LOGIC & ELECTRONICS £6.00

which covers: basic computer logic; logical circuit elements; the design of circuits to carry out logical functions; flipflops and registers; and

DIGITAL COMPUTER DESIGN £8.50

Our latest, most up-to-date course on the design of digital computers, both from their individual logic elements and from integrated circuits. You are first shown the way in which simple logic circuits operate and then, through a series of exercises, arrive at a design for a working machine.

SPECIAL OFFER! All orders received before 25th December will be sent by 1st Class post at no extra charge.

GUARANTEE No risk to you. If you are not completely satisfied, your money will be refunded upon return of the item in good condition within 28 days of receipt.

CAMBRIDGE LEARNING LIMITED, UNIT 82 RIVERMILL SITE, FREEPOST, ST IVES, CAMBS, PE17 4BR, ENGLAND.

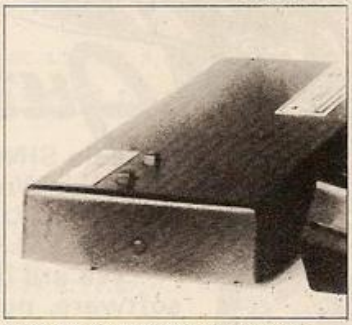
CAMEL PRODUCTS

MEMIC-81.2 Faster than a Floppy. Easier than an EPROM. A 4K CMOS memory and Lithium battery unit. Saves programmes upto 10 years without external power. Plug it into the ZX81 and flick a switch and your program is ready for retrieval. A simple PRINT USR . . . entry loads your program into RAM. Resides in 8-12K but can be moved to 12-16K. Comprehensive notes + examples. **£29.95**

CRAMIC 81.2
Banish the Whir, Click and Try again of ZX81 Systems

16K CMOS RAM and Lithium battery in cabled ABS case, with expansion adaptor.
Powers off the ZX81 when running. Resides in 16-32K. Can be used like an ordinary 16K but can also retain program upto 10 years. Ingenious hardware/software allows swopping of RAMs from program **£79.95**



ROM-81
Provides two 24 pin sockets for up to 8K of EPROM memory in the 8-16K area. Eproms are permanent memory which require programmers (see below) to write to them. Can use 2516/32 or 2716/32 **£14.95**

PIO-81
An 8+8 line parallel Input/Output card which lets the ZX81 communicate with external systems. Rugged TTL chips used. Connections on two 8 pin sockets. **£13.00**

DREAM-81 A 64K with extras
Full 16K Rampack with link options to disable 0-8-16K. Plus a 28 pin EPROM socket for 2716/2721/2764 and even the latest 27128 from Intel. Fast/slow Eprom option. Professionally built and tested. In an ABS case with an LED indicator. **£69.95**

NEW CAMEL PACK NEW
Finally, from a prestigious consultancy . . . A compactly built & tested 16K RAM for the ZX81. But WOW! Look at the price **£17.35**

NEW PROMER-81 NEW
At last! A low cost reliable programmer for 2516/32, 2716/32 EPROMS. This is the solution to using EPROMs instead of tape. Requires 4×PP3 batteries for a regulated 25 volts. Remarkably priced at **£19.95**

NEW BLOPROM-81 NEW
A highly sophisticated Eprom programmer for the 25XX, 27XX single supply families. Yes, even the 27128 from Intel. Check, Read, Program + Verify all or part of Eprom.
So immensely user friendly you'll hardly need the manual. Designed for the beginner but includes a single key entry route for the professional. Supplied as firmware, the m/c driver routine alone is worth more than the price of BLOPROM-81. No Personality Cards or other additions, just a ZX81. Several inbuilt safety features. On-board Vpp generation. 28 pin ZIF socket. Cabled connector and extender plug. ABS case. Note: Can provide up to 36 inputs or 40 outputs as an I/O **£79.95**

OTHER CAMEL PRODUCTS

MEMIC L Two kilobyte battery backed CMOS RAM unit for 2716/32 socket in any system **£26.05**

MEMIC L.2 four kB version of above **£35.95**

APPLE PAD 12" Rainbow cabled connector for Apple slots **£5.95**

PPS Cased, switched PSU. +5, +12, -12V, @ 3, 1, 0.25A **£44.95**

PSS Standard printer stands for OKI, Epson etc. 15"×12"×4.5" P+P £3.50 **£16.95**

PSL Large model 17"×14.5"×3.75" P+P £3.50 **£19.95**

BBC ASSEMBLER

You can always tell a good assembler by its range of pseudo-op codes. Chris Melville looks at the BBC's resident assembler.

IN MORE ADVANCED assemblers we expect to see a wide range of pseudo-ops that could be used in our programs at assembly time. Figure 1 gives examples.

One should remember that all pseudo-ops are merely instructions to the assembler and in no way affect the machine code produced when it is eventually run,

The BBC assembler is part and parcel of the BBC Basic interpreter. As such it has access to the expression evaluator used in BBC Basic which means that almost any sensible expression that is valid in BBC Basic, providing it has a numerical result can be used inside an assembly language program. This in turn means that a lot of the funcations and variables available in Basic can be used, including your own as defined by Def Fn, as long as the results they produce are compatible with where they are used. For example, all of the following would assemble as the same thing:

```
LDA# SIN(RAD(90))* 30 + 5
LDA# 35
LDA# &23
LDA# ASC"# "
LDA# A%
```

has the ASCII value 35, A% has previously been assigned as 35 and ampersand indicates hexadecimal value in BBC Basic.

Any expression resulting in a floating point result will merely be truncated to the next lowest integer.

The Basic interpreter is suspended and the assembler brought in at any time by using the Basic statement [. Similarly the assembler returns control immediately to the interpreter on encountering]. Upon leaving the assembler, executing some Basic and then returning again to assembler, all assembly pointers such as the location pointer remain unchanged. This facility allows Basic and assembly language to be freely mixed and we will shortly see that mixing the odd Basic statement with the assembly language can provide a simple way of implementing all of the properties/pseudo-ops given in figure 1.

It is important to remember that when the assembler is called by [, all that happens is the conversion of the mnemonics into absolute binary machine code which is sequentially stored. The routines will not actually be executed until you call them using the Basic statements Call and Usr. This is shown simply in figure 2.

The Dim statement in BBC Basic will look for a continuous block of free memory, the amount depending on its argument, and return the address of the start of this block into a variable. To reserve a block of 200 bytes and assign the starting address to the variable start% use Dim start% 199.

This should be used, before entering the assembler, to bag some memory space for your assembled program unless you want it to be placed at some particular address onwards, which is fine if you are not bothered about it working across the Tube. So if your program is n bytes long — or less — then you need:

```
DIM space% n : P% = space%
```

This form of the Dim statement is not to be confused with Dim space%(n) which would declare an integer array called space%,n elements long.

The BBC assembler supports the use of labels in assembly language programs and these are handled as if they were Basic variables. Therefore they must start with a letter and not a reserved word. When labels are first defined they must be preceded with a full stop, and finish with RTS. When they are referred to, the full stop can be omitted, and needless to say they should not be multiply defined.

Since the assembler starts off at the beginning of an assembly language program and proceeds sequentially through it, problems arise when program segments include instructions referring to a label ahead before it is defined to the assembler.

This problem is overcome by making the assembler pass through the program twice, firstly taking note of all the labels and their values, which are stored in the Basic variable space in RAM and performing crude assembly of the mnemonics, translating the op-code and addressing mode, but not the address unless it is known, and substituting in any addresses it failed to find first time. If the assembly listing were examined in between these two passes, it would be seen that any instructions where forward reference occurred would have their address fields pointing to themselves. This two-pass process does not occur automatically on the BBC computer. It is necessary to force it to happen by enclosing the whole assembly language section in a For-To-Next loop which will be done twice. Of course this is unnecessary when there are no forward references in the program.

The choice of value of control variable in the loop is determined by what you want the assembler to output and how you want it to react to the presence of errors caused by forward referencing. This is explained now as we deal with the BBC assembler's only pseudo-op, OPT.

The usual state of affairs is that we require different assembler output on each pass of the assembler, and the most common occurs like this. On Pass 1, assembler errors are suppressed so that the process is not interrupted should forward references be present. There will be no assembly listing since the process will not be complete. On Pass 2, assembler errors are given — there are no unresolved forward references for this pass so we wish to be informed if any real errors are present.

We either see no listing at all or a full assembly listing of locations, hex code, mnemonics and labels.

We control this by using the "OPT n" pseudo-op straight after the opening square bracket. The possibilities are OPT 0 for error supression and no listing, OPT 1 for error supression and a listing, OPT 2 for error reporting and no listing OPT 3 for error reporting and a listing. This is incorporated into the For-Next loop of the last section.

```
For pass% = a To b step b-a
[     opt pass%
]
Next pass%
```

The "a" is the OPT value required in the first pass and b is the one for the second. Normally, a=0, b=2 or 3. The OPT pseudo-op obviously generates no machine code of its own.

The resident integer variable P% is the location pointer for the BBC assembler, that

(continued on next page)

ADC	add with carry	INY	inc. y

Table 1. The 6502 instruction set.

TXA transfer x to a
TXS transfer x to sp
TYA transfer y to acc

The 6502 registers:
accumulator (A) 8 bits
x,y index registers (x,y) 8 bits
processor status register nvbdizc 8 bits
program counter 16 bits
stack pointer 8 bits

6502 addressing modes

Name	Example
Immediate	LDX # 23
Zero page	LDY &32
Absolute	JMP &FFF3
Accumulator	ASL A
Relative	BEQ &23E3
Indirect	LDA (&2345)
Implied	PHA
Zero page x	STA 55,x
Absolute x	JMP &FF00,x
Pre-indexed direct	LDA (9,x)
Post indexed direct	LDA (34),y
Zero page with y index	STA 22,y

(continued from previous page)

is, it always holds the value of the address where the next encountered assembly instruction will be assembled to. Thus if we wanted a particular program to be assembled starting at location &A00 we would put, immediately after the For-To loop start; P%=&A00.

Alternatively, with the memory allocating system as previously described;

```
DIM space% PROGRAMSIZE
P% = space%
```

If one wants to leave a few spare bytes in memory in the middle of the machine code program, say for workspace or constant storage, then another alternative to the Dim method described earlier would be to leave the assembler and increment P% by the number of bytes you want. You could also use the byte indirection operators to initialise this memory, e.g., ?P%=. Then record the starting address of for example spare bytes, room=P% before you increment P%. Re-enter assembler and continue, using instructions such as LDA room to access your bytes. Issue I Basic/assembler does not allow the assembly of numerical constants straight into memory. To place constants in memory one should therefore use one of the methods already described. Issue II Basic/assembler does have the necessary pseudo-ops. These are EQUB, EQUW, EQUS and EQUD.

These all take a single argument and put its value into the assembly code.

```
.message EQUS "hello"
```

would store at ASCII code of "h" at message, "e" at message +1 and so on.

Unfortunately, there is no easy way that macros can be implemented with the assembler contained in Issue I Basic. However, the EQUS pseudo-op present in the Issue II Basic assembler can be used along with the Def Fn statement to implement macros of sorts.

A subroutine call to location &FFF4 in the operating system is known as an OSByte call. This call uses the processors X,Y,Acc registers to pass information to the operating system; Acc defines the operation to be carried out such as clear input buffer or alter flash rate or anything else that can be done as an FX call. X,Y contain the parameters. We could set up a macro which would take these three quantities as parameters, load them into the respective processor registers and call the OSByte routine. The macro itself would be defined in Basic as a function:

```
DEF FNOSBYTE (A,X,Y)
IF A>127 THEN [ OPT pass% : LDY # Y]
[OPT pass%: LDX # X : LDA# A: JSR &FFF4 :]
          (dummy null string result)
```

Only OSByte calls with numbers over 12 need a Y parameter. Then, when writing an assembly program if we wanted to do an OSByte call we would do the following:

```
EQUS FNOSBYTE (&87,5,5) reads the
  character at text (5,5)
EQUE FNOSBYTE (2,1,0) gets characters
  from RS423
```

Whenever the assembler encounters the above syntax the result will be the normal OSByte code sequence inserted into the assembly process, no string is actually inserted anywhere as the EQUS is fed with a null string by the function FNOSByte which also manages to do a little assembling before it gives this null result.

The ability to freely alternate between Basic and assembler makes conditional assembly a simple problem to solve. First leave Basic, use the control structures of Basic to examine the condition — use If-Then-Else, On-Goto/Gosub, and assemble the appropriate sections of code upon the result. If you want the assembler to choose between keyboard or joystick input in pseudo-Basic:

```
assemble ..... ] ; IF joystickconnected
THEN PROCassemblejoystickcode ELSE
PROCassemblekeycode [ :.....assembler
```

The two given procedures do exactly what they say.

Repeated assembly is easy to achieve because of the easy interaction between the assembler and the Basic interpreter proper. There are two kinds of loops into which we can put the assembly language that we want copying.

Deterministic loops continue copying out the instructions until some condition is satisfied. We would use a repeat-until loop in the Basic part:

```
assemble] : REPEAT
   [ : (insert whatever is to be repeated here.
   it may involve the control variable, and
   there should be an OPT to control
   assembler output.) : ]
   There could be some Basic instructions
   here which would effect the loop control
   condition.
   UNTIL condition
   [: OPT pass% :.....assemble.
```

Non-deterministic loops repeat the assembly mnemonics a fixed number of times. For this we would use a For-To loop:

```
...(assembler)] : FOR I% = startno. TO finishno.
   [ : OPT pass% : ..... assembly
   instructions, could involve the control
   variable I% if required. .....:]
   NEXT I%
   [ : OPT pass% :.....(back to assembler)
```

Diagram summarising assembly process

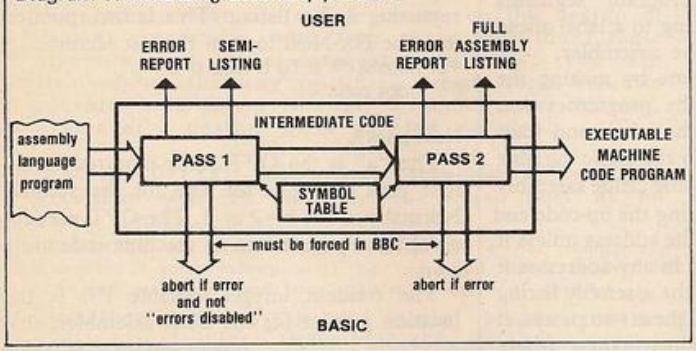

Figure 2. Calling routines.

```
10 PRINT "hello"
20 PRINT "now
   entering assembler"
30 DIM P% 100
40 enter assembler
50 .start PHA:TAX:
   CMP# &33 (more
   arbitrary assembly
   language)
100 RTS:
110 PRINT "back in
   Basic"
120 CALL start
```

Figure 1. Properties and pseudo-operating instructions.

■ The ability to reserve blocks of memory space for data, or even the program itself.

■ The allowing of symbolic labels and a multi-pass system, usually two occasionally three. This includes the automatic calculation of relative jumps.

■ The ability to reference the location pointer, a pointer to the next byte that will store machine code produced by the assembler, so that it is possible to use relative jumps in programs. For instance:

```
JMP . -5
```

allows you to jump back to the instruction five bytes further back in memory. The full point indicates the value of the location pointer.

The location in memory where the next instruction is to be assembled can be specified by a statement such as:

```
=3200
```

■ User output — an assembly listing should be given, in both hex and mnemonics, errors should be reported and — preferably — there should be a symbol table output.

■ The assembler should be able to assemble numerical constants, or the result of a numerical expression, directly into memory, as well as mnemonics. For example:

```
label     32
label+1 19-5
```

should result in the constant 32 stored in the location given by label, and 14 stored in label+1

■ It should also be able to evaluate simple numerical expressions elsewhere, so that

```
LDA# 7*2-2/2
```

would assemble as

```
LDA# 13
```

■ There should be a facility for the creation and use of macros. A macro is a set of instructions that does a particular job, similar to a subroutine in that respect, and given a specific name. Then, whenever the assembler comes across that name in a program it substitutes it with the set of instructions to which the name refers. Some assemblers allow macros to use parameter-passing also.

■ Conditional assembly — this facility allows the assembler to choose one of several program segments to assemble depending on the result of some specified test which is specified by the programmer and carried out at assembly time.

■ Repeated assembly — if a group of assembly language instructions are listed over and over in a program then it would be handy if it was necessary to write them only once and tell the assembler how many times to repeat them in a row. This is repeated assembly, for example:

```
REPEAT 10
          LDA somevalue
          STA somewhere
ENDREPEAT
```

This might tell the assembler to write out the two instructions 10 times in a row and then assemble them. In some cases it might be possible for the values somevalue and somewhere to change each time the instruction pair is copied. Also, it may be possible for the number of copies to depend upon some condition rather than a fixed number, the difference between a For-To loop and a Repeat-Until loop in Basic illustrates this.

■ The assembler should recognise all 6502 mnemonics and addressing modes. ■

DOWNSWAY

ELECTRONICS (UK) LTD.

MEMORIES FOR THE ZX81

The Downsway 64K Memory* slots directly on to the computer, without needing an additional power supply, or adding any extra load to the internal 5v regulator. Trade in your old 16K RAM Pack (any make, any age, any condition) for £12.50 against a Downsway 64K Memory to bring the price down to only **£47.45** plus p & p. Without trade-in, it costs just **£59.95** plus p & p — still incredible value!

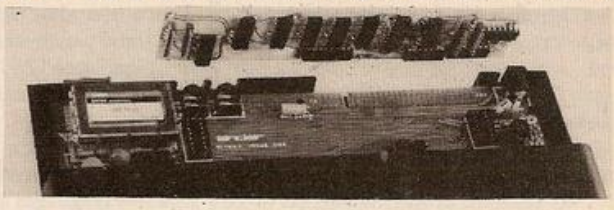
If you only want 16K of memory for your ZX81, the Downsway 16K RAM Pack offers the same benefits of high quality and low price at only **£24.95** plus p & p.

Both memories measure only 2½ x 1½ x 1in. and are supplied with a foam cushion strip to provide added mechanical stability.

* Reviewed in ZX Computing Aug/Sept 1982 and Popular Computing Weekly 22/7/82.

MORE MEMORY FOR YOUR ZX81 OR SPECTRUM!

NEW! 32K RAM FOR SPECTRUM



A full 48K of memory for the 16K Spectrum — simple D.I.Y. installation by just undoing 5 screws and plugging in!

For Issue One machines (with light grey keys) — a RAM board of advanced design, using "state-of-the-art" technology — only **£42.50** plus p & p.

For Issue Two machines (with dark grey keys) — a simple plug-in kit of I.C.s which fit straight in to the sockets already provided: only **£32.50** plus p & p.

Both come with fully detailed, illustrated instructions.

Naturally Downsway add-on memories are fully tested and guaranteed, but should you be dissatisfied for any reason, just return the memory within 14 days for a full refund (and your old 16K RAM pack, where appropriate).

Please allow up to 28 days for delivery.

DOWNSWAY ELECTRONICS (UK) LTD. DEPT. M, DOWNSWAY HOUSE, EPSOM ROAD, ASHTEAD, SURREY.

*ZX81 SCREEN KIT 1
*ZX81 ZX-MC *ZX81 REMLOAD

FAST MAIL ORDER-SEND TODAY!

SPECTRUM MONITOR. Machine Code Debug/Disassembler
• Enter, Run, Debug machine code programs. • Compatible with Basic • Breakpoints and Registers Display • Disassembly to screen and/or ZX Printer • 16K and 48K versions on one cassette + 30 page manual. **£7.50**

SPECTRUM EDITOR/ASSEMBLER. A powerful and essential machine code programming aid.
16K & 48K on same cassette with full documentation. Major features include:
EDITOR with Auto Line Numbering: 40 Column screen display, tabulated into fields for easy reading: 5 character Label Names: simple Line Editing and Cursor Control: SAVE/LOAD Text Buffer to cassette: output to ZX PRINTER.
TWO-PASS ASSEMBLER accepts all Z80 mnemonics (plus many unpublished mnemonics): Decimal or Hex numbers: simple arithmetic on operands: Assembler Directives — ORG, END, DEFB, DEFW, DEFS, DEFL, EQU, DEFM.
WE CANNOT FULLY DESCRIBE THIS IMPORTANT UTILITY HERE, AND ASK YOU TO SEND A S.A.E. FOR COMPLETE DETAILS OF THIS AND ALL OUR PROGRAMS. **£8.50**

ZX81 SCREEN KIT 1. More power to your screen in all your Basic programs
BORDERS any size, anywhere on screen: SCROLL in all 4 directions. CLEAR and REVERSE PART OF SCREEN. FLASHING CURSOR anywhere on screen — simulates INPUT. DATA FILES SAVE AND LOAD Basic variables: Double Speed. 880 bytes machine code for INSTANT RESPONSE. Becomes part of Basic Program. **£5.70** 4K to 64K

ZX81 ZX-MC. Machine Code Debug/Monitor
• ENTER, RUN, DEBUG machine code programs • SAVE, LOAD, VERIFY at double speed • BREAKPOINTS and REGISTERS DISPLAY • Self contained — cannot be used with Basic • Cassette plus 36 page manual. **£7.50** 4K to 64K

ZX81 REMLOAD. Machine Code Debug/Monitor
• A version of ZX-MC without the Save/Load/Verify facility • Compatible with Basic • CREATE A REM LINE of any length • BREAKPOINTS and REGISTERS DISPLAY • Cassette plus 30 page manual **£6.95** 16K to 64K

ADDICTIVE GAMES
at: Dept. Y.C. P.O. Box 278
CONNIBURROW,
MILTON KEYNES MK14 7NE
PLEASE STATE COMPUTER

We're tired of telling you how good our game is..... let our customers tell you

Dear Sir,

I received a copy of your Football Manager, Spectrum 48K game a couple of weeks ago and felt I must just write and congratulate you on such an "addictive game".

I started on the beginners skill level with Ipswich Town in the Fourth Division. After having played six seasons I am now into the first division having won the F.A. Cup whilst in the second division. All of which took about nine hours of being glued to the screen.

Since reaching the first division I have increased my skill level and am now sixth in the table after ten seasons and about 15 hours!

The reason I am suprised that I have played this game more than any other in my library over the last two weeks, is because I don't really like watching football on television. I don't even support a team. The structure of your game is such that anyone can play it.

P. A. HACKMAN,
BURY ST. EDMUNDS

ORIGINALS CAN BE SEEN ON REQUEST

ONCE UPON a time when most people still thought that a microprocessor was some fancy kitchen gadget, breakfast was continually disturbed by the rhythmic chant of children trying to learn their French vocabulary for school that morning. When we acquired a ZX-81 we therefore set about using this so that our 'snap, crackle and pop' would not be disturbed.

The very limited memory of the basic 1K unit was a severe problem, but with care 20 words — each 12 characters long, in each of two languages, could be stored for knowledge testing. Two separate programs needed to be used. The Word-loader program dimensions three arrays and requests 20 consecutive word inputs in each language. These are stored in arrays A and B.

When all words have been entered this program must be altered to the Word-testing program before Saving on to cassette by Goto200. Of course, the ZX-81 saves variables with the program but, whatever you do, you must not Run this program, as this will clear the arrays. When the program is reloaded it automatically starts, and when all words have been tested the program begins again.

It is essential that C$ is dimensioned — so that its length is fixed at 12 characters — the same as B$(N), as otherwise it will be impossible for it to be equal to B$(N).

Score is kept as X, which is incremented when line 150 is true. To conserve memory only the top two lines of the screen are used to display:

TEST WORD	SCORE
YOUR TRY	ANSWER

Pause is used instead of a For-Next timing loop and the program entirely fills 1K.

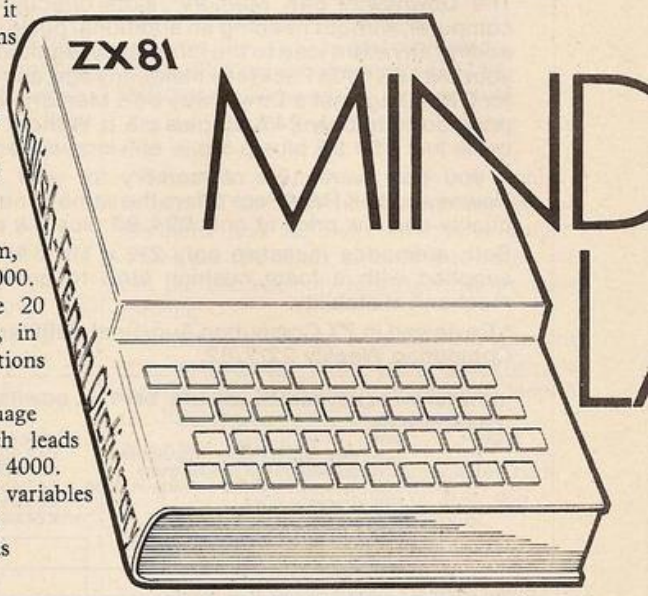
Only 20 words could be included in this initial program, but different versions could be made containing different words. For storage of more words more memory is essential — hence the development of the Vocab 16K program which not only stores 220 words or phrases, each 25 characters long, but also includes a range of useful options: adding words, testing yourself, learning and dictionary. One of the most perplexing problems was arranging for the facility to swap the two languages around, whilst ensuring that the arrays did not become garbled.

To initialise the program when it is first used, Run 8000 which Dims the arrays and sets up the other variables, before requesting the languages to be used. This was not included in the menu to avoid disastrous accidents to filled arrays. Do not forget you must never Run the program if you use Break to stop it. To save the program, plus variables, at any point Goto 9000.

The user-friendly menu at line 20 first prints the selected languages, in the order entered, and then the options available.

If you want to reverse the language order you simply input X, which leads to the language-swap subroutine at 4000. This swaps M$ and N$ via dummy variables K$ and L$. At the same time the language-swap status variable, T, is swapped between 0 and 1 so that the swap status is always indicated. If Add-words is selected the screen is cleared at line 3000 and the word select subroutine at line 6000 called. This asks where in the main arrays to start and end addition, prompting you with the current start and end numbers. To delete words simply overwrite them.

Lines 6010-6040 and 6080-6100 reject anything other than numbers. As the numbers often exceed nine this has to be done via string slicing, and the final strings must therefore be converted to simple variables by the Val function — 6050 and 6110. This subroutine is used by both Add-word and Test routines. On return the word display routine is called —



The 16K ZX-81 language program.

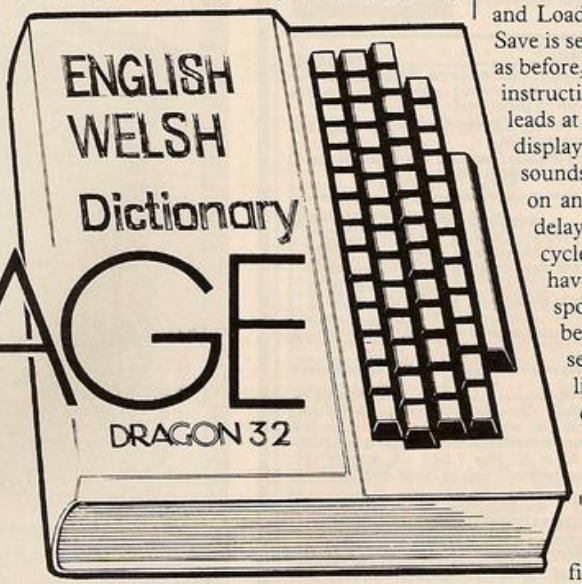
YOUR LANGUAGE



Keith and Steven Brain's ZX-81 and Dragon routines help you and your micro become multilingual.

5000. This is also used by both Add and Test routines, but with different branches. It cycles through the arrays from the selected start to the selected end — 5000, after checking the status — T — of the languages M$ and N$ — this is done at line 5010.

If these have been swapped then the word-swap subroutine at 4100 is next called. This swaps A$(N) and B$(N) via dummy variables. The first language is printed and, if Add was selected — Q$="A" — an input — B$(N) — is requested and printed, followed by the second language, and a second input request — A$(N). After a delay — 5100 — the word end counter, Y, is reset to the new end-word number — 5120, and if the languages have been reversed from their original order, then A$(N) and B$(N) are swapped back — 5175. When all words have been added the program returns to the menu.

If Test is now selected the choice subroutine — 1000 — allows selection of particular or random words. If particular words are required, the appropriate Start and End number are selected as before — 6000. The random option asks the number of words required, W, and selects a random start position H at line 1170. If H+W is greater than the total number of words currently in the array, Y, then H is halved — 1180 — and this is repeated — 1190 — until H+W is less than Y, when the program passes to the word-display routine — 5000. Whether random or particular words are selected this subroutine operates as for adding words, except that the sequence is: Print first language, line 5030; Print A$(N); Input C$(1), Print C$(1), print A$(N), the correct answer, line 5140. If your try was correct the score — Z — is incremented — 5170 — and when all words have been tested your final score is displayed.

The Learn subroutine at line 7000 prints the first seven pairs of words and then waits for an input. If there were only seven words or less in the file then any input leads back to the menu. If there were more than seven words any input displays the next seven pairs of words.

The final option is the Dictionary, line 2000, which prints the languages and requests input of the unknown word. Languages can be swapped by X as before and Newline alone returns to the menu. When an unknown word is entered, it is compared with the contents of the appropriate array. If a match is found the matching word is printed, otherwise the "word not found" message comes up. This subroutine is run in Fast mode to speed it up but, if you prefer waiting a little longer to watching the screen flash then delete lines 2065 and 2140.

This 16K ZX-81 program is obviously more useful than the 1K version, and any additional memory available can be utilised simply by changing the Dim statements in lines 8000 and 8010.

When a Dragon 32 was purchased and conversion of the ZX-81 program was considered, it was soon apparent that the Dragon had a number of distinct advantages in this learning application. The first of these was the ability to store data files on cassette separate from the program, so that the relatively short master program could be used for any number of different data files containing different words or languages.

The second difference was in the Basic array-handling routines. Whereas in the ZX-81, array elements must be of fixed length, Microsoft supports variable length array elements. In practice, this means that memory is saved as space is not wasted on blanks completing unused array points. This allowed the program to be more flexible and the length of phrases to be up to 255 characters.

The third point was the ability to control a cassette recorder and TV sound with the Motor and Audio commands, making inclusion of a speech track possible. The fourth point was the high-resolution graphics which allowed display of non-standard characters such as accents.

Finally, multiple-statement lines make complex programming easier and sound and colour can be used to liven up the proceedings.

The same outline skeleton was used, but with certain additions. As the data is loaded separately, the program always initialises the arrays and other variables and requests the languages — line 11000. The menu, line 1030, is left via Inkey$, line 1050, rather than Input, and the ASC value of Inkey$ is used to sound a note to remind you of your choice. Where lower-case letters, which are inverse on-screen are used, unsightly gaps between words are avoided by using BL$, which is set to CHR$(128), instead of a space between words.

A new cassette Load-Save routine is included — Line 8000. Selection of Save — 8010 — requests File-name, Start and End positions. The cassette motor is turned on to allow you to position the data tape and when you are ready a data file is opened and the languages (M$, N$), swap status (T) and array contents saved. Selection of Load also requests filename, Start and End positions. These need not be the same as those used when these words were Saved, but can be offset so that words can be moved around the arrays. Languages — M$ and N$ — swap status, T, and words are then read in 8030.

The Audio routines — 9000 — allow Saving and Loading of both data and voice, 9030. If Save is selected a data file is opened and loaded as before, line 9060. When Saving is complete, instructions are given to alter the cassette leads at line 9080. Each selected word is now displayed — Line 9100 — and, when a tone sounds, the recorder is automatically turned on and you speak the word. After a short delay, the next word is displayed and the cycle continues until all selected words have been dealt with. In this way, a spoken-word file follows immediately behind the word data file. When Play is selected, the data file is read back — line 9120 — and speech playback only, or speech and display can then be chosen.

If the display and speech option is chosen, the first language and first word are displayed, and the recorder automatically plays the first spoken word through the TV speaker.

The program as described so far is excellent as long as neither of the languages uses accents, but even this difficulty can be solved if the characters are drawn on the hi-res screen instead of being printed — see *Your Computer*, February 1983.

This approach requires addition of appropriate character-drawing lines — 31-90 — and handling routines. The little-used upper case #, $, %, and & have been replaced by `, ', ^ and ç, for French text but any keys can be modified in this way. We have stuck labels on to the front edge of these keys to show their new functions.

Line 20 checks that a character is valid and, if so, line 30 selects the appropriate Draw subroutine. Two different types of the hi-res display are needed — 100 — according to whether an existing string is to be read or an Input is to be made. These are indicated as MD=1 and MD=2.

If MD=2, line 300, a string — R$ — is simply sliced and each character drawn in turn. If an Input is required, life is more difficult. Only Inkey$ can be used without losing the hi-res display. If the Inkey$ character is Enter and any character has already been loaded, this is read as the same as a normal Enter and Input mode is left. If Inkey$ is not backspace — left cursor — the equivalent character is displayed, and then added on to the end of TM$ — a temporary storage string.

If backspace is used, the previous character is erased from the screen. Once the handling

(continued on page 103)

ZX81 GAMES

from

J.K. GREYE SOFTWARE LTD

"Without question the finest machine code games available today"..... J.N. ROWLAND Product Manager for W.H. SMITH

GAMESTAPE 1 for 1K _____ **only £3.95**
10 Games incl. ASTEROIDS, UFO, CODE, BOMBER, GUILLOTINE, KALEIDESCOPE, etc.
PROBABLY THE BEST VALUE 1k TAPE AVAILABLE.

We've done in 1k, games which some of our competitors require 16k to do!

GAMESTAPE 2 for 16K _____ **only £3.95**
***STARFIGHTER** Superb machine code Space Battle. Set against a background of twinkling stars, with stunning explosions — if you can hit the enemy!
PYRAMID Can you move the Pyramid? Make a mistake and it will collapse! A Thinkers game.
ARTIST The ultimate Graphic Designers aid. 8 Directions, 10 Memories, SAVE, COPY, RUBOUT, CLS, etc.

GAMESTAPE 3 for 16K _____ **only £4.95**
***CATACOMBS** A Multi-Level Graphics Adventure. Each level can contain up to 9 Rooms, 8 Passages, 7 Monsters, Food, Gold, Traps, Phantoms, an Exit (to the next level), and there's an infinite number of levels.
NOTE. . . . This is NOT one of the necessarily limited text Adventures as sold elsewhere.
"An excellent addictive game which will keep you amused for hours.". . . . *COMPUTER & VIDEO GAMES.*

GAMESTAPE 4 for 16K _____ **only £4.95**
***3D MONSTER MAZE** The Game to Top All Others. Unbelievable Graphics! Can you find your way through the Maze? The EXIT is there somewhere, but then so is a T.REX, and its after YOU! All in 3D (the T.REX will actually run towards you in full perspective!), you've never seen anything like this before!
"3D MONSTER MAZE is the best game I have seen for the ZX81". . . COMPUTER & VIDEO GAMES
"If I had to choose just one programme to impress an audience with the capabilities of the ZX81, then J.K. Greye's 3D MONSTER MAZE would be the one without doubt" . . . . ZX COMPUTING. *"Brilliant, brilliant, brilliant!"....POPULAR COMPUTING WEEKLY*

GAMESTAPE 5 for 16K _____ **only £4.95**
***3D DEFENDER** The Ultimate Space Game. Super fast Machine Code 3D version of the Arcade favourite. You have to save your home planet from the marauding Alien Spacecraft. This is all in 3D, your viewscreen shows you the view out of your fighters cockpit window. The backdrop moves when you turn, or fly up or down (8 flight directions), just as if you were really flying it! But then YOU ARE! The Enemy Saucers will actually zoom towards you in 3D, and shoot you if you let them! Your display includes Score, Shield Strength, Altitude, Proximity, Forward Radar and your viewscreen, which shows your rotating home planet, backdrop of Stars, Meteors, Explosions, Plasma Blasts, your Photon Beams, up to 4 Enemy Saucers and of course its all in full 3D!
"Another 3D winner"..... *SINCLAIR USER*

GAMESTAPE 6 for 1K _____ **only £1.95**
***BREAKOUT** Super Fast Full Screen Display Game. Your all time favourite with an added twist. See how much Money you can win and watch the pounds convert to Dollars. All in Machine Code for Fast Action with 3 Speeds, 2 Bat Sizes and three angles of rebound! The best BREAKOUT around and at this price you can't go wrong!
"The best of its kind" ..... *WHICH MICRO & SOFTWARE REVIEW*

J.K. GREYE SOFTWARE LIMITED has no connection with NEW GENERATION SOFTWARE or J.K. GREYE ENTERPRISES which are the businesses of the repective directors.

GAMES MARKED * INCL. MACHINE CODE.
Prices include VAT and U.K. P. & P.
(Add appropriate Postage on Foreign Orders). Cheques/P.O.s to

TRADE & EXPORT ENQUIRIES WELCOME

QUICKSILVA

are proud to announce they are now marketing

PIXEL GAMES

TRADER

A trilogy of 16K programmes that combine to give an epic 48K graphic adventure. As a galactic trader, you deal with some very bizarre customers indeed. Will you live to tell the tale?

SUBSPACE STRIKER

With your deadly Antimat torpedoes, you unleash havoc in the Federation spacelanes and try to dive back to the safety of subspace, fast.
+ **ZOR** — Battle of the robots. Fight for survival in this action-packed strategy game.

STARQUEST

With the help of your on-board computer, you seek a habitable planet amidst the perils of deep space.
+ **ENCOUNTER** — In this adventure, you are snatched off the Earth and the space invaders play YOU!

PIXEL POWER A graphics workshop packed with useful features like Create, Amend, Save, View Set.
HARVESTER A cut-throat strategy game for 2 to 4 players.
BRAINSTORM Can you get our three space explorers across a river of nasty goo without blowing their minds.

routines have been set up, those program lines which are to display accented words must be modified.

The modifications have the following form:

Select mode: (if MD = 2 then fill RS); set Screen position: GOSUB100 and repeat.

Screen position is set by drawing a line of length (zero) at the appropriate point on the screen. Addition of this accent facility considerably enhances the value of the program. ■

Vocab 32.

M.C. LOTHLORIEN

Fed up with Space Invaders? Fed up with moving N.S.E.W. in seemingly endless Adventure games? — then why not try our exciting range of challenging *war games* for the *SPECTRUM/16K ZX81/DRAGON 32*

1. TYRANT OF ATHENS

Can you survive long enough to turn Athens into the most feared state in the Mediterranean? Train troops, build warships, fight battles by land and sea against hostile Greek States and the vast Persian Empire. Many more features in this very addictive game.

Price: DRAGON £6.95 ZX81 £4.50 SPECTRUM £5.50

2. ROMAN EMPIRE

Your aim is to conquer the hostile countries surrounding Rome. Build armies, appoint Generals and fight campaigns. This challenging game takes full account of morale, fighting efficiencies, leadership ability, etc. 3 levels of play.

Price: ZX81 £4.50 Spectrum £5.50

3. PELOPONNESIAN WAR

Set in Ancient Greece from 431-404 BC, covering the Great War between Athens and Sparta. Your goal is a final victory over the Spartans but you will need all your skill in a combination of diplomacy and military force before you even stand a chance. 3 levels of play.

Price ZX81 only £4.50

4. SAMURAI WARRIORS

How would you have fared as a Samurai in 13th Century Japan? Face challenges from Samurai and bandits. Are you a survivor? Or will you be forced to commit ritual suicide? 7 levels of play, a most fascinating game.

Price: DRAGON £6.95 ZX81 £4.50 Spectrum £5.50

5. WARLORD

A challenging game of analytical skill set in 13th century Japan. You control a village and must meet attacks form other armies, combat challenges from other warlords and their Samurai, attack and defeat pirates, make raids for gold or slaves and feed your village.

Price: ZX81 £4.50 Dragon 32 £6.95

Cheques and PC's please, made payable to: M.C. LOTHLORIEN

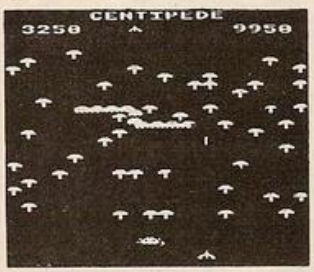
SPECIAL OFFER! Deduct £1 per cassette or disc when ordering 2 or more.

TOP QUALITY MACHINE-CODE PROGRAMS

FOR THE BBC MICROCOMPUTER



DISC-BASED SOFTWARE AVAILABLE NOW!

At last . . . high quality software is available on disc for the B.B.C. microcomputer now!

Our programs are ready for despatch on quality 5.25" discs at only £9.90 for each program.

Alternatively, all six programs (together with a special menu-type selection program can be supplied on one disc for just £49.90.

CENTIPEDE (32K) £6.50 (on cassette)/ £9.90 (on disc)
Incredible arcade type game featuring mushrooms, flies, snails, spiders, and the centipedes of course. Excellent graphics and sound. 6 skill levels, hi-score, rankings, bonuses, and increasing difficulty as the spiders become more active and the mushrooms increase.

SPACE FIGHTER(32K) £6.50 (on cassette)/ £9.90 (on disc)
Arcade-style game based upon features from DEFENDER and SCRAMBLE. 5 types of menacing alien fire at you and may attempt to ram you. Separate attack phases, fuel dumps, asteroids, repeating laser cannon, smark bombs, hi-score, ranking, 6 skill levels, bonuses.

FRUIT MACHINE (32K) £6.50 (on cassette)/ £9.90 (on disc)
Probably the best fruit machine implementation on the market. This program has it all . . . HOLD, NUDGE, GAMBLE, moving reels, realistic fruits and sound effects, multiple winning lines. This is THE fruit machine program to buy.

GALAXIANS (32K) £6.50 (on cassette)/ £9.90 (on disc)
Fast action version of the popular archade game. 4 types of Galaxian (in 3 initial screen formations) swoop down individually or in groups of two or three. 6 skill levels, hi-score, ranking, bonus laser bases, increasing difficulty, superb graphics and sound.

INVADERS (32K) £6.50 (on cassette)/ £9.90 (on disc)
Superior version of the old classic arcade game including a few extras. 48 marching invaders drop bombs that erode your defences, and 2 types of spaceship fly over releasing large bombs that penetrate through your defences. Hi-score, increasing difficulty, superb sound effects and graphics.

ALIEN DROPOUT (32K) £6.50 (on cassette)/ £9.90 (on disc)
Based upon the arcade game of ZYGON, but our version improves upon the original arcade game itself. You have to shoot the aliens out of their "boxes" before the "boxes" fill up. Once full, the aliens fly down relentlessly, exploding as they hit the ground. Suitable for use with keyboard or joystick.

SUPERIOR SOFTWARE Telephone: 0532-842714

EASY ATOM CODES

If your Atom seems hostile about giving away information, Vincent Fojut's error-message handler might not exterminate all errors — but should certainly help you correct them.

PUTTING IT KINDLY, the error codes provided by the Acorn Atom's standard error handler can be rather unhelpful at times. Just what is error 191? Newcomers to the machine need a little more encouragement if they are not to be put off by their inevitable mistakes. Even the more experienced Atom user can save himself the frustration of checking on the meanings of the less frequent error codes.

The short machine-code program — listing 2 — alleviates the problem by providing an English language error-message handler in place of the standard error routine. For maximum utility, the normal error codes and Basic line number references are still provided. Total memory requirements, for the machine code and error-message data table, are in the order of 1.25K, though this will very depending on the length and number of the error messages stored.

Before we can print the English messages for each error, we first need a convenient means of entering them into the machine. The Basic program in listing 1 facilitates the required data entry. As you can see from the short sample run in figure 1, the entry program prompts the user for an error code, which must be between 0 and 255 inclusive, and then its associated error message is requested.

As a helpful starting point, a list of all the operating system errors, and their respective translations into English, can be found in the Atom user manual, *Atomic Theory and Practice*, on pages 205 to 209. The meaning of each error can be typed in verbatim, if desired. There is, however, nothing to stop you modifying these messages — shortened lengthened, rephrased or typed in Swahili — to suit your own particular requirements.

To terminate data entry, type 999 in response to the Error number? prompt. Alternatively, the program will terminate automatically if there is insufficient memory to store another error message — see lines 340 to 360, listing 1.

When data entry is completed, the program returns the number of messages stored, and prints a suitable COS command to save the entire message table for future use. The lazier ones amongst you, who wish to avoid retyping, can enter this command by using the cursor-control and Copy keys.

Once the data table has been created and stored, the Basic program is no longer required. It can safely be overwritten by your current program or application. Remember that if you wish to use mode 4, the highest resolution graphics, you will need to store the machine-code routine and the data table in lower text space, say, at # 3700 onwards, as in the program examples. If mode 4 is not required, then anywhere in the upper 3K of graphics RAM — # 8C00 to # 97FF — can be used.

Figure 2 shows how the messages are stored in the data table. Each entry consists of an error number, followed by a message in ASCII. Both upper- and lower-case ASCII characters are permitted. Note, however, that the byte containing the first character in each ASCII string has its top bit set to 1. This gives the new error routine a convenient means of detecting the end of any message string — it need only look for a byte with a negative value.

The end of the message table is marked by two consecutive bytes of value zero. You may perhaps wonder why two bytes were necessary, as opposed to just one, since there is no Basic error with a number of 0. The reason is that the value zero could itself be a valid error code — as could any eight-bit value — if the routine were to be used by machine-code programs. Since no restriction has been placed on the order of error numbers during data entry, it follows that an error code of zero could occur anywhere in the message table. A double-byte end-of-table marker avoids any such potential confusion.

Listing 2 details the modified error-handling routine. The Break vector at # 202, # 203 is modified so that whenever a 6502 BRK instruction is executed — for example during the normal trapping of a Basic error — processing is rerouted via this program. The routine scans through the user-defined error message table until a match is found for the current error number stored on the processor stack. As soon as a match is found, the appropriate message string is printed. This is followed by the standard Atom error output, so that you can isolate the offending Basic line.

If no match for the error code can be found, the program jumps straight into the normal Atom error routine.

In testing this routine, I hit upon what appears to be a little-known fact about the Acorn Atom. The BRK vector — BRKVEC at # 202, # 203 — unlike the other operating system vectors, cannot be changed by Basic in direct mode. To demonstrate this, try entering the following directly — that is, without line numbers:

```
?# 204 = # AB;?# 205 = # CD change IRQ
  vector
P.&?# 204,&?# 205 should give AB,CD —
  that is, vector changed
```

Press Break to restore the IRQ vector's original contents, # A000. However:

```
?# 202 = # AB;?# 203 = # CD change BRK
  vector
```

(continued on page 109)

ZX Spectrum JOYSTIX ! VIC 20 SOFTWARE

FROM INTERCEPTOR MICRO'S

At last, the ultimate in ZX add-ons has arrived. The unique board has been designed to take Atari* type or Commodore× type joystix. The board will take two joysticks+ which are software programable using the in statement on your Spectrum. Just add a few simple lines to your programs for true arcade action. Supplied with full instructions and demonstration cassette for only

£15.95

INTERCEPTOR SOFTWARE

* JOYSTIX SHOWN NOT INCLUDED

(continued from page 107)

*P.&?#202,&?#203 still gives D8,C9 — that is, vector not changed

As far as our new routine is concerned, the effects of this are twofold. Firstly, any program which uses the new error handler must immediately alter the BRK vector to the new start address. Secondly, the new messages will not be displayed for Basic errors caused by a direct-mode line, unless the same Basic line redirects the BRK vector first. In practice, this second point is no real problem. Any direct-mode error will obviously be due to the line just entered and should, therefore, be relatively easy to identify.

Now that you have entered or loaded your message table and modified error routine, how do you use it? Figure 3 shows a simple Basic program which causes the new error handler to be executed. Note that the very first thing the program does is to change the BRK vector — we assume that the machine code has been stored at address #3700 onwards.

Once this is done, you may enter your Basic program as normal. You have the added assurance that when run, your program will be able to identify any errors in as precise and as meaningful a way as you choose — see the sample run in figure 3.

Machine-code programs may also use the error handler to good effect. As an example, consider the program in figure 4. The routine adds #40 to the value stored at address #0090. If the byte at this address is #3F or less, then the sum of the addition is stored at address #0091, as in Sample run A. If the byte is # or greater, then the addition will set the processor's overflow flag. When such an overflow occurs, a suitable error message can be displayed by invoking the new error handler via a BRK instruction — see Sample run B.

The value of the error code generated by any BRK instruction is calculated by adding 2 to the BRK instruction's address, and shedding the high byte of the result. In the example in figure 4, the BRK will be located at #3614, which generates an error number of #3614+2=#3616=a low byte of #16 or 22 decimal. If a suitable error message is added to the message table for this error number, then it will be displayed whenever the overflow occurs.

Note that, like its Basic counterpart, the machine-code program firstly redirects the BRK vector. This must always be done, unless the machine code is being called from a Basic program which itself modifies the vector.

The more adventurous may like to modify the data-entry program so that control characters may be easily embedded within the error-message strings. This could for example enable you to clear the screen before displaying certain error messages.

In addition, the size of the message table could be reduced to some extent through the use of text compression techniques, with text expansion routine in the new error handler. Concise message phrasing also helps. ■

COMPETITION-PRO Joystick

PRECISION GAME CONTROL!

For ZX SPECTRUM
Complete with stylish interface unit simply plug in for instant arcade action.

ONLY £25.00 inc. VAT

Outstanding Features

- Super strong nylon and steel construction, built to last.
- A total of 8 directions plus 2 large fire buttons.
- Arcade proven moulded leaf switches ensure incredible reliability.
- Complete with self contained boxed interface which simply plugs into the Spectrum expansion port (with or without printer).
- Easily programmed in BASIC or M/C.

These arcade games, designed exclusively for the **Joystick** by leading software houses, are now available for Spectrum:

3D-Tunnel	M/C	16/48K	£4.95
Gulp Man	M/C	16K	£4.95
Time Gate	M/C	48K	£6.95
Meteroids	M/C	16K	£5.95

EDUCATIONAL COMPUTING on the ZX81

Suit children ages 5-11

strongly recommended by educational authorities

No comparable collection offers so much for so little

Fifty high-quality programs to turn your ZX81 or Spectrum into a powerful educational tool.

And you don't even need to know programming. There are clear instructions and plenty of tips & advice. Designed to go beyond drill & practice the promote learning through interaction & discovery.

Almost all programs work on the SPECTRUM

All programs fit 1K

Creative use of graphics

Many innovative ideas

Fully documented

Includes many games

Educare's **50** 1K PROGRAMS for PRIMARY EDUCATION

Includes:-

TORTOISE
A simplified version of the famous Turtle programme

CODED MISSILE
Combines the fun of arcade games with learning

£5·95 only

r q FORTH

"r q FORTH" runs on 16K or 32K BBC micros and costs £15. It:

* follows the FORTH-79 STANDARD and has fig-FORTH facilities;
* provides 260 FORTH words;
* is infinitely extensible;
* has a full-screen editor;
* allows full use of the M.O.S;
* permits use of all graphic modes, even 0-2 (just!);
* provides recursion easily;
* runs faster than BBC BASIC;
* needs no added hardware;
* includes a 70 page technical manual and a summary card;
* has hundreds of users.

BBC FORTH TOOLKIT

Level 9 Computing are pleased to announce a new toolkit for "r q FORTH" on 32K BBC micros. It costs only £10 and adds the following facilities to FORTH:

* a 6502 assembler, providing machine-code within FORTH;
* turtle graphics, giving you easy-to-use colour graphics;
* decompiler routines, allowing the versatile examination of your compiled FORTH programs;
* the full double-number set;
* an example FORTH program and demonstrations of graphics;
* other useful routines.

BASIC DICTIONARY

This dictionary, compiled by Tony Edwards, will explain the function of common Basic words as used in popular machines, enabling you to work out your own machine's equivalent. A useful complement to our recent series on Basic dialect translation.

PROC A reserved word which starts a user-declared numeric procedure on the BBC Micro.

PTR An unusual statement pair used by the BBC Microcomputer to allow selection of the next byte to be transferred between program and file, giving random type access.

R

R. The TRS-80, level 1, and Palo Tiny Basic abbreviation for the RUN command.

RAD A function which converts degrees to radians.

RANDOM A statement which resets the seed to be used for the random number generator. Its use — usually without argument — allows different pseudo-random series to be generated each run.

RANDOMISE The standard ANSI word — though little used — for the RANDOM functions.

REA The PDP-80E abbriviation for READ. The same abbreviation followed by a full stop is used in TRS-80 level 1 and Palo Alto Tiny Basic.

READ A standard ANSI statement which causes data to be read from a Data line elsewhere in the program. The read data are assigned to variables.

RECALL The Apple II function which causes the computer to input data from a cassette drive.

RENAME The statement used to rename a current file. It requires two arguments, the old name and the new name.

REM A standard ANSI word used to indicate that the interpreter should ignore the following line or part of a line.

REMARK The same statement as REM.

RENUM The Microsoft abbreviation for RENUMBER.

RENUMBER The command which re-numbers the lines of a resident Basic program and simultaneously adjusts the addresses to Jump commands to maintain program logic.

REPEAT . . . . UNTIL A BBC Micro statement. It produces a loop which is repeated until the specified condition is true. A single REPEAT may have multiple UNTILs. This statement is not often available in Basic but can be simulated — see *Your Computer,* June 1982 page 44.

RES The PDP-8E abbreviation for RESTORE.

RESET The TRS-80 statement which switches off a specified pixel.

REST. The TRS-80, level 1, abbreviation for RESTORE.

RESTORE A standard ANSI word which causes the DATA pointer to be reset. This has the effect of causing the next READ statement to operate on the first of a program's data. In some machines a partial RESTORE is possible.

RESUME The statement used as a target of an ON ERROR GOTO routine. It directs the computer to continue execution from the line named in the argument.

RET The PDP-8E abbreviation for the RETURN statement. The TRS-80 level 1 and Palo Alto Tiny Basic use the same abbreviation followed by a full stop.

RETURN The standard ANSI statement used to complete a GOSUB routine.

**RIGHT$** A function which isolates a specified number of string characters starting from the right-most character. It is sometimes used with a "$" appended.

RND A standard ANSI function which returns a random number. Its use is non-standard in some Basics and details are given in *Your Computer,* August 1982, page 59. The statement RND (–X) when used on the Apple II is equivalent to RANDOM.

RU An abbreviation for RUN.

RUN A command which causes a computer to start executing the program resident in its memory.

S

S. The TRS-80 level 1 and Palo Alto Tiny Basic abbreviation for STEP.

SAVE A widely-used command which causes a program, resident in the memory, to be copied on to a cassette, or in some cases on to disc.

SCRN A special function used on the Apple II which returns a value identifying the colour of a specified graphics block.

SET The statement used in TRS-80 Microsoft Basic which turns on a graphics block specified by its arguments.

SGN A logical function which returns –1,0 or +1 depending respectively on the argument being negative, zero or positive.

SIN An ANSI standard function which returns the sine of its argument. The argument should usually be started in radians.

SLEEP A statement used to cause the suspension of program execution for the number of tenths of a second specified by the argument.

SPACE A function used to print a number of spaces in an output. The number being specified by the argument. Sometimes a $ is appended to this word.

SPC Similar function to SPACE. In the case of the BBC Micro the number of spaces inserted is argument module 256.

SQR The ANSI standard word for the function which returns the square root of a positive number.

SQRT The same as SQR.

ST An abbreviation for the STEP function.

ST. The TRS-80 level 1 abbreviation for STOP.

STEP A standard ANSI word used as part of a FOR . . TO . . STEP function which indicates the size of the increment by its argument which can usually be positive, negative, or non-integer.

STO An abbreviation for STOP.

STOP A statement which halts the execution of a program and puts the computer in the ready mode. A standard ANSI word.

STR$ A useful function which converts a numerical value into its string equivalent.

STRING$ A function which prints a ASCII character a specific number of times. The character code and the number of repeats being the arguments. In some computers the actual character, in quotes, can be the argument.

STUFF A statement used on Opus 1 and 2 machines to place integer values between 0 and 256 in specified memory addresses.

SYS An abbreviation for SYSTEM.

SYSTEM A command and a statement which places the computer into the monitor mode to handle machine-language programs directly.

T

T. This abbreviation is used in TRS-80 level 1 Basic to mean both THEN or TAB. The interpreter recognises the TAB meaning if it is followed by a numeral in parenthesis. For example,

T.(10)

means

TAB 10

and

T.10

means

THEN 10

TAB A standard ANSI word which is used in conjunction with PRINT statements. it causes the cursor, or printer carriage, to move to a position corresponding to the number used as an argument from the left-hand edge of the line. ■

RESPONSE FRAME

Do you have a problem? Your manual is incomprehensible or you just cannot get the hang of that programming trick you tried — whatever it is, Tim Hartnell will do his best to answer your queries. Please include only one question per letter and mark them "Response Frame".

SPLIT SCREEN

I wish to write a program on my Spectrum, part of which involves scrolling the top half of the screen up and down, and the top left-hand and right-hand quarters of the screen to left and right individually. Please could you explain how this could be done?

Peter Rutty,
Luton,
Bedfordshire.

THE EASIEST WAY to do this is to hold the contents of each segment of the screen in a long string. You then print the string in segments, using Print At. For example, to print the left-hand corner, you could use a sequence such as:

```
PRINT AT 0,0; A$( TO 7);AT 1,0; A$(8 TO 16); AT 2,0; A$ (17 TO 25)
```

and so on.

SOLDER JOY

Following the article in *Your Computer* on converting Atari joysticks for use on a Sinclair ZX-81, I would like to know if machine-code programs which use the arrow keys for movement will automatically run using the joystick. Also, is it worth the trouble of soldering the chips, or would I be better off buying a ready-made Sinclair joystick?

S Ray,
Ipswich,
Suffolk.

UNFORTUNATELY, machine programs using the cursor keys will not automatically run using joystick. Programs have to be tailored very carefully to the actual joystick used. Whether or not is it worth making conversions for yourself, for joysticks or other peripherals, depends largely on your confidence in working with electrical components. If you have any doubts, I would suggest you would be better off buying a unit ready-made.

MOD TROUBLE

I have come across a program in a book which uses the Mod command. Could you tell me how to make this program run on my computer, which does not have Mod?

Martin James,
Notting Hill,
London W11.

DAVID LIEN'S *Basic Handbook*, published by Compusoft, California, points out that the Mod command which prints the remainder of a division — Print 23 Mod 4 will give 3, the remainder when 23 is divided by 4 — can be emulated as follows. The form of the command generally is X Mod Y. To make A equal to X Mod Y, when your computer does not have Mod, include the line

```
A = INT(Y*(X/Y)) + .001
```

You will find that Lien's book is an invaluable aid when trying to convert programs from foreign Basics into the dialect used by your own computer.

CAT PEOPLE

I have been the proud owner of a large ginger cat for over four months. I realise the limitations of my cat, but I was wondering if you could help me with one particular problem. I also own a ZX-81 which has been damaged by my ginger cat, who pushed it off the edge of the table. The computer will now no longer load programs which I once taped, and if I try to save programs, there is a fluctuating whistle with a very much reduced program signal. I would be very grateful if you could tell me what the fault is, and how it can be corrected.

F Floor,
Hampton,
Middlesex.

I MUST admit I was not sure what you were going to ask when you started talking about your, cat, but once you mentioned the computer being knocked to the floor I realised the letter was not a joke, as I had at first feared. Despite all that, I am afraid I can not help you. Diagnosis of hardware faults by letter is a notoriously thankless task. I am afraid you will have to send your computer back to Sinclair Research for repair. It is very unlikely that Sinclair will also be able to do something about your cat.

PERICLES RULES

I am waiting delivery of my BBC model A. In the meantime, I am writing some programs for it. I would be pleased if you could tell me if the following statement, in immediate mode,

```
MODE 7, PRINT CHR$
(130);"PERICLES";CHR$(132);
"PERICLES"
```

will print the name in two different colours? That is, is it possible to have more than one foreground colour in the same line?

P J Isahageas,
Attica,
Greece.

THERE IS NO restriction on the use of different foreground colours on a single line mode 7 on the BBC computer, except for the fact that each colour control character — that is, the CHR$(130) or whatever — takes up a single space, so a blank appears every time there is a control character. If blanks do not bother you, you could have the different letters of your name chosen randomly. The following program would do this.

```
 10 GOSUB 100
 20 PRINT"P";:GOSUB 100
 30 PRINT"E";:GOSUB 100
 90 GOTO 10
100 PRINT CHR$(128 + RND(6));
110 RETURN
```

TIME BOMB

Recently I acquired a copy of a certain program from a friend. When I list the program, there is a line 6411 in between lines 877 and 1010. It reads

6411 cursor STRUCTIONS

in inverse. When I run the program, and try and input something, I obtain error code C/6411. I wonder if you could tell me why this happens — it runs on my friend's computer.

Stephen Richards,
Billingshurst,
West Sussex.

IN THE FIRST place, copying commercial software is robbing the programmer of his or her royalties, so I am afraid I can have little sympathy for you if you have copied a program which your friend bought. It is quite possible that the company which made the software has set a time bomb such as you describe to stop illegal copies from running. The way to remove the odd line is to Poke the exact address where the line is held. Determining such an address is not easy to do. If the program you are copying is not a commercial program, it seems that either your computer has corrupted the program, or it was corrupted by your friend's computer when Saving it. Sometimes an electrical discharge, like an electrical appliance starting up in the house during the Saving process, can put a corrupting "blip" on the program, producing similar results to those you describe.

KEY FEELINGS

I am considering buying an Atari 400 computer because of the vast amount of software available for it. I was wondering if you could tell me of an easy way to put a real keyboard on the Atari when I receive it.

Andrew Know,
Edinburgh.

FIRST, I WOULD suggest you do not judge the Atari 400 keyboard too harshly until you have tried it. After the frustration of working on membrane keyboards like the ZX-81, you could be forgiven for believeing the Atari 400 would also be annoying to program, but you may not find it so. I find the 400 a pleasant computer to work with, because the keys have little raised edges, which make for a much more positive feel than the smooth membrane keyboards like the ZX-81. As well as this, the keyboard gives a positive bleep every time you hit a key, and this audio feedback makes typing easy. There is at least one company selling add-on keyboards for the 400, but I would work with the computer before deciding that one of these is vital.

THE STORK TEST

Is there any way of checking that my Sinclair Spectrum 48K is, in fact, a 48K model? There seems to be no external distinguishing feature to identify the two different models.

C Browning,
Hampton,
Middlesex.

IF YOU LOOK through the hole in the back of the computer, where the Printer plugs in, you will see a number of circular brown objects on a 48K model. These are not present on the 16K version. If you enter

```
DIM A$(40,000)
```

as a direct command on your computer, and you obtain an out-of-memory report code, you have a 16K machine.

SHOP AROUND

As a new reader, in need of some advice, I wish to buy a home computer, mainly for good quality education and games program. I am contemplating buying a Dragon 32, as it seems to have some good specification at a budget price. Could you tell me if I would be restricted to buying only the software supplied by the manufacturer of the computer? I am very keen to buy some Acornsoft items, such as Snapper, Monsters and Defender, and I need to know whether or not these would be compatible. Also, would I need to buy any accessories, such as a tape unit extended RAM, or whatever?

P Wilson,
Lancaster Road,
London W11.

ALTHOUGH YOU are not restricted to software produced by the manufacturer or distributor of the particular computer you buy, you are restricted to software which is written for the computer which you have bought. Acorn software, whether for the Atom or the BBC Microcomputer, will not run on the Dragon. If you like this software so much, it may be well worth considering buying an Acorn computer. Unless you buy a disc unit for your computer — and many of the cheaper computers do not, as a rule, support discs — you will have to obtain a cassette tape player to be able to load software into your computer. Exceptions to this include the Texas TI-99/4A which accepts plug-in cartridges for programs. You cannot, however, save your own programs on to cartridges. A tape or disc unit is needed for this. ■

FINGERTIPS

Fingertips is our regular calculator column covering calculator news, programming hints and examples of unusual applications. The column is written and compiled by calculator enthusiast David Pringle who is glad to hear of any of your ideas. *Your Computer* pays £6 for each of your contributions published.

THE FIRST program this month comes from Albert Ball of Warrington, for his CBM PR-100. The program performs the basics of Boolean Algebra and is intriguing in being the first calculator program I have seen to do this. Boolean algebra refers to the logical combination of binary codes and can be used in some up-market calculators. Applications of the work are seen not only in computing but digital electronics.

The following sequences can be used to evaluate logical expressions. The two logical values are assumed stored in M1 and M2 but any memories can of course be used.

AND MR 1 X MR 2 = 6 steps

OR MR 1 + MR 2 = x F INT 9 steps

INVERT MR 1 +/- + 1 = 6 steps

EXCLUSIVE OR MR 1 + MR 2 ÷ 2 x F FRAC 2 = 12 steps

These sequences can be chained together to compute results for more complex expressions. For example, the expression (A.B) + (C.D) gives the following sequence:
(A in M0, B in M1, C in M2 and D in M3) MR 0 x (MR 1 +/- + 1) + ((MR 2 +/- + 1 x MR 3) +/- + 1) = √x F INT R/S.

A further program is useful for presetting memory contents prior to evaluating expressions when establishing truth tables. Memory contents can be set manually, of course, but this becomes tedious if many variables are involved, or if many states have to be analysed as for truth tables.

A decimal number is entered manually and the program runs as many times as there are memories to be set. The effect is to load the memories to be set, in other words load the memories with binary digits corresponding to the decimal number entered. The most significant digit is in M0, the next in M1 and so on for as many digits as are needed — up to a maximum of nine.

For example, to generate a truth table for the expression quoted earlier, enter the program shown in locations 0-21 inclusive, and enter the key sequence also shown earlier from location 22 onwards.

Enter 0 — the first decimal number, Goto 00 then press R/S four times — allowing the program to stop between presses. This loads M0 to M3 inclusive with zeros. Run the expression evaluation program from 22, and the result is given. For the next value, enter 1, Goto 00 again press R/S four times. Now M0 to M2 contain zeros and M3 contains 1. Run from 22 for the next result. continuing in this way up to decimal number 15 generates a truth table.

DEC NO.	A (M0)	B (M1)	C (M2)	D (M3)	RESULT
0	0	0	0	0	1
1	0	0	0	1	0
2	0	0	1	0	1
3	0	0	1	1	1
4	0	1	0	0	1
5	0	1	0	1	0
6	0	1	1	0	1
7	0	1	1	1	1
8	1	0	0	0	1
9	1	0	0	1	1
10	1	0	1	0	1
11	1	0	1	1	1
12	1	1	0	0	1
13	1	1	0	1	0
14	1	1	1	0	1
15	1	1	1	1	1

The memory loading sequence shown uses a feature of the CBM PR-100 which is not described in the manual, that is

F x <> M F 9M

This has the effect of cycling the contents of all memories. M0 contents go to M1, M1 to M2 and so on, M9 contents go into the x register — the display — and the x register contents go into M0.

Memory Loading Program.

Bent Bollerup, of Denmark, has a Jackpot program for the PC-1211 that has kept his friends occupied for hours, he says.

In Def mode you press Shift A. You are asked for an initial number between 0 and 7 — up to ten digits. Enter this, and you are shown the wheels one by one, then the winnings and your total. On pressing Enter you are asked for Hold? (0-1).

010 ENTER

means hold the middle wheel. If you do not want to hold, just press Enter again and the next game is in play.

You will not be asked for Hold after winning. Hold cannot be used in two succeeding plays. Every game costs you two coins — H in line 20 — and you can win from two to 40 coins — G in line 60.

The priority of the signs is from the lowest:

/ - + * = // Y $

If you want to proceed from the last game, rather than from scratch, start on Shift B next time you turn the computer on. About the program: line 5 and sub-routine lines 190-220 generate the first random number. The random generator — lines 200-220 — is to be found in *Response Frame*, March 1982.

Lines 22 to 55 calculate the next random numbers, pick the corresponding sign, and show the wheels. Line 60 calculates the winnings — this can be adjusted by changing the fraction 8/7. Lines 70 and 90 beep 1 for every two coins you win and print the three wheels, your winnings and your total number of coins, plus or minus. Lines 100 to 170 handle the Hold function together with lines 250 and 260 and, to be specific, lines 24 and 26.

For space in the listing I have used a dot. Two dots mean two spaces.

Jackpot program for PC-1211

260 K=INT(K/10): RETURN
```

Mark Vince of Halesowen has written an intriguing little program which will output exactly the factorial of any number between 1! and 237!. I await the flood of letters informing me of a quicker method. Mark uses a Casio fx-602P.

This program calculates all digits of n! for any n between 1 and 237. The program calculates all digits and displays the first few digits; successive presses of Exe then display blocks of seven digits at a time. When all digits are exhausted the letter E is displayed to signify End. Long execution times must be expected for large values of n.

Finally a program for the TI-57 from B Maddocks of Sheffield. It will calculate the area of any polygonal shape — a great improvement on Simpson's Rule. This program will give the area of any shape or cross-section from the co-ordinates of that shape based on:

$$A = \sum_{i=2}^{N} \frac{(X_1 = X_i)(Y_{(i+1)} - Y_{(i-1)})}{2}$$

when $Y_{n+1} = 71$

See figure 1.

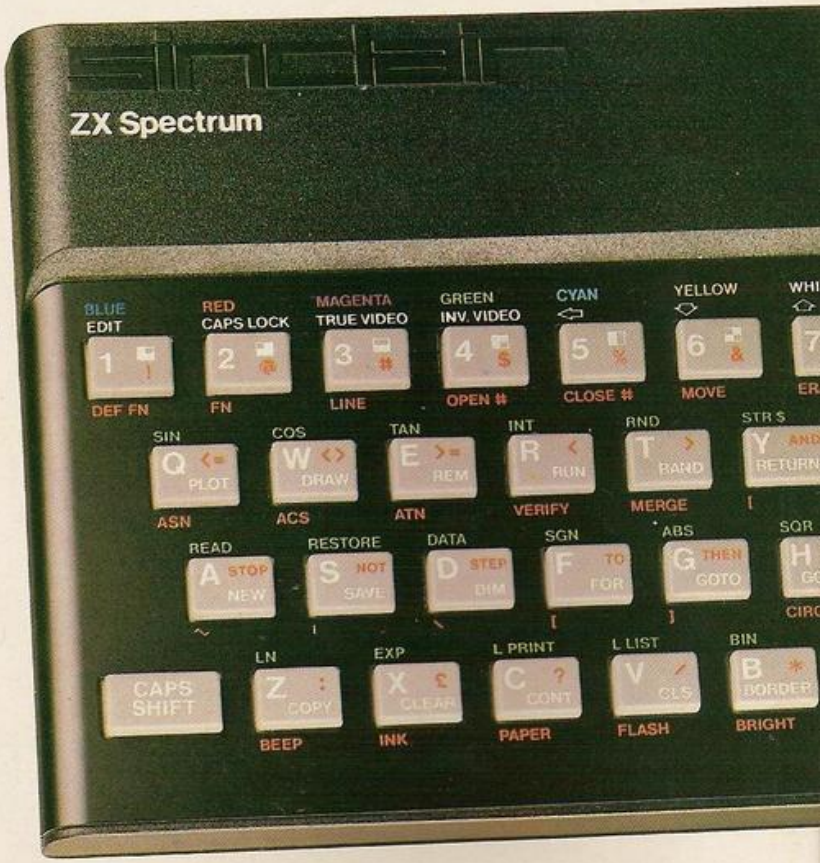
Sinclair ZX Spectr

16K or 48K RAM... full-size moving-key keyboard... colour and sound... high-resolution graphics...

From only £125!



First, there was the world-beating Sinclair ZX80. The first personal computer for under £100.

Then, the ZX81. With up to 16K RAM available, and the ZX Printer. Giving more power and more flexibility. Together, they've sold over 500,000 so far, to make Sinclair world leaders in personal computing. And the ZX81 remains the ideal low-cost introduction to computing.

Now there's the ZX Spectrum! With up to 48K of RAM. A full-size moving-key keyboard. Vivid colour and sound. High-resolution graphics. And a low price that's unrivalled.

Professional power– personal computer price!

The ZX Spectrum incorporates all the proven features of the ZX81. But its new 16K BASIC ROM dramatically increases your computing power.

You have access to a range of 8 colours for foreground, background and border, together with a sound generator and high-resolution graphics.

You have the facility to support separate data files.

You have a choice of storage capacities (governed by the amount of RAM). 16K of RAM (which you can uprate later to 48K of RAM) or a massive 48K of RAM.

Yet the price of the Spectrum 16K is an amazing £125! Even the popular 48K version costs only £175!

You may decide to begin with the 16K version. If so, you can still return it later for an upgrade. The cost? Around £60.

Ready to use today, easy to expand tomorrow

Your ZX Spectrum comes with a mains adaptor and all the necessary leads to connect to most cassette recorders and TVs (colour or black and white).

Employing Sinclair BASIC (now used in over 500,000 computers worldwide) the ZX Spectrum comes complete with two manuals which together represent a detailed course in BASIC programming. Whether you're a beginner or a competent programmer, you'll find them both of immense help. Depending on your computer experience, you'll quickly be moving into the colourful world of ZX Spectrum professional-level computing.

There's no need to stop there. The ZX Printer – available now – is fully compatible with the ZX Spectrum. And later this year there will be Microdrives for massive amounts of extra on-line storage, plus an RS232 / network interface board.

Key features of the Sinclair ZX Spectrum

- Full colour – 8 colours each for foreground, background and border, plus flashing and brightness-intensity control.
- Sound – BEEP command with variable pitch and duration.
- Massive RAM – 16K or 48K.
- Full-size moving-key keyboard – all keys at normal typewriter pitch, with repeat facility on each key.
- High-resolution – 256 dots horizontally x 192 vertically, each individually addressable for true high-resolution graphics.
- ASCII character set – with upper- and lower-case characters.
- Teletext-compatible – user software can generate 40 characters per line or other settings.
- High speed LOAD & SAVE – 16K in 100 seconds via cassette, with VERIFY & MERGE for programs and separate data files.
- Sinclair 16K extended BASIC – incorporating unique 'one-touch' keyword entry, syntax check, and report codes.

um

ZX Spectrum software on cassettes – available now

The Spectrum software library is growing every day. Subjects include games, education, and business/household management. Flight Simulation...Chess...Planetoids...History...Inventions...VU-CALC...VU-3D...Club Record Controller...there is something for everyone. And they all make full use of the Spectrum's colour, sound, and graphics capabilities. You'll receive a detailed catalogue with your Spectrum.

ZX Expansion Module

This module incorporates the three functions of Microdrive controller, local area network, and RS232 interface. Connect it to your Spectrum and you can control up to eight Microdrives, communicate with other computers, and drive a wide range of printers.

The potential is enormous, and the module will be available in the early part of 1983 for around £30.

sinclair

Sinclair Research Ltd, Stanhope Road, Camberley, Surrey GU15 3PS.
Tel: Camberley (0276) 685311.

The ZX Printer – available now

Designed exclusively for use with the Sinclair ZX range of computers, the printer offers ZX Spectrum owners the full ASCII character set – including lower-case characters and high-resolution graphics.

A special feature is COPY which prints out exactly what is on the whole TV screen without the need for further instructions. Printing speed is 50 characters per second, with 32 characters per line and 9 lines per vertical inch.

The ZX Printer connects to the rear of your ZX Spectrum. A roll of paper (65ft long and 4in wide) is supplied, along with full instructions. Further supplies of paper are available in packs of five rolls.

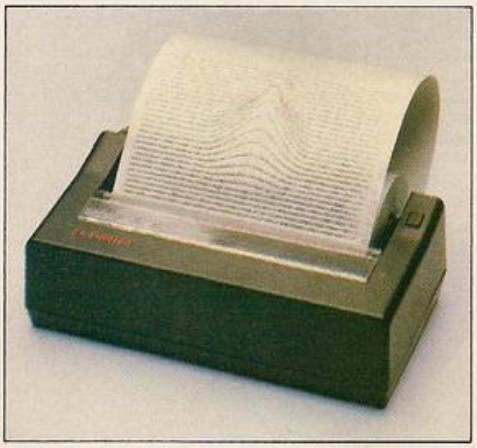
The ZX Microdrive – coming soon

The new Microdrives, designed especially for the ZX Spectrum, are set to change the face of personal computing by providing mass on-line storage.

Each Microdrive can hold up to 100K bytes using a single interchangeable storage medium.

The transfer rate is 16K bytes per second, with an average access time of 3.5 seconds. And you'll be able to connect up to 8 Microdrives to your Spectrum via the ZX Expansion Module.

A remarkable breakthrough at a remarkable price. The Microdrives will be available in the early part of 1983 for around £50.



How to order your ZX Spectrum

BY PHONE – Access, Barclaycard or Trustcard holders can call 01-200 0200 for personal attention 24 hours a day, every day. BY FREEPOST – use the no-stamp needed coupon below. You can pay by cheque, postal order, Barclaycard, Access or Trustcard.

EITHER WAY – please allow up to 28 days for delivery. And there's a 14-day money-back option, of course. We want you to be satisfied beyond doubt – and we have no doubt that you will be.

To: Sinclair Research, FREEPOST, Camberley, Surrey, GU15 3BR. **Order**

Qty	Item	Code	Item Price £	Total £
	Sinclair ZX Spectrum – 16K RAM version	100	125.00

Sinclair ZX Spectrum–technical data.

Dimensions

Width	233 mm
Depth	144 mm
Height	30 mm

CPU/ memory

Z80A microprocessor running at 3.5 MHz. 16K-byte ROM containing BASIC interpreter and operating system.

16K-byte RAM (plus optional 32K-byte RAM on internal expansion board) or 48K-byte RAM.

Keyboard

40-moving-key keyboard with full upper and lower case with capitals lock feature. All BASIC words obtained by single keys, plus 16 graphics characters, 22 colour control codes, and 21 user-definable graphics characters. All keys have auto repeat.

Display

Memory-mapped display of 256 pixels x 192 pixels; plus one attributes byte per character square, defining one of eight foreground colours, one of eight background colours, normal or extra brightness and flashing or steady. Screen border colour also settable to one of eight colours. Will drive a PAL UHF colour TV set, or black and white set (which will give a scale of grey), on channel 36.

Sound

Internal loudspeaker can be operated over more than 10 octaves (actually 130 semitones) via basic BEEP command. Jack sockets at the rear of computer allow connections to external amplifier/ speaker.

Graphics

Point, line, circle and arc drawing commands in high-resolution graphics.
16 pre-defined graphics characters plus 21 user-definable graphics characters. Also functions to yield character at a given position, attribute at a given position (colours, brightness and flash) and whether a given pixel is set. Text may be written on the screen on 24 lines of 32 characters. Text and graphics may be freely mixed.

Colours

Foreground and background colours, brightness and flashing are set by BASIC INK, PAPER, BRIGHT and FLASH commands. OVER may also be set, which performs an exclusive–or operation to overwrite any printing or plotting that is already on the screen. INVERSE will give inverse video printing. These six commands may be set globally to cover all further PRINT, PLOT, DRAW or CIRCLE commands, or locally within these commands to cover only the results of that command. They may also be set locally to cover text printed by an INPUT statement. Colour-control codes, which may be accessed from the keyboard, may be inserted into text or program listing, and when displayed will override the globally set colours until another control code is encountered. Brightness and flashing codes may be inserted into program or text, similarly. Colour-control codes in a program listing have no effect on its execution. Border colour is set by a BORDER command. The eight colours available are black, blue, red, magenta, green, cyan, yellow and white. All eight colours may be present on the screen at once, with some areas flashing and others steady, and any area may be highlighted extra bright.

Screen

The screen is divided into two sections. The top section – normally the first 22 lines – displays the program listing or the results of program or command execution. The bottom section – normally the last 2 lines – shows the command or program line currently being entered, or the program line currently being edited. It also shows the report messages. Full editing facilities of cursor left, cursor right, insert and delete (with auto-repeat facility) are available over this line. The bottom section will expand to accept a current line of up to 22 lines.

Mathematical operations and functions

Arithmetic operations of +, −, ×, ÷, and raise to a power. Mathematical functions of sine, cosine, tangent and their inverses; natural logs and exponentials; sign function, absolute value function, and integer function; square root function, random number generator, and pi.

Numbers are stored as five bytes of floating point binary – giving a range of $+3 \times 10^{-39}$ to $+7 \times 10^{38}$ accurate to $9\frac{1}{2}$ decimal digits.

Binary numbers may be entered directly with the BIN function. =, >, <, >=, <= and <> may be used to compare string or arithmetic values or variables to yield 0 (false) or 1 (true). Logical operators AND, OR and NOT yield boolean results but will accept 0 (false) and any number (true).

User-definable functions are defined using DEF FN, and called using FN. They may take up to 26 numeric and 26 string arguments, and may yield string or numeric results.

There is a full DATA mechanism, using the commands READ, DATA and RESTORE.

A real-time clock is obtainable.

String operations and functions

Strings can be concatenated with +. String variables or values may be compared with =, >, <, >=, <=, <> to give boolean results. String functions are VAL, VAL$, STR$ and LEN. CHR$ and CODE convert numbers to characters and vice versa, using the ASCII code.

A very powerful string slicing mechanism exists, using the form a$ (x TO y).

Variable names

Numeric – any string starting with a letter (upper and lower case are not distinguished between, and spaces are ignored).
String – A$ to Z$.
FOR-NEXT loops – A-Z.
Numeric arrays – A-Z.
String arrays – A$ to Z$.

Simple variables and arrays with the same name are allowed and distinguished between.

Arrays

Arrays may be multi-dimensional, with subscripts starting at 1. String arrays, technically character arrays, may have their last subscript omitted, yielding a string.

Expression evaluator

A full expression evaluator is called during program execution whenever an expression, constant or variable is encountered. This allows the use of expressions as arguments to GOTO, GOSUB, etc.

It also operates on commands allowing the ZX Spectrum to operate as a calculator.

Cassette interface

The ZX Spectrum incorporates an advanced cassette interface. A tone leader is recorded before the information to overcome the automatic recording level fluctuations of some tape recorders, and a Schmitt trigger is used to remove noise on playback.

All saved information is started with a header containing information as to its type, title, length and address information. Program, screens, blocks of memory, string and character arrays may all be saved separately.

Programs, blocks of memory and arrays may be verified after saving to confirm successful saving.

Programs and arrays may be merged from tape to combine them with the existing contents of memory. Where two line numbers or variables names coincide, the old one is overwritten.

Programs may be saved with a line number, where execution will start immediately on loading.

The cassette interface runs at 1500 baud, through two 3.5 mm jack plugs.

Expansion port

This has the full data, address and control busses from the Z80A, and is used to interface to the ZX Printer, the RS232 and NET interfaces and the ZX Microdrives.

IN and OUT commands give the I/O port equivalents of PEEK and POKE.

ZX81 compatibility

ZX81 BASIC is essentially a subset of ZX Spectrum BASIC. The differences are as follows.

FAST and SLOW: the ZX Spectrum operates at the speed of the ZX81 in FAST mode with the steady display of SLOW mode, and does not include these commands.

SCROLL: the ZX Spectrum scrolls automatically, asking the operator "scroll?" every time a screen is filled.

UNPLOT: the ZX Spectrum can unplot a pixel using PLOT OVER, and thus achieves unplot.

Character set: the ZX Spectrum uses the ASCII character set, as opposed to the ZX81 non-standard set.

ZX81 programs may be typed into the ZX Spectrum with very little change, but may of course now be considerably improved. The ZX Spectrum is fully compatible with the ZX Printer, which can now print out a full upper and lower case character set, and the high resolution graphics; using LLIST, LPRINT and COPY.
ZX81 software cassettes and the ZX 16K RAM pack will not operate with the ZX Spectrum.

Ashford,
Kent.

ZX-81

HERE IS A machine-code arcade-type game written for the 16K ZX-81. It will not work on a computer will less than 3.5K as the down-scroll routine, adapted from Munir Zaman's program in the January 1983 *Your Computer*, crashes if used with a minimum display file. The game itself is relatively simple involving the player controlling a car driving along a road avoiding the edges of the road and any other cars, but the incredible speed of machine code makes it enjoyable and challenging.

To enter the program, first type in a Rem statement containing 305 characters, made up of nine full lines plus 17, as the first line of the program. If you then use the direct command Poke 16510,0. This will give the first line a line number of 0, so that you cannot accidentally erase it. Next type in and run this now well-known hexadecimal loader:

```
 1 REM . . .305 characters. . .
10 LET X=16524
20 LET A$=""
30 IF A$=A"" THEN INPUT A$
40 SCROLL
50 PRINT X,A$(TO 2)
60 POKE X,16*CODE A$+CODE A$(2)-476
70 LET X=X+1
80 LET A$=A$(3 TO)
```

90 GOTO 30

Notice that the actual program in machine code starts at 16524, the first 10 bytes being data.

Enter the hexadecimal numbers shown in the machine-code listing: if you do not understand machine code, then these are numbers in base 16 which allow you to represent any number from 0 to 255 in just two digits — see the Sinclair manual. This loader allows you to enter as many codes as you like before pressing Newline. If you think that you have made a mistake then type S and Newline, and when the error report 3/50 appears then type Let X=an address which you know is correct, followed by Goto 20.

When you have entered the last code C9 at 16818 type S to stop, and then enter the second Basic program which prints the instructions and activates the machine code. Save the resulting program on tape as any error in the machine code could cause a system crash and the loss of your program.

Corridors of fear

Colin Carruthers,
Edinburgh.

SPECTRUM

THE THREE-DIMENSIONAL view that confronts you when you play this game shows the corridors within a maze from which you must escape within a given time. Your current x-y co-ordinate is displayed along with your orientation and the x-y co-ordinate of the way out.

Movement around the maze is by means of the cursor control keys: 7 moves one space forward — unless there is a wall directly in front — and 5 and 8 turn the player through 90° to the left or right.

At the end of the game, a plan of the maze is drawn so the player can see where he took the wrong turning. The game consists of a short machine-code routine and a larger Basic program.

The machine-code routine clears the first 22 columns of the display file and is best entered using the short Basic program. Run it, save it on tape and test the routine by typing

LET x=USR 23760

Assuming all is well, delete lines 10-40 by typing their line numbers. Type in the main program, using:

LIST 2

instead of just List to avoid listing the machine-code. The graphics characters in line 5025 are graphic ABCD and the inverse characters in 5786 say "Hit any key to being".

Each maze used in random, generated from four out of eight possible segments, each five by five units giving a final maze of 10 by 10 units.

Stockbridge,
Sheffield.

DRAGON

YOU, A DOT roughly in the screen centre, have to try and protect all four cities at the bottom of the screen from incoming bombs from outer space. Each time one of the bombs hits a city, a dot appears underneath the foremost left city. When all cities have a dot underneath them, the game ends. To protect your cities you are equipped with a device which causes the space-bombs to detonate prematurely. When you move the base and push the fire button an explosion will occur round your base. If a bomb is in the vicinity, it will stop, leaving its smoke trail, and another will appear at the top.

To move your base, a joystick is required. The movement of the base is controlled between lines 340-410. The variables are Score for score, Base for number of bases blown up, x,y and x1,y1 for the bombs and x2,y2 for your base.

The program takes only 1,922 bytes so you can always modify it. Note: if you wish to Save it or Load it, you must first press the reset button.

```

Tank killer

Peter Wales,
Hereford.

VIC-20

USING MULTICOLOUR mode graphics on the unexpanded Vic-20, you can create this bombing game. The objective is to blow up a tank by dropping a bomb from your supersonic jet while avoiding the tank's return of fire. There are 10 skill levels in the game. These determine the rate at which the tank's missiles home in on you and the speed of the tank.

To obtain multicolour graphics for text, Poke 646,12 then use Print. To use this mode for graphics, Poke the colour memory map with 12 for the position of your object. To achieve horizontal bars in the graphics use Poke 36878,16. To turn them off use Poke 36878,0. This is the volume location. This is used to flash the plane and create good graphic explosions in the game.

Main program lines

10 - 80	INITIALISATION
300 - 395	MAIN SUBROUTINE
5000 - 5090	YOUR SHOT ROUTINE
8000 - 8135	YOUR WIN ROUTINE
8140 - 8440	TITLE INSTRUCTIONS
9000 - 9080	ROUTINE TO ANIMATE TANK
9910 - 9970	TANK-SHOOTING ROUTINE
10000 - 10100	YOU LOSE ROUTINE
30000 - 30060	SKILL LEVEL ROUTINE

Main variables

P	= POSITION OF JET
TB	= POSITION OF TANK
M	= POSITION OF BOMB
TM	= POSITION OF MISSILE
SN	= SOUND LOCATION
VN	= VOLUME, GRAPHICS LOCATION
SK	= SKILL LEVEL
G$	= TIME
A$	= KEYBOARD INPUT

To make the game more difficult change line 5075 to:

5075 IF PEEK (H + 22 + I) = 30 THEN 8000

Now you have to hit the tank in the dead centre.

Psychic asteroids

J P Riggs,
Gosport,
Hampshire.

BBC

WRITING GAMES on a home computer can pose many problems, the main one being where do I start? You can start designing things like the layout of the screen, special characters and sound effects. If the game is of the type where you are playing the computer the program must contain the logic to handle this. Once the program has been written you will want to improve it by speeding it up and having better presentation and a more exciting game.

In this program the ship can be rotated and the relevant positions must be calculated many times a second to give the effect of the craft spinning, therefore sine and cosine tables are set up before the games commences. Other ways of speeding up are a program to remove any routines which are wasting time, spaces and superfluous text. Simplifying the equations before the computer evaluates them can save a great deal of time.

If you have moving graphics you need them to move smoothly across the screen without disturbing features such as the scores and visual information. This can be achieved on the BBC by setting up separate graphics and text windows, using VDU24 for graphics window and VDU28 for text windows — see page 386 of the manual.

To make the game more exciting, better graphics and sounds can be developed. The graphics are fairly easy to achieve using the wide variety of commands such as Move, Draw and Plot available on the BBC. The sounds are not so easy to create because the Envelope command takes time to master. The sounds in this program were created using the Envelope-defining program published in the November 1982 issue of *Your Computer*.

The program is a space asteroids game with a difference. Where normal asteroids just amble across the screen these contain homing devices and high explosives. Just dodging them is not enough: you have to blow them out of the ether using quick reflexes and your laser cannon. Your craft can be moved through 360° and propelled using the thruster.

The control keys are: F0 left turn; F1 right turn; F2 a quick 180° turn; F3, F4, F5 hyperspace; F6 thrust; F7 fire.

BUG-BYTE SOFTWARE, MORE THAN A GAME

All about me was darkness. Tens of thousands of screens stared blankly into space. Minds drifted aimlessly, dulled by lack of stimulation. The world was grey, drab, lacking . . .

Then suddenly it happened. First one, then another, then tens, hundreds, thousands of tired screens felt a surge of power and flickered back into life. They were much as I had seen on my own planet's microcomputers – the ZX 81, ZX Spectrum, Vic 20, BBC Micro and ORIC-1.

The minds paused to take stock. They clustered round the screens, their nimble fingers excitedly flicking the controls back and forth. At last they had found a challenge . . . action and adventure with cunning tests of dexterity and reaction. Everywhere, conversation was of Asteroids, Mazogs, Panic, Another Vic in the Wall.

Unable to resist, I too had a closer look. There before me was vivid colour, high resolution graphics. I could practically feel the spine-tingling

...IT'S A DOOR TO ANOTHER DIMENSION !

sound effects as whole battle fleets of Cosmiads swarmed out of nowhere and attacked. I should have known. As my fingers raced over the controls, and I prepared to stand and fight with only a single laser bolt for protection, I realised I was trapped!

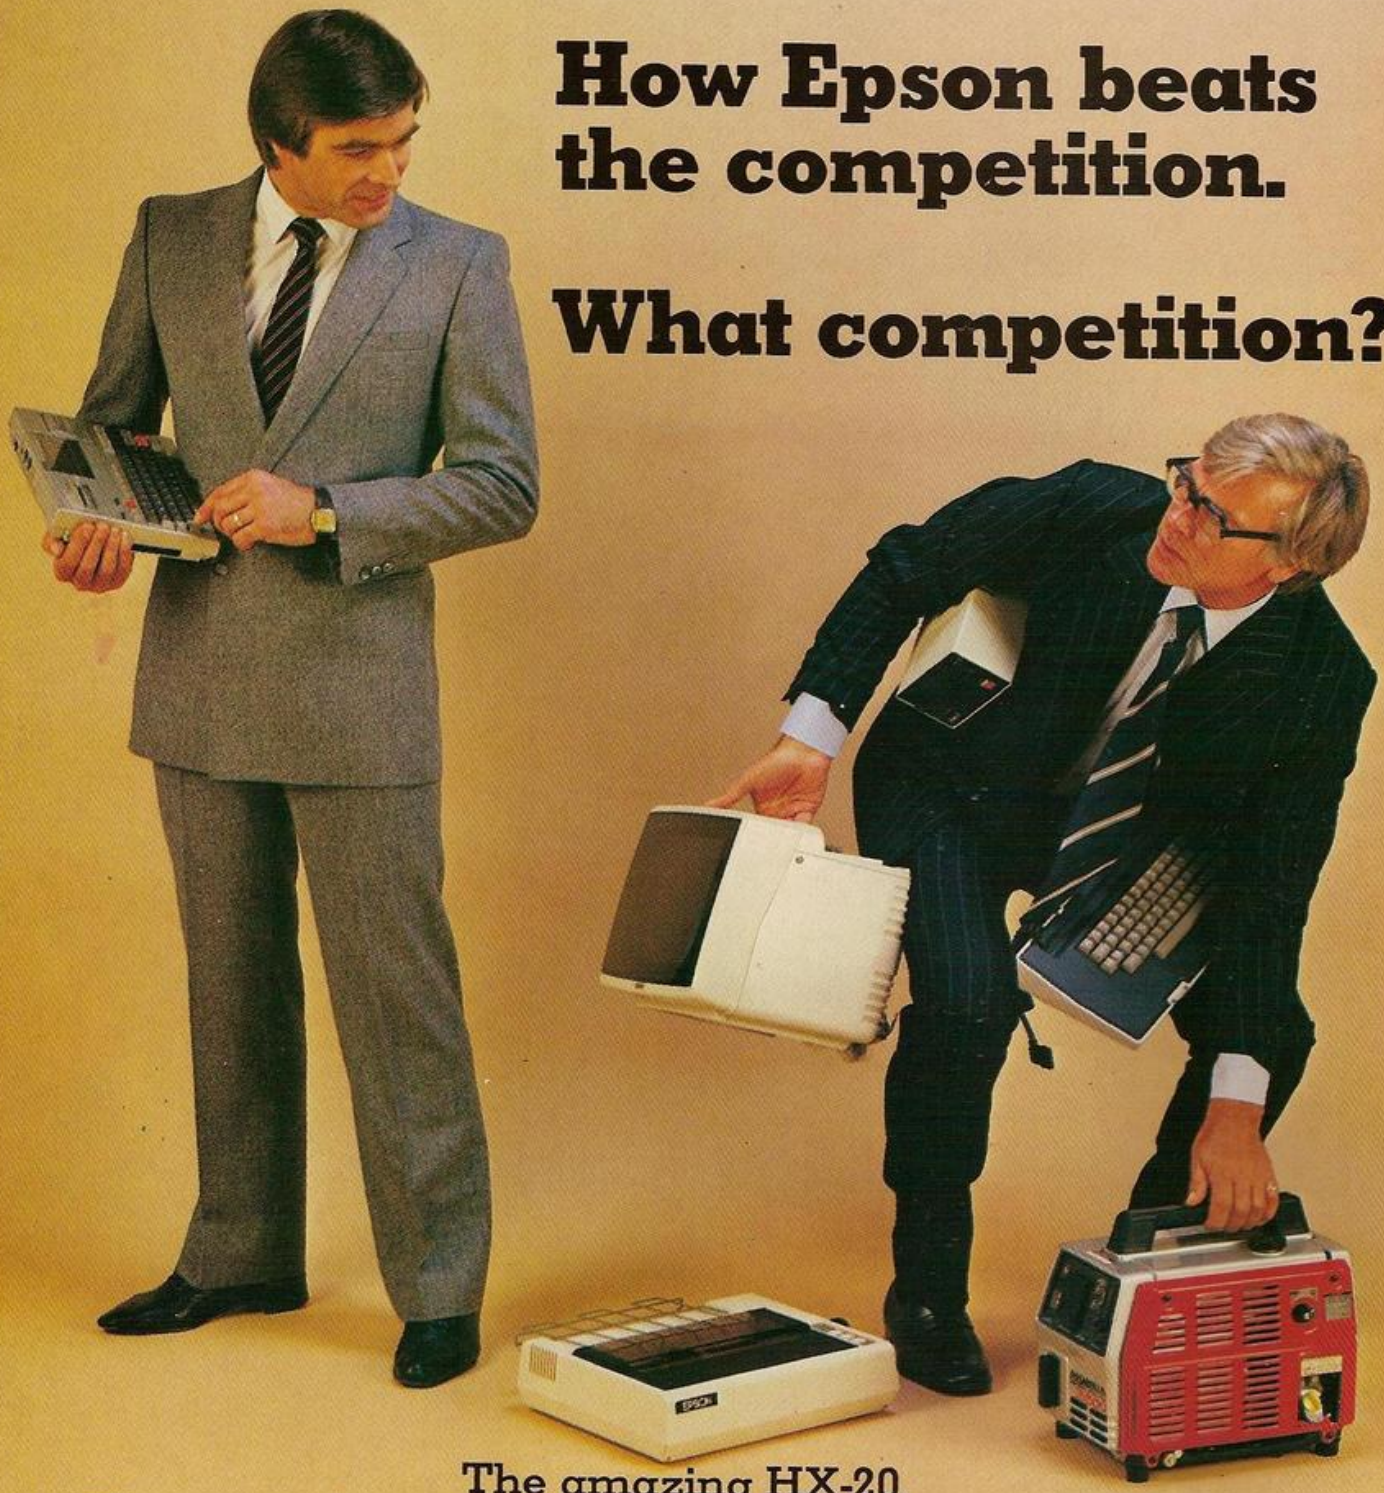
Too late now, I remembered this was no ordinary software. I'd been warned, as I now warn anyone buying from Laskys, W.H. Smith, Currys Micro C, Spectrum and larger branches of Boots, and a nationwide network of dealers stocking Bug-Byte. Because Bug-Byte is more than a game, it's a door to another dimension. One that I had opened.

BUG-BYTE SOFTWARE

100 The Albany, Old Hall Street, Liverpool L3 3AB

How Epson beats the competition.

What competition?



The amazing HX-20.
The most complete portable computer available today.

The HX-20 is a portable computer with a full size typewriter keyboard, LCD Virtual Screen, printer and microcassette facility actually built in. A computer with a rechargeable power source that's large enough for writing programs and manipulating data virtually anywhere, yet small enough to carry in a briefcase.

But don't let the size fool you. The HX-20 is not a gimmicky toy or an excuse for a calculator. It's a precision machine using a full extended version of Microsoft BASIC with 16k RAM, optionally expandable to 32k and 32k ROM expandable to 64k, RS-232C and Serial interfaces. The ASCII typewriter keyboard and five programmable keys brings ten separate program functions to your fingertips.

Power to your elbow.

The HX-20 runs on its own power supply for over 50 hours and can be easily recharged overnight, or whilst in use, with the ability to retain its memory in RAM even when switched off.

Keeping you in the picture.

The LCD screen is unique – showing any 20 characters by 4 lines at a time – enabling you to carry out word processing or data entry as if you are using a large screen.

Print Out. Built In.

The 24 column dot matrix impact microprinter offers 42 LPM in a crisp, precise 5 x 7 matrix for perfect hard copies. Every time. And you can choose from a wide range of peripherals from bar code readers to acoustic couplers for total capability.

Epson. Reliability through Research.

You'll find our name on a highly successful range of computer printers. So you can be assured of the same quality and reliability through an extensive research programme prior to the launch of any Epson product.

Write or call us for further details and the name of your local stockist (because seeing really is believing).

Just take a glance at the competition and you'll soon realise that the HX-20 is the most portable computer available today.

```

This program is specifically for the BBC model B but could be squeezed into a model A with a few changes: in line 160 change Mode4 to Mode5; in line 170 change the VDU24 to accommodate the new Mode; in line 560 the printing will have to be changed to make it neat; as there are four colours in Mode5 rather than two in Mode4 you can be more adventurous with the colours.

Interrupt-intercept

Simon Liston,
Walthamstow,
London.

SPECTRUM

THE ZX SPECTRUM produces an interrupt every 0.02 seconds. The Spectrum ROM uses this interrupt to increment the Frames system variable and also to see if any keys are being pressed. This short machine-code program causes the micro to Call address 63479 on each of these interrupts. I have written a real-time clock to illustrate one possible use of this facility.

First, reserve some memory; type Clear 63400. Next, Poke the 23 bytes of the interrupt-intercept into locations 65040-65062. Now, Poke the machine code for the real-time clock into locations 63479-63665. Check what you have Poked with the listing, then Save the code you have entered. Next, Enter Rand USR 65040.

You should now have a random time displayed in the top right-hand corner of the screen. Hours, minutes and seconds are stored in packed-bed format. Their respective addresses are: 63667, 63668 and 63669.

Setting the time, for example, 11:44:13 is done as follows:

```
POKE 63667, 1*16+1
POKE 63668, 4*16+4
POKE 63669, 1*16+3
```

Note that you must have a self-contained machine-code program at locations 63479-64760, that is, unless you know exactly what you are doing, you should Save all the registers and do not alter any system variables.

It is a good idea to end your routine not with ei; ret but with JP 56_{10}, this causes control to be passed to the usual interrupt routine.

The clock program given will keep good time so long as Load, Save, Beep, Copy or the printer are not used. Some other ideas: on every interrupt, Print the value of the system variable PPC to show you the line number being interpreted. This provides a simple trace mechanism. Or set SCR CT to 255 on every interrrupt, this will stop the Scroll? function being erased. Why not have a delay loop on every interrupt? This will slow down program execution — if it is not slow enough already.

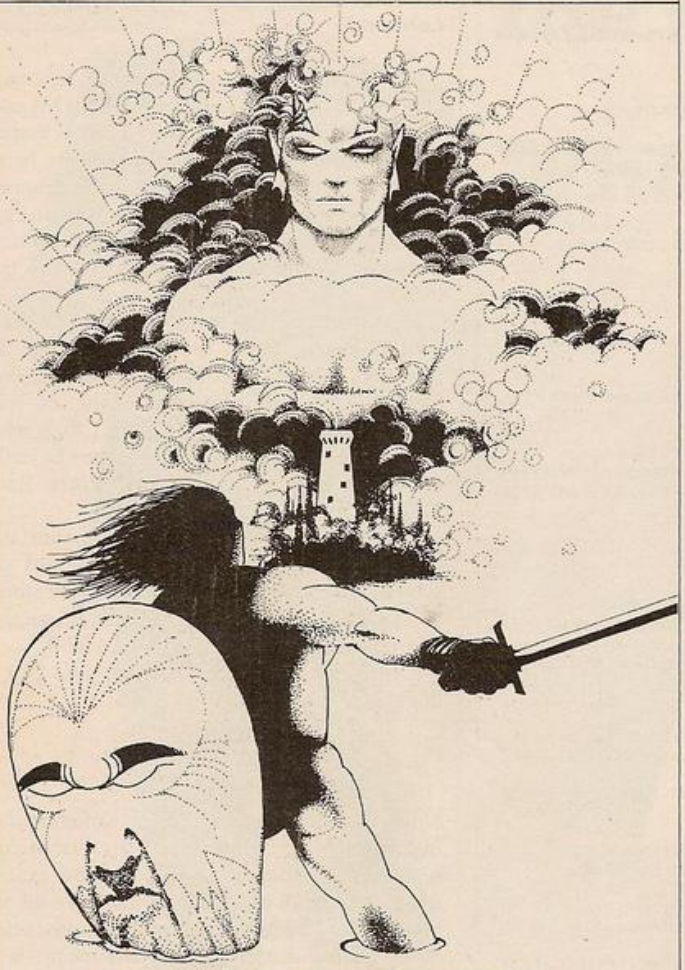
SPECTRUM 48K : ZX81 16K
SIX PART ADVENTURE



BLACK CRYSTAL
THE QUEST IS ABOUT TO BEGIN

The ultimate role-playing adventure for the SPECTRUM/ZX81.

You can become a warrior, elf or wizard on a quest to find and use the rings of creation: to destroy the Black Crystal and defeat the Lords of Chaos. Held within six programs lies a land of fabulous treasures and mythical monsters. Journey through the land of Beroth, explore the castle of shadows, descend into the Shaggoths lair, search for diamonds in the sea of sand but beware of sand sharks! Confront the fire demon in his temple, battle against the Lords of Chaos and win your way to the Black Crystal.

By splitting Black Crystal into six programs we can provide more variety and detail than any other adventure for the Sinclair computers.

Real time monster battles. Superb graphics. Save game feature. All six parts are supplied together on cassette, boxed with instruction booklet.

SPECTRUM 48K: 180K OF PROGRAM IN SIX PARTS — ONLY £7.50
ZX81 16K: OVER 100K OF PROGRAM IN SEVEN PARTS — ONLY £7.50

SOUND with SINCLAIR

MAKE AMAZING SOUND EFFECTS WITH YOUR ZX 81, TIMEX Sinclair 1000 or SPECTRUM

THE ZON X
£25.95
incl p&p & VAT

★ The ZON X SOUND UNIT is completely self-contained and especially designed for use with the ZX 81, TIMEX Sinclair 1000 and Spectrum Computers. It just plugs in — no dismatling or soldering.

★ No power packs, batteries, leads or other extras.*

★ Manual Volume Control on panel — ample volume from built-in loud-speaker.

★ Standard Sinclair — 16K Rampack or printer can be plugged into ZON X Sound Unit without affecting normal computer operation.

★ Huge range of possible sounds for Games, Music, Helicopters, Sci-Fi, Space Invaders, Explosions, Gun-shots, Drums, Planes, Lasers, Organs, Bells, Tunes, Chords, etc., or whatever you devise!

★ 8 full octaves. Uses 3-Channel sound chip giving programme control of pitch, volume of tones and noises, all with envelope control.

★ Easily added to existing games or programmes using a few simple "BASIC" lines or machine code.

★ No memory addresses used — I.O. mapped.

FULL instructions with many examples of how to obtain effects and the programmes, supplied, fully guaranteed. British Made.

**Except with Spectrum, you need the Spectrum Extension Board Order No. SE1 — Price £6.80 incl. V.A.T.*

Payment may be made by Cheque. P.O. Giro No. 388 7006. Postal Order or Credit Card.

Export orders :— Bank Cheque. International Money Order. U.S. $ or £ Sterling.

BI-PAK Dept YC2, P.O. Box 6, 63A, High Street, Ware, Herts.

Chords

Bernard Dembowski,
Feltham,
Middlesex.

ACE

THREE TYPES of chord are described by this program: major, minor and seventh. Each chord consists of eight notes played in rapid succession, similar to the banjo cross-picking style. A bar — four beats — requires 16 notes. Within the confines of this Forth program, if one chord lasts the length of the bar, you enter it twice. In other words, one chord entry equals two beats.

Now for the program. First enter a variable, T; this is the length of each note in milliseconds. This governs the tempo of your tune. Next, define the word Chord, then define the chords you need for your tune. The Jupiter Ace's memory is not sufficient to store all the chords shown, so just define the chords you need. Unfortunately, this method is not suitable for waltzes, that is, anything in three-four time. In the example the chords are written out exactly as you would enter them into the Ace.

Stuntman

C Szponjnarowicz,
Hounslow,
Middlesex.

ATOM

STUNTMAN uses high-resolution graphics, and creates realistic motor bike sound effects. The program fits into 2.5K but high-resolution is also needed.

The basic idea is that the motorcyclist has to jump as many buses possible. To acquire the correct speed, press Control to accelerate, Shift to decelerate, and Repeat to jump. The correct speed is equal to the number of buses multiplied by 10.

The exact speed would be too difficult to get, so at the start of the progam the skill level is asked for. Now the speed to successfully jump all the buses is greater than the number of buses, but less than the number of buses combined with the current skill level.

There are two starting roads before the final road, where the correct speed has to be attained. If you travel too fast, the bike crashes into the ramps. If you travel too slowly, the bike will not generate enough speed and will fall killing your man. If you attempt to jump before the third road, the bike crashes, losing one of your three lives.

When the roads have been drawn, and the

(continued from page 131)

bike appears at the top of the screen, press any key to start. This happens each time the bike is positioned at the top left-hand corner of the screen.

The first line, retains the high score — value of H — even if Break has been hit, but set the value to 0 when the program is first loaded.

In some places — for example, 8000-8300 and 9000-9300 the Plot statement has been used instead of Move and Draw. This is for ease in typing. For example once lines 8000-8300 have been typed, it is a simple matter of editing these lines, changing the line number to 9000, 9200 and 9300 and changing the Plot 13 to Plot 15.

Line 8100 does not have to be edited because it is used to delete remnants of the bike before the ramp. This editing can also be used for lines 270 converted to 307 — remembering to delete the Goto variable i.

Hi-res mover

Jan Erik Lundberg,
Solna,
Sweden.

SPECTRUM

IMPRESSED BY THE SMOOTH action of the hi-res graphics in Psion's Planetoids for the Spectrum I just had to have a go at writing a machine-code subroutine that could do a similar job. I hope that it will be useful for the readers who want to write their own programs using moving graphics.

Overcomplicated Basic programs would be too slow but perhaps a compiled version would be better.

The demonstration driver program is only intended to show how to use the routine and demonstrate its good and bad features.

See what happens when you change the mode — 0 to 3. The subroutine writes or erases the user-defined graphic in high-res — 172×256. You can expand them from 21 to 32. It is position-independent coded, PIC, and you should start to load it 600 bytes lower than the UDG pointer. Perhaps it is easier to load it directly from the memory dump.

List remedy

Robert Pearlman,
Winchmore Hill,
London.

ZX-81

THE LIST routine provided by Sinclair in the ZX-81 ROM is inadequate for the serious programmer for several reasons: a long program must be listed in small sections using many List statements, which is time-consuming and leads to mistakes; the end of a very long line cannot be listed; after a Newline character in a line, which is common in machine-code programs, the rest of the line and the rest of the program are sometimes not listed. Finally, after a Chr$ 126, a common character in machine-code programs, the next five bytes are not listed.

These faults are remedied by my List routine. When executed, a screenful of text is scrolled up the screen and displayed. A small black square then appears in the bottom left of the screen indicating that the program is waiting for a key to be pressed, either Break to abort the listing, or any other key to continue.

The machine-code routine occupies 160 bytes and may be located anywhere in RAM because it uses no absolute addressing, a good place being in RAMtop or in a Rem statement. It can be entered using any of the hexadecimal loaders that have been in previous issues of *Your Computer*. It is executed by Rand Usr followed by the start address.

Auto-list

S M Russell,
Lee,
London.

BBC

IT IS SOMETIMES useful to list part of a program automatically under the control of that program. For example, a program could give the option of changing the contents of its Data statements, and then list the relevant lines for alteration. Unfortunately, BBC Basic does not allow the use of the List command within a program. These subroutines overcome the problem.

ProcList scans the program in memory and, when it finds the required lines, sends each line number, its position in memory, and the line length to ProcDecode. ProcDecode first prints the line number, and then sends each byte of the line to a resident routine — located at &B53A — to be translated into a keyword if a token, or into ASCII if not. The result is then printed.

There is one limitation that ProcDecode does not translate the line numbers associated with Goto and Gosub correctly, because these use a special code.

When calling ProcList, the two parameters in brackets after the procedure name specify the first and last lines to be listed. If only one line is required, then set both parameters to that value. Line 10020 gives a demonstration.

These procedures may also be used in error-trapping routines, to display the offending line automatically; for example:

```
10 ON ERROR GOTO 10035
10035 MODE 7:REPORT:PRINT:PROClist
  (ERL,ERL):END
```

```
10000 REM SUBROUTINE TO LIST FROM WITHIN A PROGRAM (C) S.M.Russell 1983
10010 REM DEMO
10020 PROClist(10040,10120)
10030 END

SPECTRUM

THIS PROGRAM was written on a 16K machine and will run in either 16K or 48K. It is a short three-line program which I called Status. When exectued it returns a number of useful pieces of information about the general status of the machine — program size, variable space and free space. I use it while developing other programs.

```

BBC

THIS PROGRAM is an assembly language program for a Model B BBC Micro with a printer interface and Epson MX-80 F/T 3 printer or similar. The final routine occupies about 250 bytes and is located at 10000 in the memory. Alterations may have to be made for other printers. This program takes about two minutes to print the entire screen, much faster than any Basic program.

In this way, graphics and text can be reproduced at the same time.

To use the program, type it in exactly as shown, leaving out any comments, if you wish. Comments follow an oblique sign. Run the program. If you are sure that no errors have occurred then type:

*SAVE"DUMP" 2710 2803 (Return)

This saves the area of memory where the program occurs. Also save the assembly language program as usual:

SAVE"ASSEMBL" (Return)

To use the routine in your programs simply use the Basic command:

CALL 10000

10000 is the memory location where the routine starts. When using the program it must be ensured that you do not overwrite it with a Basic program: Top must be below 10000. To reload the routine into memory having saved it under a particular filename use the command

*LOAD"DUMP" 2710

When reloading the program it will not disrupt any program already in memory, so it can be loaded into memory from a Basic program, using the aforementioned command.

To use with another printer: it must be a dot-matrix printer with bit image printing capabilities. The areas where specific commands for the Epson are shown and the commands for your printer can be inserted here.

Decimal liner

K W Hall,
Catterick Garrison,
North Yorkshire.

VIC-20

THIS USEFUL subroutine was written for the Vic-20 but can easily be modified for other micros. Anyone who writes programs and requires their outputs listed in columns will know that Basic does not line up decimal points. The following subroutine does just that. The subroutine expects the variables to be processed in X: the output is in X$.

```
8000 A$=RIGHT$("      "+STR$(INT(X)),4)
8030 B$=LEFT$(MID$(STR$(INT((X-INT(X))
     *100+.005))+"00",2),2)
8040 C$=".":X$=A$+C$+B$:RETURN
```

X string can now be Printed in a normal For loop Print routine. The spaces in line 8000 can be increased to adjust the position of the output on the screen. ■

COMPETITION CORNER

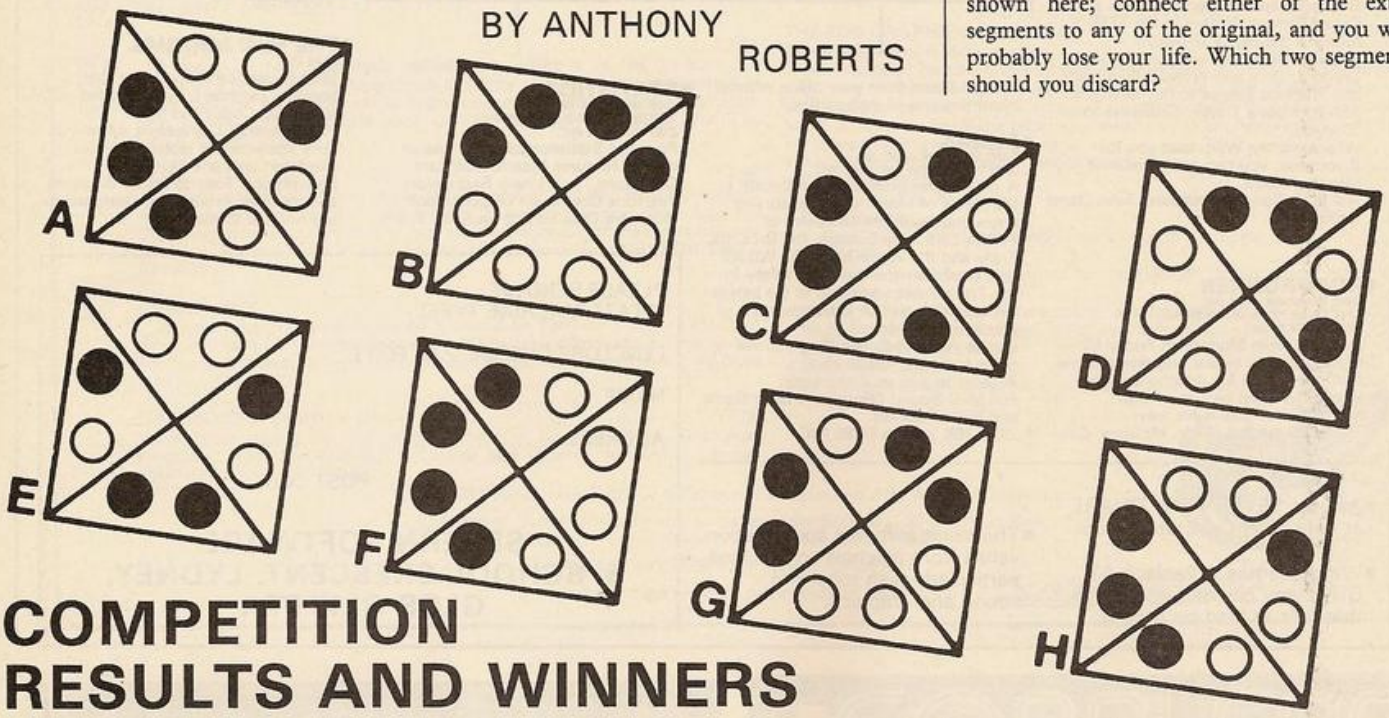
A £15 book token will be awarded to the first correct solution drawn from the competition bag. All entries must be at the *Your Computer* offices by the last working day in March. The name of the winner, the solution, and a competition report will be published in the May, 1983 issue of *Your Computer.*

If you want to set a competition for Competition Corner, remember that the simplest solution should be calculable by a short program rather than by any other form of reckoning.

TELEPATHIC DANGERS

BY ANTHONY ROBERTS

YOU HAVE found the fabulous cube of On'ey! However, as you approach, a careless thought triggers a circuit, and the cube tumbles apart into six regular square-based pyramids, and you know that you have just minutes to reconstruct it before the segments crumble to dust. Each segment connects to its neighbouring segments via a set of four lugs and four holes, two to each triangular face — each lug must match a hole on the next segment. As you gather the segments you notice that there are in fact the eight segments shown here; connect either of the extra segments to any of the original, and you will probably lose your life. Which two segments should you discard?



COMPETITION RESULTS AND WINNERS

JANUARY'S COMPETITION to win an Oric asked contestants to complete the crossword and the sentence, "My New Year should start with an Oric because . . .". If the number of entries for our competitions is any indication of how popular a new computer will be, the Oric should do well; but not as well perhaps as its closest rival, the Spectrum, which drew several hundred more entries last July.

The winning entry was a rather off-beat one from J Elliot, 1 Saint Mary's Road, Burgess Hill, West Sussex, who wrote "I got those ZX-81 — 16K — RAM-pack — wobble blues!". Unlike the ZX-81 the Oric, of course, keeps its memory tucked away inside the case. The ZX-81 also came in for a bit of stick from R Booth who said that "the Alsatian keeps mistaking my ZX-81 for a dog biscuit".

Quite a few readers showed their learning by making a play on the line from Hamlet, "Alas poor Yorick. . .". The best of these was P Douthwaite's "Alas poor Oric, I'd use him well, a computer of infinite jest". This is the one quote, incidentally, that everyone gets wrong. Look up your Hamlet and you will see that Hamlet says not, "I knew him well" but "I knew him Horatio". Neither version, however, is particularly relevant to the Oric.

N Dickason claimed optimistically that "with my Oric promotion will be meteoric", while S Yeo revealed "my wife has run off with the Sinclair". From A Cutler came "it would provide the Basic necessities for life . . . and many other games".

Finally, G Towner's entry raised the big question hanging over Oric International — can it deliver? He pointed out that his New year should start with an Oric because "it will be over 28 days since I ordered one".

A number of correct solutions were sent in for the Star Stone competition but few were accompanied by a program. Admittedly the problem did not lend itself to a short program solution. To find the answer you needed to work out that there are only three faces on the Stella Octangular which cannot form part of a closed loop. Between them they contain one tetrahedroid crystal, three pan-metallic hypercubes and five spheroid diamonds.

The £15 book token goes to the first correct entry picked from the bag which was from P Carlotti, Hope Paint House, Granville Road, Kingsdown, Deal, Kent. ■

The solution to January's crossword when a prize of an Oric 1 was at stake. Although swarms of aspiring Oric owners came forward, the level of entries failed to match last July's competition with its prize of a Spectrum.

DRAGON 32 SOFTWARE

DRAGON-TREK £9.95

A real time version of the classic space game featuring full colour tactical, status and long-range scanner displays, hyperbole, the Faerie Queen, Klingons and Klingon commanders, tractor beams, enemy movement, black holes and much more. Choose from ten levels of difficulty and three sizes of galaxy. Comes complete with 6-page flight manual. JOYSTICK (1) REQUIRED. DRAGON DATA APPROVED.

WIZARD WAR £7.95

A game of magical combat between the Wizards of the Tri-Suns for supremacy of the planet Xarg. Both dexterity and deduction are needed in order to outwit your opponent as spell is traded against spell. Comes complete with 12-page illustrated spell book. JOYSTICKS (2) REQUIRED. DRAGON DATA APPROVED.

GOLF £7.95

An accurate interpretation of the game of golf written by a keen club player. Allows match play between two players or one player may play using the Stableford points system widely used for competition golf. Features full club selection, hazards, out of bounds and player handicaps. DRAGON DATA APPROVED.

GRAND PRIX £7.95

Do you have the potential to be a champion Formula 1 driver? Find out when you race on these 8 famous Grand Prix tracks from around the world. For 1 and 2 players. 2 joysticks required. Dragon Data Approved. DRAGON DATA APPROVED.

GAMES COMPENDIUM D1 £7.95

Six great games for the whole family — Donkey Derby, Blackjack, Kingdom, Hunt the Wumpus, Noughts and Crosses and Lunar Lander. DRAGON DATA APPROVED.

VULCAN NOUGHTS AND CROSSES £7.95

A three-dimension game of noughts and crosses for one or two players. Also includes a zero player option where the machine plays itself. Can you outthink your Dragon? DRAGON DATA APPROVED.

BBC MODEL B SOFTWARE

THE EDG GRAPHICS PACKAGE £24.95

For the BBC Model B Microcomputer

An advanced picture drawing system developed by a firm of consulting engineers to the oil and utility industries world-wide. Uses cassette tapes for software and picture storage and is controlled entirely by normal keyboard input — no extra hardware required. The main system features are:

- Picture drawing in mode 0, 1 or 2.
- Actual and Logical colour changes at any time.
- Drawing functions:
  Lines, boxes, circles, arcs, text, shape repetition
- Drawing aids:
  Grid, elastic band, save and home cursor (5 positions)
- Colour fill.
- Text window showing x,y cursor position, length, angle, colour menu and current colour.
- Saving and Loading of picture using cassette tapes.
- Multi-file pictures facilitating very complex drawings.
- Flashing cross-hairs cursor.
- User instructions/prompts.

This package comes complete with a spiral bound manual.

Please telephone for up to date information on Prestel, Teletext, speech synthesis, second processors, etc.

TORCH Computers

Z-80 Disc Pack for the BBC Microcomputer £895.00

This unit connects to the BBC Micro in the same way as a normal disc drive, but as well as offering a dual 2 × 400K disc drive for use under BBC BASIC or other languages it provides the option of using the wide range of CP/M software available for business and data processing applications. The firmware supplied with the machine allows switching between BASIC and CPN, a powerful operating system developed from CP/M 2.2.

In addition to the disc pack a second processor is supplied. This is a Z-80A with its own 46K RAM card, communicating with the 6502A in the BBC computer through the 'Tube'. Typically the speed of execution of programs under the twin-processor system is increased by up to 50% compared with a conventional single-processor computer.

A third processor, the 16 bit 68000, will shortly be available.

TORCH CF240 ..... £2,795.00 (Ex. VAT)

This an extension of the BBC microcomputer/Torch disc pack system, available in a single unit. The computer contains a BBC based peripheral processor connected to the main Z-80 computer, a dual 2 × 400K disc drive as described above, a high resolution (80 character) colour monitor and a complete British Telecom approved 1200 baud modem. It is the only microcomputer which has been granted permission for direct connection to the Public Switched Telephone Network both in the U.K. and the United States.

The TORCH can communicate either directly with another TORCH or with virtually any other type of computer via Prestel. Using the Gateway facility of Prestel it is possible for the TORCH to access vast amounts of information stored by private organisations on public database systems. The Mailbox facility of Prestell also allows the use of electronic mail.

TORCH CH240/10 As above but with a 10 MB hard disc drive.
TORCH CH240/21 As above but with a 21 MB hard disc drive.

THE GREATEST PROGRAMMING AID SINCE FINGERS

Cuts Down Program Entry Time

- *How many hours do you spend de-bugging programs?*
- *How many times have you traced a bug to a typing error?*
- *How many times have you wished for another pair of hands to keep your place in program listings?*
- *How many times have you had back-ache, neck-ache and eye-strain through copying listings at uncomfortable angles?*

THE EASIREADER FROM BUGBEAR

Saves Hours in De-bugging time

- Over 99% of bugs in programs copied from printout listings are the result of entry errors — errors anyone with only one pair of hands can make. Even one mistake can take hours to trace.

The EASIREADER Minimises Bugs by Minimising Entry Errors

- The attractive perspex stand can be positioned where most comfortable, avoiding stiff necks and aching backs... strain causes mistakes!
- The specially designed cursor prevents skipping between complicated and similar-looking lines while allowing you to 'read through' simple lines.
- The **EASIREADER** keeps your place for two-handed keyboard entries, i.e. when using a Sinclair computer or just using the 'shift' key.
- It will even scan the off-horizontal listings found in many magazines.
- The **EASIREADER** can handle all normal magazines up to A4 size, single sheets, computer printouts and most books.

HELP BANISH BUGS
Make your programming easier and more comfortable.
SAVE TIME AND EFFORT - AVOID FRUSTRATION

Send for your **EASIREADER** now at a special introductory price of **£12.99**. Please add £1.25 p&p.

How Good is YOUR Spectrum

If you're interested in finding out what your Spectrum can really do then you must go beyond the limitations of BASIC. Now, mastering machine code can be a reality with

CRYSTAL COMPUTING'S MACHINE CODE UTILITY PACKAGES

ZEUS Z-80 ASSEMBLER

If you own a 48k Spectrum and want to fully exploit the enormous potential of your computer then ZEUS is the perfect companion.

TOTAL MACHINE CODE CAPABILITY:

Optimum memory usage: By maintaining its own compressed text which is completely separate from BASIC, ZEUS allows you to enter more than 5000 individual lines of text (which assembles into more than 5K of machine code!)
The ultimate editor: A unique word-procesor style full screen editor allows movement of the flashing cursor in any direction for fast and easy alteration of the text.
Flexibility: ZEUS features both auto-line number and re-number facilities plus commands to list, search through and delete sections of the text. Alpha-numeric labels of up to 14 characters in length are catered for, along with comments and constants (hex, decimal or character) which may be replaced by expressions. In addition to accepting ALL standard Z-80 instructions, ZEUS also supports the assembler directives ORG, ENT, EQU, DEFB, DEFW, DEFS, DEFM, and DISP.
Direct access to memory: To further enhance ZEUS, an invaluable monitor system is included AS STANDARD! Operating with the same free-format scren editor and accepting input in hex, decimal or character form, the monitor allows you to display and directly modify memory. It also has many other useful facilities such as block tabulate, copy and hex/decimal convert.
Parallel output to ZX printer: The user may easily make hard copies of text (source-file), symbol (label) tables, monitor output etc.
ZEUS is all this plus much more. It represents a powerful machine-code operating system which is destined to become as much a part of the Spectrum as the Sinclair ROM.

MONITOR AND DISASSEMBLER

This easy to use utility enables fast entry, editing and debugging of hexadecimal routines. It features one-touch 'KEYWORD' input as in Sinclair BASIC. Numerical parameters may be entered in either decimal or hex, and a facility is provided to convert between the two forms. Hexadecimal bytes of machine-codde may be entered directly into memory using the editor which displays the contents of a specified area of memory in both hexadecimal and character form. The user may then use the disassembler to convert the numbers back into Z-80 mnemonics. Two notable debugging aids are the commands BREAKPOINT and REGISTERS, which can provide a full display of the values held in all C.P.U. registers, including the alternate set and flags, at any point in the program. Also included are commands to insert strings of characters, to print, tabulate, copy and verify blocks of memory, and a unique 'jump relative' calculator to evaluate the correct offset byte in JR type instructions. The monitor further provides a versatile FIND cokmmand which will search a specified block of memory and display all occurences of any data it was asked to find.
These features, several extra facilities, plus full printer drives make this simply the most comprehensive machine-code test utility available.
The SPECTRUM MONITOR AND DISASSEMBLER has been designed as the perfect compliment to the ZEUS Z-80 ASSEMBLER. Having both co-resident in memory gives you the ultimate machine-code system. Now you can explore the excellence of your computer and open up a whole new world of programming!

ZX-81 SUPERFAST LOAD AND SAVE

Our Monitor and Disassembler as available for the 16K ZX-81 also includes commands to LOAD and SAVE any block of memory (including BASIC programs) at up to FOUR TIMES normal speed!

Each utility comes with detailed user manual for only . . . £8.95
. . . alternatively, try our own range of exciting and original ZX games:

Have you the skill and reflexes to control a leviathan space freighter from lift-off to touch-down?
Have you the business head to trade successfully throughout the length and breadth of an entire planet?
Find out by becoming a

MERCHANT OF VENUS

where a complex economic scenario is combined with a superb graphic simulation to produce an entirely new concept in real time adventures.
By studying the current market and wheeling and dealing in Cyborgs, Robodrones and much more, you must plan your business strategy.
But ultimately your success depends on your ability as a pilot; from lift-off as you thrust skyward . . . during flight as you control your ship's flight over mountains, cities and oceans . . . to landing where your descent is displayed in incredible graphic detail.
A compelling game of skill and strategy for the 16K ZX 81 ..... £5.95.
ZX 81 1K GAMES PACK: Without doubt the finest quality collection for the 1K ZX 81:— 4 full screen, fast action graphics games, all with on-screen scoring: Invaders, Astavoid, Bomber and Super Slalom, plus a challenging adventure, Dungeon Quest.
All 100% machine-code. Great value at ..... £4.95.

COSMIC GUERRILLA

This classic arcade game is now available for the ZX Spectrum. Written in 100% machine code, with fast super-smooth colour graphics and sound. You must defend your laser bases against incessant attack by those marauding aliens. For 16K and 48K Spectrums £5.95

ZX81 SPECTRUM DRAGON TANDY BBC

16K 16/48 32 LEVEL 2 A/B

ADVENTURE

* Over 200 places to explore in this machine code game using advanced data compression techniques.
* No random elements — you will need skill, cunning and a sense of humour as you explore caves, forest and castles.
* Evade ruthless pursuers and overcome a host of obstacles.
* Multiple word commands and single letter abbreviations.

AWARI

* The ancient African game of logic. It takes 2 minutes to learn the rules but far longer to master the tactics.
* Select the 'Goat-herd' level of play and it's an addictive game for children (8+) that exercises their minds — not their laser fingers.
* Select the 'Witch-doctor' level and it's a threat to your sanity. We haven't beaten it and we wrote it!

£1000 IN PRIZES

FANTASTIC VOYAGE (ZX81 16K ONLY)

This real-time graphics simulation set inside the human body was written by a lecturer in anatomy. You are injected into the blood stream in your miniature submarine. Navigate the arteries, veins and heart to the brain, where a blood clot must be destroyed. Features a real vasular map. You will be attacked by lymphocytes which must be destroyed using arcade game type graphics. Everything you do uses up precious energy. Three display formats — a lateral and frontal body scan plus blood vessel name, a close-up scan and a laser-sight for fighting lymphocytes.

** Buy both Awari and Adventure and enter the 'Foilkade Challenge' competition. Details with cassette or send SAE.

HUGE SELECTION—OVER 400 IN STOCK!

HIRE ZX81/SPECTRUM PROGRAM TAPES

Get the most from your ZX81 or Spectrum at minimum cost by hiring program cassettes for just £1 each per fortnight (plus 40p p/p).

Our stock of over 400 tapes (up to 20 maker's original copies of the more popular ones) covers most of the best cassettes advertised in this magazine—and more: thrilling m/c arcade and adventure games, tests of skill, realistic simulations and a wide range of utilities for business, multi-indexing, banking, toolkit and graphic aids.

You can switch from ZX81 to Spectrum membership at any time by paying the balance, and hire up to three tapes at a time. Our regular illustrated magazine "Computerchat" is posted free to all members, with its product and software reviews plus our unique "Top Twenty" ZX tapes chart based on members' scores, and some special offers.

"An exceptionally professional and thriving organisation with, even, a most readable newsletter"—review in Eric Deeson's "Guide to ZX Spectrum Resources."

YOUR COMPUTER BACK ISSUES

Just getting started in computing? Or perhaps you're already pretty knowledgeable and would like to extend your programming skills. Either way Your Computer back issues can help to fill your need for reliable and, above all, relevant information about home computing.

Every issue contains reviews of new computers, software evaluations, and surveys of add-on equipment together with informative articles which tell you how to get to grips with graphics, sound and machine code programming.

Facilities provided on the Sinclair ZX81 and Spectrum, Vic 20, Acorn Atom and BBC micro have been examined in article after article, providing a comprehensive introduction to all the most popular home computers. Just run your eye down the Contents of our back issues and you'll see what we mean.

To order back issues complete the coupon at the foot of this page and send it with your remittance to the address shown on the coupon.

dual Plasma Disruptors and
ve haven't you?

TRUM (16K or 48K)
achine code with 12 different alien types,
ible animation and explosive effects, sound and the
est, smoothest hi-res graphics ever!

VIC-20 (any memory size)
100% machine code with eight different alien types,
smooth hi-res multicolour graphics and animation, narrow
playfield and sensational sound effects.
Keyboard or joystick.
Game design and software by D. H. Lawson.

for any ZX SPECTRUM.
It's my own fault, I even volunteered.
I thought that with the space-dozer and its shovel and skyhook
it would be easy shifting the galaxy's rubbish.
Childs play. HUH! They warned me of the weird packaging,
the trays, the rods, and all the rest.
But they didn't say I'd have to stop and control not just one but two
or even more garbage pods. Then prod them, push
them, toward that black hole, and oh, it's so very, very
black, and so lonely, so empty.
Panic, mustn't panic, but they won't stop, twirling and
spinning and turning, always turning, towards me, against
me, at me. And I'm alone.
No way out, nowhere to hide, on my own, my own . . . own . . . .
SCHIZOIDS: NOT JUST A GAME, BUT A STATE OF MIND.
SCHIZOIDS features real-time animated 3d graphics for a
breathtaking visual experience, plus sound and all those arcade
features you'd expect from IMAGINE.
Game design and Software by Peter Paranoid and
the Yid Kids. (D.H.L.)

the wildest, zaniest way of earning a
fast buck. With crazy guests screaming for
service you're gonna have to be
quick to pick up the tips, don't slop the drinks,
as you dodge the drunks and
dart from elevator to elevator, coz if the Boss
man spots you, your gonna be
out on your but. 100% machine code,
incredible animation, super smooth hi-res
multicolour graphics, authentic
sound effects and special playfield.
Keyboard or joystick control.
Yet another high performance
Arcade quality experience
for any Commodore Vic-20.
Game design and
software by
Eugene Evans.

for any Commodore Vic-20.

for any ZX SPECTRUM.

Are you just the average teddy.
Are you teddy enough to
take on the terrors of the
toybox in an epic struggle to fulfill your
true role in life – to reach and comfort your
crying baby? To boldly go where no teddy
has gone before. To overcome incredible
odds, to take on and fight the clockwork
soldiers, the mammah dolls, the train set, the
play people, and the murderous plastercine.
With only the bear essentials – your
wellington boot, your beachball and faithful
old peashooter – for your defence and your
only ally, the Jack in the Box, you will need
to build stairways from the play bricks
around you to reach your baby without
getting the stuffing knocked out of you.

AH DIDDUMS features multiple
toyboxes with progressive difficulty
levels, super cute – super detailed
animation, sound and those fast
smooth graphics that only
IMAGINE can produce.
100% machine code.

ELECTRONIC

Klik Keyboard

AN ALTERNATIVE NOT AN ADD ON

Installed in 3 easy steps . . .

1. Peel off the touch sensitive key pad.
2. Plug in Klik-Keyboard (no soldering) and place in position.
3. Apply self adhesive two-colour legends to the keys.

This full 40 key keyboard has a positive click feel as the keys are depressed but as it replaces the original touch pad it becomes a permanent part of the ZX81 without bulky boxes or trailing wires.

ZX81 CONTROL & MONITOR SYSTEM

24 CHANNEL COMMAND CENTRE
An exciting new concept in computer control with 24 independent channels operated by simple PEEK & POKE commands from the ZX81. Allows extensive control of all kinds of appliances and monitors their response. Superbly designed and engineered with extensive filtering circuiting protecting your ZX81.

COMMAND MODULES
A varity of control or monitor modules may be added to the command centre with its own indicator LEDs recording the current channel states. Comprehensive programs are easily constructed and checked because you can see the state and response of each channel.

1001 APPLICATIONS:

DOMESTIC: Control and Monitoring of appliances, heating, lighting models + security systems.
COMMERCIAL: Atuomatic test equipment, office equipment, electric surveillence FIRE/DOOR/INTRUDER monitoring laboritory applications.
INDUSTRIAL: Process control, level monitoring, detection and robotic/workshop applications.

Complete with manual and excellent security program giving operation to BS 4737.
SIMPLE TO INSTALL & USE, JUST PLUGS INTO ZX81 PORT: DOES *NOT* AFFECT RAMPACK or PRINTER.

QTY	DESCRIPTION		TOTAL
	24 CHANNEL COMMAND CENTRE CASED	£34.95	
	UNCASED	£19.95	
	PLUG IN 4 CHANNEL SOLID STATE MONTIRO MODULE	£6.50

SOFTEK

48K ZX Spectrum
COMPILER

£14.95

OUT OF THE BLUE . . .

Come three awesome additions to the Softek range of Sof$_{TM}$ Ware.

SOFMON

The ultimate monitor/disassembler/machine code loader for the ZX Spectrum. Sofmon has 25 functions, including modify in HEX or ASCII, more blocks, delete or insert bytes, HEX-DEC and DEC-HEX conversion, fill, display registers and nine breakpoints! And uniquely, as you enter HEX Sofmon will instantly do a full disassembly into Z80 mnemonics! Almost like having an assembler. For 16K or 48K Spectrums, only £9.95 including manual. This program is way ahead of all competition.

SOFKIT 1 – A full programmer's aid

This toolkit has every feature you could ever need. The fullest renumber routine available, covering GOTOs, GOSUBs, RESTORE and LINE. Search-and-replace any character, keyword, etc. Delete program lines singularly or in blocks. Display the variables, and list all lines containing any given character, phrase or keyword. It even offers the only TRACE facility for the Spectrum! Ideal for developing programs to be compiled as it removes REMs, changes lower to upper case (and vice versa) and displays program length. Incredible volume at £9.95 including manual. (16K or 48K Spectrums).

SOFKIT 2 – The complete graphics kit

This astounding program offers instant changing of INK or PAPER, pixel or characters scrolling (the fastest available), colour scrolling, PAINT, separate 'windows' which can be scrolled independently, characters printed with user defined vertical and horizontal magnification. It even allows storage of 'screens' in memory for cartoon effects, and the creation and display of Sprite-like graphics. Designed to work with our compiler, this kit is unbeatable at £9.95 (16K or 48K Spectrums).

These new additions to our range, as well as our best selling Meteoroids, Softime, Zolan Adventure and 3D Mazenture/Dragon's Lair, are available from your local software outlet. If not, let us know! If you can't get our Sof$_{TM}$ Ware locally write to us at:

SOFTEK SOFTWARE, 329 CROXTED RD., LONDON SE24

THE NEW AND UNIQUE C.A.D. PROGRAMME FOR THE BBC (32K)

AT A VERY AFFORDABLE PRICE

Ideal for teachers, designers, artists, technical drawing and numerous other applications including your own form and stationery design etc.
This programme must be seen to be appreciated — your imagination is the only factor to limit its individual applications.
- Modes 0,1,2,4,5 (can be changed when programme is running).
- Multiple display of arrays enables infinite complexity.
- **FUNCTIONS:** Line, rectangle, triangle, circle, text (upper and lower case) and colour pallet (8 colours and flashing).
- **DRAWING AIDS:** Alignment grid, circle copy, delete, free memory, purge memory, variable cursor speed, clear screen and redraw.
- Shapes can be filled or outlined (no need for Fill Routines).
- Save and load to tape in about *20 seconds*.
- SPECIAL FACILITY — Rubber band mode — A very flexible and variable line drawing facility — must be seen.
- Free "redraw" routine to enable the pictures created to be displayed in your own programmes.
- Grafkey and Grafstik. Versions availble for keyboard — Grefkey and *ANY* type of joystick — Grafstik.

ZX SPECTRUM & ZX81 EDUCATIONAL SOFTWARE

Spectrum Junior Education **£5.50**
Use your Spectrum to help your children with their school work. This cassette contains eight attractive, easy-to-use programs for the 7 to 11 age group.

Topics include English comprehension, spellings, homophones, junior science, maths and history.
* Entering your own questions and answers allows you to adapt two of these programs for exercises in any subject area.
* Moving colour graphics and sound are extensively used to improve motivation.
* Use the "draw" program to produce pictures, maps and diagrams.

Suitable for the 16K or 48K Spectrum. Program notes are supplied.

O-Level Chemistry (C1) **£5.50**
This cassette contains four clearly presented revision/tutorial programs. The subject matter has been carefully structured to cover the most important aspects of:

* Elements, compounds and mixtures.
* Structure, bonding and properties.
* Redox, electrolysis and the activity series.
* Acids, bases and salts.

48K Spectrum and 16K ZX81 versions of the cassette are available. Please specify which you require.

Overseas orders: £6.50 ($11.60) per cassette; includes AIRMAIL postage.

Simonsoft

Specialists in high quality software for the BBC Microcomputer

DISASSEMBLER (A/ B)
Unlock the secrets of the BBC's ROMs and machine-code programs. The Simonsoft Disassembler includes a host of features which make it the most powerful, yet flexible and easy to use, Disassembler for the BBC Microcomputer.
Designed as the first of a suite of compatible programs which form the essential tools for machine-code experts and beginners alike.

FEATURES:—
Five Modes of Operation:— Ranging from — memory dump with ASCII character equivalents — through line-by-line dis assembly in BBC standard format — to full automatic disassembly with labelling of all jumps, branches, subroutines and data.
User Definable Labels:— Can be attached to any memory location be it code or data. Automatic labelling can be redefined by the user, 32K machines can hold over 2,400 labels, 16K machines hold nearly 500! Operating system entry points and vectors are automatically labelled on loading.
Disassembly Aids:— Two additional aids to disassembly are included:
i). A *map* of which areas of memory hold code, and which hold data. Up to 72 separate areas of code can be defined. The map is automatically generated during automatic mode.
ii). A stack of useful addresses to aid line-by-line disassembly.
Output to Printer and Tape:— Disassembly can be listed to a Printer, or dumped on tape in Basic *Exec format and subsequently incorporated in other programs.
Easy to Operate:— Menu driven program with full instructions in a "Help" program and single key commands.
Without doubt the best Disassembler on the market.

BBC DISASSEMBLER (A/ B) £6.95
(100K S/S Disc Version . . . £9.95)

CASH BOOKS ACCOUNTS PROGRAM FOR BBC MICRO . . .£95.00

New

One of the most innovative business programs on the market. Most serious accountancy packages are written and coded by professional and competent programmers. The Gemini Cashbook Accounting program was written by practising Chartered Accountants and coded by professional and competent programmers. This is a fundamental difference.

This practical program is simple to use and will replace your manual cash and bank records and by giving you instant management information, it may even put your accountant out of job!

With exceptionally exhaustive user documentation, full technical back up and product update policy this program will increase the efficiency and profitability of your business. Take a look at the information this program will provide.

* summary of VAT information to enable you to complete your VAT returns
* cumulative receipts and payments report analysed over the standard profit and loss and balance sheet heading.
* option for departmental analysis of sales and purchases
* print out of all transactions
* journal routine for entering transfers between accounts and year end adjustment for debtors, creditors etc.
* year end trial balance
* profit and loss account and balance sheet.

These statements can be produced at what ever interval you require e.g. monthly, quarterly or annually.

Coming soon:– Integrated Sales + Purchase Ledgers

"... the systems worked immaculately when tested ..."
"Mailist is a very professional piece of software ..."
(Which Micro & Software Review Feb 83)

Here's a range of software for the independent businessman that's designed to harness the power of your micro to deliver the vital information you need in all key areas of your business. A breakthrough on both price and performance, each program is fully tested and comes with all the documentation back up you need.

"Gemini's range of software is in the vanguard of the releases for 'serious' micro users ..."
(Which Micro and Software Review)

SPREADSHEET ANALYSIS
BEEBCALC £19.95
DRAGONCALC £19.95

New

FOR BBC AND DRAGON 32. Spreadsheet processors have proved to be important tools for using micros in business, scientific and domestic financial applications.

Without any programming knowledge at all, you may:–

* Set up a computerised spreadsheet, with chosen row and column names.
* Specify formulae relating any row or column to any other.
* Enter your source data and have the results calculated.
* Save the results on tape (or disk – BBC) for later reloading and manipulation.
* Print the tabulated results in an elegant report format.
* Experienced users may access saved files and write their own reporting or graphics presentation programs for the results.

Some typical applications:–

* Small business accounting applications, e.g. profit and loss statements and cashflow projections, break-even analyses etc.
* Investment project appraisal – anything from double glazing to oil rigs!
* Comparing rent/lease/buy options
* Processing the results of scientific experiments or field studies
* Engineering calculation models
* In fact, anything that involves repeated re-calculation of results presented in tabular or spreadsheet format.

I'S NEW

SOFTWARE

ur business at petty cash prices.

INVOICES AND STATEMENTS . . . £19.95

Compatible with most micros. See table. Ideal for the small business. A complete suite of programs together with generated customer file for producing crisp and efficient business invoices and monthly statements on your line printer. All calculations include VAT automatically, and the program allows your own messages on the form produced. This program gives you superb presentation and saves time on one of the most tedious tasks in the office.

COMMERCIAL ACCOUNTS . . . £19.95

Compatible with most micros. See table. A gem of a program, all for cassette, with the following features:– Daily Journal. Credit Sales. Cash Sales. Credit Purchases. Purchases – other. Sales Ledger. Purchase Ledger. Bank Account. Year to date summary. A fully interactive program suitable for all businesses. Files can be saved and loaded and totals from one file carried forward to another on cassette. Particularly useful from a cash flow point of view, with an immediate accessibility to totals for debtors and creditors. Bank totally supported with entries for cheque numbers, credits and, of course, running balance.

MAILING LIST . . . £19.95

Compatible with most micros. See table. A superb dedicated database to allow for manipulations of names and addresses and other data. Gemini's unique 'searchkey' system gives you a further ten 'user-defined parameters' to make your own selections. Features include the facility to find a name or detail when only part of the detail is known, it will print labels in a variety of user specified formats.

DATABASE . . . £19.95

Compatible with most micros. See table. The program that everyone needs, the most valuable and versatile in your collection. Facilities include sort search, list print if required. Can be used in place of any card index application; once purchased you can write your own dedicated database to suit your particular needs with a limitless number of entries on separate cassettes.

STOCK CONTROL . . . £19.95

Compatible with most micros. See table. Dedicated software with all that's necessary to keep control of stock. This program will take the tedium out of stock control and save time and money. Routines include stock set up, user reference number, minimum stock level, financial summary, line print records, quick stock summary, add stock, delete/change record and more.

HOME ACCOUNTS . . . £19.95

Compatible with most micros. See table. Runs a complete home finance package for you with every facility necessary for keeping a track of regular and other expenses, bank account mortgage, H.P. etc. This program also allows you to plot graphically by Listograms your monthly outgoings.

WORD PROCESSOR . . . £19.95

Compatible with most micros. See table. This program features routines found in much larger and more expensive packages with a typical word length of 5-6 letters it allows for around 1000 words in memory at one time. Ideal for the user who requires a simple program to write letters on his computer. Features include, block delete, block insert, search and replace, edit text, display text and more.

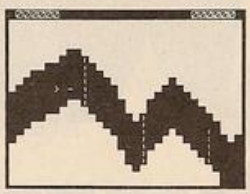
A TOTALLY NEW AND ORIGINAL GAME
FROM SOFTWARE FARM
FOR 16K ZX81

NEW!

the Super Scramble



YOUR MISSION

To penetrate the Witches Defences, Enter her Cavern and Destroy her wicked Heart

THE WITCHES DEFENCES

STALAGMITES AND STALACTITES which grow across your path. Blast a way through with your Lazer Cannon (but beware – a surprise is in store fore you!).
VOLCANOES to get past alive – if you can! – an ever increasing amount of white-hot Larva to avoid the closer you get to the witches cavern.
VAMPIRE BATS that cling to your ship, making your controls sluggish and finally (if you are not careful) dragging you down to your destruction.
CAVE-INS should you hit the side of the cave with your Lazer Cannon or Bomb, part of the roof will cave-in on you – the greater the landslides to avoid each time!.
THE NEARER you get to the Witches Cavern, the more of her Defences she will throw at you at once. Should you survive all of them (highly unlikely) then you must contend with the Witch herself! Avoid being turned to stone by her spells while attempting to destroy her wicked Heart!.

* Written entirely in Machine Code
* Hall of Fame
* 1 or 2 Players
* Mystery Score positions to bomb
* 5 Skill Levels

DESTINED TO BECOME A CLASSIC!

AND ONLY £5.95

THE SOFTWARE FARM

£24.50 incl. VAT and P&P

* * * * * * * *

HAPPY WITH YOUR DISPLAY?

Or have you got problems?

- Are your whites yellowish?
- Is every other line a different colour (like Venetian blinds)?
- Do your characters wobble? (Some character wobble is bound to exist, but it can be reduced)

We have prepared instructions to allow any Spectrum to give the best possible results, by adjusting internal controls.

Send £1 plus S.A.E. *(Sent free if you order the RAM.)*

Fountain Computers Ltd., Darvill Road, Ropley, ALRESFORD, SO24 0BE. 43/1

DRAGON-32 AND BBC MODEL B
747 FLIGHT SIMULATOR

Superbly realistic instrumentation and pilots view in Hi-Res graphics. Lifelike simulation including emergencies such as engine fires and hydraulic failures. This 32K program uses the Dragon's excellent graphics facilities to the full to produce the most realistic instrument display yet seen on a home computer. There are 21 real dials and over 20 other indicators (see diagram). You control throttle, ailerons, elevators, elevator trim, flaps, slats, spoilers, landing gear, brakes, reverse thrust and see the runway centreline in true perspective. Uses joysticks and cases with bound 12 page manual. Includes options to start with take-off or random landing approach and restart.
Cassette £9.95 (PP and VAT included).
D.A.C.C. LTD., 23 Waverley Rd., Hindley, Gtr. Manchester WN2 3BN.

16K RAM PACK FOR THE JUPITER ACE

THE NEW 'PACER' FROM STONECHIP!

The RAM pack that starts at a full 16K and is easily expanded to 32K by plug-in module!

At last! The thing Jupiter Ace owners have waited patiently for.
A minimum of 16K RAM plus the added benefit of extending to 32K by a simple plug-in module!
Now you can start to program seriously in FORTH without the restriction of 3K RAM.
Make no mistake. Not only is the PACER the first RAM pack for the Jupiter Ace, it is a totally professional piece of equipment.

Look at just some of the features:—

*** 16K RAM expandable to 32K * Professionally cased to enhance the look of your computer * LED Power-on indicator * Wobble free connection — no loss of programs! * A fully tested product * Complete with 1 year's full warranty.**

The NEW "PACER" is available now direct from STONECHIP ELECTRONICS.
Write now for quick delivery by mail.
Remember: For more power from faster FORTH . . . you need a PACER!

only £29.95

IF YOU'VE ALREADY GOT A SINCLAIR RAM PACK, ALL IS NOT LOST!

The Fix-A-Ram offer is for you.

STOP THE RAMPACK WOBBLING
for only **£0.50**
post and packing included

Program crashes on the ZX81 are only too well known, but one of the most common reasons is *'wobbling'*.
The *Sinclair Ram Pack* is attached to the computer by a small contact area, as shown in figure 1.
We have designed what is much needed: a *plastic sleeve,* which is sandwiched discreetly between the Ram Pack and the computer, called the *FIX-A-RAM* (see fig. 2).
RESULT: *a perfect match and stability*.
