THE AGE OF THE R.A.T

CONVENTIONAL JOYSTICKS ARE DEAD!

The Cheetah Remote Action Transmitter is the most sophisticated computer controller available.

It has these features:

- Infra Red transmission – so there are no leads trailing across the living room. Just sit back in your chair up to 30 feet from your machine.
- Touch control – no moving parts, extremely fast, long life.
- No extra software required.
- Can be used with all Cheetah RAT/Kempston compatible software.
- Fits comfortably in your hand for long play periods.
- Comes complete with receiver/interface unit which simply plugs into the rear of your Spectrum.
- Compatible with all Sinclair/Cheetah peripherals via the rear edge connector.

Simply incredible at £29.95 including VAT and p & p.

Dealer enquiries welcome. Export orders at no extra cost.

Send cheque/p.o now to:

Cheetah Marketing Ltd. (Dept. YS), 24 Ray Street, London EC1R 3DJ. phone 01-833 4909

Cheetah products are also available from branches of

John Menzies  **WHSMITH**  **Rumbelows**
and all good computer shops.

OUT TO LAUNCH!

If you're bored with software that repeatedly crashes through loading errors, never fear — Sir Clive has now introduced hardware that can be crashed!

The Sinclair C5 is claimed to be "a new power in personal transport" and the "vehicle of the future". Its actual constituent parts are a 'squirrel-cage' electric motor (the basic design of which originated in the late nineteenth century and has been used in washing machines ever since!), a lead-acid battery (of similarly venerable antecedents), a welded pressed-steel frame (not conceptually unadjacent to that

Roger Willis meets the C5 — "Honest guv, the rubber band came off in my hands!"

employed in any early '50s NSU motorcycle) and, oh yes, bodywork that profiles as the largest polypropylene injection moulding ever mass-produced.

The Sinclair C5 will retail at only £399, which is the same price as the Sinclair QL, but waiting for the emergence of an 'infinite lives' POKE

may well be worthwhile before considering purchase. Expert criticisms of its safety and stability abound; at its launch, motorcycle stunt rider and leading road safety campaigner Dave Taylor was impolitely requested to desist from demonstrating the C5's tendency to climb on to two wheels instead of its usual three (before falling over completely!).

Fourteen years may be old enough to drive a Sinclair C5 on the main roads without suitable safety measures (such as helmet, safety belt and so on) . . . but it could also be old enough to die in one!

THE SOUND OF MUSIC

The Speccy barks back! (Bach's back?)

Have you ever wanted to play Bach's *Fugue in D minor* to the merry sound of a dog barking? Well, now you can do it — with Datel's clever

add-on, the Digital Sound Sampler.

Although slightly larger versions of the device have been around the music

industry for many years, it's now been adapted to work on the Speccy system. The Digital Sound Sampler allows you to record a noise — any noise — and then play back the digital recording in any way you wish . . . either as it was recorded or backwards, at a different pitch, expanded. In fact, you can do almost anything!

With a price tag of £49.99 it's not too far out of the range of your average Spectrum user. If you can't wait for a full review in *Your Spectrum*, then give Datel a ring on (0782) 273815.

Good news for all Kempston joystick and Centronics interface owners. The trouble used to be that if you had a replacement keyboard, there wasn't enough clearance to plug in the joystick itself. So, the company has produced this flexible extender cable at £7.95 which moves the interface away from the back of the keyboard. Give Kempston a buzz on (0234) 852997.

THE POWER OF CASH

Well, it had to happen. The music and micro industries are far too close together for the two tribes not to mix with each other. And so, following negotiations between Ocean and Island

Records, Liverpool hit band *Frankie Goes To Hollywood* will get its very own computer game.

Ocean can be contacted on 061-832 6633 for the Frankie fans out there.

Relax . . . Frankie's gone to Ocean.

DO YOU WANT TO KNOW A SECRET?

Purchasers of Design Designs' program *Dark Star* are getting a bonus in the shape of an extra game on the tape called *Spectacle*. Comprising some 40K of code, the company aren't letting users run the program, as a password must be typed in before it will start.

The encryption method used is a fairly standard one whereby the text of the password entered is used to modify the code before it's run. This means that the password doesn't have to be stored within the code.

Bearing in mind that the password is about 26 characters in length, there could be a lot of

worn out tape decks around if Design Design don't come up with the goods fairly soon.

Dark Star's dark secret . . .

QUICKSILVA'S MOLE

Author of smash software hits like *Monty Mole* and *Potty Pigeon*, Tony Crowther, has signed up with Quicksilva to produce two games for 1985.

Tony's not actually leaving his company, Wizard Developments, but he and his partner Roger Taylor are passing on distribution rights to QS for their next two earth-shattering games. Unfortunately, their first game is being written for the Commie 64, but if you keep everything

crossed the next one's bound to be something for the Speccy.

If you're into amazing graphics and you want Tony Crowther and Roger Taylor writing for your Spectrum, give QS a ring on (0703) 26515 and tell 'em.

Meanwhile, it's a warm cheerio to original QS members Caroline Hayon and Mark Eyles — they've decided to move on to pastures new. Let's just hope that the new-styled Quicksilva is as good as the old!

Wizard Developments at Quicksilva?

PRINTING IN THE PINK

Floyd 40 — listing to 32 or 40 columns.

A new Dublin-based company called Floyd has recently launched their first ever product for the Spectrum; an intelligent, Alphacom-type, thermal printer.

Called the Floyd 40 and priced at £79.95, it's obviously going to be a direct competitor to the established

Alphacom 32.

The difference between the Floyd 40 and Alphacom 32 are numerous. Though the Floyd 40 can cope with all the usual stuff like screen copy and software on ROM, it also offers intelligence with three different print modes including

Graphics, Adjust and List. It can also print double height, double width and inverted.

On top of all these apparently thrilling features it can also list at either 32 or 40 columns.

For more information, drop Floyd a line at 153 Merriion Road, Dublin 4, Ireland.

HACKING AWAY

All the POKEs and more! Send your hacking hints to Andrew Pennell, Hacking Away, Your Spectrum, 14 Rathbone Place, London W1P 1DE.

Welcome to this month's hacking column — and have we got some strange POKEs for you! I'll start off with *Mr Wimpy* from Ocean. **Peter Ball** wrote in with POKE 33501,0 to skip the first screen, or alternatively you can POKE 33501 with a one

or a two to make the game a little harder to complete. You can also POKE 33509 with the required number of lives (though beware of high numbers corrupting the screen display), or POKE 33693,0 for more straightforward infinite lives. You can also POKE 33721 with the number of peppers required, or POKE 43105 for unlimited peppers (this has to be one of the strangest POKEs ever!).

A couple of months ago I described the annoying aspect of Ultimate's loading programs, in that they include all the important bits in line number zero; this meant you had to duplicate the line to make them work. Well, I had loads of letters telling me that POKE 23756,1 changes it into line 1 (which I must admit I did know). Trouble is, it doesn't work if you've invested in an Interface 1 unit. Lucky (?) Interface 1 owners should resort to:

POKE (1+PEEK 23635+256*PEEK 23636),1

Which is slightly more long-winded!

Like everyone else, I've had it up to here with *Jet Set Willy*. But it's U-turn time, and all because of a letter from **Mike Smith**. To get the mysterious object in the First Landing, he supplied probably the best JSW POKEs I've seen in a long time, namely POKE 56350,0; POKE 56358,0;

POKE 56365,85. What these fiendishly simple POKEs do is add a platform so that you can go to the cross and get the object. Now, where was I? Oh yes, I've had it up to here with JSW POKEs.

Another interesting letter provided an infinite lives POKE for *Interstella's Defenda* — POKE 35730,52. This gives you 52 lives, but every time you get killed it gives you another life! Whoever wrote the letter described him/herself as 'The Led Zeppelin and RML380Z Freak from Handsworth'. Well, we all know *Led Zep*, but who's heard of 'RML380Z' — they must be a Brummy band!

On the international front, **Bjarne Nielsen** of Denmark sent in a 100-lives POKE for *Moon Alert* — POKE 42404,255. Nice to hear from you Bjarne... and nice too to receive my first letter from a hacker of the fairer sex. **Susan Bowman** wrote in to ask for general help on hacking. Well, Susan, it's a bit difficult to give you a lot of help in this column, but I hope you've read carefully the two YS articles by Terry Bulfib on codebusting... there's a trick or two in there that just might be what you're looking for.

In YS issue 9, I mentioned the 'Hi Chris' phenomena in *Cavalon* — all you have to do is hold down all the keys and the message 'Hi Chris' pops

up on-screen. Hah, I'd only scratched the surface! If you wait until the man is stood in the maze and then type 'JSWILLY', you can also get the message... then, if you want to press keys '1' to '6', you can start from any of the screens. This little gem was supplied by someone living in Cheshire who wished to be known only as 'Gremlin'. (It seems that complete lunacy is rapidly becoming a prerequisite for contributors to *Hacking Away*!) Of course, you could always take **Sean Gorden's** advice and just hold down keys 'D', 'F', 'R', 'T', 'I', 'K' and 'L' to get the message on-screen.

Nigel Osborn wrote in with POKEs for PPS's *Maze Death Race*, to prevent it crashing with Interface 1 connected. The method he subscribes to is to POKE a zero into the following locations: 26689-90, 26730-1 and 26771-2. **Paul Hargreaves** described his first attempts at hacking into *Horace Goes Skiing* to find an 'infinite money' POKE. Needless to say, he was unsuccessful, but he did find a POKE that removes all the traffic from that very busy road — and that's POKE 29270,0. He also reveals the code words for **Carnell's The Crypt**, which are numbered one to six... they are 'Carnell', 'Software', 'beats', 'all', 'the' and 'others'. Hmm, very modest!

VINTAGE STUFF

Ian Hoare, professional freelance chef and creator of Bug Byte's *Cook Book* series, is now working for Peter Dominic writing a program to help you make the critical choice of which wine to drink with your meals.

The program, called *Vino File*, is being marketed by Peter Dominic wine merchants and will be sold through some 460 retail outlets throughout the UK.

Each selected store fitted with a Spectrum+ will also have an Alphacom 32 printer so that your selection of wines can be taken to the counter without you stammering over the odd pronunciation.

A price has yet to be set for the package, but no doubt if you ask the assistants in the Orange Street branch of Peter Dominic in London and ply them with a little Mouton Rouge '52, they'll sell you the package at a nominal fee.

Vino File's Ian Hoare.

FLAT SCREEN SPECTRUM?

Following Sinclair Research's manic secrecy over the Spectrum+, it's somewhat surprising to already be hearing rumours about a second Spectrum derivative. But with a possible release date of mid-1985, this version of the machine is planned to be fully portable and compatible with all existing Spectrum software.

The low-down on this new micro is that it's aimed at the Spectrum owner who can't bear to be without it at any time and, in particular, the business user. So far unnamed, it's supposed that it will incorporate Sinclair Research Flat Screen technology, though it'll no doubt plug into a normal TV. Reports are that Sinclair Research is currently devoting much of its energy towards developing the Flat Screen TV into some-

thing suitable for it — say about five by six inches. The reincarnation may also have a built-in Microdrive, although it's not yet clear whether it will include all the features of the Interface 1 (RS232 interface, networking facility, and so on).

Current speculation seems to suggest that the new machine will resemble the American version of the Spectrum, incorporating a similar keyboard, but with hard-topped keys; the Microdrive replaces the cartridge slot on the right-hand side of the American Timex 2000. It's presumed that the flat screen will fold down over the keyboard, making it ideally suitable for carrying around in a briefcase.

The memory will consist of new CMOS chips which use very little power, thus allowing the machine to

Would you buy an electric car from this man?

run for long periods on the batteries; the battery power source will probably be the type already used in the Flat Screen TV, though it's not known if these will be rechargeable.

The price of the machine is predicted to be around £300. As Nigel Searle, Sinclair Research MD, stated in an interview with *YS* late last year, any business machine produced by the company would bear the QL logo — it will be interesting to see how the new micro fares. To QL or not QL?

AN OLD-FASHIONED EMPIRE

Imperial Software has come up with an altogether more subtle, sophisticated and, one could say, satisfying path to galactic domination.

Empires is a game for three players plus a gamemaster (Umpire): there's also an expansion kit, allowing up to three more players, called *The Umpire Strikes Back*. It's not a simple *Kingdoms* variant where you have to build and maintain fleets, there are many other factors involved, entailing lots of forward planning.

The game certainly seems intriguing — but just to find out for sure, we've set some crazed megalomaniacs at each others throats in a play test. Further reports will follow.

HARD FACTS

DIY demon Stephen Adams offers advice on your hardware hassles — contact him at Hard Facts, Your Spectrum, 14 Rathbone Place, London W1P 1DE.

First of all, thank you for all the letters you've sent into the *YS* hardware hacking column. What I'll try to do is to answer as many questions as I can that'll help others out there solve their own problems. If your Spectrum looks really sick, the best place for it will be in a jiffy bag winging its way back to its manufacturer or a recommended repair outfit.

One of the first letters I received was from Marc Aldrich of Cheadle. His first problem occurred when he got his Spectrum power supply back from a local repair shop, only to find that a heat resistor had been bridged over with a single piece of insulation wire.

Well, quite simply, your power supply now sounds like a very dangerous piece of kit! If you want to put a new fuse in on your own, look to CPC (Sinclair Research's distributor for spares) at 194-200 North Road, Preston, Lancs PR1 1YP (Tel. 0772 555034).

Marc's other hassle involved his Microdrives and Interface 1 device — whenever he plugs the PSU in, either the Microdrive whirrs into action and refuses to stop or as soon as an Interface 1 command is used, the screen's border is filled with coloured flashing squares. Hmm... it sounds like you've got gremlins in your 'power-up-on-reset' circuit. Try speeding it up with a 10KOhm resistor from the +5 volts line to the RESET line at the back of the computer. Better still get in touch with TV Services of Cambridge, French's Road, Cambridge CB4 3NP (Tel. 0223 311371) and get them to do it for you.

David and Craig Allen from Swinton wrote in to say that they're having problems loading and saving programs using a Philips TX 14-inch black and white TV; they're especially confused as all seems OK once the set's turned off.

Well, briefly, the trouble's inside your TV; it's somehow connecting the zero volts line

of the computer to one side of the mains supply, which is then feeding into the cassette recorder and ruining the tapes. Yes, you've guessed — this is very dangerous, and should be fixed immediately!

Our last letter comes from someone who obviously wants to go through life anonymously, if his/her signature is anything to go by... The problem seems to be that, if the Spectrum is used in tandem with a printer, Interface 1 and Microdrive, as well as a VTX 5000 modem, whenever a Prestel page is flashed up on-screen — it vanishes; all that's left is a blue border and screenful of fancy graphics.

It does sound as if you might be overloading the Spectrum power supply unit, if you're running the Microdrive, printer and modem all at the same time. However, it's worth checking to see if there's a loose connection between the Interface 1, Spectrum and/or the VTX 5000.

That's enough for this month... but if there's anything 'funny' happening inside your Spectrum or any of its associated peripherals and you suspect it could be hardware, don't hesitate to drop a line at Hard Facts, *Your Spectrum*, 14 Rathbone Place, London W1P 1DE.

The New Protocol4 interface for the ZX Spectrum brings you game control customising in a way that no other interface can. It accepts all commercially standard joysticks and is compatible with ALL Spectrum software. Operates like fixed option interfaces or can be fully hardware programmed. Infinite flexibility is achieved by the unique "CustomCard" System. CustomCards are easily programmed to suit all types of games. Protocol4 comes with 3 pre-programmed cards and allows operation with Kempston, AGF/Protek, Sinclair joystick 1 and 2 options as well as 2 programmable CustomCards and 10 Quick Reference Programming Cards. Simply clip in programmed card for immediate customised control.

Other exciting features include:

- ★ Automatic 8 direction control
- ★ Guaranteed conflict-free with other peripherals
- ★ Reset Button to clear memory between games
- ★ Fully guaranteed for 18 months
- ★ No power-down programming loss
- ★ Keyboard remains fully operative
- ★ Complete with full instructions

Also from the AGF Hardware range:

PAPERDATA

MACHINE CODE SPRITES AND GRAPHICS

John Durst/Sunshine Publications

Author John Durst tells us right from the start that the object of the exercise is to discuss the Spectrum display, machine code techniques and animated sprites; nothing covered in this book calls for the addition of peripherals.

Chapter one goes into all the things you'll need to know to help you program well in machine code on the Spectrum.

ROM routines have an important part to play in machine code programming and Durst explains the Save routine thoroughly, detailing how the header information is stored and how to play various tricks with it.

In fact, as you can tell from the title, graphics play an important part in Durst's book. He talks about the character set and provides us with various routines to make it appear twice, four and even eight times its normal size, and others to make it bold, extra tall and extra wide. There are still more routines which turn characters on either side or upside down!

Soon, we're getting

very in-depth about sprites and animation. The first four sprite routines are none too impressive, but they do get better. The author talks of the Matte process — which does get a little confusing — but despite all that, at the end of it you're left with a pretty good sprite system.

Here, and not a moment too soon, Durst adds some colour to the subject in the form of a number of attribute handling routines.

The last few chapters give details on interrupt routines and what can be done with them, plus a tutorial on how to produce sound effects. They also set out to explain how to write efficient machine code.

For £6.95, this is one of the best attempts at the subject I've seen so far.

Tony Samuels

COMPETITION CHEETAHS

At last! The results of our *extremely* popular Cheetah competition can be revealed. Thanks to all of you who took part and congratulations to all those who won a prize. For those that didn't — well unlucky! But there's always another time...

On to the winners. First prize winners in all three age groups receive a Cheetah RAT and they are: **Craig Smith**, Sheffield; **N Hopkins**, Kemnay; **Chris Melton**, Whitby; **Paul Rowland**, Coldwaltham; **G Officer**, Hartlepool; and **MG Morris**, Shirley.

Second prize winners each receive a Cheetah Sweet Talker and they are: **Joanne Tock**, Selby; **Vincent Potter**, Yarm; **George Leys**, Aberdeen; **Daren Chandisingh**, Lancaster; **D Hubbard**, Cleckheaton; and **Morag Paskins**, Chichester.

Our third prize winners receive copies of the latest games software from CheetahSoft — *Perils of Bear*, *George*, *Dragon Fire*, and *MoonSweeper*. They are: **Stuart Masters**, Upminster; **Peter Wilman**, Wigan; **Philip Asprey**, Solihull; **Christopher Biggs**, Teignmouth; **Rev RF Campbell**, Newcastleton; and **M Baker**, Bristol.

Finally, 14 runners-up in each age group

receive either *Conquest* or *3D Bat Attack*. They are: **Ian Dogget**, Ipswich; **Catherine Alexander**, Port Talbot; **Christopher Johnson**, Milton Keynes; **Andrew Godfrey**, Lowestoft; **Paul Houlton**, St Helens; **Michael Durkin**, Droitwich; **Kevin McCarthey**, Langholm; **Wayne Henry**, Brixton; **Alison Wainright**, St Helens; **David Parry**, Liverpool; **J Ledbrook**, Dawlish; **Paul Lockett**, Altrincham; **Paul Stewart**, Glasgow; **Stefan Tock**, North Duffield; **David Walker**, Liverpool; **Glen Sunter**, Bolton; **M Mead**, Bourne; **S Atkins**, Welling; **Adrian Kay**, Chesterfield; **Martin Rigden**, Whitstable; **J Baron**, Abingdon; **Stephen Tiffant**, Leeds; **Nick Wood**, Middlesborough; **Simon Crowfoot**, Fakenham; **Roberto Paolacci**, Derby; **Darren Hall**, Stoke-on-Trent; **Peter Burrows**, Middlesborough; **K Croudace**, Wymondham; **Valerie Day**, Walthamstow; **DJ Goodhand**, Warley; **S Samways**, Lincoln; **GA Smith**, Seaford; **Barry Burrows**, Birmingham; **D Sheppard**, Southend; **P Camp**, Oxford; **M Toms**, Walsall; **Miles Osborne**, London; **TB Priestly**, Manchester; **James Gouck**, IOW; **K Pound**, Penn;

FRONTLINES

P Whichello, Brentwood; and **Helen Zuchowska**, Birmingham.

All the prize-winners will be receiving the goodies through the post very soon. And to all of you who didn't manage to win anything in the compo, Cheetah have very generously offered RATs to all *Your Spectrum* readers at only £25 each! Nice one Cheetah!

Cheetah's RAT.

CONCURRENT AFFAIRS

For all the news and views on the QL market, dispell the rumours with John Torofex.

AT SIXES AT SEVENS

Dissatisfied QLUB members who write to Sinclair Research complaining about their membership not being worth £35 are being informed that instead of a mere six issues of *QLUB News*, they'll now receive seven issues in their first year of membership.

Sinclair Research will have to get its collective finger out as this means its next five issues will have to be cobbled together in the first six months of 1985.

HARD LINES

Quest still seem to be having difficulties getting its disk drives to work with the QL. The company had a QL with a disk drive attached at Compec last November, allegedly running CP/M 68K. However, as no-one was allowed to touch the QL, we've still to wait for the device itself to

find out if the rumours were true that it was really running CP/M off the Microdrives, and the disk drive was just for show.

Simplex Data, although advertising a rather strange-looking memory expansion unit (the board depicted consisted of a chopped-up QL PCB, stuck together with sticky tape), is now shipping units to customers. But the units bear no resemblance whatsoever to the ones advertised — but they seem to work and that's the important thing!

A 'prominent IBM lease-broker' (whatever that is) PCML will shortly be marketing a range of interesting add-ons, rejoicing in the name QL Plus. First off the stocks will be a Z80

second processor and disk interface, which will enable users to run 'proper' CP/M on their QL (and not the unpopular CP/M 68K favoured by Quest). Of course, this means that users will be able to use *WordStar* (instead of the slow and bug-ridden *Quill*) although the cost of the Z80 and disk interface, together with *WordStar*, will add up to more than the cost of the original QL!

And, getting back to disks, CST has announced its own disk interface. Not only that, but the company's decided that the few square inches of unoccupied PC board will contain a couple of 64K RAMs providing a low-cost memory expansion option. Sounds good...

FRONTLINES

The winners of Gardener Merchant's childrens painting competition all received a Spectrum and Six Pack amongst their prizes. The paintings have been used in GM's 1985 calendar entitled 'Through The Eyes Of A Child', to be sold in aid of the Save The Children Fund. Pictured here are old friend, Julian Goldsmith — Sinclair's PR man — and Mark Gore, one of the winners in the compo. But we still haven't quite worked out who the geezer in the beard is. Answers on a postcard please...

BUSTING MAKES MAC FEEL GOOD

Macsen Software and Central Television have now finished final arrangements for the release of a computer game based around the TV series *Blockbusters*.

The game itself consists of two players competing with each other to answer general questions selected from hundreds stored on cassette. Each correct answer extends the successful competitor's path across an on-screen

matrix of four-by-four hexagons. The player who completes this path first wins that round...and the player who wins most rounds is the winner of the game. Get the picture?

Players can set the number of rounds and the level of difficulty; the higher the difficulty level, the shorter the time allowed for answers by the on-screen clock. There's also a sound on/off

feature.

Blockbusters is also supported by the follow-up tape, *Questionmaster* — this allows the user to create a database of questions to be used within *Blockbusters*. *Blockbusters* is priced at £7.95 and *Questionmaster* is £5.95. If you're interested, give Macsen Software a ring on (0267) 232508. (Who ya gonna call? Ed.) (*Blockbusters!! T.P.*)

GHOST OF CHRISTMAS PAST?

Ocean Software has just released a new game called *Gift From The Gods*, written especially for it by Denton Designs. But could it be that this is the first program to come out of the Imagine sell-out? John Gibson, the programmer, was at Imagine, and the line-up from Denton Designs looks just like an Imagine group photo — so who's to say that the whispers going around the industry telling us that this is an aborted Imagine game aren't true?

The game itself is a multi-screen affair and

nothing to get too excited over. Yes, it's been nicely designed, but the object of this type of game is now rather old hat.

The piccy shows the team responsible for the game. From left to right are: John Gibson, the programmer; graphics specialist Karen Davis; Steve Cane — also on graphics; systems designer Kenny Everitt (*I bet he gets some stick, Ed.*) and computer graphics artist, Ally Noble.

Gift From The Gods is available now from usual outlets at £9.95. Ocean can be contacted on 061-832 6633.

Mere mortals from Ocean Software!

FROM THE H/P

I may have got my own direct telephone line this month, but I still find myself swapping between the office switchboard line and my new phone. Let's get it straight — the YS Helpline phone number is now 01-636 2416, on Wednesdays and Fridays only please!

Anyway, on to some of the callers. Kicking off with a call from John Press of Stratford who, after explaining that he'd only just mastered Basic, wanted to know why we

printed assembler listings — and, for that matter, what were assembler listings? He couldn't type them into his Speccy and was at a complete loss as to what they were for.

Well, John, these listings are included for those readers who've got pieces of software called assemblers. To put it simply, these are a sort of compiler that work in a language called assembly language. Now, assembly language is the standard form for listing machine code; it isn't actually machine code itself, because the computer has no idea what all those little letters and symbols mean, but each language instruction (or mnemonic, as the jargon goes) has its own corresponding Z80 machine code instruction. If you've got an assembler program, then you can feed the listing (called source code) into your Spectrum and the program will run through the code converting it into pure Z80 instructions.

So, why do we use all this intermediate source code instead of diving straight into pure Z80 machine code? The answer's obvious if you've ever

been faced with the pure stuff. It's just a whole bunch of binary ... and even an expert Z80 programmer would have great difficulty understanding a long list of ones and zeros.

There are also programs called disassemblers and monitors which you'll also find useful if you're contemplating becoming a programmer. But that's another story for another day ... if all you want to is to be able to type in the listings from the pages of YS, then get yourself an assembler. Packages I can recommend are one from Picturesque and Hisoft's *Devpac 3*.

If that's all gone in one ear and out the other, then give me a bell on 01-636 2416 and we'll talk about it, OK?

A subject I find recurring is a general puzzlement about which RGB monitor and interface to get for the Spectrum. Well, monitors are really a matter of personal taste and how much spare cash you happen to have lying around, but the choice of interface is very limited as there are only a handful of boards available. Personally, I'd suggest you take a good look at the one from

Adapt Electronics, 20 Starling Close, Buckhurst Hill, Essex IG9 5TN (Tel. 01-504 2840). It's well-designed, fairly cheap and I've had no problems with it ... but do check out what else is on the market — and if it's good, tell me!

I often get asked questions that seem pretty obvious to me, but then again, they don't seem so easy to answer when you get down to the nitty-gritty. A couple of people wanted to know how to enter Hex dumps when there isn't a Hex loader provided. Well, to be honest, Hex loaders are all pretty much of a muchness and in a mag like YS you'll probably find something you can alter to suit your particular application. But then again, a simple little question like that has got us all going here ... Hopefully we'll try and sort you out a universal Hex loader for the April issue.

Anyway, that's it for this month — catch you on the 'phones.

Troubleshootin' Pete

Pete's phone lines are open from 10am-1pm and 2-5pm on Wednesdays and Fridays. Ring him on 01-636 2416.

New

TEAM UP WITH FLOYD!

FLOYD 40

ON RELEASE NOW
THE FIRST SPECTRUM
COMPATIBLE PRINTER
WITH BUILT IN INTELLIGENCE

Features

Clear easy to read print • 3 print modes (see below) •
No split words • Indented printing • Inverse
printing • Double height double width • 32 or 40
characters—software selectable • Firmware program —
no loading from tape • Comprehensive instruction
manual supplied • Interface 1 & 2 compatible •
Spectrum + compatible •

The printer comes in a slim plastic case which will
complement your spectrum. It connects with the spectrum
via a 56-way ribbon cable and all connections are brought
through to the back of the printer. The printer has two
switches — one for paper feed and one for on/off line. A
roll of paper is included in the price.

1. GRAPHICS MODE—
FULL GRAPHICS CAPABILITY —
NORMAL 32 CHARACTERS PERLINE.

Full graphics capability is available
in the Graphics Mode.

SINEWAVE

2. ADJUST MODE

This is a high quality thermal printer
for the Sinclair Spectrum. It has three
modes of operation:
- the Graphics Mode,
- the Adjust Mode,
- and the List Mode.

and three special features
- double height,
- double width,
- and inverted printing.

In the Adjust Mode, the printing is
such that no split printing of words at
the end of lines occurs, and printing
is done with up to 40 characters per
line.

It is possible to mix the
double width and double
height features even within normal
text!

**Inverted printing
is also possible!**

3. LIST MODE

The List Mode allows BASIC programs to
be more easily read by indenting the
program statements from the
corresponding line numbers:

```
360 REM This is a program to plot any  
370 required trigonometric function.  
380 PLOT 0,87: DRAW 0,175  
390 INPUT S,68  
395 LET T=0  
400 FOR I=0 TO 255  
410 LET X=(I-128)*6/128: LET Y=SIN X  
420 IF ABS Y>67 THEN LET T=0: GO TO  
440  
425 IF NOT T THEN PLOT I,Y+85: LET  
430 T=1: GO TO 440  
440 DRAW I,Y-old Y  
445 LET old Y=INT (Y+.5)  
450 NEXT I  
460 RETURN
```

SPECIAL INTRODUCTORY OFFER £79.95 (+4.95 P&P)

TO: FLOYD, 153 MERRION ROAD, DUBLIN 4, IRELAND

I enclose cheque/p.o. for £ made out to FLOYD —

.....printers @ £84.90 EACH (incl p&p) =
.....boxes of 10 rolls of paper @ £12.50 =
.....rolls of paper @ £2.50 each =

RAM MAKE MORE OF YOUR SPECTRUM...

Two great new add-ons to boost the power of your Spectrum
(and Spectrum Plus).

The Ram Interface Mk.II

is Kempston
compatible. It lets
you get the best
out of your action
games, with all
the best
joysticks around

— even the
Quickshot II rapid
fire joystick. Electrify
your enemies, with real
power and lightning-fast reactions
at your fingertips.

JOYSTICK
INTERFACE MK II

£9.95

£21.95

Then there's our Spectrum Upgrade
Kit. Boost your 16K memory to a
fantastic 48K and
run all the latest
superb action
software.

SPECTRUM
UPGRADE KIT

...FOR LESS.

(Both Ram products are made to last. And fully guaranteed.)

Get some real action into your Spectrum Games today!

Simply return the coupon below to Ram Electronics (Fleet)
Ltd., Dept. YS, 106 Fleet Road, Fleet, Hampshire GU13 8PA.

TOP 20

● THE YS READER POLL

Attention all you gamers, we interrupt this magazine to bring you the chart you *know* isn't fixed.

This month reveals all sorts of odd happenings. Not only are there bags of new entries, but there's also the reappearance of lots of your favourite oldies.

Thanks to all those who sent in their votes to the *YS Top Twenty* and commiserations to everyone who didn't get to win three great software prizes. This month's winner, drawn at random from the Editor's voluminous hat, is John Williams from Hammersmith, London. Look out for the Postman, John!

So, if you want this chart to continue to reflect your *real* opinions of Spectrum software, you know what to do, don't you? Poll your votes by filling in the coupon at the bottom of the page and send it post haste to YS Charts, *Your Spectrum*, 14, Rathbone Place, London W1P 1DE.

YOUR SPECTRUM

I understand that when this chart was tested — eight out of ten owners said their Spectrums preferred it. (What? Ed.)

Send your completed coupon post haste to:

YS TOP TWENTY, YOUR SPECTRUM, 14 RATHBONE PLACE, LONDON W1P 1DE.

YS TOP TWENTY CHART

THIS MONTH	LAST MONTH	MONTHS IN CHART	GAME	COMMENTARY
1	3	9	JET SET WILLY SOFTWARE PROJECTS	BACK AT THE TOP AGAIN! WILL WILLY NEVER LEAVE THE CHARTS?
2	2	2	DALEY THOMPSON'S DECATHLON OCEAN	OLYMPIC THRILLS... WITHOUT LEAVING YOUR ARMCHAIR!
3	4	8	TRASHMAN NEW GENERATION	NO MUCKING ABOUT, TRASHMAN'S BACK — RISING UP THE CHARTS WITH A VENGEANCE.
4	1	6	SABRE WOLF ULTIMATE	ULTIMATE'S HIGHEST THIS MONTH. THAT DOESN'T SAY MUCH FOR UNDERWURLDE AND KNIGHTLORE !
5	NEW	1	UNDERWURLDE ULTIMATE	THE SEQUEL TO SABRE WOLF IS THIS MONTH'S HIGHEST NEW ENTRY. CAN IT MAKE IT TO THE TOP?
6	12	3	TLL VORTEX	FLYING HIGH IN THE CHARTS IS THIS 3D PLANE GAME. WHAT DO YOU THINK OF THE SEQUEL CYCLONE ?
7	NEW	9	MANIC MINER SOFTWARE PROJECTS	GOOD GAMES NEVER DIE, THEY JUST MAKE A CHART COMEBACK! THE ORIGINAL PLATFORM MINER WILLY.
8	NEW	1	SPLAT! INCENTIVE SOFTWARE	A REAL OLD CHESTNUT IS THIS ONE... BUT IT'S STILL A GREAT GAME!
9	NEW	1	PYJAMARAMA MIKRO-GEN	IT'S ONE LONG NIGHTMARE IN THIS PLATFORM GAME. DEFINITELY NOT FOR LIGHT SLEEPERS!
10	NEW	9	CHUCKIE EGG A 'N' F SOFTWARE	ONE OF THE EARLY MANIC MIMICS... BUT ONE OF THE BEST! COLLECT THE EGGS BEFORE THE DUCK GETS YOU...
11	NEW	1	JASPER MICROMEGA	WHAT THE FUR'S GOING ON HERE? MORE BUNGLING IN THE JUNGLE WITH JASPER.
12	NEW	3	FOOTBALL MANAGER ADDICTIVE GAMES	DRIBBLING UP THE OFFSIDE. THIS CLASSICS STILL KICKING. IT'S NOT THE EASIEST JOB TO TACKLE, THOUGH...
13	7	9	ATIC ATAC ULTIMATE	YOU'D HAVE THOUGHT SOMEONE WOULD HAVE LOCKED THIS IN THE LOFT BY NOW!
14	20	4	THE HOBBIT MELBOURNE HOUSE	MORE OF YOU SEEM TO BE GETTING THE HOBBIT HABIT.
15	NEW	1	KNIGHTLORE ULTIMATE	KNIGHTLORE AND UNDERWURLDE BATTLE IT OUT FOR THE ULTIMATE POSITION.
16	NEW	1	THE HULK ADVENTURE INTERNATIONAL	THIS ONE'S SURE TO TURN THE COMPETITION GREEN.
17	NEW	4	FULL THROTTLE MICROMEGA	ROARING BACK INTO THE CHARTS, THIS POPULAR BIKE GAME'S BACK ON THE CIRCUIT. BUT WILL IT GET INTO SECOND GEAR?
18	8	2	FIGHTER PILOT DIGITAL INTEGRATION	FIGHTING FOR A PLACE IN THE YS TOP TWENTY, THIS ONE LOOKS AS THOUGH IT'S ABOUT TO RUN OUT OF FUEL.
19	6	6	LORDS OF MIDNIGHT BEYOND	HAVE YOU LOST INTEREST IN THIS 32,000 SCREEN ADVENTURE?
20	13	9	CHEQUERED FLAG PSION	IT LOOKS LIKE THIS ONE'S NOW STUCK IN REVERSE GEAR.

New - the official Spectrum Upgrade!

Turn your Spectrum into

a Spectrum+ for just £20

- Professional full-size keyboard – includes 17 extra keys.
- Responsive typewriter-style action.
- Accepts all current Spectrum software and peripherals.
- Complete with 80-page User Guide and Companion Cassette.

Here's some exciting news for 48K Spectrum owners ... the official Spectrum Upgrade Kit.

The £20 Kit has everything you need to turn your Spectrum into the stylish new Spectrum+. You don't even need an understanding of electronics, just the ability to solder a few wires together! The leaflet in the kit gives clear, step by step instructions.

If you're not sure about doing it yourself, don't worry. Simply return your 48K Spectrum to Sinclair and for £30 we'll upgrade it for you.

Whichever you decide on, you'll also receive the new 80-page User Guide and Companion Cassette.

The bigger, better Spectrum keyboard

The Spectrum+ measures 12½" x 6". It has a large typewriter-style keyboard, with hard, moulded keys.

You'll find the new keyboard has a smooth, positive action – ideal for touch-typing, word processing, simulation programs, and extended programming sessions. Two retractable legs give a perfect typing position.

There are 58 keys in all, including 17 new keys. Programmers will be pleased to see dedicated punctuation keys, a space bar, and separate shift keys for graphics and extended modes. And a reset button allows you to clear a program from your computer's memory without disconnecting the power supply.

The official Spectrum Upgrade

Naturally your upgraded computer will accept all the peripherals in your Sinclair system - Interface 1, Microdrives and so on - as well as all

Spectrum software.

Just as important, new Spectrum software and peripherals will be designed with the Spectrum+ in mind. So the Sinclair upgrade adds stylish looks, new capabilities ... and new potential for the future.

Included – the new Spectrum+ User Guide and Companion Cassette

The new User Guide has over 80 pages of information, including a handy BASIC dictionary. The Companion Cassette provides an interactive tour of the new keyboard, and includes three entertaining arcade games.

TO ORDER BY MAIL:

When ordering the Upgrade Service,

send off your 48K Spectrum to the address below, carefully wrapped, together with the completed coupon and appropriate payment. (Please do not return the mains adaptor, manual or other ancillaries.) Your upgraded computer will be despatched to you within 10 days of receiving your order.

When ordering the Upgrade Kit, simply complete the coupon, enclosing the appropriate payment and post it to us at the address below. Please allow up to 28 days for delivery.

BY PHONE: Access or Barclaycard holders can call Camberley (0276) 685311 for personal attention, 9am to 5pm Monday to Friday. Only the Upgrade Kits can be ordered by phone.

Please note: the upgrade offer applies to working 48K Spectrum models in the UK only.

To: Sinclair Research Limited, Upgrade Dept., Stanhope Road, Camberley, Surrey, GU15 3PS.

All prices include VAT, post and packing. User Guide and Companion Cassette.

☐ Please send me the Spectrum+ Upgrade Kit. I enclose payment of £20.

OR

☐ Please upgrade my 48K Spectrum for me. I enclose my computer together with payment of £30.

I enclose a cheque/postal order

payable to Sinclair Research Limited for £

OR

Please charge my Access/Barclaycard no.

OUTPUT INPUT

Thank you for putting my free classified advertisement in your magazine. I've had many replies from people from all over the world including England, Northern Ireland, Switzerland and Israel. I now have many Spectrum user friends. But if anyone else would like to write to me, I'd be pleased to hear from you. **Scala Fabio, Via Pegaso, 7, 47037 Rimini, FO, Italy**

Hmm, sounds like a nice person. But if Scala Fabio's not your cup of tea, check out the 'Pen Pal' section in this month's Input/Output. OK, you may not find a friend for life... but you might end up swapping software, selling off your redundant peripherals and being able to afford all the latest games. Ed.

WHEN IN DOUBT ... DIY

In response to the somewhat desperate sounding plea from Anthony Mayers of Wrexham in issue 10 and despite being in no doubt that you will by now be fighting your way from beneath a deluge of letters (all containing listings for Hex to Dec conversion) I would

```
10 PRINT AT 0,3;"HEX TO

220 RETURN
```

Derek Hirst has the answer with this Hex/Dec convertor.

nevertheless like to submit my own version.

It's written in simple Basic statements ('cos I don't know any other way!) and, though the 'nitty-gritty' is contained in

FORUM

Is there something you're not telling us? Don't miss out on the chance to win a bundle of free Spectrum software for each month's Star Letter! Write to Forum, Your Spectrum, 14 Rathbone Place, London W1P 1DE.

nine or ten lines, the few extra make it much nicer to use. Hex numbers from zero to FFFF (65535₁₀) are allowed.

I'd like to suggest an alternative to solution five in Anthony's letter — that is DIY! It's much more rewarding. So, come on Anthony, let's see the reverse of this program using similar statements to these.

Derek Hirst, Barnsley

Yeah, c'mon Anthony... let's see what you make of that. Of course, if anyone else wants to write in instead, it'd be nice to hear from you! Ed.

THANKS FOR THE MEMORY?

I was very interested to see in your mag an extension to the Spectrum's 48K memory (XK PCB) in kit form. So, as a loyal follower of YS, I promptly went out and bought it. It's now fitted and I'd be grateful if Stephen Adams could answer a couple of points for me.

When I actually load up the XP Basic software, everything seems fine until the end. All I get on the screen is the message 'RAM FOUND AT PAGE 255'. Shouldn't I hope for 'RAM FOUND AT PAGES 127, 255'? Does this mean that the supposedly faulty side of the chips, etc, is in fact faulty and useless?

You also mentioned that the memory could be extended (potentially) to 4096K. Would this be 128 pages of 32K? How could all this be done using an 'extra power source'? If you happen to have precise details I'd be interested to hear something about them. **G R Charles, Birmingham**

You appear to have something wrong with your kit — a possible wrong connection. You'll get the message 'PAGE 255' because the data input is not indicating that the XK System is fitted. A way to test the system is to type 'PRINT IN 253' and if you get '126' printed up on-screen, everything is OK. There's actually 130 pages of 32K, but

you get two pages of 32K inside the Spectrum! Extra power and RAM packs are necessary for the full 4 Mbyte memory expansion, but just the RAM pack is required for 64K. If you want this fitted, have a word with the nice people from Spectrum Electronics, c/o Micro Computer Systems, 110 Leagraves Road, Luton, Bedfordshire. It'll cost you £100 for the complete Spectrum 'memory-lift'. Stephen Adams.

IT'S THE PITS!

I thought the following tip might be of use to any reader using a ZX Printer or any other four inch wide paper printer.

Since printouts always seem to get messed up if left about, I wanted some way to keep them all safe. Funnily enough, the container from BIC razors (15 razor pack) is the perfect size for storing rolled up printout. And if they're good enough for John McEnroe...

Of course, there's always an alternative... if your programs are all as bad as mine, try wrapping the printout around an empty toilet roll centre. It can then be left in the bathroom and put to good use.

Dave Vickers, Lincoln

I suppose we must consider the possibility that some of you out there don't shave. So, next month we'll be giving you hints and tips on (1) how to sneak in the bathroom and steal a BIC container and (2) how to get Dad to buy the 'orrible things in the first place. Of course, as Dave says, there's always an alternative... Ed.

WRITE ON!

Concerning the DIY Centronics interface project in YS issue 6 and 7, it's easy to convert it for use with *Tasword Two*, especially as you can use its own print routine instead of the published driver software.

First up, load *Tasword Two* and return to Basic. POKE

the following values: 57978 to 57991 inclusive with zero; 58004,98; 58008,63; and 58012 to 58020 inclusive with zero. Now, enter the Basic lines provided; it may be necessary to alter the line feed

```
251 LIST i=14: PRINT AT
i,0;"No. of copies? (1)";
60 SUB 6000: IF A$="" TH
EN LET A$="1"
252 LET k=VAL A$
277 OPEN #2,"p"
278 FOR i=1 TO k
279 OUT 63,127: REM Dele
tes last character in the
printer buffer
281 CLOSE #2: CLS : PRIN
T AT 19,0;"Press the q ke
y to quit printing"
282 IF i<k THEN PRINT #
0;"Press any key (except
q) for next copy": PAU
SE 0
283 IF PEEK 23560=113 TH
EN LET i=k
284 OPEN #2,"p": NEXT i
288 CLOSE #2
```

Craig's wordprocessor mod. Note 'E' signs should be 'S's code to zero if your printer has auto-line feed.

Run the program and save a copy of *Tasword Two*. If the interface and printer are connected, you should now be able to specify the number of copies to be printed and abort printing if so desired. **Craig L Joly, Sutton, Surrey**

So, we'll be expecting all your letters wordprocessed for Forum in future. You've got no excuse now! Ed.

CURE FOR INSOMNIACS

Having just purchased a Taxan/KAGA KP 810 printer for use with my Spectrum, I remembered reading something of an article about a program that would allow me to dump screen graphics to a printer. Ploughing my way through my growing pile of *Your Spectrums*, I eventually found the article entitled *Dumps of Distinction*. Unfortunately though, the article glibly states that all one has to do is simply re-write the machine code to suit one's own printer and interface combination (the Interface 1 unit I have is from Miracle systems). To 'simply re-write' a machine code program may be the sort of thing that some superhuman race can cope with but is as yet not within my range of abilities. Can anyone come to my rescue?

While on the subject of machine code, I've attempted to read numerous books and articles on the subject but find it incredibly difficult to keep from falling asleep. However, I did read an article in another computer magazine (*Shame on you! Ed.*) which adopted a slightly different approach. They used a common Basic routine and converted it into

The Sinclair

QL

and you

Exploring the Sinclair QL — An Introduction to SuperBASIC Andrew Nelson, £4.95

The QL has a rich, new programming vocabulary, and this great book gives you the chance to master the host of new words Sinclair has added. Sure, you can use the QL more or less just like a Spectrum, but if you do, you are missing the extraordinary power which lies behind the radical concepts of SuperBASIC. Command by command, statement by statement, Andrew Nelson takes you through the richness of QL SuperBASIC in *Exploring the Sinclair QL — An Introduction to SuperBASIC*. Just £4.95 and available from most book and computer shops. In case of difficulty, you can order it directly from Interface Publications, using the coupon below. (Trade only: Interface Publications are distributed exclusively in the UK and Eire by W H S Distributors. Export orders handled by Interface Publications.)

Interface Publications, Department QYS,
9-11 Kensington High Street, London W8 5NP.

Please send me the following books.

machine code step-by-step; this made it look so simple that I actually attempted to incorporate a similar routine into a program I was writing. Why don't you run a regular feature along this line? Learning by example beats hours of boring reading that seems to get you nowhere!
DB Snow, Oakham, Leicestershire

'Fraid no-one round here's very familiar with your make of printer — but that doesn't stop any of our intelligent, witty and co-operative readers coming to your aid ... does it? As far as machine code goes — our policy is to include small machine code routines that'll prove useful in your programs, give you a full explanation of how they work and how to customise them. Once you're familiar with its operation and usefulness then, and only then, will you find it easier to grab hold of a book/magazine tutor and learn to ... Zzzz. Troubleshootin' Pete.

KARTOON KAPERS

L Boorman from Chichester sent us a program called **Cartoon** that he wrote with his mate, **Mav**. As you can see, the graphics are very entertaining and there's no less than two story lines in the program. On the left, there's a customer in a shop complaining that his tape won't load — he's then transformed into a frog and told to 'hop it!' On the other side of the shop, a man's waiting for his QL to arrive ... but when it does, his rotting skeleton has turned to dust.

CHUCKING UP?!

Regarding your article **Hacking Away** (YS issue 10). Having played about a little with the program for 'filling in holes at the screen bottom' in **Chuckie Egg**, I discovered some rather interesting (yes, you've guessed it) ... **BUGLETS!**

Buglet number one is when you lose a life on screens thus 'hacked about' with, part of the duck's cage disappears, together with the tops of several ladders. This bug is extremely prominent on levels five and seven. And now for...

Buglet number two. When on any level you fall off a lift near the bottom platform of the screen, the farmer

performs a series of very unusual and very entertaining little hops until he reaches any side of the screen. And there he stays until the inevitable happens ... he gets pecked!

Buglet number three is a level five occurrence deriving from the previous hiccup. Our friend the farmer gets seized by an insatiable desire to get to the top of the screen, floating up buoyantly with outstretched arms until he meets the end of 'that particular life'.

Very unfortunate hiccups (hic!) in an otherwise excellent game. In my (and your) opinion, **Chuckie Egg** is the best release from poor old A'n'F (what a fate to be taken over by Ocean!!).
Paul Smith, Bourn, Cambridge

It's those Gremlins again ... I never should have fed them after midnight! I'm afraid we left out one number from the data statement in line 1000 — the omitted item was '87' and it fits in after the first '40713' in the line. Still, it sounds like you had some fun anyway! And what's that about A'n'F? Are you a professional rumour-monger — or are you just doing this in your spare time? Troubleshootin' Pete.

KEYBOARD KLASH!

We're always pleased to have our products featured in magazines of the calibre of *Your Spectrum* and we looked forward to reading your report. Sad to say, however, we were very disappointed by the observations and conclusions made about the Transform keyboard.

The keyboard was designed specifically to obviate the need to strip either the Spectrum or its power pack from their respective cases in order that the user may simply fit them both into the new case. Also, both the LED and the on/off switch are arranged to be connected without the need to solder at all; special clip-on connectors are provided for this purpose together with full instructions on how to make the connection. Contained in this instruction sheet is our recommendation that the completed set be earthed and again the procedure is described and we also supply the necessary connection aid.

The case itself is constructed in two main parts, the top of which is made of anodised aluminium 18 gauge (1.2mm) and the base of mild steel 20 gauge (1mm). It's hard to see

how, with this specification, the case can be described as 'flimsy'.

We guess that you may not have had the time to set up and use the Transform keyboard personally and hope you will appreciate our disquiet at the inaccuracies which have perhaps resulted in this omission ...

Many potential buyers look to magazines like yours for accurate product information before making their purchase and of course they'll tend to take your printed words as 'gospel'.

To end, perhaps I can tell you that we have received a number of calls from existing customers urging us to write to you to set the record straight and one or two have actually written to you direct (Hmmm! Ed.).

We are proud to be able to tell you that we have among our many happy customers, professional journalists and writers — some, in fact, in the computer trade. These people currently use the Transform keyboard in preference to others on the market.
Michael Mackenzie, Transform Ltd

I'll take the points in the order that you've raised them.

1. You must take the top off the Spectrum's case to remove the original keyboard and get at the keyboard connector. The review states quite clearly that the bottom of the case and the complete power supply are then fitted in, so I'm not quite sure what the problem is here.

2. Yes, that's correct — you don't need to solder anything. But, if memory serves, the user will need wire strippers and a crimping tool to do a decent job, especially if it's going to be a permanent fixture. Also, I don't recall seeing any insulating sleeves so there'd still be live mains floating around. (This last comment also applies to the earthing of the case, although this would be rather difficult as I can only find a live and neutral in my Spectrum's power supply cable!)

3. My review case actually came in three parts, although what the third piece was for remains a mystery — perhaps I got an early prototype. I actually said that the "... Transform case was flimsy by comparison". This was a comparative review and as the only other metal case keyboard was built out of what appeared to be 22 gauge mild steel that seemed a fair comparison. The main complaint, though, was that the sample was very poorly

finished with several sharp edges and insufficient support for the keyboard.

4. Every product I test is set up and used thoroughly. Assembly was carried out according to the supplied instructions and the keyboard used for between one and two hours for programming, data entry and game playing. **Henry Budgett.**

CHRISTMAS COMPLICATIONS

Being a glutton for trivia and glossy pretentiousness, I finger punched the *Xmas Greeting* program from YS issue 10 faithfully digit for digit into my aging Spectrum. Surprise, surprise! Instead of marching on in an endless loop, it ground to a halt after one circuit, displaying a 'subscript wrong' message in line 430.

This may easily be corrected by substituting line 440 with the following:

440 IF c= LEN m\$ THEN GO TO 420

I hope this makes next Christmas a happier time for all your readers.

Andrew Lea, Hereford

Well, that's Tony 'Slim' Samuels for you — ever since he programmed Ugh!, his mind's been permanently trapped somewhere in prehistoric times. Yes, Andrew, the above correction will certainly work, as will:

440 IF c=f THEN GO TO 420
Hope it didn't spoil your Xmas too much. Troubleshootin' Pete.

AN ADDITIONAL PROBLEM

Can you advise me on the following problem with my new Spectrum+?

When I entered the routine shown below I got all sorts of different results for zero according to the value in line 30:

**10 LET S=1
20 PRINT S
30 LET S=S-0.1 (or 0.2 or 0.5, etc)
40 GO TO 20**

For example, if line 30 reads 'LET S=S-0.2', I get 4.6566129E-10 and if I change 0.2 to 0.1, I get 6.9849193E-10, and so on.

G Baker, Chesterfield

Sorry Mr Baker, there's nothing we can do, it's just more proof that Sinclair Research could never handle arithmetic too well. Troubleshootin' Pete.

... Upgrade Your Spectrum
To A MegaSpectrum—NOW!

ONLY £7.95!

It all began with the ZX80 ...the first personal computer retailing for under £100. Next, Sinclair Research announced the ZX81, offering memory expansion to 16K. Completing the ZX series of micros came the Spectrum and its big brother, the Spectrum+.

Although the hardware has been modified extensively, not much thought has been given to ZX Basic ... and, compared to Basics on many other home computers, ZX Basic is sadly lacking!

Until now, that is! *Your Spectrum* is proud to offer your Spectrum the opportunity to transform itself into a MegaSpectrum. All it needs is *YS MegaBasic* — the inexpensive miracle on cassette.

Professional Computing Power — On A Spectrum

Incorporating many of the best features of Basics found on some of the Spectrum's major rivals (such as the BBC Micro, CBM 64 and Amstrad computers), *YS MegaBasic* gives you the opportunity to unleash power normally associated with machine code!

The program itself uses 19K of RAM, leaving you with 22K to write your own *YS MegaBasic* programs. It may seem as though you've lost a lot of memory, but you'll find you don't need so much code to create on-screen effects with *YS MegaBasic*. Anyway, when was the last time you wrote a program larger than 22K?

At Last! A Real Keyword Entry System

If you've ever suffered from cramp when you're playing double-octaves over the Spectrum's keyboard accessing some of those 'hard-to-get-at' commands ... then despair no longer.

YS MegaBasic incorporates a real single-letter keyword entry system. And before you start thinking this is going to mean more typing, *YS MegaBasic* allows most commands to be abbreviated. For example, you'd type 'RA.' instead of 'RANDOMISE'.

The man behind *YS MegaBasic* — Mike Leaman.

KEY FEATURES OF YS MEGABASIC

- An extended command set. *YS MegaBasic* recognises over 35 new commands, which allow you to access the new features available as well as providing the opportunity to make more of the commands in standard ZX Basic.
- 64 columns of text. Useful for wordprocessing and database applications.
- Three character sizes. Using *YS MegaBasic*, you've now the choice of accessing double-height, standard and half-width characters.
- Three character fonts. *YS MegaBasic* offers three font styles which allow your Spectrum to mimic other machines on the market.
- Windows. You can manage up to six QL-style windows on-screen at any one time.
- Sprites. Using the free *Sprite Designer* package that accompanies each copy of *YS MegaBasic*, you'll be able to design and manipulate up to ten sprites on-screen at once!
- Enhanced sound. Mike Leaman's taken the Spectrum's BEEP command and given it the full Mega-treatment.
- Procedures. Structure your programs and define new commands — it's all here!
- Stippled characters. QL-style stipples allow you to mix colours on-screen to give interesting colour effects.

ZX BASIC?

Sprite Designer — Free With Each Copy Of YS MegaBasic!

Included in the *YS MegaBasic* package, you'll find a special utility program called *Sprite Designer*. Written by Mike Leaman in *YS MegaBasic*, this 11K program is designed to help you create sprites on the Spectrum.

You can have up to ten sprites on-screen at any one time, but if you're careful with memory you can get more!

Here, *YS MegaBasic* is showing off its multifarious character sizes and fonts. Each window contains text in three different sizes: double height, normal height and that used for 64-columns; double height and standard text can be output in three different fonts.

The screen format for the input/output of *YS MegaBasic*. Three windows are provided for input, LISTing and RUNNING programs; under software control, each window's size and purpose can be changed to suit individual requirements.

YS MegaBasic Available only by mail order and only from Your Spectrum

Your Spectrum, *YS MegaBasic* Offer, Sportscene Specialist Press, 14 Rathbone Place, London W1P 1DE.

YS MEGABASIC PRIORITY ORDER FORM

There's Nothing As Good As YS MegaBasic!

YS MegaBasic is probably the *best* way to upgrade your Spectrum. Give your Spectrum real computing power ... for just £7.95.

YS MegaBasic will cost at least £9.95 when it's sold in the high street stores — so, save yourself two quid and send off for your copy today.

Be one of the first to transform your Spectrum into a MegaSpectrum with the inexpensive miracle on cassette ... *YS MegaBasic*!

Your Spectrum, *YS MegaBasic* Offer, Sportscene Specialist Press, 14 Rathbone Place, London W1P 1DE.

How to Order YS MegaBasic

Just fill in the order form below (or a photocopy of same) and send it off to *Your Spectrum, YS MegaBasic Offer, Sportscene Specialist Press, 14 Rathbone Place, London W1P 1DE*. For each copy of *YS MegaBasic*, you'll need to enclose a cheque/Postal Order for £7.95, made payable to Sportscene Specialist Press, and three *YS MegaBasic* coupons (or photocopies) clipped from past issues of *Your Spectrum*.

There's a *YS MegaBasic* coupon already included on this order form and you'll find other coupons in *YS* issues 8, 9, 10 and 11. And they'll be more in future issues ... so no-one will miss out!

QTY	ITEM	PRICE	TOTAL

GHSTBUSTERSTM THE COMPUTER GAME.

BY DAVID CRANE

© 1984 COLUMBIA PICTURES

Yes. Ghostbusters is a computer game, too.

The game play follows the film with incredible accuracy. Even down to the chart-topping music score.

Your task is to rid the world—and in particular New York City—of a cataclysmic plague of ectoplasmic nasties.

Play it well and we give you a Ghostbusters franchise—with your own secret account number. Use this number and the money it brings you, to buy the same ghost busting gear they had in the film. (Don't worry—we'll give you some money to get started.)

You will have earned it. And you can use it to go to undreamed of levels. Don't try to use someone else's number; we'll find out.

From then on, it's you against the ghosts. All the way to the Temple of Zuul.

Where the final battle begins...

Designed by USA's David "Pitfall II and Decathlon" Crane and running on Commodore 64 cassette and disk and Spectrum. Coming soon on other systems.

ACTIVISION[®]
Your computer was made for us.

AVAILABLE FROM SELECTED BRANCHES OF BOOTS, WH SMITH, JOHN MENZIES, LASKY'S, SPECTRUM, RUMBELOWS, WOOLWORTH AND GOOD COMPUTER SOFTWARE STORES EVERYWHERE.

TUNING UP!

ZX Spectrums may not be the most musical of micros... but, if you're like Chris Somerville, you're not exactly a Beethoven in the making anyway! So, compose yourself for the musically illiterate's guide to writing music...

Apart from enhancing the variety of zaps and zings which accompany alien annihilation, the Spectrum BEEP commands can be used quite effectively to produce simple tunes and jingles; witness the somewhat over-used 'Funeral March' that signifies failure in many commercial programs.

Of course, you could always call suitable snippets of music from sheet music for your own programs — these are often available for a few pence from a local secondhand bookshop. But this is where the catch comes in! The musical notation has to be translated into the numerical pitch and tempo required by the Spectrum. Fine if you can read music, especially as a number of commercial programs allow you to use the Spectrum as a sort of piano keyboard. But if you can't read music...

NOTA BENE

Very few programmers can claim to be conversant with musical notation but anyone could, by laboriously counting lines and spaces, work out the individual notes. This program allows leisurely entry of each note as a musical letter, followed by a number to

signify the duration of that note. You can even indicate the use of a sharp or flat!

Musical notation generally conveys two pieces of information: the pitch of each sound and how long it should last. Although it may look confusing it's really not that difficult to translate.

The pitch of a note is shown by its position on a staff, which is a row of five lines; notes can be placed on a line, or in the space between two lines. Take a look at the diagrams provided and you should be able to figure out which note is which in most any sheet music you can find. Of course, there are one or two things to watch out for. For example, to make a note higher or lower, you'll find that the composer has introduced a sharp (#) or a flat (b) respectively. If these symbols appear next to an individual note, then it must be altered appropriately; if, however, the sharp or flat symbol appears at the very beginning of the staff, all the notes on that particular line, or in the space, should be altered. You'll also find that there are a number of different shaped notes, each offering varying length notes; there's a separate diagram showing all the

Here's the listing of Chris' program, Music Writer. Please note that due to our capitalist printer, hash signs (#) have been printed up as sterling signs (£).

THE ART OF NOISE!

Once you've RUN Chris' Music Writer program, you're greeted with a menu offering eight options: to create a tune, to play the tune back through the Spectrum, to raise/lower the octave, to increase/decrease the tempo, to print out the data for the tune, and to reset the octave/tempo. So, let's take it from the top and transcribe a tune...

First off, you'll need to lay your hands on some sheet music. Now take a look at the illustration above and you should be able to transcribe each note on the sheet music into a letter 'a' to 'g' or 'A' to 'G'; initially, 'c' is set to middle C — but you've always got the option of altering the octave once you've completed all the fiddly bits. Notes are entered with a letter first; if you're required to enter sharp (#) or flat (b) notes, you must tag each letter with a '#' symbol for a sharp or a 'b' for a flat.

Once you've input the letter of the particular note by pressing the Enter key, you'll be asked for the duration of the note. The Spectrum is expecting a number from the diagram above — simply match up the note with the one on the music sheet and type it in. Once you've got the tune safely into the Spectrum's memory, you can use the 'playback' option to hear what you've got. If you're not satisfied with the output, you've got four options to speed it up or slow it down, or change the octave it's been written in. Then, if you want, you can print out the list of BEEP statements on your printer for future use in other programs.

Musical rests can't be simulated in this program but, using the suggested PAUSE values for the rest symbols shown above, you can insert the necessary PAUSE statements once you're sure that the rest of the melody is as you want it.

musical notation you'll need to master.

Unfortunately, this program can't deal with musical pauses. However, these can be included as PAUSE commands in between the BEEP commands when you transcribe the program for future use. Since the PAUSE command works in fiftieths of a second, its duration number can't be in the same range as used for BEEP. However, provided with this article you'll find a table illustrating the various musical rest symbols and the corresponding PAUSE duration.

Most music is written within two sets of five lines — the upper staff carrying the melody and the lower staff containing the accompaniment. Since the Spectrum can only cope with one note at a time (Unless you're Sandy White, of course! Ed.) you'd be best advised to stick with the melody only.

ON A FINAL NOTE

Anyone who's had any formal musical training will probably be experiencing an extreme case of the vapours by now. Yes, I know it's cheating — but for readers who want to 'SingalongaSpectrum', well, this could be your only chance. Armed with this program and the 'oh so brief' guide to reading music, you should be able to transcribe any sheet music.

A word of advice though; before you start converting Beethoven's Fifth for the Spectrum, don't be tempted to add too much sound to your program — generally a recognisable snippet will do. You only need to set the scene and you'll find that a five second blast of an old familiar tune will be a lot more successful than a long tune that keeps repeating. **VS**

SON OF BLAGGER

HE'S HERE! HE'S MADE IT!
Son of Blagger for 48K Spectrum

Relive the daring exploits of Roger the Dodger through his prodigy Slippery Sid. More skill, more nerve, this cool little character seeks not only to follow in his famous parent's footsteps, but to establish some amazing feats of his own. Money's not his game. Espionage is his middle name and having forced his way into the National Security HQ he's faced with a no return journey through one of the most dangerous, most complex buildings in the land. Can he successfully complete a nerve tingling search for the golden keys – his only means of escape – or this time has his skill and daring taken him too far. Watch out for those weird killer security guards – you never know what chilling surprises the mad scientists have produced – and beware the floor doesn't disappear from under your feet, sending you to an early grave.

JOYSTICK JURY

From their bench on high, our regular panel of jurors — Ross Holman, Dave Nicholls and Roger Willis — pass judgement on the latest games software!

You're probably getting used to our joystick jockeys by now but, for the record, there's gamester supremo Ross Holman; the hairiest of hackers, Dave Nicholls; and the fastest reviewer on two wheels, Roger Willis.

WARNING!

Just in case you find our scoring system too confusing, here's what it's all about. The score out of five at the end of each person's review is based on their own experience of the game. But that's pretty subjective... so they also use the HIT and MISS system to indicate its potential as a commercial success.

ROSS HOLMAN

ROGER WILLIS

DAVE NICHOLLS

SKOOL DAZE

Microsphere/£5.95

Ross: In *Skool Daze* you get a chance to re-live your youth or, as in my own case,

do all those things you didn't dare do!

You play Eric, and if you want to be able to sit down for the next week, you must retrieve your school report from the safe before your parents get to see it. The first thing to do is to hit all the shields hanging on the walls. This in itself is not so easy and may require using one of the other boys as a spring-board, or even deflecting one of your catapult pellets off a teacher! Once all the shields have been hit the masters can be persuaded to reveal their letter to the safe's four-part combination.

Eric and the other children can go to any room but *must* obey the bell which signals the start of lessons.

The graphics are very clear and well

animated, and the independence of all the other characters makes the game fun to watch. However I didn't really find that I wanted to play it for very long. It is, nevertheless, a very clever piece of software. 3/5

HIT

Dave: This is a very original game with good graphics. The playing area isn't very big, and it does seem rather unfair that if you go to a lesson where there aren't enough seats you get lines every time you get pushed out of your seat.

HIT

I want my Mummy! 3/5

Roger: Buy now — before Sir Keith Joseph has it banned! This is as near to the *real thing* as I'm prepared to get. If you're still at school, learn and inwardly digest... 4/5

HIT

MUTANT MONTY

Artic Software/£6.95

Ross: If you were going to write a piece of software but couldn't think of an original idea then you might end up doing what

everybody else seems to have done... and that's to borrow a bit of inspiration from *Manic Miner* or *Jet Set Willy*.

The game itself has 40 screens, each of which has a name and a number of pieces of gold to collect. Monty (a similar character to Miner Willy) moves left, right, up and down, and has to career around the screen dodging the horizontally or vertically moving graphics. The lack of jumping ability means that this is not a true platform game.

Despite its many familiar features, *Mutant Monty* does have a few things going for it. Firstly, Monty accelerates when moving left and right if you keep the key held down and will continue to move until you press another key. This means that avoiding the nasties is a little

more tricky than your average game. Secondly, the sprites move and animate smoothly.

The screens are all very colourful and lively, but unless you're a real fan of this kind of game it offers nothing new. 2/5

MISS

Dave: Reasonable graphics, but the controls seemed rather slow to react. After wandering around so many games like this and collecting gold, I should be a rich man — where am I going wrong? 2/5

HIT

Roger: Forty-seven cans of *Special Brew* and a blindfold might prepare you for staggering through Monty's many rooms in an imprecise and frustrating quest for gold. But I suppose any ol' anaesthetic will do! 2/5

MISS

CYLON ATTACK

A 'n' F Software/£5.75

Roger: Having always thought that 'Cylon'

was something they made cheap shirts out of, I was disagreeably surprised to find it cropping up as yet another alien life form. Here we go again, striving to protect the wholesomeness of one's mother ship.

Launch and landing sequences, and on-screen instrumentation (including radar and cockpit sights) complement protective screens and lasers that gradually expire from over-exposure to malevolent cheap shirts. As one would expect, these garments are cleverly disguised as spacecraft, getting bigger as they get nearer.

That, more or less, explains the pretension towards 3D graphics, in which

case I can only wish there were more — dimensions, that is. Such a facility would at least allow me to exploit the space/time continuum and slip off for a swift half whilst Spectrum and Cylons play 'shootie-bangs'. Computers have no feelings. Neither have shirts. 1/5

MISS

Ross: This didn't quite live up to my hopes that it would be a good 'blast everything that moves' game, but it wasn't that bad. 2/5

MISS

Dave: Nice, big, smooth graphics are the main feature of this game. I didn't find it very addictive, but 'shoot 'em up' fans might think it's fun. The background graphics are great. 3/5

HIT

The ZX Spectrum
Expansion System. Only £99.⁹⁵

Sinclair's complete alternative to floppy discs...

The ZX Spectrum Expansion System contains:

- One ZX Microdrive
- One ZX Interface 1
- One wallet containing four programs on Microdrive cartridge
- Microdrive demonstration cartridge
- One blank Microdrive cartridge
- Full documentation
- Connecting lead for Microdrive/Interface 1
- ZX Net Lead

The new ZX Spectrum +

Fully compatible with all Spectrum software and peripherals, including this Expansion System

Tasword Two word processor

Turns your ZX Spectrum into a high-quality word processor!

Tasword Two has all the essential features of professional word processing packages – move and copy, insert, margin settings, 'help' pages, find and replace, and much more.

Written by Tasman Software Ltd.
Usual price (RRP): £13.90.

Masterfile filing system

Address lists...personal files...stock inventories...stamp or album collections...club records...recipes...if you can file it, you can Masterfile it!

Masterfile is a menu-driven filing and retrieval system of immense power. Display formats are user-defined, so the range of applications is enormous. Written by Campbell Systems Ltd.
Usual price (RRP): £16.95.

Games Designer

Now, all you need to create original games are original ideas – and Games Designer! It has eight, very different, pre-programmed games for you to play as they are – or modify out of all recognition!

There's never before been an easier, more enjoyable, way into games design.

Written by Quicksilver Ltd.
Usual price (RRP): £14.95.

Ant Attack

The all-time classic 3D strategy game. Ant Attack combines stunning Escher-like graphics with fast-moving action and a real tactical challenge.

Your task is to enter the walled city, seek out your captured partner, and escape. At all times you can choose from four angles of view. But beware: the city is patrolled by giant ants...

Written by Quicksilver Ltd. Usual price (RRP): £6.95.

All programs run on a 48K Spectrum or Spectrum+. Recommended retail prices are for each program on cassette.

...includes this great set of Microdrive programs!

The unique ZX Microdrive system sets the Spectrum apart from all other home computers.

It gives you all the advantages of floppy disc drives – at a fraction of the cost. And tests show the Microdrives are faster than some disc drives.

Now, the complete Microdrive system comes in one package – together with four of the best-ever Spectrum programs, on Microdrive cartridges.

This software alone would normally cost you over £50.

Yet the Sinclair price for the complete ZX Spectrum Expansion Pack is just £99.95!

You'll find full details of its contents in the panel opposite.

ZX Microdrives – another Sinclair first!

The ZX Microdrive is a revolutionary fast access / mass storage device. And it's the only truly affordable alternative to disc drives...

- Loads or saves up to 85K of program or data from Microdrive cartridges.

- Just 3.5 seconds to access a typical file.
- Only 9 seconds to load a typical 48K program.

The ZX Microdrive cartridge – a unique storage medium.

Smaller than a matchbox, the ZX Microdrive cartridge packs in a massive amount of data and programs.

Each Microdrive cartridge holds at least 85K bytes of data or programs (that's 30 pages of A4 text). And you can store up to 50 different data files per cartridge, identified by titles of your choice.

Every cartridge comes in its own protective case. Simply remove the cartridge, slot it into the Microdrive, and it's ready to use.

ZX Interface 1 – adds powerful new capabilities to your Spectrum.

ZX Interface 1 connects to the back of your Spectrum and controls up to 8 Microdrives. (Additional Microdrives are available for £49.95 each.)

It also gives you:

- An RS 232 interface – to link your Spectrum with full-size printers, other

computers using RS 232 (the industry-standard interface) and provide data transmission over telephone lines, via modems.

- ZX Net – lets you set up a local area network of up to 64 Spectrums, for high-speed data communications between you and Spectrum-owning friends.

At your local Sinclair stockist – today!

The ZX Spectrum Expansion System adds an exciting new dimension to Spectrum and Spectrum+ computing. At £99.95 it's superb value too.

To find out more, call in at your local Sinclair stockist now!

Sinclair Research Ltd,
Camberley (0276) 685311.

* Sinclair, ZX, ZX Spectrum, ZX Microdrive, ZX Net and ZX Interface are Trade Marks of Sinclair Research Ltd.

JOYSTICK JURY

STRONTIUM DOG — THE KILLING

Quicksilver/£6.95

Roger: Johnny Alpha is a 'Search And

Destroy' agent (a mutant bounty hunter of the future) who first appeared in yer actual 2000AD comic and he may well have been the star of many ripping yarns in those smudged and inky pages. His dubut, however, as Sinclair superheroette is somewhat more than underwhelming. It's desperate! It's a dog's life!!

You can poodle the Strontium woofers through a generally doggy selection of extraterrestrial kennels, seeking 'vicious murderers' who need to be put permanently too sleep, along with the 'Evil Dictators' who apparently control this contest of yapping yawns. Watch out for the 'Steel Kriegs' too!

Owing to a blatant programming

oversight, Strontium Dog fails to cross his back legs in frustration and agony at the complete absence of life-relieving lampposts unfolds screen by screen. Maybe they were just hard to find in two dimensions? 2/5

MISS

Ross: Here we have another complex maze of rooms within which you wander aimlessly! Occasionally, you come across a 'nasty' to blast, but otherwise there's very little to do.

Tedious stuff. 1/5

MISS

Dave: 'The Killing' is an apt name for this game — while playing it, I nearly died of boredom! Games seem to be getting bigger and bigger, but with less and less content! 1/5

MISS

STARSTRIKE

Real-Time Software/£5.95

Ross: About two years ago I first saw a game called *Star Wars* in the arcades and

looked forward to the day when I'd be able to play such a game in the comfort of my own home. Well, that day's here as it's now available on the Spectrum.

Starstrike has three stages; the first finds you out in space in control of a fighter under attack from various alien craft; the second stage involves you shooting the gun emplacements and towers on the alien moon; and third stage is in a trench (à la Deathstar) where you must avoid the bridges that cross it and shoot out more gun emplacements.

Your fighter is protected by a shield which decreases in strength each time it gets hit by the alien.

Like *Dark Star* this game pushes the Spectrum to the limits with some very fast

line drawing routines. However, unlike *Dark Star*, *Starstrike* manages to maintain its playability. The speed sometimes suffers if you shoot a lot of things at once, but the 3D simulation and crisp response to any adjustments in your flightpath is superb. 4/5

HIT

Dave: At last, *Star Wars* on the Spectrum — and a pretty good version at that! The graphics are great, especially the alien moon trench, but they do slow down quite a bit when there's a lot going on. 3/5

HIT

Roger: Suddenly, it says here, there were the (gasp) Outsiders! Suddenly (yawn), I fell — completely and unsurprisingly — into a deep slumber for the duration of this game. 1/5

MISS

BRIDGE PLAYER 2

CP Software/£9.95

Ross: *Bridge Player 2* is intended as an aid for those wishing to practise playing bridge, and *not* as a guide on how to play

the game. The accompanying manual describes all the features of the program, but does tend to slip into 'Bridge jargon'; having said that, though, I'm far from a hardened *Bridge* player and I could still understand most of the finer points!

The program works by dealing the pack to all four hands, but there is the restriction that no more than eight cards of one suit can appear in one hand; this is due to the graphical layout of the cards on-screen. Once dealt, the bidding begins and follows the Acol system, with commands such as '5C' being interpreted as a bid of five clubs; however, as the human player, you always play south and enter the card you wish to play with the suit first and then its value. Some nice refinements are the automatic play of

cards if you have only one legal response, and hitting the Enter key to play the lowest card when following suit.

The graphical display is clear and easy to follow, and the computer plays very reasonably. This will not appeal to the masses, but it's worth trying if you want to become the *Bridge* equivalent of the Cincinnati Kid. 3/5

MISS

Dave: Hah! Hands up who thought this was a sophisticated platform game. I'm not that good at *Bridge* but, after playing this package for a while, I think I'm a bit better... 4/5

MISS

Roger: I'd have preferred something a little more racy... maybe, Spectrum poker! Generally, though card games are a sunset industry. 1/5

MISS

AIR TRAFFIC CONTROL

Mikro-Gen/£9.95

Dave: "Oh no! I've lost contact with that 737 heading for Heathrow, and the outward bound DC10 has lost pressurisation so I'll have to re-route all

the aircraft down W17 and put Concorde in a holding pattern, then I can..." This is an example of the thoughts that go through your head as you play (!) Mikro-Gen's *ATC*.

The program simulates the job of controlling the air traffic over a section of southern England, including the main London and south coast airports. All you have to do is make sure the planes don't get too close together and that aircraft leaving your section are at the correct height for the air channels they're entering. You take over for a fixed period of one hour and, at the end (or earlier if you quit), you're given a percentage rating relating to your performance. Different ability levels are catered for by varying the number of planes entering the area within the hour.

Communication with the planes is handled via the keyboard and the main screen display depicts your radar screen; you can also have on-screen lists of aircraft or all flights scheduled to come through the area.

ATC won't be everyone's cup of tea, but if you like simulations or turning your brain to jelly then it's worth a look. 4/5

MISS

Ross: Because this game's such an accurate simulation of air traffic control, it's rather slow and dull. No doubt some of you out there are dying to be master of the skyways, but it's certainly not my idea of fun! 1/5

MISS

Roger: Such a staggeringly boring and witless simulation that it'll probably go *nova* in Guildford and be even bigger in Woking... 0/5

MISS

UTILITIES FOR THE QL

SIX programs on one Microdrive for the Sinclair QL.

"Nothing very dramatic . . . could be quite useful" (PCW).

1 "Boot"

Displays DIrectory in columns, and allows LOAding of programs with single key-press. Without this, the directory will overflow the screen if you have more than about 18 files on cartridge; also "load mdv1-program" has 17 keypresses!

2 Q Mark

Will allow you to FORMAT a cartridge repeatedly (as recommended by SINCLAIR). You only have to enter a name and number once.

3 "Q Back"

Makes back-up copies of cartridges. One key-press will copy all files onto an empty cartridge, or you may single-step and choose whether or not to copy each file. If receiving cartridge is not empty, you will be asked whether or not to over-write any namesake of a file about to be copied. You can copy from many cartridges onto one until it is full.

4 "Q Prune"

Will delete any file with a single key-press, so be careful with this one!

5 "Q Print"

It spools files the printer.

6 Tool

Tool kit for programmers

Instructions

On Paper and in a QUILL file (for when you lose the paper!). All six programs, will work with the extra microdrives if you get them, and have been successful with cartridges holding over 60 files each.

JOYSTICK JURY

BOOTY

Firebird Software/£2.50

Dave: Booty is a platform game in which

you have to move around in the hold of the Black Galleon collecting — not surprisingly — booty. There are 20 holds to empty and, when all have been cleared, you have just 45 seconds to find the key to the next section. Hazards in the game include deadly parrots, ghost pirates and exploding treasure.

Each screen has a number of doors (some of which lead to alternate holds and others which simply get in the way) and there are various numbered keys lying around which can be used to open the corresponding door.

Music plays throughout the game but can be switched off when it gets too annoying. However, now we're onto the

annoying features. The thing that really bugged me was that when you die you always return to the first hold.

For the price, *Booty* is very good value, but it does rather lack addictivity. 2½/5

HIT

Ross: This represents good value for money. It requires a slightly different approach to other 'ladder and levels' games — but I still didn't find it that compelling. 2/5

MISS

Roger: If only my daily life had 'doors' to escape into the next screen... but cabin boy 'Jim' has to cope with parrots that bode terminal illness reminiscent of the Inland Revenue on heat... 3/5

HIT

MS PACMAN

Atarisoft/£9.95

Roger: As the Greater London Council

and page seven of *The Guardian* never cease to remind us, God was obviously a woman. And so, we are now told, was the 'Original Atari Arcade Classic'.

However, before your imagination's run riot, there's not a 'lady bump' in sight. Which is surprising really since she must be bursting out all over, considering her diet of interminable dots, intermittent fruit and interestingly aggressive energy pills. But never mind, because fat is, after all, an acceptably feminist issue.

What started out as a simple screen for simple minds can be viewed through playground perspectives by pageboys or sucked dry of innuendo cred by Page Three readers. After all, pills that can be

consumed prior to the termination of blinking phantom breath have got to be twinning the jolly old *entendres*, haven't they? Ignore this intellectual flatulence. *Ms Pacperson* is a seminal and shapely (oops!) figure in micro software history. Put her in the display case next to your mainframe! 5/5

HIT

Ross: Surprisingly, this offering from Atarisoft is much better value and a superior program to its original Pacman! 3/5

MISS

Dave: I loved Pacman when it first came out, and I'm sure I'd have loved this one — if only Atarisoft had changed a little more than Pacman's sex! 2/5

MISS

MATCH DAY

Ocean/£7.95

Dave: *International Soccer* has been available on the Commodore 64 (*Wash your mouth out with soap! Ed.*) for some time and has proved popular...

especially in Dixons' shop windows! Well *Match Day* is basically the same game.

For those who haven't seen it, this is a football game where you have a 'camera's eye' view of the pitch on which two teams — either both player controlled or where you get to pit your boots against the computer — battle it out. You only control one team member at a time, while the others in your team run about and try to get into the best positions under computer control. If one of your players has the ball, then you get to control the player in possession; if you've got the ball, the Spectrum puts you in control of the player best positioned to intercept.

If the opposing side shoots for goal then you get control of your goalie and you can make him jump up or dive left or right. Set pieces, like corners and throw-

ins, are handled automatically with your players positioning themselves; if it's your corner or throw-in, then you've nine options for the direction/strength of the throw/kick.

I hate football — but I loved this game and I'm quietly confident that it will be a hit. 5/5

HIT

Ross: The large graphics animate nicely, especially the goalkeeper who kneels up briefly after a dive and looks around for the ball. A fun game with a good degree of skill needed if you want to win the cup. 4/5

HIT

Roger: Unrealistic, in that it lacks violent crowd invasions of the pitch and vicious, leg-breaking fouls whilst the ref ain't looking. Still good enough to make Jimmy Hill mix his metaphors... 4/5

HIT

THE WITCH'S CAULDRON

Mikro-Gen/£6.95

Ross: Mikro-Gen are producing some very good pieces of software these days, and this text and graphic adventure is no exception. In the best of fairy-tale

traditions, the plot is based on a Prince who having been turned into a toad, is now trying to regain his regal form.

The wicked witch, Hazel, cast the spell that transformed the Prince, and it's her abode that you have to hop around collecting all the ingredients necessary to make a potion in the witch's cauldron and then drink it. On your travels you may turn into many other forms, which can be useful but can also make you vulnerable to attack; for example, try turning from a toad into a bat and you'll be eaten by the cat.

I'm not a great fan of adventures but I liked this one very much. The illustrations of each room (which appear at the top of the screen) are detailed and drawn quickly, and the idea of the toad moving about the picture as you give it

instructions is quite novel. Above all, this adventure is very user-friendly; it understood most of what I typed in and didn't expect that strange dialect I call 'adventure-speak'.

Overall, a humorous and well-designed game that I'd recommend highly. 3/5

HIT

Dave: Being able to see yourself moving around on-screen is a nice touch, but then there's lots of humour in this game. Red herrings abound and the puzzles are more than difficult. Addictive enough to keep you hopping back for more. 3½/5

HIT

Roger: One for the pot — in that any literate, difficult, but somewhat sluggardly, cerebral adventure game can earn its supernatural keep. 3/5

HIT

JOYSTICK JURY

BEAMRIDER

Activision/£7.99

Dave: Beamrider is a 'skim the surface of the planet (or, in this case, Restrictor

Shield) shooting things that appear over the horizon' game. There are few other games of this type around and, I'm afraid *Beamrider* is nothing really very special. That said, it's an above average 'Zap 'em' with quite a lot going on...

In order to progress up through the screens, you have to shoot 15 of the flying saucers that come down the grid, but there are several other types of alien flying around which sometimes get in the way. Some of the aliens can be destroyed with your 'laser lariats', but others can only be blown up by a torpedo. As you only get three torpedoes and you need at least one to destroy the sentinel ship that appears at the end of each screen, I found myself dodging more often than shooting.

Different meanings appear on the higher screens and, by about sector seven, you'll find yourself very busy indeed!

If you're looking for a fast shooting game, then *Beamrider* is probably worth a look — but it's not exactly state-of-the-art stuff. 2/5 **MISS**

Ross: This is a very 'old' game... and it shows! The different behaviour displayed by the nasties and the hectic pace of the game on the higher levels make this a reasonable 'zap and blast' game. It does however, have rather a short-lived appeal. 2/5 **MISS**

Roger: Clearing the sinister Restrictor Shield that surrounds one's planet is about as vibrant as outgrowing the brace on one's teeth. 1/5 **MISS**

SON OF BLAGGER

Alligata Software/£5.95

Roger: When you've finally managed to

keep the Bagger loaded by persuading this program that you *have* actually entered the correct master anti-piracy code deduced from straining peepers at a minuscule key on the packaging, disappointment soon follows...

Son Of Bagger ain't just another platform game — it's a bad platform game. Less-than-witty graphics are notable only for their crudity, abetting annoyingly erratic control of the Bagger himself. As he hops, jumps and creeps around the two-dimensional scrolling screens of Spectrum Security HQ, our boy is expected to scarpier out of each room with all the 'hidden' gold keys before exhaustion of limited air supply.

Quite what he's supposed to do with a binful of such upmarket locksmith's accoutrements, I don't know... not having hung around to find out. Do yourself a favour and blagg a better game than this! 1/5 **MISS**

Ross: It's nice to see a scrolling *Manic Miner* type game — after all, they're really popular on the CBM 64 and BBC Micro. Catching the occasional brief glimpse of an as yet unreachable area can make the game that much more interesting! 2/5 **MISS**

Dave: I found movement on-screen a little sluggish, and play was a bit boring. However, the scrolling techniques used are clever. 2/5 **MISS**

WORD GAMES WITH THE MR MEN

Mirrorsoft/£9.95

Dave: This is one of a series of educational programs. Included in the package are two cassettes (one for each game), an explanatory booklet, and a

plastic keyboard overlay which covers the alphabet keys and masks off the Spectrum keywords.

The package is aimed at five to eight year-olds; to be realistic though, it's more likely to appeal to children at the lower end of the scale.

On the first cassette is *Mr Noisy's Word Game*, which is designed to teach words like 'small', 'wide', 'smallest' and 'widest'. There are nine different games to play, each of which can be selected from the main menu.

Other games allow various combinations of reading and writing exercises ranging from matching up a picture with the correct word to choosing the opposite to a displayed word.

The second cassette contains *Read With Mr Bounce*, which teaches position

words like 'above', 'inside', and 'on'. Again, there are several different options to teach different uses of the words.

The graphics are large and clear, and this is just about the best educational package I've seen on the Spectrum. 5/5 **HIT**

Ross: The colourful screen layout and large, well animated graphics make this series of educational games very appealing. The pupil is lead through a number of increasingly difficult tasks, from single key answers to full sentences. A very good educational package. 3/5 **MISS**

Roger: A vital training aid for the illiterate scribbling in this rag. *Your Spectrum* rumours allege that it constitutes 'Troubleshootin' Pete's favourite screentime! 5/5 **HIT**

KNIGHTLORE

Ultimate/£9.95

Roger: Beginning life as some sort of gothic Noddy, the quest through Melkior's castle is frequently interrupted

by one's temporary transformation into a werewolf, which is what, *ultimately*... (groan)... this superior escapade is all about. In a mere on-screen 40 days and 40 nights, your canine metamorphosis will become tragically permanent and the game will be up in all possible senses. Better get moving, eh?

Splendid isometrically-projected 3D cartoon participants and hazardous, but cleverly defined, rooms demonstrate how this program leaves most of the rest in a technical Dark Age. Despite my getting somewhat chunderesque about these programming chaps who even blow their noses in machine code remaining unimaginatively fascinated by Sword n' Sorcery plots, this remains one slice of mysticism that isn't stale.

I'll personally front up with a bottle of fizzy 'falling-over' pop for the first infinite lives *POKE* — so that I can actually survive for more than my current appalling 8% of the total cataclysmic content. 5/5 **HIT**

Dave: Ultimate shows no sign of stagnating and producing duff games — in fact, the games get better and better. *Knightlore* is original, playable and has superb graphics. Show it to your Atari/Commodore-owning friends and turn 'em green! 5/5 **HIT**

Ross: What can you say about Ultimate when it comes up with software as good as this! The graphics are second to none and the other characters in the game seem to have a life of their own. 4/5 **HIT**

BYTE HI NO LIMIT

starring
HARRY HACKER

FOUR-THIRTY P.M. IN THE EDITORS OFFICE AT YOUR SPECTRUM...

BZZT! ED. TO HACKER! GET THAT REVIEW WRITTEN BY 5 OR I NAIL YOUR PIXELS TO THE SKIRTING BOARD!

This 3" CRESCENT unit is the real alternative to tape filing systems utilizing state of the art floppy disk system.

THE MICRO COST

£129.95

3" DISK DRIVE

All units have Japanese mechanisms and are manufactured by Servicon Dynamics, a company with over 15 years of success in specialist electronic manufacturing. All items carry a 12-month warranty.

- Completely compatible with 5¼" drives
- Full software support (plus INNER CIRCLE CLUB†)
- Full disk interface system for SPECTRUM
- Exclusive low cost accessories through INNER CIRCLE CLUB
- One-touch disk load/unload
- Compact and lightweight
- Cables included in price
- Full manual provided

† See address below for details.

New Crescent 3" disk drive upgrade for Spectrum.

SPECIFICATION OF DFS

- Handles up to 78 files (200K) on 3" diskette (39 files per side)
- Interface uses 8K of user RAM. However, the manual contains a machine code program which allows 48K programs to be loaded and saved
- Has extension edge connector to allow plug in peripherals like printers and joysticks
- Random access filing of data arrays
- Has additional BASIC commands
- Will support 3", 3½" or 5¼" drives
- Black livery to match SPECTRUM

CRESCENT 401 £129.95*

CRESCENT 401

PRESS 1,2,3 OR 4 TO PURCHASE CAR
PRESS ENTER AFTER YOU CHOOSE.

GO AHEAD:

"Professional paranormal investigations and eliminations..."

That's the aim of the game. You're given a \$10,000 loan to start your franchise, and the first thing you need is a decent set of wheels. The vehicle and equipment selection stages of the game are done well, although they do lack the variety of colours available on the Spectrum ... and the tele-typewriter style of printing text gets extremely tedious after a while.

MONITORING EQUIPMENT:
PK ENERGY DETECTOR \$400

IMAGE INTENSIFIER \$800

MARSHMALLOW SENSOR \$600

USE JOYSTICK TO
CONTROL FORKLIFT.
1-3 FOR MORE CHOICES
2 TO END.

YOU HAVE \$5000

The VW Beetle

This vehicle's cheap, but it only carries five items and chugs along at a mere 75mph. It's not really that good a buy as it won't hold all the items you can afford to purchase and it's so slow that you'll be reaching for those abort keys quicker than you can say 'Gremlins'. Of all the monitoring equipment on offer, the Image Intensifier is the most useful, allowing you to keep a constant watch out for those Slimers.

MONITORING EQUIPMENT:
PK ENERGY DETECTOR \$400

IMAGE INTENSIFIER \$800

MARSHMALLOW SENSOR \$600

USE JOYSTICK TO
CONTROL FORKLIFT.
1-3 FOR MORE CHOICES
2 TO END.

YOU HAVE \$5000

The Hearse/Station Wagon

Both of these vehicles are good buys, but the extra speed offered by the station wagon could be considered by some to be worth the inflated price tag. The capture equipment on offer is all too important — be sure and purchase some Ghost Bait, and a Ghost Trap is pretty essential as well. The Ghost Vacuum will allow you to suck up the spooks when you're out roaming the streets.

PK ENERGY DETECTOR \$400

IMAGE INTENSIFIER \$800

MARSHMALLOW SENSOR \$600

USE JOYSTICK TO
CONTROL FORKLIFT.
1-3 FOR MORE CHOICES
2 TO END.

YOU HAVE \$4000

The High Performance Sports Car

The high-performance sports car offers a 160mph top speed and allows you to carry up to seven items. This, and the Portable Laser Confinement System (an expensive alternative to individual Ghost Traps), is only for experienced 'busters with a very healthy bank balance. (I found that the Ionizer Backpacks ran out of power after five or so captures, thus making a trip back to base a necessity anyway. It might be worth investigating whether carrying plenty of Ghost Traps is a cheap and effective viable alternative to owning a PLCS.)

There's no way you can stop the Keymaster and Gatemaster on their relentless journey to Zuul — just make sure that your bank account is healthy to the tune of \$10,000 when they meet. Otherwise, you lose!

All the floaters, as well as the Gatemaster and Keymaster, are heading towards the Temple of Zuul. It's also where you'll end up for the final confrontation.

The ghosts, or 'floaters', fly in from each corner of the map. Don't let their slowness fool you as they first enter the map — they speed up and, pretty soon, all hell's let loose!

If you run out of traps, your 'busters have all been 'slimed' or your backpack's run out of energy, you'll need to head back to Ghostbusters Headquarters (GHQ).

"I ain't 'traid of no ghost!"

Ghostbusters Headquarters is the base for all 'busting operations and a building that'll become all too familiar as you play the game. Whenever you need new back-up 'busters, fresh backpacks or traps, a message scrolls across the bottom of the screen telling you to return to GHQ. On arrival, three new Ghostbusters — raring for action — trot out of the door and into the 'buster-mobile'. It's a shame that the Ghostbusters look so stick-like, especially when the majority of graphics are fairly good.

"Gotta run, gotta date with a ghost."

Once you've guided the Ghostbusters symbol to the building that's being haunted, you have to drive your vehicle along the streets sucking up any Roamers you may come across on the way, there's not much else to do at this stage of the game — I recommend you buy a Ghost Vacuum, if only to prevent you falling asleep at the wheel! It grieves me to say it, but the musical element that make the game so good on the CBM 64 is well below par ... even for the Spectrum. Oh, to be tone-deaf! Don't look too closely at the graphics at this stage either!

SEEN A GHOST?

are package than to wait until the film, book and T-shirt have all own product while the market's still eager. When Ghostbusters this country, Activision launched a version of the eponymous 'ghostbusting' thrill has died down a bit, the Spectrum version of and Dave Nicholls are unhappy to report, it just hasn't got the man and Nicholls draw their paranormal conclusions...

In the later stages of the game, you'll be wishing you'd bought a Marshmallow Detector to warn you that the Stay-Puft Marshmallow Man's in town! Once you've got him in your sights, you've got to lay a trap with Ghost Bait to catch this lovable fiend.

This is where you really get down to the Ghostbuster business. As soon as a building starts flashing red, you can be sure there's a Slimer causing some trouble...

As you pass by a building, it may begin to flash a lavender colour — which means that, although there might not be a ghost on the premises yet, you won't have long to wait!

This familiar-looking symbol is you... the dots that follow it trace the path to your next location. Look out for floaters on your travels, as you'll score extra cash for hoovering them up in your Ghost Vacuum.

You're shown an area of New York on-screen, that seems to be positively teeming with ghosts... and their fate's in your hands. Buildings on the map that flash red denote the presence of a Slimer; at this point, it's your task to steer the Ghostbuster's symbol to the scene of the psychic disturbance. The longer you take to reach your destination, the longer you spend driving the car in the next sequence of the game. If all goes quiet in the buildings, you can opt to do a bit of spring-cleaning and vacuum up a few of the ghosts floating around. However, you must stay alert for the 'Marshmallow Man' warning and quickly drop some Ghost Bait; if you manage to avert the danger, the Mayor will give you that \$2,000 reward.

"Oh sh! It's the Stay-Puft Marshmallow Man." Yes, guarding Zuul is the great Marshmallow Man himself, and obviously a very funny character if you live in America! However, in the game as in the film, this character's no joke... he can stamp on you! The idea of this part of the game is to sneak two of your 'busters past his bouncing mass; if you mis-time things slightly, don't be surprised if they're squashed underfoot. But, if they make it, then it's congratulations all round and you're given a unique account number which you can use next time you want to play the game. For some reason, you never get to see the summit of Zuul — but maybe that's being saved for the sequel. As a game, *Ghostbusters* is about average, and I'm sure the film will generate a large market for it. I'd like to be able to say it's better than the CBM 64 version... but it's not, and that's a great shame as it'll be a great disappointment to a lot of people.

"Try to imagine all life as you know it stopping instantaneously and every molecule in your body exploding at the speed of light. Total protonic reversal." That's what happens if your 'busting team manage to cross the ionizer streams while trying to trap a spook, so be careful! To avoid such accidents, remember to walk your 'busters right up to the building (or the streams won't reach very high up) and drop the trap in the middle of the screen. Now manoeuvre one of the team to the far right and one stage right, and face them both inwards — you're now in a position to bust a ghost!

"He's an ugly little spud, isn't he." And he's difficult to catch too! The Slimers flit about most unco-operatively and you often have to wait quite a while for the right moment to start blasting. Two techniques can be employed to trap the Slimers. First off, you can advance both 'busters and trap the foul Slimer under the canopy of the streams; watch out, though, that it doesn't escape between the streams. The second, and recommended, method is to wait for the Slimer to be just on the inner-side of one of the 'busters, then turn on the beam and advance towards the trap.

"We came, we saw, we kicked its a's!" If you spring the trap just as the Slimer moves over it then — Hey Presto! — one less 'Class 5, Full-Roaming Vapour', and up goes the cry (and it's bad enough to bring tears to the eyes) 'GHOSTBUSTERS!'. If, however, something didn't quite go as planned, then prepare to be 'slimed'. With a bit of practise, though, you'll soon manage to avoid this unpleasant experience and the cash will come rolling in. Then, if you've got more cash than you started with when the city's PK level reaches '9999', you'll have to start the final journey to Zuul.

MICROSPHERE

Skooldaze - the game that has everything - excitement, drama, comedy, tragedy, catapults . . . join our hero on a madcap romp with your favourite characters - the wicked headmaster, the nutty professor, the ancient history master (the history's quite old, too!) and, not forgetting the swot and the school bully. Speech bubbles, amazing animation, great graphics.

£5.95

Skyranger - patrol the air between the skyscrapers and make the city a safer place to live. 3D like you've never seen before, showing what a Spectrum is really capable of with the right programmer.

£5.95

Wheelie - in February the CRASH magazine reviewers thought this was one of the most addictive games ever. At a rough guess I'd say they were addicted to this game.

£5.95

All for the 48K Spectrum.

Available from all good computer shops.

HEY, ANYONE SEEN A GHOST?

HACKER'S GUIDE

Codebusting makes Dave Nicholls feel good... especially on Activision's Ghostbusters.

By and large, there are really only a couple of reasons why people become hackers, and they tend to divide the hacking community into two distinct groups. There are the practical hackers who go in search of infinitive lives POKes and new programming techniques. And then there are the hard core lunatic hackers who do it for fun!

I have to admit that I fall into the latter of these two groups and I'm proud of it! For me, hacking's akin to an adventure game, in which I'm pitting my wits against the programmers. To this end, I

Ultimate used for *Underwurlde*. There could be several reasons for this — either Activision has 'borrowed' it from Ultimate (or *vice versa*), or a third party may be going round selling the same idea to everyone. And if someone is getting into the 'protection racket', then software houses had better realise that if they all use the same method — no matter how good it is — the result can be counter productive. To qualify this statement, let me say that when I first hacked into *Underwurlde*, the protection employed was new to me and it was a devil of a job to break into;

Ghostbusters' protection, on the other hand, being so similar allowed me entry to the code within five minutes!

Once in, I did my usual run through the game and found that, although it's generally well-written, there are tell-tale signs that the package was thrown together in a hurry. Some of the routines are not in the most logical positions and there are some rather surprising 'garbage' bytes floating around; for example, up near the top of memory there's some assembler source code! Meticulous hackers may also notice a 340 byte routine that reads in blocks of bytes from the Interface 1 RS232 port that's been left lying around. Quite why these lumps of code were saved off on to the master tape is anybody's guess!

Most of the rest of the code is quite boring — except, of course, for those routines containing the speech; this is an example of the simple 'recording' technique where a program samples the earphone socket and creates a 'bit stream' which, when played back out again, recreates the original sound (with a few crackles thrown in for good measure). Although it's by far the simplest way of generating speech, there's rather a heavy toll on memory; it takes around 3.5K of memory to reproduce the three spoken phrases in *Ghostbusters*!

Another routine I particularly like isn't at all revolutionary, but it *does* use some old theories very effectively. The map of New York is stored as a series of two byte pairs, the first number of which is normally a

count for the second byte.

For example, if the first byte is '10' and the second '32', then the next ten screen locations are loaded with '32'; if, however, the first byte is a zero then the next byte is a count of the number of times the next block is repeated (a block is delimited by two zero bytes at the end). It may sound complex, but Activision's managed to squish the whole screen with all of its attributes into just 1370 bytes — a compression ratio that even

future *Hacking Away* column.

And, here's your chance to play *YS Bingo*! Next time you're asked for your name, enter 'CODEBUSTERS' and use account number 00166605 — it's the easiest way I know of starting off with \$1,000,000 (minus V.A.T., of course!).

To add POKes to *Ghostbusters*, you have to create a new header to stop it from auto-RUNning. First of all, type in the fake header given, RUN it and save it on to a blank tape. Now, listen to the *Ghostbusters* master tape and stop it just after the initial header (the first screech you hear on the tape). Remove the master tape (without re-winding it!) and replace it with the cassette containing the false header. Type 'LOAD' and, as soon as the header's loaded, swop the tapes around again and start the master up again. Then, when the 'OK' message appears, stop the tape (don't re-wind it) and type the following as a direct command:

POKE 24578,251: POKE
24579,207: RANDOMIZE USR
24527

Now press the Enter key, and ignoring the message on-screen, type:

CLEAR 40000: NEW

Enter the second program given and RUN it. Start up the master tape for the last time and, once loaded, you'll find that you never lose a 'buster once slimed, a single trap will be sufficient because it never fills up, and your backpacks will never discharge unless you cross the beams. Not bad, eh?

It takes around 3.5K of memory to reproduce the three spoken phrases in Ghostbusters!

Level 9 would be proud of!

By the way, before we move on to the tricky bits, watch out for a bug when you go to catch a Slimer — if you drop the trap too low down on-screen, when you catch the ghost, your *Ghostbusters* won't be able to retrieve the trap; at this point, the game gets stuck until you relieve the boredom by returning to the main menu for a new game. I'm working on a fix at the moment which will hopefully appear in a

```

Our second program gives you unlimited 'busters, bottomless Ghost Traps and backpacks that never discharge!

usually work my way methodically through most of the game to find out what's going on — but I get the most of my kicks out of 'reading between the instructions' and trying to work out how the program was developed. And *Ghostbusters*? Well, let's just say I had a lot of fun with that one!

Luckily, the first thing I noticed was that *Ghostbusters* uses one of the Ultimate software protection techniques; by this I don't mean that it's the best, it's simply the same one that

FOR SPECTRUM USERS

JOIN ALBERT BATTERSBY IN HIS SEXUAL FANTASIES AND ADVENTURES IN HIS DESIRE TO ACHIEVE THE ULTIMATE SENSATIONS

"SOHO SEX QUEST"

Albert is a 27 year old sewing machine attendant from North Yorkshire. He wins a national contest. The prize "A Night With Zelda The First Lady of Soho". What a way to go, but before you get to Zelda's bedroom, you must first encounter the dark and luring parts of Soho. If you go wrong the pimps, perverts and police will get you. Good luck Albert... you'll need it.

£7.50

48K SPECTRUM

"HERPES OR BUST"

It's not a good start I'm afraid Albert... you're back at the sewing machine factory and after the thrills of Soho and Zelda, life is all too boring. However, you read in a book of a strange trance you can get into where fantasies - yes especially sexual fantasies - can take you over. It's up to you Albert. First achieve the trance-like state and work towards a world of ultimate unreal sexual fantasies. Will your body stand it? Will your sewing machine ever mean the same?

£7.50

48K SPECTRUM

Cheques/P.O. made payable to:

malon

X RATED - Sold only to people over 18 years old

SPECTRUM BEEP BOOSTER

TELESOUND is a tiny electronic circuit which constantly enhances the sound volume and quality of the Spectrum sound output. Adjustable from a whisper to a roar, Telesound provides added realism and excitement for games players and security for programmers. No cutting, no soldering, just connect. TELESOUND also allows you to Load and Save programs without unplugging leads.

TELESOUND gives you real sound for only £9.95 inclusive of post, packing etc. Please state your computer when ordering.

COMPUSOUND

DEPT: YS2, 32-33 LANGLEY CLOSE, REDDITCH, WORCESTERSHIRE.
B98 0ET. TELEPHONE: (0527) 21429 (21439 Answerphone)

Calls this month have seemed to centre around Domark's *Eureka!* For this reason, we've enlisted the aid of *Eureka!* wizard, Steve Dale... and you can write to him for hints and tips on this adventure c/o *Your Spectrum*, 14 Rathbone Place, London W1P 1DE (please enclose an SAE for Steve's reply). But don't ask him about other adventures — he's still busy trying to fathom out the final clue in *Eureka!*. All other queries should be directed to Peter Marment, Gary Smart and Neil Mackintosh as usual.

Valhalla is still proving popular with callers, though some purists may argue that it's more of an arcade game than adventure. A fair proportion of the questions asked about *Valhalla* refer to problems in finding Drapnir. No problem — Drapnir is located north of Despair. Something else that seems to be hampering apprentice adventurers is that, having come across a chest or cupboard containing a quest object, there's no way to get the blasted lock open. No offence, but you're just too puny to attempt such heavyweight tasks on your own — try enlisting the help of a friendly God, such as Bodir, to help you.

Moving on, the Green Goblin, Peter Shaw (still trapped in the bowels of Castle Rathbone, stapled to the YS Helpline) has some hints and tips for those still floundering around with Ram Jam's *Valkyrie 17*.

According to ol' Green Fingers, the woman in the bar of the hotel is not actually a woman at all, but a male agent in drag! This may suggest the idea of stealing his wig, etc, and making an escape from the hotel in disguise... but, unfortunately, this just won't work. What you have to do instead is collect the sheets from the laundry room on the first floor and move down to the window at the end of the corridor. Here, you have to open the window and climb out on to the ledge. Make a rope out of the sheets you have and move around the ledge until you can find something to tie the sheets on to. Then, you can climb down and wander around the town.

But what's the use of hitting the town without any money? Luckily, there's a safe in one of the rooms, which you'll need to prise open with the object inside the glass case in the infirmary. Of course, you'll have to break the case, but if you look around the room under construction you should find the odd piece of rubble. Need I say more!

YS ADVENTURE HELPLINE

England and Wales: Gary Smart (0264) 59489 and Peter Marment (0264) 66660.
Scotland: Neil Mackintosh 041-332 2216.

ROUTINE ADVENTURES

Starting this month, we're going to be presenting a number of routines that can be incorporated in your own programs. It may seem an arduous task to write a full-blown adventure, but you'll find that most of the individual routines are no

CLUES FROM THE CASTLE

Clive Gifford, the Black Baron of Castle Rathbone, gets on-line with Peter Marment, Gary Smart and Neil Mackintosh to check out your adventure problems this month. Also enlisted are Hairy Hacker Dave Nicholls and Green Goblin Peter Shaw.

bigger than the one given here. Perhaps the most difficult aspect of adventure programming is making sure that all the component parts of the program fit together in full working order. Of course, you'll need to get your imagination in gear — but that's up to you!

Moving on to specifics, your first task is to give the computer the ability to

recognize commands entered by the players.

IN A COMMANDING ROLE ...

The routine given assumes that any command input will be stored in the string a\$; the punctuation is then removed and the input is checked against the words held in the string c\$. Type the routine in and RUN it; try replacing the words in quotes in the IF ... THEN statements in lines 1070-1080 to customise the routine for your own adventures.

When you input a word, it's stored in string c\$ and that's then checked against the words stored in the IF ... THEN statements. Of course, there's more than one way of checking the words input — for example, for a one-word command like 'QUIT', you could include line:

IF c\$="QUIT" THEN STOP

Of course, if you're offering the player the choice of a number of words, the program will have to be programmed to accept them. Try using a line like the following:

**IF c\$="KILL" OR c\$="SLAY" THEN
GO SUB ...**

Certain words, such as 'NORTH' will always be used in adventure programs — but it soon becomes tedious to have to

'VENTURING OUT...

**GHOULIES
IMS Software/£7.50**

It's rather sad that certain adventure games on the market find it necessary to hide their origins. I refer, of course, to those written using Gilsoft's *Quill* utility. I assume the reasoning is that the buying public are prejudiced into thinking they're in some way inferior. True, there are some awful adventures, but most are quite good and often very competitively priced. Just because someone is the best machine-codist in the world doesn't mean they have the ability to write good adventures — *Quill* simply gave people with adventure ideas an easy way to try them out without the hassle of machine crashes; in fact, software houses have been using utilities like it for years! In *Ghoulies*, the code has been changed and graphics added, but the basic adventure was obviously written using *Quill*. Come on IMS Software, it's a good adventure, so why not show your appreciation by giving Gilsoft a mention!

Enough gripes about the software industry and back to *Ghoulies*. Your task is to find some magic treasure produced and hidden by an alchemist, Father Gilbert, before he died in the torture chamber of the Spanish Inquisition. It's now many years after his death and you've arrived on the ferry to start searching.

Ghoulies has all the features you'd expect from a *Quilled* adventure — two word commands, instant responses, and save and load facilities — but there are

extras. The screen is the standard *Quill* format, but there's a small graphics section at the top illustrating the current location. Also, when you enter a building, the first letter of the location's description is enlarged (like an old fashioned scroll) to match the special typeface used throughout the game.

The first thing that'll strike you when you begin playing *Ghoulies* is the way in which the graphics, typeface and descriptions together produce a superb Gothic atmosphere. Another surprise is that there's so much going on — fat men with cheeses wander about, and ghouls steal corpses from gibbets, to name but a few. *Ghoulies* has so much atmosphere, it's difficult to get around to solving any of the problems (that's my excuse anyway!)

It's a shame IMS Software haven't admitted using *Quill*, but, all in all, *Ghoulies* deserves 10 out of 10 — but don't play it in the dark!

Although it's a *Quilled* adventure (on the quiet!), *Ghoulies* still rivals most of its adventurous competitors.

DOOMDARK'S REVENGE Beyond Software/£9.95

When *Lords of Midnight* appeared on the software scene, it immediately carved itself a place in adventuring history — nothing like it had been seen before and many adventurers turned into tacticians overnight in their attempts to defeat the Witchking. Now, with debates about the best way to succeed at *LOM* still raging, the sequel has arrived and Luxor the Moonprince's problems are far from over!

Doomdark's Revenge takes over where *Lords of Midnight* left off with the Ice Crown destroyed and the Witchking killed. Unfortunately, Doomdark's daughter, Shareth, Empress of the Ice-mark, swears revenge on Luxor and kidnaps Morkin, Luxor's son, and locks him away in her fortress. At the start of the game, Luxor, Rorthron the Wise and 1,000 Riders have just entered the Ice-mark to attempt to rescue him; as the player, you get to control all of these characters as well as Tarithel, daughter of the Lord of Dreams and Morkin's newfound love. As the game progresses, other characters may be recruited and controlled by the same 'SELECT' key mechanism used in *Lords of Midnight*.

Doomdark's Revenge comes in the same packaging as its predecessor but the keyboard overlay has been changed to accommodate the extra functions offered; these include four separate keys to perform the functions that the 'THINK' key did in *LOM* so that the progress of battles and states of health can be checked with-

out reading through all the other information. Movement controls haven't changed with keys '1' to '8' heading you in a certain direction and the 'Q' key actually making the move. The playing area has been expanded and now offers some 48,000 different views to be examined. There are also underground tunnels crossing the land which you can enter via pits and gates.

The object of the game is twofold — firstly, Morkin must be rescued, and, secondly, Shareth must be destroyed. It's possible to gain a 'minor' victory by just rescuing Morkin but to find out the 'Watchwords of Midnight' and win the prize of a model of Ice-mark with figures of the major characters, both parts must be completed.

Doomdark's Revenge is a much more difficult and, in a lot of ways, more interesting than *Lords of Midnight* — save up those pennies and buy it!

The long awaited follow-up to *The Lords of Midnight* has finally arrived... but is it different enough to be a hit?

type the word in each time. Thus, you should use:

```
IF LEN c$ > 0 AND LEN c$ <= 5 THEN IF
c$="NORTH" (TO LEN c$) THEN GO SUB ...
```

The above sorts out how many characters you've input and then, using string slicing techniques, compares them to those already stored in c\$. For example, if all you'd typed was 'N', the routine assumes you've entered the command 'NORTH'.

You'll probably find that you will need to have two routines like this in your adventure program — one to check the verb and one for the noun. Be here next month and we'll look at numeric arrays and their role in structuring an adventure game. **YS**

```
1 POKE 23658,B
10 INPUT A$
20 GO SUB 1000
30 GO TO 10
1000 REM Command recognition
1010 FOR a=1 TO LEN a$
1020 IF (a$(a)<"0" OR a$(a)>"9")
AND (a$(a)<"A" OR a$(a)>"Z") TH
EN LET a$(a)=" "
1030 NEXT a
1040 FOR a=1 TO LEN a$
1050 IF a$(a)=" " THEN LET c$=a
$( TO a-1): LET a$=a$(a+1) AND (
a+1)<LEN a$ TO ): GO TO 1070
1060 NEXT a: LET c$=a$
1070 IF c$="KILL" OR c$="SLAY" T
HEN PRINT "NO VIOLENCE PLEASE,
THIS IS A FAMILY DEMO,"
1080 IF LEN c$ > 0 AND LEN c$ <= 5 T
HEN IF c$="NORTH" (TO LEN c$) T
HEN PRINT "TOUGH, NO EXIT NORTH"
1090 IF c$="QUIT" THEN STOP
1990 IF (LEN a$=LEN c$) AND a$=c
$ THEN RETURN
2000 GO TO 1040
```

The 'command recognition' routine, that compares the input words in a\$ to those stored already in c\$.

MUSIC TYPEWRITER

COMPLETE MUSIC SYSTEM FOR THE ZX SPECTRUM

MUSIC TYPEWRITER gives you all facilities needed for music making. Using a special keyboard overlay it turns Spectrum into simulated music keyboard and enables you to write, edit, play & store music. Music is shown as played in **STANDARD NOTATION** and can be copied to a printer (see example above). **MUSIC TYPEWRITER** is easy to use even without any music knowledge and is an ideal educational tool for learning music. It's fun to play with for music novices and yet offers a lot even to professional musicians (like full transposing).

It has up to 16 compositions; 6 octave range; treble & bass clefs; two staves on screen; most time signatures & note values including dotted notes & triplets; staccato, tenuto; many automated features like tails direction, bar length, use of accidentals; error trapping; on-screen instructions; eight page manual, overlay and much more.

Please send me a copy of **MUSIC TYPEWRITER** at £ 9.95 each Y.S.

(European orders please add £1.00 overseas £2.10)

Over the past couple of years, apart from the odd snatch of a tune in games software, very little attention has been dedicated to the development of good music utilities. Composer and electronic designer Adrian Wagner checks out five of the latest packages available to see if the wait was worthwhile.

INTO THE MUSIC

Reviewing our musical software is modern composer and electronic designer, Adrian Wagner. Adrian can claim four LPs to his name — *Distances*

Between Us, *Instincts*, *Inca Gold* and *Disco Dream of the Androids* — all featuring his own compositions on the synthesiser.

But, unlike his great-grandfather Richard Wagner, Adrian's not just concerned with writing music, he's also heavily involved with the production of synthesisers. Adrian was instrumental in the invention of the Wasp and Gnat synthesisers and, at present, he's working with Francis Monkman (ex-Sky and *Curved Air*) on a long-term project that they hope will revolutionise the synthesiser as we know it today.

As I'm speaking among friends, we can all admit that, musically, the Spectrum's not up to much. But although its sound capabilities are certainly limited, they can prove to be very usable. Trouble is, the Spectrum itself doesn't come prepared, either from the hardware or software point of view, to make beautiful music. But, of course, there's a way around this problem ... and the answer's

in the software. First, though, let's review the present situation.

ON BOARD OPTIONS

You've got three basic parameters to play with in order to make music, and they can all be found in chapter 19 of the Spectrum manual; they are, of course: BEEP — the frequency or pitch of the note; PAUSE — the time before the next

MUSIC MAKER

Price: £1.99

Supplier: Malan Associates, PO Box 390, Purleigh, Essex CM3 6QQ.

This package offers little instruction on its use other than the blurb on the badly printed paper index card. This is a shame, because I found it quite easy to use — the only exception being that R Green (the programmer) decided to use a 10-line stave instead of the five line standard. As much as we need innovation in the world of music, I'm afraid this only adds to the confusion.

The screen information was enough to help me to store notes with ease but, unfortunately there's no facility to introduce sharps and flats! This, of course, makes the program musically unusable. But even worse, on playback it turns out that the notes are not what they say they are; for instance, a scale of C turns out to be a row of semitones starting from C and ending with G!

I think R Green would be well advised to take some music instruction before attempting any more music programs!

PLAY, TYPE AND TRANPOSE

Price: £4.95

Supplier: Hilton Computer Services, 14 Avalon Road, Orpington, Kent BR6 9AX.

This software package comes complete with a seven-page manual, which tells you that the *Play* program plays tunes entered as a series of BEEP and PAUSE Basic statements. The question is, why was the program written at all?

Having loaded the cassette, you're asked how many sharps and flats are required; the problem here is that your

key signature will contain *either* sharps or flats, but not both! After you've waded through a couple of screens giving you information on the pitch card and how to cope with metronome markings, you're in for a real thrill. The program breaks out and asks you to type your tune in Basic. What all this means is that after you've shelled out your hard-earned money for this package, you're told to type in the equivalent of what appears in chapter 19 of your Spectrum manual. Out of interest, I tried writing a tune and altering the musical parameters, but it made not the slightest difference.

The other program in this package is *Music Typing and Transposing* which is much the same as *Play* — tedious and boring.

MUSIC TYPEWRITER

Price: £9.95

Supplier: Romantic Robot, 113 Melrose Avenue, London NW2.

This package contains a very fast and easy-to-use non-real time sequencer that can process up to 16 tunes in memory. The writing and editing facilities are slightly easier to use than on *Spectune*, but then they're also musically more precise. You're even able to use complex timings like triplets and staccato notes with this package.

But the exceptional part has got to be the notation — it has to be seen to be believed! The way *Music Typewriter* prints up musical notation on-screen puts many expensive professional computer music systems to shame. The notes are tied together when necessary and, when in play mode, the music's printed out as the piece is played. The accuracy, even at fast speeds, is

Music Maker: Not one of the most brilliant pieces of coding I've come across, but then it's one of Malan's budget range for just under two quid! Bad graphics and poor use of colour are the first things you'll notice — but this is nothing to the lack of musical awareness shown by the program's designer; for instance, how many sheets of music manuscript have you seen with ten ledger lines? Altogether, a very confusing program and not really worthwhile if you have musical aspirations. 1/5 Peter Shaw

Music Typewriter: This is certainly one of the most professional music editors I've seen! Out of the five packages here, *Music Typewriter* sports the best musical notation (the graphics are excellent!) and speed, plus a very easy-to-use editor that incorporates a full error-check of the length of each bar. It also comes with a keyboard overlay — which isn't much use if you've got a replacement keyboard or a Speccy+, but it's a nice thought. 4/5 Peter Shaw

note; and duration — the 'on-time' of the note. Circumventing the need to get too musical, the Spectrum allows the pitch to be expressed in numerical terms, with middle C at '0', concert A at '9' and the C below middle C at '-12'. Duration of the note and pauses are expressed as '1' for a one second burst, '.5' for a half a second, and so on. By using a look-up table, it's quite simple to create a program that's an

easy-to-use musical sequencer (See Tuning Up this issue. Ed.).

There are a number of musical utilities on the market and I've chosen five which purport to extend the musical capabilities of the Spectrum. It's best to have a good idea of what you're looking for in a music package — do you want to learn how to write music, play pretty tunes, or both? As you'll see from the five pack-

ages I've looked at here, they do vary quite dramatically in their musical awareness, and if you imagine that they've had the same programming dedication lavished on them as on much of today's games software, you're in for a shock!

Please be extremely careful when choosing the right program to buy — some can be *really* disappointing. **VS**

astonishingly good.

The program contains three pages of menu: Page 0 provides facilities to play, repeat, write, edit, and print; Page 1 changes key signatures, time signatures and tempo; and Page 2 catalogues the tunes with their respective titles and length.

The supplied manual comes complete with a keyboard overlay — which does help when you're playing the Spectrum as a musical keyboard. It would have been nice to see a demonstration program (like the one in *Spectune*), but you pay your money and you take your choice. For me, though, the advanced musical notation definitely gives this one the edge.

MUSIC MAKER

Price: £5.75

Supplier: Bellflower Software, 6 Rosewood Avenue, Greenford, Middlesex.

This program comes neatly packaged with a helpful index card; the instructions have been well-written and are very easy to follow. Unlike some of the other packages in this review, the programmer obviously has some knowledge of music — which I do feel is important!

The screen has been quite well laid out; the only problem here being that it displays only one bar at a time while you're inputting notes. Staying with the process of writing your tune on-screen, the program won't allow you to delete more than one note back — and even then, it has to be in the same bar. This means that if you do make an error, you've got no choice but to start all over again. On playback, it first *prints* the notes on the screen in non-real time and

then *plays* them back in real time.

Music Maker allows you to add to the existing melody and store it on to cassette for later use; if you possess a printer, you can also obtain a hard copy and alter the speed of the playback.

Overall, this program's pretty good — but it should have included a suitable editing facility.

SPECTUNE

Supplier: XORsoft

Spectune converts the Spectrum keyboard into a two and a half octave musical keyboard that can be made to record, recall, edit, save, merge and print. The instructions explain concisely how to change the length of each note, the tuning mode (which re-tunes any note for interesting scales), selecting key signatures, time signatures, writing and editing, and so on.

Diving straight into the teaching part of the software, a user starting from scratch can learn the basic techniques of playing and writing music in very simple terms. Using an on-screen keyboard, the relevant keys blink in red and an explanation of how music is printed follows. When you've had enough of the demonstration program, you're then ready to load in the main operating program.

You're offered three options from the on-screen menu, the first of which is a learning game to help you sort out exactly where you are on the keyboard. A note's printed up on-screen and you've got to find it on the keyboard within three lives. It's fun and a useful learning aid — something other programmers should take note of. Returning to the main menu, the second

option — edit/write mode — is very easy to use. Having selected a note and specified its length, it's entered into the sequencer. If you change your mind, you can go straight into the editing mode and change any notes by scrolling to the left or right to insert, delete or alter any part of the composition.

The last option on the menu is the play mode. You're now programming music in real time and the sequencer's recording *exactly* what's played, including your mistakes! But, even if you have entered your tune in real time, the editor *still* allows you to remove or change any unwanted notes.

Spectune allows up to 26 different tunes in memory at any one time; these can be merged together in any sequence in the final composition. You can also make a hard copy of your tunes on a printer.

Overall, *Spectune* is a very well-written program, and one that I can recommend. It's a useful educational tool that's fun to use.

OUT OF TUNE?

Here at YS, we have piles of software flung our way by various suppliers — some good, some bad, but all worthy of mention. Trouble is, once the review copy came back from Adrian, we realised that no-one had the slightest idea where XORsoft is based and how much its package, *Spectune*, retails at. Standing up to its first test, the YS filing system broke down completely — so now it's up to you! If you've heard of XORsoft and can tell us where the company's based, give Trouble-shootin' Pete a ring on 01-636 2416. It's a pretty good package, and deserves a little more than anonymity.

Play, Type and Transpose: Either I've missed something crucial, or there isn't anything in this program that couldn't be explained better on paper. After the program's loaded, you're asked to type in the key you want to play in and the speed you want to play it at. Then, instead of diving into some all-signing, all-dancing music editor, the program stops and asks you to type in the relevant BEEP statements for yourself, providing a 'pitch card' on-screen for reference purposes. Try reading the Spectrum manual and save yourself some cash! 1/5 Peter Shaw

Music Maker: This is a good program, although slightly overshadowed by the standards of Music Typewriter and Spectune. The graphics have been quite well designed and the package is very easy to understand — but if you want to type in tunes of any length, then tedium soon sets in. Although the screens seem very 'busy' to begin with, the control keys are kept to a minimum to stop things getting too confusing. This program would be of most use to the musical novice (unfamiliar with the piano keyboard) who's keen to type sheet music into the Speccy. 3/5 Peter Shaw

Spectune: OK, so I'd never heard of XORsoft (Who has? Ed.) but that didn't stop this from being my favourite package of the five I play-tested. It was the only one of the programs to let me use the Spectrum's keyboard like a true piano synth (playing each note for as long as you hold the key, and then playing it back in real-time). The program was a little let down by the clumsy use of graphics and the confusing layout of the control keys. 4/5 Peter Shaw

MOON CRESTA

The background of the entire page is a dynamic space scene. In the upper center, a large, bright orange and yellow starburst or explosion radiates light. Above this, two green, rocket-like ships with blue flames are flying towards the viewer. To the left of the starburst, a blue circular emblem with a white star and a crescent moon is visible. Below the starburst, a red, bat-like or winged ship is flying. In the lower right foreground, a large, detailed white and blue spaceship is shown, with 'MX2' and 'MX3' written on its side. A long, blue laser beam extends from the starburst towards the bottom right, passing near the foreground ship. The background is a deep black space filled with numerous white stars of varying sizes.

How many times have you laboriously gone through a ZX Basic program, replacing one item with another? Well, despair no more, *Multisearch* will quickly and automatically find and replace almost any selected item. This routine is easy to use and is only 225 bytes long. It'll run anywhere in memory (so it doesn't interfere with other utilities) and, what's more, turns out to have lots of useful and unexpected applications.

POWERFUL POSSIBILITIES

The possibilities of *Multisearch* aren't limited to changing one message for another. You can use it to edit long program lines, to replace keywords or to document programs (replacing line-number references with names). *Multisearch* will also work the other way, replacing names with numbers — which is very useful if you intend to compile a Basic program into machine code.

Most interesting of all is the possibility of writing programs which edit themselves; *Multisearch* can easily be called while a program runs. In this article we will investigate the internal format of ZX Basic and show how you can use *Multisearch* to make programs faster, more concise, or to protect them against people who want to fiddle with them (Troubleshootin' Pete, please note).

INSPIRATION

The idea of *Multisearch* came when YS reviewed a job lot of 'programmers' toolkits' a number of months ago. These are designed to make life easier for Basic programmers, but they all turn out to have a common flaw — they won't let you replace numbers in a program automatically.

MULTISEARCH

After a brief sojourn writing commercial software, we welcome programming guru Simon Goodwin back to the pages of YS with his first major utility since ZIP! Multisearch might be somewhat smaller than its predecessor but, as a fully relocatable 'search and replace' utility in just 255 bytes, it too is dedicated to the art of speeding up your Basic programs. Don't limit yourself to any other utility — make more of Multisearch!

Some of the toolkits had a 'search and replace' facility, but they all had annoying limitations — for example, *Super Toolkit* would only replace single keywords. The suggested use was to change LPRINT into PRINT or *vice versa*, but in fact that's pretty pointless because you can get the same effect on *any* Spectrum with a standard (but undocumented) command:

OPEN #2, "p"

This sends the output of PRINT statements to the printer until you cancel it with:

OPEN #2, "s"

If you want to work the other way, you can use:

OPEN #3, "s"

to send the results of every LPRINT statement to the screen. When you want to use the printer again, the command:

OPEN #3, "p"

will set things back to normal.

It's a bit more useful to be able to replace text in a program — perhaps you might want to Americanise the word 'colour' by replacing it with 'color', or enforce some similar indignity. But by far the most useful application baffles every single toolkit — the problem of changing numeric values within a program.

INSIDE BASIC

The accompanying figure shows the rather complicated way the Spectrum stores a simple Basic program:

```
10 PRINT 2+VAL "2"
20 GO TO 10
```

WHAT'S MY LINE?

10 PRINT 2+VAL "2"

20 GO TO 10

Here we see the complicated way the Spectrum stores Basic program lines in its memory. Take a look at Appendix A of the Spectrum manual if you're not sure what's going on.

MULTISEARCH

Most of the data is ASCII code — for instance, 34 is the code of inverted commas and 236 is the code of the keyword GO TO. A full list of the keyword values is in Appendix A of the Spectrum manual — take a look at the strange way the Spectrum stores numbers.

Most numbers in a program are also stored in a hidden 'binary form' which takes up six extra bytes. This is meant to make programs run more quickly, by removing the need for the computer to convert numbers from text to binary whenever they are found. In practice, VAL "2323" can be handled almost as fast as the number 2323, and the first version uses three less bytes, because the string value doesn't have a hidden 'binary form'.

In the figure, you can see that VAL "2" needs three less bytes than '2' on its own. The number '2' is followed by a 'marker' byte (code 14) which tells the LIST routine to skip the next five bytes — the binary form of the number. When the program RUNs, the text is ignored and

The assembler listing for Multisearch. Grab an assembler (or a Hex loader if you're going to enter the Hex code on the left of each column) and get typing!

the binary form is used.

The binary is in a rather odd format — one which is explained in Dr Ian Logan's excellent book, *Understanding Your Spectrum* (published by Melbourne House). Luckily, with the aid of *Multisearch*, you don't need to understand the format to manipulate it.

The upshot is that numbers in ZX Basic programs need careful treatment, as they can gobble up memory at an alarming rate. Some expressions for numbers are even more concise than the 'VAL' version, because they use the keyword PI instead of a number. PI only occupies one byte in a program. The accompanying table lists a few common values and the expressions to replace them, along with the number of bytes saved ('n' represents any number).

You could use variables with preset values instead of numbers to get a similar saving in space, but beware — ZX Basic is rather slow at finding the value of variables; expressions like SGN PI may be worked out more quickly, especially if your code uses lots of variables anyway.

Interestingly, values expressed using the BIN function are also stored in two forms, so that BIN 1 soaks up eight bytes — one for the keyword, one for the digit, and an extra six for the genuine binary form.

The line numbers at the start of each line are stored in a more sensible 'packed' format — each number occupying just two bytes. They are converted into deci-

Value	Abbreviation	Saving (bytes)
-3	-INT PI	5
-1	-SGN PI	5
0	PI-PI	4
1	SGN PI	5
3	INT PI	5
n	VAL "n"	3

The table above shows you just how many bytes you can save if you start using constant expressions.

mal by the LIST routine in the ROM. The two bytes after each line number hold the length of the line, so that Basic can skip quickly from one line to the next. An 'ENTER' character is at the end of every line. This format is briefly explained in the Spectrum manual, on page 166.

The first program given is a simple loader which will store the machine code for *Multisearch* at address 30000. To use it, simply RUN the program and if you've made no typing mistakes, the correct code will be stored. If there's a mistake in the data, an appropriate message should appear. It's wise to SAVE the program as soon as it has apparently run correctly, just in case an error has slipped through. If you save the code you can then load it again — without the Basic — at any address.

MULTISEARCH ON THE RUN

The routine is very easy to use, and all you need to do is load the code into any

MULTISEARCH

bers in program lines. We can't store a number in a string without putting it in quotes (or using STRS). LET AS="1" is OK, but LET AS=1 gives an error, and we've already discovered that numbers outside quotes have a special format. To illustrate this, try out the following program:

```
10 LET SS="40"
20 LET RS="60"
30 RANDOMIZE USR 23296
40 PRINT "Hello";
50 GO TO 40
60 STOP
```

When you RUN this program it'll replace the text '40' in line 50 with the text '60'. However, it *won't* replace the hidden binary form; the program still prints out 'Hello' over and over again, because ZX Basic uses the binary form of the line number (still 40), and ignores the text completely. You end up with a line that reads GO TO 60 and performs a GO TO 40!

This is a very useful trick to discourage people from editing your programs — you can jumble up the text of the line numbers but the program will still work correctly because the binary forms are unchanged. The hidden binary is removed when a line is edited (to stop it getting in the way as you move along the line) and the binary is re-calculated from the text when you press Enter. This means that the jumbled values *are* taken literally after a line is edited, changing the way the program works and hence discouraging fiddlers.

You can save a little memory by

```
120 CLEAR 29999
130 LET c=-26434
140 FOR i=30000 TO 30224
150 READ a
160 LET c=c+a
170 POKE i,a
180 NEXT i
190 IF c THEN PRINT "DATA ERROR": STOP
200 SAVE "Megasearch" CODE 30000,225
210 SAVE "Megasearch"
1000 DATA 42,75,92,126,254,83,40,14

1110 DATA 35,19,16,248,42,174,92,126
```

replacing the text of each number by a single digit. However you can't dispense with the text altogether — there must be *some* numeric text between the GO TO and the CHR\$ 14, or Basic will spot the subterfuge and give the game away with a 'Nonsense in Basic' error.

BINARY CHOICE

We still can't alter numbers properly. The routine so far will only change text within a program... it can't replace the binary form of numbers. The solution is to distinguish between numbers and strings, and use a small Basic program to work out the binary form of a number. An appropriate routine is given, which should be MERGED with your Basic program once the *Multisearch* code is loaded.

Rather than use a complicated routine to generate binary forms, this program 'cheats' by storing the required number in a variable and then PEEKing the contents of the variable area (which always contains binary values in the same form as that used within programs).

To use the program type GO TO 9990 and press 'T' or 'N' to indicate whether you want to search for text or a number. Then type the data required, exactly as it appears in the program. If you select 'N', the program adds the numeric form to SS. Next you specify the replacement, which may (once again) be text or a number. The program STOPS once the requested changes have been made.

This technique is not ideal, but it does allow numbers to be changed properly without denying you the ability to alter numeric text and leave binary forms unchanged. If you need to process a pattern which contains a number, you'll need to add other characters around the search or replacement string, using the normal Spectrum string-handling commands.

```

9995 LET v=VAL a$: LET a$=a$+CHR$ 14: LET i=PEEK 23627+256*PEEK 23628: FOR j=i+1 TO i+5: LET a$=a$+CHR$ PEEK j: NEXT j: RETURN
```

Once you've got *Multisearch* up and running, use this short routine to get the show on the road!

You can use the 'binary form' program as a subroutine if you replace the STOP in line 9902 with a RETURN and get rid of the CLEAR statement in line 9900. However you *must* make sure that V is the first variable encountered when your program is RUN. The routine finds the binary form of a number by storing it in variable V, and then PEEKing the first entry in the variable table. If V isn't the first entry you'll get incorrect results.

ASSEMBLER LISTING

Multisearch uses a number of interesting routines and could form the basis of a complete Basic toolkit. The assembly code of the routine, produced by the whizzo new Microdrive version of the Picturesque *Editor Assembler*, is a little more repetitious than it need be, since it's written in relocatable code. This means it'll run anywhere in memory without modification, but also that it can't use any internal subroutine calls, since the location of each subroutine is not fixed.

Broadly speaking, the program can be divided into two sections. The first part (up to the label LINE) is used to find the variables SS and RS and check that they contain correct values. The code to find SS is duplicated to locate RS — the only difference is the letter of the name and the extra check to make sure that SS contains at least one character.

At FINDS, the program points HL into the variable area and then looks for a capital 'S'. This indicates the start of the storage allocated to SS, as explained on page 168 of the Spectrum manual. The ROM routine F-VAR is used to step from one entry to the next until the required letter is found, or the end of the table is reached — in which case a 'Variable not found' error is generated.

Strings stored in the variable area are preceded by their length, recorded in two bytes in normal Z80 fashion — low byte first. *Multisearch* can't cope with strings of more than 255 bytes (the code is kept simple!) so it generates a 'Parameter error' if the most significant byte of either string length is not zero. If all goes well IX is left pointing to the text of SS.

From NEXT2 onwards the routine looks for RS. The address of the string (a pointer to the length, in this case) is stored at R-LEN, at the end of a Basic work area called MEMBOT. DE is pointed just before the start of the Basic program (as if the Enter at the end of a

If you haven't got an assembler or Hex loader to hand, just type in the Basic listing of *Multisearch* given above and let the data statements work their magic.

BEWARE. THE CYCLONE.

You've seen the havoc Tornado Low Level can create.
Now it's the turn of Cyclone. The latest action game from Vortex.
Stunning multi-view 3D graphics. Vast dynamic
playing area. A new game designed to take the Spectrum
world by storm.

Beware. The Cyclone...is imminent.

HISOFT

ULTRAKIT £9.45

The most powerful toolkit yet for ZX BASIC. All the features you will ever need; AUTO insert, full RENUMBER, block DELETE, CLOCK, ALARM, error trapping, break trapping. Full TRACE with single-step and much, much more. Makes ZX BASIC easy-to-use and powerful.

DEVPAK £14

An excellent assembler, an advanced line-editor, a comprehensive disassembler and a superb 'front panel' debugger all in one package. Used by many leading software houses to write their games. "Buy it!" Adam Denning 1984.

PASCAL £25

A powerful and almost full implementation of Pascal - not a Tiny Pascal. A valuable educational and development tool, programs typically run 40 times faster than a BASIC equivalent. Spectrum version includes Turtle Graphics package. "I haven't seen any other compiler that could match Hisoft's Pascal"

HISOFT

180 High Street North
Dunstable, Beds. LU6 1AT

for the ZX Spectrum

Hisoft is pleased to announce a new compiler for this popular and effective systems programming language. Not a tiny-C but an extensive, easy-to-use implementation of the language. Allows direct execution of compiled statements. Supplied with function library. Available direct from Hisoft for £25, or write for further details.

All prices, UK delivered, relate to 48K ZX Spectrum versions. Our software is available for many other Z80 machines e.g. Amstrad CPC 464, MSX, Memotech, SHARP MZ700, New-Brain, CP/M etc. Please write for details.

Tomorrows Dream Software Proudly Presents

TITAN

The debugging monitor utility for machine code programs on the BBC B

Includes:

- ★ Single stepping through RAM and ROM — including operating system
- ★ Intelligent memory mover
- ★ Breakpoints in ROM
- ★ Microsecond timer
- ★ Machine code program relocater
- ★ Single step through graphics routines
- ★ Intelligent masked string search routine

Plus—'Front panel, display, OSCLI commands available within debugger, conditional breakpoints at relative branch instructions, display of four memory windows updated during single stepping, user zero page preserved during single stepping, arithmetic operators + — × —, output to printer, ASCII dump, hex dump, disassembly, block fill, plus much more.

With complete instruction booklet

ONLY £10 on tape, £12 on disc, from TDS

Dealer enquiries welcome

Written any good software? We pay top rates for original programs

Please send me a copy of **TITAN** for the 48K Spectrum on tape (£8)/cartridge (£15). I enclose a cheque/PO for £
payable to Tomorrow's Dream Software

previous line had just been reached) and the main loop through the program begins at LINE.

At LINE the routine expects the end of a line and the start of a new one. It skips over three bytes — the Enter and line number — and stores a pointer to the line length in L-LEN. We need to know where the line length is recorded since we may need to alter it if we add or delete characters in the line.

FIND is the point at which *Megasearch* tries to locate the search string. DE is saved, so that we know where the match did (or didn't) occur, and then the loop at MATCH is used to see if the characters from DE onwards match those from IX onwards. Register B contains the length of SS. If the comparison fails before B reaches zero, the program leaps off to GO-ON, but if all goes well, the length of RS is fetched and compared with that of SS. If the two are the same, execution continues at NO-OK (pronounced 'number OK!') — otherwise some characters must be inserted or deleted so that the replacement text fits in the line.

The job of adding or removing characters is not trivial, since any change in the program size also alters the location of variables, and other useful pieces of information. Luckily, ROM routines exist to adjust the program size and make sure that nothing gets lost. SHRINK and XPAND remove or add BC characters at the location pointed to by HL. XPAND produces an 'Out of memory' error if

there's no room for the extra characters.

If SS and RS are different lengths then *Multisearch* must adjust the line length (as explained earlier) and alter the pointers to SS and RS. Any movement of the program also sends the variables skidding around memory, since they're stored at the end of the program. This took a little while to puzzle out when we tested the machine code!

A couple of extra jumps are located between the Delete and Insert instructions — the main loop is too long to be traversed in a single relative jump (it can only cross 126 bytes at one mighty bound) so FINDX and LINEX are used as 'staging posts' on the way to FIND and LINE respectively.

Various paths meet at NO-OK. At this point a correct match has been found and the address on the stack points to the place where RS must be stored. An LDIR is used to copy the new text into the program. This leaves DE pointing to the character after the new data, from whence the search can re-start. If SS didn't match the program we have to advance DE and start again one byte further through the program. This step is performed at GO-ON.

Whether or not a match was found, we end up at NEXT, where the Break key is polled in case the user has decided to give up. The routine stops with a BREAK error if bit zero at port address 32766 (the Space key) is reset. At CONT the contents of the system variable VARS are compared with the address in DE.

If DE is pointing into the variable area we've finished, and the routine RETURNS. Otherwise we must look further through the program, although before that we check for a couple of 'special cases'. If DE points to an 'ENTER' character we've reached the end of a line, so we should pick up the new line length by looping back to LINE.

If DE points at a number marker — CHR\$ 14 — we must skip over the binary data since it could contain values which appear to be text or keywords, but aren't really. This doesn't stop us finding numbers, since those will always start with an ASCII character (probably a digit). If we've reached the CHR\$ 14 we've gone too far.

POSSIBLE IMPROVEMENTS

There are lots of ways in which *Multisearch* could be improved, but the existing code works and it doesn't take long to type in! It might be useful to make it return a count of the number of replacements found, and perhaps a list of the lines in which changes were made. It would be convenient (but perhaps rather difficult) to re-code the 'binary form' program in machine code.

As it stands, *Multisearch* is a simple but very effective routine with a multiplicity of uses. There can't be many short routines which can be used to make ZX Basic edit-proof, faster, more concise, more readable, and more versatile. Do let me know what you make of *Multisearch*. **VS**

TAPE COPIER 6 (new) MICRODRIVE 1

(plus disc/waferdrive transfer)

Make your essential BACK-UP copies with our second generation copies TC6. It copes with the vast majority of programs, with new UNIQUE advanced features. 48k Spectrum only. Makes your old copier redundant?

- Deals with fast loaders + converts them to normal speed for drive transfer.
 - LOADS in program parts CONTINUOUSLY — even when there is no sound gap, short tone leaders, false headers, etc, making the process simple and effective. User friendly.
 - Copes with v. long programs (say 65000 + bytes)
 - Extra features e.g. integral header reader, pause, delete, abort, repeat copies, FULL Manual.
 - M/TAPE — this extra option GENUINELY copies BASIC, M/CODE + arrays onto MICRODRIVE, alters program names, etc.
 - Updates for old customers £3, (£3.50 with m/drive) old tape and SAE
- TC6 £5.00 (WITH M/TAPE OPTION £6.00)

MICRODRIVE ONE (MD1)

48k Spectrum owners with m/drive can NOW transfer the MAJORITY of their programs (inc. headerless, long programs, + those with LOW addresses — say 16384).

TC6 transfers the bytes, but MD1 has 5 programs to help you do the conversions to get them running + 2 "CAT" housekeeping programs.

The manual has examples/exercises and we believe this widely acclaimed program (together with TC6) gives you an unrivalled opportunity for you to fully utilise your m/drive. Try it and see for yourself.

MD1 (WD1 for disc or Waferdrive owners) costs a mere £6.50. ALL PRODUCTS CARRY OUR MONEY BACK GUARANTEE.

OVERSEAS customers: add £1 Europe, £2 others for each product.

Please send SAE for enquiries.

■ A wealth of Peripherals for your Spectrum! ■

By RICK BRAVO

Since the 48K Spectrum was launched the opportunities it offered has attracted peripheral manufacturers throughout the world.

One of these manufacturers was bound to emerge as the "brand leader" and in the case of the Spectrum this turned out to be DK'tronics. The company is based in Saffron Walden in Essex and proudly boasts a history dating back to the ZX80. All the company's products are manufactured in England at their own factory and they have now established themselves as world leaders, exporting to over 30 countries.

Below you will find a review of their range which now includes over 16 products, all of which are available for the Spectrum and Spectrum + models.

Keyboard

The DK Microdrive Compatible Keyboard is the best selling keyboard in the world and is now used by around 10% of all U.K. Spectrum owners. It is micro-drive compatible and offers more key functions than any other keyboard in its price range. The stepped keys and space bar make it even easier to use. It is constructed from high density black ABS and has 52 keys and a full width space bar. A separate numeric keypad of 12 red keys including single entry 'delete' plus single entry 'decimal point' facilitate fast numeric data entry.

From good computer shops everywhere at only £37.50 or direct from DK'tronics, add £1.50 post & packing.

Dual Port

This highly successful Light Pen for the Sinclair Spectrum plugs neatly onto the rear of the Computer or the rear of the printer connector. The operating software now runs faster and supports 16 pre-defined instructions. You can change all the colours (Border, Paper, Ink), draw circles, arcs, boxes, lines and insert text onto the screen (ideal for diagrams etc.) Save & load completed or partly completed screens onto or from the tape.

There are also features to draw Free Hand and animate on the 48K Spectrum, you can retain and animate 5 screens.

You can also use the machine code on its own in your own programs for selecting out of a menu, playing games etc. All entry points necessary are given. The Pen works down to pixel level with pixel accuracy.

From good computer shops everywhere at only £19.95 or direct from DK'tronics, add £1.50 post & packing.

The first port simulates 6,7,8,9, & 0 Keys. The second port simulates in (31) command.

The port will accept any Atari style joystick. It will run any software. That is:-

- (a) Using Keys 6,7,8,9 & 0.
- (b) Having redefinable key instructions.
- (c) Using in (31) (i.e. Kempston).

This Dual Port interface interconnects with the existing range of DK'tronics products to form the most comprehensive range of Spectrum peripherals available from any manufacturer.

From good computer shops everywhere at only £13.00 or direct from DK'tronics, add £1.50 post & packing.

3 Channel Sound Synthesizer

Any microcomputer is capable of manufacturing sound, however, in order to produce a single octave 'C' note with a frequency of 8372Hz the signal needs attention over 16,000 times per second.

To produce software capable of performing just this one task would be difficult if not impossible, especially when you consider that to produce arcade type sound effects requires even greater attention.

The production of these sound effects without the constant attention of the processor is now possible thanks to the AY Sound Chip, its flexibility makes it essential for a wide range of applications including music synthesis and sound effects generation, continuing the monitoring and production of sound after the initial command.

More often than not realistic sounds require more than one effect and this function is provided by 3 independently controlled channels, as an example compare the sound produced by the single note of 'C' with that produced by the chord 'C' and you will know just what I mean, likewise producing the sound of an explosion using all 3 channels gives games a totally new dimension.

Add to this the ability to alter the pitch tone and shape of the sound you have produced and it's flexibility is unlimited. In simple terms, imagine the note you have produced as a calm sea, by altering the pitch and shape you can produce waves, the top of the wave corresponds with the maximum volume and pitch of the note, which like the wave itself rises and falls.

Programmable

At last! A fully programmable joystick interface with feed through connector that really works!

Now you can run ANY software from ANY supplier with the DK'tronics fully programmable joystick interface. It comes complete with machine code software and can be programmed in seconds to give full 8 directional joystick movements plus five capabilities and will accept any Atari/Quickshot type joystick. A catalogue is now available showing the full range of products available from DK'tronics the world's leading Spectrum peripheral manufacturer. The through connector enables other add-ons to be plugged into the rear.

From good computer shops everywhere at only £22.95 or direct from DK'tronics, add £1.50 post & packing.

Speech Synthesizer

The speech synthesizer uses the popular SL0/256 speech chip and has an almost infinite vocabulary. It is supplied with a text to speech converter for ease of speech output creation. Everything you wish to be spoken is entered in normal English, without special control codes or characters, it is therefore extremely easy to use. The voicing of the words is completely user transparent and the computer can carry on its normal running of a program while the speech chip is talking.

Although there are only 26 letters in the alphabet, letters have a totally different sound when used in different words. For example, the 'a' in Hay is much longer and softer than in Hat. When you speak you automatically make adjustments because you know just how a word should sound. Not quite so easy with a computer. After looking at other speech synthesizers we decided that it was essential that the DK'tronics Spectrum Speech would offer a simple system that would enable the user to produce realistic speech that was instantly recognisable.

The solution to the problem was extremely complicated, it required hours of programming to enable the computer to look at the individual letters that make up each word and compare their relative position to each other before deciding on the appropriate sound.

I consider this to be the best Spectrum Speech Synthesizer on the market. From good computer shops everywhere at only £24.95 or direct from DK'tronics, add £1.50 post & packing.

Centronics

The new Dk'tronics Parallel Centronics Interface will link your Spectrum to any printer with a standard centronics input. As the choice is vast, you can select the printer exactly suited to your needs.

Features of the interface include: Runs all parallel centronics type printers: Controlling software fully relocatable; Interfaces with any software using the printer channel e.g. Tasword Dev Pack etc; LList Lprint recognised. High res screen dumps; All control codes allowed through to printer; Fully microdrive compatible.

Supplied with full instructions and controlling software. From good computer shops everywhere and sensibly priced at only £39.95 or direct from DK'tronics, add £1.50 post & packing.

Flexibility for Spectrum users!

56-way I.D.C. connector and ribbon cable assembly, designed and manufactured by Varelco Ltd., to fit the Sinclair Spectrum and Spectrum+ computers. Available in single, double-ended and threeway format. Also available, paddle board to convert female connector to male plug format.

! NEW VERSION '85 !

- Would you like to transfer your Spectrum programs from
- ① MICRODRIVE TO MICRODRIVE
 - ② TAPE TO MICRODRIVE
 - ③ TAPE TO TAPE
 - ④ MICRODRIVE TO TAPE

Then do it with

TRANS-EXPRESS

TRANS-EXPRESS is the most comprehensive package of four m/c utilities for transferring Spectrum programs. They are user-friendly, simple to use, reliable & very efficient. They will enable you to transfer any kind of programs up to the full 48.0k length. TAPE TO MICRODRIVE will also automatically, if necessary, modify, re-structure & relocate both BASIC and m/c to RUN from microdrives.

TRANS-EXPRESS is an essential microdrive companion and an invaluable software back-up utility.

You can buy each of the four programs separately for £ 5.50 or TAPE TO MICRODRIVE & MICRODRIVE TO MICRODRIVE for £ 7.50 or an entire package of all four programs on one tape for £ 9.95 or on a microdrive cartridge for £ 14.95 only.

DEALER ENQUIRIES WELCOME

OK, in this month's competition, we're going to ask you to do a bit of day-dreaming. Remember the excitement you felt when you first heard that Uncle Clive had hatched up another computer ... and it was based on the Spectrum? And then the let-down, when you eventually heard about the Spectrum+. Well, all we want you to do is have a look at the list of ten attributes we at YS thought would make the Spectrum+ a world-beater ... and put them in the right order of importance.

Of course, there's no such thing as a 'right' or 'wrong' order — especially since the Spectrum+ is out, and it's nothing like we hoped it would be. So, what we've done is to get a certain somebody you'll all have heard of to make up the definitive order. And who's that special person? Yes, it's none other than that Sinclair Research spokesperson we're always quoting (Well, he needs some publicity too! Ed.).

THE GOODS

Competitions wouldn't be much fun if there wasn't an amazing prize for the winner ... and that's why our first prize is a £500 voucher — to be spent on any Spectrum peripherals or software only, in one of the well known UK chain stores selling Spectrum equipment. Not only that, but there'll be five £100 vouchers for the following five correct coupons picked out of a hat at random!

All you have to do is fill in the coupon, giving us your name and address, together with the order you think the imaginary Spectrum+ attributes should be in. Then, bung it in an envelope and address it to: Spectrum UK Competition, Your Spectrum, 14 Rathbone Place, London W1P 1DE.

There's £1,000 worth of peripherals and software to be won for the ZX Spectrum — courtesy of Spectrum UK and Your Spectrum magazine.

SPECTRUM RULES OK!

- Entries for the Spectrum UK competition must have a post date of not later than 31st March, 1985.
- Each entry must have the coupon filled in correctly; bad language and illiteracy will be treated with the respect they deserve.
- The Editor's decision is final, and no correspondence will be entered into with regard to the results of the competition.

COMPETITION!

sinclair
+
YOUR
SPECTRUM
+
?
=
£500!
worth of peripherals/software!

Only when hell freezes over, will there be any chance of Sinclair Research coming up with a Spectrum-based micro with this lot on-board ... but if it did, I reckon I'd put its attributes in the following order of importance:

- | | | | |
|---|-------|---|-------|
| Pixel colour resolution mode | | User-defined function keys | |
| Joystick ports | | Centronics parallel interface | |
| Built-in Interface 1 and Microdrive | | Built-in cassette unit | |
| Sound synthesis chip | | RGB monitor output | |
| Built-in power supply and 'on/off' switch | | Software-compatibility to the ZX Spectrum | |

PROGRAM POWER

Your Spectrum is proud to present an amazing 100 per cent machine code game written by Stuart Jamieson. All programming contributions should be sent to Gavin Monk, Program Power, Your Spectrum, 14 Rathbone Place, London W1P 1DE.

MAC MAN

BY STUART JAMIESON

Is Mr Mac a hypochondriac? All he wants to do is munch his way through all those pills...that's if the ghosts don't get him first!

Following the success of our first 100 per cent machine code program *Stampabout* (YS issue 8) now try this one for size! Again it's based on an old favourite — but it's certainly one of the best *Pac-Man* clones we've seen here at YS!

Before giving you the details of the game (*Only hermits won't know what it's all about!* Ed.), here's how you get that code into your Speccy. First type in the machine code loader and SAVE it to tape. Next type in the Hex loader program and RUN it. It'll accept eight bytes at a time (without spaces) and then ask for a checksum (which is given after the eight Hex pairs). You'll then be asked to SAVE the code *after* the short loader program. This done, reset the Spectrum, rewind the tape to the beginning, enter LOAD "" and press the Play button on your cassette machine. It's as easy as that!

On now to the game itself. Quite simply, you have to control the hero, Mr Mac, around the maze collecting the pills as you go and avoiding the four distinctly unfriendly ghosties. Don't be daunted though! Eating the power pills you'll find in the four corners of the maze will enable you to turn the tables on the ghosties and let you eat them instead — but only when they've turned green, so you'll have to be fast as they don't stay that colour for long!

This excellent version of the arcade classic uses ultra-amazing double-size graphics and smooth animation throughout. If you manage to progress beyond the first 'cherry' level, you'll get to 'strawberry' level and that's as far as we at YS have managed to get! But there's lots more...

Controls for the game are simple and easy to use. Just press the 'Q' key to go up, the 'A' key to go down and the 'P' key to move right and the 'O' key for left.

Happy munching!

Here's the Hex code that you'll need to type into the Spectrum using the Hex loader given above.

```

Once you've SAVED the loader program, reset the Spectrum and type in the Hex loader program and RUN it. The program will ask for eight bytes at a time from the main machine code listing and then, finally, the checksum at the end of each line. When you've typed in all the code, SAVE it to tape after the short loader program. Now rewind the tape, reset the Spectrum, type LOAD "" and start the tape.

FREE SOFTWARE FOR LIFE!

"Probably the best offer ever made to the micro user..."

Directors: Alex Fry ARPS, FRSA; Erna Fry BA

New Gold Star life membership of The Software Library is your key to a vast treasure trove of tapes costing up to £18 each. They are yours whenever you want them, three at a time... and a full week's rental won't ever cost you a penny in hire fees!

Only the original Software Library has the resources to make such an amazing offer—free software for life! Our ten megabyte computer ensures fast service; our illustrated, descriptive catalogue makes it fun to choose from over 80 top arcade games, 124 Adventures, simulations and other games, and over 120 great utilities and serious applications; 65% are for the Spectrum, the rest divided between Commodore 64 and ZX81. New releases are constantly being added. Joining this money-saving scheme should cost you £24: as an introductory offer, you can join this month at **half price—£12**. From then on, you can take away three tapes from our shop whenever you wish; or if you order by post, all we ask is 30p post/packing per tape. The rental is perfectly free in either case.

What's more, you can sell your surplus software to other members (we have over 5,000!) and recoup the cost of membership in no time at all. We offer huge discounts on peripherals and tapes... and so much more. Phone us now on 0730 892732, quoting your Access number, or return the coupon without delay!

GUARANTEED to save you more than any other software library scheme!

SOFTWARE LIBRARY FARNHAM ROAD, LISS, HANTS GU33 6JU

Please enrol me at the introductory offer, and send my membership pack by return.

NAME..... I enclose cheque/P.O. for £

ADDRESS.....

THE ORIGINAL SOFTWARE LIBRARY!

OVERSEAS: join here for £18, or join one of our foreign branches: Postfach 7800, 4800 Bielefeld, W. Germany; Jacobusstraat 75, B-2400 Mol, Belgium (also covers Holland); 122 S Circular Road, Dublin 8; Peder Lykkevej 33, 2300 Copenhagen S; Box 1769, Manzini, Swaziland. France & Italy soon. Branch terms vary. All software hired with supplier's permission. **YS**

Green Fingers GARDEN PLANT DIRECTORY

Here's your **FIRST** computerised plant database!

- * Only 80 seconds to find the ideal plants to fit your requirements.
- You can ask for plants that suit up to any 5 out of 17 characteristics simultaneously (height, hardiness, sun, water and soil needs, pruning, month of flowering, colour, etc.).
- * Comprehensive details of over 350 flowers, shrubs and trees.
- * You can look up plants using Latin names, common names, or part of names (e.g. 'lily' displays nine different types of lily, any one of which you can obtain fuller details within 60 seconds).

To order cassettes for 48k SINCLAIR SPECTRUM send cheque/postal order for £8.95 to:

PRACTICAL SOFTWARE, DEPT. YS, 40 WORPLE ROAD, LONDON, SW19.

PROGRAMMING ON SPEC

Here at *Your Spectrum*, we pride ourselves in providing you with the best in software each and every month. And how do we manage this amazing feat ... well, we don't — but *you do!*

A number of programs are submitted for publication from readers and, as you've no doubt gathered from past issues, the quality is pretty excellent. But that doesn't mean we don't want to hear from you — *Your Spectrum* is *your* magazine so make use of it. You're one of two million Spectrum users — don't just sit there, write us a program and be famous!

All we're looking for is a bit of originality, a sense of humour and some competent code. (Have a look at Gavin Monk's program in *YS* issue 10 if you're looking to nick some ideas to 'pretty up' your programs.) All we ask is that you don't type up a program from another magazine or book as we always find out in the end and your name will be mud throughout the industry. (Remember the game, *Ground Attack* in *YS* issue 7? Well, the so-called author of that particular game (*We wouldn't want to mention his name because that would be indiscreet ...* Anthony

Crawford. Ed.) stole it lock, stock and barrel from a weekly computer magazine; we didn't find out until after it had been published.)

As further incentive, we do pay a sizeable sum for *good* programs. All we ask is that each program comes on cassette, with a written introduction and an annotated listing. Please send all programming contributions to:

Gavin Monk, *Your Spectrum*,
14 Rathbone Place, London
W1P 1DE.

BACK ISSUES

You can now obtain any back issue of *Your Spectrum* simply by filling in the coupon below and enclosing £1.10 for each issue you require. A complete selection of back issues of *Your Spectrum* is available from our shop in London's West End, two minute's walk from Tottenham Court Road tube station. As well as saving you the postage and packing charge, a visit to the shop will allow you to see the extensive range of other computer magazines we carry.

The shop is open Monday to Friday, 9.30 am to 5.30 pm. The address is 14 Rathbone Place, London W1P 1DE.

BLITZ

VOL 1/1 (DEC/JAN 1984)
REVIEWS
 Currah's MicroSpeech, general computing books, joysticks.
FEATURES
 Speech synthesis, Toni Baker's machine code break-out, Spectrum communications, DIY keyboard buffer, machine code scrolling.
GAMES
 Chess packages.

VOL 1/4 (JUNE 1984)
REVIEWS

The **SPRINT**, loads at four times speed!

The Sprint, from Challenge Research, loads and saves programs on the Spectrum four times faster than normal. Both commercial and home recorded programs will load at speed, and they do not have to be resaved to do so.

Price: £64.95 inc VAT and p/p

Off-line switch version £5.00 extra — to suit
Interface 1, Centronics I/F printers etc.

The Sprint loads standard cassette programs at high speed without having to resave them first.*
Microdrive compatible version now available.

Features: Retains standard commands, no software to load first, has internal ROM containing 4x speed routines. Connects via 56 way ribbon cable, no interface, has its own full expansion slot at rear. 3 digit tape counter and auto-stop system.

Order from: Challenge Research Ltd,

218 HIGH STREET, POTTERS BAR, HERTS
(0707) 44063

(*Turbo-load programs require resaving to Standard tape format.)

Datapen

A QUALITY LIGHTPEN for use with the SPECTRUM computer

The DATAPEN lightpen enables you to create high resolution pictures and technical layouts directly on your T.V. screen. The accompanying software allows you to draw any shape or filled area you wish, to pixel accuracy, in full colour and the results may be utilised within your own programs, e.g. for animation, or to illustrate your title pages. At just £29 inclusive, the Datapen lightpen package represents superb value – just look at the actual screen photographs and you will agree that this must be the best value for money on the market.

PLUS: 3 SOFTWARE PROGRAMS

- Routines and ideas for your own programs. (Menus, games, music, etc.)
- User-defined graphics creation program.
- Superb full colour drawing program as illustrated in these actual screen photographs.

- Incorporates features not provided with other pens.
- Push button operation on pen – no need to use keyboard.
- Works under any lighting conditions.
- Plots to pixel accuracy.
- 20 pre-defined commands allow plotting of geometric shapes, including triangle, lines, circles, etc., text, or user-defined characters.

- Uses all paper and ink colours.
- A screen grid may be turned on and off, at will, to assist drawing.
- Flexible erase capability.
- All drawings can be saved to tape for further use.
- Plugs in direct – no batteries, additional components, or adjustments needed.
- Handbook, plus printout of routines for use in your own programs.

Send cheque or P.O. for £29.00 to: Dept. SU1 or ask at your local computer shop. Send S.A.E. for details.

DATAPEN MICROTECHNOLOGY LIMITED, Kingsclere Road, OVERTON, Hants. RG25 3JB 0256 770488
Lightpens and software are also available for BBC B, Dragon, CBM-64 and VIC-20.

THE FREE YS CLASSIFIED AD SERVICE

INPUT OUTPUT

Swap your software, flog your hardware and achieve immortality in print. Simply fill in the form below and book your free ad today!

SOFTWARE

■ Swap three Spectrum books + 15 games (including *JSW*, *LO Midnight*, *S Wulf*, *TLL* + *Hunchback*), worth £110, for Interface 1, Microdrive + cartridges — must work! N Oughton, Lower Rye Farm, Moreton-in-Marsh, Glos GL56 9AA.

■ Original Spectrum software to swap. My list for yours. SAE please to Martin Crocker, 16 Derwent Road, Wyke Regis, Weymouth, Dorset. DT4 9DE.

■ Swap *Combat Lynx*, *Braxx Bluff*, *Monty Mole* and *Moon Alert* for Video Command Joystick. Tel. 0326 290459 and ask for Sean.

■ Swap *The Quill* and *Scrabble* (originals) for two of the following: *Android 2*, *Ant Attack*, *Tranz Am*, *Scuba Dive* (must also be originals). Tel. Dersingham 40497 for further details.

■ Swap *White Lightning* for two out of *Daley's Decathlon*, *Delta Wing*, *Combat Lynx*. Also have many games. Reasonable offers accepted. Write to Mark Franklin, 69 The Heights, Northolt, Middx UB5 4BP.

■ Software to swap. Send your list for mine. Tel. Northampton (0604) 403905, or write to Ryan Keates, 3 Bepton Court, Northampton NN3 3BQ.

■ Would like to swap *Decathlon*, *Kong*, *Ant Attack*, *Zoom*, *Penetrator*, *Tranz Am*, *Night Gunner* and *Froggy* for Dk'Tronics lightpen. Tel. 0334 74263 after 4pm and ask for Steven.

■ Swap *QS Games Designer* for *Scope* or *White Lightning*. Tel. 05438 77852 and ask for Jon.

■ I have *Space Raiders*, *Espionage Island*, *Bugaboo*, *Super-League*, *Chuckie Egg*, *River Rescue*, *Halls of the Things* and others. Will swap for any good arcade-type games. Tel. Glarryford 85479 and ask for Norman.

■ Swap *Manic Miner*, *Valhalla* and many others for *Micro Olympics*, *Monty Mole*, *Pyjamarama* or any good software, or lightpen. Tel. 0484 607416 and ask for Paul.

■ Swap *Moon Alert* and *Hobbit* for a powerful disassembler, or someone willing to teach me machine code. Write to P Watson, 27 Miles Hill Crescent, Leeds LS7 2EU (age 15).

■ I have software to swap. Many new titles, such as *UnderWurld*, *KnightLore*, *Tir Na Nog*, and more. Tel. 01-552 3983 after 6pm and ask for Artar.

■ Swap *Lords of Midnight*, *Alchemist*, *Sorcery*, *Survival*, *Make-a-Chip*, all originals, for *Strange Loop*. Write to Doug Bowman, Babingley Cross, Kings Lynn, Norfolk PE31 6AP.

■ Swap *Decathlon*, *Micro Olympics*, *Crypt*, *Time Gate* and *Ground Attack* for *Scrabble* and *Android Two* (or offers). Tel. 0246 826264 and ask for John.

■ Will swap *Sinclair Scrabble* for *Ant Attack*. Jason Liddle, 184 Diamedes Avenue, Stanwell, Staines, Middlesex TW19 7QP.

■ Swap *Micro Olympics*, *Microbot*, *Skull*, *Bear Bover*, *Alcatraz Harry*, *Yomp*, *Schizoids*, *Cookie*. Any two for *KnightLore*. Tel. Shaw 842 637 and ask for Lee Tudor.

■ Swap Spectrum software. *Alien 8*, *Skool Daze*, *Sky Ranger*, *Eureka*, *Death Pit*. Write to JS Dickson, 142 Cumberland Road, London E13 8LR. Tel. 01-476 8884 after 7pm.

■ Lots of software to swap. Games include *Avalon*, *TLL*, etc. Send your list for mine. Thierry Kumps, Langeweg 193, B-1900, Overijse, Belgium — anyone from any country!

■ Will swap *Jet Set Willy*, *Atic Atac*, *Trashman*, *Splat*, *Halls of the Things*, *Moon Alert*. Send SAE. John Kerr, 'Edmonstow', Martyn Street, Airdrie ML6 9AU.

■ Will swap *Airliner* + *Whodunnit* for *Matchpoint* or *Pystron* or just *Airliner* for *Worse Things/Sea* or *Monty Mole*. Tel. 0525 373446 and ask for Robin.

■ Spectrum software to swap. Send your list for mine. SAE please, or phone. Mr S Hayward, 29 Henwood Road, Compton, Wolverhampton, West Midlands, WV6 8PQ. Tel. 0902 753866.

■ Swap games such as *Bugaboo*, *Doomsday Castle*, *Sabre Wulf* and many more. Tel. Kingsbridge 6201 and ask for Jo. Redford Court, Union Road, Kingsbridge, Devon TQ7 1EF.

■ *Snowman*, *Fred*, *Bear Bover*, *Tutankhamun*, *Jack & Beanstalk*, *Doomsday Castle*, *Birds & Bees*, (originals), for *Worse Things/Sea*, *Rapscallion*, *Blockbusters*, *Factory Breakout*, *Zombie Zombie*, *Adventure Quest*. Tel. 0385 881299 and ask for Chris.

■ Will swap *Hobbit*, *Espionage Island* for *Lords of Midnight*. Tel. Newton-Le-Willows 28114 and ask for Joe.

■ Swap *Hobbit*, *Jet Set Willy*, *Zaxxon* for *White Lightning*. Write to R Shah, 84 Spring Grove Crescent, Isleworth, Hounslow, Middlesex, London.

■ Swap *Zaxxon*, *Atic Atac*, *Time Gate*, *Minedout*, *Spawn of Evil* for *Pystron*, *TLL* and *Fighter Pilot* (originals). Rajat Indrayan, 98 Alexandra Gardens, Chiswick, London W4 2RZ.

■ I have *Sabre Wulf*, *Mugsy*, *Codename Mat*, *Trashman* plus many more titles. Swap for *TLL*, *Full Throttle*, *Pole Position*, *Pystron*, *Lords of Midnight*, *Decathlon* and any other games. Tel. 0525 715699 and ask for G Donnelly.

■ Have *HURG* and *TLL*, swap for *White Lightning*. Stuart McLoughlin, 15 Victoria Road, Wargrave, Berks RG10 8AD.

■ *Delta Wing*, *Decathlon*, *Matchpoint* or *TLL* wanted. Swap for any of my originals. Send SAE for full list to Simon Lack, 10 Denbigh Close, Banbury, Oxon. Tel. 0295 51279.

■ Swap *NiteFlight*, *MasterChess* (Mikro-Gen), *Sentinel* and *Tasword 2* for *Quill* + three Microdrive cartridges. Write to Michael Bishop, 18 Denmark Street, Aldershot, Hants.

■ Swap — *Kong*, *Horace/Spiders*, *Inca Curse*, *Astro Blaster*, *Planetoids*, *Ground Attack*, *Gobbleman*, *Sentinel*. Worth over £45. For — *Sherlock*, *UnderWurld* or *Daley's Decathlon*. Tel. 0482 702092 and ask for Andrew.

■ Swap *Survival*, *Make-a-Chip*, *Horace & Spiders* and *Chequered Flag* for any software or peripherals. Tel. 0455 637544 after 4pm and ask for R Meakin.

CIRCE JET-SET JOEY!

Getting a foothold into the 'glamorous' world of writing software can be a harrowing experience. Sue Denham calls on Joey, ex-programmer for Bug-Byte, to recall the tortuous road to success.

You don't have to keep your ear too near to the ground to hear reports of teenage software authors earning the kind of money you'd normally associate with the likes of *Dallas*! But that doesn't mean the rumours are entirely true. Although the incentives may seem the same as those offered to rising stars in the pop music world, in reality, success in the software world is difficult to attain.

Joey, a former student at Manchester University studying computer science in the late '70s, got his first big break writing a Spectrum program for an LP called *XL1* by Pete Shelley (ex-frontman for the punk band, *The Buzzcocks*).

"I'd never really seen a home computer before I went round Pete's house and had a go on his Spectrum. We never did anything particularly exciting with it — just played games and so on — until one evening we hit upon the idea of writing a program that would flash the lyrics of a song up on-screen in time with a record. In a mad fit of enthusiasm I wrote a small program in Basic to prove it could be done and then, once it looked like Pete would put the program on his LP, I spent three months learning Z80 machine code."

Had you by this time decided to be a professional software writer?

"Well, yes, but it didn't quite turn out to be the way I imagined it. Around July '83, when *XL1* was finally released, I was still working for Manchester Council, re-arranging the software governing rates payments and various re-housing projects. I was very excited about the release of *XL1* — I thought there'd be all sorts of people after me to write programs for their albums; you know the sort of thing, long-distance

'phone calls from *ABBA* and so on. Of course, nothing happened at all — it was very disappointing.

"When I saw that there was absolutely no recognition coming my way as a result of *XL1*, I went to see Tony Wilson of *Factory Records* — a company that's guaranteed to experiment with new ideas. I told him about a 'sound of light' program I'd been working on and, lucky for me and my depleted wallet, he was impressed enough to buy me my own Spectrum — which at the time was a godsend!

"I also nearly got to record a program on a live album with Elvis Costello. He'd recorded a

couple of gigs at 'The Hacienda' in Manchester and was very interested in including a Spectrum program as one of the tracks — hardly surprising since Elvis was a computer operator before he became a successful musician. Anyway, to cut a long story short, that project fell through as well ... although it was a good connection to make."

How did all these near misses to fame and fortune affect your work for Manchester Council?

"Well, by late '83 I realised there was no way anyone was coming searching me out — so I went after them. I answered an ad in *The Guardian* to join

Bug-Byte as one of its programming team. The first interview comprised of a quick chat and a small machine code test — nothing too difficult, but it certainly weeded the candidates out. The second set of interviews were a lot fiercer — four of us were competing for just two jobs! The head programmer devised an exam for us, testing a lot of the theory I had learned at college. Nerve-wracking stuff — but I managed to get myself a job!

"It may not seem much but during the year I was at Bug-Byte I was involved with the production of *Twin Kingdom Valley*, *Star Trader* and *Automan*. We'd also have to examine tapes sent in by outside programmers — about six a day — but it didn't take very long ... they weren't usually very good."

You seem to have been very involved with the Spectrum so far in your career — how do you view the CBM 64 as a rival micro?

"As a matter of fact, my latest project is for Island Logic, converting the Beeb's *Micro Writer* for the '64. At the moment, the Spectrum seems to have lost the number one position — but everything gets converted for everything else anyway!"

What advice would you give to anyone contemplating a career in software?

"Well, first off, you need a lot of ideas, backed up with a lot of confidence. But, most of all, my best advice is not to listen to anyone else's advice ... don't be afraid to experiment with your Spectrum and work out problems for yourself. And, lastly, don't believe too much of that rubbish you read about the 'glamour' of writing software. In my time, I've only nearly been interviewed by Channel 4, I've never been invited to a computer show and as for that Porsche ..." **VS**
