## 50

### KNIGHT-CLUBBING

The real inside story; the machines that never were; the blunders and the shortcuts; all you ever suspected about Sinclair but never actually wanted to believe.

## 44 46

### MASTERTRONICS AND HEWSON

Paul Bond meets the people behind Britain's most successful software house and lifts the lid on the next Braybrook blockbuster from Hewson.

## 30 48

### BUDGET PRINTERS AND SERIOUS SOFTWARE

Paddon gets into hard copy from as cheap as £20 up to about £450. And Simon Beesley gets serious with utility programs — including the first example of an integrated program on a home computer.

## 74

### CHEEKAH'S EXPLOITS

Screen and screen again of non-stop Spectrum mayhem from Julian Woods — you can even add extra screens of your own design.

## 89

### HARVEY SMITH SHOW JUMPING COMPETITION

Win a Sanyo stereo system plus 30 runners up prizes of Software Project's new game.

# Thrifty micro owners choose the new MT80+

**K**een on saving money? But not prepared to sacrifice quality and performance? Then the new MT80+ serial matrix printer has plenty to offer at a price that will have you rubbing your hands with glee.

The MT80+ prints at 100 cps and is compatible with just about any popular office or home micro. For true print

flexibility, there's compressed and expanded print, subscripts and superscripts, bold print, italics and, of course, graphics.

You'll have to see the print quality to believe it, thanks to the outstanding film ribbon cassette. Continuous fanfold stationery or friction fed single sheets pose no problem. And if you're in a hurry

the quick tear facility is a real bonus.

The new MT80+ from Mannesmann Tally. Europe's leading matrix printer manufacturer. You'll be laughing all the way to the bank. Contact us now for our literature pack.

# AIR • COMBAT • EMULATOR • • BY CASCADE GAMES •

**£10.95**  
INC. FREE WATCH  
AND POSTAGE

1-3 Haywra Crescent Harrogate

## THE FASTEST GAME ON TWO WINGS! AND A FREE MULTIFUNCTION CALCULATOR WATCH

The AIR COMBAT EMULATOR, packed with exciting features, is by far the fastest, most realistic flight simulator available. For the first time on a home computer, feel what it is **really** like to fly a high performance military jet and engage tanks, missiles, ships, helicopter gun-ships and two types of cunning intelligent enemy aircraft.

Featuring over 300 sprite images, ACE has the smoothest, most detailed cockpit view of hills, trees and other ground objects ever achieved thanks to specially developed Dynamic Graphic Techniques (D.G.T.®) allowing sensational high speed solid 3D graphics.

In combat, your head will spin as you struggle with the help of the advanced avionics which include a rear-view camera and radar, to stay alive long enough to do some damage to the enemy.

The unique two seat flying option (pilot, navigator/weapons man) and **Synchro Speech**® which passes vital aircraft condition information to the flight crew without freezing the action combined with dynamic tactical map, take offs and landings, summer, winter and night-time flying and a remarkably realistic in-flight refuelling option makes ACE the ultimate AIR COMBAT EMULATOR.

### ACE SCENARIO

A vast invasion fleet has landed on your southern shores and discharged scores of tanks supported by helicopter gun-ships and protected by mobile surface to air missiles. Squadrons of enemy fighters give the enemy forces air cover. Advancing ruthlessly they are conquering your homeland, facing no opposition.

You are the last fighter pilot with only three A.C.E. Mark 2.1 multi role All Weather All Terrain (A.W.A.T.) combat aircraft. Based at an allied airbase, your task is to attack and destroy the numerically superior enemy land and air forces and drive them from your shores. The final stage of the conflict, having already destroyed the enemy land forces and shot down their air force, is to sink the enemy fleet as it evacuates its defeated army.

### ACE - EXPERIENCE IT NOW

Every computer game fan will love ACE - just look at these features:-

- 100% optimized machine code uses all available memory.
- Featuring Dynamic Graphic Techniques (D.G.T.®)
- The smoothest, fastest and most detailed cockpit view of any flight simulation.
- Views of hills, trees, tanks and other ground objects. Aerial combat, ground attack and naval attack.
- **Synchro Speech**® i.e. the speech does not freeze the action.
- Two seat option - fly and fight with the aid of a friend.
- Sensational 3D solid (not boring wireframed) graphics.
- High score saving system.
- A.W.A.T. operation (All Weather All Terrain).

\* Note due to memory limitations ACE on the C16 and VIC20 (+8K Ram) do not have any ground objects.

## Most home computers.

As you can see, the Amstrad CPC 464 is no ordinary home computer.

For a start, it comes complete with an integral cassette datacoder.

And in addition, you get the choice of either a superb quality green screen or a full colour monitor.

With £100 of free software to get you going all you have to do is plug in and start computing.

The 64k of RAM means you'll have plenty of memory to play with. And there are over 200 Amsoft games, that you

can play, many exclusive to Amstrad.

But games are only half the fun on the Amstrad CPC 464. In fact using it can also be quite an education.

The kids can learn spelling and arithmetic with software like Wordhang and Happy Numbers.

Whilst adults will love the way it helps around the house with budgeting and accounts.

Put the 464 to work and it will take care of a number of business-like functions, such as wordprocessing and spreadsheet.

# The complete home computer.

To help you get the most from your CPC 464, there's the Amstrad User Club as well as a number of books and user magazines devoted to this most versatile home computer.

And your 464 will be made even more complete with the simple connection of joysticks, printers, disc drives, speech synthesisers and light pens.

But perhaps the most extraordinary thing about the Amstrad CPC 464 is the price.

Just £199 with green screen, or £299 with full colour monitor.

For more information about the complete home computer, all you have to do is complete the coupon.

Please send me more information

**DURELL** sales dept.,  
Castle Lodge, Castle Green, Taunton TA1 4AB

# When it comes to computer games you can't beat an Amstrad.

We've enlisted the help of some particularly wicked program designers to put our entertainment software range together.

They've come up with over 200 Arcade and Adventure games.

Many of them exclusive to Amstrad (like those shown above). All of them mindbenders you'll find hard to beat.

And all at prices that are as competitive as the games, from £12.95 on disc and £8.95 on tape.

But the software is only one of many good reasons for buying an Amstrad computer.

The 64k CPC 464 computer comes complete with built-in datacorder and a choice of green screen or full colour monitor.

The CPC 6128 is a big memory 128k computer with built-in, fast-loading disc

drive and again, it's own colour monitor or green screen.

Both are available at an all-inclusive price you'll find hard to match.

In fact, with Amstrad's unbeatable software, unbeatable hardware and unbeatable prices, how can you lose?

Tell me more about the Amstrad range of software.

## NATO-COMMANDER

Pin on the four stars of a Nato General and defend Europe in a heart pounding, accelerated Real-Time war simulation! React to the combat radio, teletype, and news service messages from the battle front, and use your full continent scrolling battle map to deploy, manoeuvre, and command the battle units, including infantry, armour, helicopters, air forces, and tactical nuclear weapons in real time to stop the ever advancing Warsaw Pact battle units! Nato Commander is great fun and challenge for wargamers and arcaders alike!

C-64/128 & Atari Cassette £9.95  
C-64/128 & Atari Disk £12.95

## SOLO FLIGHT

Solo Flight is an outstanding flight simulator that will provide you with the thrill, excitement, and joy of flying your own aircraft. Solo Flight uses superior three dimensional graphics to provide realistic take-offs, landings, and cross country navigation under both visual and instrument flight rules among 21 different airports, in three different geographical areas of the United States. Options include touch and go's, visual or instrument flying, full cockpit instrumentation, dual VOR navigation radios, an instrument landing system (ILS), multiple air navigation maps, four difficulty levels, and emergency procedure practice. In the game mode the player uses his superior skills to deliver the U.S. Mail quickly and safely among the various airfields. This simulation is a realistic trainer and outstanding fun for all ages!

C-64/128 & Atari Cassette £14.95  
C-64/128 & Atari Disk £14.95

# The excitement

## SPITFIRE ACE

Strap on your parachute and man your fighter!! Save London during the Blitz in your Supermarine Spitfire!! Fly loops, Immelmans, and all the real air-to-air combat manoeuvres using outstanding, out of the cockpit 3-D graphics!! SPITFIRE ACE (European Theatre) provides at least 9 different Combat scenarios and fast paced action that puts you right on the edge of the real personal danger of being shot out of the sky!! For 1-4 players!!

C-64/128 & Atari Cassette £9.95  
C-64/128 & Atari Disk £12.95

## MIG ALLEY ACE

MIG Alley Ace is an exciting and action packed split screen head-to-head aerial combat flying simulation. The game allows two players to fly against each other in their own jet fighter and each receive outstanding graphics and flight information as if they were in the cockpit of their own F-86 Sabre Jet. The game play consists of a series of actual fighter pilot manoeuvres, from loops and High-G turns to Hi-Yo-Yo's, as each player attempts to centre his opponent's aircraft in his gun sights and shoot him down. Additional game options include a solo mode against one to three enemy aircraft, and a co-operative mode where two human players can fly against two computer controlled enemy aircraft. Five actual Korean War scenarios are included, each with five different skill levels. MIG Alley Ace is an outstanding simulation that requires superior fighter pilot skills and guts to survive and win the Silver Wings of a Jet Ace!

C-64/128 & Atari Cassette £9.95  
C-64/128 & Atari Disk £12.95

See, feel and hear all the action! Kennedy Approach is the FIRST simulation to include realistic high-quality speech right from your computer. Bad weather, in-flight emergencies, instrument failures and other variables provide an ever changing environment. You control the action in the skies of our busiest airports, twenty different aircraft could be calling you at the same time and may be vying for the same runway!

## KENNEDY APPROACH

You will hear both their radio calls and your broadcast messages in high-quality speech. All commands can be given using the joystick. This simulation is immediately playable and enjoyable. The safety of hundreds of passengers is in your hands as you guide jet airliners, private planes, and even the supersonic "Concorde" to and from their destinations.

ARE YOU READY TO TAKE CONTROL...  
YOU'LL BE GLAD WHEN THIS SHIFT IS OVER!!!

C-64/128 & Atari Cassette £14.95  
C-64/128 & Atari Disk £17.95

# ent is REAL!

Enter the world of computer adventure. Each adventure takes several weeks to master, providing hours of fascination and intrigue. You must use your imagination and logic to unlock the mysteries of each adventure.

Map skills are essential; each adventure contains full-colour computer generated images which lead you in every direction. You'll need to muster up all your wit and logic and perseverance for each of our adventures will prove a test to your imagination and ingenuity.

### **The Wizard & The Princess** from Sierra On-Line

Become the hearty and steadfast adventurer who rescues the fair princess from the dreadful wizard, Harlin. He has taken her to his towering castle beyond the great mountains. You must outwit and outmanoeuvre the mystical power of the wizard which has grown dark and potent through time. Begin your adventure in the village of Serinia, but take heed, everything is not as it may appear.

### **Exodus-Ultima III** from Origin Systems

Upon escaping the crumbling ruins of Shadowguard, the black fortress of Minax, you lay your weary body on the now-sacred ground. As you rest, you remember your first encounter with the evil wizard of Mondain, whom you later tracked down and destroyed. The existence of his apprentice, Minax, was soon revealed and the crusade was begun again. Younger and more cunning than her mentor, she has been much more difficult to vanquish. But now your sense of accomplishment is touched by a chilling fear. Have all vestiges of evil been removed? Somehow, you sense that your treacherous foes have not been eliminated. Without further feats of skill, daring, and perseverance, all of your past accomplishments may be lost. You stand up, prepare your armour, and walk to the dimension door. Stepping in, the hunt resumes.

# **BORED WITH SHOOT'E** **then it'** **VENTURE IN**

### **An Epic Fantasy Role-Playing Experience**

- Up to 20 character roster
- A 1 to 4 character party
- Individual player movement

- 8 armour types
- Magic weapons, armour and items
- 32 magic spells
- 11 character classes. 5 races
- New combat mode
- New ship to ship or shore combat
- Full colour visuals throughout
- New advanced dungeon graphics
- New animated outdoor graphics
- Sound on/off toggle
- New navigational strategies
- Adventure style verb entry
- New astrological influences

### **Ulysses & The Golden Fleece** from Sierra On-Line

Protected by the gods, the "Golden

Fleece", legendary treasure of ancient mythology, has been kept from man for many decades. Many valiant men have attempted its recovery, but none have been successful in possessing it for any amount of time. The setting is ancient Greece and YOU are Ulysses. The king has requested an audience with you, to assign you the task of retrieving the "Golden Fleece", and returning it safely to him. On your voyages you will encounter many of the same foes dealt with by your predecessors. (The wicked "Sirens", whose beautiful songs lure unsuspecting seamen to their deaths on the island's treacherous shores: the Cyclops, son of king Neptune; Pluto mythological god of the underworld and others). Highlighting your journey is an encounter with the magnificent winged horse "Pegasus".

# TO THE UNKNOWN

Legend acclaims Ulysses as the most daring and skilled seaman of all time. Clad in a pocketed "toga" and chain armour, it's up to you to prove it!

## Mission Asteroid from Sierra On-Line

A terrible tragedy is about to happen... An asteroid of incredible size is headed for a direct collision with the Earth. The predicted impact could destroy all life here — unless something is done quickly. As an astronaut, it's your duty to rocket to the asteroid and attempt to alter its course.

There's no time to lose! If you don't do things exactly right and travel fast enough, there will be DISASTER! The asteroid will collide with Earth at a pre-determined time. You are wearing a watch, which, if checked periodically, will let you know how much time you have left. If you're quick and careful, you will save us all from oblivion. If not, don't bother landing on Earth again, you will have no home to return to... Good luck!

## Lucifer's Realm from American Eagle

By some tragic twist of fate your departure from this life leads not to Heaven as expected, but a journey which deposits you in Hell!

On coming face to face with Lucifer you find he is strangely kind to you. A path to Heaven can be yours but tread carefully — this journey is littered with the likes of Adolf Hitler and Benito Mussolini.

## Masquerade from American Eagle

It turned out to be the toughest case of your detective career. Clues have led to nothing but dead ends. Nobody is talking. Meanwhile, the crime boss you are after is still operating from somewhere. You're about to throw in the towel. But wait! Something breaks. You trail a stooge of the crime organisation to a cheap, seedy hotel, hoping to pump some answers out of him. You break into the hotel room and with the butt end of your trusty .44 magnum, you knock him cold. This could be the lead you've waited for. Maybe, just maybe, if you could find some clues...

## GOOD TIMES, BAD TIMES

Don't believe what they tell you. The truth is that despite the disasters of 1985 computers and software have sold better than ever this Christmas.

It may be difficult to credit it after a year when Acorn twice had to hide behind Olivetti's Turin shroud to escape oblivion, and Sinclair and Commodore managed to clock up millions — in losses.

Clearly all that adds up to a lot more than just a bad attack of hiccups. But that isn't the whole picture. While most of the hardware manufacturers were gasping for cash, the survivors of the software industry were breathing new life into games.

Programs like Alien 8, with its superb graphics, Frankie goes to Hollywood, which brought icons and windows to home computing, and Way of the Exploding Fist, which did to animation what sound did to movies, all pushed game-playing and programming to new heights.

To be honest, even on the hardware side it wasn't catastrophes all the way. No one can deny that Amstrad, thanks to the 6128 and 8256, is now a major force in European computing. And Stateside, although the noises coming out of the Commodore make it sound as if they've sat on another financial whoopee cushion, Tramiel's STs are making people take Atari seriously again.

Let's try forgetting 1985 for a moment, and try a bit of guesswork about the future. When Sinclair decides to start pushing the Spectrum 128 in this country it will be the first time that the top-sellers from all the manufacturers will sport the same size memories. Think what that will do for the software houses.

The accent may shift away from eight-bit technology. As the Japanese regroup after the MSX rout, Western micro-makers will have to come up with something very special to beat them off for a second time. Let's hope it does come to a fight — it will stop the big boys from becoming too complacent. It may make them sweat but the exercise should do them good. And in the long run we'll be the winners.

## Join the Elite in 3 seconds

Impress your friends, be the life and soul of the party. With this simple bug, you can reach Elite status in three seconds. Step one, load the tape; step two, get through the hideously complex Lenslok procedure (OK we were lying about the three seconds). Now press "Y" to load new commander. When on the

save/load screen press "2" to save, press return when it asks for a name. After saving press "3" to exit and — voila! Elite with all the credits and cargo you can eat.

Unfortunately, the security code generated by this method won't fool those guys at Firebird and get you into the monthly play-offs.

## Spectrum loads for Enterprise

Spectrum Basic programs can be loaded directly into the Enterprise computer, with the aid of Basic to Basic. Once the £19.95, program from Enterprise is running, tapes containing Spectrum Basic files can be loaded into the Flan. The program then converts the Spectrum Basic into Enterprise Basic, highlighting areas of the program which the user may

have to rewrite.

Any Spectrum owners thus tempted to rush out and buy one might like to consider an bundling deal from McIntyre Marketing. Enterprise 128 and Fidelity TV/Monitor for £229.95, or Enterprise 128 with a cassette recorder and joystick adapter for £199.95. Anyone interested should contact McIntyre Marketing on 051-708 8141.

## Battle of the Planets

Bryan Hulme, 24, an unemployed motor mechanic from Cheshire, has won the National Computer Games Championship. The contest, organised by Micro Gen was held on December 12th at the

Savoy Hotel, London.

The four finalists had 15 minutes to battle it out on a new game called "Battle of the Planets" which is due out from Microgen around Christmas.

# Hard News

## PRICE SLASHERS 128 shake-up starts here

High Street giant W H Smith has dropped the price of the Sinclair Spectrum Plus to £99.95 in a bid to capture the elusive Christmas market. Meanwhile, the new 128K version of the machine is waiting in the wings. The long awaited Spectrum 128 is expected to make its debut early in 1986. When it arrives it will mean that the flagship machine of each of the major micro manufacturers will have the same memory capacity for the first time.

Elsewhere, the Spectrum Plus is being sold as part of a package including a joystick and interface together with some software, all for around £139. At Currys you can get all this plus a cassette player for the same price, however the recommended retail price of the micro remains at £129.

Commodore owners can trade in their old 64s for a 128, getting £50 off the

*Spectrum 128: Sinclair's shy star waits in the wings.*

current retail price. This brings down the cost of owning a CBM-128 to £220. Other computer owners cannot trade in their equipment, but will receive a free Datasette — which Commodore claim is worth

£45, with any CBM-128 purchased at full cost.

Comet, Greens and Ultimate are selling the Commodore Plus/4, together with a Datasette, joystick and 10 pieces of software for just £99.99.

## Some go East, some go West

He who laughs last laughs longest so we can look forward to large quantities of inscrutable oriental mirth. The in joke last year and early this year was MSX. The xenophobic, parochial Brits just couldn't take it seriously. Now the boot is on the other foot. By offering a quality product at a good price they are getting the sales. Next year MSX will be the best selling computer, globally.

Amstrad's current crop of machines are well made, well marketed and good value. They are not, however, technically interesting. This is obviously a situation that cannot go on forever. Their 68000, 1/2 megabyte, WIMP etc machine is a lot nearer

## DIARY

than some people imagine. Amstrad are just much better at keeping things under their hats than most companies. On past performance we can expect better price/performance than the rest of the Amiga, S.T. crop. Especially when those three inch disk drives are rumoured to only cost Amstrad £12 a piece.

Next time you see screen shots in a game advert or insert card take a closer look. One or two software houses have got into the naughty habit of using C64 screenshots for the Sinclair Spectrum version. Some have gone so far as to use proper arcade machine screen shots on both the C64 and Spectrum versions. Slap wrists.

A certain Liverpool software house recently had a moderate hit with their version of "Underwulde"

*(continued on page 23)*

## Mickey Mouse contest

A trip to the Epcot centre is the prize on offer in an essay competition being run by the Association of Young Computer Enthusiasts.

The catch is that to enter, you have to be a member — which costs £5 a year. The other catch is that the closing date is January 15. The essay should not be longer than 2,000 words, and should describe a computer system for running a club. The Association is an offshoot of the British Computer Society, and for your £5 you get a monthly magazine, with competitions and special offers.

For more information contact Elizabeth Davies on 01-637 0471.

## Big boys face cash crisis

Sinclair Research and Commodore Business Machines both announced losses during the last few weeks of 1985. Sinclair's figures for the year to March '85 were bad enough, showing a loss of more than £18 million, but Commodore, being American, had to go one better and managed to lose nearly £30 million in the three months before September.

While Sinclair's problems are blamed on the retailers — who overstocked by as many as 400,000 computers early in 1985. Commodore's woes are due to investment in new machines such as the 128 and the Amiga.

Commodore's figures are

much worse than expected, and industry analysts in the U.S. claim that if these figures are not turned around quickly, the company could be in serious trouble.

On the other hand, Sinclair has done much better than most forecasts expected, especially so considering the abortive deal with Robert Maxwell last summer.

Currently Sir Clive Sinclair is trying to raise £10 million, in order to build the next range of computers.

Meanwhile if you are feeling charitable this Christmas, spare a thought for poor old Sir Clive — his wages have been cut from £77,000 to a mere £53,000.

# SOFT TOUCHES

Add a touch of communications genius to your computer and modem with these packages!

## BBC

The DATABASE ROM-based comms package gives your BBC Computer access to PRESTEL\*, MICRONET\*, MICROLINK\*, Viewdata, telex, electronic mail, databases, and bulletin boards, handling baud rates of 1200/1200, 75/1200, 1200/75 and 300/300.

Features include carousel facility, Macro Command File, error trapping and telesoftware download. The package includes full fitting instructions, User Guide and Function Key Guide.

**£25.00** exc VAT

**£28.75** inc £

## ATARI

The DATATARI/MULTI-VIEWTERM serial interface plus software package is unique, because it gives full PRESTEL facilities, including graphics, to Atari\* users. Allows access to MICRONET, MICROLINK, Viewdata, telex, electronic mail, databases and bulletin boards, handling baud rates of 1200/1200, 75/1200, 1200/75 and 300/300. 850 interface not required.

For models 400, 800, 600XL, 800XL, 65XE, 65XEM and 130XE. Software on disk or cassette.

**£52.13** exc VAT

**£59.95** inc £

## SPECTRUM

The DATASPECTRUM interface and software package puts your 48K Spectrum\* in touch with Viewdata, telex, electronic mail, bulletin boards and databases, plus PRESTEL, MICRONET AND MICROLINK. The interface handles baud rates of 300/300, 1200/75 and 75/1200. Software features include Mailbox Editor, Frame Processor, Save, Print, and Tele-Software Downloader.

The package includes interface, cable, cassette and full User Guide. Software is transferable to Micro-drive.

**£39.95** exc VAT

**£45.94** inc £

APPROVED for connection to telecommunication systems specified in the instructions for use subject to the conditions set out in them.

\* postage free when bought with WS2000. Otherwise, please add £1.15 UK p/p.

## MODEM WS2000

To use these brilliant comms packages you need a modem, so get the best — the multi-speed, multi-standard modem WS2000! It's the versatile, flexible communications tool that thousands of users depend on.

This world-famous modem was a 1985 British Microcomputing Awards Finalist, PCN Best Buy, and is MICRONET recommended. It comes complete with BT telephone lead, mains power lead, comprehensive user manual and free introductory subscriptions to MICRONET and MICROLINK.

**£129.95** exc VAT

**£154.73** inc VAT & UK delivery

\* reg'd trade marks of the companies concerned.

## ELECTRIC FUTURE

(continued from page 21)

So far so good, nothing unusual in that. What is surprising is that they are threatening to sue another Liverpool software house. They feel their copy has been copied.

Rumour about the Sinclair business computer seems to be firming up. Best guess is that it will use the OS9 68K multi-tasking operating system. This might have a wimp front end written by Metacomco, of Amigados fame. Most likely RAM is ½ a megabyte, though one megabyte is always possible. The end result is probably a cheaper, more elegant Atari 520 ST look-alike. Knowing Sinclair this could all be just a rumour.

On January 23rd at their Annual General Meeting in America, Apple will announce the Mac plus. With one megabyte of RAM a 128K ROM and double sided 800K disk drives it offers a potent package. Upgrade kits will be available for existing Mac Owners. In September Apple will offer an even more powerful Mac, codenamed Carla. This will have four megabytes of RAM and a built in hard disk. It promises to make an ideal games machine.

By selling off U.S. stocks of the BBC Micro to British American Scientific Instruments of Texas for just under a million pounds, Acorn has paved its way to the Latin American computer market. The Texan company has a Mexican parent organisation, Dataum, which has developed Spanish language software and a special keyboard to sell the computer to hispanic users.

As part of the deal Acorn has granted the company assembly rights to build and sell the computer throughout the Americas. Meanwhile, Acorn's parent organisation, the Italian giant Olivetti, will be selling the BBC Micro in Eastern Europe.

Steven Spielberg may have the Midas touch — but with a 20th century embellishment: his movies turn into computer games. Hard on the heels of US Gold's Goonies comes Electric Dreams' Back to the Future — the movie that toppled Rambo from its number one US position.

Faithful to the storyboard of the movie, you zoom back in time in your psychedelic DeLorean and must bring your parents together — otherwise you cease to exist. At the bottom right-hand of the screen is a photo of three people which fades as time goes by, just like in the

movie. Using digitised sequences from the film the icon-driven game breaks new ground in having an on-screen kiss! Sloppy, huh? But if your mom Lorraine and your pop George don't kiss, then you, Marty will never exist.

The design concept was developed by Mark Eyles of Quicksilver fame and uses Huey Lewis and the News' Power of Love as background music. Scheduled for release at the end of this month, Back to the Future will sell at £9.95 on the CBM-64, closely followed by an Amstrad version.

## Stone age

That modern stone-age family, the Flintstones, have been popping onto our screens in re-runs that seem to stretch back to the original Stone Age.

The aim of the game is to help Fred Flintstone build a house with stones from the local quarry and win the affections of Wilma his wife-to-be.

Players can win a holiday in Los Angeles including a visit

to Hanna-Barbera studios.

The Quicksilver game boasts excellent animated graphics and will be available on CBM-64, Spectrum and Amstrad at £7.95. Do Flintstones and Electric Dreams' Back to the Future augur a worrying new trend in games? In both you have to bring two people together instead of slaughtering hundreds of aliens.

## ZAP A ZOID

Zoids, Tomy's popular cybernetic dinosaurs were around when Transformers were no more than a marketing concept. Now you can join in the internecine conflict on Zoidstar where the Red Zoids have smashed Zoidzilla, the Blue leader into eight pieces.

Martech's Zoids on Spectrum at £7.95 and the CBM-64 and Amstrad at

£8.95, gives you a chance to claw your way to the top of the Zoid hierarchy until you control a Zoid yourself. This will make it a lot easier for you to assemble the missing bits of Zoidzilla.

The game includes a 3D sequence in which you, as a guided missile zoom towards the evil Red Horn and try to destroy him. Zoids will be zoids.

## BACK TO EARTH

Earthlings, I think your correspondent "Harry Seldon" — obviously a pseudonym — should stick to building his Foundations and not spout such twaddle about Aliens coming to destroy us through misunderstanding our video games. After all, if they don't even recognise the games as such, how likely are they to recognise the zapping or the blobs, sorry — "invaders", as such?

Seriously, however, there has been much furore recently about Amstrad's twin-deck cassette unit, and about Interface III-type devices. Once again, we are told that such devices "breach copyright" and should therefore be banned.

There seems to be a misconception — deliberately fostered, in part, by the software houses themselves — as to what, exactly, copyright is and what rights the consumer gets under it. Contrary to popular belief, the copyright

## Dear Eugene Evans,

I have had the pleasure of knowing you and your family for over five years. Then you were an enthusiastic and well-mannered 14-year-old. I employed you to work as a Saturday boy in my Liverpool shop, Microdigital. Being keen and intelligent you quickly became a microcomputer expert and a highly valued employee. As soon as you were old enough you left school and worked for Bug Byte and then Imagine. This was a great mistake.

Imagine seized on you as a PR opportunity. The story of working-class teenager earning a fortune in Liverpool was a natural for the mass media. You had a fleeting fame in newspapers and on television, with strong undertones of John Lennon involved. What you didn't seem to realise is

that Imagine didn't do it as a favour for you, they did it for themselves. In fact what they did for you was the exact opposite of a favour.

Back in reality you wrote a simple game on the 3K Vic called Wacky Waiters that was just tolerable. Catcha Snatcha which followed was unplayable. Frantic was so bad the company had to withdraw it. Then you converted to the Commodore 64 with an attempt to put Arcadia on it: it was a travesty.

The last few months of Imagine were wasted playing around while pretending to work on a game called Psyclapse. All these attempts at programming were on the relatively simple 6502. You never could handle the more complex Z-80. The 68000 must seem as

difficult as playing Rachmaninov backwards on a mouthorgan.

Now you are wisely not trying to program. The problem you have in life is that you are left with no skills or qualifications. You do have a misplaced loyalty that is seriously holding you up in life. The time has come to escape from the past. There is only one logical course of action. You must make the most of your undoubted potential by going back to school.

*Bruce Evans*

laws are not intended to block legitimate usage of items for which the consumer has paid good money. Magnetic media are not infallible; indeed, on the contrary, my experience is that protection schemes are self-defeating, forcing me to break the protection and make a copy

simply so that I have one which will load.

It is true that these gadgets could be used to break the law, making multiple copies to give or sell to others, but "could be" is nowhere near strong enough a reason to ban them. Whilst condemning the lawbreaking

potential of their customers, the software people all ride around in cars. Don't they know that cars could be used to kill people? That's far worse than a few illicit copies! So, let's ban cars, knives, headache tablets etc., before working our way round to the much lesser menace of copier devices and software.

Stardate: 6.12.85.*

## IN TOUCH

### How to write for Your Computer

We called this magazine *Your Computer* precisely because we welcome your views, tips and hints and even your criticisms of machines and software in general. Here's how you go about getting your name into print. Your article should be typed, double-spaced, on A4 paper. A name and address on each sheet would help. Don't forget to tell us which machine it runs on. With programs please include a cassette or disc and some indication of how long it is. Please put what

machine it's for on the envelope. Don't forget full instructions to us how to load and list your program and how to enter it for the readers.

The article must be submitted exclusively to *Your Computer*. We pay £35 per published page — that's as it appears in the magazine and includes illustrations.

### Telsoft

Telsoft is *Your Computer's* software downloading service. Any program for the Spectrum or the BBC and the Commodore which has a telephone symbol next to it is available on the service. Both 1200 and 300 baud speeds are

catered for. For more details call Colchester (0206) 8068. No more lonely nights typing in hex

### Message service

You can get messages to us in two ways. Either use the Prestel Telex Link to 892084 BISPRES G or you can use our very own modem, day or night on 01-661 8978. The modem is V21, 300 baud, even parity, 10 bits per character. You simply transmit in upper case "YRC" — our address code, and wait for the acceptance code "+ + + STF GO". Then off you go. Don't forget to tell us who it's for. Sign off with "NNNN" — again in upper case.

## DOWN IN THE DUMPS

Goodness knows what Basic screen dump A J Torlesse was using for his Spectrum/HR5 system — Letters, November. I thought my routine — adapted from the Epson routine in *Mastering your Microdrive* — was slow at about 5½ minutes.

Got the time down to 1¼ minutes by modifying another routine and have ended up with the Tascopy suite of m/c routines for small and large

(continued from page 25)

black-and-white copies, plus a "shade copy" which prints sideways to give a near-A4 size copy with shading of increasing density simulating the screen shades from white through the colours to black. The code for each is only 256 bytes long, and resides the printer buffer, not used except for printing to the ZX printer.

There's also a probable reason for his Poking, in that the early HR5s had an incremental feed of 1/36", whereas the current model is twice as fine, with 1/72". Thus for bit image printing the control code had to call for 4 times 1/36" for a 1/9" feed, but now requires 8 x 1/72" for the printer to advance the paper by the same amount.

Incidentally, Brother changed my HR5 from 1/36" to 1/72" feed free of charge when I dropped it in at their Manchester service centre.

I've seen so many different cable connections stated for the Spectrum-HR5 link, some of which could not work, that I quote the "official" connections as stated by Brother.

## RECURSION, AGAIN...

In First Bytes November '85 you have said that Forth has an advantage over Basic in its ability to support recursion. It has been stated so many times that you cannot do recursive techniques with Basic that some people are even beginning to

believe it! It isn't true.

Any computer with Gosub and Return commands can solve any recursive problems. The only stipulation is that the return addresses must stack so that you can nest the subroutine calls. This not only means that Basic is perfectly suitable, it probably also means that virtually any language will support recursion whether high-level or assembly language.

It is easy to write recursive programs for a ZX-81 or Spectrum and I guess even Commodore Basic would do. The best book which explains how to do it is *The Complete Programmer: A Guide to better programming in Basic* by Mike James. This dedicates a chapter to recursion and gives a first class treatment of the subject. Peter Erskine,  
Colchester.

## DRAWER

I feel I must write in and congratulate Paul Rhodes on his excellent program Drawer, *Your Computer* November '85, for the Sinclair Spectrum. As

## LAST MONTH

Part of listing two in Roy Dictus' Sound Sampler, published in December, has been smudged. The last six characters in the second and third lines from the end — Line 110 — should read:

f7ed78

4c04c9

If you are having trouble with October's Spectrum Melody Master, note that there should be a plus sign at the beginning of line 810, ie.,  
810 LET NO = NO + ...

Paul points out, it is not possible to see the attribute grid if using the program with an RGB monitor, however it is possible to alter the program to make the grid visible.

Simply Poke 26613 with 32. This will make the attribute grid white and green and is perfectly satisfactory. You can use any other colour by Poking the above address and the formula

Paper x 8 — i.e., green is Paper 4 x 8 = 32.

As far as I am aware this has no detrimental effects on the rest of the program. By the way this has no effect on the transparent grid and this still does not show up on a RGB monitor.

Anthony Challis,  
Peterborough,  
Cambridgeshire.

## AUTODIAL WITH TELSOFT

There appears to be a slight problem with my Autodialler program, published in your November issue. It works perfectly with the D1 and D2 programs that are available on Telsoft, but won't work with the Telsoft listing in the magazine, as they have different start addresses. To allow for this, line 1240 of my program should be:

1240 DATA 76,56,199,32,53,  
193,96,234,234,234

if you are using the Telsoft listing on page 102.

David Derrick,  
Cheddar,  
Somerset.

## SCRABBLE A CHEAT?

In September's Update you talked about reworking old games. Chess programs are regularly updated, so why doesn't somebody do the same for Backgammon and Scrabble?

CP Software describe their Backgammon as "excellent". Not true. No doubling cube, no score, very little colour. It doesn't compete with Psion's and that one has its problems.

Psion's Backgammon occasionally generates extra pieces for me and then hangs up by not allowing me to play my last piece into my home table if it's on the bar.

Psion's Scrabble is super but, oh, some of those words: "squits" and "vison" do not appear in any of the dictionaries that I have — Chambers and Pocket Oxford.

Please all you superb programmers can we have updates of Backgammon and Scrabble for the good players out here, professional jobs too — no kid's stuff.

I'll buy two of each. And if ever I see Scrabble for the Amstrad 6128 based on a good dictionary I'll buy a 6128.

Peter J Turner,  
Norway.

# POOLSWINNER

THE ULTIMATE POOLS PREDICTION PROGRAM

- **MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available - 22000 matches over 10 years. The database updates automatically as results come in.
- **PREDICTS** Not just SCOREDRAWS, but AWAYS, HOMES and NO SCORES.
- **SUCCESSFUL** SELEC guarantee that Poolswinner performs significantly better than chance.
- **ADAPTABLE** Probabilities are given on every fixture - choose as many selections as you need for your bet. The precise prediction formula can be set by the user - you can develop and test your own unique method.
- **SIMPLE DATA ENTRY** All team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).
- **DISC/MICRODRIVE COMPATIBLE** Tapes supplied with conversion instructions.
- **PRINTER SUPPORT** Full hard copy printout of data if you have a printer.

AVAILABLE FOR Spectrum (48K), Commodore 64, VIC 20 (+16K), AMSTRAD, BBC B, Atari (48K), ZX81 (16K), Dragon, Apple II, ELECTRON

PRICE £15.00 (all inclusive)

Boxed, with detailed instruction booklet

**NOW AVAILABLE**

**FIXGEN 85/6**

AT LAST! No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish fixtures for 1985/6. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner.

POOLSWINNER with FIXGEN £16.50 (all inclusive)

## COURSEWINNER V3

THE PUNTERS COMPUTER PROGRAM

You can develop and test your own unique winning system by adjusting the analysis formula, or use the program in simple mode. Coursewinner V3 uses statistical analysis of major factors including past form, speed ratings, course statistics, prize money, weight, going, trainer and jockey form etc. etc. It outputs most likely winners, good long odds bets, forecasts, tricast etc. The database includes vital course statistics for all British courses. You can update the database - never goes out of date.

AVAILABLE FOR Spectrum (48K), Commodore 64, BBC (B), AMSTRAD, Atari (48K), Apple II

PRICE £15.00 (all inclusive) includes Flat And National Hunt versions.

Tel: SWANLEY (0322) 64851

Official orders welcome. UK prices are shown first and include post and VAT. The second price in brackets is for export customers in Europe and includes insured airmail postage. The third price is for export customers outside Europe (including Australia etc) and includes insured airmail postage.

# ROMANTIC ROBOT present

56K Spectrum extension? Instant back-up of any program? Joystick & video interfaces? YES! All this & even more with **NO1 SPECTRUM MULTIPURPOSE INTERFACE**

## Multiface one

Version '86

UNPRECEDENTED - UNPARALLELED - UNBEATABLE at £39.95!

- \* Internal 8K ROM and 8K RAM open new concepts in Spectrum computing: 100% reliable saving of anything, anytime and onto all types of peripherals with extra 8K at user's disposal and with a full peek & poke facility covering the entire 56K. MULTIFACE ONE does not take any part of Spectrum RAM & does not need any additional software. Just push a button to freeze a program, save it and restart from the same point next time. Peek/poke facility and 8K RAM (say with a monitor disassembler) are also ideal for studying, modifying, developing programs.
- \* Menu-driven with prompts & one-touch commands: 1) Push button 2) Select function: exit/return/save/poke 3) Input name 4) Save to: tape/cartridge/wafer/opus/beta
- \* Extremely powerful & efficient compressing for fast re-loading & using minimal room on cartridges, tapes, wafers, disks. A 7K screen can be compressed to a few hundred bytes, the whole RAM into a few K (depending on a program).
- \* Option to save a full 24-line screen only
- \* Pressing the button & return can restart a "crashed" computer
- \* Through extension bus for connecting other peripherals
- \* User friendly, fully error trapped, simply magic
- \* Users must ensure the copyright laws are not infringed

Expand your Spectrum to 56K and stretch its capabilities even further with

# HARDWARE HITLIST

## SPECTRUM KEYBOARDS

► Spectrum • Saga System • Transform • Both cost £80

What do you get the Spectrum owner who has everything? Possibly one of the two new deluxe keyboards. At around £80, they have to offer something a bit special.

The new Transform keyboard looks likely to stand up to anything. A diecast metal case contains a full set of sculpted stepped keys. These are embossed in colour with the Spectrum keywords.

There is a separate numeric keypad and a few separate functions keys as well as an extended mode key. Fitting is simple and just needs the top whipped off the Spectrum. There is plenty of room for Interface 1, and the Microdrives can be connected without using an extension. There is an on/off switch, and room to mount the transformer in the case.

As you might expect at this price, the feel of the keyboard was up to the best professional standards.

The other contender, the Saga Elite 3 goes for a plastic IBM look alike keyboard. Again the feel is very nice. They have gone a bundle on extra function keys. No less than 10 down the left side with a full numeric keypad with cursor keys and arithmetic operators.

The only disappointment is the lack of keywords on the keys. These are supplied on a chart which clips just above the keypad. Not a problem for the Spectrum fanatic, but off-putting for the casual user.

Hardware compatibility is maintained by keeping the board in the same position in relation to the back and

bottom of the case, although Microdrives will have to stick up in the air.

If you've got this sort of money to spend on a keyboard, then there isn't much to choose between the two. For me the Transform gets it by a short head because of the colour embossed keys and last-for-ever metal case. Transform telephone number is 01-658 6350 and Saga are on (04862) 22977.

### OPPOSITE

● The Saga 3 Elite. For the Spectrum owner who would rather be tapping away on an IBM PC.

## MULTIPOINT

► Skywave • RS232 interface • Any Amstrad • £99.95

The unit consists of a full 25-way connector, two sideways Rom sockets and a 24-way user port. One of the Rom sockets is occupied by the Skycom software, and as yet no software has been

written to use the user port; it may eventually be used to control intelligent modems for unattended operation.

The two main tasks of software like this is to access Prestel and bulletin boards. In Prestel mode, there are four colours instead of the usual eight. Some dynamic pages seem a problem, but apart from that, it does an adequate job. Pages can be printed or stored in Ram or disc/tape, although it was unclear how to retrieve pages from storage for printing. Most commands are accessed using cntrl + key combinations, with windows and menus to help.

The bulletin board software

has the usual choice of parameters for baud rate, word type and 40/80-column option. The same printing and saving facilities are available.

This looks like a promising package. Obviously there are many facilities one would like which are absent — file transfer and offline mailbox editor to name but two.

At the moment it has stolen a march on the competition where software downloading is concerned, but the dismal standard of software available does not make this a winning advantage.

Multipoint is available from Skywave on 0202 302385. The interface plus modem deal is from Modem House. ●

### BELOW

● The Skywave Multipoint lets you plug in to free Prestel software for £100.

# Budget Printers

*From £20 to £450, Lee Paddon takes a short hand look at hard copy for the hard-up.*

*The DMP-200 gives good-value quality, and not just for Amstrad owners. Right, the Epson GX-80 for those who want a famous name. Below, the Okimate 20: fast, colourful for £260.*

A printer is often the first add-on that new users consider when they decide their micro is going to be something more than a games machine. It is vital if you want to do your own programming as it is impossible to see your whole program on the screen at one time and thus root out persistent bugs. You may also want to use your computer as a word processor — the most important “serious” application for home micros.

For listings, almost any printer will do. Obviously speed is useful as this will allow you to get on with the job more quickly. Print quality and paper size are probably less important. On the other hand, if your major application is word processing, then your major criterion will be the appearance of the finished work. There is no point spending time and effort getting the spelling and appearance right if it's printed illegibly on paper which would look more at home on a toilet roll.

Another application is graphic

presentation. This is important if you want to use your computer to plot graphs, charts, or do screen dumps. For this sort of work the important thing to bear in mind is whether the software you have will drive the printer you want and whether you need colour.

There are four basic varieties of printer which use different methods of forming characters: dot matrix, where characters consist of a series of dots, a daisy-wheel, thermal printers and plotters.

Plotters consist of one or more coloured pens which are moved over the paper to produce lines and characters. Up until recently these were very expensive but there are now several makes which produce accurate results for a reasonable outlay. Some are flat-bed plotters, which work on a single sheet of A4 or A3. Others like the much cloned MCP-40 have roll feed; possibly only worth considering if you are primarily interested in graphics as they are usually too slow for general-purpose work.

Daisy-wheels were once considered the Rolls Royce of printers, being mainly found in offices. However, they are rapidly falling in price, and you might be able to pick up a second-hand bargain. But they are quite slow and have no graphics capability. Be careful about availability and price of ribbons.

Thermal printers are about the cheapest way of getting into print. An outstanding example is the Alphacom printer from Dean Electronics, which is now available for the Spectrum at £20. Softek also does an interface for CBM-64 and Vic computers. Brother also has a range of thermal printers which are good value. The main drawback with this type is they are somewhat sluggish and the paper is costly and sometimes not readily available.

Lastly, there are dot matrix printers. Frankly if you can afford around £300 for a printer you should look no further. Within this class you should find a printer to suit your needs. Ideally it should be Epson

compatible — i.e., its graphics and character set should conform to those of the Epson printer range. It should print with a range of character sets, including NLQ, and you should be able to redefine the character set.

Buffers are also useful; your computer is free to get on with computing while your printer does the printing. NLQ — or Near Letter Quality — is a recent development. The printer prints a line twice, the second time half a dot lower. This increases the vertical resolution to the standards of daisy-wheels. Most printers now offer this facility and it really is a must these days, even if you're only going to use it for your CV or to impress the bank manager.

Laser and inkjet printers are starting to make an impression in business. How long before their presence is felt in the home market is hard to foresee. The major advantages of these printers are speed and quietness. These are not important considerations in the home market unless their prices change dramatically. Epson has plans to

launch a smaller version of the SQ-2000 to match its portable computer but its performance is not that much better than many dot-matrix printers.

If you need colour you now have a number of technologies to

choose from. There are dot-matrix printers from Epson and Seikosha which use multi-coloured ribbons to produce up to eight colours. Plotters normally come equipped with a variety of pen colours and some, like the Penman plotter, will take Pentel pens, giving you a wide variety to choose from. Another approach is the Okimate 20 which claims to produce up to 100 different shades. At £259 it is certainly very competitive even offering a correspondence quality type-face.

If colour isn't important but you want the flexibility of dot matrix and NLQ then the Amstrad DMP-2000 is a good choice at £159. It has a standard Centronics interface, although the cable you get thrown in will be useless and the colour scheme may jar a bit. The manual is very clear and also written with other computers in mind.

Epson has dominated the upper end of the market for a long time with its FX and MX range. These workhorse printers have acquired a deserved reputation for reliability. However, in terms of facilities for the money, they may well not be the best value for money. The Taxan KP-810 gives a spritely 160 cps — characters per second — with a choice of three NLQ faces\* as opposed to the single NLQ face of the comparable Epson LX-80.

Also worth considering is the Star range of printers. One of their important plusses is that some use normal, cheap and readily available typewriter ribbons so running overheads will be low. Generally, they are a little more expensive than the Taxan and offer similar facilities. Another consideration for Spectrum and Commodore owners is the interface. For the Commodore, more and more manufacturers are bringing out CBM versions of their printers, including Star, Brother and Epson.

There are a number of Spectrum printer interfaces on the market. Probably the best known is the Kempston interface. Although expensive, it offers all the facilities you are ever likely to need and is compatible with a wide range of printers.

Printer technology is a never-ending source of ingenuity and, despite the basic requirement of delivering ink to paper, is one of the fastest moving areas in the home computer world. At the moment dot matrix would seem to offer the best all round performance and there are some excellent deals on offer this Christmas.

Next year another variation on present technology may reign supreme. And then you can start all over again.

# ABC Elektronik

Telex: 932 974 budde d

Hügelstraße 10-12  
4800 Bielefeld 1  
West Germany

*The Giga Soft Mouse for the Sinclair QL is now available!*

**Price £49**  
exc VAT, including p&p

#### The hardware:

The mouse + special interface to use with the joystickport of the QL computer. The mouse resolution is 0.26mm.

#### The software:

**GIGA Basic:** This extension adds more than 70 new commands to SUPERBASIC. This includes a full screen editor, animated sprites, mousecontrol commands, GEM style pulldown menus and many more.

**E.A.S.E.:** A totally new user interface for the QL. It supports a desktop environment, similar to GEM. It includes pulldown menus, icons, really scrollable windows, a calculator and a game. This program enables the user to have access to all system functions in an easy manner.

How to order: (1) Send a cheque to ABC; (2) Transfer money to Postcheckamt Dortmund to Mr Budde, Account No. 902 83 469; (3) Send an order to the address above, we will send the package with post cash on delivery.

## Our first show was an outstanding success...

**This time we've got many more surprises and lots more room to wander around!**

- ★ Amstrad goes striding into 1986 as the most innovative and profitable computer company in Britain. Come and see for yourself the ever-growing range of products that puts it head and shoulders above the rest.
- ★ So many people turned up for the first-ever Amstrad Show in October that entry had to be restricted and lengthy queues formed outside. Not this time! We've almost doubled the floor area – so you'll be able to move around with ease.
- ★ Every stand was taken at the October show, and many potential exhibitors had to be turned away. This time they've booked well in advance! Well over a hundred exhibitors will be there.

★ On display will be just about every piece of hardware and software that has yet been produced for the Amstrad range. And that means lots more products – and lots more bargains! A big feature of the October show was the way exhibitors entered into the spirit of excitement that pervaded the show and slashed their prices. This time many thousand more visitors will be going home with some really worthwhile bargains!

★ One thing you'll get for nothing – and lots of it – is advice! Waiting to talk to you, and answer any problems you may have about Amstrad computing, are some of Britain's top Amstrad experts. They'll all be there!

## BETA BASIC 3.0

SINCLAIR USER, JAN. 85 (ABOUT RELEASE 1.8): "HAS ESTABLISHED ITSELF AS THE STANDARD EXTENDED BASIC FOR THE SPECTRUM...TURNS SINCLAIR BASIC FROM A GOOD VERSION OF THE LANGUAGE TO A FANTASTIC ONE." - NOW, WITH RELEASE 3.0, BETA BASIC BECOMES PROBABLY THE MOST POWERFUL BASIC AVAILABLE ON ANY 8-BIT MICRO.

- **PROCEDURES** - a very full implementation that lets you extend Basic easily. With parameter passing by value or by reference (including arrays), LOCAL variables, recursion, DEFAULT parameter values, and the ability to handle parameter lists of any length. No PROC keyword is needed; e.g. you can use things like: swap a,b or draw box 10,20,5 or 5000 M,500.
- **GRAPHICS** - up to 128 WINDOWS, each with its own character size (giving 1-64 char/line) and attributes. ROLL and SCROLL any part of the screen by any number of pixels in any direction. Use GET to store parts of the screen, then put them back anywhere at different magnifications. Fast FILL, ALTER attributes, PLOT strings, DRAW to a point, change scale and origin.
- **TOOLKIT** features: Renumbr with block move or copy; block DELETE, search and/or change find; ALTER applies to all 36 User-defined keys. List the variables, list a procedure, list DEF KEYS.
- **EDITOR** - lets you move the cursor around the screen 10 times faster. And you can move the cursor up and down within edited lines. AUTO, EDIT, JOIN and SPLIT commands.
- **LISTINGS** with optional automatic indentation of loops, IF, procedures etc. Works on existing programs e.g. you can choose to list:  
10 FOR n=1 TO 10: PRINT n: NEXT n  
as: 10 FOR n=1 TO 10  
PRINT n  
NEXT n
- **KEYWORDS** can all be entered by typing them in full, or by the "single entry" method, or both in the same line; e.g. the line:  
10 print "hello"; if x=1 then goto 100 will be recognised and listed normally.
- **Upgrades to Release 1.8 customers:** If you bought direct from us, there is no need to return your cassette - just quote the (approximate) original purchase date with your order; otherwise return your cassette and name your supplier. The upgrade price of £6.95 (£7.50 overseas) includes a new manual.
- **ARRAY** and string handling features include fast INSTRING (100,000 chars/sec) and INARRAY search functions. You can JOIN arrays together, delete, transfer and insert sections, change dimensions without data loss. LENGTH function gives dimensions. Ultra-fast array SORT - e.g. a\$(500,30) will sort in about 3 seconds!
- **MICRODRIVE** commands let you use simple forms, or exactly the same commands you normally use for tape - just enter DEFAULT sml or m2. Some possible Microdrive commands: SAVE "name", ERASE "name", LOAD 1, "name", SAVE 10 TO 100; "part prog", SAVE a "slices" or just the variables, MOVE program, CODE, arrays, MERGE auto-running programs, End-Of-File function.
- **OTHER FEATURES**, new or improved, are too many to describe: DO - LOOP structure with WHILE, UNTIL and EXIT IF; BREAK, CLEAR, CLOCK, CONTROL, CODES, EDIT variables, ELSE, GET, KEYIN (programs can write themselves) multi-LET, (LIST a "slices", ON (works with line nos, proc, etc.) ON ERROR, OVER 2, POKE strings, POP, READ LINE, TRACE, USING, DPOKE, Faster GOTOs, GOSUBs and FOR-NEXT loops.
- **26 FUNCTIONS:** AND, OR, XOR, DEC, HEX\$, BINS, fast SINE, COS\$, RND\$, CHR\$, NUMBER, DPEK, EOF, FILLED, INARRAY, INSTRING, ITEM LENGTH, MEMO\$, MEM, MOD, SCRN\$, SHIFTS, STRING\$, TIMES, USING.
- **Spectrum Basic compatible** - you can run existing programs. Transferable to Microdrive. Syntax check on entry. Extra error messages. Compatible with most printer interfaces (please specify). Waft-drive and DISCOVERY versions available.
- **Comprehensive A5-size manual.** More than 80 pages, with many examples.
- **To show you the power of Beta Basic's procedures**, we include a FREE TURTLE GRAPHICS package!
- **Release 1.8 remains available**, at a lower price of £8.95 (£9.50 overseas). You can upgrade later to Release 3.0 for £6.95 (£7.50 overseas).
- **TRANSFORM** your Spectrum with BETA BASIC 3.0 for just £14.95 inclusive! (£15.50 overseas).

(TICK AS APPROPRIATE.) PLEASE SEND ME:  
BETA BASIC 3.0. PAYMENT OF £14.95 (OR £15.50 OVERSEAS) IS ENCLOSED.  
BETA BASIC 3.0 UPGRADE. PAYMENT OF £6.95 (£7.50) IS ENCLOSED.  
BETA BASIC 1.8. PAYMENT OF £8.95 (£9.50) IS ENCLOSED.  
MORE INFORMATION ON... I HAVE/DID NOT HAVE RELEASE 1.8 ALREADY.  
A STAMPED ADDRESSED ENVELOPE IS ENCLOSED.

### SCREENS

● Commando: An amazing programming feat.

Bitter battling has not been confined to the game itself — Elite forced Alligata to make alterations to their excellent Who Dares Wins II in order to delay its production — and it would seem both games are superseded in complexity and variety by Ocean's Rambo.

What all the games have in common is an upward scrolling scenario depicting a feisty little soldier battling his way past the enemy, past gun emplacements, bridges all the way to the fortress.

This game is particularly striking on the Spectrum — the animation and detail are so good it makes Sir Clive's little box of tricks look like an arcade machine. The sound quality on the Commodore is excellent and adds to the whole atmosphere of

generally frothing stupidly at the mouth that is essential to partaking in warlike activity.

Developed with the aid of Capcom to create the closest possible duplication of the original arcade game, Elite's

Commando has the cachet of being the official version. A lot of people will think they are doing well if they get as far as the fortress wall, but beyond here there are troop carriers and tanks to defeat.

### SCREENS

● Rambo: Just one of those sixties kids who decided to make war, not love.

Rambo is just one of those sixties kids who decided to make war not love, and even in the US Army declined to use the Sylvester Stallone creation as part of their recruiting drive — it was not the kind of thing they wished to be associated with. Stallone fans are probably fed up with being told that their hero spent the Vietnam war working as a gym coach in a girls' school in Switzerland — but maybe it proves that he's smarter than he looks.

Now to review the game. Martin Galway's excellent soundtrack ensures that this will probably be the biggest thing to hit the market since Ghostbusters — especially since Activision's contributions this Christmas

— Hacker and Little Computer People — are far

too freaky/boring for success.

The game is Commando-esque, it must be said, but the greater variety of weapons and the ability to move back down the screen make it radically different from the two Commando clones currently available. There is more plot and strategy, too. You discover Banks, your former comrade in the compound.

The screen display makes use of icons, using the space bar you can choose between explosive arrows, rocket launchers — everything the well-dressed man-about-jungle is wearing these days.

Strategy requires you to approach the camp as quietly as possible.

# THE COMMODORE 128. HARD FACTS ABOUT THE SOFTWARE.

## PAZAZZ

Have you ever wished you could create a whole theatrical performance of your own? Do you have your own ideas about scenery, costumes, music, choreography...? Now you have the opportunity to try out your ideas, and to develop a performance that the professionals would be proud of.

Using PAZAZZ you can:

- design scenery
- design costumes
- write music, and
- choreograph the action.

Four complete performances are included in the package to get you started, after that it's down to you and your imagination. So come on all you budding National Theatre Directors, it's never too soon (or too late) to start.

## PERSONAL MONEY MANAGEMENT

Personal Money Management helps you make the money go round. It is a straightforward, simple-to-use budgeting program for personal finances with which you can control your domestic cash flow and make the most of your income. With Personal Money Management you need never again be caught by the unexpected bill and no money to pay it.

The program is extremely easy to use. You enter your income and expenses, and Personal Money Management calculates your total annual expenses together with the amount you need to set aside each month to meet those expenses. In this way no bill can arrive that you do not have the money to pay, and the money you have set aside is working for you earning interest in a bank or building society account.

Personal Money Management makes planning and budgeting easy, no household should be without it.

COMMODORE 128 PERSONAL COMPUTER APPLICATIONS

Script 128 is the intelligent, fully professional word processor for your Commodore 128. It offers you all the usual advantages of word processing - cut and paste editing, mail merge, tabs, search and replace, print preview plus other advanced features such as an arithmetic function for totalling rows and columns, a second text area, wordwrap, 80 or 40 column display and customized printer output with programmable options.

- Some of Script 128's powerful features:
- Menu driven operation throughout - with shortcut command options for time saving
- Print-preview providing instant feedback on layout changes
- Two text areas in 128K machines, allowing two separate documents to be held in memory simultaneously
- Support for all main printer types, and customising to suit individual user's printing requirements

With hundreds of software packages available never has a more useable machine been launched.

Three modes mean you can use software for the Commodore 64, software for the CP/M system and new software specially written.

Here are just three new examples of what is available.

Visit your local dealer for your 128 software or call the Commodore Information Centre on Corby (0536) 205252 for more information.

### SCREENS

● Repton II: A rattling good play

When you'd got over the fact that it wasn't Boulderdash — despite the teasing similarities — Repton II turned out to be a pretty good game. More relaxing than rivetting, it placed the emphasis firmly on problem solving and map making, rather than strenuous activity.

Repton II is more of the same with a new twist in the form of Transporters. As before you tunnel through the earth collecting diamonds, keys, and pieces of a jigsaw puzzle. This time, though, there are 64 Transporters to whisk you from one of the 16 levels to another. The trouble is, the transport system in Repton II makes British Rail seem a model of efficiency. There are no signposts so the only way to discover where you are going to end up, is to step into a transporter and see.

Advance planning is vital; otherwise you might re-materialise two stages back, or in a cul de sac. And once you have used a transporter it self-destructs.

Stamina is also a factor. To complete the game you must dig out 4744 earth sections, collect 1634 diamonds, kill all 18 monsters, use all 64 transporters, pick up 42 jigsaw puzzle pieces. Do this

before April 1986 and you'll be in the running for a T-shirt bearing the legend, "I've completed Repton II".

It is still hard to avoid comparisons with Boulderdash — the rocks are too few and play only a minor part in the game. There is also an irritating flicker at the edges of the screen when it scrolls sideways. But Repton is a rattling good play.

### SCREENS

● Citadel: 100 screens — Is this a record?

100 screens, a host of animated characters, secret rooms, a teleport system...Excited? Well, maybe not. Even on the BBC, epic arcade adventures are nothing new.

But new titles of any sort on the BBC are scarce these days, so owners should certainly be grateful for Citadel. And, to be fair, 100 screens is probably a record number to pack into the machine's limited memory space.

The game's graphics and general level of invention are not in the same league as Castle Quest's. But Citadel is a tough nut to crack, nonetheless. Even getting past the first few screens proved almost too much for this reviewer.

One of the nice things about the game is that you don't lose lives but energy. Falling down a chute leaves you severely weakened rather than dead. If you get caught in the grips of something nasty, manual control is overridden and you are hurled back across the room to the point where you came in. Losing your life by running into a toxic bush or mistiming

a jump is the more normal fate in arcade adventures, so this kind of safety scheme is a welcome feature.

Also pleasing is the sheer variety of different locations. The story so far is that Marduk the Dictator has set up camp in an old deserted castle. Your job is to find the five crystals on the island,

teleport yourself to his redoubt on an alien planet, and locate the bejewelled figurine. Then it's back to Earth in time to destroy the teleport system.

Interplanetary travel in an arcade adventure can't be bad, and the scale of the game makes up for any lack of novelty.

## TAU CETI

► Spectrum • CRL • Shoot'em-up • £9.95 • Lee Paddon

GRAPHICS

PLAYABILITY  
● ● ● ● ●  
VALUE FOR MONEY  
● ● ● ● ● ● ● ● ● ● ●  
OVERALL RATING  
● ● ● ● ●

It seems that the days of the old meat-and-potatoes shoot-'em-up may be numbered. Spectrum owners are having to handle ever more sophisticated craft. In Tau Ceti your skimmer is positively bristling with missiles and lasers. You also have scanners, an on board computer, and even a computerised memo pad! A cross between a sort of 2D Elite, Legend's Complex and Impossible Mission, you start the game with a map of the major cities on Tau Ceti. Apparently it's another bad case of revolting robots.

You've got to go in there and blow away all the robots and restore order out of chaos by shutting down the reactor. To do this you have to visit each city in turn, skimming along the ground. You have to dock with the reactor substations and pick

up cooling rods. These have to then be assembled and then you enter the main reactor building.

Meanwhile you have to fight off various hostile forces using lasers, missiles, anti missiles and flares. The flares come in handy at night especially if your infra red night vision has been put out of action. You must also try to avoid shooting "innocent" buildings. You start off docked with your main supply ship, to which you must return for all but the most minor repairs and supplies. At this stage commands are entered to your computer as words.

There are 20 of these commands, which basically help you move around the planet and assemble your fuel rods. Entering "launch" will put you into flight mode which gives an out of the

cockpit view in any direction of the planet's surface. Your instruments tell you how much ordinance you've got left and give a scan of objects in your vicinity, there is also a little window for the computer to give you cheerful messages like "your laser is mangled".

Tactics seem to be the usual mix of aggression tinged with caution. It's tough to work out what's shooting at you when you've zipped into the middle of town at high speed, but on the other hand, it's against the clock. Sorting out the reactor rods is not easy either.

A well thought out game with a strong overall theme linking up the series of essentially straight forward shoot'em-up scenarios. Only one difficulty level, so to start off with, you hardly get out of the airlock.

● Lord of the Rings: Anachronisms abound.

I was Merry. The hobbit, you understand, not the state of mind. And as Meriadoc Brandybuck, the first thing that struck me about Michel Delving is that it looked rather like its name — a small suburb whose branch line station was probably closed down by Beeching in the early sixties. In short, the graphics in this game show a distinct lack of enterprise. Things have moved on since the legendary days of Melbourne Houses's first foray into Middle Earth, The Hobbit, and while the structural side of this program is excellent, I suspect something a little more eye-catching is needed to tempt the punters away from their zapping.

Another worrying thing about this game is the incursion of certain futuristic anachronisms. In the beginner's program Frodo looks at a noticeboard which has some photographs pinned to it. Now although hobbits smoke and love to compile family trees, one thing that The Lord of the Rings is thankfully free from is continued heated debates

between Merry and Pippin as to the F-stop their cameras should be on when they see a flock of Nazgul flying by. There would have been whole chapters where the irrepressible hobbits tried to cajole the preoccupied Gandalf into posing for a shot — giving a lump of sugar to Shadowfax, maybe. And you can imagine how difficult it must have been to get colour film in the land of Mordor, especially since Sauron cancelled his subscription to Amateur Photographer.

Give'em their due, it's true

to the map, in the book. Get on to the main east-west road through the Shire, leading east and you'll soon come to the Last Bridge. Melbourne House have designed it lovingly, obviously based on the programmer's favourite bridge on the M5. All that is missing is a sign telling how far it is to Heston Services.

There is a bit of a problem with Black Riders at this time of the evening, of course, but if you know the back doubles, south through the forest glade, east into the thick forest and back up north

● Think: Very well presented.

Board-games on computers have had a chequered history. Playing games like Connect-4 is just as easy with a pencil and paper as on a computer. But Ariolasoft think they have a winner on their hands with a board-game which can only easily be played on a computer.

The board consists of a six-by-six grid. You play counters alternately to either the bottom row or the right-hand column. If you play to a column, that column, all counters and spaces, move up one, and the same with rows. The object is to get four pieces in a row Connect-4 style.

The fact that a whole row or column moves when just one piece is played makes it very hard to look more than a couple of moves ahead to try and force a win.

The game is designed by Tigress Marketing, and a lot

of time and effort appears to have gone into attractive presentation.

The "front-end" of the game is nicely designed, with icons allowing you to select various game options. Seven levels of computer opponent, normal, timed or "blitz" play, sound, colour and joystick options.

Although easy to learn, it takes a great deal of time to master. Even beating the

computer at a low level is quite an achievement. At the higher levels the computer takes rather a long time, but you can prompt it to move when you get fed up. There is a tutorial mode, where the computer gives you points for the quality of your moves, there is a problem-solving mode and a move take back feature. An intriguing, original board-game well presented.

● The Last V-8: Excellent value for money.

through the ravine with unclimbable sides, you can dodge this particular bottleneck. The Shire Watch are experimenting with contra-flow, but if you keep you palantir tuned to MEBC (Middle Earth Broadcasting Corporation) or one of the local stations you should make Rivendell and be quaffing a few ales at Elrond's gaff in no time flat.

Melbourne House's special English language is supposed to make adventures less hard to play — but real adventurers will be glad to know that things have not really been made easier for the younger generation. Ask Gildor for help and you will be told that the computer doesn't know "for". Ask Gildor to help and the computer is sorry, but it doesn't know how to do that. Of course it lets you talk to Gildor but you never get to know what the conversation was about. It doesn't know the word "listen" and a really good wheeze is typing in "Hear Gildor". This generates some of the most spectacular rubbish I have ever seen a computer utter. Good fun for adventure freaks.

"V-8, return to base". The computer issues this order in suitably stentorian tones at the beginning of the game — you only have a limited amount of time to get your souped-up, post-holocaust runabout back in the garage before the radiation gets you. The screen display is an areal scrolling view of the terrain. This is a race against time as opposed to a race against another car, but like most racing games you have to remember to take the curves slowly and you have to get to know the route.

Created by David Darling, the game has incessant

synthesised music, smooth-scrolling graphics, and, in short, all the hallmarks of a much more expensive game. Value for money it definitely is, which is the purpose of the Mastertronic Advanced Design range — and still well within the range of the average pocket-money customer. Surely one of this company's best defences against piracy is price — which is not to say that their games don't get pirated.

It's tough and will require what little co-ordination you have left to get yourself into the city.

# Five Fantastic Games

Keep your eyes peeled for **NOW GAMES 2**. Five major software hits jostle for your attention on this packed-solid-with-fun cassette.

Available for  
COMMODORE 64 and SPECTRUM 48K  
and for only

£8.95

## 1. AIRWOLF – Elite Systems Ltd

Stringfellow Hawke must use his helicopter to free five imprisoned scientists in this exciting arcade game which takes place in a subterranean terrorist base!

## 2. TIR NA NOG – Gargoyle Games

This remarkable interactive graphic adventure allows you to play the mythological Celtic, Cuchulainn, searching for the fragments of the Seal of Calum.

## 3. CAULDRON – Palace Software

Take up the witches' challenge and unravel the mysteries of this beautiful land in this striking arcade adventure.

## 4. CHUCKIE EGG 2 – A & F Software

Help Hen House Harry in the smooth running of the A & F Chocolate Egg Factory! He must find equipment and find out where to use it in this amusing arcade game.

## 5. WORLD CUP – Artic Computing

This great football simulation lets you re-enact the tough fight to the World Cup Final. Play a friend or the computer (a pretty tough opponent)!

Now that's what I call value

**STILL AVAILABLE – NOW GAMES**

● Sir Fred: Takes the arcade adventure to new heights.

With Rambos mowing down everything in sight and Supermen juggling skyscrapers, this offering represents a return to Elizabethan values. The gallant Sir Fred has to rescue a princess from a castle. Glossing over the sexism endemic in computer games — when has a princess ever done any rescuing? — this is another from the ever popular arcade adventure genre.

All the rooms you can eat, with nasty things trying to drain your strength, lots of objects to pick up, and then work out what to do with.

It's a tricky game to master, one for the real aficionados to drool over. If you thought Jet Set Willy was a piece of cake, then this could be right down your dungeon.

Despite only the usual controls of up, down, left right, select and use, a lot of extra moves have been crammed in by combinations of the keys. Climbing, running, swimming, there is apparently no end to his

talents.

The graphics are up to Wally standards, despite the fact that it was written by a Spanish company, rather than the Wally programmers. Another of Sir Fred's many talents is swinging on ropes. However, this is where the game rather falls down — or at least I did.

You are meant to swing on the rope by pressing alternately left and right; I must have been defeated by keybounce or something, but all that kept happening is the

intrepid knight would end up going spurs over helm.

Just to cater to the mobs of computer games players conditioned to handing out mindless violence to all who get in their way, you get scoundrels and footpads to put to the sword. This rather goes against the grain of normal arcade adventures where the philosophy is to avoid things rather than kill them.

Odious overtones apart, this game takes the arcade adventure to new heights.

A year after the battlestar Elite was launched, it has at last made contact with the universe of the Spectrum owner. Perhaps the most talked about computer game ever, has it lost anything in translation?

The game has virtually been rewritten by Firebird's Torus team, and is a very impressive piece of programming. All the best features of the BBC game are there — very fast vector graphics, good instrument display and of course tremendous depth.

You start off as "Harmless" with a real bucket of a ship and 100Cr to your name. Your ambition is to attain the fab combat status of "Elite", and line your pockets at the same time. The game starts slowly while you get the hang of the controls and make a paltry profit shuttling between safe planets, then the pace begins to quicken as

you fill you hold with highly profitable cargo, and equip your ship to allow you to go where no man has traded before.

To attain the status of Elite you have to blow away some 8,000 ships. To break up this somewhat monotonous process, you are called upon to perform a couple of missions for the Galactic Navy.

What, of course, sets this game apart is the use of vector graphics and challenging combat sequences with, if you're unlucky, up to a dozen ships and general bits of debris floating around the place. The number of ships is a reflection of your legal and combat status, the type of planet and your cargo.

Shooting peaceful traders and trading in narcotics are good ways to get rich quick, but the police take a dim view of it. Things can soon

get sticky with half a dozen ships whittling down you energy as you twist and turn trying to escape. However, once you're equipped with a military laser — affectionately known as The Can Opener by pilots everywhere — life becomes a little easier. If it really gets nasty, it's time to hyperspace out, or perhaps try out the smart bomb.

Although it's difficult at this early stage to tell whether Firebird have succeeded in bug eradication, there does seem to be a problem with the space stations which are sometimes placed too far away from the planet, and on one occasion in the middle of the planet.

On the plus side, your status is constantly displayed on all screens and the display is very fast, even when a lot is happening on the screen.

Frankly a program no self-respecting Spectrum owner can afford to be without.

SCREENS

● Willow pattern. An adventure on a plate

Everyone knows about the game-of-the-book, game-of-the-film, game-of-the-tee-shirt syndrome. But this must be the first game to be based on a blue-and-white tea service.

All those fond of Chinese food will be pleased to know that if you manage to save Princess Koong-Shee you'll be chased out of the maze by her father, that well-known oriental dessert Li Chi. Let's try forgetting food for a minute — which is difficult given that Firebird is the first company to hand you an adventure on a plate.

Apart from the setting, there's nothing terribly original about the Willow Pattern plot. You have to guide the hero, Chang, around a maze of suitably Far Eastern complexity. His aim is to gather items on route — the most important one is the key — which will help free the Princess.

Although the game view and playing techniques resemble Sabre Wolf, there are none of those tiresome nasties which litter Ultimate games. In their place you'll find maze guardians at key points. These touchy warriors can only be passed if you have a sword to hurl at them.

Some of these Chinese bouncers stand there impassively blocking your path, others fling swords which you can dodge, pick up and use to hack down their former owners with.

An important tip is never to use words unnecessarily. If you do, you'll find it impossible to get past certain guards later on. It's not even worth collecting a sword until

you're sure what to use it for.

A nice touch is the way the tempo of the Chinese take-away music picks up when you're holding a sword.

Of course Willow Pattern wouldn't be Willow Pattern without those little wooden bridges. But if you try to cross one you find yourself in a different playing sequence

that doesn't seem to match the rest of the game. As Chang hops across the stepping stones under the bridge a pack of giants try scooping him.

The smooth graphics and tinkling music are very good given Willow Pattern's £4 price tag. The maze is just right, too.

## SPEECH

► BBC • Superior Software • Utility • £9.95 • Simon Beesley

VALUE FOR MONEY  
●●●●●  
OVERALL RATING  
●●●●●

Speech without a speech chip. It's hard to think of a more entertaining utility than this one. You can easily insert the program's 7K of code on someone else's disc, write a short Basic loader, and ask them to boot it up. Lo! a spoken message. The surprise effect alone is worth the price; like seeing colour on a ZX-81 screen.

Speech's speech may not

always be intelligible if the words are not printed on the screen at the same time. But it is unusually easy to use.

\*SAY voices any English sentence, while \*PITCH sets the pitch. If you are willing to put a bit of effort into it you can improve the program's enunciation by using \*SPEAK which directly accesses a set of 49 phonemes. One of the demo programs will even take

a text file — from Wordwise, or View, for example — and painstakingly talk it through — if you can bear to listen to it.

Although speech has been generated before on the CBM-64 and Spectrum, through the sound chip alone, this is the first time on the BBC. Elsewhere in this issue Speech's author, David Hoskins, explains how.

# INDIANA JONES, J.R. & BRUCE LEE JOINED THE U.S. GOLD CLUB... ...NOW YOU CAN TOO!

You are aware only too well, the ability of U.S. Gold to bring to you the very best of American Software at British prices. Previously American Software, whilst recognised as being of brilliant concept and quality, has been prohibitive in cost compared to home produced packages.

In April 1984 that situation became history!

During 1985 U.S. Gold will be releasing titles from the following well known software houses: DataSoft/Synapse/Sega/Microprose/Cosmi/Access/Sydney/Sierra On Line/Advantage/Mindscape/American Eagle/S.S.I./Big 5/Funsoft/Penguin/PDM - and that's only sixteen excellent reasons to join the U.S. Gold Club. Here's some more:

Membership to the U.S. Gold Club will guarantee you a regular newsletter featuring software reviews, advertising material and future product information. There will be regular U.S. Gold Software offers and U.S. Gold merchandise offers. Be 'In the Know' before your friends.

# Master Pieces

**A**pril 1984. It began quietly, insidiously. Rumours about cheap software — “pocket-money games”. The establishment scoffed. It couldn't be done — look at the overheads; paying distributors, duplicators, artwork and advertising costs — sometimes even the programmers wanted a cut. Anyway the product would be cheap and nasty and would blemish the noble escutcheon of the British games software industry — which apparently, was so altruistic it made Dr Barnado look like Richard Branson.

“Companies that said Mastertronics were bad for the industry have gone. They're not around and we are,” points out John Maxwell who selects the programs for the company stable. “Activision, Ocean, Melbourne House — those kind of companies are all far too professional, far too good to worry about the penetration of other people into the market place.”

Mastertronics is more than the sum of its parts. John Maxwell heads Artificial Intelligence Products which deals with the raw programs, Colin Johnson is Dream Promotions which handles Mastertronics' artwork and promotions — and Mastertronics itself is represented by Martin Alper, managing director responsible for the American side of the business and matters other than the UK sales, production and distribution handled by UK sales director Alan Sharham.

Martin Alper, already comfortably ensconced in the video business, effectively founded Mastertronics when he bought a tape and data duplicating facility. “I asked the guy how much it cost to duplicate a tape — he said about 30p; then I asked him how much they sold the games for — about eight or nine pounds. I couldn't understand

the massive difference, so I took a closer look.”

Savings in volume is the keynote of Mastertronics philosophy — to be profitable Colin Johnson says their games must outsell competitors at a ratio of 4 to 1. “But, for example, in Boots we are selling at a ratio of about six or seven to one, so we are outperforming considerably.”

How did little acorns Mastertronics manage to grow into a mighty oak dominating a mammoth 18.47 per cent of the entertainment software market (according to Gallup)? “We went over the heads of the distributors,” says Martin Alper. Websters, Terry Blood, Centasoft — none of these firms would have touched the burgeoning company with a barge-pole. But Martin Alper had his own sales force: “We already had about 18 or 20 salesmen; we just hired another 12. Within 14 days of launch we had the product in WH Smiths — then the distributors had to sit up and take notice.”

Shuttlesoft is the firm's marketing arm responsible for getting all those cassettes into your local corner-shop. This is the basis for Mastertronics GmbH, Mastertronics SAS, Mastertronics PVBA and

Mastertronics International Inc. All selling into Germany, Italy, Belgium and the United States.

But is it quantity rather than quality? “At the start we certainly went for bulk”, agrees John Maxwell. “We wanted to build up a team of people we could rely on. We get about 200 games sent in every month. We look at everything — if there's a spark of something we contact that person. A good machine-code programmer is not your average run-of-the-mill person. They're very serious, thirsting after knowledge all the time.”

“We estimate that there are as few as 100 really top-class machine-code programmers in the country. We also believe in religious payment of royalties — a lot of our programmers were surprised when they got paid promptly, which in turn surprised us. We didn't realise how badly some quite big companies behaved.”

David Darling, who wrote one of Mastertronics all-time hits, Chiller, learnt to program with his brother Richard while living in the USA. Mastertronics

believe in encouraging talent — hence David Darling's promotion to the new MAD range, priced at £2.99 as opposed to the standard £1.99 range. But Chiller, successful though it is, had some problems — namely its Michael Jackson Thriller sound-alike soundtrack. Rocksoft, a company set up to protect royalties of musicians, took Mastertronics to court. “A very clever girl wrote down the music of both Chiller and Thriller, and proved that they were not identical. But the barrister said it would cost us £60,000 to prove we were in the right. It was cheaper for us to settle out of court”, said John Maxwell. “Rocksoft is no longer functioning, I believe.”

But David Darling is, and his new program, The Last V-8 with synthesised speech and super-smooth scrolling graphics adds a touch of Mad Max to the MAD (yes, it stands for Mastertronics Advanced Design) range. Set in 2008, just after a nuclear war you have to

Paul Bond meets Mastertronics: a threat to the establishment or a promise?

Top left: Kane. Above: One Man and his Droid; Top Right: Big Mac. Below left: Colin Johnson, Alison Beasley and, below right: Spellbound.

return to base before disaster overwhelms you — see Software Shortlist for full review. Along with Sean “Kikstart” Southern’s Hero of the Golden Talisman, an all-action arcade adventure, and David “Finders Keepers” Jones, The Last V-8 forms part of a three pronged assault on the quality end of the market. “It also means we can pay the programmers a bit more”, John Maxwell is keen to emphasise.

How far up-market will Mastertronics go? They are very proud of their acquisition of Ski-Writer an extremely user-friendly word-processing program developed by Ken Skier for Wang in the United States. Marketed over there for about \$69 by Prentice-Hall, Mastertronics have acquired rights to Apple and CBM versions. It will be sold here for the CBM-64 at £13.95 (Cassette) and £14.95 (disc).

Part of the secret is to put all the help functions into the program itself, rather than a bulky accompanying manual — this cuts costs and provides a utility at considerably less cost than Commodore’s home-grown word processor — it might stop a lot of 64 owner trading their micro in for an Amstrad PCW. You can get the equivalent of 22,000 characters into the Editor before downloading.

But fear not — Mastertronics

will not desert their zap-pow roots. Recent releases for the CBM-64 include Kane and Zzzz, plus Specventure for the Spectrum and Big Mac for the C-16? According to a recent Gallup survey it’s Britain’s fourth biggest selling machine after the Spectrum, C-64 and Amstrad machines. “And there’s not much software for it,” says John Maxwell. Like everything the company have done from day one, this exemplifies the secret of

Mastertronics’ success.

“We were at a GOSH meeting the other day,” said Colin Johnson. A man for a software house stood up and asked the WH Smith’s representative why they had dropped his company’s entire range. The rep replied that he had just explained that Smith’s no longer carried BBC/Electron software — which was all this guy’s company did.”

In other words, identify your market. “Yes — Mastertronics always assumed there was a market for high-playability impulse-purchase games with a short life-cycle. Even if kids bought one every two weeks, they would still take two months to spend the same amount of money that they would spend on a full-price game.”

# Hewson

If you thrilled to **Paradroid**, Hewson's new stunner, **Uridium**, will really knock your socks off. Paul Bond reveals all.

**U**st when you thought it was safe to go back into outer space, hard on the heels of Hewson's **Paradroid** comes **Uridium** — another Andrew Braybrook masterpiece. With the same hard-edged three dimensional graphics that make your 64 look like an arcade machine and some brain-twisting sequences this game stands apart from the run-of-the-mill shoot'em-up.

The pictures here show the program under development — you pilot a small spacefighter attacking a gigantic armed starship. Your craft can spin, wheel and loop the loop — during all these manoeuvres its shadow is faithfully etched on the space leviathan beneath you by the harsh unscintillating light of the local star.

Naturally you must incapacitate the on-board defence systems of the ship — turrets, but also its own on-board defence squadron, scrambled from exterior launch-tracks on the outer hull — still under development at the time these pictures were taken. The attacking craft will have the same realistic movement as your own scoutship, but will attack in waves composed of up to six vehicles flying in formation, peeling off one by one as they attempt to rupture the fragile shell that separates you from the airless depths of the cosmos.

As in **Paradroid**, there will be more than one ship, **Uridium** being the name of the final craft that you must destroy. Andrew Braybrook is toying with the idea of a hyperspace transfer sequence that will echo the mind-control section in **Paradroid**. The program is scheduled for release before Easter but Hewson are cagey about making promises that they may not be able to meet. A lot of us are still waiting for Novagen's **Mercenary** at the time of going to press.

YC JAN '86

**There's life beyond games. Simon Beesley settles down to some serious software reviewing.**

A popular misconception about home computers says that they are not really suitable for running business software. If you are starting from scratch, people advise you to buy a 16-bit micro. This means buying an IBM PC or one of the legion of IBM compatibles.

In point of fact, now is a very good time for 8-bit business software. Amsoft has started to release CP/M classics such as Supercalc at a fraction of the price they were selling at two years ago — £50 as compared to £200; while Computer Concepts has launched the first two of four integrated business programs for the BBC. Called Rom-link, this package will be the first serious application of the integrated software concept to home micros.

To run business software a home computer needs to meet at least three requirements: it must have a decent keyboard, an 80-column screen mode and, of course, an adequate range of software. These conditions rule out all but the CP/M based micros — Amstrad, Memotech, Tatung Einstein, and Enterprise — and the BBC.

### Software on Rom

You can run CP/M software on the BBC by adding a second processor; but its main asset is the range of programs on Rom. Despite being limited to 16K, BBC Rom programs are often just as effective as their larger CP/M counterparts. This review looks at business software in general, and the BBC variety in particular.

Leaving aside specialist programs such as accounting packages, business software falls into three categories: wordprocessors, spreadsheets, and databases. Business software, however, is perhaps a misleading term. It suggests that you actually need to be involved in running a small business to make use of them.

In fact, wordprocessing programs have a much wider appeal. The beauty of a word-processor is that it allows anyone to produce a professional-looking document without being a competent typist. Take the problem of typing a letter designed to impress, say,

a bank manager or a prospective employer. Unless you are a trained secretary, to do it properly usually means an exercise in frustration, resulting in a bin full of crumpled writing paper.

With a wordprocessor even one-finger typists can produce Tipex-free letters remarkably quickly. Just as important, they can also lay them out correctly.

On the BBC, Computer Concepts' Wordwise and Acornsoft's View illustrate two different ways of entering text. View displays a document exactly as it will appear when printed out. If you want to enter text over more than 80 columns the screen can be scrolled sideways.

By contrast, Wordwise only allows text to be entered in 40

Computer Concepts' Interchart solves the integration problem.

72% Free				Auto	Step - Left

Computer Concepts' spreadsheet on Rom, Intersheet.

column mode. To format a document you insert sequences of command characters. There is a preview mode which allows you to see how the text will look after formatting. However, laying out tables over a number of columns can be a fiddly business.

What gives Wordwise a decisive edge over View is the inclusion of a programming language, similar to Basic, with 70 commands. When you consider that CBM-64 Basic has no more than 70 commands, you will realise what a powerful feature this is. Among other things, it allows you to instruct the computer to print out a document as many times as you want; or run a mail merge; or

produce a page index.

Both View and Wordwise can hold their own against larger CP/M programs such as Wordstar. And because they have been written specifically for the BBC they are much faster. To shift text on the screen CP/M programs have to work through a layer of operating system routines. This makes them noticeably slower in scrolling or reformatting a document.

Speed is also a feature of Computer Concepts' new spreadsheet program for the BBC, Inter-Sheet. Not only is it much faster than Supercalc II on the Amstrad, it also outstrips most spreadsheets for 16-bit micros. Supercalc II, on the other hand, has a greater range

of commands and options.

For an idea of what a spreadsheet does, take a look at the Spectrum version in this issue. Put simply, it provides a grid on which you can manipulate figures as easily as a word-processor handles words. Each cell or box in the grid can hold either a figure, or a formula calculating a result from any other figures in the grid, or a label.

For example, you could lay out a balance sheet with Costs down rows 1 to 8 in column A, and Sales down rows 1 to 5 in column F. Working out the total profit or loss is just a matter of entering in a cell below, the formula, SUM(F1:F5) — SUM(A1:A8). If you now want to change a figure or insert a new item, you can do so almost immediately, and get a result almost immediately.

### Complex or simple?

Obviously spreadsheets lend themselves to far more complex applications than this example. Yet the principle remains the same, even with elaborate financial models which relate hundreds of cells via complex formulae: calculating a result, after you have re-adjusted figures or changed a formula, takes no more than a few seconds.

Again, you do not need to be involved in business, to find a spreadsheet program useful. Both Supercalc II and Inter-Sheet are equally suitable for sophisticated financial planning or tightening up your household

# Get Serious

Spreadsheet data presented in a bar chart.

budget.

It is less easy to make the same claims for database software. A database is simply a computerised filing system. Files are usually organised as a collection of records, which in turn break down into fields. Thus, a single record might hold a name, address and telephone number in separate fields.

For many purposes a database program is more trouble than it is worth. Why store your friends' telephone numbers on a computer when you can look them up more quickly in an address book?

In the *Your Computer* office we still use old technology in the form of filing cabinets. The business of typing into a computer files containing product and company information, contributors' addresses, and so on, would be too time consuming.

Where databases come into their own is in their ability to sort and select data. Recently we had to prepare a list of all the games titles currently available for home micros, for *Your Computer's* Top 100. Together

with each game we wanted to give the machines it ran on, and the company name. And we wanted the list sorted into alphabetical order. At a rough estimate we thought the task would require a file of over 100K; far larger, in fact, than the memory capacity of most home computers.

Acornsoft's ViewStore, which comes on a 16K Rom, was the database we chose. It is one of the few programs that gives you an almost unlimited file size — Starbase from GCC Ltd is another, for the BBC. This it does by treating the disc as "virtual memory", in other words as an extension to Ram. The maximum size of a file is nearly 2 megabytes.

As a consequence the program needs to be continually accessing the disc, and slows down considerably when you add a record to a large file. But by comparison with other home micro databases ViewStore is exceptionally powerful. Among other things, it provides extensive facilities for indexing data, reformatting it, and selecting data to create new files or

Interchart's line graph option.

to generate reports. Especially useful is its utility for printing labels from a mailing list.

The major drawback to ViewStore is that it is not easy to use. It took us 15 minutes to discover how to print out our list; and another 15 minutes to prepare the file for printing. Part of the blame can be ascribed to the manual, but, to be fair, the more sophisticated the program, the harder it is to master. A reviewer recently complained that it was months before he could find his way round Psion's integrated software package, Xchange.

## For 16-bits only

Psion's program only runs on 16-bit micros, costs over £500, and calls for at least 256K Ram. Lotus' Symphony — a development of the first best-selling integrated program, Lotus 123 — needs 512K, and costs over £600. Naturally, these packages are far more extensive than anything you are likely to find on a home computer.

The idea behind integrated software is that different programs can use the same data. To some extent you can do this anyway with programs like Wordwise and View, by spooling files so that characters are stored as Ascii codes. In this way it is possible to edit Basic programs or exchange files between Wordwise and View. But it does not allow quite different types of software to share the same data. Typically, an integrated package includes

a wordprocessor, spreadsheet, and database, each of which can work on the same files.

Integration is also taken to mean having the various programs resident in the computer at the same time. Lack of memory is the main bar to including this last feature on a home computer. But this is just what Computer Concepts has done with its Rom-Link series.

You can create a spreadsheet on Inter-Sheet, then switch in Inter-Chart — by typing \*ICHART — and see your figures displayed on a bar chart with the labels beneath them. Inter-Chart is a chart and graph plotting program, so you can equally well display the spreadsheet file as a pie chart or a line graph.

## Impressive solution

Computer Concepts' ingenious and impressive solution to the integration problem takes advantage of the BBC's sideways Rom facility, whereby the machine can accommodate up to 16 Roms at the same time. The other Rom-Link programs will be Inter-Base, a database program with a built-in programming language, and Inter-Word, an 80 and 105 column wordprocessor.

When Computer Concepts releases these two products early next year, you will be able to plug in — to a Rom extension board — a bank of Roms, all instantly available, and all perfectly integrated.

More business graphics from Interchart.

# KNIGHT-CLUBBING

Ian Adamson, Richard Kennedy and Freda Trovato do some Sinclair research.

**H**ow and why did Sir Clive Sinclair come to acquire his current high-profile reputation as "inventor", "innovator", "visionary" and general balding boffin around town? What we have found has changed our view of Clive in many ways. We've uncovered a consistent history as a sort of technological barrow-boy, a provider of technical toys he thinks the public should want. Sometimes they do — ZX-81 and Spectrum — and sometimes they don't — C5 and Microvision.

The book we have just finished, *Uncle Clive — Soul of the Sinclair Machine* — investigates the corporate career of Sir Clive Sinclair. This ranges further afield than the home computing area in which millions have come to know of "Uncle" Clive.

From the start, back in 1962, Clive has combined minimum component cost and mail-order merchandising. Full-scale advertising campaigns bring the money flooding in from the punters to pay your bills before you've sent anything out.

This practice of "forward financing" has stuck as a bit of a habit with our Clive, as many readers will know. Then as now

some ads attracted complaints because of unjustified claims, and products were rushed into production quickly, with resulting design and quality-control problems. Demand exceeding supply became a familiar phrase used to justify delays. Sound familiar?

Mostly the hobbyists didn't complain too much, just as the computer consumers and computer press nowadays are far too willing to forgive and forget commercial and marketing tactics from Sinclair that demonstrate an unfortunate lack of professionalism and an indifference verging on contempt for the consumers who provide the profits.

## Get rich quick

Clive's computers, with the possible exception of the ZX-81 — which did provide genuine cheap computer power if you could stop your Ram pack dumping the program and if it didn't give up through overheating — have hardly served the cause of computing, if this is understood as pressing processing power into service to perform functional tasks.

They have served to enrich Clive, and make him into a household name. They have also given us the computer games industry, for all the good that will do mankind, by providing the cheapest available means of playing poor imitations of arcade games on a flickering and colour-crawling TV screen, but not much else.

*Sir Clive poses with two of his most far-out brainchildren; in deep prayer before the C-5 Juggernaut, and left, the QL monolith. Innovations or high-tech toys*

The avuncular Uncle Clive, posing as some sort of Ronald MacDonald of information technology, with his cheap keyboards, minimal components, impotent speakers and quirky Basics has in fact served the cause of consumer electronics alone, which is the art of providing technological gimmickry at a low enough cost so you can grab the innovative toy and gadgeteer market.

The success of the Spectrum is a creation of, and is still sustained by, the software rather than the minimal, but high profit-margin, hardware.

Sinclair Research was set up as Clive's lifeboat from the sinking ship of his first company, Sinclair Radionics, when the NEB took over control. It produced the MK14, a microprocessor trainer kit using the National Semiconductor SC/MP or Scamp chip. It was, relatively speaking, a great success, and confirmed the computer market potential.

Although the official history has it that Clive left Radionics and then started to work on the ZX-80, this obscures the truth of the matter. Since work had started in April on the Basic for the ZX-80, which implies a certain amount of hardware design, it was a lot more than a gleam in Clive's eye when he departed the doomed Radionics in August.

## Demon seed

The ZX-80 wasn't much of a computer. Five years after its launch in February 1980, Sinclair cheerfully admits that the machine's specifications had more to do with marketing considerations than application.

At the end of the seventies, personal computers weighed in at around £300. Clive's aim with the ZX-80 was simply to bring out a machine for less than £100; whatever the effects of such a constraint on the ultimate usefulness of the product.

It's often argued that technical innovation (specifically Clive's) has always been at the heart of Sinclair's ability to successfully undercut the competition. Although this is certainly true of the ZX-81 with Ferranti's revolutionary ULA a determining factor in the

machine's low price, there was nothing remotely innovative about the ZX-80.

For the purposes of this history, the machine is only important because it inadvertently established the hard- and software foundations for the entire ZX range. The ZX-81 was a ZX-80 upgrade, the Spectrum was a ZX-81 with colour and the QL was . . . well, we'll worry about the QL later.

In short, everything you've learned to dread about a Sinclair computing product has its roots in the ZX-80's design. For example, keyboard layout.

On the face of it, single keystroke Basic is a great idea

for beginners. However, as an entire generation of ZX programmers will testify, the advantages of the system are insufficient compensation for the horror of the keyboard.

Single keystroke Basic was the result of a marketing decision. Clive decided that few of his customers were likely to be typists, and that the ability to enter entire keywords with a single keystroke would be a valuable sales feature. The inspiration for such a system came from an old Wang machine at Radionics which used an obscure single-keystroke dialect.

As if the ZX-80's mind-numbing, multi-function keys weren't enough, the machine also boasted the first manifestation of the hideous membrane keyboard. Touch-insensitive and consistently fallible, the design is only remarkable in that it is entirely without supporters. Apart from Clive, of course.

In the final analysis, the ZX-80 was conceived, first and foremost, as an economy of components. As Clive has subsequently explained, his target audience was the old-style electronics hobbyist who on this occasion would hopefully be joined by a new breed of consumer electronics enthusiast.

Sinclair was gambling on the support of the professional for whom a computer (however useless) would prove an irresistible image accessory. And the gamble paid off with a vengeance.

As far as the gritty world of "real" computing was concerned, the ZX-80 was little more than a portentous gizmo. With its integer only mathpack, the infamous screen flicker, joke

keyboard and pitiful 1K of Ram, reviewers felt they could safely dismiss Sinclair's new product. In the year that followed, 25,000 unit sales revealed the error of their ways. Clive's time had come.

To his credit, Sinclair was under no illusions about the ZX-80. In a charitable frame of mind, the machine could perhaps be considered a tolerable learning aid for would-be programmers; it was certainly nothing more. In early 1980, John Grant and Steven Vickers at Nine Tiles set about the task of turning the ZX-80 into a proper computer, the first priority being the improvement of the mathpack.

In the opinion of Tony Tebby, author of QDOS, the QL's (almost) flawless operating system, the ZX-81 is far and away the best product to emerge from the Sinclair stable. With its expanded floating-point math package, improved dis-

*Keep taking the tablets. A rare picture of Sir Clive shortly after descending from the mountain. Mail-order customers certainly needed to have the patience of a saint, if they wanted a Spectrum.*

(continued on next page)

(continued from previous page)

play and partially improved storage capacity, the ZX-81 was in every way a "real" computer for less than the price of its predecessor.

A critical but hidden element in the rise and fall of Sinclair's ZX range is the software that Nine Tiles created for the ZX-80. Whatever the shortcomings of the machine, it is generally recognised that John Grant's software for the ZX-80 is a masterpiece of efficient and economic coding. Since this early work would become the foundation for the entire ZX range, its quality and objectives were crucial to future developments.

Although obvious given a moment's thought, most people are unaware of the literally linear evolution of the software for the ZX range.

According to his technical staff, Clive seems to have very little interest or expertise in any aspect of software development. This goes some way towards explaining why he failed to realise that, although inspired, the ZX-80 software was simply an elegant solution to a very specific problem.

Like the NewBrain, the ZX-80's Basic was loosely based

on the ANSI Minimal dialect. Grant saw his brief to be the creation of as full an implementation as possible given the constraints of the hardware.

In short, the design and structure of the ZX-80's software were specifically tailored to a machine with very little memory. It was never considered that the resultant code would serve as the software foundations for an entire range of machines with wildly different memory capacities.

### Sinclair graft

Despite opposition from the programmers, when commissioning software for the ZX-81 and Spectrum, Clive insisted that existing code remain untouched, and any expansions effectively grafted on to the old software. This decision had little effect on the efficiency of the ZX-81, but would have serious consequences for the poor old Spectrum.

While investigating ways of refining the ZX-80's hardware for the new machine, Clive hit upon an innovation in chip design that was to make him a fortune. Ferranti had announced a new kind of chip known as an Uncommitted Logic Array or ULA.

The wonder of ULAs is that

they enable limited customisation of an "off-the-peg" chip to suit a specific application, while avoiding the expense or delays of commissioning a full-blown custom chip. One of the problems with the ZX-80's hardware was its relatively high component count.

After speaking with Ferranti, Clive knew he could slam the contents of 17 ZX-80 chips onto a single ULA, thus reducing the new machine's chip count from 21 to four. The manufacturing economies were astounding. Ferranti's innovation enabled Sinclair to market an improved machine at a lower price, and in the process establish a market lead to intimidate the most determined competition.

The phenomenal success of the ZX-81 has been extensively chronicled over the years and hardly merits yet another re-run. Suffice to say that by the end of 1982 more than 500,000 units had been consumed by the technology-hungry masses of the world. The ZX-81 whisked Clive out of the world of the mail-order merchant and into the relative respectability of mainstream retailing.

By January 1981, Sinclair had signed an exclusive retail agreement with WH Smith. Both parties made significant

fortunes out of the arrangement, which continued to flourish until a disagreement following the lukewarm response to the Spectrum.

The Spectrum earned its place in history as the world's first low-cost colour micro. More than any other product it is responsible for Sinclair's international reputation, but in the cold light of 1986 the old warhorse looks less than impressive.

The membrane keyboard is still there, it's raised rubber keypads — "like the touch of a deadman's hand" — only an inspiration to ZX-81 owners with limited ambition. These days the most impressive effect of the machine's additional features is that they make the keyboard even more awkward.

### Code overload

Bestowed upon an expectant world in April 1982, the Spectrum's launch marked the end of an era for the ZX range. It was the last machine that used Nine Tiles for its software development. According to John Grant, coding structures originally designed for the ZX-80 finally collapsed beneath the demands of the Spectrum's massively expanded memory.

Code which had been clever and efficient handling data for a 1K system proved totally inadequate when applied to the processing requirements of a 16K or 48K Spectrum. In particular the neat but quirky system for storing variables, which used the 80's limited memory to its own advantage, was proving a liability on the Spectrum.

Nine Tiles recommended that the existing code be radically restructured for the Spectrum and Clive declined the suggestion. Grant insists that a £15,000 rewrite would have massively improved the Spectrum's capabilities and in the process extended its market life.

But it was not to be, and the result was an erratic, sluggish performance from the last of the ZX range. Ironically, the R&D of the most successful ZX product was plagued by technical disputes and financial disagreements.

### Sinclair Research and the future

As far as the future goes Sinclair Research is still dependent upon the home/personal computer market. Plans for a Cellnet telephone and future computers will require income from the current products in the meantime. Sinclair Research has just revamped its image and corporate structure drastically, to make the company more attractive to the financial partners they need for the wafer-scale project. They need computer sales to keep the action going in the meantime, however. The gospel according to Clive on new computers was given to us in an interview.

The Spectrum 128, already out in Spain, will be released "in spring" next year, but since the QL has virtually abandoned all pretence of being a business machine, Sinclair will have a somewhat cluttered market for their own products, sub-£200. The Pandora portable, under development now, bears a remarkable resemblance in Clive's descriptions to the original ZX-83/QL concept — flat screen, portable, add-on modem, a "totally professional keyboard" (another membrane design, we presume), and since Clive said: "I can't tell you that", when we asked him if it used Microdrives, it presumably may well have 3in. discs. Whether the concept matches the machine will be a measure of whether Sinclair has got its act together. Oh, it will use the Z-80 chip. What price progress?

The only other potential computer is the Proteus, a 68000-based portable. Clive says "it's a hypothetical machine".

Most of the graft on the Spectrum's software was performed by Steven Vickers at Nine Tiles, while Richard Altwasser at Research handled the hardware and acted as a buffer between the two companies. When Altwasser and Vickers left their respective employers to design and market the Jupiter Ace, an already fraught development fell into disarray.

Although, on the face of it, only the I/O software remained to be completed, a difficult task was made impossible by an absence of working peripheral prototypes coupled with daily changes of brief.

In the end, the pressure of the launch deadline prompted Sinclair's decision to send out the first wave of Spectrums with unfinished Roms. The original QL or ZX-83 spec called for a Z-80 based portable machine, with the flat screen, Microdrives, built-in modem and bundled software. From this initial vision, progress was mainly downhill.

### Chip changes

While problems with earlier machines can be laid at the door of Clive, those of the QL end up being assigned to Nigel Searle and his team, since Clive had little to do with it.

Having got his funding for the C5 electric bidet project when 10 per cent of Sinclair was sold — remember when the company was worth £130 million temporarily — Clive promptly moved out of Willis Road and Searle took over his office. However the initial vision was Clive's, and certain other decisions, like the chip.

The chip was changed to the 68008 in late '82, more for reasons of marketing than any benefits it offered. Apart from its capability to perform 32-bit arithmetic directly, and a larger memory addressing capability, this poor relation of the 68000 family has little going for it in computing terms. The restriction of the eight-bit address bus slows the whole thing down, and a Z-80 could run faster.

The cost differential now between the 16-bit 68000 and the 68008 is down to a few dollars. When Sinclair chose a

new hip chip, more to create the capacity to claim innovation and a "32-bit chip" in the ads than to improve their machine, the price differential was a lot more, 68000s being five times the price of 68008s.

Never one to spend a penny more on components than he has to (the QL hasn't got an On/Off switch either), Clive took the 68008, despite being told by Motorola at the time that they could now plastic package the 68000 — it was originally ceramic-packaged and hence pricey — and the price would drop.

Effectively, this decision has lumbered the QL with an illusorily advanced chip which renders it uncompetitive with Macintosh's 520STs and the like. Even if Digital Research can port the GEM system across to the QL, who's going to want it if it runs at half its original, itself boringly sedate, speed?

### Monitor dropped

With the flat screen aborted, they went the monitor route. The idea of having a Sinclair monitor to go with the machine was dropped because they thought you couldn't sell a machine complete with a monitor — a fact Amstrad haven't noticed yet? Hedging their bets for the home market, a bodged TV outlet was added.

Portability also vanished, since the Dram chips would eat up too much power, even if the Microdrives would work quite happily on fairly small power requirements. With a flat screen they might have still tried it, but certainly not with a conventional TV tube.

Loss of portability also meant there were no good arguments for using the slow Microdrives, since they are not significantly cheaper to produce than 3.5in. disc systems are to buy. However the mindset at Sinclair says they have to be used, since they

Above: inside the Spectrum.  
Below: Clive and the QL.

are part of the "innovation".

It's the same thinking that gave us the QL keyboard, inappropriate for a "business" machine, despite the fact that a proper keyboard would cost less than a pound or more. Indeed, Sinclair had samples of such keyboards produced, but chose to do it his way.

The modem chip never got designed past the notional stage, let alone offered for BT approval, because of the other hardware problems in what was described to us as the "disorganised shambles" of QL design.

Meanwhile another machine, the SuperSpectrum, was started. With similar hardware to that of the QL, it was to be a 128K, 60008-based machine with Interface I and II built in — when they got them working — and aimed at the Spectrum market.

It was also to have a new Basic, which Jan Jones was recruited to write. When the QL development program went wrong, and the QL spec came

resemble the SuperSpectrum as features were cut out, they dropped it.

The other machine that came along in '83 was the "low-cost colour computer" or LC-3, developed in response to the threat of a product from the East that would undermine the Spectrum's market. Produced in a very short time, it existed as a TTL prototype, complete with an OS and demo software.

It used a Z-80 and memory management, and was designed for Rom software, with data on battery-backed Cmos Ram packs. Apart from the initial cost advantages — it was to cost less than £50 — it had two advantages over the QL in the autumn of '83.

First, it could run full overlapping windows, and secondly, there was a full prototype. It was never developed further, presumably because profit margins didn't look as good as those of the QL. So much for cheap computing power!

Although QLs now work, it took up to D12 (the twelfth revision of the board) and a year to do so. There are still hangovers from a flawed design process, however.

Sinclair launched the QL without a working prototype. Despite a note of realism struck in the first draft of the press release, promising machines by "end-April", it went out as "end-February" because the ads said 28 days delivery, so the press release couldn't say any different". Decent, legal and honest?

The bugs in SuperBasic and the kludge deserve a mention. Up to a month before the launch, the QL was to have no Basic — it was supposed to be a business machine, remember — but then it was decided to use SuperBasic. Trouble was, SB was 22K in unfinished form, and another 4K of code was added to SuperBasic a month after the launch.

The OS, originally contracted to GST, had been produced for 2\*16K Rom sockets. Tony Tebby's QDOS had been produced as a back-up, and would fit along with SuperBasic into a total of 48K. Hence the infamous kludge, pending 32K Roms.

TAKE A CLOSER LOOK AT:

GRUMPY GUMPHREY

YOU'LL BE APPALLED AT HOW INCOMPETENT HE IS.  
AND HOW BADLY HE NEEDS YOUR HELP

GRUMPY GUMPHREY

SPECTRUM  
48K

SUPERSLEUTH

£7.95

Available soon Amstrad

Ageing, losing his sight and panic stricken with overwork can Grumpy Gumphrey, the geriatric store detective, hold down his position in this department store fantasia. A kind assistant is needed to help round-up the thieves, cage the gorilla and tidy the warehouse. Would you fit the bill?

AVAILABLE FROM ALL GOOD SOFTWARE STOCKISTS

Gremlin Graphics Software Ltd., Alpha House, 10 Carver Street, Sheffield S1 4FS. Tel: (0742) 753423

# S. Cartwright with a fast- moving arcade-type game for the Amstrad

nd Zone is a machine code arcade-type game for Amstrad computers. At the start of each round your arrow head craft appears in the middle of the grid. Pressing one of the direction keys starts the craft moving in the chosen direction until you hit the perimeter of the grid, you change direction or get zapped!

## Steer craft over spores.

Points are scored for steering your craft over the pattern of

UDG's. Oops! Sorry; dormant nasty space spores! While avoiding the deadly plasma bolts of the patrolling guardians. When all the spores are collected you will enter a new grid with a different pattern. There are 10 different grids to attempt. Playing keys are shown at the beginning of each game.

To enter the program type in the Basic loader. Then save it in case of mistakes. Run the program and if the Ready appears type New. Don't worry, the code is still in memory.

Enter as line 1:

1 MEMORY 34999:LOAD

"EZCODE": CALL 35000

Then as a direct command:

SAVE "ENDZONE": SAVE

"EZCODE",8,35000,4875.

## Program with auto run

This will save the program to auto run. To load the game type RUN "ENDZONE" or RUN"" (CTRL and small Enter keys).

If you cannot be bothered to type in the program I will supply the game on cassette for £2.00. Send to S. Cartwright, 21 Maelog Place, Gabalfa, Cardiff.

**Colossus and White Knight**  
author Martin Bryant rates  
the mates.

ideo games may come and go, but chess programs just grow bigger and better every year! In this article I will take a look at the latest and best available on a variety of machines.

The programs chosen were Colossus Chess 4.0 (CBM-64), Cyrus II Chess (CPC-464), Psion Chess (QL), Superchess 3.5 (Spectrum) and White-Knight MK12 (BBC). All of these packages have existed for several years and have been written by enthusiastic computer-chess programmers. This is a very important guide to the programs' quality because today's chess programs, have reached such a level that no new program written by a casual programmer catch up on the years of development that have gone into the commercial offerings.

The programs' abilities are compared in table 1. Of course, an overall verdict of the "best" program is impossible, because people have different requirements from their programs. Also the hardware which the programs run on varies greatly so direct program comparison is impossible.

Where relative comparisons of features are possible, the best program has been given 10 out

White Knight MK12 finds Rf2-a2 in 29 seconds. See how long your own program takes...

**Examples.**

.. BQ .....	BK8
.. .. XR .....	7
.. .. ..	6
.. .. ..	9
.. BQ .....	4
.. WB .....	2
.. WK .....	1
a b c d e f h h	

(Forsyth notation:  
1q5k/4R3/8/8/1p6/1B6/5R2/1K6)

of 10 and the others a relative score. Other features are simple yes/no facts.

Gone are the days of chess programs which couldn't even beat a casual player on a bad day and programs took minutes to solve a simple mate-in-two.

Today's programs can give even the best club players a run for their money on tournament of blitz levels, and mates-in-two should now take at most a few seconds. Several programs are

**Colossus Chess 4.0 versus Cyrus II Chess.**

now able to spot some mates-in-five or even six on blitz levels in the middlegame. Psion Chess is the strongest home-computer chess program at the moment. It does run on much better hardware than the opposition — faster, better processor/more memory — of course than the opposition, but would still be a strong program with lesser hardware.

A version of Psion Chess, running on a Sage computer — about three times faster than a QL — came equal first with three other programs in the 1984 World Microcomputer Chess Championships. From the comparison table you'll also see that its rival are no pushovers!

Most modern programs will now think on the opponent's time by anticipating your move and continuing its search. If you play the more it was expecting it can save itself a lot of time and thus search further ahead and play much better. Problem-solving has come a long way too. Colossus Chess now offers the ability to solve not only normal mates but self-mates and help-mates up to seven moves ahead. This is the only commercial program to offer these features.

White-Knight Mk12 is actually used by international chess grandmaster John Nunn to aid in problem solving and design. If a grandmaster finds it helpful, think how much it can help club players, or anybody interested in chess problem-solving. Also, the better programs offer the ability to check problems for "cooks", i.e. alternative solutions to the one the problem-author intended.

Nowadays, the programs usually offer more than the standard levels. The move is towards modes-of-play and levels being totally user-selectable by

entering an average move time you wish to play at, thus providing thousands of levels. The new modes of play add to the normal averaged-move-time levels and they include easy-play where the program deliberately plays more weakly so that even

useless players stand a chance; all-the-moves where — as in most casual games in chess clubs — the whole game must be completed within a certain pre-agreed time or the slowest player loses on time; equal-time where the program kindly monitors your rate of play and adjusts its own accordingly — if you play

fast, it plays fast, if you slow down, so does it; infinite-search where the programs just looks further and further ahead until told to stop — useful for postal games where you can just leave the program to ponder a position overnight or even all week. Colossus provides six modes-of-play, more than any of the other programs.

The latest gimmick is of course 3D graphics. The quality will of course depend on the hardware available. I've seen one display where it was totally impossible to make out the pieces in a complex middlegame, making the display useless. On the other hand, the QL, which uses 32K screen memory — as opposed to 8K in the CBM-64 — can provide an excellent display which is a pleasure to use. Actually most of the recent attempts at 3D are much clearer and more usable.

Loading times are generally much better now. Colossus Chess 4.0 uses a turbo-loader, Psion Chess comes on Microdrive, Superchess can be transferred to Microdrive if you want, White-Knight loads quickly because the BBC's normal loading is quick, and the program is very compact. However, Cyrus II Chess takes forever to load on the CPC-464. ●

Table 1.

3.5" 250 K disc drive  
Double density disc interface  
Parallel printer interface  
Joystick interface  
Video monitor interface  
Peripheral through connector  
Built-in power supply  
Utilities on ROM including format and verify  
RAM disc facility  
Random access files fully supported  
Connections for second drive upgrade  
Comprehensive user manual  
Total: £199.95 inc. VAT

# Discovery – helps your Spectrum make all the best connections for only £199.95

In one simple step you can now transform your Spectrum into a complete computer system. Discovery from Opus Supplies is a sophisticated computer nerve centre combining not just a powerful disc drive and double density disc interface but the most comprehensive range of interfaces capable of running printers, monitors, joysticks and other peripherals.

No other system can offer your Spectrum so many options – allowing you to play the very latest games or providing facilities for serious business use. Discovery's specification includes over £300 worth of Spectrum peripherals and yet, at just £199.95, this remarkable all-in-one system costs less than a disc drive and interface combination.

Just connect Discovery to the rear of your Spectrum and you've started the transformation. Now you have immediate access to the very latest Japanese 3½" disc drive controlled via a powerful and ingenious double density disc interface. The unit's built-in power supply feeds both Discovery and your computer allowing you to dispense with your Sinclair power supply.

The Opus system takes no user memory from your computer giving you full compatibility with all tape-based software including programs designed for use with microdrive and Discovery even has its own RAM disc allowing you super fast access times.

Now the choice is yours. Connect up a joystick or a printer to the built-in Discovery interfaces, link up to a video monitor or incorporate your own choice of peripheral using the through connector.

Whether you choose Discovery for games or business use you can rely on a complete range of readily available disc software produced by many of Britain's leading software companies, and our price of £199.95 includes an unbeatable two-year free warranty and free delivery.

Discovery is available nationwide from Boots and from all good computer stores across the country. Ring us now on 0737-65080 for details of your nearest dealer, or to order your Discovery.

Trade and export enquiries welcome.

\*Price quoted refers to Discovery unit only.

# Tandy Printers.. More of what it takes.

So what's Tandy® got the others haven't? Quite simply we've got more. A range of computers that's second to none and a complete range of printers to fulfil most hard copy requirements. And for those who need IBM compatibility in daisy wheel or dot-matrix format we offer you more for your money. Check out what Tandy can do for your business and like thousands of other businesses who've already chosen Tandy you'll find out for yourself that Tandy has got what it takes.

**£395** Ex.  
VAT

**DWP 220.** Accurate, concise printing for word processing programmes. Prints clearly defined characters at a speed of over 200 words per minute.

**£595** Ex.  
VAT

**DMP 430.** Gives a high quality print return, accommodating a whole host of specifications including correspondence fonts, up to 180 cps., Micro, Italic, double high and elongated fonts and graphics.

**£299** Ex.  
VAT

**DMP 130.** This amazing Triple-Mode 9" printer will perform a variety of tasks for the price of only one machine! The choice is yours, whether you require Word Processing, Data Processing or Dot-Addressable graphics.

**£199** Ex.  
VAT

**TRP 100.** Has the advantage of printing both texts and graphics on regular and thermal paper. A versatile machine that responds with sheer perfection.

**£995** Ex.  
VAT

**DMP 2100P.** High quality printer at a price that's hard to beat. Accommodates Data Processing, Graphics and correspondence quality fonts.

**TANDY®**

Available from selected Tandy Stores, Dealers and AT ComputerWorld.

You're an Olympic athlete competing in eight key events at the SUMMER GAMES. How well can you score in track, swimming, diving, shooting, gymnastics and more? So realistic, there's even an opening ceremony and awards presentation after each event.

Unlike other "Olympic-like" games, SUMMER GAMES has incredible realism, superb state-of-the-art graphics and sound effects, including national anthems from eighteen countries and true action-

Compete with up to seven other contestants in your favourite individual event, or go for it all in the grand competition. Some events, like cycling, rowing and fencing even challenge you with realistic head to head competition!

You have a choice of eighteen countries to represent and you will need the correct strategy and mental toughness, not just speed and agility to excel in each of the eight events. That's why we included a feature that lets you practice each event until

BREAKDANCE is more than a game, it's four games in one. In the first you "go down" to "battle" row after row of breakers as they attempt to invade your turf. A second game lets you "break" with the famous "Hot Feet" in a contest to see who really has the most "juice" in town. A third challenges you to figure out the right sequence of steps to perform a backspin or suicide without getting "whacked." Or you might want to start with the free-form section where you choreograph your moves

# EPYX MAKES EVER

## SUMMER GAMES

strategy game play. In each event you must plan and execute your game strategy in order to maximise your score. It's not just a matter of how fast you can move the joystick.

So change into your running shoes, grab your joystick and GO FOR THE GOLD!

- Opening Ceremony and Awards Ceremony.
- 8 Different Sports Events.
- Action and strategy elements in each event.
- Compete against an opponent on the computer.
- Individual and Team play.
- Joystick Controlled.
- One or more players.

Available for:

Commodore 64 Cassette	£9.95
Commodore 64 Disk	£14.95
Atari Disk	£14.95

## SUMMER GAMES II

you're ready for the real competition. Remember, it's not too early to get ready for 1988. With the right diet and training you might just make it; but in the meantime grab your joystick and try eight new ways to go for Gold!

- Includes Cycling, Fencing, Kayaking, Triple Jump, Rowing, High Jump, Javelin & Equestrian Events.
- Opening, Closing & Awards Ceremonies with National Anthems.
- Individual & Head to Head Competition.
- One to Eight Players.

Available for:

Commodore 64 Cassette	£9.95
Commodore 64 Disk	£14.95

## BREAKDANCE

and watch the computer act them out in slow motion or at normal speed.

It's up to you, play it alone or against a friend either way...Breakin' is now made easy with BREAKDANCE!

- Over 100 different steps in all.
- Complete with breaking music.
- Includes: Moon Walk, Turtle Up Rocking.
- Head Spin, Suicide, Back Spin and more.

Available for:

Commodore 64 Cassette	£9.95
Commodore 64 Disk	£14.95

Introducing true competitive auto racing, both on the track and in the pits.

A split screen display allows two players to race against each other, fighting for the lead on the track and struggling to be first out of the pits.

You'll need a race strategy good enough to beat an opponent. But remember, his strategy might be as good as yours. Then it comes down to a test of nerves, a test of guts.

Grit your teeth and hope that your tyres and fuel hold

Your mission is to foil a horrible plot. From an underground laboratory, Elvin, the scientist, is holding the world hostage under the threat of nuclear annihilation. You must penetrate his stronghold, avoid his human-seeking robots and find the pieces of the security code.

Somersault over the robots or use a precious snooze code to deactivate them long enough to search each room. Use the Agency's computer to unscramble the passwords from the code pieces, or

You've captured the gold in Summer Games™ and Summer Games II™ — now it's on to the Winter Games!

And what an incredible setting — a completely realistic winter wonderland featuring six action-packed events. You can compete against your friends or the computer.

First choose the country you want to represent. Then it's practice, training and learning a winning strategy for each event. Now the Opening Ceremony and the competition begins. Will you be the one who takes

# ANYTHING POSSIBLE.

## PITSTOP II

out for another lap, because if you 'pit' now it may cost you the race!

- Head to Head Motor Racing.
- 6 Different Circuits.
- On Screen Map.
- Full Pit Facilities.

Available for:

Commodore 64 Cassette	£9.95
Commodore 64 Disk	£14.95

## IMPOSSIBLE MISSION

try to solve them yourself. You've got to reach Elvin's control centre, but you'd better beware.... This mission is stamped IMPOSSIBLE!

- Over 30 Rooms.
- Over 80 Different Robots.

Available for:

Commodore 64 Cassette	£9.95
Commodore 64 Disk	£14.95
Spectrum 48K Cassette	£7.95
Amstrad Cassette	£9.95
Amstrad Disk	£14.95

## WINTER GAMES

the gold at the Awards Ceremony?

The quest for the gold continues... And it's all here — the strategy, the challenge, the competition, the art and pageantry of Winter Games!

- Six Winter Events: Bobsled, Ski Jump, Figure Skating, Free-Style Skating, Hot Dog Aerials and the Biathlon
- Opening, Closing and Awards Ceremonies complete with National Anthems
- Compete Against the Computer or Your Friends and Family

Available for:

Commodore 64 Cassette	£9.95
Commodore 64 Disk	£14.95
Spectrum 48K Cassette	£7.95

Coming soon:

Amstrad Cassette	£9.95

The Robotix kits from Milton Bradley are a new addition to toy shop shelves. Each kit contains plastic beams, wheels, bearings and trimming pieces that allow you to build any number of different moon buggies, asteroid scanners, dune detectors, and star crabs; as well as more mundane cranes, lorries and "walking" machines.

The heart of the system is a small, but very tough electric motor. The smallest kit has one motor and the largest has four. Each motor can be controlled separately by a manually operated switch and will turn clockwise or anticlockwise.

The second key element in the design of the system is the hexagonal plug and socket method by which different components are joined together. Everything,

### John Dawson looks at Milton Bradley's Robot kits.

from axles and swivel joints, to beam and gears, uses the same six-sided connections. Both Fischer Technik and Lego have produced construction kits that can be used for serious computer-controlled projects and the different methods have advantages and disadvantages.

Fischer Technik components lock precisely and solidly together but the gear will rely on

Above: Milton Bradley Robotix motor.

Below: Controlling the arm using a BBC micro.

friction between the axle and the wheel to transmit force. Lego plugs together less decisively than Fischer Technik but its gear trains use axles with splines to hold the gears rigidly in place. Neither system is inadequate provided that you stay with the forces with which it was designed to cope.

In the same way the Robotix system relies on a tight push fit between the male and female components of the connectors if useful loads are to be supported and driven.

The Robotix motors are about 5.5 by 3 by 3 cms in size. An output shaft emerges from one side and there are connectors on four other sides of the oblong casing. The motor can be mounted so that the output shaft rotates in any one of three axes. The unit is powered by three volts DC and incorporates a 1300:1 reduction gear train.

When it's running free with no load the shaft rotates at about six revolutions per minute (rpm) so the motor itself is rotating at about 7800 rpm. Milton Bradley say that there is an integral clutch inside the casing which prevents damage if the motor is connected to the two arms to make a "hand" for holding objects.

#### Motors are impressive

Using fresh batteries I measured the free running current taken by the motors as approximately 60 mA. On load the current rose to about 180 — 200 mA and when the motor was stalled, that is with the output shaft stationary, the current rose to around 400mA.

There seemed to be about two or three degrees of play at the output shaft which is not surprising given that there is a substantial reduction gear train between the output and the motor. The maximum torque is said to be 3.5 kg/cm. In other words the motor will lift 3.5 kg on a lever one centimetre long fixed to the output shaft. If the lever is made longer, the weight that can be raised is reduced. At five centimetres — about 2in. — the motor will raise a weight of 700 milligrams, roughly 1.25 pounds.

The motors, made in Hong Kong, are very impressive pieces of cheap mass production engineering.

The instructions in the Robotix kits are based on photographs of completed models with a list of the parts required printed at the side. The photographs are very nice but not particularly easy to follow if you want to slavishly build one of the Milton Bradley designs. Leaving that aside, the kits offer enormous scope for constructing working models that are both fun and instructive.

I had intended originally to use the Fischer Technik robotics kit to illustrate how you can build an interface between a microcomputer and a device that you wish to control. However, the Fischer Technik kits are expensive and difficult to obtain from local toy or model shops. The Robotix kits are marketed widely and you get more motive power for your money.

What the Milton Bradley kits lacks are the sensors like

```

microswitches and photocells that are easily available for Fischer Technik, and also some of the precision that can be achieved using Fischer Technik components. The first problem can be overcome and the second may or may not matter to you.

Figure 1 is the original program that I typed into my BBC microcomputer to control the lines from the user port. The program was copied from *Interfacing and Control on the BBC Micro* which is a National Extension College publication — ISBN 0 86062 400 4. Figure 2 shows how the program developed to show on-screen the status of the interface, and to obtain an input from the keyboard which will switch the interface to move active state — moving up — to a second active state — moving down — or to an inactive state — both outputs off: all off.

## Principle is quite simple

The principle of the program is quite simple although the chip involved in sending the data to the interface is almost as complex as the 6502 central processor unit itself; it is certainly less well understood by most people.

The uses of 6522 Versatile Interface Adapter (VIA) are described in the Advanced User Guide to the BBC Micro, *6502 Software Design* by Leo J Scanlon — ISBN 0 672 21656 — and several other books about the 6502 microprocessor. For these purposes the 6522 VIA can be treated as a simple input/output chip which takes data from a memory location and outputs this information on

the eight data lines.

The output lines coming from the user port continue to hold their on or off status until new information is written into the memory location.

The superb machine operating system in the BBC micro makes everything easy in both machine code and Basic. Price Output — lines 250 to 300 in figure 2 — sets up an Osbyte call which will write to one of the memory locations associated with the user VIA. The "memory location" is actually one of the registers in the 6522 chip which is treated as though it were part of the computer's ordinary Ram. Initialisation is carried out by sending Data &FF to Register 2 in lines 210 and 220. This sets up all the eight data lines as outputs rather than inputs.

Proc Off transmits 0 to register 0 which sets all the output lines to off, that is about zero volts. When a line is set to On the voltage rises to more than 2.4 volts in theory and a little less than the 5 volt supply in practice — 4.8 volts typically.

A line is turned on by setting one bit of the data byte to a one

*Far left: Unpacking the pieces. Left: The interface. Below: The "hand" made out of two opposed "fingers" driven by a motor.*

instead of a zero. Remember that each byte has eight bits:

```

0 0 0 0 0 0 0 0
7 128 64 32 16 8 4 2 1

```

one byte shown as binary bits  
value of each bit in decimal  
So the byte shown above has a decimal value of four. I have used the two lowest bits to control two lines from the user port and these are turned on by writing either &01 or &02 to the VIA register. Programming books will show you how to twiddle individual bits using the various Boolean operators - And Or Not XOR. If you want to control each data line independently you will need these techniques because the only alternative is to turn off all the lines at the same time by sending &00 to the VIA.

## More than one process

The advantage of controlling each line separately is that it permits you to have more than one process operating at the same time. For example, you may wish a robot arm to turn clockwise while the wrist joint

is also extending to position the object it is holding correctly before it is placed at its destination. If the wrist turning movement is completed before the rotation you must turn off the wrist motor or actuator while the other continues to run.

It doesn't matter that the software that you use to start controlling a robot is very simple. There is a sense of wonder when you press a key on the BBC micro and see this translated into a movement of something that you have built. The excitement of making the first steps will lead you quite certainly into developing more complex and capable software.

The electronics of controlling a robot or some other machine can be as sophisticated or as simple as you like. The interface that I built is very primitive indeed but it works and could be developed further.

Most of the components for the interface came from the local Tandy shop. I don't like going to Tandy's particularly because their electronic bits and pieces are more expensive than they should be, but otherwise you may have to order what you want by mail. You will need a lead to plug into the BBC micro user port — 20 way ribbon cable and one, preferably two, 20 way insulation displacement plugs — IDC plugs. I used a small piece of Veroboard to mount the interface components and bought a 20 way socket to connect to the remote end of the lead from the BBC computer.

The VIA in the computer will not drive the motors in the Robotix kit directly. The reasons why not, and some commercial alternatives to doing it yourself, are well explained in Richard Pawson's excellent book *The Robot Book* published by Windward — W H Smith and Son Ltd — ISBN 0 7112 0413 6. I decided to use

Figure 3.

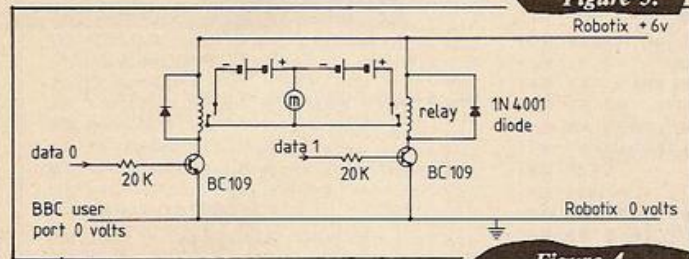

Figure 4.

(continued from page 69)

ordinary relays to switch the motor power supply because they provide good isolation between the electrically noisy motor circuits and because they make reversing — rotating the motor in two directions: forward and reverse — far easier than doing the same thing using transistors.

The circuit diagram of the original Robotix switches is shown in figure 3. You can see that one side of the motor is connected to the middle of the four 1.5 volt batteries. Pressing on the rocker switch connects the other side of the motor to either end of the stack of batteries — 3 volts positive or 3 volts negative — which makes the motor rotate clockwise — forward — or anticlockwise — reverse. When the switch is left untouched it is not connected to either the positive or the negative supply.

The interface is designed simply to replace the two actions of the switch and figure 4 shows the circuit diagram. The test version that I built and that is shown in the photographs can control only one motor. You can control four motors using eight relays by duplicating the circuit and connecting each input to a transistor to one of the data lines from the user port.

Alternatively, you can use some of the data lines to switch other devices like electro-

magnets for lifting things, light bulbs, solenoids to open or close gates, and motors that have to turn in one direction only. Darlington transistors — the TIP 120 and TIP 125 are typical — can be connected to the data lines and, because the transistor has a very high gain of more than 2000, can control directly a Direct Current (DC) load of up to four or five amps at 50-60 volts. So, if you have one or two motors in the Robotix kit these can be supplemented by other devices that you make yourself.

The 20K Ohm resistor — 20,000 Ohms — between the user port line and the base of the transistor prevents an excessive current being drawn from the VIA in the computer. The relay requires about 70 mA at 5 volts to operate reliably and the BC109 NPN transistor uses the voltage change on the data line to switch hard on and hard off, turning the relay on and off as

it does so.

Any general purpose NPN transistor will do for this application provided that its maximum collector current is sufficient and that it has a DC gain of more than 60. The 1N4001 diode is connected across the coil of the relay to prevent a spike of reverse voltage which might destroy the transistor when the current through the relay is turned off.

I can never remember which way round diodes should go and for this application the band round the diode, which marks the positive end or anode, should be soldered to the side of the coil connected to the positive supply.

The batteries in the Robotix kit are used to supply power to the transistor/relay circuit. With the exception of the Tandy relays, the cost of the interface can be counted in pennies. You don't need the IC socket shown in one of the photographs, it was part of my experimenting with an opto-isolator on the way to the interface given in figure 4.

I guess that it will take you a little while to get over the thrill of seeing a buggy or a robot arm moving under the control of pressing keys on the BBC micro. But what would happen if the Robotix machine disappeared out of sight? You are responsible for every move that the machine makes and it's your eyesight that is closing the loop that runs from the BBC micro keyboard to the VIA, to the interface, to the motors, to your eyes and back to the keyboard through your fingers.

If the computer could detect when a robot arm had reached the right place, it could then take the appropriate action

without your invitation.

Motors, loudspeakers and electromagnets are called "effectors" because they allow a robot to effect an action or movement. Position detectors such as microswitches, potentiometers, ultrasonic rangefinders and photocells, and other measuring devices like temperature probes are known as 'sensors' because they sense or detect information which can be used by the robot's computer to make decisions.

For example, a simple micro-switch mounted at the front of a remotely controlled turtle or buggy can be made to switch on when the buggy collides with an object. The Advant command in BBC Basic can be used to detect the On/Off status of two input lines — intended originally for the fire buttons on joysticks — as well as to read the values of the four analogue to digital converters.

Related to the Milton Bradley Robotix kits, the Advant instruction could be used quite easily to read the position of four potentiometers monitoring each of the four motors in the Master set while one of the switched inputs could be connected to a microswitch mounted so that it is turned on when an object is held securely between the fingers of the motorised "hand".

No special electronics are required to couple the potentiometer to the A-D inputs.

Beyond this you can start to make up sensors and designs to suit your own purposes. For example, you may wish to weigh a number of packages as they pass along a conveyor belt.

The weight of the package, in terms of either too light or OK, can be detected by using rubber bands to bias a microswitch so that it closes only when the tension in the cord supporting the electromagnet is more than a certain amount. If the package is too light the arm can be used to lift it off the conveyor belt.

Wychwood, the plotter control program described in the October and November, 1985 issues of *Your Computer*, could be adapted without difficulty to work through a series of instructions to make a robot carry out a set process.

## CONCLUSIONS

- The Robotix motor and "hand" lifted a solid glass ball about 1.5 inches in diameter. The ball weighed approximately 4 ounces. That was the heaviest object I tried to hold in the soft rubber palms of the plastic fingers. Six revs per minute doesn't sound very fast but the end of an extended robot arm will complete 90 degrees of rotation in 2.5 secs — quite fast enough if you are trying to position the hand over something you want to pick up.

- The design of the Robotix component is clever and it would be good to see a firm producing sensory add-ons for the kits. Flight Electronics have been marketing robotic equipment to connect to the Microprofessor range of computers.
- You won't make a fortune, I don't think, with a robot built out of Milton Bradley parts and run by your BBC microcomputer but you can't fail to enjoy watching a mechanism you have designed and built being controlled by software you have written.

**T**he program will end on BBC, owners

So far OE LTD's Telemod 2 and the VTX 5000 modems have been tested with the BBC and Spectrum but the service also works with a number of other makes. For the CBM-64 it will initially only be available with the OEL Comms pack together with the Telemod 2 or similar modem; later we hope to

To enter the download program first type in the hex-loader for your machine — figure 1 — and then enter the machine code — figure 2. Once the program has been saved you can run it by entering CALL

When a program you want to

## A reminder of how to use the Telsoft service.

download is on line, make sure your modem is set up and dial the number appropriate to its speed. As soon as you hear the modem tones switch the modem to line and replace the receiver. Select Option 1 from the menu — Receive. After a block of data is received you will see "OK" printed if there are no errors, otherwise the program

will wait for the blocks to come round again. When the "Program loaded OK" message appears return to the Telsoft menu and select Option 5. You can now save and run.

### Option 6 for CBM-64

Note that CBM-64 owners will need to use Option 6 if machine code is to be saved.

# Cruncher

Terence Simmons presents  
a spreadsheet program for  
the Spectrum with  
many important  
features including  
individual cells and  
windows

Number cruncher is a spreadsheet program for the 48K Spectrum with the following features.

- Labels and formulae may be entered into a matrix of up to 26 rows by 24 columns and referenced to one another, thus enabling scientific, financial, mathematical and other tables or complex models to be generated.
- Individual "Cells" are selected for data input by moving a cursor about the screen. Numbers and formulae may be changed at will on the spreadsheet, which can then be

rapidly recalculated; this enables all kinds of "What if" situations to be evaluated.

- The program utilises Paul Rhodes' "Character Print" routine — YC, October 1984 — to give about 50 characters per line and enable a 6 column by 20 row "window" on the matrix, in which the labels, and values relating to formulae entered, are shown.

- All Spectrum maths and logical functions are supported. The contents of cells may be edited similarly to Basic program lines.
- Formulae may be replicated relatively or absolutely. Columns and rows may be inserted or deleted and calculation references in the cells moved are automatically adjusted to maintain the spreadsheet integrity.

- The spreadsheet may be recalculated repeatedly to enable iterative solutions.
- Titles may be set.
- A hard copy of the entire

spreadsheet is obtained on a ZX-compatible printer, by printing the columns out sideways.

The program may be entered by first typing out the Basic Listing 1; save this on tape and New the computer. Then enter listing 2 and run it. The program pokes in the hex code, which consists of the sideways character set, print routine and proportional characters, at the addressed prompted.

Save the code with the command.

SAVE "chars" CODE 62900,2380

When the complete program is it will auto-run from line 7900 and present a Menu of available commands which are discussed below. Pressing any key then presents a blank spreadsheet with two axes; the vertical one shows a series of alphabetical characters referring to the

Rows, while the numbers on the horizontal axis designate the first six columns.

The green cursor in the top left-hand corner relates to cell A (1). The cursor may be moved about the screen to refer to different cells using Caps Shift 5,6,7 and 8.

If you try to go off the screen you will be prompted:- Jump: No. of Columns — or Rows, depending whether you were moving horizontally or vertically. Enter the number of lines along or down the spreadsheet you wish the window to be shifted, the axis range will the change to reflect your response.

To Input into the spreadsheet, press! to enter a value or formula, and "to enter a descriptive Label. The string entered, or its value, will appear in the spreadsheet at the cursor position; the contents of the

## Listing 1.

current cell will be reflected in the blue band at the bottom of the window. For example, suppose cell A (1) contains the value 12 and we want to calculate 25 per cent of this and put the result in A(2). Move the cursor across one column and enter A(1)\*.25

The value 4 will appear in the spreadsheet at the cursor position, while the formula is printed in the Cell Contents line.

A formula in a particular cell can be up to 29 characters long; longer expression may be handled by splitting them up. The value or label will be displayed in the spreadsheet up to eight or nine characters long, scientific notation being used to display greater values.

The contents of the Current Cell may be edited by pressing Caps Shift 1. The relevant string

will then appear at the bottom of the screen and may be altered using the left-right cursor and Delete keys. Note that Extended Mode functions such as Sin may not be edited in this way, the string may have to re-entered.

Commands are accessed by pressing the (/) symbol (S Shift V) — instead of the (!) or (") keys — followed by the character specific to the function required.

**ε — RECALCULATE** — Recalculates the Spreadsheet row by row. This is used when a value or formula is altered.  
**\$ — DECIMAL FORMAT** — Specifies the number of decimal places displayed. Defaults to two.

**a — REPEATED RECALCULATION** — This allows problems requiring iterative calculations to be solved. The number of the

current calculation sequence is printed at the bottom of the screen. The iterative process is halted by pressing the Space bar when the problem has converged to the required degree of accuracy (keep the bar pressed until the current calculation sequence is complete). As an example of the use of this command. The spreadsheet above (fig. 1) has to be iterated by adjusting the value of I(2) until the two values in N(2) and O(2) were identical within acceptable limits. This was achieved by adding the differ-

ence between N(2) and O(2) to I(2) with each loop, i.e. the formula in I(2) was set at I(2) + -O(2)/7. The iteration procedure was halted manually when the difference printed in P(2)) was less than 1.

**b — BLANK CELL** — Clears the current Cell.

**c — CONCEAL CELL** — Clears the cell on the Spreadsheet but retains the formula/

# ATARI ST 520ST

## POWER WITHOUT THE PRICE

### ATARI 520ST SPECIFICATION

**MEMORY**  
512K RAM (524,288 bytes)  
18K ROM expandable to 320K  
Port for add'l 128K plug-in ROM cartridges  
200K TOS operating system

**GRAPHICS**  
Individually addressable 32K bit-mapped screen with 3 screen graphics modes:  
320x200 pixels in 16 colours (low resolution)  
640x200 pixels in 4 colours (med resolution)  
640x400 pixels in monochrome (high res)  
16 shades of gray in low res mode  
512 colours available in low/medium res  
16 levels of each in red, green and blue

**ARCHITECTURE**  
4 custom designed chips:  
68010 Chip - MMU Memory Mgmt Unit  
DMA Controller - Graphics Processing Unit  
16/32 bit Motorola 68000 processor at 8MHz  
8/16/32 bit data registers  
8/16/32 bit address registers  
16 bit data bus/24 bit address bus  
7 levels of interrupt/56 instructions  
14 addressing modes/5 data types

**DATA STORAGE**  
High speed hard disk interface  
Direct memory access 1.33 Mbytes per second  
CD (Compact Disc) interface  
Built in cartridge access  
Dedicated floppy disk controller

**DISK DRIVE**  
500K (Unformatted) 5 1/4 inch floppy disk drive  
340K (Formatted) storage capacity

**SOUND AND MUSIC**  
Sound Generator  
Frequency control from 30Hz to above audible  
3 voices (channels) in wave shaping sound in  
addition to a noise generator  
Separate frequency and volume controls  
Dynamic envelope controls  
ADSR (Attack, Decay, Sustain, Release)  
Noise generator  
MIDI interface for external music synthesizers

**KEYBOARD**  
Separate keyboard microprocessor  
Standard QWERTY typewriter styling  
Ergonomic angle and height  
96 keys including 10 function keys  
Numeric keypad - 16 keys including ENTER  
One touch cursor control keypad

**MONITOR**  
12" screen - high res monochrome monitor  
640x400 monochrome resolution  
Note: Some of the above specifications are pre-release and may therefore be subject to change

**VIDEO PORTS**  
Display - Low Resolution - 40 columns  
Med/High Res - 40/80 plus cols  
Medium res RGB (Red/Green/Blue) output  
High resolution monochrome (Black & White)

**COMMUNICATIONS**  
Bidirectional centronics parallel interface for  
printers, or modems capable of input/output  
RS232C serial modem/printer interface  
VT32 Terminal Emulation Software  
Maximum Baud Rate up to 19,200  
High speed hard-disk interface  
Floppy disk controller (Western Digital)  
2 joystick ports (one for 2 button mouse)  
MIDI interface for external music synthesizers

**GEM WIMP ENVIRONMENT**  
WIMP - Window Icon Mouse Pop-down menus  
Two button mouse controller  
Icons/Pull down menus/Windows  
GEM VDI - Virtual Device Interface  
GEM AES - Application Environment Services  
GEM BBT - Bit Block Transfer  
Real time clock & calendar

**SOFTWARE**  
GEM environment  
With user friendly Macintosh style operation  
TOS - Tramiel Operating System  
Atari's own system based on CP/M 88K with  
hierarchical directory & file structure plus a  
host of MS-DOS & UNIX command structures  
BOS - Business Operating System  
To run any standard BOS business programs  
GEM desktop  
With GEM PAINT graphics mgmt system  
and GEM WRITE word processor  
Personal BASIC and DR Logo  
originally written by Digital Research (DR)  
Very much like those on other machines  
except for the extensive use of pull down  
menus, mouse control and windows

**VARIOUS**  
Dimensions: 470mmx240mmx100mm  
Replaces external power supplies  
Expansion: 3 1/2" floppy disk drives 500K/1,000K  
(two drives can be connected)  
3 1/2" 180K hard disk  
CD compact laser disc  
Dot matrix & d'wheel prints (black)  
Thermal dot matrix (colour)  
RGB & monochrome monitors

**LANGUAGES**  
BASIC & LOGO supplied  
Many others will soon be available, including:  
Assembly, C, C++, Pascal, Fortran, Basic  
Lisp, Modula-2 and Prolog

### MACINTOSH v F16 v 520ST

"Imagine a Pet Mac - the 512K Apple Macintosh - but with a bigger screen, a far bigger keyboard with numeric keypad, cursor and function keys, and colour. That gives you some idea of what the Atari 520ST is like, except for two important things. First the Atari seems faster. Second the Atari system is about one third the price." June 1985 - Jack Schofield - PRACTICAL COMPUTING

FEATURES OF BASIC SYSTEM	MACINTOSH	F16	520ST
Price includes B/W Monitor	YES	NO - extra £200	YES
Keyboard size mm (LxHxW)	330x147x50	450x167x28	470x240x50

+ Mouse	Included
+ Monochrome Monitor	Included
+ Expansion to 512K RAM	Included
Price of complete system (exc VAT)	£2,995-VAT

PRICE rounded down including VAT	£2,984	£1,362	£749
----------------------------------	--------	--------	------

### THE NEW ATARI 520ST

Under the new leadership of Jack Tramiel (former boss and founder of Commodore Business Machines), Atari Corporation have marked their entry into the world of business/personal computers with a machine which leaves the competition standing. Tramiel's slogan 'Power Without the Price' has been implemented in the manufacture of the new 512K Atari 520ST colour computer which offers the user amazingly high performance at an incredibly low price. Launched as a work-station, this new system incorporates seven software packages as well as the 520ST computer with 512K RAM, mouse controller, high resolution monochrome monitor (640x400), 95 key keyboard (with 16 key numeric keypad), MIDI interface, GEM and a 500K 3 1/2 inch disk drive, all for the package price of only £651.30 (+VAT = £749). Dubbed the 'Mac beater' and the 'Jackintosh' (after Atari's Chief, Jack Tramiel), Atari's new machine has been directly compared with the Apple Macintosh RRP £2595 (+VAT = £2985) which offers similar features and capabilities but at a much higher price. Favourably reviewed by the UK's highly critical specialist computer press, the 520ST is likely to make a great impact in this country as a sophisticated alternative to an IBM PC, APRICOT or APPLE MACINTOSH. Unlike its overpriced competitors, the Atari 520ST can be linked up to a colour monitor to unleash a choice of up to 512 colours. The addition of colour brings out the full potential of graphics packages such as GEM.

### USER FRIENDLY GEM OPERATING SYSTEM

The power of the ST is harnessed and made user friendly by the new operating system 'GEM' from Digital Research. GEM stands for Graphics Environment Manager and allows a user friendly colour or B/W graphics interface which closely resembles that of the Macintosh. This similarly extends to the use of moveable resizable windows, icons to represent objects such as disks and disk drives, and the use of pull down menus and a mouse. The advantage of all this is that the computer becomes extremely easy to use. GEM has now been implemented for the Acorn, ACT, Atari, IBM, ICL, Olivetti. Software written for GEM on one computer should also run under GEM on another computer. This will enable the market to quickly produce a large library of standard interchangeable software.

### FREE SOFTWARE AND FUTURE EXPANSION

The Atari 520ST comes supplied with seven free software packages as listed below: 1) TOS - Tramiel Operating System based on CP/M 88K. 2) GEM Graphics Environment Manager by Digital Research (DR) giving a WIMP (Window, Icon, Mouse, Pull down menu) environment. 3) DR GEM Paint for creating graphics masterpieces. 4) DR GEM Write for word processing. 5) Logo learning language to enable you to write your own programs easily using turtle graphics. 6) DR Personal Basic a powerful user friendly version of the Basic programming language. 7) BOS operating system giving you access to dozens of business applications packages already available on the market. Designed with future expansion in mind, the ST also features a host of different interfaces to the outside world and an impressive list of accessories is planned. Atari will soon be releasing a 1000K (1MB) 3 1/2 inch disk drive, and a 15MB hard disk storage system as well as a mass storage compact disk (CD) player capable of storing an entire 20 volume encyclopedia on one disk. A full range of inexpensive printers are planned including dot matrix, daisywheel and thermal colour printers. With its unbeatable graphics, speed and software at a price which is far below that of any comparable personal computer currently on the market, the ST is all set to do battle with the competition. To receive further details of the ST from Silica Shop, just fill in the coupon below with your name and address details and post it to us.

**Silica Shop Price: £651.30 + £97.70 VAT = £749.00 This price includes:**  
 ★ 512K RAM ★ B/W MONITOR  
 ★ MOUSE ★ 500K 3.5" DISK DRIVE  
 ★ GEM ★ KEYBOARD (95 KEYS)

"Atari's new corporate image as an aggressive low cost computer maker is likely to mirror that of Commodore where Mr. Tramiel established the maxim that 'business is war'." August 21st 1984 FINANCIAL TIMES

"This is the only personal computer I know of that comes with a MIDI interface as standard." Peter Bright March 1985 PERSONAL COMPUTER WORLD

"The (GEM) version running on the Atari 68000 machines will have the additional advantage of leaving the PC version standing." April 6th 1985 PERSONAL COMPUTER NEWS

"It would seem that GEM offers the ideal operating system." March 7th 1985 POPULAR COMPUTING WEEKLY

"I found it (GEM) extremely easy to use and was very impressed with the way in which it dispenses the unfriendly hardware and operating systems lurking under the surface." Peter Bright Feb 1985 PERSONAL COMPUTER WORLD

### PRESS COMMENT

"The electronics in the machine are a work of art... The heart of the 520ST is a Motorola 68000, one of the most powerful 16-bit processors around and in many respects it is close to being a 32-bit chip... when the machine appears in the shops, it'll be at the front end of the queue to buy one." Peter Bright June 1985 PERSONAL COMPUTER WORLD

"This machine is significantly more powerful than an IBM PC... if it is possible to design a sure-fire winning machine, this is it." May 11th 1985 PERSONAL COMPUTER NEWS

"... the use of GEM makes the new range of Atari computers so similar to the Macintosh (with the added attraction of colour), that they are already being called 'Jackintoshes'." May 2nd 1985 COMPUTING

"The new Atari ST computers truly represent to the consumer what Jack Tramiel is saying - easy-to-use computing power without the price." March 1985 ANALOG COMPUTING

"It (the ST) uses the most modern technology that is affordable, in a package that gives a professional impression." May 29th 1985 POPULAR COMPUTING WEEKLY

"The Atari ST is one of the most elegant designs I have seen... Atari has used an original and elegant method of memory management which should make the ST faster than any other PC on the market - in any price bracket... The 64K dollar question is would I go out and spend money for one? To which the only answer is 'Try and stop me!'" John Lambert July 1985 ELECTRONICS & COMPUTING

"The 520ST is technically excellent... The 520ST hardware is the new standard by which others will be judged." July 1985 YOUR COMPUTER

## SILICA SHOP

ATARI WE ARE THE UK'S No1 ATARI SPECIALISTS ATARI

At Silica we have been successfully dedicated to Atari ever since their products first appeared on the UK market. We can attribute our success largely to the Atari specialisation which we practice and to the user back-up we provide. Rest assured that when you buy a piece of Atari hardware at Silica you will be fully supported. Our mailings giving news of software releases and developments will keep you up to date with the Atari market and our technical support team and sales staff are at the end of the telephone line to deal with your problems and supply your every need. With our specialist bias, we aim to keep stocks of all the available Atari hardware, software, peripherals and accessories. We also stock a wide range of Atari dedicated books and through us, the owners on our list can subscribe to several American Atari dedicated magazines. We can provide a full service to all Atari owners and are now firmly established as the UK's NUMBER ONE Atari specialists. Here are just some of the things we can offer to our customers:

- ★ FREE POST & PACKING ON MAIL ORDERS
- ★ FREE NEXT DAY SECURICOR DELIVERY
- ★ INFORMATION MAILING SERVICE
- ★ TECHNICAL SUPPORT TEAM
- ★ HIGHLY COMPETITIVE PRICES
- ★ AFTER SALES SUPPORT SERVICE
- ★ REPAIR SERVICE ON ATARI PRODUCTS

If you would like to be registered on our mailing list as an Atari computer owner, or as a person interested in buying an Atari machine, let us know. We will be pleased to keep you up to date with all the latest Atari developments free of charge. So, return the coupon today and begin experiencing a specialist Atari service that is second to none.

 If so, which one do you own?

# Snowbot

George is the park-keeper at the local park and as it was getting near Christmas he decided to put the park's Christmas tree up. He spent all day decorating it and the last thing he did was to hang lights on it.

During the night however a strange electrical storm caused havoc in the town, but worse than that it caused all the snowmen that the children had built in the park to turn into evil robots — Snowbots.

The Snowbots needed energy to keep them going and the first thing they found was George's Christmas tree so they stole all the lights from it. When George found out about this he realised he had to try and get the lights back and destroy the Snowbots.

After thinking for a while he remembered that he had some flares left over from the fireworks display. He soon discovered that not only did the Snowbots not like the flares, the heat actually melted them and gave George an opportunity to get the lights back.

He also found out he had to be doubly careful because Snowbots can make huge icicles come crashing down from the trees. Armed with a supply of

flares he set off into the park to confront the Snowbots...

Needless to say, George isn't that bright and he needs a bit of help — a joystick plugged into port 2 will let you control George's movement, the fire button will make him throw a flare — use the spacebar to pause.

Each Snowbot you manage to dispatch earns you 10 points, each icicle is worth 20 points and there is a bonus of 50 points for each light bulb you recover. The light bulbs are hidden inside some of the Snowbots and they will automatically be displayed with any others you have. There are eight light bulbs in a set and each screen ends when you have a complete set. The bottom line of the screen shows the set of lights and any bulbs you have will light up. The small flag on the bottom line indicates the level of play you are currently at. The

top of the screen shows the usual — score, lives left and the highest of the recorded high scores. The game will record five entries of names and high scores and they are displayed during the title sequence.

Typing the program brings the usual problem of Commodore control characters. I have tried to make things easier by including Remark statements after most of the difficult lines. Unfortunately some of the lines are too long to be treated this way but none of these lines contain anything very complicated so they should not prove too much of a problem.

There is a considerable amount of data to be dealt with — definitions of sprites and the machine-code routines used to move the sprites, smooth scroll the screen etc. For the two large sections of data I have included a checksum which should show if there are any data errors. Part

**Keith Suddick and his evil robots — with a Christmas game for the CBM-64.**

1 of the data is lines 15000-15999 and part 2 is lines 16000-16999 in case it finds an error. It takes quite a while to read the data in but this is only done once when the program is first run. If the data is correct then even stopping the program and re-running it will not re-read the data.

One very important point, the program uses a rather unconventional method of getting the game started and for this to work line 0 must be typed exactly as shown, no extra space or anything even though it may look wrong. If you are typing the program in don't forget to save a copy before you run it. I do not recommend attempting to save a copy after running it — whether it works or not. The program interferes with the normal interrupt routines and interrupt sources, so unpredictable things may happen during saving. If you would rather not type the listing then I can supply tape copies for £2.00. Please write to Keith Suddick 6 Ravel Court, Jarrow, Tyne & Wear, NE32 3BW.

# The Commodore 128. When you look at the facts they do seem to weigh rather heavily in our favour.

When you add it up, the Commodore 128 is really three computers in one.  
It can run 64K, 128K and CP/M software. Giving it the largest range of computer software in the world. Making it as efficient in business as it is entertaining at home.  
That's why Commodore has become the world leader in microcomputers.  
And why, on balance, the Commodore 128 has no equal.

commodore

# BBC English

*Speech without a speech chip. David Hoskins explains how to do it.*

The BBC has very easy to use and versatile sound facilities. The envelope command enables you to change the pitch and volume of any sound played. But there is one draw-back, you cannot change the actual waveform of the sound. So you always get that spikey, tinny kind of sound that's always recognisable as a BBC.

## Digitise speech

About six months ago I was very impressed by some speech on a Commodore 64 game, and wondered if it was possible to do it on the BBC. The first problem — and quite a big one — was to find a way of encoding a waveform so I can literally play from the BBC speaker! I will briefly explain how this can be achieved.

First, set the sound chip to its highest possible frequency, which is inaudible to the human ear. The more channels used the louder the waveform will be. The waveform which varies in amplitude from 0 to 15 is then sent nibble by nibble to the

volume control of each channel. The fastest speed the BBC can do this is about 10000 times a second, the faster you go the clearer the sound will become. What was needed now was the waveform data to feed the program. To do this I used the Interbeeb module from DCP Microdevelopments which sampled — recorded — data at a rate of 10000 times per second, this was perfect for the job. After many weeks of frustration and fiddling I eventually had a result...

"It worked!" I exclaimed and ran downstairs to tell everyone. The scope for experiment was awesome. I spent a long time recording and playing sounds, at different speeds, backwards, with an echo, while mixing with other sounds, making drum beats, and even playing tunes with samples like some £280000+ synthesisers!

I had digitised about five seconds of music at a high sample rate, and it was now playing through the BBC's speaker under complete software control!

To digitise speech I use a sampling rate of about 5.5KHz and a filter to cut out any unwanted sounds above that frequency. I speak the words into a microphone which are then converted from analogue form to digital by the Interbeeb, and sent to the BBC which in turn stacks the data in memory. The data can then be saved and played back any time without using any hardware.

## A phoneme solution

Since then I have been developing a program called Speech! which is being marketed by Superior Software. This system allows the user to type in English or phoneme phrases (explained later), which are then spoken by the program, e.g. \*SAY Hello I am a speech synthesiser. The above command can be typed directly to the computer or put into a program. Speech! will translate this command and speak it through the BBC's speaker.

This program, like a few hardware systems on the market, has an unlimited voca-

bulary. So how did I manage to digitise every word in the English language in 32K?

The answer is in phonemes: the sounds that we string together in order to make speech. Take the words "mat" and "cat" for example, they both use exactly the same "a" sound. So in the sentence "The cat sat on the mat" all the "a" sounds can be just one block of speech data. The same thing applies to the "t"s, "th"s, "e"s, and so on until you have covered as many phonemes needed for understandable speech. In Speech! I have used 49 different phonemes, which are merged to form whatever word or sentence you like.

Unfortunately to convert English phrases into phoneme data is a little more complicated. The trouble with the English language is that it is occasionally very illogical. For instance, the word "laughter" almost completely changes pronunciation when an "s" is prefixed to make "slaughter". Why is the word "rough" different from "bough" and

"tower" different from "mower" merely because of the prefixing consonant? The reason why we know the differences and exceptions in the English language is because we have had years of training. The computer hasn't, and all it has to rely on is logic. Basically there can be at least 400 rules for text/speech conversion with a few thousand exceptions! Obviously to fit Speech! into 7.5K I have cut down on the exceptions, but any mispronounced words can be easily altered with a little thought.

### Glottal pulse

To digitise each phoneme sound that uses the vocal chords for speech, i.e. "OO" not "S" I prolonged the sound (like when the doctor says "Say aaahh") into the microphone and sampled a small section of it. On analysis it can be seen that there is a close repetition in the waveform, every time the vocal chords produce what is known as a glottal pulse. By changing the pitch of my voice with the highest sample rate my program

could handle I found that I could get the waveform to repeat every 128 samples. Unfortunately it is very difficult to remember and keep a steady pitch of voice throughout the recordings and it took many hours to complete the voiced — glottal pulse phonemes — sounds.

### Voiced fricatives

Explosive sounds like "P" or "D" as in "Dear" never repeat so the 128 sample waveform is only played once. But this is not all. Before we make the explosive sound air pressure is built up behind the lips, making a slight pause before pronunciation. This pause was reconstructed just before playback of the phoneme. Similarly, because

a relatively small sample of the sound was taken a small pause was also needed after the phoneme as well.

The biggest problem with sampling and repeating waveforms is that it does not work with fricatives. These are phonemes which use "white noise" or resonant hiss e.g. "S" as in "Salt". Voiced fricatives use the resonant hiss but are also overlayed by a glottal pulse waveform. You cannot use the BBC's own white noise generator because it has only one set sound and doesn't resemble any of the phonemes.

To get around this problem I digitised 128 samples of spoken fricative, which fitted nicely into the rest of the data and could be easily tabled. To play the frica-

tive Speech! picks a random number between 0 and 127 along the data of the sound and then plays a waveform block of 16 samples from that point. The process is then repeated by choosing the random number again. This is continued until the desired time of the phoneme is over. The result is quite an accurate reproduction of the original fricative. The only problem left (soundwise) was the voiced fricatives.

### No white noise

I found that it was possible to say these phonemes and not actually sound the white noise into the microphone. After digitising and tabling this sound I worked out that the fricative

(continued on next page)

sound could be added to the waveform after it has played one section of about 100 samples. For example, in the phoneme "Z" as in "ZEBRA" SPEECH! plays about 100 samples of the wave (without the hiss) and then it plays 28 samples of the fricative "S". The reason why "S" was used in the phoneme "Z" was because it's sharp and loud, whereas "V" would need a mellow and quiet sound like "H" — as in "House".

## Vary the pitch

The user of Speech! can also control the overall pitch of the voice and individual phonemes. Inserting full-stops and question marks vary the pitch of the voice towards the end of the sentence. To change pitch Speech! simply plays back the phoneme at different speeds. But . . . the problem was that when you change pitch of the voice in the phrase it suddenly changes where it should vary slowly. Also, after a voiced phoneme was played it suddenly jumped into the next one usually making it very hard to understand at the best of times! What was needed was some kind of merging technique which will slowly change one waveform into another while they are playing.

## Fairly accurate

With the phonemes "AA" in "Yard" and "EE" as in "Feet", the merging was achieved as follows. When the "AA" phoneme starts, 128 samples are played and then 0 samples of "EE". Then 127 samples of "AA" are played and 1 of "EE". This continues until the end of the "AA" phoneme when 0 samples are played of "AA" and 127 of "EE", you see! This merge is timed to finish exactly when the first phoneme has completed its cycle, no matter how long it is played. The result is a gradually varied and fairly accurate reproduction of speech.

An example of Speech! can be heard on two games from Superior Software: Citadel and Repton 2. Speech! and six programs and utilities can be bought at £9.95 on tape and £11.95 on disk.

# TAKE A TRIP INTO THE PLEASURE GAME

AVAILABLE  
NOW  
FOR THE .....

AMSTRAD

## SOME ALREADY HAVE...

YOUR  
COMPUTER

CRASH

... innovative mix of ideas and excellent graphics ...

Variety is certainly the key word in this highly unusual game which has surely gone far beyond what anyone ever expected.

CLASSIC

... a beautiful program, an adventure of great imagination, with some superb programming techniques ...

It's nice to see a game that can match the quality and the style of the group.

— action and strategy — and there are a number of slick touches that will keep you on your toes.

# The Standard by which others will be judged.

This is Hardball from Accolade. The first in a new generation of game software that sets the standard for others to beat, if they dare! With graphics so large and lifelike and sound effects so real, you'll believe you really are at the ball park – yes, you can almost smell the hot-dogs!

Sorry, we can't supply the hot-dogs; you'll have to bring your own – but everything else is here to recreate the atmosphere, tension and excitement of big time baseball on your own small screen.

**[C]OMPETITION**

# Harvey Smith

*For the best entry to this competition we're giving away a full Sanyo midi stereo system. And the top 30 runners-up will each receive a copy of Software Projects' new game Harvey Smith Showjumper.*

## COMPETITION RULES

- The winners of the competition will be the people who, in the view of the editor, come up with the most interesting or amusing designs for a home computing obstacle course.
- The names of the winners will be printed in the March issue of *Your Computer*.
- All entries must arrive at the *Your Computer* offices by the last working day in January 1986.
- Each person may enter the competition only once.
- Entries to the competition cannot be acknowledged.
- No employees of Business Press International or their relatives may enter the competition.
- The decision of the editor is final.
- No correspondence on the result of the competition will be entered into.
- Business Press International assumes no responsibility or liability for any complaints arising from this competition.

*To enter the Software Projects Harvey Smith competition what we want you to do is send us your designs for a home computing obstacle course. You can submit your entry as a written description or drawing.*

## HARVEY SMITH COMPETITION

Don't forget to enclose this coupon, or a photocopy of it, when you send in your entry to Harvey Smith Competition, *Your Computer*, Room L221, Quadrant House, The Quadrant, Sutton, Surrey SM2 5AS.

# Make it live

James Hartley shows you how to control six adventure characters.

In last month's instalment I showed you one way of programming tree structures in Basic. This month, in order to show you the system working on a rather larger scale, we've provided a listing that uses it to control six characters.

Margaret Thatcher, Ronald Reagan, Catherine the Great of Russia, Hamlet, Count Dracula, and Godzilla are all guests at the Hotel Horrabelle. They can discuss their favourite subjects with one another; pick up, drop, and give objects; and indulge in other less conventional activities. To see them in action, simply enter the program and Run it.

Controlling characters in this way is only one aspect of the vast subject of "data structures" and their use in programming. The "trees" we have built are really only a type of linked list which enable items to be stored in memory in some relation to each other that enables them to be sorted and processed by a simple algorithm. If you're serious about programming then you could try getting a book on the subject and your programming will benefit enormously.

The Hotel Horrabelle example is not as efficient as it could be for a number of reasons. First, it's written in minimal Basic and sacrifices the good features of most machines for the standard features they all share (with one or two exceptions). Second, it's rather slow in execution since it's been written with more attention to ease of compre-

hension than to speed.

It's worth noting that this method of handling characters is in fact even better suited to machine code than to Basic, and machine code programmers would find it very easy to program the tree traversal algorithm in lines 1070 to 1210 together with the tree data to

gain obvious benefits in speed.

Large areas of program could also be condensed, in particular by putting sub-messages in data statements and then using either string functions or sub-routines to compile the statements. Perhaps the most practical solution of all, if you wish to make serious use of this technique

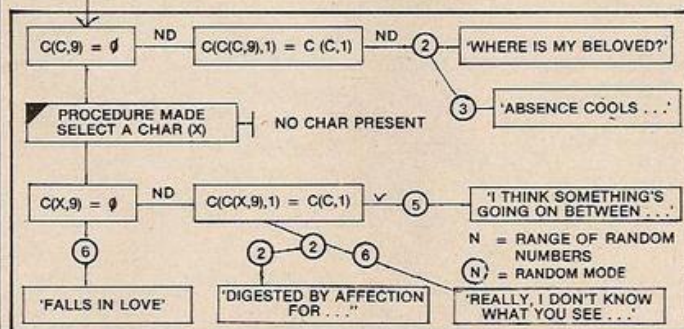

without getting into machine code, is to condense the program as much as possible and then compile it, though of course you could only do this if there is a suitable compiler available for your machine.

This approach is adopted by at least one adventure software company I know.

*c(c,n) = Character Data Array*

n:	1	2	3	4	5	6	7	8	9	10	11
	LOCATION	MOOD	STRENGTH				CONVER-			MOVE	MOVE
							SATION			COUNTER	FRE-
	INVENTORY			CURRENT			COUNTER	CONVER-			QUENCY
				ACTION				SATION			
					CHARACTER			SUBJECT			
					INTERACTING				LOVER		
					WITH						

	t(t,n,1)	t(t,n,2)	t(t,n,3)	t(t,n,4)
CHOICE	1	CONDITION NUMBER	BRANCH IF FALSE	BRANCH IF TRUE
ACTION TERMINAL	2	ACTION NO.	Ø	Ø
RANDOM/MULTIPLE CHOICE	3	CONDITION NUMBER	RND NO RANGE	BASE NODE
PROCEDURE	4	PROC NO	Ø	Ø
RANDOM BRANCH TO ONE NODE	5	Ø	RND NO RANGE	NODE TO TO JUMP

Main variables.

c — current character  
x — character interacting with  
d(n) — conditions  
c(c,n) — character data  
a — player's position  
v\$(n) — location descriptions  
b\$(n) — object descriptions  
t(tree no., node no., data) — the arrays

## Program Notes.

The program allows the user to input numbers 1 to 4, which will select different locations. You can then see what's going on in that location. Messages are only printed on the screen about the characters in the location you are currently viewing. If you'd like to know what's going on in all the rooms, just delete line 750.

The program as written will run unaltered on the Amstrad range of computers. However, other micro users may have to make some minor corrections. Spectrum

owners will have to alter the string dimension statements, giving the maximum length of the elements involved. They will also have to replace the ON...GOTO/GOSUB statements with the following construct:  
RESTORE (line number):  
FOR N = 1 TO (branch variable): READ D: NEXT N:  
GOTO D  
(line number) DATA... list of line numbers...

BBC owners will also have to make slight alterations to the syntax of the random number routine in line 1330 and Commodore owners will

also need to alter the CLS routine in line 1270. The input routine in line 450 may also need minor alteration for some micros.

The program sets up five trees as described in the previous issue's article. Each node has four data values associated with it — a node type, followed by three parameters. The node types are (1) a simple choice node (2) an action terminal node (3) a multiple choice node (either a random choice or as dictated by a condition) (4) a 'procedure node' which exits the tree and then re-enters it and (5) a

random node that branches to a given node only if a specified number is returned from the random number generator.

You could experiment with adding your own trees if you wished. The program is designed to call one of seven trees at random, but only five are implemented. Trees six and seven could be introduced by altering line 2700 and adding the data, action routines, and procedure routines to the different tables. A diagram of the 'falling in love' tree is shown as an example.

Lord of the Rings must be the prime example of an adventure using interactive characters. Anything you can do, they can do, and possibly better.

# QUEST CORNER

## SEAS OF BLOOD

► Various • £9.95 • Adventure International

Our man with the brass lamp and the key to a thousand mysteries sheds light on new adventure programs. Lost? Never fear, Hugo North is here.

The Fighting Fantasy (FF) gamebooks of Steve Jackson and Ian Livingstone have been a huge success. Two of these books were later used as the bases for computer games.

The first adaptation, Warlock of Firetop Mountain, was very disappointing, being an arcade game with little connection with the book. The second, The Forest of Doom, and released by Penguin books themselves, was excellent. This was virtually a straight conversion of the book's contents and in my opinion deserved far greater success than it actually achieved.

Now comes a third adaptation, Seas of Blood, from Mike Woodroffe and Brain Howarth whose earlier Gremlins and Robin of Sherwood have proved very popular.

The game is in the usual

text and graphics style of Adventure International, plenty of attractive pictures, locations (over 300) and puzzles.

A new element is the addition of a combat system, capturing more of the flavour of the book. This involves

attributing various aspects — strength, stamina, etc — to you and your opponent and determining the outcome of combat by throwing dice.

The plot concerns Tak, a city chock-a-bloc with cut-throats, thieves, pirates and assorted dregs.

## WINNIE THE POOH

► Commodore 64Z/128 • Disc £14.95 • U.S. Gold

Manufactured under license by US Gold from Walt Disney Productions, this is a very good children's adventure. Pooh has attractive graphics, is different each time it's played and is simple to use. For example, the game is

controlled by selecting one course of action from several displayed on the screen at each decision point.

When the blustery wind whistles through Hundred Acre Wood, it blows objects about. The player's task is to find all the lost articles and return them to their rightful owners, including Pooh, Rabbit, Eeyore and Piglet. The player must take care — Tigger is bouncing around, the mist sometimes comes down and another wind could start blowing again at any moment.

Although the game is marred by a screen glitch along the bottom border of the picture, Pooh is still a delightful adventure.

## A HELPING HAND

Russell Deitch of London and Tim O'Neill of Dublin have asked for assistance with the brilliant Hitch Hiker's Guide To The Galaxy: Can't get the babel fish!

1. KOOH NONW OGTU P
2. NIAR DREV OLEW OTTU P
3. LENA PFOT NORF NILE HCTA STUP
4. LEHC TASO NLIA MKNU JTUP
5. NOTT UBSS ERP

## THE CRYSTAL BALL

The marvellous Infocom have released Spellbreaker, the third in the Enchanter series. It's available on disc for Commodore, Atari, Apple, IBM and others.

If you're lucky enough to own an Atari ST, you'd be well advised to buy A Mind Forever Voyaging, Infocom's 128K blockbusting adventure for this new machine.

Soul of Darkon, a text and graphics adventure from Tasket, is now available for Amstrad owners. BBC B owners might care to sample Star of the Void, a new text adventure from Black Knight Computers of Chislehurst, Kent.

# Transdisc

**Fast, flexible efficient file copying from Geoff Hatts for CBM-64 disc-drive fans. Up to 58.4K can be transferred from one disc to another.**

```

is both the presentation and the ability to change the file's parameters once the file has been loaded into the computer.

The program can copy sequential (SEQ), program (PRG) and user (USR) file types — but not relative files — and can intelligently convert from one type to another in memory. The new file can then be re-saved on disc.

The program supports a screen directory which also shows the total number of files which are displayed to the screen. A disc command facility is also included and the disc drive status can be read whilst in the main menu and is automatically updated after disc I/O.

The whole program has been designed to be extremely simple to use and is entirely menu driven with a powerful "pop-up" menu system. To select an option use the vertical cursor keys to control the cursor position and type Return.

When the program prompts for filenames and start addresses, the last entry or address which was entered is remembered and displayed on the input line. This allows simple modification of existing filenames and start addresses. If the last entry is not required then it may be removed in one keystroke by holding down the shift key and typing return. The new filename or address can then be entered.

After running the program you are presented with the main menu. The following describes

each option in detail. Remember, to select an option, use the vertical cursor control keys to position the cursor and type the return key.

When you select the Load File option you are presented with a sub-menu which asks which program type you wish to load — sequential, program or user. When this has been selected, enter the desired filename followed by pressing the return key. The program will now attempt to load this file into memory. A bell sounds to indicate that the loading process has been completed.

If the disc error status — shown in the bottom display box — is OK then your file has been loaded correctly. If it says Out of Memory then the file which you attempted to load was greater than 58.4 Kbytes — 236 blocks — long. If the status line says File Not Found then the file does not exist on disc — use the Directory command in the main menu to check the disc contents.

With the file loaded into memory, use the Same File option as often as required to save copies of the file to disc. A sub-menu is presented which allows you to create a new copy of the file on disc, or it allows replacement of an existing file with the same filename.

When the program is asked to replace an existing file on disc, it first erases the old copy and then creates the updated version from the file stored in memory.

This overcomes a slight problem using the @0: replace

# FED UP WITH WAITING FOR THE 'SPIN-CYCLE' BEFORE OVERTAKING ....

command provided by the disc drive, which saves the updated version first and then scratches the old version. This can result in a Disc Full error when updating a file on a disc which only has a few blocks free.

If a Disc Full error should occur when using the save option do not scratch the now starred file — as it appears in the directory — or you will stand a chance of corrupting the disc. You should always validate a disc when a starred file appears in the directory. Use the Send Disc Command option in the main menu to issue a validate command. Note — this point also applies in general when saving a Basic program using the 1541 disc drive.

Use the Change File option to vary the file parameters, i.e. the program name, start address and file type. It is quite useful to be able to change the file from one type to another or a program's start address — in decimal. For example, a sequential file stored on disc can be converted by loading it into the Transdisc program and storing it back on disc with a different file name and as a program file with a start address.

This allows you to load to file straight into memory where you can inspect the contents. Remember, Basic programs are tokenised, and so not much is gained by converting them to sequential or user files. This

**FIT THE ALL NEW AMSTRAD 3" DISC SYSTEM**

THE KIT CONSISTS OF:-

1. RELIABLE, COMPACT, AMSTRAD 3" DISC DRIVE UNIT.
  2. HIGH TENSION BELT
  3. HIGH RATIO GEAR (FIXES TO REAR SPINDLE)
- MAKE YOUR ECLAIR CS REALLY GO.**

*Nicholas Card's entry was runner-up in our September 6128 competition.*

# Transdisc

(continued from previous page)

option is more useful on data files or source code from assemblers, etc.

If the file in memory is not a program file then the start address is set to zero and the end address is actually the number of bytes in the file. To find the number of bytes in a program file, subtract the displayed start address from the end address.

Use the Directory option to display the disc contents to the screen. If you ask for a match, enter the match when prompted and use wild cards — stars and question marks — where appropriate. See your disc drive manual for more information on wild cards.

When the directory display has finished, type any key to return to the main menu.

The Disc Status allows you to inspect the disc drive status when you are at the menu. The disc status is displayed on the bottom display box.

Disc CMDs allows you to send disc commands to the disc drive to do "house-keeping" jobs, such as deleting unwanted files and for validating and formatting discs. A conformation sub-menu is provided to help prevent accidental formatting of your favourite disc containing your best programs!

Sometimes, the disc drive can get confused. If at any point you feel the disc drive is not behaving correctly, issue a U; disc command which will reset the drive. For example, continual Drive not Ready messages can sometimes occur after failing to put a disk in the

drive when saving a file on the first attempt.

Reset 64 resets the computer — performs a cold start. Note — the file in memory and the program are both lost after execution.

To get a copy of this program on disc, type in the program listed and save it. Now place a disc in the disc drive to receive the executable copy of this program and type run. If all is well, then the program will have saved an executable copy of the program on disc. If not, then the reported errors in the Data statements must be corrected and the listing re-saved ready for another attempt.

The program may be reloaded and executed when required by typing:

LOAD "TRANSDISK V2.0".8

This program has not been

designed to transfer a large quantity of files from one disc to another — better to use a program specifically designed for batch copying. It does come into its own, however, when you wish to copy a file, but also to change or inspect all of the file parameters in the process.

## Text is not destroyed

It should be noted that all of the individual functions selected from the menus do not affect the file loaded in memory, i.e., using directories, disc functions etc.

Even if the disc drive produces an error when attempting to save a program, the text in memory is not destroyed. In fact, once in memory the program can be saved as many times as required on different discs.

# THOUGHTS & CROSSES

## 37 MARKET STREET, HECKIMONDWKE, WEST YORKS

### COMPUTERS

Apricot FIE 128K disk drive	£695
Apricot F1 256K + 720K disk drive	£895
BBC Plus Microcomputer (includes DFS)	£469
Acorn Electron (+ £40 FREE software)	£399
ZX Spectrum 48K (+ £50 FREE software)	£389
ZX Spectrum Plus 48K (+ £50 FREE software)	£429
Memotech 512	£129
Commodore 64 (+ £40 FREE software)	£189
Amstrad CPC 464 (green) + £100 FREE software	£199
Amstrad CPC 464 (colour monitor) + £100 FREE software	£299
Amstrad 6128 (col with disk drive)	£399
Amstrad 6128 (green with disk drive)	£199
Sinclair QL	£199
Amstrad PCW 8256	£458
Commodore 128	

### PRINTERS

Judd 5510	£299
UX80 Tractor Unit	£22
Canon PW1080A with NLD	£290
Canon PW1156A with NLD	£395
Panasonic KX-P1091 with NLD	£315
Smith Corona D100	£215
Epson LX80	£287
Brother AC adaptor	£17
Brother HR15 (Centronics)	£375
Brother Cut-Sheet Feeder	£220
Brother Keyboard	£160
Juki 6100 (Centronics Daisy Wheel)	£390
Juki 2200 (Typewriter Daisy Wheel Printer Centronics)	£275
Juki 6100 Tractor Feeder	£129
Juki 6100 Sheet Feeder	£220
Daisy Wheel 2000 (Centronics Daisy Wheel)	£250
Shirwa CP80 (Centronics)	£189
Mannesman Tally MT80 Plus (Centronics)	£195
Mannesman Tally MT80	£195
Commodore MPS801	£99
Samcolex DX85 (State Interface Res)	£195

### PRINTER RIBBONS

Epson MX/FX/RX80	£4
Epson MX/FX100	£8
Seikosha GP100/Commodore 1523	£4.50
Seikosha GP80	£4.50
Microline (group 66)	£2.30
Amnolux	£12.50
MPS801	£8.50
NEC8023	£7
Canon/Kaga Tazan	£8
Shirwa CP80/CP80A/MT80/MT80Plus	£8.50
Ritenan A1	£7
Panasonic KX-P101 (MTX)	£9
QUME MS	£4.30
QUME nylon	£6.50
Diablo MS	£15
Diablo Nylon	£4
Diablo SS	£3
Juki 6100/DPS	£2
Juki 6100/DPS	£5
Brother DP44	£2
Brother HRS	£2.99
Brother M1009	£2.99
Brother singlestrike HR15/25	£3
Brother connectable HR15/25	£3
Brother multistrike HR15/25	£8
Samcolex DX85	£9.50
Amstrad PCW8526	£9.50

Others available, please ask.  
Print wheels also available, please ask.

### PRINTER LEADS

BBC Centronics printer lead	£10
BBC Serial printer lead	£10
Memotech Centronics printer lead	£10
Dragon Centronics printer lead	£10
Oric Centronics printer lead	£10
Amstrad Centronics printer lead	£10
Einstein Centronics printer lead	£10
Wafadrove to Centronics lead - Spectrum	£10
Spectrados to Centronics lead - Spectrum	£14.95
ZX Interface 1 to RS232 'D' - Spectrum	£14.95
QL to RS232 lead	£14.95
Centronics to 25-way 'D' lead	£15
Centronics to Centronics lead	£15
RS232 'D' to RS232 'D'	£13.50
IBM to Centronics	£15
MSX to Centronics	£15

Atari 520ST to Centronics £15

### PRINTED INTERFACES

Epson RS232 Interface	£32
Epson RS232 Interface with 2K Buffer	£72
Canon RS232 Interface	£85
Shirwa RS232 Interface with 2K Buffer	£85
Mannesman MT80 RS232 with 2K Buffer	£45
Philips 7502 anti-glare green screen monitor (20Mhz)	£210
Commodore 1702	£210
Fidelity TV/Monitor	£210
Fidelity CM14	£170
Fidelity QL Monitor (161 res)	£180
Amstrad Modulator	£30
Reguson MMO2 green screen (UK made)	£88
Lead for above	£4
Philips 7522 Amber	£95

### PRINTER PAPER

1000 Sheets of continuous tractor feed paper	£9
1000 Single/Double tractor feed labels	£8.50

### MONITORS

Microvitec 1431 MS (standard res. suitable for BBC etc)	£199
Microvitec 1431 M (medium res. suitable for BBC etc)	£290
Microvitec 1431 M2 - Spectrum	£245
Microvitec 1431 DQ - Sinclair QL	£275
Microvitec 1431 APMSA	£345
Philips 7502 anti-glare green screen monitor (20Mhz)	£210
Commodore 1702	£210
Fidelity TV/Monitor	£210
Fidelity CM14	£170
Fidelity QL Monitor (161 res)	£180
Amstrad Modulator	£30
Reguson MMO2 green screen (UK made)	£88
Lead for above	£4
Philips 7522 Amber	£95

### DISK DRIVES

ZX Microdrive - Sinclair	£45
ZX Interface 1 - Sinclair	£45
ZX Expansion System (includes Microdrive/Interface 1/Tasword)	£95
TwoMasterfile/Attack Games Designer	£95
Commodore 1541 + Easy-Script + 6 programs	£150
Amstrad 3" drive - Amstrad	£39
Electron Plus 3 - Acorn	£180
Micro P 3 1/2" disk drive 720K inc disk interface	£220
Micro P 2nd drive	£120
Challenger (Opus)	£20A
Discover 1 (Opus)	£190
Amstrad 3" Disk Drive + Interface	£159

### CUMANA DISK DRIVES

CSXL 100 100K 40T	£99

**T**his is a...  
the BB...  
which fe...  
scrolling

This is a game written for the BBC and Electron which features full screen scrolling, animated multi-coloured graphics and original music. The game itself is written in two parts which have to be typed, checked, and saved and then run. The first program contains all the machine-code routines while the second sets up the screen, checks the number of lives left, plays the music and controls most of the aspects of the game which do not require the speed of machine code.

Locomotion has you in control of a runaway steam locomotive. You are unable to stop or slow down this train. However, you may change tracks. You must also watch out for attacks by planes, airships

and C5s. To shoot these enemies you have the following weapons — smoke and harpoons. However, the eccentricities of these must be learnt if they are to be used to destroy the C5s; to fire simply press the space bar. There is a counter on the firing mechanism so once it has been fired it takes a long time before the harpoon is ready to fire again, so an early shot will prove fatal for you.

Now we come to the more complex smoke firing routine. To fire the smoke simply press the Return key. The longer you hold down this key after the smoke is launched the higher it goes until it flies over to the left of the screen after you release the Return key. There can be up to three pieces of smoke in the air at one time but, once these three have been fired, you

cannot fire again until the last one out of those three has left the screen.

To scroll the whole screen on the Electron would take too long for a playable game to be written around it, so instead of making a window and scrolling just a small but concentrated box, as in *Jump Jet Assault*, I simply scrolled small sections of the screen, such as the track and radar the full length of the screen thus giving a more pleasing overall effect.

The short musical sequences are original and previously composed on a Roland keyboard. If BBC users wish to type in the program they must once again increase the contents of the x and y registers in line 400 of listing 1, the particular values will have to be found through experiment.

**Brian Lewis steams ahead on the BBC and Electron.**

# WITHOUT OUR 'LEARN BASIC' YOUR COMPUTER IS ONLY PLAYING GAMES...

## LOGIC 3's COMPLETE TEACHING PACKS FOR TODAY'S MOST POPULAR MICROS

Based on the teaching methods developed by Professor Andrew Colin of Strathclyde University, Logic 3 is the most comprehensive guide to Basic programming currently available.

Logic 3 is designed for people who want to keep abreast of the computer age, for people who realise that understanding computers is a key to future success at work, at school and as a parent.

If you are thinking of buying, expecting a present, or already have an Acorn Electron, BBC, Sinclair Spectrum 48K, Dragon 32/64 or Amstrad CPC 464/664 you need Logic 3 'Learn Basic' too.

Each Logic 3 pack contains a 190 page work-book, 2 cassette tapes containing 20 programs plus a flow-chart stencil.

QTY	COMPUTER	PRICE	TOTAL
	SINCLAIR SPECTRUM 48K	14.95	
	ACORN ELECTRON	14.95	
	BBC	14.95	
	AMSTRAD CPC 464/664	17.95	
	DRAGON 32/64	14.95

# THE ANIMATOR

An animation package for the Amstrad 464/664/6128

## INSTANT ANIMATION

You only need to draw two "key frame" pictures to see them transformed into a smooth flicker-free animation sequence. In other words, a cartoon. Add more key frames to make a more elaborate cartoon. The program does the work for you by generating the frames in between.

The Animator uses a highly efficient screen compaction technique. With over 30K for storing your animation (64K on the 6128), even quite detailed cartoons can run over hundreds of frames.

Animation sequences of over 750 frames are possible — double that on the 6128. Projected at 12 frames per second, this means a cartoon lasting more than a minute. You can speed up the action to a rate of 25 frames per second; or replay it backwards; or freeze frame it.

- Choice of number of key frames
- Joystick or keyboard control
- Rubberbanding
- Colour facility
- Standard or stippled colour fill
- Edit frames
- Copy frames
- Rotate frames
- Polygon draw
- Save and Load frames
- Choice of Modes 1 and 2
- Variable speed of animation
- Demo mode
- On-screen memory counter

See us on Stand 74 at the Amstrad User Show on January 11th and 12th.

The Animator costs £8.95 on tape, £13.95 on disc, p&p included.

Send cheque/postal order to:

## [B]UFFERS' GUIDE TO MICROS

**Starting out in home computing? First Bytes is for you. Just write to *Your Computer* with any hardware or software problems, no matter how small or simple.**

Every jargon has phrases which cause non-initiates to glaze over. Automobile hobbyists used to plunge families into catatonia by intoning the awful words, "Differential Gear". Computer addicts have a wider range of conversation killers: one forms our tasteful topic for today. Even those who've dabbled in Basic can turn pale at the far-off cry, "Control Structures!"

There's a chap in one of Moliere's plays who is

delighted to find he's been *talking prose* all his life without knowing it. Similarly with Basic: if you've used an If-Then statement or a For-Next loop, then without knowing it you've been talking control structures. They're just methods of executing program statements in a controlled — conditional or repetitive — way.

Often Basic users have to lash together their own control structures, using the dreaded Goto statement. Saying Goto will cause upmarket programmers not to glaze over but to show snobbish disdain by hitting you in the mouth. For example, you may not know how many times your program needs to go around a loop. If it's supposed to count the full stops in *Robinson Crusoe* — somebody once did this — you want a loop structure with a conditional exit, like this:

```
10 GOSUB 1000 : REM find
   next full stop
20 STOPS = STOPS + 1
30 IF NOT ENDOFTEXT THEN
   GOTO 10
```

Subroutine 1000 contains the hard bits, and sets EndofText as true when it at last reads the words "The End".

Basic is cruelly short of control structures; high-class languages usually offer three extra-powerful ones, called While, Repeat and Case.

The Crusoe example above is a home-made Repeat-Until

loop. In Pascal it would look like this:

```
Repeat
  FindNextStop;
  STOPS := STOPS + 1
until EndOfText;
```

Pascal lets you write a Procedure called FindNextStop, which does the same as our old subroutine at line 1000. In this form the program chunk's much easier to understand — and the bug becomes visible. Suppose we've got a duff copy of *Crusoe* without any full stops? The routine still says there's one: anything inside a Repeat-Until is always executed at least once. Really we should be using a While loop. In Microsoft Basic it looks like this:

```
10 GOSUB 1000
20 WHILE NOT ENDOFTEXT
30 STOPS = STOPS + 1
40 GOSUB 1000
50 WEND
```

Here Wend is to While as Next is to For. The extra Gosub at line 10 checks the input before the loop: if "The End" is reached without finding any full stops, the While-Wend loop statements are never executed.

This is the point of powerful control structures and — pause for another turn-off phrase — "structured programming". It's not that they're upmarket and favoured by the Royal Family: just that the programs are easier to read and debug. Most of us still have to toil along with Basic, but one day ...

*I was Provoked, officer. He said GOTO!*

## [D]ISPLAY HANDLING

The aspect of microcomputing in which machine-code routines are of greatest use is probably display handling, i.e. drawing, moving and animating graphics.

There exists in the Sinclair operating system several routines to facilitate this process, and the easiest way to manipulate the display from machine code is to use them. The Scroll routine, for example, will allow you to scroll not only the entire screen upwards, but any number of lines on it. You just have to know how to access this potential.

This feature of the Scroll routine allows you to effectively set up two separate "windows" in the display. The assembly language routine to scroll the lower five lines of the screen only is as follows:

```
LD B,5
CALL OEEO
RET (calls up Rom routine for Scroll)
```

To write out the entire routine — see pg 43, *The Complete Spectrum Rom Disassembly*, Dr I. Logan — would take time, patience and computer memory.

The computer must now be told to carry out these

instructions. Each command in machine code corresponds to a number between 0 and 255. It is these numbers which the computer "understands" and can operate upon. The program must, therefore, be translated from "mnemonics" — above — to this code — below. Taking our previous example this code would be:

```
6
5
205
0
14
201
```

(continued on next page)

## DISPLAY HANDLING

(continued from previous page)

...where 6 corresponds to LD B, etc. Substituting the 5 for another number changes the no. of lines to be scrolled.

To persuade the computer to look at these codes from Basic, they must first be programmed into an area of memory. A program to do this is shown below.

```
10 CLEAR 30000
20 DATA 6, 5, 205, 0, 14, 201
30 FOR X=0 TO 5
40 READ Y
50 POKE 30000 + X, Y
60 NEXT X
```

The aptly named command,

Poke puts the number in Y into the memory location specified where it remains. Note that Clear 30000 reduces the amount of memory available to the Basic user, but the program caters for 16K as well as 48K. If you do not wish to use up so much memory, and have 48K, 30000 may be replaced by 60000.

When you enter the program and run it, nothing will happen. But the machine code is now in memory. To use it, you need to give the machine code equivalent of Run; in this case it is USR 30000. Typing

RANDOMISE USR 30000 will

now scroll up the bottom five lines of the screen — you will, of course, see nothing if you have written nothing there to scroll. You can now incorporate the routine in your own program, if you wish to use a split screen for, say, graphics in the top part and text in the bottom.

This series of articles, over the next few months, sets out to give you routines such as this one, which you can include as part of your own Basic program to enhance its speed or extend its function — without knowing anything about assembly language.

James Higgo

## PROLOG

If you are familiar with programming in Basic, you will know what a bind it is to write database-type programs: programs that store sets of data, and allow users to update the data, and retrieve it in various ways. Basic's named variables and arrays are primitive tools, and its handling of disc and cassette files is poor in many versions.

There are many alternative languages which make this type of job simpler. Most of the list-processing school of languages — Lisp, full Logos and so on — concentrate on fitting the data into flexible structures, some of which let you describe specific relationships between the data items. Prolog, however, goes one step further. It concentrates on different ways of retrieving data.

In a session working with Prolog, you don't write a program: you set up, enhance or interrogate a database. The Prolog interpreter does most of the hard work of

setting up a structure into which you can fit your data. It also provides you with search commands. You never need to write a search routine at all!

Let's take a very simple example. This is a Prolog statement that could be taken to describe the eating patterns of cows:

food (cows, grass)

This one describes the appetite of pigs:

food (pigs, swill)

and this of one particular animal:

food (Napoleon, swill)

Store these in the computer, and then you can ask, in simple one-line phrases, questions like:

what do cows eat?  
which animals eat grass?  
do pigs eat swill?

These are the Prolog statements (they vary slightly from dialect to dialect) which do that:

?— food (cows, X)  
?— food (Y, grass)  
?— food (pigs, swill)

Type these in, and the computer will answer:

X = grass  
Y = cows  
Yes

It's as easy as that. Prolog can go further, though. You can also include in your database rules like:

if an animal eats grass,  
then it is a herbivore  
if an animal eats swill,  
then it is a pig and the  
interpreter will then be able  
to answer questions like:  
is a cow a herbivore?  
is Napoleon a pig?

This ability to answer questions that have only indirect answers in the database makes Prolog an ideal language for writing artificial intelligence programs. Many expert systems have been written in Prolog. And the Japanese have chosen it for their Fifth Generation Project.

There are some drawbacks. Prolog has a fixed method of searching its database, and it is essential to understand it and to structure the database carefully. Otherwise, the computer may come up with some wrong answers. It's also important to remember that the computer doesn't in any way understand the data that is fed in.

Its answers are not necessarily right: they are only logical deductions from the data, right or wrong, that is available.

Finally, in Prolog a "no" answer doesn't mean "That's wrong": only "That isn't provable from the database".

Big expert systems need big computers, of course: but mini Prolog interpreters are available for most home computers, and they can be put to real uses. As well as providing an easy way of setting up "intelligent" databases, they give the programmer a very rigorous training in thinking logically. That's one reason why Prolog is a great educational language.

Susan Curran.

# Competition results

## MUD CHALLENGE

For the MUD competition in our September issue, we asked you to design a game which could be run using the MUD system. In particular it had to exploit the interactive nature of the system. Another problem with running a game on MUD is that it must be playable with only a small number of players or with many participating, and people must be able to come and go more or less at will.

Ideas ranged from the mystic past to the distant future. A common theme was interactive Elite. Dungeons and Dragons-type themes kept coming up, including one from Peter Luckham who suggested that, like the board-game, players

should attempt to become skilled in one area, i.e., develop a certain number of spells, so that co-operation between these different types would be necessary.

The other runner-up was Per Landberger from Sweden who wanted to base his game on the suitably Scandinavian theme of the Vikings being generally unpleasant all over Europe. Players would take part in the raids and gather plunder and acquire status within their village.

The winner, however, found inspiration in the recent space opera *V*. Stephen Jetley's scenario involved players joining resistance bands and going

on various assignments. This would seem to suit the system well. The type of raid generated would depend on the number of players logged on, and people could enter the party at will. Obviously more experienced

players would know the system better and therefore the other players would look to them for guidance.

So Stephen Jetley will go forward as YC's champion to the great MUD challenge.

## PHILIPS MONITOR

This competition attracted one of our largest ever entries, well over a 1000 of them. This is probably because just about anyone who's got a computer would like a monitor, but few can justify the cost to themselves, parents or spouses. Indeed, domestic bliss was one of the commonest reasons put forward for wanting one. It seems that many computer users have to fit in Elite or Doomdark's Revenge between Wogan

and Dallas, inevitably leading to ructions.

I'm afraid that we're a heartless crowd here, you'll just have to sort out your own domestic problems. Another common theme was people wanted a set that couldn't pick up Terry Wogan. Laudable though this aim is, I'm sure the indefatigable Mr Wogan will find a way to get himself on to monitors as well. After all, he has monopolised every other form of

electrical equipment, and there is even talk that you can get him on some microwaves.

Some complained that while their computer was state of the art, their TV was a little over the hill. The best of these was Kevin Lowe, who claimed John Logie Baird wanted his set back. Foremost in the slogan market was Mr JW Smith from Shetland who claimed that "Philips packs pixel power".

And so we come to the winners. Runner ups were Andrew Callister from Douglas, Isle of Man. A Philips monitor

to him meant no more trouble with the Fuzz — presumably he won't get done for license evasion again. Another runner up was R Laskey from St Albans. He claimed that "dedication was so hard to find nowadays." However, winner by a clear pixel from all the thousands of entries was Mark Bentall from Sheppey, Kent: I asked my computer, a BBC B, What make of monitor it would most like to see.

With a clunk and a whirl and a giggle of glee.

It just be a Philips CM -8533.

## TOUR DE FRANCE

October's Tour de France competition asked you to redesign the circuit for Activision's bicycle racing game. 20 copies of the game together with a Tour sweatshirt were on offer for the runners up; and for the winner we threw in a Commodore 64 to play the game on.

Most entries wanted to make the course longer and tougher —

as if the present circuit wasn't gruelling enough already. They also thought to change the venue. Thus we had Tours of Australia, Europe, Sweden, Atlantis, Saturn's Rings, and, from a Yugoslavian reader, a nicely illustrated Tour of America. Other suggestions included a race round the coast of France on hydro bikes, and a circuit based on Birmingham's

Spaghetti Junction twisted into the shape of a Mobius band.

First prize goes to Neil Marsh, 25 Oxford Road, Orrell, Wigan, Gr. Manchester. As his extract from the Bike-Rider's Guide to the Galaxy points out, the most demanding circuit in the universe is located in the Rof mountains on the planet Orhim. Due to a freak rift in the fabric of space, the entire circuit is uphill.

Copies of the game and sweatshirts to the following: E. Cook, Cwmbran; O. Sjostrand,

Sweden; A. Aldrick, Coventry; M. Shillaker, Corsham; S. Whitehouse, Halesowen; R. Sheppard, Chingford; R. Stesevic, Yugoslavia; M. Mobarak, Milton Keynes; T. Chapman, Ashwell; H. Sandhar, Wolverhampton; L. Porsklev, Sweden; R. Fleuty, Eastbourne; M. Roberts, Burgess Hill; M. Whaley, Knutsford; S. McRae, Inverurie; M. Woods; M. Lockwood, Huddersfield; J. Williams, Stoke; P. Holland, Wirral; A. Ennis, Herne Hill.

## SUMMER OF GAMES II

£100 of sportswear plus a copy of Summer Games II, was the prize in October's competition based on US Gold's hit game. We asked you to come up with a new event for the game. S. Jardine, 108 Barrowby Road, Grantham, Lincs., wins the prize for a Trapeze event: points would

be awarded for smooth landings, artistic interpretation, number of somersaults, and so on, while timing would be absolutely crucial. Among the other entries, fishing and C5 racing were suggested, but were rejected on the grounds that they would be too slow.

30 copies of the game go to the following runners up: J. Green, Radlett; A. Ennis, Herne Hill; J. Williams, Stoke-on-Trent; C. Fyre, Codnor; J. Tunstall, Hartlepool; A. Shaw, Nailsea; P. Croxall, Farby; C. Broad, Oldham; W. Sonner, Folkestone; R. Stewart, Tinsley; F. Turra, Bologna; K. Young, Coventry; P. Cheesbrough, Keswick; M. Hatton, Morpeth; S. Ahmad,

Crawley; J. Morris, Poole; P. Williams, Rushton; S. Whitfield, Beverley; P. Barker, Battersea; D. Constable, Upminster; J. King, Belgium; A. Charles, South Anston; C. Macaskill, Alloa; A. Brett, Broadmeadows; D. Johnson, Stockport; T. Wells, Stourbridge; S. Davies, Wyrley; J. Norris, Beckenham; J. Salfarlie, Mitcham; P. Sandell, Sweden.

# IT MAKES DRUMMING SOUND LIKE HARD WORK

## SYNDROMIC MUSIC

### SYNTRON DIGIDRUM

The Syntron Digidrum is an exciting professional digital drumcomputer designed to operate with the Commodore 64.

Using 'live' digital sound samples which are encoded onto software the user has a programmable drum machine with a sound quality many times the price.

Easy visual grid programming, hear the sounds you enter, 51 patterns available in memory plus 10 songs linking 100 patterns together are possible with full copy, insert and delete functions.

Whether you want to play along to it, do demo's and record with it, sing along and dance to it or just enjoy programming it — The Syntron Digidrum — Get It!

The Syntron Digidrum comes complete with a hardware user port connector, audio out, trigger out, easy to follow user's guide, software with the first eight digital samples including Crash Cymbal, Snare Drum, Bass Drum, Floor Tom, Hi Tom, Med Tom, Open Hi Hat, Closed Hi Hat and programming functions. The software contains a complete set of demonstration patterns and songs — All this for just £65.00 Inc VAT.

# RESPONSE FRAME

## POINTER PROBLEMS

Do you have a problem related to your micro? Our team will do their best to help. Please include only one question per letter and mark it "Response Frame". Alternatively, perhaps you have an idea you'd like to pass on to others. Why not write to us with your top tips?

● I am developing a drawing program for the Amstrad. How can I move a pointer around the screen without overwriting the background? Also, could you tell me how to incorporate pull-down menus.

*Simon Modi,  
Prestel Mailbox.*

Although it is not well explained in the manual, the Amstrad has four different "ink modes" which determine how a pixel or a line interacts with colours already on the screen. Ink mode 1, XOR, the exclusive

OR option provides a simple solution to your problem. In this mode, drawing a line or printing a character twice has the effect of restoring the original picture.

You can set the XOR mode by including a fourth parameter at the end of a plotting command such as Plot or Draw; or by Printing control character 23. The following program illustrates the technique. Lines 10 to 30 create a background, Line 80 simply causes a delay.

```
10 FOR N=1 TO 1000
20 PRINT "M";
```

```
30 NEXT
40 PRINT CHR$(23) + CHR$(1)
50 TAG
60 MOVE 50,100
70 PRINT "TEST";
80 FOR D=1 TO 1000:NEXT
90 MOVE 50,100
100 PRINT "TEST";
```

If you want to include pull-down menus, I am afraid you will have to learn machine code. You'd need first to store part of the screen, print the menu, and then reprint the original screen data.

Doing this from Basic would be too slow.

*Jim Taylor.*

## SIMULATING A PAUSE

● I have been delving into the depths of machine-code for a while now and have met with a problem. How do I simulate the pause function but only allow one key to continue the operations? For example: If one was to save chunks of code headerless one after the other, how would I go about making the system wait for, say, Capshift to be pressed, thus continuing with the save?

*Mark Plumett,  
Thetford,  
Norfolk.*

The principle of pausing in machine code is fairly similar to Basic. Consider the following:

```
10 LET IS = INKEY$
```

```
20 IF IS = " " THEN GOTO 100
30 GO TO 10
40 STOP
```

```
100 REM continue with program
```

The way to do this in machine code is to read the keyboard and keep doing so in a continuous loop until such time that the key depressed is the one required. So if you want to save two blocks of headerless code with a pause 0 equivalent in between, use the following:

```
LD HL, START OF SAVE
LD DE, LENGTH OF CODE
LD A, 255 (LENGTH OF LEADER)
SCF
CALL 04C2 (SAVE BYTES)
LD A, CODE OF KEY
```

```
LOOP IN A, (254)
RRA
JR C, LOOP
LD HL, START OF SAVE
LD DE, LENGTH
LD A, 255 (LEADER)
SCF
CALL 04C2 (S/B)
RET.
```

This routine works on all of the outside keys. Here are their values.

```
1 — 247
0 — 239
Q — 251
P — 223
A — 253
ENTER — 191
CAPS — 254
BREAKSPACE — 127
Craig Rawston
```

## WHICH COMPILER?

● In the June issue of *Your Computer* you answered a letter about a compiler for the Spectrum.

You advised Softek's FP-Compiler, as it is the best you know. Please could you give me a little more information on this compiler, like what sort of speed increase it has, how much user memory it provides and how much it costs.

*S Smith,  
Minster Lovell,  
Oxon.*

Basically the Compiler Pack is made up of two separate compilers F.P. and I.S. The "Floating Point" version supposedly speeds up your programs by 10 times (about right) and the Integer version between 200 and 500 times.

To be realistic the latter is more like 5-10 time average.

Obviously the more complicated the program is

the slower the compiled code will be. Both programs fit fairly high up in the memory so a large chunk is available to the user.

Although most operations are catered for I would disagree with Tim Hartnell and say that 'Blast' from Oxford Computer Systems Ltd is far superior, but then for £24.95 it should be. FP will set you back around £19.95 and is available in the shops whereas Blast is only available by post. The less extensive but faster Softek Computer, I.S., costs £9.95.

Oxford Computer Systems Ltd — 0993 812700; The Edge — 01-240 1422/7877.  
*Craig Rawston.*

## TOP TIPS

This short piece of machine code — 179 bytes — which will list the current variables in memory. It works on any Spectrum. Type in the program below and run it. If there are no errors it will then save the machine code it creates to tape.

The routine is leaded by LOAD "" CODE but first reserve memory with CLEAR 59999. To call LVAR from Basic enter. RANDOMISE USR 60000.

Non-printable characters are handled by + CHR\$(n), where n is a character from 0 to 32.

*Anant Modi*

# Software File

## SYNTHESISER

David Walker • Amstrad  
Knighton, Powys

After typing in the listing and successfully running it several inputs will have to be made before you can make the program play music.

Programs for Software File should be fairly compact and sent on a cassette. Please include clear instructions and say what computer it's for. We pay between £6 and £36 for programs published. They must be double-checked and submitted to *Your Computer* exclusively.

You will input the octave number. The attack rate — how fast the sound reaches its peak volume.

The lower the number the faster this happens. The decay rate — how fast the sound drops to its

constant volume.

The release rate — how fast when you have released the key the sound decays away. The tone effect. You can experiment with all the preset sounds in lines 600-700 and alter them if you wish. After these inputs your keyboard will be live.

## PILE-UP

David Judge • BBC  
Surbiton, Surrey

This is a strategy game for the BBC model B — with OS 1.2 — for two players. It is played on a 10 by 10 board. Each player takes it in turn to place a counter of his or her colour onto a square on the board.

To place a counter on the board, you simply move the cursor — a cross on the board — to the desired

square, using the cursor keys, and press the space bar. You may also use joysticks.

When there are more than five counters "piled up" onto a single square, that square explodes, and throws counters into the surrounding squares. If there are any of the opponent's counters in these squares, then they are wiped out.

The object of the game

(continued on next page)

# File

(continued from previous page)

is to take over the entire board with your own coloured counters.

The strategy of the game is more complex than it at first appears. For instance, one strategy is to build up a chain of squares each containing five counters, until you consider that it is the right time to set off the chain. Another strategy

is to explode squares as soon as possible, in order to take over a lot of the board quickly.

The game is in two parts. The first part gives the game instructions, while the second part is the game itself. Type in listing 1 and save it onto the start of a cassette. SAVE "PILE2" <RETURN> Then enter listing 2 and save that after listing 1 on the same cassette.

SAVE "PILE2" <RETURN> Then rewind the cassette and run the game by typing:

CHAIN "" <RETURN>

The game as written will run on disc-based machines without the need for a downloader, as there is sufficient memory for the program to run with Page set to &1900.

The program has not been tested on an Electron. However, if all

references to Mode 7 are removed, the program should run.

Listing 1 can, in fact, be left out altogether.

If anybody would like to play the game without having to type it all in, a cassette of the program is available for £3.00 from me. Please send a cheque or postal order for £3.00 to: David Judge, 39 Warren Drive North, Tolworth, Surbiton, Surrey.

## LABELS

► M Payne • Spectrum  
• Milton, Stoke-on-Trent

This program allows labels to be used on the Spectrum. It is written in such a way that it may be used with a line renumberer thus adding

greater versatility to program development. By using meaningful labels you can forget about line numbers and settle down to writing some readable, structured programs. Points to note:

- A label is stored as a variable containing the value of the line number on which it appears.
- A label is defined by a

Rem statement followed by an asterisk followed by the label name.

- No other text may appear with a label — each label must have a line of its own.
- This program must precede any program using labels.
- Labels must not be longer than 20 characters.

The program is searched for label declarations, and

when found, the label name is poked into the Let statement on the second line. This statement is then executed and the search continues until the end of the program. Note — the Go Sub statement, and the For z=0 TO 0 Step 0 statement are methods of avoiding direct jumps involving line numbers.

### Labels.

## SQUIGGLE

► Robert Bain • Spectrum  
• Dorset

Squiggle is about 8K long. the game has no machine code. When first run, it may look simple but in reality it is fairly complex and many hours of fun can be obtained from it.

The idea of Squiggle is to complete a continuous line from the top left-hand corner of the board to the bottom right-hand corner, or to force your opponent off the edge of the board.

All the player is required to do is input the letter of the piece he/she wishes to place at the end of the line and the computer will do the rest.

As the first piece is placed to the right of the start square placing piece Y will automatically lose the player the game.

A running score is kept of how many games each player has won and if different players want to play the names can be changed and the scores reset.

## CHARACTER DESIGNER

◆ RA Mason • CBM-64  
• Alton, Hampshire

This is a utility program to help in the design of a new character set.

It uses all eight sprites,

an interrupt routine to give three character sets on the screen at once, several short machine-code routines, and allows for saving and loading of character sets.

There are three choices at the start of the program, to copy all the Commodore characters

and then customise them, to start with a blank set, or to retain the set already in memory — the memory area used for the new characters is 12288 — 16384 or \$3000 — \$4000.

The section of the character set which may be re-designed is the alpha-numeric area of

upper/lower case, a total of 128 characters.

As the character is designed the corresponding character on screen is changed. The green set is to select the symbol to be changed, the black set beneath is the new set. The program requires the use of a

(continued on next page)

# File

(continued from previous page)

joystick in port two.

Once the new set has been saved to tape or disc it may be loaded into any future program by LOAD "name",device,1. As the new

set is in the area normally used by Basic it must be protected by POKE52,48:POKE56,58. This will reduce the amount of memory available to the Basic user. To switch the

Commodore set out and the new set in the following command is necessary: POKE53272,28 then select upper/lower case by CHR\$(14) or pressing Commodore/Shift

keys.

I advise saving the program after typing it in as the program relies heavily on pokes, and just one mistake might cause a crash if run.

## Character designer.

# Beyond Your Wildest Dreams

An amazing new concept in software presentation, Electric Dreams will bring you two exciting games in one double size cassette package at the superb value for money price of **ONLY £9.95 on cassette and £12.95 on disk.**

Some of the world's most ingenious minds will be recruited to bring you entertainment and excitement beyond your wildest dreams.

Buy this title as the first of many to complete your range of Electric Dreams.

Digital dexterity and devious deduction are only two of the skills you'll require when you take on the nasty bad men in these two episodes from the world's most intriguing espionage story.

Spy's Demise

Spy Strikes Back

**Available on Commodore 64 and Atari**

THE ULTIMATE UTILITY FOR THE BBC MICRO

# SPEECH!

NO HARDWARE  
REQUIRED

At last, speech synthesis at a price you can afford. SPEECH! works entirely in software, taking up only 7K of RAM: no hardware whatsoever is required. Unlike other systems, SPEECH! has an unlimited vocabulary: it will say anything you want it to, and is simplicity itself to use. Simply type in: **"SAY I am a talking computer, as easy to use as 1 2 3..."** and the computer speaks.

Adding a question mark to the end of a word pushes the pitch up ("SAY How are you?") and a full stop pushes it down ("SAY I am really unhappy.") You can even change the overall pitch by using the "PITCH" command.

SPEECH! has a built-in parser which translates English words into 'phonemes' or speech particles. There are 45 different phonemes, and 8 different pitch settings for vowel sounds. These phonemes can be used directly by using the "SPEAK" command (e.g. "SPEAK HEH4LOW4"), so stress or intonation can easily be added wherever desired. You can even say foreign languages.

Hear SPEECH! for yourself in the loader programs of REPTON 2 and CITADEL.

Every copy of SPEECH! comes complete with 5 programs:

- SPEECH! — the 7K program
- DEMO — shows off all the features
- SPELL — a simple educational program
- SAYFILE — says WORDWISE, VIEW files etc.
- RELOCATE — moves SPEECH! around in memory, onto Sideways RAM, etc.

Applications in:

- games      • business
- education      • utilities

*Previously, to get this quality of speech you would have had to pay at least £30. SPEECH! costs only £9.95 on cassette or £11.95 on disc.*

ATARI

64

The Gates of Apshai loom before you. Many adventurers have stood here and pondered their fate. Will you plunder the grand treasures of the Apshai priests? And live to learn the secret of the Sphinx? Did the wily Innkeeper wheedle his profit from your meagre purse? Or do you go forth equipped with the finest swords and armour leaving him muttering oaths and swearing you stole the food from the mouths of his babies?

Once inside the Temple you know why the Legends of Apshai

speak of Magic. You will need more than a character of strength and intelligence and the keen nose of intuition to overcome the evil and power of the Curse of Ra. The monsters roam about — Zombies, Ghouls and the terrifying minions of Apshai the Insect God. Giant mosquitos, wasps, ants and beetles suddenly attack, biting and clawing. This my friend is adventure — classic adventure from the Dunjon Masters at Epyx. Welcome to the Temple of Apshai Trilogy...you're just in time for lunch!

# THE TEMPLE OF APSHAI TRILOGY

- The Complete Temple of Apshai Trilogy: Temple of Apshai, The Upper Reaches of Apshai and The Curse of Ra.
- 12 Levels, 568 Rooms With 37 Terrifying Monsters!
- New Graphics, Enhanced Sounds, Faster Play! ► One Player.
- Classic Cast of Characters — The Inn-keeper, The Dwarf, The Magic User and The Cleric and more!

\* Screens from Commodore 64 version of game

COMPUTER SOFTWARE

# "Products worth shouting about from Cumana!"

## DISK DRIVES

Cumana, Europe's leading supplier of floppy disk drives and the first manufacturer to win BEAB approval to BS415 for electrical safety, now have an even wider product range than ever before – whether for the BBC, Spectrum, QL, Amstrad, Apple, Enterprise, Dragon, Tandy, Electron, Oric Atmos, Cumana have the best quality drives available.

## UPGRADE

But Cumana's range now covers much more than just disk drives; there's a growing range of exciting new

computer products designed to uprate and extend the uses of the most popular micros. Products like the Cumana Upgrade – a major expansion to the BBC and QL micros, enabling real-time minicomputer performance with .5Mb of RAM and high level applications software. 10Mb and 20Mb Winchester systems are available for both the QL and BBC using Upgrade.

## TOUCH PAD

There's the new, improved Touch Pad graphic input device with powerful Screen Artist software – an infinite variety of graphic design or artistic

uses for the home, business or education, taking you another step towards the professional league. Ask us about the new Touch Pad library!

## SOFTWARE

Also new and exclusive to Cumana is Pocket Wordstar – a full implementation of Wordstar & Mailmerge, the industry standard word processing package. Thanks to Cumana, it's now available to you, at a price within every users pocket.

Cumana the very best name in memory.

# "And so are the prices!"

## CUMANA COMPUTER PERIPHERALS – THE VERY BEST QUALITY AT THE MOST COMPETITIVE PRICES.

3", 3½" + 5¼" disk drives for the BBC, Spectrum, QL, Dragon, Apple, Amstrad, Enterprise, Electron, Tandy, Oric Atmos prices from £89.95 to £255.95 inc. VAT.

Cumana Upgrade including software suite for the BBC + QL from £795.95.

QFS (double density disk interface for BBC-B) £79.95.

Cumana Touch Pad only £49.95 inc. VAT.

Additional Touch Pad Software from £4.95.

Pocket Wordstar £119.00.

5¼" double sided double density diskettes (10) £13.95.

3½" double sided double density diskettes (10) £29.95.

Cumana disk interface for the Electron (double density) £74.95.

All prices are inclusive of VAT.

- \* Prints any portion of the screen.
- \* Up to the full 24 lines!
- \* Single, double or quad density.
- \* Nine widths and three heights of output.
- \* Plain black and white copy.
- \* Or shaded colour representation.
- \* Tab to any position on paper.
- \* Many more features!

Price £7.50 cassette, £9.00 cartridge.

Bradway Software (YC), 33 Conalan Avenue, Sheffield S17 4PG

### WDSOFTWARE

#### FOR THE QL

Utilities (3rd ed) (base £5.50)  
PRINT 60-file Directory or view it on one screen, one-  
key LOAD, COPY or PRINT 60 files with one key  
(allows for namesakes). Multiple FORMATTING to  
prevent corrupting by stretching of tape. TOOLKIT to  
give dated, numbered modules in program  
development. PRUNE old files to release space (one  
key DELETES a file). Full instructions in QUIL file. Use  
up to 6 EXTRA MICRODRIVES (add on your Spectrum  
ones!)

WD Utilities for CST Q-Discs (2nd ed) (base £6)  
As above, with extra utilities; 100-file capacity, for  
CST/Compartments disc systems AND up to four extra  
microdrives. User-friendly timesavers. Update 1st ed  
for 25p (£1.25 outside Europe).

Ref. QL (5th ed) (base £5)  
900 useful QL references in an ARCHIVE file (too long  
to share cartridge with other software). Also ARCHIVE  
2 search program.

**FOR SPECTRUM/QL/BBC/ELECTRON**  
WD Morse Tutor (base £4)  
From absolute beginner to beyond RYA and Amateur  
Radio receiving. Adjust pitch. Set speed to your test  
level (4-18 wpm). Learn from single characters, via  
groups with wide spaces to random sentences;  
decrease spacing to normal. Write down what you  
hear, then CHECK on Screen or Printer (or speech for  
Spectrum with Currah Microspeech). Also own  
message, random figures, letters or mixed.

**FOR SPECTRUM 48K**  
Wordfinder (microdrive/disc only) (base £6)  
For CHEATING at crosswords. Finds m-s-s-g letters,  
solves anagrams of single words. 13,000 word  
vocabulary. 10-letter word ending in ATE? No  
problem!  
Tradewind (base £4)  
Sailing/trading strategy game with graphic surprises.  
Jersey Quest (base £4)  
Test adventure with Bergerac and the Dragon. Based  
on genuine folklore of the Island of Jersey. (Not on  
SPDOS)

**PRICES** Incl. Europe postage — elsewhere add £1.  
Cassettes — base price only. QL or Spectrum Microdrives —  
£2/cartridge plus base price; 5 1/4" floppies £2, 3 1/2" floppies  
£4 plus base (SPDOS/Beta/OPUS discs for Spectrum). State  
required format when ordering. ACCESS/Mastercard welcome  
Inver £4.

Two or more programs on one medium — pay medium  
+ base, e.g. WD Utilities and Morse on microdrive  
for £11.50, but IMPOSSIBLE to mix QL/BBC/Spectrum  
programs on one medium. Send YOUR cartridge and  
base price, but FORMAT it FIRST six times like us for  
reliability.

**WDSOFTWARE (YC),**  
Hilltop, St Mary, Jersey  
Tel: (0534) 81392

708

### SUSS BOX

£49.95  
+ VAT  
incl. carriage  
CWO please  
packet size

The DUPLEX SUSS-BOX has been designed to  
enable the less skilled computer user to have a  
better understanding of the correct working  
connection between a computer and a peripherals,  
such as a printer. This is achieved by using the  
commonly used signals (wires) of the RS232C  
serial data cable specification, a matrix-block and  
special connector pins. By inserting the connector  
pins into the SUSS-BOX's matrix-block at the axis  
of two incoming signals the user can quickly  
establish a firm connection. The signals are  
routed into the SUSS-BOX by two 25 way D  
type connectors; 1x female, 1x male. The SUSS-  
BOX also provides a lamp for each signal to  
show its condition when connected in line, ie  
high or low. SUSS-ADAPTOR & CABLES  
available.

### OCTET/HERMIT

Typewriter Interfaces

ADD ON TO THE  
OLIVETTI ET121  
OR HERMES TT21  
ELECTRONIC  
TYPEWRITER  
AND HAVE THE  
BENEFITS OF  
THESE FEATURES

• Ideal for  
TELECOM GOLD

- A DAISY WHEEL PRINTER for your computer
- A COMPUTER TERMINAL (True KSR)
- A TELEX TERMINAL using the Duplex DIAL-  
TEXT modems

## BEAT THE DUST PROBLEM

The Mini-Vac is a vacuum cleaner in miniature. It fits in the hand and comprises a chrome plated metal body, which contains a surprisingly powerful motor driven by a PP3 size battery (not included). There is a choice of two tubular nozzles on which can be fitted a large or a small soft bristle brush and a dust collection bag with Velcro flap for emptying. When used as a vacuum cleaner it was found to be ideal for dust removal from the inside of computers and peripherals, or around keyboard and screens. By removing the dust bag and putting one of the nozzles in its place it can also be used for blowing.

Has many other uses: for blowing or removing dust from stereo and video equipment, cameras, lenses and enlargers.

**OFFER PRICE £8.99 incl. 15% Vat and UK p&p**

Order from: Your Computer Mini-Vac Offer, 48 Beauchamp Place, London SW3 1NX using coupon or copy or plain paper. Allow up to 28 days for delivery. UK addresses only. Closing date 31.12.85. Cheques should be made payable to Your Computer Offers. If Vat receipt is required, it is essential to say so when ordering.

## ...the Duraplug Mains Filter Adaptor...

## ...the end of the line for spikes!

The Duraplug Mains Filter Adaptor is an essential, yet inexpensive, item for any user of sensitive electronic equipment in the office or home. Plugged into an ordinary wall socket it provides adequate protection against distortions in the mains supply, 'laundering' noise and spikes out of the current and preventing digital circuits from misbehaving.
