The No.1 Football Game

ZX81 16K.
ZX Spectrum 48K
BBC and Cric versions coming soon!

Football Manager

Designed by Kevin Toms

This outstanding game of skill and strategy is now widely available and you can join the many thousands of satisfied customers who have purchased the game. This is no five minute wonder – you will be playing this game for hours over many weeks (we know – our customers tell us!).

Kevin Toms

Some of the features of the game:–

- ★ Matches in 3D graphics ★ Transfer market
- ★ Promotion and relegation ★ F.A. Cup matches
- ★ Injury problems ★ Full league tables
- ★ Four Divisions ★ Pick your own team for each match
- ★ As many seasons as you like
- ★ Managerial rating
- ★ 7 skill levels
- ★ Save game facility

* ZX81 Chart,
Home Computing Weekly 16.8.83

Comments about the game from press and our customers

"FOOTBALL MANAGER is the best game I have yet seen on the Spectrum and my personal favourite of all the games on any micro ... To the ordinary person it is an excellent view of what can be done in the field of computer games ... The crowning glory of this game is the short set pieces of match highlights which show little stick men running around a pitch, shooting, defending and scoring ... It is a compulsive game but people who cannot take game sessions of 9 hours or so, which happened on one happy Sunday, will be grateful to know that there is a 'save to tape' option. FOOTBALL MANAGER has everything it could ... The

originator, Addictive Games, certainly deserve the name." Rating: 19/20 (Practical Computing – August 1983).

"When I first received this game I spent the best part of the weekend playing it. Since then I have returned to it more often than any other. The truly addictive quality of this game is the remarkable way it mirrors the real football manager's problems ... (Personal Computer Games – Summer 1983)

"It's my own fault you *did* warn me – I am totally and completely hooked on FOOTBALL MANAGER." (Mr. A. Wright – Lancashire.)

"It is by far the best software game that I have seen for the Spectrum." (Mr. N. Lincoln – Surrey.)

"I congratulate you for a marvellous game which keeps the player enthralled." (Mr. N. Creasey – Gerrard's Cross.)

"I am writing to say what a great game it is. I have spent over 45 hours on it." (Mr. D. Fearn – Gloucestershire.)

"Your FOOTBALL MANAGER game is terrific." (Mr. N. Cumming – West Bromwich.)

Programmers

We want your software. Send us a sample, if accepted, we will supply generous royalties plus cash advances plus free advice from Kevin himself!

Action from the Spectrum version

Available from computer software stockists nationwide, including **Booth** & WHSMITH.

"YOUR SAME-DAY SERVICE IS BY A LONG WAY THE BEST"

(J FARMER, EDINBURGH)

SOFTWARE SUPERMARKET

CONFUSED by the vast choice of Spectrum programs? Don't be, we can help. We've played hundreds and chosen just the best of each sort. Details are in our catalogue - free with your first order. It's the only catalogue brave enough to put in the best, leave out all the rest and quote all the reviews! (We produce no programs ourselves - so our choice is impartial.) Of course, we have VALHALLA and THE HOBBIT (each £14.95) and MANIC MINER (£5.95), but here are just a few others that may surprise you (and will amaze you if you buy them!)

WE TRY TO SEND YOUR PROGRAMS BACK ON THE SAME DAY WE RECEIVE YOUR ORDER. Phone orders for VISA or ACCESS 24 hours a day from any country where your own laws allow this! Mail order or phone credit card only. All games work with KEYBOARD CONTROL and joystick as shown.

Spend more time playing the great programs - and less time trying to find out which they are! In over 40 countries you rely on us to pick the best and send them fast. All games in stock - and tested by us - BEFORE they are advertised! Try us and see.

ANY SPECTRUM

DEATHCHASE "Life in the fast lane... Deathchase is essential... some of the best 3D graphics I've seen." (PCGames) Speed your Big Bike through the forest - you can only fire at top speed to kill the enemy bikers, tanks, helicopters. It's a night and day 3D chase that gets faster and faster. Amazingly realistic! KEMPSTON STIX (Micromega) £5.95

THRUSTA HIGHLY ORIGINAL AND FASCINATING NEW ARCADE GAME from a new company! Very neat graphics as you beautiful spaceship (with 'real' gravity) pushes and drops rocks to crush the revolting wobbling monsters' eggs before they hatch. Watch out for the guards! Great big smooth graphics make you feel you are really there! Takes a long time to complete each screen. Well chosen keys but also KEMPSTON STIX (Software Projects) £5.95

PHEENIX "This program has everything - superb presentation, graphics and sound. Highly recommended." (HomeCompWeekly) The full arcade-action 5 screens in the best-ever Spectrum 'Phoenix' 5 skill levels. Choice of character sets - demo mode. Crams 48K quality into 16K. KEMPSTON/AGF STIX (Megadodo) £5.50

THE TRAIN GAME "An excellent game - original, well thought-out and full of action, absorbing and amusing." (S User) Run your own railway! Change the points to avoid crashes: watch out for hijacking by irate passengers. Full-screen graphics. 30 command keys. 2 track layouts. 7 skill levels. 14 sub-levels. Demo mode and Pause while you strike! Very catching hobby. NO STIX. (Microsphere) £5.95

3D SEIDDAB ATTACK "One of the most impressive 3D programs I've seen." (PopCompWeekly) Great 3D view through the turret of your tank as you patrol the city at night - glowing, luminous skyscrapers. Radar plan shows where you are - and where they are. 1 or 2 players and amazing flying saucers! You can see the damage they do to your tank as it happens! KEMPSTON STIX (Hawson) £5.95

48K SPECTRUM ONLY

WHEELIE "Lovely graphics, very, very difficult and challenging. Excellent value." (Crash) Take off on your SuperDream Bike, jump buses and cars, watch out for hedgehogs as you search for the ghost rider. Will you find him? Will you beat him? Keyboard or ANY STIX. Some of the most spectacular graphics and sound we've met. Totally involving. (Microsphere) £5.95

PI-BALLED THE PIMANIC'S O-BERT!! Forget the horrible reggae flipside (you will eventually) and concentrate on changing the colour of the PYRAMID OF PI. Watch for the Piman and Sid the Snake, the Bouncing Balls, Col and Jas. 66 screens: transporter discs: graphic jokes. Buy it, it's wonderful! KEMPSTON STIX (Automata) £5.00

HUNTER-KILLER "AN EXCELLENT SIMULATION" (PersCompNews) Captain your own S-Class submarine: hunt down and kill the enemy sub. 18 controls (PROTEK STICK helps) dive, surface, chart your course: watch through your periscope the 3D target. Full-screen control room: chart room: periscope view. Quick-kill practice mode. Good full-screen graphics. Watch the track as your torpedoes run towards the enemy. (Protek) £7.95

DENIS AMUSING and highly original text adventure. As Denis Thatcher, you travel up to 95 locations, seeking peace in the pub. You need to find a drink every few moves, while dropping in on the Royals, the MPs and, eventually, the Pope wearing a truss and carrying a lawnmower. It is all quite mad and lots of fun. 100% m/c. NO STIX. Written with THE QUILL (only £14.95!) The Thatcher adventure is by (Applications) £5.50

PAINTBOX "If you've been looking for a Spectrum graphics aid, this is one of the best." (PopCompWiki) We've tried it and, as they say, even a child can use it to define up to 84 User-Definable Graphics, draw all of them on-screen, save them to your programs: then there's the 2-speed hi-res drawing program and the 28-page manual and... it is the most useful utility we've ever used. KEMPSTON/ANY CURSOR STIX. (Print&Plotter) £7.70

ALCHEMIST "Graphically, this is probably the best game I imagine have produced." (PopCompWeekly) Beautifully graphic arcade/adventure - as pretty as ATIC ATAC (£5.50) but entirely different. Amazing full-screen apparently endlessly different graphics as you search for the 4 parts of the Spell, turning yourself into a Golden Eagle from a Wizard (and back). Cast spell, fight the monsters with lightning bolts - and don't forget to eat too! Astounding. MOST STIX. (Imagine) £5.50

THE FOREST "The world's most realistic adventure game." (PersCompNews) RAVE REVIEWS all over for this fully graphic computer simulation of orienteering - you really feel you are map-making as you search for the Control Points. Draw 3D diagrams of the terrain: contour maps and feature maps. And there's 37kms of unmapped country for you to discover. 32-page manual helps. NO STIX. (Phippe) £9.95

STONKERS "Excellent... the best war game I've seen... very addictive." (Crash) The best battle-game graphics yet. (NOT an arcade game) Simple joystick (MOST STIX) control, but the brain is in your strategy and tactics as you deploy and supply your troops. Beautiful large and small-scale maps of the battle area: moving graphics: great sound: tickertape messages. 2 skill levels. You are on the brink of battle - make your first decision. NOW! (Imagine) £5.50

GO TO JAIL "Excellent graphics are used to make a very impressive display indeed - highly recommended." (ZXComp) The best computer version of the famous game. From 2 to 5 players including the Spectrum if you wish. It's ruthless, but honest. Every original feature is faithfully reproduced and the screen display (which scrolls helpfully) is simply incredible. NO STIX. (Automata) £5.00

HALLS OF THE THINGS "The most exciting and innovative game I have seen - no other game runs with such speed, smoothness of action and graphical quality." (ZX Comp) Explore an 8-storey maze: find treasures: avoid nasties - but this time it's all graphic and you can see yourself waving your sword! Brilliant use of 19 command keys. NO STIX. (Crystal) £7.50

CONTENTS

Welcome 8

The power of the pen — the pages where we get our say and you get yours.

Galactoids 14

Incredible! A machine code game for any Spectrum, easily entered in BASIC and provided by master programmer, Gavin Smyth.

Logo and Turtles . 20

There has been a lot of interest lately in the use of languages on the Spectrum other than BASIC — FORTH is already available. In this article, Tim Hartnell discusses Logo, a language currently under development for the Spectrum.

Taken to Book ... 24

A scoop for ZX Computing! A program taken from the new book, '100 Programs for the ZX Spectrum' by I McLean and J Gordon.

Spectrum Lessons 28

Mike Edmunds goes back to school to give us his thoughts on some of the new educational software available for the Spectrum.

Battlefield 32

Tanks for the memory! A real challenge to your driving skills from James Thurlby.

Guitar Tutor 37

Our thanks to Alan Renwick for this superb Spectrum program. Use it yourself, enter it for a musical friend or take it to school to impress your music teacher.

Moonlander 44

Can you bring the Spectrum shuttle to a safe landing? Find out with Gary Moore's excellent game.

Readers' Reviews . 48

Cutting comment or pleasing praise — the opinions in this section are entirely up to you.

Editor's Project .. 53

How did we produce the listings herein? Can the Spectrum be used for word processing? Find out all this and more in this month's exciting instalment!

Flatman 56

'Cleanliness is next to Godliness' — so says J Dave Rogers in this ZX81 game!

Datafile 60

There must be 101 uses for Nigel Salt's all-purpose Spectrum filing system. How about keeping track of all the ZX Computing contents?

COMPUTING

ZX Computing is published bi-monthly on the fourth Friday of the month. Distributed by: Argus Press Sales & Distribution Ltd, 12-18 Paul Street, London EC2A 4JS. 01-247 8233. Printed in the UK by: Garnett Print, Rotherham and London.

Shoot and Decide . 68

Gone but not forgotten — we bring you Shoot the Target and Decision Maker — two ZX80 programs from Mike Haslam.

The ZX81 Soft Selection 72

Nick Pearce gives us his considered opinion of some of the latest ZX81 software releases.

Club Corner 76

Want to find out more about computing? Exchange articles and ideas? See our club page for details of national and international ZX user groups.

Quicksoft 77

Clive Smith looks at a miscellaneous selection of Spectrum software.

Competition 80

Fed up with untidy leads? Putting pen to paper could be the answer to all your problems! Win a super computer cabinet in our easy-to-enter competition.

Maniac Munchers . 83

Go for your guns in this original Spectrum challenge from M Parrish.

All Change 88

Put more character into your Spectrum programs with this useful utility from P Matthews.

The 1K Corral 91

The best of 1K programs to try, modify and enjoy from a selection of readers.

Graph It! 94

Don't just write it, graph it! A plotting program from Paul Bates.

The Petron Trichord 97

Making music and sound effects on the ZX81 or Spectrum is easy with this unit — or is it? Colin Christmas investigates.

The Soft Touch . . 100

What's new on the Spectrum software scene? James Walsh has taken a look.

The Martian Affair 104

The ZX81 takes you where no man has ever been before! A Turner pilots you to this adventure game.

Biorhythms 112

How are your emotional, physical and intellectual states? More to the point, what are they? All is revealed by Patrick Garfield.

News 117

Our regular round up of new releases and events in the world of ZX computing.

All at Sea 124

Sail round the world in the comfort of your own home. A fascinating simulation for the ZX81 from Eric Hutchinson.

Warlock 132

Fight the forces of evil with HT Walker's Spectrum adventure.

Bookshelf 139

Patrick Cain examines a selection of the latest computer books and is pressed into giving a report.

Problem Page . . . 142

Peter Shaw gets to grips with more of your difficult, unusual and infuriatingly awkward questions.

Conversion Tips . 145

The grass is always greener . . . David Nowotnik helps you get to the other side of the fence with the aid of his conversion sheet.

Machine Specifications . . 147

A reference guide to the ZX80, ZX81 and the ZX Spectrum. It's all here!

Please note that Sinclair, ZX, ZX80, ZX81, ZX Spectrum, ZX Microdrive, ZX Interface, ZX Net, Microdrive, Microdrive Cartridge, ZX Printer, and ZX Power Supply are all registered trademarks of Sinclair Research Ltd.

Subscription rates: UK £12.70 including postage. Airmail and other rates upon application to ZX Computing, Subscriptions, PO Box 35, Wolsey House, Wolsey Road, Hemel Hempstead, Herts HP2 4SS

ZX Computing is constantly on the look-out for well-written articles and programs. If you think that your efforts meet our standards, please feel free to submit your work to us for consideration.

All submitted material should be typed if possible; handwritten work will be considered, but please use your neatest handwriting. Any programs submitted should be listed, a cassette of your program alone will not be considered. All programs must come complete with a full explanation of the operation and, where relevant, the structure; Spectrum programs should be accompanied with a cassette of the program as well as the listing.

All submissions will be acknowledged and any published work will be paid for at competitive rates. All work for consideration should be sent to the Editor at our Golden Square address.

GET THE RIGHT ANGLE ON YOUR SPECTRUM

Trickstick turns your Spectrum into the most sophisticated games machine in the world. Your fingers rest on the Trickstick's six sensitive pads (four directions and two fire buttons) and the harder you press the faster you go or the harder you turn.

Trickstick works by picking up mains hum from your body and converting it by an ingenious circuit design directly into digital input. Proportionality gives vast possibilities for more interesting games.

- ★ Each Trickstick comes with its own interface included in the price.
- ★ Up to eight interfaces can be stacked into each other for 1-8 simultaneous players. (Own 1-8 player game is Attaktics at £10).
- ★ Works with most Kempston compatible software, and with our new programmable adaptor (£10 for Trickstick owners) it works with ANY software.
- ★ Easy to program, even for proportional games.
- ★ In the shops soon. Now available by mail / telephone order at £34.50.

TRICKSTICK-

**The revolution that
Runs Rings round
ordinary joysticks**

THE 80k SPECTRUM - £57.50

Upgrade your 16k Spectrum to a full 80k with the SP80 - a 64k expansion kit giving two 32k pages above address 32767. Not recommended for beginners, but ideal for the serious programmer. Pages are switched using software instructions only, and an LED indicates which page you are on. The other page is isolated from the system, but retains all its information until switched back.

The SP80 simply plugs into the sockets in the 16k Spectrum. Full fitting instructions are provided. It is easy to fit and no soldering is required.

See 48/80 FORTH for another angle.

48/80 FORTH - £14.95

The latest, best and most complete version of this popular language for the Spectrum. FORTH runs many times faster than machine code - a tonic if you're fed up with all those GOTOs.

Each tape includes both a 48k version and an 80k version (for use on Spectrums upgraded with our SP80). SP48 owners are offered a part-exchange price of £18 if they upgrade to 80k.

The manual provides both the normal technical definitions of the language, and an outstanding brief introduction for the beginner. Each tape also includes a superb EDITOR program to give you full control of the 16 (48k) or 32 (80k) disk screens.

A FORTH Toolkit (giving floating point etc) and an extension for the Microdrive will be available shortly. 48/80 FORTH uses standard FIG-FORTH definitions with extensions to exploit the special characteristics of the Spectrum, including BEEP (for real arcade quality sound), DRAW, PLOT and CIRCLE.

BEYOND HORIZONS - £4.50

This teaching program has already made computing less mysterious for thousands of people. It guides you through the Spectrum 48k memory, teaches you to PEEK and POKE systems variables, shows you how the display file and colour attributes work, how a BASIC program is stored byte by byte, and much much more. Outstanding value for those who get stuck on the second half of the Spectrum manual.

UPGRADE YOUR ISSUE 2 OR 3 SPECTRUM FOR JUST £23 AND GET A £4.50 COPY OF BEYOND HORIZONS ABSOLUTELY FREE

The SP48 simply plugs into the sockets provided by Sinclair in your Spectrum. Easy to fit, full instructions provided and no soldering. Fits both Issue 2 and Issue 3 machines and gives you a standard 48k Spectrum. And no other expansion kit allows you to upgrade later to the 80k Spectrum. Over 20,000 16k Spectrum owners have already upgraded with the SP48. Join them.

And you get a free copy of BEYOND HORIZONS, so there's yet another angle to look at.

ROBOTICS

Welcome

An anniversary

Two years ago this month, I had my first close encounter of the Sinclair kind. The speed of development in the field of home computing has already created a generation gap and many old hands can be heard muttering "I remember when..."

Way back in the good(?) old days (1981-2) computers were for the dedicated hobbyist; fanatics huddled in secret dens reading underground publications and wielding unlicensed soldering irons.

Sir Clive, then simply "Uncle" Clive, changed all that with ads in the national press for the ZX81. The result of this flagrant exposure was an interest in the erstwhile 'boffin' magazines and they in turn began to cater for the users of the new machine.

I remember looking for these rare publications lurking at the back of the occasional specialist newsagents, the joy and excitement when one actually featured a 1K ZX81 program! Who cared if it was bug ridden and mediocre — it was recognition!

Then came the advent of the magazine for the "home computer user", two at first, catering for all the machines: one being for games players and the other with a bias toward programming.

A strange phenomena was observed with these generalised magazines — the programs for the other machines always looked better than the ones for your machine. The era of the program converter was born.

At this stage of the proceedings, the breed of computerists was special indeed. Owing to late deliveries and especially the infamous RAM pack wobble, programmers tended to be possessed of infinite patience and almost mystical fatalism.

Many names which were to become part of the legend of Sinclairology were born at this stage, often in garages, back rooms and other unlikely places. Names to set the heart pounding, DK'Tronics, Artic, Mikro-Gen, to mention only a few.

I suppose commercialism arrived with the Spectrum. The possibilities for high class pro-

gramming, from games to home business, was soon spotted by the software houses.

Meanwhile, on the publication front, the magazines had expanded and developed into a specialist range. Each of the makes of machine had at least one magazine and in the newsagents, they had emerged from behind the 'glamour' magazines and women's weeklies and taken over whole counters.

Soon the first colour, full page advert appeared, the era of professional software had arrived. More monthlies, bi-monthlies, quarterlies, weeklies: the shelves creaked!

Today's programmer seems to be generally more demanding and less likely to accept delays and problems. Quite rightly too, we have now reached the age of mass production.

Although many bemoan this raising from the level of the specialist to that of the "every home should have one", I continue to be excited by the expanding field of human ingenuity.

The launch of the QL, the latest in the Sinclair range, continues the saga and, whilst I don't long for the "good old days", in the words of the well known Welsh comedian, I'm glad that "I was there!"

(Excerpt from "A Biased View" by Ed)

Who and what

Seriously though, this issue is something special. All our regular writers are here plus a few new names to grace the pages of ZX Computing.

We welcome and introduce Mike Edmunds who assesses

some of the educational software, Clive Smith who looks at the more unusual programs and Colin Christmas, a man of music, who checks out a musical box for the ZX81/Spectrum.

And of course, our readers who provide some of the best programs published. Try Galactoids, a machine code game for any Spectrum which is entered by an easy BASIC program; Datafile, a comprehensive filing program or Guitar tutor, have you ever fancied yourself as a budding Eric Clapton? Programs abound for all tastes; games of logic or reaction, utilities and hints and tips. Also news, reviews — what more could you want? A competition? Of course!

This issue also sees the result of my project to produce a clearer listing printout and I'm sure you'll agree that they are much easier to read. This should mean less eyestrain and less chance of making an error when entering them. I tell you all about how it was set up in this issue, and also how feasible it is to use the Spectrum for word processing.

Service with a smile?

Being a computer nut myself, I often phone companies as a private individual and not in my capacity as Editor. There seems to be a wide range of attitudes between companies and, in general, this tends to reflect on their product.

The next time you decide to spend your well earned cash on that ingenious device advertised in the mags, try giving the company a phone call first to ask for

more details. You'll get a good idea of the product from the attitude they adopt on the phone!

I think this ties in with my comments on the development of the market, there are many who are meeting the challenge and are full of enthusiasm and energy but unfortunately, some are still in the back room days.

Contributions

We are always on the lookout for good programs and articles for future issues of ZX Computing, and where better to look than to our own readers. If, when reading through the magazine, you think you can write programs as well, or better than, our present contributors, then let's hear from you.

All contributions are, of course, paid for at very competitive rates. So if you've got your eye on a new ZX add-on or you'd just like to supplement your pocket money, get writing! It is vital, though, that all the programs you send us are totally original, and not 'borrowed' or 'adapted' from other magazines or books. (When Tim Hartnell was sitting in the Editor's chair, he even received 'original' contributions he himself had written for his own books!)

Any kind of program (business, domestic, educational, or just fun) will be welcomed, but particularly those which use ZX BASIC in clever and efficient ways, or those which employ certain routines which can be re-used on other programs.

Program listings are vital, along with a clear explanation of how the program is constructed, what it does and what the user can expect to see once the program is RUN (a screen dump is particularly valuable in this respect). When submitting Spectrum programs, it is very important to remember to enclose a cassette of the program as well as the listing, as this will allow us to check the program before publication.

The last word

Enough of the introduction, on with the show!

Ray Elder

Home and DI?

Dear ZX Computing,
It was great to see my program, Home Base, published in the Feb/Mar issue of the magazine. However, I have noticed a couple of small faults which I would like to correct.

In line 5, the GO TO 8 can of course be omitted as line 8 comes next anyway! A more serious fault occurs on line 2025 where it reads 7 and not 8. The correct line should be:

```
LET DI=DI+1:IF DI<8 THEN
GO TO 2035
```

This error means that there would be no level 7. I hope this didn't spoil anyone's enjoyment of the game and apologise.

Yours faithfully,
David Naylor
Leeds

Don't get the hump!

Dear ZX Computing,
Thank you for the review of our utility, Grasp (price £6.50) in the Dec/Jan issue of *ZX Computing*, but you gave us the wrong name! To avoid confusion, it should be Camel Micros (not software) at 33a Commercial Road, Weymouth, Dorset.

Could we also mention that, in response to users' requests, a separate User Guide with fully worked examples should now be available. This will complement the reference manual provided with the cassette.

Yours faithfully,
J R Keneally
Weymouth

Ins and outs of Nuclear Attack

Dear ZX Computing,
I'm sure that many of your readers who typed in the Nuclear Attack game in the Dec/Jan issue will have had trouble with their bombsight and firing. This is because the keyboard scanning system which the author used does not give the same result on all Spectrums. He is not alone, some commercial companies have slipped up on this!

The command which is causing all the problems is the IN function and any program published which uses this is likely to give some people problems. The easiest way to change your program is to check the value returned by the IN function when no key is pressed: the value assumed by the program is 255 but mine returned 191.

To check enter the following line:

```
9200 PRINT AT 0,0;IN 65278:
GO TO 9200
```

You can have the original program in the computer while you do this if you wish, and type GOTO 9200 newline. The number displayed at the top of the screen is the default or base value; pressing any key on the left-hand half of the bottom row will cause the value displayed to change.

Once you know the base value and the specific values for particular keys then you can adjust the control values accordingly. Replace 65278 with each of the numbers used in the program. (Note 65022 is checked but not used — probably left over from an earlier version and can be left out.) Find out the values for specific keys and then alter lines 135,990,1010 to 1 0 3 5 , 2050.

Here are my alterations based on the base value of 191, if this is the number which your Spectrum produces then you only need to make these changes. 135 and 990 to:

```
IF IN 65278+IN 64510+IN
57342+IN 49150<764
THEN GO SUB 1000
```

Delete lines 1010 to 1035 inclusive and replace with:

```
1010 LET x=x+(IN 64510=
187 AND x<30)-(IN 64510=
189 AND x>0)
1020 LET y=y-(IN 57342<
191 AND y>0)+(IN 49150<
191 AND y<19)
```

Alter line 2050 to:

```
2050 IF IN 65278<191 THEN
GO SUB 6000
```

I hope that this will help you to get this and other programs working and I would like to say that even with the odd error, I think *ZX Computing* offers the best variety, reviews and all round value of any of the magazines on the market.

Yours faithfully,
A Herbert
Somerset

Round and round

Dear ZX Computing,
I enclose a short program which draws Spirals. Usually you input 1 for the x and y values but if you enter a greater or lesser number, then the pattern drawn is bigger or smaller.

```
5 INPUT x,y
10 INPUT "A Number please ? ";
P
15 PLOT 128,88
20 FOR a=0 TO 500*PI STEP PI/p
30 DRAW x#a+5*SIN a,y#a+5*COS a
40 NEXT a
```

As is usual, x and y are the horizontal and vertical scales. The next input, "p", represents half the number of sides of the spiral. For example, p=2 gives a four sided spiral. If p=2.05 then there should be 4.1 sides which the computer draws as a revolution of the square.

Try these values for p, with x and y equal to 1 in each case:

0.98, 2.05, 0.85, 1.55, 2.35, 1.33

Then try varying x and y eg:

x=0.5,y=0.4,p=0.77;
x=0.2,y=0.15,p=1.33

An even wider range of pattern can be obtained by adding "OVER 1" to the program.

Yours faithfully,
Simon White
Gloucestershire

ZX international

Dear ZX Computing,
We take this opportunity to introduce ourselves as one of the leading institutes providing computer education and training in India. We conduct courses in BASIC and COBOL as well as System Analysis and Design.

We have been retained by some of the leading schools in India to conduct computer training classes for school children in the age group of 8 years and above. We have developed some schedules for these lessons and have commenced experimental classes already. These classes have been designed so that practice sessions are held on the ZX Spectrum.

Through the columns of your magazine we would like to request readers to let us know about any special educational software that may be available for this age group. Since this is a pioneer venture in India where computer training has been introduced at middle school level, we request readers to give special consideration and send us as much material as possible to make this scheme a success. Thanking you.

Yours faithfully,
Aren Luther, Systems Manager
International Systems Services (P) Ltd
810 Meghdoot
94 Nehru Place
New Delhi
India

Dear ZX Computing,
Could your readers help me with a problem that I have come across? Are there any companies that sell programs of basic or intermediate German for the 16K ZX81?

I would be grateful for any help you may be able to give and may I say many thanks for a brilliant magazine which even manages to find its way to Germany.

Yours faithfully,
LCPL M A Jones
W Germany

We will forward any information from readers that will help Mr Jones with his language problem.

Motor mechanics

Dear ZX Computing,
I have enjoyed
Toni Baker's

Listing to load the machine code in the racing car game, Dec /Jan

series of articles on machine code and would love a lot more on machine code in future issues.

Could I point out eight faults in an otherwise superb racing car game in the Dec/Jan issue. All the following is in hex:

1 At address 8103 it should be 69 instead of 49. This produces the correct lower case "i" in "Distance" in the window.

2&3 At address 8164 and 8165 these bytes were missing and should be 11 (Code for PAPER) and 07 (Code for WHITE).

4 At address 82A1 it should be D8 RET C and not C8 RET Z.

5 At address 82C7 there should be a RET instruction eg C9. This one was missing.

6&7 Now comes the crucial mistake that was difficult to find. The call address to the ROM CL-SCROLL for scrolling the lower part of the screen was in the reverse order eg: CD OE00 which means CALL 000E, and is not the place to call. It should have been CD 000E which calls at address OE00.

8 The last error is at address 8351 which is C0 meaning RET NZ. It should have been C8 which means, as the mnemonic

at the side in the magazine says, RET Z.

Thank you again for a wonderful magazine and I hope these corrections are of help to some of your readers though I think Toni Baker's articles are so good that most of your readers will have worked out the program for themselves.

Yours faithfully,
Adam M Momcilovic
West Yorkshire

Our thanks also to Ray M Tarr of Bracknell and Andrew R Broome of Macclesfield who pointed out these errors in the Dec/Jan issue. Andrew sent in the listing above which loads the machine code, prints screen instructions and starts the program.

Feeling sheepish

Dear ZX Computing,
I think Toni Baker's machine code series has been superb. Once again could I point out several bugs that have crept into the printed version of the Word-sheep program in the Feb/Mar edition of ZX Computing.

Starting from page 45, the corrections are as follows:

1 23 instructions after ORG EB00, the mnemonic LDIR is correct but the coding says ED80 which means LDI. This should have read EDB0.

2 On the same page, the first instruction after ORG EB68 reads LD, BC, 0060 which is correct but the two bytes in the coding are the wrong way round. They should be 016000 and not 010060.

3 Over on page 46 the next instruction after A RANDOM should read JR NZ, R RANDOM. The coding, 20FD, is then correct.

4 Seven instructions after TRANSFER U in the next column, the mnemonic LD BC,8003 is correct but the

coding should read 010380 and not 013080.

5 At the third instruction of WIPE, the instruction reads INC DE which should be INC HL. The coding is then right with 23.

6 On page 48, two instructions before PR_LOOP, the coding should read 21COEA and not 2100EA.

7 & 8 The last bugs are to be found two instructions after PR_LOOP on page 48 and two instructions after R_FIND_2 on page 49. In both cases the mnemonics should read JRNZ... and not JRZ...

I hope my letter is of some use to your readers but again, I would imagine that most of them would have been able to debug the program for themselves.

May I suggest that the "YOUR" subroutine in Toni's final paragraph could be a SAVE file routine so that set letters could be SAVED for further use?

Yours faithfully,
Adam M Momcilovic
West Yorkshire

Our thanks to Mr F J Cooper of Basildon and Patrick Giordmania of E London who also spotted these errors.

New horizons

Dear ZX Computing,
I was interested to see the use made of the large characters routine from the Horizons tape in the Christmas Card program

Dec/Jan issue, as I also have been investigating how to use it in my own programs.

The procedure described in the article is fine provided your program runs within the standard 16K. To use it in a larger program requiring the 48K machine, the routine must be relocated higher up the memory, but since there are jumps to specific addresses within the routine certain bytes must be changed.

The simplest procedure I have found is as follows:

- 1 Enter CLEAR 65023
- 2 Find "walls" on HORIZONS but do not load it,
- 3 Enter LOAD "c"CODE 65024,300 and load the bytes, then
- 4 POKE the value 254 into the following addresses: 65111, 65131, 65152, 65179 and 65276,

To call the routine incorporate the BASIC subroutine (lines 3000,3010 in Christmas Card) with 32256 changed to 65024 (argument of USR next to last statement). Save after the program by typing SAVE "c"CODE 65024,300 and load by beginning your program (the autorun line) with CLEAR 65023:LOAD "c"CODE 65024.

Of course, if your program runs in 16K it is better to leave the routine at 32256 so that it will work on a 16K machine.

Perhaps it may be useful to set down the variables needed to use the routine. xs is the enlargement factor horizontally, ys is the enlargement factor vertically, yy is the number of pixel lines from the top of the screen to the top of the characters (the corresponding xx is calculated in line 3000), p\$ is the string of characters to be printed (max length 32/xs). The routine also uses the variables i,n and w so these should not be in use when the routine is called.

Yours sincerely,
J B Thorpe
Lancashire

Many a slip...

Dear ZX Computing,
I received a letter this week from A J Sheasby who thought he had come across a small bug in my program, Valley of Death, in the Feb/Mar issue. I regret to say that he is absolutely right — there is a bug which manifests itself, only in special circumstances at the very end of the game.

I had fixed this bug even before I sent you the program. Indeed, the fault is cleverly solved by line 765. What is not nearly so clever though is that line 765 is never actually reached! The problem is that, in renumbering the lines just prior to sending you the program I made a careless slip and forgot to alter one of the GOTO statements. The error lies in line 730 which reads:

```
730 IF A(X,V)<>0 THEN
GOTO 770
```

The line should read as follows:

```
730 IFA(X,V)<>0 THEN GOTO
765
```

This small change allows line 765 to do its duty in ridding the program of its minor flaw which, admittedly, only crops up on the rarest of occasions.

Thank you for publishing the program and I humbly apologise for the slip-up.

Yours faithfully,
Jerome K Laskowski
London SE6.

Vital statistics

Dear ZX Computing,
Thanks for printing my program, Statistical Analysis for the Spectrum in the Oct/Nov issue of your magazine. However, unfortunately you used notes from an early copy of the program with the updated listing.

The program actually gives you mean, SD, CV(%), SEM, minimum, maximum, median, print/alter data, print ranked data. The tests are regression, correlation, F-test, 2-sample t-test plus graph drawing and bar-chart routines. Any page can be copied by pressing 'c' instead of enter. Data output to the ZX printer is automatic if n is greater than 21, although this could be changed to just PRINT if no printer is available.

The original bubblesort routine I devised was slow as you said. However, I later altered this to a Shell-Metzner type of routine which only takes about three minutes to sort 100 data pairs and not 15 minutes. It

is extremely fast for less than 50 data pairs. I hope this did not deter any readers from typing in the program.
NB: CV=Coefficient of variation, not variables.

All the best,
Greg Turnbull
Sunderland

Break in

Dear ZX Computing,
I was messing about one day with the IN statement on my 48K Spectrum and discovered an alternative way to break into a program: pressing keys Z, Symbol Shift and Caps Shift at the same time stops the computer. It then gave the report, L BREAK into program, 10:1.

This is useful if you do not want to use the Break and Caps Shift keys.

Yours faithfully,
Peter Ryan
Middlesex

Sorry!

Danger UXB: Feb/Mar issue. Unfortunately, the author of this game was incorrectly given as Roger Harmsworth. Our apologies to Mr Mark Harmsworth who should have received the credit for this program.

A slight error crept into the Pelmanism program in the Feb/Mar issue: in line 460 the word copy should be deleted and replaced with the plus (+) sign.

Our apologies for any confusion!

JUST AROUND THE CORNER, A NEW

BLACK CRYSTAL

BLACK CRYSTAL

The Classic, six program adventure game for the 48K Spectrum and 16K ZX81 computers. No software collection is complete without it. **Black Crystal** is an excellent graphics adventure and a well thought out package. *Sinclair User*, April '83. **Black Crystal** has impressed me by its sheer quantity and generally high quality of presentation. I am afraid I have become an addict. *Home Computing Weekly*, April '83. **Spectrum 48K** 180K of program in six parts only £7.50. **ZX81 16K** over 100K of program in seven parts only £7.50. **WHY PAY MORE FOR LESS OF AN ADVENTURE?**

THE CRYPT by Stephen Renton

Prepare yourself for the many challenges that shall confront you when you dare to enter **THE CRYPT**. You will battle with giant scorpions, Hell spawn, Craners, Pos - Negs and if you are unlucky enough — the Dark Cyclops in this arcade style adventure.

Available now for the 48K Spectrum at £4.95

THE ADVENTURES OF ST. BERNARD

An exciting, fast moving, machine code, arcade game where you guide your intrepid St. Bernard through the perils of the icy wastelands to rescue his Mistress from the clutches of the abominable snowman.

Available for 48K Spectrum £5.75

STARFORCE ONE

Take on the robot guardians of the central computer in a superbly stylised three dimensional battle game.

(100% machine code arcade action)

Available for 48K Spectrum £5.95

ZX COMPENDIUM

ZX81 COMPENDIUM

Alien Intruder, Wumpus Adventure, Numerology, Hangman, Hieroglyphics, Movie Mogul.

The ideal software package for all 16K ZX81 owners. Six major programmes on two cassettes for only £6.50.

Alien Intruder/Hieroglyphics — Both programs make good use of graphics and words to make a very entertaining package. *Sinclair User* Aug 82. Alien/Hieroglyphics/Wumpus/Movie — A varied mix from Carnell, all featuring imaginative responses and graphics and all of them good games for all ages (Hieroglyphics is particularly good for children). *Popular Computing Weekly* Aug 82.

THE DEVIL RIDES IN

I uttered the last incantations as the clock struck thirteen. All fell silent except for a faint rustling in the corner. From out of the shadows they came, all Hell's fury against me but I was not defenseless until the Angel of Death, astride a winged horse, joined the battle. Avoiding his bolts of hell fire, I took careful aim. My chances were slim, but if my luck held...

(Fast moving, machine code, all action, Arcade game)

Available for 48K Spectrum £5.95

The above are available through most good computer stores or direct from:

CARNELL SOFTWARE LTD.,
North Weylands Ind. Est., Molesey Road, Hersham, Surrey KT12 3PL.

DEALERS: Contact us for your nearest wholesaler.

RANGE FROM CARNELL SOFTWARE

COMING SOON

"THE WRATH OF MAGRA"

The first born has been destroyed. The Black Crystal of Beroth has been banished. The alliance of Evil has been defeated by the armies of Lord Fendal. So ends the Third Age. Now we invite you to write your name in the history of the Fourth Age of the Third Continent.

You will meet friends and enemies, old and new, in the long awaited sequel to Volcanic Dungeon. Using high resolution graphics and combining the best qualities of "Black Crystal" and "Volcanic Dungeon", we will allow you to become part of this tale of revenge.

"The Wrath of Magra" comes as three, 48K programmes on cassette, boxed with instruction manual and book detailing the history of the Third Continent and the many spells you will be using throughout the game.

NOTE: "The Wrath of Magra" is a complete adventure. You need not buy "Volcanic Dungeon" or "Black Crystal" to play it.

CARNELL SOFTWARE LTD

An amazing arcade game from Gavin Smyth of Londonderry. A must!!

Galac

At last! A program that overcomes the problem of the speed (or lack of it) of Sinclair BASIC. This machine code space invaders-type game occupies just over 1K and so will run on either the 16K or 48K Spectrum. This is not an attempt to teach machine code programming, but with the instructions given, anyone can run the program without having to understand it.

The object of the game is to destroy the eight coloured spiderlike aliens randomly moving about the screen dropping bombs all the time. Naturally you have to hit them dead centre, but if a bomb touches your gun at all, bang! If you are invaded, you only lose a life, not the whole game. To begin with, the game is easy since the gun moves at eight times the speed of an invader but after you have bumped off the first three without trying, the remaining aliens move at a fifth of the guns speed — to get the last one, you have either to be pretty quick or very lucky! After this, you get another sheet with an extra life, but games do not normally last for more than three screenfuls of aliens.

The aim of the program

There are several reasons for writing this program:

1 To make a game less predictable than the familiar legions marching across the screen in neat rows. This randomness adds to the difficulty, keeping games short and defeating those show-offs who hog the space invaders machine all evening.

2 To keep kids (and adults!) out of the way by making the games colourful, noisy, simple to operate and totally uncrashable (famous last words). The controls are: Z for left, X for right

and space to fire. There is no return to BASIC in the program (to prevent cries of "Hey! They've stopped moving!"), so the only way to dispel the menace forever is to pull the plug-out — but beware, the game is addictive.

3 To cause endless frustration with the aliens' continuous chirping and high scores not even in three figures. (My best so far is a mere quarter century and the score counter can clock up to 9999.)

4 Finally, to show how the Spectrum ROM can be used to simplify programming by performing the more fundamental duties such as printing.

Interesting routines

Here are a few of the techniques used in the program to get a lot out of the machine without typing too much in:

RANDOM NUMBERS: The subroutine RND (address 32056d) returns a fairly random number in the A register. What it does is step a pointer through the ROM and return the value of that location (random enough for this purpose although there is a distinctly non-random region) an unused region of over 1K starting at 14446d, where all the memory locations contain 255d. This provides an interesting short period every three sheets or so when the aliens move uniformly without dropping bombs and with a distinct sound, but they are still just as frustratingly tricky to hit.

SOUND: The subroutine BLEEP (31677d) is used to emit a ran-

dom short tone. It is there simply to slow the program a little, it can be slowed still more by increasing the value of DE in this routine (equivalent to POKING a larger number of locations 31683d). This routine calls the ROM subroutine BEEPER (949d) which controls the loudspeaker. This is one of the few routines that corrupts the IX register pair, hence the PUSH IX and POP IX near it in the program in places.

To use BEEPER, DE should contain a number equal to INT(frequency * duration) and HL should contain INT(437500d/frequency-30.125d).

For example, to play the note A 440Hz for 2.5 seconds:

```
DE contains INT(440*2.5)=1100d
HL contains INT(437500/440-30.125)=962d
```

INVADER CONTROL: The IX register pair is used to hold the start of the individual invader databases, greatly simplifying code since, for example, the invader column is always (IX + 1) regardless of the invader being used.

Graphics galore

The remainder of the routines deal with graphics:

CLS (3435d): This routine

simply clears the screen.

BORD1 (8859d): This sets the border to the colour contained in the A register. For example, to set a red (code 2) border:

```
LD A,2
CALL BORD1
```

CHANOPEN (5633d): Before writing to the screen, it must be opened for printing. The upper screen is channel "S" with code 2, so to prepare for printing:

```
LD A,2
CALL CHANOPEN
```

PRSTRING (8252d): This prints a string of characters of length BC which starts at the address contained in DE. For example, to print the word "Sinclair" which is held in the ROM at 5440d:

```
LD DE,5440d
LD BC,8; length of word
CALL PRSTRING
```

OUTNUM1 (6683d): This routine prints out the integer contained in BC, it is used to print line numbers. The number must be positive and less than 10000.

No check has been made for overflow of this type since it is unlikely that such a score will be reached.)

CLSET (3545d): There are two

roids

point to the graphics data at the end of the program. (If Mohammed can't come to the mountain...)

ATTRP: Loading location 23693d with 7 is equivalent to PAPER 0: INK 7. In general, this system variable contains:

FLASH*128d+BRIGHT*64d+PAPER*8+INK

MASKP: Loading 23694d with 255d is equivalent to INK 8: PAPER 8: FLASH 8:

BRIGHT 8 — setting ink and paper to transparent so that screen colours will not be affected by anything printed — the alternative to this would be complex colour controls before each print.

There is also a general listing of the whole program (see listing 4).

Most of the information on ROM routines was found in Dr Ian Logan's book, 'Understanding your Spectrum', which contains a lot of valuable information on other routines and machine code for the Z80.

Typing it in

We received the listing of this program in full HEX, Mnemonics and REM form — unfortunately this ran to 16 pages! The present form was obtained by a program which created the lines in listing 1 by PEEKing at the code from the tape of the program supplied.

Each line of the listing consists of ten DATA bytes plus a checksum to help ensure that errors are eliminated. The method of entering these codes

ways to move the print position. One is to use the AT code (22d) followed by position with PRSTRING or RST 10. This method is used in the PRINT routine, address 32034d. The other method is to use CLSET: for this, B contains 24d-row; C contains 33d-column. For example:

```
PRINT AT 5,6 ;is equivalent to:
LD B,19d ;(24-5)
LD C,27d ;(33-6)
CALL CLSET
```

You will notice that RST 10 occurs frequently in the program — this calls the main printing routine which displays the character with code held in A. It will cope with any character, including tokens, paper and ink controls, and position controls. For example, to print a blue "X":

```
LDA A,16d ;INK control code
RST 10
LD A,1 ;colour code for blue
RST 10
L A,88d ;code for "X"
RST 10
```

The subroutine MAININIT (31206d) takes care of setting up some system pointers:

UDG: Rather than move all the data for the graphics characters into the user defined area, the program changes the system variable UDG (23675d) to

are slightly different for the 16 and 48K Spectrums:

48K Enter both listings 1 and 2a and RUN the program, correcting any errors that are reported.

16K Do not enter listing 1 but enter listing 2b and RUN the program, enter each of the 11 numbers in each DATA line one number at a time. If you make a mistake the program will tell you and you will need to re-enter that line.

Saving

Before testing the program it MUST be saved on tape. Even though we have taken great pains to foolproof the entering system, it is still possible for an error to slip through!

First, remove the BASIC listing (if you entered it in the 48K mode make a copy on tape just in case by using NEW — the machine code is quite safe — then enter listing 3. To save both the loader and m/c enter GOTO 40, start the tape and press and key. After a few seconds the "start tape" message appears again, press another key and the m/c will be saved. Verify both sections by VERIFY"" and then VERIFY""Code.

To start the game either reload it from tape or enter RANDOMISE USR 31000. If all is well the instructions will be displayed and look out!

If it crashes then switch off, enter listing 4, RUN, reload the program and check each number until you find the

mistake (not forgetting to ignore the last number of each DATA line), POKE the address

given with the correct number. Now follow the saving procedure again.

LISTING 2a

```
1999 REM ** 48K LOADER **
2000 CLEAR 30999: RESTORE
2010 FOR i=31000 TO 32417 STEP 1

30 NEXT i
```

START Call MAININIT :Set system variables, 'random' number pointer.

NEWG Call NEWGAME :Reset score(0), lives(4); print instructions; wait until ENTER is pressed.

SCREEN Call SETUP :Print score, hiscore, lives; set screen attributes (in bands of different inks).

MAINLOOP For each invader — Test lives; if none, GOTO ENDGAME. If invader pointed to is dead, try next; GOTO MOVE8.

Call UPDATE :Call MOVINVDR :1 in 16 chance of row change (¼ up, ¾ move down). Check limits; if on edge or top, restore old position. If on bottom, return from MOVINVDR. If on edge, reverse direction. Random 1 in 16 chance of reverse. If bomb not dropped, ½ chance of drop; copy invader position into bomb.

Call INVDRPRNT Erase old invader, print new one.

If bomb dropped,
Call MOVBOMB :Erase old bomb; move down a row; print new bomb.

Call KEYBOARD :Call BLEEP. If SPC pressed and bullet not fired, copy gun position into bullet. If Z pressed, move left. If X pressed, move right. If new position out of range, restore old co-ordinates.

Call GUNPRINT Erase old gun, print new one.

If bullet fired,
Call MOVBULLET :Erase old bullet; move up a row; If at top row, reset bullet else print new bullet.

For each invader
CHECK If alive, Call LASTROW :If invader on bottom line, blow up gun and invader.

Call HITINVDR :If bullet and invader co-incident, :Explosion (flashing, beeping). Reset bullet; signal dead invader; decrease number

Call BLOWINVDR :Invaders; increase score; update hiscore if necessary; print score and hiscore.

Call HITGUN :If bomb has hit gun, Call BLOWGUN :Explosion; reset bullet; decrease lives; print lives.

If bomb is on bottom line, Call ERASEBOMB :Erase bomb; reset its co-ordinates.

Loop back to CHECK for next invader.
Loop back to MOVE8 until all 8 invaders updated.
Go back to MAINLOOP to repeat sequence.

ENDSCREEN Award extra life; beep low tone; start another screen by jumping to SCREEN.

ENDGAME :Call DISPLAY print end message; flash screen and beep; beep very low tone.

Start another game by jumping to NEWG.

REF. CC100
£79.95

REF. DLC200
£185.00

REF. BHU300
£46.95

REF. BHU400
£39.99

Ref. CC.100 — Especially designed for your home computer system whilst also giving plenty of storage space for software, magazines or perhaps a video recorder. Keeps your equipment **dust free**.

Standard Features!

1. Smooth sliding shelf locks in position just when you require it — and neatly glides away after use.
2. The computer shelf has been designed to allow adequate 'Knee room' for you to sit comfortably, and will avoid 'programmers back-ache'.
3. Adequate room to position tape recorder, printer, disc-drives, etc. alongside computer for ease of use.
4. All cables neatly and safely out of sight, while allowing all units to be permanently connected if desired.
5. Lots of storage space for cassettes, cartridges, books, listing paper, joysticks, etc.
6. With shelves and doors closed, instantly becomes an elegant piece of furniture.
7. The lower shelf suitable for your video recorder or storage of software, etc.
8. Smart Teak effect finish.
9. Supplied as a flat-pack. Very simple to assemble, using just a screwdriver. Full instructions supplied.
10. Measurements: Height 32½ in., Width 36 ins., Depth 16¼ ins.

PRICE only £79.95 incl. VAT.

Ref. DLC.200 — This cabinet has the same basic features as model CC.100 but comes in a real wood veneer finish. Built in traditional English style to a very high standard of workmanship this cabinet will grace any home. Available in teak, oak, mahogany or walnut with brass fittings.

PRICE £185 incl. VAT — fully assembled.

Ref. BHU 300 — A basic home computer housing unit in a teak effect finish. Storage shelf for magazines etc. Supplied as a flat-pack, very simple to assemble. Full instructions supplied. Measurements — 32" wide x 31" high x 18" depth plus VDU bridging unit 21" x 6" x 12" (available as a separate unit). See **Ref. BU.500** below.

PRICE only £46.95 incl. VAT

Ref. BHU 400 — Similar to BHU 300 but without the storage shelf. Measurements — 32" wide x 27" high x 18" depth plus VDU bridging unit 21" x 6" x 12"

PRICE only £39.99 incl. VAT.

Ref. BU.500 — Bridging Unit only — Price £12.50 incl. VAT

TERMS OF OFFER:— UK Mainland Customers only. Please allow 28 days for receipt. Cash with order or charge to one of the credit card accounts specified. Money back if not satisfied provided goods are returned undamaged at the customers expense to Marcol Cabinets, Southampton within 72 hours of taking delivery.

Logo and

We welcome back Tim Hartnell who this issue gives us a fascinating article on Logo, a new language for the Spectrum and an introduction to turtle graphics.

Logo is quite different from BASIC. It was designed with the lofty aim of being a language which would 'teach learning' and, to a certain extent, this aim has been realised.

Pioneered by Dr Simon Papert when he was a Professor of Mathematics and Education at the Massachusetts Institute of Technology in the US (he has now moved to France where he is one of the leaders of the World Computer Centre), Logo is intended to be the very first programming language a person learns. The first language you learn inevitably colours the way you program and the way you think about programming for the rest of your life. Proponents of Logo claim that the base provided by initial exposure to Logo is a far more suitable one for future programming excellence than is a language such as BASIC.

Is there a basis for such a claim? Papert says that many teachers have only seen computers as devices which can extend the traditional ways of doing things in the classroom, rather than as utterly new teaching tools. In contrast to this, Papert says Logo is a liberating device, which enables computers to be used to teach new and important skills, including the skill of 'learning how to learn'.

Following observations made by Jean Piaget that children are able to learn quite complex skills — such as being able to talk and walk — without formal training, and the fact that this highly-effective informality was absent in traditional classroom teaching, Papert set out to create a language which would remedy this deficiency. Papert says most school instruction in

computer programming puts the child almost in the position of being programmed by the computer. Logo, by contrast, puts the child firmly in charge.

It does this by allowing the programmer to create new shapes and actions — such as one which draws a triangle — and then get the computer to execute this on demand, simply by entering TRIANGLE. BASIC has no such way of creating new commands and functions.

Put just about anyone in France, let them live there for a while and they will become skilled French speakers, even if they had a prior concept of themselves as 'not good with languages'. The same holds true for mathematics, claims Papert. Part of Logos function is to allow users to 'live in Mathland' where there is no such thing as a person who is 'not good at Maths'. In an arti-

cle, 'Logo in the Schools' (BYTE magazine, August 1982, pp 116-134), Daniel Watt reports that 'teachers found that students who had taken part in the Logo classes were more willing to "argue sensibly about mathematical issues" and to explain their "mathematical difficulties clearly".'

When computers were first developed, memory was at a premium. Programmers had to bend their thinking to the demands of the machine (such as integer variable name starting with specific letters), regardless of how much extra work this added. The thinking that human beings should continue to humble themselves before the computer's demands has continued.

Although BASIC is relatively easy for a computer to interpret as well as easy to teach, it is not a flexible language and

labyrinthine program constructions are sometimes needed. Papert and his team at MIT decided when developing Logo that they would not allow their work to be limited by computer technology. Rather than gear their thinking to the cheap (for the time) computers available when they began their work in the late sixties, the team worked with the biggest mainframes they could.

The most familiar aspect of Logo is 'turtle graphics' when the computer controls the movement of a 'turtle' (a triangular shape on the screen) which leaves a trail behind it as it moves. Therefore, if the turtle moves up the screen for an inch, turns through 80 degrees and moves another inch, turns and moves, turns and moves again, it will have traced out a square.

The robot turtle used in schools in conjunction with Logo graphics programs.

turtles

Turning turtle?

Turtles move in 'turtle steps' (with a screen being about 200 turtle steps high). A turtle command is often in the form of a direction (such as FORWARD) followed by the number of turtle steps — FORWARD 100 would cause the turtle to move half way up the screen (FORWARD is the direction the triangular cursor is facing).

With Logo, the computer can be taught a sequence of moves, such as the one we described to trace out a square, and the sequence can be 'remembered' by the computer under the name, say, SQUARE. Then, whenever we want the turtle to draw a square, we just enter SQUARE. A sequence of moves like this is called a *procedure*. The process of drawing a square could be even simpler. Think of FORWARD 100. The computer draws a line up the screen. The word RIGHT followed by a number turns the turtle to the right the number of degrees specified by the following number, so RIGHT 90 will make it turn through a right angle. Moving FORWARD 100 again will draw a line at right angles to the first. Follow this with RIGHT 90 and the turtle will turn through another 90 degrees (and will now be facing down the screen). Going through the sequence FORWARD 100 RIGHT 90 four times will draw a square.

This should give us a hint as to how the procedure SQUARE

can be created more simply. The Logo word REPEAT means just that. A number follows REPEAT, and the computer repeats the instruction which follows the number however many times are specified. So, to create a square-drawing program, we need the following:

```
TO SQUARE
REPEAT 4 (FORWARD 100
RIGHT 90)
END
```

Note that the first line of this program, TO SQUARE, is the procedure title line. Run it, and the computer then knows what a square is, and can produce one whenever it encounters the command SQUARE. As I'm sure you can appreciate, there is no such facility in BASIC for creating new commands at will.

Logo has other useful commands, as such as CLEARSCREEN, and PENUP (which 'lifts the pen' from the screen) and PENDOWN. You can draw a line, lift the pen up and move it to another part of the screen, put the pen down and continue drawing.

Looking back to our definition of the procedure SQUARE above. You can see that if we had a way of entering the size (the 100 in our example) each time we ran the program, SQUARE could be used to draw squares of any size. Logo allows for this. If you include the variable name in the procedure title line, preceded by a colon, the computer will wait for you to enter the required information.

```
TO SQUARE: LENGTH
REPEAT 4 (FORWARD
:LENGTH RIGHT 90)
END
```

To run this, you enter SQUARE 64 (replacing 64 with the side length you choose).

From this, it is easy to see that we could do much more than just change the length of the side. We could easily define a procedure which allows you to specify not only the length of the side, but the number of repeats, and the angle through which the turtle will turn. If you're creating mental pictures of the effects of each of these changes, you'll see what a powerful tool we now have on our hands.

```
TO SHAPE :MANY :ANGLE
:LENGTH
REPEAT :MANY (FORWARD
:LENGTH RIGHT :ANGLE)
END
```

This simple procedure holds a wealth of extraordinary effects.

To draw a triangle, with sides 35 steps long, you'd just enter:

```
SHAPE 3 120 35
```

A star with each line 55 steps along could be drawn with:

```
SHAPE 5 144 55
```

We will end our brief introduction to turtle graphics by pointing out that once the computer has been taught a word such as SQUARE, this procedure can be used within further definitions. That is, if you wanted the computer to print a shape, then move just a little to the side, then draw the shape again, and repeat this a number of times, you could define the following procedure (assuming that the procedure SQUARE had previously been defined):

```
TO AMAZING :MANY
REPEAT :MANY (SQUARE 50
FORWARD 1)
END
```

There are four important features of Logo:

1 PROCEDURES The language works by defining sequences of steps called *procedures* which are then *called*. Procedures can incorporate other procedures. The closest BASIC equivalent (and it is generally NOT helpful to learn Logo by drawing attention to barely-equivalent BASIC statements) would be a series of subroutines which were called by name (such as GOSUB PAUSE, where PAUSE was a variable which had previously been assigned a value of the line number where the subroutine PAUSE began).

2 INTERACTION Any command, whether it's one which is part of the original language (such as FORWARD or PENUP) or one defined as a procedure, can be triggered just by entering the command, such as the word SHAPE or SQUARE.

3 LISTS The language supports compound structures called *lists* which are much easier to manipulate than are data structures such as arrays. They can be manipulated very flexibly. Procedures can be handled as lists.

4 TURTLE GEOMETRY The 'cybernetic animal', the turtle, will follow instructions to draw shapes on the screen. Turtle graphics have proved an ideal way of introducing the concept and practice of computer programming, and also as the basis upon which a computer-based mathematics curriculum can be built.

Further reading on Logo:

Mindstorms: Children, Computers and Powerful Ideas — Simon Papert (Basic Books, New York, 1980)

Logo for the Apple II — Harold Abelson (BYTE/McGraw Hill, Peterborough, 1982)

Learning Logo on the Apple II — Anne McDougall, Tony Adams, Pauline Adams (Prentice-Hall of Australia, 1982)

The August 1982 (Volume 7, number 8) issue of BYTE magazine is dedicated to Logo and is an extremely useful introduction to both the language, and to its implications.

**Keep yourself up to date
with this sample program
from a new book,
100 Programs for the
ZX Spectrum.**

Prentice Hall International are publishing a new collection of programs for the Spectrum by authors, Ian McLean and John Gordon. The book is a large paperback which, as can be deduced, contains 100 program listings! A tape of these can also be purchased. The book is priced at £6.95 and the cassette at £11.50.

I have sent the book to Patrick Cain for a full review, but meanwhile, Prentice Hall have allowed us to publish a sample program from the book.

All the programs are given in this format, some have more detail given and longer explanations but all are set in the same typeface which is easier to read than the Sinclair printer

reproduction often found nowadays.

The programs are split into ten sections with the following headings:

Introduction
Games
Business
In the Home
Graphics
Data Handling
Recreation
In the Science Lab
Mathematics
School

Our sample is taken from the 'In the Home' section. Diary could be used both to store diary information and as a simple word processor. Key in the program and RUN following the instructions.

"Do you wish to.....

1. Review an old page

2. Write a new page

3. End the program"

120 PRINT AT 14,5; INK 1;

Spectrum lessons

Mike Edmunds takes his Spectrum into school and reports on some of the latest educational software available.

With an increasing amount of educational software now on the market, we felt that we ought to have a special review spot for these programs. Mike Edmunds has enough computing experience to be able to assess the standard of programming and, as a professional teacher, can give a qualified opinion on the educational value of the cassette. Of course, he can also test out the programs on the pupils at his school — the lucky lot!

Early Punctuation, The Apostrophe, Capital Letters and Speech Marks — Sinclair Research

Spelling and punctuation have never been the easiest of subjects for children, so any material that makes the task

easier should be welcomed. A new range of software by Blackboard Software under the Sinclair banner aims to bring 'a light-hearted clarity... to these tricky subjects.'

Designed for use both at home and in the classroom these cost £7.95 each. Not cheap if you intend to use the whole series, but all have something of value to offer. Each is a fairly well-structured package with a definite purpose which offers the user a 'one-to-one relationship' and experience that would be difficult to achieve without a computer.

These programs are not intended as teaching packages in themselves, rather as an accompaniment to a lesson. As such, each comes with a pamphlet briefly outlining the aims and giving full instructions as to how to 'tailor' the program for children of differing abilities. A list of useful books

for further practice is also included.

Although the theme of each program is different, the format is very similar. Instructions are followed by a 'step by step' example section and brief examples are given before the exercises proper. Successful completion of these gives entry to the next level or the reward game. These rewards are fairly basic in nature, being mainly keyboard trainers, but do aim to be instructive as well as entertaining and manage to succeed in both a colourful and amusing way. Graphics and sound are used to good effect in all of the programs.

In Early Punctuation the child has to decide what punctuation is required and an animated figure drops in the appropriate mark when the correct key is pressed. Good hand/eye co-ordination is needed here as the figure is in

constant motion: movement via cursor keys would have been better. Each correct answer brings a tune and builds up a further element of a picture used as part of the final 'shoot-em-down' reward game.

Capital Letters again uses the matchstick figure (this time controlled by cursor keys) to correct sentences with missing capitals. As with all the programs in this series, incorrect responses bring an invitation to try again — the computer eventually providing the answer after repeated errors.

In The Apostrophe a bird is guided to drop a worm (the apostrophe!) into the correct place. The worm gets its own back in the keyboard trainer reward game, when it can munch the flowers if your responses are too slow. This game is rather spoilt by 'chunky' target letters.

Speech Marks is of a rather

more complex nature and therefore offers three levels of difficulty. Sentences can contain one or two sets of speech marks; direct or reported speech or a mixture of each. This was the only program with a bug, a missing set of speech marks which remained uncorrected by the computer.

On the whole though, Blackboard have produced a nice package of programs to enliven the rather dull and mechanical process of punctuation... a pity some of the games lack imagination!

All programs are priced at £7.95 and available from Sinclair Research Ltd, Stanhope Road, Camberley, Surrey GU15 3PS.

Learn to Read (Programs 1-5) — Sinclair Research

A series of programs entitled Learn to Read is one of the latest educational offerings from Sinclair in collaboration with Macmillan Education. Together they have produced a comprehensive package for use by both parents and teachers to take children through the early stages of reading. The programs are based upon the popular Gay Way reading scheme, but can be used independently or alongside any reading scheme, using such techniques as word recognition, phonics (the matching of letters with sounds) picture matching, match and spell and so on.

All the tapes are attractively packaged in a sturdy box and come complete with a detailed booklet which outlines the way in which the parent can help, as well as detailing the role that the computer can play in their child's reading development.

The programs have been designed to make full use of the Spectrums graphic and sound capabilities and in this they succeed admirably. Loading is reliable and the initial screen displays give a taste of the fun to come! In Learn to Read 1 we are introduced to colourful representations of Sam the fox, the fat pig and their friends and these characters play leading roles throughout the series. Familiar

tunes accompany each stage of the programs and serve to enhance the excellent graphics.

Although the programs can be used by the child alone, active participation by an adult is encouraged and indeed is necessary for the early tasks. On screen instructions have been kept to a minimum, but initial 'reading aloud' by an adult is essential for the younger child.

All the programs in the series provide a substantial amount of activity and will keep any child entertained for a long time. Each section is very user-friendly and above all, fun to use, helping the child to realise that learning can actually be enjoyable!

Learn to Read 1, 2 and 3 use the same format, consisting of 'Names' — an introduction to the characters and new vocabulary; 'Kim' — exercises in logical thinking and memory; 'Spell' — phonic and spelling practice and 'Card' — a pelmanism game for the matching of pictures, phonics or spellings. Learn to Read 4 deals primarily with alphabetical sequencing under the titles 'next' and 'middle'. 'Find', the final title, is a consolidation program. The last program in the series deals with 'positional' terms; inside, on, at the bottom of and so on using 'snap' and spelling games.

A lot of thought has gone into these programs. They are well structured and help the child move in easy stages towards becoming a reader. The programs aim to be diagnostic in approach, in that they gently prompt when an error is made, then reinforce by giving the mistake and follow it with an invitation to try again. Emphasis is placed on correct spelling at all stages but the necessary capitals and punctuation are built into the programs. Sinclair and Macmillan seem to be on to a winner here as this is an excellent series of 'teaching' programs. They are rather expensive but, in this case, the price is justified by the quality. However, as with all things, the proof of the pudding...

Learn to Read programs are £9.95 each and available from Sinclair Research Ltd.

Joystick and Interface

for Sinclair Spectrum with these features to give you endless hours of enjoyment.

1. Super positive response fire button.
2. Firm suction cups for stable one hand operation.
3. Snug fit hand moulded grip.
4. Additional fire button.
5. Extra long 4 ft lead.

The interface supplied with the Quick Shot TM has a two joysticks facility.

The first port simulates 6789 & 0 keys. The second port simulates in [31] command. It will run any Software.

1. Using keys 6, 7, 8, 9 and 0.
2. Having redifinable key function.
3. Using in [31] i.e. Kempston.
4. Any Software you write yourself.

A New Dimension in Spectrum Hardware

£22.95

Keyboard for use with a Spectrum or ZX81

Our cased keyboard has 52 keys, 12 of which form a numeric pad. The 12 keys comprise 1-9 numeric plus full stop and shift keys, all in red, to distinguish from the main keyboard keys which are in grey, the keys contrast with the black case to form a very attractive unit. The case has been designed to take a ZX81 or Spectrum computer. 16K, 32K or 64K can also be fitted to the motherboard inside the case (81 model only). The case is also large enough for other add-ons like the power supply to be fitted, giving a very smart self-contained unit with which other add-ons e.g. printer etc. can still be used. Our ZX Professional keyboard offers more keys and features than any other model in its price range making it the best value keyboard available.

£45.00

Light pen

The LIGHT PEN enables you to produce high resolution drawings on your own TV screen simply by plugging into the ear socket of your Spectrum. The controlling software supplied with the light pen has 16 pre-defined instructions. You can change colour (Border, Paper, Ink), draw circles, arcs, boxes, lines and insert text onto the screen at any chosen place, you can also draw freehand. There is a feature to retain the screens and animate. On the 48K Spectrum you can retain 5 screens. You can also use the machine code on its own in your own programs, for selecting out of a menu etc. The LIGHT PEN is supplied with a control interface, to adjust the sensitivity/pen alignment.

£19.95

Spectra-Sound

The so-called speaker in your Spectrum is really on a 'buzzer'. With the DK Tronics "SPECTRA SOUND" you can generate fully amplified sound through the speaker on your TV set. SPECTRA SOUND is a very simple but highly effective add-on. This means that you no longer have a faint beep but a highly amplified sound, which can be adjusted with the TV volume control. The SPECTRA SOUND fits compactly and neatly inside the Spectrum case and is connected by three small crocodile clips.

Battlef

Fancy your chances as a tank commander? James Thurlby of Farnborough lets you try.

"Message from HQ to Tank Commander. Destroy enemy sites. Return to base . . . Warning . . . Fields contain mines, traps and craters . . . You have 5 Tanks . . . Good Luck . . ."

If you manage to complete your mission then you get your just reward — another mission with even more obstacles to avoid, and a greater concentration of enemy sites!

To wipe out an enemy site all you have to do is to drive your tank over it: simple but effective! Once all the sites have been destroyed then you will be told to return to your base camp. At the end of the game you will be given a ranking according to your performance.

This is one of those simple but annoyingly addictive games which appear now and then. Controlling your tank is not as easy as it looks and accurate timing of key presses is essential.

Your computer controlled tank responds to key "q" to go up, "z" down, "7" left and "8" right. However, it only recognises lower case letters so make sure that CAPS LOCK is off or, as an exercise, adjust the program to take this into account.

Variables

S\$(21,31)	Character array holding screen display
tank	Number of tanks left
dest	Number of enemy sites destroyed
stage	Stage of the game
x,y	Random numbers used to calculate position of obstacles
ts	Tank UDG different for each of the four directions
a,b	Horizontal and vertical position of tank
a1,b1	Old tank position
res	Number of enemy destroyed in this stage
n\$	Tank direction of movement
m \$	Change of direction on key pressed
f	Loop variable

Guitar tutor

All you ever needed to know from Alan Renwick of Norfolk.

In *ZX Computing* Aug/Sept, we published a ZX81 program to help guitarists. We wondered about the possibilities of the Spectrum in this field, and were promptly contacted by Alan who had been working along these lines already. Written for the 48K Spectrum, this is a must for any guitarist, containing routines for expert and beginner alike, and is also a valuable educational aid.

The program is designed to go one step beyond guitar tutor books by making use of the sound capabilities of the Spectrum to aid tuning and to check that you are playing chords correctly. There are limits to the ability of the Spectrum of course, one of which being the fact that only one note at a time can be played but Alan uses what is available to the full.

The program is structured in a simple manner which makes for easy expansion or contraction of the routines. Each particular subject is cod-

ed at a block of lines which is a multiple of 1000. This is selected from line 595.

If you renumbered lines 6000-6030 to 5960-5999 you would have room for three routines of your own at 6,7 and 8000. The possibilities are endless — how about lyrics, song structure and rhythm patterns?

The whole program is built around DATA statements and it is important that these are typed in accurately — especially lines 9210 to 9420. If the correct number of spaces are not left the program will crash. Note that the flat character is the UDG character A, but in the listing I replaced by "b" because my printer would print it as "A" and Ab is clearer than AA!

Twenty chords are included but more can be added if you wish by increasing the 20 in line 9210 DIM. and adding the extra chords to the DATA statements. These are constructed as follows:

C\$(x,1 to 12) Notes which appear under the chord window.
 13 to 16 Print position for finger 1.
 17 to 32 Print position for other four fingers.
 33 to 39 Chord name.
 40 to 57 Values of notes for BEEP if user wants to hear chord.

The program uses approximately 13.5K but 16K users could break the program into

smaller units and record them as sequential programs.

Stell Software

for top quality programs

Make learning fun with these top quality educational games!

Maths Invaders - answer the questions correctly or the invaders will land on you 4-12 yrs. (Spectrum 16/48k, BBC B, Electron, Commodore 64 & Atari.)

Money - an introduction to coins and notes and their use in shopping. 4-10 yrs. (Spectrum 48k.)

Missing Words - watch the train move forward when you type in the right word. 4-10 yrs. (Spectrum 48k.)

Identikit - choose from a range of features and build up a face on the screen. 2-8 yrs. (Spectrum 48k, BBC B, Electron & Commodore 64.)

Time - learn to tell the time with this simple step by step guide 3-10 yrs. (Spectrum 48k, BBC B, Electron.)

Micros for Children 1, a set of four educational games for children of 3-8 yrs. Excellent value. (Spectrum 16/48k.)

Railroader - lay track on the screen in any layout you want. 4-10 yrs. (BBC B, Electron.)

COMING SOON

Spectrum programs **£6.95** BBC, Electron & Commodore 64 **£7.95** Atari **£8.95**

Ask for Stell Software at larger branches of *Boots*, John Menzies, and all good computer shops, where most titles are available.

In case of difficulties order direct from Stell Software.

Dealers should contact their regular distributors.

No. 1 in Education

Stell Software Ltd., 36 Limefield Ave, Whalley, Lancs. BB6 9BX

Moonlander

A superior version of the arcade favourite from Gary Moore in Essex.

This really is a special version of the classic lander game. Just like the original, this game uses long range and close up views of the lander and moonscape, depending on the lander's proximity to the mountains.

The aim of the game is to land your moonlander on all the five landing pads (shown as flashing Xs). There are no on screen instructions as these had to be omitted to fit the program into 16K, so here is a brief outline.

Using the "9" key is as the thrust and the "7" and "8" keys to rotate the moonlander

left and right, guide the moonlander to a safe landing on one of the landing pads. Having landed once on each of the five landing pads, you start again but at a harder level.

When the program is first run you will see a landscape showing the positions of all five landing pads. When you are a certain distance from a pad the landscape will change to a magnified view of the pad and the surrounding landscape. To make a successful landing your vertical speed should be less than or equal to 10 (the vertical speed (v/speed) is negative if the

moonlander is going upwards and positive if going downwards). The horizontal speed (h/speed) is the speed at which you are travelling horizontally (positive for right, negative for left). If you land on the same base twice then you will be asked to take off again (or pay the consequences). Having landed on all the five pads you get a bonus score (depending on how

much fuel you have left), an extra moonlander and your fuel tanks topped up. You then try to land on the five pads again, but this time your rate of fall is faster.

Variables

lv	Level.
sc	Score.
z	Number of landers left.
l	Counts the pause between the blip sounds.
vs	Vertical speed.
hs	Horizontal speed.
pad	Number of pads landed on.
f	Fuel left.
ls	RESTORE number for landscape data.
h	Line number of landing pad when in magnify mode.
d	Column number of landing pad when in magnify mode.
line	Line number for lander.
column	Column number for lander.
drift	If positive then lander moves to the right, if negative then moves to left, if zero then stays in column.
gs	Character code for graphic of lander.
down	If positive then lander goes down, if negative then lander goes up.
s	Equals 1 if in magnify mode, 0 if in normal mode.
Array c	If $c(\text{line} + \text{column}) = 1$ then pad has already been landed on.
pl	Previous line number of lander.
pc	Previous column number of lander.

Program description

10- 70 Sets up variables.
 100- 410 Main program, broken down as follows:
 115 Prints information on screen.
 116 Checks for landing.
 120 Prints lander.
 125 Checks for crash.
 130- 145 Updates print position.
 150- 155 Updates horizontal and vertical movements.
 160- 180 Decides which position lander should face.
 190 If key "9" is pressed then subtract 10 from fuel.
 200- 210 Checks if lander is at edge of screen. If it is then GO TO 700.
 220 Stops lander going off top of screen.
 230 Updates horizontal and vertical speeds.
 235- 250 Checks for change of landscape.
 290 If no fuel left THEN GO TO 950.
 400 Deletes lander.
 410 Starts lines 100-410 again.
 500- 580 Magnifies landscape.
 600- 696 Checks for landing, crash landing, restricted landing pad and to see if all pads have been landed on.
 700- 795 In magnified mode, if lander is at edge of screen then draw new magnified landscape next to the one the lander is now in.
 800- 895 Crash landing display. If no more landers left then end of game.
 900- 940 Landed on all 5 pads, bonus score, restart program but at slightly harder level.
 950- 960 Routine for "OUT OF FUEL".
 9000-9060 UDGs for lander.
 9500-9999 Data for shape of landscape.
 9530 Data for starting landscape.
 9540 Data for magnified area around base 1 (from left to right).
 9550 Data for magnified area around base 2.
 9560 Data for magnified area around base 3.
 9570 Data for magnified area around base 4.
 9580 Data for magnified area around base 5.

NO INTERFACE!!!

SPECTRUM-STICK

only £9.95 inc. VAT & P&P

- Operates cursor keys directly
- Simply clips onto case
- Leaves rear socket free for accessories • No wiring
- 8 axis control • One hand operation • Essential for all flight simulation games • Ideal for plotting and drawing • Tough Maranyl Nylon moving parts.

WHAT THE PRESS SAYS:

"an ingenious low cost joystick" *Popular Computing Weekly*.
"Robustly made & handles well" *Personal Computer Games*. "an ingenious device... found it to work well" *ZX Computing*.
"the best feel joystick... produces 8 directional movement with perfect accuracy" *Crash Micro Games Action*.

Now that most modern programs offer user-defined or cursor key choice, Spectrum-Stick is being used more and more, even by owners of interface type joysticks who prefer the light one-handed control plus the freedom to plug in other accessories to the Spectrum rear sockets.

We cannot list all the programs suitable for Spectrum-Stick, but here are a few:

Atic Atac	Fighter Pilot	Nightflight	Knot in 3D
Apple Jam	Flight Simulation	Paratroopers	Vu 3D
Airliner	Froggy	Paint Box	Wheelie
Bedlam	Gold digger	Robot Panic	3D Desert patrol
Bonkers	Gold rush	Scuba Dive	3D Maze of Gold
Bubble trouble	High Rise Harry	Splat	3D Tunnel
Caterpillar	Maze Death Race	Super digger	3D Vortex
Chopper rescue	Maziacs	Spectrapede	Last Sunset...
Cybertanks	Mined Out	Harrier Attack	Corridors of Genon
Earth defence	Missile Defence	Morris meets Bikers	Etc. Etc. Etc.

Reader's reviews

Tell us what you think about the software that's on the market.

This feature provides space for you to air your views on any software, be it for the ZX80, ZX81 or ZX Spectrum. If you've had a good or bad experience of any of the commercial software packages available for your micro, why not write and tell us.

Your reviews should contain your critical thoughts about the software and the relevant details concerning the availability of the package, the price etc. If you can provide any screen dumps to illustrate the review, so much the better. Any reviews published in this section of the magazine will be rewarded with the price of the tape you review. So, if you buy a cassette and send in a review that gets published, you'll get your software for free!

Ground Force Zero Titan Programs Guy Haines

The lengths to which some companies go to in advertising their product, in terms of magazine space, makes you think they have something special to offer. A full page colour advertisement of this type prompted me to buy Ground Force Zero from Titan programs. However, the game simply reaffirms my belief in the old adage 'you can't judge a book by its cover' or in this case 'don't be influenced in purchasing programs by the advertising campaign behind it'.

Ground Force Zero is written totally in BASIC, and suffers all the accompanying problems of programming in this language. On loading you are greeted with the 'Dambusters' theme music and a second world war biplane chugging across the screen with a prompt asking you to select 1 of 10 levels of difficulty. Then, at the bottom of the screen, skyscrapers of varying height are being constructed and when the bottom of the screen is fully occupied

by buildings, your plane begins chugging along the top of the screen once again. As it goes off one side of the screen it reappears at the other but this time it is one line lower. Using simply the 'B' key you must drop bombs on the buildings knocking them down to the ground before your decreasing height causes you to collide with one.

Being written in BASIC, the graphics are crude and jerky and the monotony of having only a single key to press brings boredom almost immediately. In my opinion it is the sort of game that you feel you could have whipped up yourself and then put it on some tape and stored away never to be used again. It would appeal to the very young in testing their judgement for the right moment at which to drop their bomb but in today's market, where to stay afloat in the software industry demands high standards, I am surprised that Titan Programs have not been renamed Titanic. At £5 a throw the program is ludicrously priced but it did teach me a lesson. From now on, I'll find out what I'm getting before I part with any money!

Slippery Sid Silversoft P D Jones

The majority of programs available for the 16K Spectrum come in attractive packages and Slippery Sid is no exception. However, often an attractive cover can conceal a poor or even bug-ridden program. Fortunately, this program lives up to all expectations. Basically simple in concept, the game is incredibly addictive.

On running you are seen to be in a walled garden in which a number of frogs are sitting. You take the role of Slippery Sid the snake and your aim is to gobble up all the frogs. But beware! Every time you eat a frog, a white toad will appear at random in the garden. Also, the

more frogs you eat, the longer you grow and the harder it becomes to get around the screen. Occasionally a magic mushroom will appear and on eating this you can gobble up a toad and gain extra points. On eating all the frogs, the screen clears and you find yourself in the next garden which contains an extra wall. The game continues as before with more walls and hazards added each time you clear a screen. The control keys are well chosen and a high score can be achieved quite quickly. The battle is not over yet though as you have the choice of five levels of speed — from manageable to well-nigh impossible!

All in all, Slippery Sid is a very enjoyable game with good use of sound and graphics. I highly recommend it but would warn those of you who are married that it can cause marital stress. I am still trying to pry my wife away from the keyboard so that I can have another go. Slippery Sid is available from most good software stockists at £5.95.

3D Tunnel New Generation Software S Brookes

New Generation's latest contribution to the software market is the highly recommended 3D Tunnel. On the cassette there are two versions of the game available, 16K and 48K. The 16K version comes in

two parts, playing sequences and practice modes which have to be loaded separately. The 48K version has the added attraction of a demonstration mode (which anyone could watch for a long time in fascination) and a London Underground train to avoid.

The whole object of the game is to shoot as many assorted creatures as possible, and to avoid the underground train (48K only). Points are awarded as follows:

Hitting a bat	20 points
Hitting a toad	40 points
Hitting a spider	60 points
Hitting a rat	80 points
Avoiding the underground train	100 points

Provision has been made within the program for the use of joystick control — Kempston Microelectronics and AGF are to be used. If the user does not have this facility, the normal keyboard can be used with a varying combination of control keys.

When the program is loaded, you are greeted with an options page. This shows the selection of speeds available — fast, medium, or slow. There are also practice modes for each phase of the game:

Phase 2 Crawling spiders
Phase 3 Leaping toads
Phase 4 Scurrying rats
Phase 5 London Underground train (48K only)

Anyone of these modes can be selected along with the speed to start the practice sequence.

Highly recommended maybe, but my first disappointment came with the start of the game — the so-called 3D Tunnel is no more than varying borders of colour whizzing towards you (depending on the selected speed). I would have liked to have seen, at the least, vanishing points at the corners of the tunnel walls to give the view more perspective although actual graphics within the game are superb.

My second disappointment came when I first started to play the game; the first phase, Flapping bats, has no end! I have sat at my Spectrum for twenty solid minutes without managing to complete this phase. I find this very discouraging — surely the actual game is not another practice mode?

At £5.95 3D Tunnel is good value to anyone who is prepared to sit at the computer for hours just to reach the other end of the tunnel!

Apocalypse Red Shift Greg Turnbull

Apocalypse is the new strategic wargame program for 2-4 players from Red Shift. The program comes in a sturdy box with a full 16 page user manual. Tape side A loads the main program and the prompt to load one of the four available maps on side B (Europe, Great Britain, the Caribbean and London). Once the map is loaded you must select the play date from 0 to

7999 AD, the number of players' names (and symbols for the map display), then select the empire centres (of the 24 names offered). Each centre (and all squares) is worth between 0 and 9 revenue points, depending on the location (desert: low, centre: high). These points are the currency of the game.

The screen shows the year and quarter currently being played, player number and decision information, main map plus symbols for each players' areas, the player's power points (sum total of all revenue points) and an exploded window of the current cursor position plus surrounding squares. At the start of each quarter the power points give each player a revenue which he can spend on troops, warships or nuclear missiles. There are four phases to each quarter:

- 1 Nukes phase where nukes can be seen on the map and launched if required. (If this is done, the target square is destroyed and all 8 surrounding squares as well.)
- 2 Deployment phase where the player can build up armies or fleets on the squares he owns.
- 3 Movement phase where the player can move any army or fleet to occupy new territory (and so build up his total revenue points), or may attack another player's area. (Movement of each force is limited to a certain amount for each turn). If an attack is made, the Combat phase occurs where both players can choose a number (from 1 to 9) without letting each other see the value chosen. This then determines who wins the conflict (alternatively the computer can be left to make the decision).
- 4 End Turn phase where a player may challenge the next to concede.

ANOTHER GREAT
ADVENTURE
GAME FOR
THE 48K
SPECTRUM

Golden Apple

During the main deployment/movement phases of the game, the exploded window is used to observe the strengths of each square (this is scrolled at a rate of 1 or 3 squares, in any direction, by the use of cursor keys). Victory can be decided by the number of names of the centres captured, or the total number of revenue points built-up, or the destruction of the opponent's forces.

The program is a complex wargame that can last from a few hours to a few days depending on how involved you get with it, as it is highly addictive. Luckily, a save game facility is included. It is also easy to break in and list the program with LIST 2, this is endorsed by Red Shift as they welcome any ideas on improvements to the program and will even supply a listing if you send an sae.

If you get tired of playing on one map there are three

others to choose from, although every game will of course be different — unlike arcade games. Each map demands different tactics: the Caribbean needs warships and control of the ports, Great Britain relies more on the troop movements. Also, the Nukes option does not have to be used in a game.

If after many weeks of play you need other maps or you are getting too used to them, there are expansion tapes available. Volume 1 contains maps for USA, SE Asia, Africa, Arctic Circle, Star systems and Nether Earth. Volume 2 has historical scenarios such as the fall of Rome, Napoleon's campaigns, the Pacific War and 1984. Red Shift say that they will be altering the rules of play in these further expansions to add to the interest for seasoned players. Plus if you need any help there is a telephone number to ring for advice from Dr Strangelove!

Overall, at £9.95, this is an excellent program which will give you many hours of enjoyment especially as the game is constantly expanding and looking for ways in which to be improved. As such, it is highly recommended but it must be noted that some of the recent tapes will not load due to poor tape duplication processes. If you get one of these tapes (as I did) then just telephone Red Shift and they will very quickly replace the tape.

The Golden Apple Artic Computing Stuart Rogerson

The Golden Apple is the fifth of Artic Computing's adventure

games and the first to include colour and sound. The program begins with a colourful picture of the main locations of the adventure, a mansion house, a ship and a mountainous island.

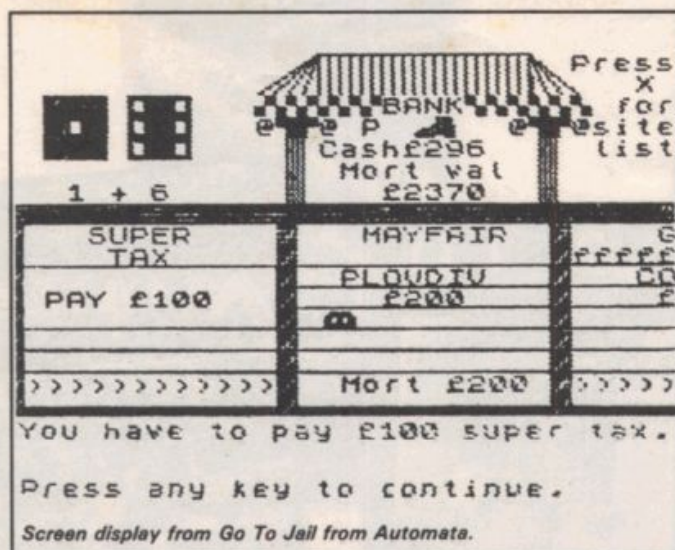

The plot is simple — you are on quest to find The Golden Apple and on the way you must find thirteen treasures and a safe place in which to deposit them. This is not the kind of adventure where you are killed in every second location and meet strange monsters round every corner. Rather, it is a test of skill, insight and ingenuity. You will find yourself seeking water to fill a watering can to water seeds or fishing for salmon (assuming you find the net) and be left puzzling over the unpleasant crocodile.

The program understands over one hundred and fifty words and although a fairly standard textual adventure, it contains three new features for Artic. By requesting instructions you are given a page of useful hints including some of the key words and advice on which abbreviated entries are acceptable. Requesting help produces the message "What and spoil your fun!" followed by Artic's address and the promise of a crib sheet if you really get stuck. Asking for your score not only produces an update on the treasure position but gives you a rating out of one hundred and tells you the number of turns you've had so far. The latter might seem a nice but irrelevant touch but it isn't as I soon discovered.

The whole point of adventure games is to explore new worlds and use your wits to survive, finding uses for the various objects you see lying around. This is a high quality adventure game which more than fulfills this aim. It is for the experienced adventurer only. If you are an adventure game enthusiast it is certainly one worth considering adding to your collection. It is for the 48K Spectrum at £6.95 and the ZX81 at £5.95. Like all Artic adventures so far, The Golden Apple is completely machine code and includes a save routine. Two hints: beware of sunset and don't be tempted by the nice soft bed!

Go To Jail Automata Philip Hickling

Go To Jail for the 48K Spectrum was originally marketed as "Automonopoli" but the

Screen display from Go To Jail from Automata.

name was changed, if their advertisements are to be believed, for reasons of copyright. It is written largely in BASIC, with several machine code routines to scroll part of the screen one pixel at a time, create fancy border patterns and store and retrieve the screen from above RAMTOP so saving time building up the screen.

The program simulates the board game for between two and five players — one can be the computer if requested, thus one human can play against the computer. Whether the computer is an active player or not, it takes upon itself the role of banker, keeping account of all the player's money, property owned, and collection of fines and taxes etc. The game is authentic in virtually all details to the original, even down to the captions on the chance cards!

At any time during the normal course of play, the screen displays two and a bit squares of a monopoly board in a large format, scrolling them from right to left as the player advances. While at times this may be confusing, the sites are large and the text easy to read — if the whole board was to be displayed the information would be compressed to an unreadable degree. On the sites are shown the name, owner, rent and mortgage value. Also shown during a player's turn is the bank, giving details of the player's cash and mortgage value. If during the course of play a player becomes bankrupt, his property is repossessed by the bank and is up for action, as happens when a player lands on property that is for sale and does not buy it. During these

auctions, the computer will make its own bids, according to how highly it rates the value of the property.

The computer plays a fairly skilful game, especially when it has only one opponent. If the player has very little cash on hand, it will take advantage of offering the site up for auction then making a bid just higher than the player can afford so buying half the board at ridiculous prices!

The game incorporates various facilities. Players can trade with each other by-passing the bank, houses and hotels can be bought at will and the game can be saved at any time — usually an essential feature! There are very few unfavourable points in the program. It is possible in a couple of places to cheat but the computer does not use these and all that is needed to overcome them is a little self-discipline on the part of the player. The only major complaint I can make against the program is its limited use of sound.

These drawbacks, however, are easily countered by the excellence of the program in other areas. Overall, it is extremely good value for £6 and I can recommend it to both seasoned addicts and newcomers to the game alike.

Avenger Abacus Programs Mark Davies

Dear readers, if you have been looking for an excellent arcade-type scramble then buy Avenger from Abacus Programs. It's really the best scramble program I have seen available for the 16K ZX81.

The game loads every time

and once loaded, runs automatically displaying the instructions and which keys to use. Then, when you have pressed 'p' as you are told, the next screen of instructions are shown and the points awarded for each target. You then enter the skill level and set off on your intrepid mission.

You fly over mountainous terrain hurling bombs or lasers at the ground. They are both accurate and the computer responds quickly to key depression (which is just as well!) Guided missiles are launched against you and are only destroyed by bombs whereas factories and missile pads can be flattened by both sorts of ammunition. Watch out! If you miss the guided missiles they are sure to get you!

Your plane can be hit as many as five times before you are destroyed but a hit from a missile counts as two shots. You can also be killed by the atomic explosion resulting from the destruction of a power station. As if this isn't enough, interceptors will attack you from all directions and they are hard to destroy as you only have your lasers for defence and they are no match for their rockets. If you manage to score more than 5000 by the time your fifth plane is destroyed then you have beaten the planet at that level.

At the highest level, level 5, the game is very, very fast. Not only are there more guided missiles and interceptors to deal with but your laser is shortened, making it much harder to destroy the interceptors. In addition, there is a high score facility for every level and a hit/time ratio which tells you the average hits you have made in your allotted time.

Avenger, at £4.95 from Abacus Programs is great value for money and really releases the full potential of the 16K ZX81.

Manic Miner Bug Byte Bruce Boughton

This excellent title is a must for ALL arcade enthusiasts. At £5.95 it is well worth a couple of weeks pocket money.

While loading, we are met by a continuous rotation of the words MANIC and MINER in large letters which alternate in colour. Once loaded we can hear a fascinating tune played on a piano keyboard with the

keys visibly being played.

On the inlay we are told that miner Willy (that's us) has found a long-lost mine and has to bring out all the treasure he discovers there. We have a choice of keys, but I found that Q to go left, W to go right and space to jump (with A to pause) are the best keys for the job. We also have a choice of having the tune (Hall of the Mountain King) on or off while we play.

So, onto the game itself. On pressing 'enter', the first cave (called the Central Cavern) flashes up instantly. We are in the bottom left-hand corner and have to get all the keys that are placed in awkward positions around the rest of the screen. This is not as easy as it seems as there are nasties like poisonous pansy bushes all over the place which must be jumped over or otherwise avoided at all costs. A mad mining-robot must also be missed as an added peril. Conveyor belts also must be negotiated as well as disintegrating floors. If these are not enough complications for you then I'll add that you have a limited air supply, which only takes about 2½ minutes to run out.

If you safely get all the keys and manage to return to the lowest level, you can go through the flashing door into the next sheet. You get a bonus depending on how much air you have left, with the keys at 100 points each. If you get killed for the third time a boot comes down on the end of a very long leg and steps on you. What a good idea!

If you make it through the first cavern you have got another 19 more caves to go through before you reach home, each one progressively harder. Cave 2, the 'cold room', has penguins on ice skates after you, and rather than keys you have to get snowshoes. The third cave, the 'Menagerie', obviously got its name from the three emus which eagerly patrol the different levels. Deadly spiders appear for the first time on this sheet, making it even harder.

My favourite cave (also the furthest I can get) is 'Eugene's Lair', cavern number 5. In this we must obtain five bricks to get to the next cave. Eugene is a small round man with stubby legs and glasses and is clearly named after a certain well known programmer. He does his best to stop you getting all the bricks, as do the ferocious toilets, which are complete with flapping seats.

This game is highly addictive as there is always the motivation to try and reach the next cavern. Each cave holds its own secret, which must be learned before any progress can be made.

Well done to Mathew Smith for writing an ingenious program with such super graphics, and thanks to Bug-Byte for issuing it. All in all, an excellent game for the 48K Spectrum.

Super C Compiler Softek Mcode 2 Compiler PSS David Harrison

Wouldn't it be lovely to write a program in "slowly but surely" Sinclair BASIC and, at the touch of a button, convert it into machine code to run at between 20 and 100 times the original speed? Well, that's what Softek and PSS claim in their adverts for these two compilers. But do they work?

Both compilers cost £9.95 but each has its own characteristics and idiosyncrasies. There are some things, however, that both compilers have in common. Both work with integer numbers only and can handle numbers from -32768 to 32767, while Super C also handles numbers from 0 to 65536 on a simulated INPUT.

Most BASIC commands can be compiled, with a few exceptions. Neither compiler can handle LOAD, SAVE, VERIFY or string arrays. However, MCode 2 can handle strings (but not string splicing), where Super C can't. This is the big difference between the two utilities. The Super C manual does tell you how this can be done but it is fiddly, involving PEEK and POKE.

MCode 2 can also handle numeric arrays (one dimensional), LEN, LPRINT and INPUT. Super C cannot cope with these but instead, can use STEP in FOR-NEXT loops and SCREEN\$ (with code), where MCode 2 can't.

RND is special on each compiler, giving an integer number between 0 and 32767. This is fiddly to work into a BASIC program but, on MCode 2, you can simulate this function with:

```
LET R = USR 59997
```

This is useful when testing your BASIC program before compilation.

REM, on both compilers, is put to very good use. On Super C, you can use REM to enable the BREAK key to run machine code (which follows the REM in the line, in decimal), or to erase everything, including the Compiler, without pulling the plug. (Both compilers can survive NEW).

On MCode 2, REM #n, gives a choice of the mode in which the compiled program will run:

- Mode 0 Gives the fastest code disabling the BREAK key.
- Mode 1 Gives longer and slower code by enabling the BREAK key.
- Mode 2 Gives code that runs at almost the same speed as BASIC, with TRACE on.

By default, Mode 1 is chosen.

Both compilers have good error messages, if a bit concise at times. Only MCode 2 gives you the number of bytes which your code takes up, after compilation. It seems that the only way to save a compiled program is to save the whole of memory, machine code, compiler, work space, the lot. However, this is not difficult, and, with a microdrive, hardly time consuming.

One important point to note is that Super C allows only A to Z as variable names, giving only 26 available, without POKEing into memory. MCode 2 on the other hand, happily accepts, 'LIVES' 'HS' and 'SCORE' without question. Both compilers are called with simple RAND USR commands.

Finally, to documentation, MCode 2 was supplied by return of post in a cassette case with an inlay-card size, eight sides of "manual". This, however, tells you enough to make full use of the compiler, including a full description of all the commands available.

Super C took more than three weeks to arrive, and was sent in a large package, about the size of a video cassette box. Super C's manual can only be described as a work of art. Written by Tim Langdell, it gives a superb description of everything about the compiler including the commands, the error reports and just about everything else, finishing off with a plug for the rest of their programs.

If I had to choose between these two very powerful packages, I would prefer to use MCode 2 from PSS, mainly because it can handle strings and can use more than 26

variables. It is also a little easier to use. However, since about June, Softek have been promising an enhancement package for Super C allowing for string arrays, string splicing and floating point. This will probably push up the price to around £15.00. Whether this will ever become available, we shall have to wait and see. At the moment, MCode 2 still represents the best value for money.

Down to business

Or how to make your computer earn its keep.

The DK'Tronics keyboard.

Being determined to improve the quality of our listing print, I bought a Shinwa CP80 Centronics printer to do just that. Now armed with the ability to produce typewritten text easily, I wondered about using it and a computer as a word processor. At first I thought "get a **C", but then I started wondering whether the Spectrum could cope with the job.

My next step was to scan the magazines and write to the companies who were producing suitable goods — this is the outcome of the somewhat ambitious project.

The hardware

With the printer, bought due to availability rather than choice, I

was limited to using a Centronics interface and Tasman. Kempston sent a suitable interface for me to try and I received a tape and letter from Microdot Software saying that Cobra Technology had sent a interface. Unfortunately the interface never arrived.

Memotech supplied an interface and Hi-res graphics pack for the ZX81 and finally, DK'Tronics supplied a keyboard. Fuller also offered one but at the time they were having problems — their keyboard finally appeared at the December ZX Microfair.

The keyboard

The DK'Tronics keyboard is a sturdy, solid-looking, black

ABS case with a set of grey alphanumeric keys on the left and a 3x4 red numeric keypad set on the right. The Spectrum is removed from its case by unscrewing the case halves, gently pulling out the two keyboard connecting ribbon cables and unscrewing the two small circuit board screws. The reverse process is then undertaken with the DK'Tronics keyboard. Precise instructions are supplied so any incompetent can do it — even I managed!

The keys have a pleasant feel to them, the spring pressure was just about right to allow for my fumbling efforts, and generally the legends, supplied on transparent stick-on labels, are easy to read. Some of the smaller red characters — \$%& — may give rise to eyestrain.

My main problem came from the design of the back of the case. The sides slope out slightly but the back slopes out a lot making it difficult,

sometimes nigh impossible, to connect units to the user port. I had to take saw to case to remove several cms from between the port and the save/load sockets. Even so, some units that had ridges which normally fit over the top of the Spectrum would not fit without major surgery. The only way to use items such as the Microdrive or the Prism VTX modem which normally fit beneath the Spectrum, was to buy a ribbon cable extension.

Irritating though these problems are, the keyboard is still worth having for general use and is invaluable for any serious typing on the computer.

Interfaces

It would probably have been much better if I had asked Peter Shaw to take them apart and given us his expert opinion. However, here is the opinion of a electronically ignorant user!

Both the Tasman and the Kempston interfaces for the Spectrum are well boxed in tidy-looking, robust, black cases with firmly fitting edge connectors. Both are also "dead enders" as neither have sockets at the back for further units to be plugged in. If you use several such units then constant changing is called for with the eventual loosening of the connectors. The Kempston unit is slightly longer than the Tasman and has a slight ridge at the top which normally fits over the top of the Spectrum case.

Both units performed perfectly when LLISting, LPRINting and making screen

The Tasman interface.

text copies. The Tasman offered options to print alternative characters for UDGs and the block character set — usually it prints the "natural" letter (ABC...etc) for the UDGs and sets the graphics to printer codes. If your printer has a graphic set then it is possible to alter these codes so that it will print the graphics.

The Kempston interface simply substitutes spaces where it encounters UDGs or graphics codes. This was a problem but I wrote a simple routine to replace UDGs with ABC... in the listing before printing. I include this as Fig 1.

Making screen dumps is a feature of the Sinclair printer which is very useful: however, I could not get the Tasman to produce one at all. I tried both BASIC and various of the m/c routines supplied but to no avail although I'm assured that they work with Epsoms, Seikoshas, Star and Tandy printers.

The documentation for the Tasman was superb and very easy to use, but when sending control codes to the printer — to print different line lengths for instance — you have to send an extra code CHR\$ 27 before each non-standard ASCII code.

Although the Kempston instructions are less professional in appearance, they are, nevertheless, clear and easy to use. The user has to make any adjustments via BASIC POKES and not through program control as with the Tasman, and printer control codes are sent by the more usual system of CHR\$ (27) — the brackets indicating a control code.

Then came the test. I loaded the Epson screen dump code which Kempston said would work with the Shinwa, typed the RANDOMISE USR number and hey presto! One hi-res screen dump.

There is very little to choose between the two interfaces; the Kempston seems to have a little more support from other software houses, but the reason that I'm using it is purely because of the screen dump facility. To produce listings for ZX Computing I'm using the Tasman interface, mainly because it fits better with the keyboard.

The Memotech Centronics interface for the ZX81 is one of their series of interconnecting units that are as wide as the ZX and comes cased in an attractive black metal box. This is supplied with an instruction booklet which I found needed careful study. Although straightforward in printing letters, there are a few awkward actions needed when sending control codes. So far I have not been able to manage to LLIST the graphic characters, but Memotech also kindly sent their Hi-res Graphics unit from which it is possible to COPY a screen. The problem now is how to send the program list to the Hi-res screen and then COPY it.

Owing to the fact that there is no related software to adjust, this is not easy. If any readers have solved the problem I'd love to hear from them! Meanwhile, I will continue to print the ZX81 listings in the complex but, I hope, easily read format found herein.

The software

Now that I had the computer housed with a high quality keyboard and on speaking terms with the printer, I turned my attention to finding some form of Wordprocessor. I am a single finger typist at best, and find that my paper usually has more tippex on it than ink but to get someone else to type up my work is a costly process.

I have tentatively used one of the "B" Wordprocessors and so realised that this would be the answer, but would a suitable professional machine be available for the Spectrum?

Two companies sent samples of their products; Tasman and Microl, both for the 48K Spectrum, but before looking at them let me explain briefly what a wordprocessor (wp) should do, and what I wanted it to do. Skip this next section if you already know!

Wordprocessing

A wp effectively turns your computer into a typewriter and displays text on the screen. This can then be altered, modified, adjusted, corrected, added to or removed before being sent to a printer.

Text can be formatted or laid out on screen by use of various commands "embedded" in the lines and can be Loaded/Saved or Merged. A range of text-handling commands are usually provided to move blocks of text and a system of sending codes to operate the printer is desirable. This is an outline of the basic requirements, if you are looking for a professional, specialist wp then many other facilities will be required, consult an expert!

1 The Microl: Supplied in a presentation-type box with a well produced booklet, the Microl wp follows the standard

system of embedding formatting controls within the text.

There is room for 30,000 characters, approximately 4000 words, which is roughly equal to ten A4 pages. This is made up of 950 lines of 32 characters and is a lot of text. This article, for instance is 400 lines long.

The booklet is quite a good manual although it depends on your attitude to learning. If you like things spelt out in simple words, phrases like "feel free to experiment" will fill you with terror! All the available commands are explained briefly but adequately, there are 21 file handling commands and 12 embedded formatting commands. Saving, loading and merging facilities are provided.

One of the most useful features of a wp is Word Wrap — a system where a word which would be split by the end of a line is transferred complete to the next line. This facility is included in the Microl program. Using this program was fairly easy. I had to work with the manual in easy reach, but I soon found myself remembering the most frequently used commands. Text is displayed in the usual 32 chr/line form and can be sent to the Sinclair printer or to a printer with a greater number of characters to a line.

A fair amount of time is spent in the manual in formatting using the ZX printer and only 14 lines on using a bigger beast. I think this is a little unwise as I would imagine that anyone likely to invest in a wp would probably intend using a quality printer. There is also a lack of facilities to output printer control codes, and to use anything other than the ZX printer you have to modify the BASIC program yourself. This could and should have been done as part of the program run.

I found editing to be a bit

fiddly and the system of entering lines separately to the main text display (just as you enter new lines in a BASIC program) difficult to get used to.

As a general comment, this is a good wp but is probably most suited to the home user with a ZX printer who wishes to produce well set out text. Ideal for writing your Christmas thank you letters!

2 The Tasword Two: This is the most professional, user friendly business-type program for the home micro that I've ever seen. Everything from the manual (written using Tasword) to the on screen presentation is designed to enable the user to feel relaxed and confident when using the program.

On loading, the program is "write" mode and displays an empty screen except for the cursor in the top right corner and a status line at the bottom of the screen. This status line shows a constantly updated line and column cursor position and the state of the justify, word wrap and insert modes.

The text is displayed as written and this is cleverly produced with 64 characters to a

line. An option is available to display at the normal 32 characters if you find the letters too cramped. I soon became used to the 64 format and I have never needed to use this option.

The booklet is very well written and takes the user through each command step by step, and if that's not enough, there is a tutor program supplied on the tape to give you practical examples and experience. Should you get stuck, two "help" pages can be accessed during the programs operation which lists all 42 commands and the 8 printer control codes. A further page can be called which is a menu for Print/Save/Load/Merge/Define your own printer codes/Return to file or BASIC options.

This program was written with the professional printer in mind but also will print on the ZX printer at 64 characters per line which is readable but not very satisfactory. Comprehensive instructions are given to allow you to use the program with a variety of different printers and interfaces.

There is not enough room to list all the functions which

this program provides — suffice to say that everything I needed was provided as well as many options which I haven't got a use for as yet.

To sum up, this is the one for me and in fact, the whole of the magazine was written with the aid of Tasword Two! I think that this program will provide word processing for anyone who needs this facility (bar specialist applications) and, taking into account the cost of a keyboard and interface, still works out cheaper than its nearest rival.

Tasman software also supply a program which will convert your normal Spectrum display to the 64 character one used in the word processing package.

Conclusion

Well, apart from producing the ZX81 graphic set, I think that I have achieved all that I set out to do. I'll work on the latter and perhaps investigate the possibility of using the Spectrum to store records of our contributors and the software file lists that we sometimes publish.

I've already had a quick look at Sinclair's VU FILE, if only I could get it to print on the Shinwa at 80 cp — I'll let you know...

In this game you play the part of the harrassed caretaker of a rather badly situated block of flats. Your job is to ensure that every window gets cleaned when dirty and repaired when cracked, using the buckets of water and spare panes of glass that are stored around the building. The difficulties, however, are that you cannot carry both water and glass at the same time, and that the windows keep getting dirtied again (pollution and pigeons!) and cracked again (aircraft vibrations and vandals). If you manage to get the whole lot perfect (and don't fall off too many times in the process) you can go on to harder levels of the game, the object being to reach as high a level as possible.

How to play

Use keys Z and C to move left/right, keys N and J to move up/down. You must travel along the ladders and walkways marked by inverse 'equals' signs, if you try to do otherwise you will fall off and lose a life. To pick up water move towards a 'w', or for glass go towards a 'stroke', the man will then flash with whatever has been picked up. When you are 'empty' the man flashes white. Each 'w' you pick up lets you clean four windows, and similarly each pane of glass lets you fix four windows. You can pick up as many as you like at one time but you cannot carry glass and water together (too dangerous!) so if you already have water and then go to pick up glass you will lose whatever water you had left, and vice versa. Tactics are clearly needed to make the most of what there is.

To clean or repair a window just move towards it from either side or from underneath, using the same movement keys as usual. Whenever you manage to get all the windows clean together you are moved on to harder levels of the game, where the ladder-pattern is more awkward and there is less water available.

Program operation

Lines 20-70 are the man-move subroutine. Since this is by far the most frequently used part of the program, it has been placed right at the beginning of the listing, and the variables used in it are defined before any others when the program is first run, this making all access times as short as possible. These considerations together with poking onto the screen rather than 'PRINT AT' make for a fast game compared to many ZX81/

BASIC written programs.

Line 40 checks for move/can't move/fall off/pick up water/glass/clean window/repair window. It does this by looking at the next space to be moved to and if this is not a 'ladder' (character 148) then the program is diverted to lines 300-580 where, depending on what character is found, different actions are taken. Eventually a return command is hit which completes the original GOSUB to the man-move subroutine. The man's previous known screen position is still held unchanged in the variable PP so that normal movement can resume next time around.

Lines 100 and 110 form a loop which constantly calls the man-move subroutine, but the loop is occasionally broken out of to allow the next set of lines to operate as follows: lines 200-290 cause windows to be cracked or dirtied again during the game. So as not to slow down movement during this operation, the man-move subroutine is also called in between lines.

Line 310 uses Boolean algebra to replace a long mess of IF-THEN-GOTO comparison lines. Assume for example, that line 310 has found a 'dirty window' (grey character, code 8) and that the man has 'water' ($w>0$) then line 500 is selected. This reduces water points by one, then in line 540 the grey is POKEd with a space character to 'clean' it. Line 550 then looks to see if the next space is also a grey, if so POKeing it, if not POKeing the space before it. This is so that any window can be wiped from either side or even underneath and still give the same result. A similar procedure is followed for repairing cracked windows.

Lines 600-690 initialise variables. Lines 700-892 form a subroutine to draw the screen, also used to redraw it full of broken windows at each new level of the game. Line 705 starts the ZX81's random number sequence off at a fixed place for each level of the game. Each screen therefore follows a different pattern of window cracking, but it is always the same for a given level. This is done so that players can eventually learn what to expect and develop tactics.

Line 830 causes the ladder pattern to vary between levels. Lines 900-990. The 'fall off' routine. This replaces characters behind the man as he falls.

There's been Zip, Zap and Pac-man, now here's Flatman, a race against grime by J Dave Rogers of Liverpool!

Modifications

Onscreen instructions have been omitted to keep program length down, but readers may like to add their lines at the end of the program to do this. A few sarcastic comments might also be added at the end, depending what level the player managed to reach.

If you find the game too dif-

ficult then change line 800 to print 32 graphic 'equals' instead of blacks, thereby giving the man extra access all along the bottom. If the game seems too easy however, try *slightly* decreasing the value of 0.94 in line 110 as this determines how often windows are likely to be re-cracked during play.

Variables

PP	Present position of man.
S	Next intended screen position.
X	Marks the start of the screen in the display file.
K	Character of man.
Y	Character of next space if user tries to move off a ladder. This is used to decide whether man picks up water, picks up glass, cleans window, repairs window or just falls off.
W	Water points.
GL	Glass points.
PW	Perfect windows (0 to 30).
E,F,H	Used to generate random cracking/dirtying of windows.
LE	Level of game.
N	FOR-NEXT loops.
P\$	Printing string, used to print horizontal walkways.
LIFE,L\$	Number of lives left; on screen indication of this.
JD	At the end of line 990 is just an undefined variable to stop the program at the end of the game.

A note or two

Graphics 'equals' are important characters in this program, but these can often look like inverse spaces when printed on paper, so please note the following very carefully when typing-in:

Line 730 : 14 graphic shift F; 3 spaces, 3 graphic shift F.
 Line 740 : 3 graphic spaces, eight various characters, 5 graphics spaces, 2 spaces, 3 graphic 'equals'.
 Line 760 : Graphic shift 'S' is used.
 Lines 760, 770 and 780 must have graphic 'equals' at positions 4,7,10,13,19 and 21.
 Line 810 : 6 graphic 'equals'.
 Line 830 : 2 graphic spaces, 3 graphic 'equals'.
 Line 880 W, graphic 'equals', W.

Since the program contains 'pokes' it is liable to crash if typed in wrongly, so it is a good idea at first to omit the self-start line 1050 and 'save' a few copies of the program onto a cassette *before* it is ever run.

Warning

This listing was not printed on a Sinclair printer and graphic characters have been replaced by a simple code. This consists of a number (no number means only one character) which is the number of characters needed, followed by "g" to in-

dicate graphics mode, and finally a letter or number which is the key of the character. The code "is" means inverse space, ie "█".

These codes are combined with a "+" as a separator, so the code "2is+2ga" means two inverse spaces and two characters obtained by graphics mode shift/key A. Lower case messages are to be typed in inverse mode.

I hope you will find this easy to enter, I know it is less than simple, but I think that you will agree with me that it makes the rest of the program easier to read...

AMOEBAS SOFTWARE

54 WALDEN AVENUE, CHISLEHURST, KENT
Telephone: 01-857 8999

LAZE BLAZE

Superb machine code action. Pit your beam against the 2 beams of the computer. Race your opponent for the random fuel dumps. For the very strong of heart, battle to the death in the maze. 9 speed levels. Over 500 Options in this fast moving arena.

48K Spectrum.

£5.95

TANK TRAX

A TWO player game to stretch your skill. Destroy your opponents tank before he obliterates yours. Choose the battlefield, fire over the mountains or select foothills and have an eyeball to eyeball confrontation. Sounds easy, but don't forget as in all real situations weather plays an enormous part in success or failure. This game is no exception. The wind must be allowed for if you have no desire to blow yourself up.

Uses all the 48K memory of the Spectrum. £5.95

Soon to be found in all good software outlets.

"Games that grow on you"

If you are having trouble buying your copy send a cheque or postal order to: AMOEBAS SOFTWARE, 54 WALDEN AVENUE, CHISLEHURST, KENT

The Complete Printed Circuit Workshop

Easy Add-ons for ZX Spectrum & ACE

NEW

17 exciting electronic projects to build and run your own micro.

- LIGHT PEN
- PICTURE DIGITISER
- KEY PAD
- MODEL CONTROLLER
- WEATHER STATION
- + OTHER EXCITING & INTERESTING PROJECTS

A newly released book by well known author Owen Bishop, published by Bernard Babani, describes in detail 17 projects to build (using low cost materials) to bring your micro into the real world.

The most complex component (the DECODER) is supplied in kit form ready to assemble with all components and plated through PCB

Order ref HB 2000 "EASY ADD-ONS" BOOK + DECODER KIT	£24.00
Order ref HB 2001 "EASY ADD-ONS" BOOK ONLY	£3.00
Order ref HB 2002 DECODER KIT ONLY	£22.00
Order ref HB 2003 DECODER PCB ONLY	£8.00

Please state computer when ordering

Micro Interface Kit

Professionalise your add on projects. Kit comes complete with attractive black ram pack style case, pre-etched & drilled double sided PCB, 28 way 0.1 pitch connector, 9 way D output plug & extender card. Suits Spectrum, ZX81, etc.

Order ref. HB/2090 £9.50

ZX81 Hi Resolution Graphics Kit

Improves screen resolution to 256x176 pixels enabling superior graphics to be easily programmed. Plugs directly into ZX81 ROM socket & is complete with extensive software tape.

Order ref. HB/2070 £22.00

ZX/Spectrum Intelligent Joystick I/F

Trebble your game scores overnight!

Suitable for Atari type joysticks. The kit provides an interface to enable ALL games programs to be played with joystick control. Tell it once & the keys for that game are remembered forever.

Spectrum Kit & Joystick HB/2061 £27.31 less joystick £20.80
ZX81 Kit & Joystick HB/2060 £27.31 less joystick £20.80

Computer Cables & Connectors

We now offer an extensive range of computer cables & connectors including a Spectrum user port extender cable. Send for new cable & connector price list.

Spectrum Extender

HB/2069 £8.85*

Overcomes those interconnection problems! Six inch double ended extender & male PCB plug. Also available as single ended with 9" of ribbon cable HB/2068 £4.76*

Prices inclusive of VAT, carriage 60p in U.K. Overseas orders please add extra carriage. Newly published full catalogue £1.50 (Refundable with first order over £10.) Please quote REF. ZX/4

Datafile

A multi-purpose file handling program from Nigel Salt in Kent.

Keeping records can be a laborious job — bits of paper alterations, amendments etc etc. But now in this comprehensive and versatile program you have all the facilities that most filing applications will require.

Datafile impressed us in both operation and in programming techniques, it is liberally REMmed so that the operation of each section is explained and has been well documented by Nigel for the operator to use.

Whatever your interest, job, or need, Datafile will be of use. Type it in and then read the following instructions on using it.

Datafile is a utility program which sets up a file in A\$ in accordance with parameters supplied by the user. The only limit to the number of records held is the size of the memory of your Spectrum. A 16K machine can only manage 28 records 100 characters long but fields within each record can be any length and each

field can be given a name up to 6 characters long.

Toolkit is a set of subroutines designed to enable you to use files generated by Datafile in your own programs. The sample application program Letters (on side 2 of your cassette) gives an example of one such application.

The uses of these routines is manifold. You might use them to set up a directory of your records and tapes or books. You could equally use Datafile to keep track of all your business clients. The example which follows guides you through every stage of datafile and explains the use of Toolkit routines.

Using the program

On using the LOAD "" command and playing side 1 of your tape you will be greeted with the main menu. Before you can use a file it must be defined in the following ways:

1. Select option from the menu. The program first asks you to name your file. You can call it anything you like but for this example enter CLIENT.

2. Number of records. Once you have named your file the program asks you how many records will be on this file. It is always a good idea to specify more than you think will be required to allow for future growth.

For this example enter 10. This will mean that only 9 clients can appear on the file because Datafile uses the first record to store information about the file size and structure.

3. Record size. Each record can be any size you wish. Obviously it must be equal to or greater than the maximum number of characters of data that you wish to store on each record. For the example enter 120.

4. Number of fields. What you enter here requires some thought. It is necessary to define one field for every item of data which you want to hold on each client. The difficult part may be deciding what constitutes an "item of data".

Say you wanted to store the address of each client. You could specify just one field called say, ADDRESS. This would not be very useful because then you would be unable to access individual lines of the address. A better solution would be to define one field for each line of the address and call them something like ADLIN1, ADLIN2 etc to refer to address line 1 and so on. For this example enter 10.

5. Field definition. If you have followed the example instructions then the program will now tell you that the CLIENT file has 10 records of 120 characters each.

The program will then ask for a name and size for each field in turn. You can call the fields anything you like but any name more than 6 characters long will cut short automatically. I recommend that you give meaningful names to your fields to make future use of your files easier. There is no restriction on the length which you specify for each field providing that the sum of the field lengths is less than the record length which you entered at 3 (record size) above. For the example I suggest that you enter the following field names and lengths:

Name of field	Length of field
INITS	6
NAME	15
ADLIN1	20
ADLIN2	15
ADLIN3	15
ADLIN4	10
PHONE	15
ACCNO	6
INVDAT	8
INVNO	6
	<hr/> 116

The total length of these fields is 116 characters which is less than the 120 character size which we entered at 3 above. When you have entered the data above you will have defined all of the 10 fields which you specified for each client record at 4 above. You will now be returned to the main menu.

Entering data

First select option 2 from the menu. If you have been following the example then you will be asked for the value of INITS in this record. For reasons which will become plain when you use LETTERS, enter your own initials separated by full stops. Your entry will now be displayed next to the field name. If you have made a mistake don't worry, you will be given an opportunity to put it right when you have entered all the data for this record. Continue to enter your details as prompted. If you just press "ENTER" when asked for a value then that field will not be left empty. Clearly you will not have an account number and you will not have invoices outstanding yourself. Thus for these fields leave a blank. If you later sort the file by invoice date for instance then records with no invoice data will be put at the front of the file.

Having entered your own details you will be asked whether you wish to alter anything. If you enter "Y" then you will be prompted to enter a new value for each field in turn. If you just press "ENTER" when prompted then the value for that field will be left unchanged. When you are happy with the record content, press "ENTER" when asked if you want to alter anything and you will be asked whether you wish to enter any more records. If you enter "Y" then the process above will begin again. If you just press "ENTER" then you will be returned to the main menu.

When you enter dates I suggest that you use the American format: YY/MM/DD rather than the British format: DD/MM/YY. If you do this then you will be able to sort your records by date using the sort routine in Datafile. You might wish to sort clients into Date of Birth order for example.

Sorting files

Select option "3" from the main menu. Assuming that you have more than one record on your file you can now sort them alphabetically or numerically.

The sort routine will first ask you for the name of the files by which you want to sort your records. For example, if you want to sort your file so that the records appear in alphabetical order of names then you might enter NAME.

If the field name that you have entered was a valid one then the message "SORTING" will appear on your screen. When sorting is complete you will be returned to the main menu. If you have entered the name of a field which does not exist then you will be asked to enter another. If you have forgotten the names you assigned to the fields of your record don't panic. Just press "ENTER" and you will be returned to the main menu. You can now select option "8" which will tell you the names that you gave (see print file detail).

Amending / deleting records

Select option "4" from the menu. You will be asked for the name of a field. Say you know that the record which you wish to amend is that of Mr West. This means that the name WEST will be in the NAME field of that record. You should thus enter NAME when asked for a field and WEST when asked for a value for that field.

If you enter a field name which you have not defined then you will be asked to try another. Just pressing "ENTER" at this point will return you to the menu. If the value of the field does not exist on the file then a message will be displayed to this effect. For example, if you had not entered a record for Mr West when entering data.

Once the record that you require has been found you will be given the opportunity to alter each field in turn. If you do not wish to amend a particular field then just press "ENTER" when prompted for a new value.

To delete a record select option "5" from the menu. As when amending records, you will be asked for the information that the program requires to find the record that you wish to delete. When the record has been found it will be removed from the file and you will be returned to the main menu.

Saving and loading

Once you have got some data on your file you may want to save the file to tape. To do this select option "6" from the menu. The file will now be saved under the name by which it

was defined above. If you followed the example your file will be saved as "CLIENT" DATA A\$().

When the file has been saved you will be prompted to rewind the tape and prepare for verification. You will be returned to the main menu when verification is completed. If verification fails, use "GO TO 1" to return to the menu and then try again.

If you wish to update files which you have already saved to tape then select option "7" from the menu. You will be asked for the name of the file. If you have forgotten it then just press "ENTER". The program will then load the first file that it comes to on tape.

When the program has loaded your file it will decode the first record to determine the format of your file and the names which you gave to its field. It will then return to the menu. You can find out the names of the fields etc by selecting option "8".

Print file detail

Select option "8" from the menu. The program will then print the names of each of the fields in the file and tell you the position that they occupy in each record.

For example if field INITS starts at 1 and ends at 6 then this tells you that INITS occupies the first 6 characters of each record, ie for record 2 inits would be A\$(2, 1 TO 6).

To print the whole file select option "9" from the menu. Each record on the file will be displayed in turn.

Warning!

If you BREAK out of the program for any reason use "GO TO 1" to return to the menu. Do not use "RUN" since this will result in the loss of any data held on the current file.

A list of the variables used by Datafile is given in REM statements at the start of the program. You must not use these variables in your own programs when you use Toolkit to manipulate data held on files created by Datafile.

Using Toolkit

Each of the routines in TOOLKIT is designed to make using Datafile files in your program easy. Each routine is fully documented in REM statements.

1. Get field value. Each record in a Datafile file is stored as an element of the array A\$. For example, the first record in the file will be A\$(2). You will remember from the field definition stage that each field within a record also has a number and a name. The field number enables Toolkit to find out the position of a field in each record. It might, for instance, be A\$(2, 1 TO 6) as for INITS in the example. This routine when supplied with a record number in RN and a field number in FN will fetch the value of that field in record number RN. The value is returned in Q\$ and trailing spaces are automatically removed.

2. Decoding dates. I have already explained the usefulness of storing dates in the American format. This routine will translate a date supplied in Q\$ from the American form to the British form.

3. Removing spaces. If you have given a field in a record a value with less characters than the field length then the field will contain spaces after your value. This routine removes the unwanted spaces from a field value supplied in Q\$ and returns the trimmed value in Q\$.

4. Read header. I explained above that the first record on a Datafile file contains information required by Toolkit to use the data in your file. When you use the LOAD routine this routine is automatically called to find out the format of your file.

5. Loading files. This routine will load a Datafile file and call the header reading routine. The name of the file should be in Q\$ on entry to the routine. If you don't know the name then let Q\$ = "".

6. Find field number. The name of the field required should be in Q\$ on entry to the routine. The routine will then find out the number of that field and return the result in FN. The value of FN allows you to get the start and end positions of that field from the numeric array F() which will have been filled by the header read routine. F(FN,1) holds the start position and F(FN,2) the end position. Thus, field 1 of record 1 extends from A\$(1,F(1,1)) to A\$(1,F(1,2)).

7. Finding a record number. This routine returns in RN the number of the record which has a value equal to that of Q\$ in the field designated by FN. You should define Q\$ and FN

before entry to the routine. The record number is returned by the routine in RN.

Letters: a sample application

If you followed the example that I have given you will now have a file called CLIENT. LETTERS will input this file from

tape and then write a letter to each client reminding them of the account that they have outstanding. Now you know why your own details should be entered first!

The listing of LETTERS should help you to develop your own applications. I hope that Datafile meets all your requirements.

FIGHTER PILOT

48K SPECTRUM

BY D.K. MARSHALL

A SPECTACULAR FLIGHT SIMULATION OF THE WORLD'S MOST EXCITING JET FIGHTER WITH STUNNING 3D COCKPIT VIEW AND THE MOST REALISTIC 3D AIR-TO-AIR COMBAT EVER SEEN ON THE SPECTRUM!

The SUPREME SIMULATION... it leaves the rest at the runway threshold!

£7.95

inc. VAT & p. & p.
Joystick Compatible
(Kempston, AGF, Sinclair
Interface 2, Protek etc.)*

OTHER AMAZING FEATURES

- * Landing and take off from 4 runways plus steering on the ground.
- * Fully Aerobatic Performance
- * Airfield attack by the enemy
- * Cross winds, Turbulence and landing in fog.
- * 4 Pilot ratings, 8 Beacons, ground features and map
- * Artificial horizon, radar and flight computer.
- * ILS, Flaps, U/C and system failures
- * 100% machine code with complete instructions and pilot notes.

"Definitely the best simulation for the Spectrum..."
- Crash Micro

TAXI
£5.50

Any Spectrum

Become a Taxi Driver and test your skills - but beware the Reckless Drivers! Fun for all the family

FOOTBALL
£7.95
48K Spectrum

League Analysis - Easy to use Pools Prediction. With 9 methods of team performance analysis - let your Spectrum guide you to your pools selection.

NIGHT GUNNER
£6.95
48K Spectrum

Joystick Compatible * The air battle where only aces survive - with enemy fighters attacking from all directions, guns blazing, explosive 3D ground attack sorties - and there's still the flight home.

Shoot the Target is a game of luck and perception. There is a 5×5 grid on which is placed a marker and you have ten goes in which,

to discover it's position. If you hit the marker then you will be told how many tries remain, the co-ordinates and asked if you

wish to play again. If you fail then you are told the correct position and offered another go.

Decision Maker reminds me

of conversations with my parents! A nice, humorous little listing which could keep a non-computist happy for hours!

Shoot and decide

**Two ZX80 programs from
Andrew Haslam to challenge and amuse.**

GAMES MACHINE

At last, a magazine that gets to the core of it.

As the proud owner of an Apple, you know that really helpful magazines don't grow on trees.

But now there's Orchard Computing. Orchard is a brand new quarterly put together specifically to suit the Apple user.

It brings you the very best in useful routines, business and games software. And not a word of it that isn't directly relevant to you.

So if you like an Apple a day, take Orchard quarterly.

It's just what the doctor ordered.

£10.00

The ZX81 soft selection

In which Nick Pearce casts a critical eye over some of the latest software releases.

3D Grand Prix — DK Tronics

Having recently spent a considerable amount of time on the Spectrum negotiating the various circuits of Psion's Chequered Flag, I wasn't expecting too much of this ZX81 program — no colour, sound and chunky graphics. I must admit, however, that I was favourably impressed by this simulation from DK Tronics.

The dashboard is displayed

on screen and shows gear, speed and rpm indicators and your fuel gauge. You have a perspective view of the track as from the driving seat of a Formula 1 racing car and see the other cars on the track as you pass them or are overtaken yourself.

Unlike Chequered Flag, cornering is no problem providing that your speed is not excessive. The car takes bends automatically, left and right steering puts you on the appropriate side of the track for overtaking. You do have control over the gears (there are six of them), throttle and brakes.

Weather effects, mechanical failures and pit stops all feature in this game with each race lasting five laps, unless you succumb to one of the numerous hazards faced by the Grand Prix driver. I found that it required careful concentration to avoid crashing into the back of slower cars ahead for at 180 mph there is not much time in which to react!

An excellent simulation.

3D Grand Prix costs £4.95 and is available from DK Tronics Ltd, Unit 6, Shire Hill Estate, Saffron Walden, Essex CB11 3AQ.

COSMIC GUERRILLA ZX-81 GAMES FROM QUICKSILVA

Cosmic Guerilla — Quicksilver

Cosmic Guerilla is a fast moving arcade-type game. Contrary to the note on the cassette insert card, there are no on-screen instructions but it is not difficult to play. Key 6 moves you left, 7 moves you right and 0 fires. The speed of play is selected from a choice of three — I preferred the fastest of the three, action is very smooth and responsive at that level.

The object of the game is to defend your city from marauding space guerillas — you shoot them down from your ship which moves along the base of the screen. As you knock out the raiders they leave their plunder littering the skies. As this loot is imperious to your missiles and remains in the sky, it becomes more difficult to shoot at the guerillas as the game progresses.

These guerillas are not just sitting ducks, they are programmed with some 'intelligence' and do not fly into

your missile tracks. They therefore can be quite difficult to destroy. I got rid of the first batch without too much trouble but the problem is that successive armies appear. A score card is kept and the game ends with the loss of all three of your lives.

Another good buy from Quicksilver.

Cosmic Guerilla costs £3.95 and is available from Quicksilver, Palmerston Park House, 13 Palmerston Road, Southampton SO1 1LL.

Games V (Family Games) — JRS

Games V contains two impressive games, Sleuth and Roulette, both for the 16K ZX81. Both of the programs incorporate a 'fast load' system. This effective technique means that LOADING time is cut from five minutes to about 60 seconds.

In Sleuth, one to six people can play at being private detectives. The winner is the player who correctly identifies the murderer guilty of the crime

committed at the infamous Roxy Club. The computer sets the scene and circumstances of the crime. There are fifteen suspects and a total of sixteen clues in form of questions which may be asked of the suspects. The problem is that each suspect will only answer certain questions and will also lie in certain circumstances.

Only one accusation is allowed per player and a pen and paper to keep a record of the suspect's response is essential. It takes a long time to sift through the evidence and then deduce the identity of the killer. I was absorbed for two hours and still got the answer wrong!

I would have liked the facility to print out the suspect list and the list of questions, that option was not included in the review copy. Each game is different and takes only a few seconds to set up. All in all, Sleuth is an absorbing, if frustrating, family game.

Roulette is also a game for up to six players, with the computer as banker. To start, each player is given 100 francs and enters his or her name. Up to ten stakes are permitted in each game and bets are placed utilising a very effective display of the roulette board. All the normal bets can be placed, from any individual number paying 35 to 1, to rouge, noir, pair, impair, man-que and passe paying even odds. The prompts are in French to create the right atmosphere. If your French is anything like mine you'll need the instruction sheet at hand for the first few games to give you the translations!

An impressive simulation — bon chance!

Games V costs £4.95 and is available from JRS Software, 19 Wayside Avenue, Worthing, Sussex BN13 3JN.

AXIS SOFTWARE

ZX 81 — for 16K

CLASSIC 3

Classic 3 — Axis Software

This cassette contains three rather routine games — Hangman, Codebreak and Pairs. They are all the sort of games that the new ZX81 owner might try to program himself but they are good versions and run well.

Hangman offers a total of 450 words and there are three levels of difficulty — increasing difficulty being represented by six, eight and ten letter words. The letters tried are displayed on the screen throughout each game.

Codebreak is a version of the popular game in which you have to try and decipher a secret number code, in this case chosen by your ZX81. The computer selects a four or five digit number made up of the numbers one to six. After each guess from the player the screen indicates how many numbers were absolutely correct and how many were correct but in the wrong place. A game to test your powers of logic.

In the well known game of Pairs the screen displays twen-

Software for your Sinclair

ty blocks identified by the letters A to T. The player chooses two letters and the numbers under those blocks are revealed — if they don't match then they are hidden again. The object is to find all the pairs in as few tries as possible — a good memory training exercise.

These three cerebral games from Axis Software on one cassette make Classic 3 a good buy.

Classic 3 is available from Axis (UK) Ltd, 71 Brookfield Avenue, Loughborough, Leics. LE11 3LN.

Tempest — Mikro-Gen

Tempest is a fast moving arcade-type game. The object is to survive for as long as possible against a variety of aliens. There are five different types of alien which attack your ship from left to right across the screen: some fire missiles and others lasers. The lasers of the Liner aliens are particularly difficult to avoid and cannot be shot down. You aim for a maximum number of points and have five lives.

Once you have successfully defended a sector on the left of the screen for a preset time, the aliens gradually die out and you start moving to the right. To complete the sector you must reach the right side of the screen avoiding the 'spikes'. If things get too difficult then you can destroy everything on screen with your 'superzapper' but you only have one per sector and although it saves your life, it doesn't score any points.

There are five levels of play and I found even the easiest level difficult; mainly because the Liners' lasers invariably destroy you once they start to

home in on your ship. However, the action in Tempest is fast and smooth and the game performs well. At £4.95 it is a reasonable buy.

Tempest is available from Mikro-Gen, 1 Devonshire Cottages, London Road, Bracknell RG12 2TQ.

Community Chest — Artic

This is a condensed version of the popular property game and contains thirteen sites, community chest/chance and jail. The rules are broadly comparable with the board game, but the site prices and fines are much higher. You have £2,500 to start but with the prices ranging from £750 for Old Kent Road to £9990 for Mayfair, it takes a good few circuits of the board passing GO or a lot of luck to become a man of property.

In Community Chest your opponent is the computer — it is also banker and dice thrower, makes all the moves and monitors progress. The board is displayed on screen throughout the game, a feature not included in some other ZX81 simulations which trade off the screen in favour of a larger site list.

If you cannot find a willing human opponent and wish to play against your ZX81 then this is a good version and well worth considering. It is not a full simulation but I like the way in which Artic display the board throughout the game.

Community Chest costs £4.95 and is available from Artic Computing Ltd, Main Street, Brandesburton, Driffield YO25 8RG.

Screen illustration from Classic 3.

Club corner

Bombay Microcomputer Club

Dear ZX Computing,
We have recently formed a microcomputer user's club in Bombay, meeting on every second and fourth Saturday night at 6.00pm. Anyone who owns a personal computer, whether it is a Spectrum, ZX81, TRS-80, Apple, Commodore or any other Indian or foreign model can join.

The club is very much a non-profit organisation with positive social aims — the main aim being to create a greater computer awareness. To this end we are organising lessons in BASIC and a 'Microcomputer Exposure' day.

In view of inadequate services available in India we would welcome help in any form from other clubs and organisations. Looking forward to receiving newsletters/club magazines/product news, I am, yours sincerely

Anis H Millwalla
Hon Secretary
Microcomputer Users Club
C/O Indian Register of Shipping
72 Maker Towers "F"
Cuffe Parade
Bombay 400 005
India

Microsoftware Club

Dear ZX Computing,
We have been prompted to write to you after reading a letter in Club Corner from Nathan Carney in Moseley. To the best of our knowledge, we are the only our Spectrum user group in and around Moseley and possibly even in Birmingham.

Microsoftware Club is open to Spectrum owners

throughout the UK. We communicate with each other via our bi-monthly magazine on cassette which costs £1.50 to members (£1.99) to non-members) or £7.50 for one years subscription (£10.00 to non-members). One thing that we all have in common is that we all own a Spectrum — an ideal means of communication.

MSWM readers contribute to the magazine by sending letters, programming tips, programs and so on. They may ask questions or give the answers to other readers' queries. The most important aspect of all this is that we can help each other across the miles and thereby learn about the Spectrum that much faster. All programs may be listed and there are plenty of REM statements for easy guidance. Spectrum owners may also be put in touch with other members (or readers) in their own area if they so wish.

Through the magazine we can really club together and become the only Spectrum Users Multi-Club offering all these things and more at little cost. Anyone interested in our services should send an sae for full details to the address below. Good luck with your magazine in 1984, it is by far the best!

Yours sincerely

T Storton
73 Alcester Road
Moseley
Birmingham 13

Aylesbury Computer Club

Dear ZX Computing,
With the large increase in the variety of home computers over the last year, the Aylesbury ZX Computer Club has decided to drop the ZX from its name in order to cater for all types of microcomputer.

As the main microcomputer club in the area, the Aylesbury group have found that despite the fact that it was primarily a Sinclair user group, users of micros other than the ZX series have been drawn to the club. With the initials ZX now dropped from its name, the club has formalised its interest in all makes of home computer.

The club will continue to hold weekly meetings at Quarrendon School (each Friday at 7.30 pm) and monthly meetings at the Mandeville Centre. Further information on the facilities offered by the club and its activities can be obtained from myself, on Aylesbury 630867.

Dr David Nowotnik
Secretary
Aylesbury Computer Club

Sussex ZX Computer Club?

Dear ZX Computing,
I would like to see if there is a club in my area and if so, would like some information about it. If there is no existing group then I would like to start my own ZX Computing Club and see if there are any 'like minded enthusiasts' that might like to join.

Yours sincerely

Daren Benfield
9 Smith Close
Southgate
Crawley
Sussex

Norwich Computer Club?

Dear ZX Computing,
I have been a reader of ZX Computing for four issues now and I have not seen any mention of a Norwich Computer Club. Is there a club in the Nor-

wich area? If not, I should be interested in starting one myself. Please contact me at the address below if you are interested. I own a 48K Spectrum

Yours sincerely

Gregory Norton
The Vicarage
Eleanor Road
Norwich NR1 2RE

Carlisle Micro Computer Club

Dear ZX Computing,
May I use the good offices of your magazine to publicise the information of the Carlisle Micro Computer Club.

We meet on Friday evenings from 7.30 to 10 pm at Currock Community Centre, and will be delighted to welcome any new members.

As secretary of the Club I can be contacted on Carlisle 23314.

Yours sincerely

D Scott

If you run, or are a member of a user club which caters for the Sinclair user, why not get your group on the map by writing to us at:

Club Corner,
ZX Computing,
1 Golden Square,
London W1R 3AB

All you have to do is to send us a letter with details of your club's activities (times of meetings, addresses of who to contact etc.) and we'll do the rest. If you publish a newsletter or club magazine, we'd very much like to see that too.

And if you don't see a club in your area, why not start one up by writing to ZX Computing and seeing if any like-minded enthusiasts wish to join you.

Lojix — Virgin Games

Written by Steve Webb for Virgin, Lojix is a very old game brought up to date for the computer. The game consists of a gridded square and various shapes that if put together correctly, will fit into the square. You first have to choose the shape you want to start with and then move a cursor across the grid — pressing a key will drop the shape into the grid. There is a facility to rotate your shape until it fits into the correct place in the square.

The screen display and key operation are fair enough and you get the usual biography of the programmer on the inlay. Virgin keep 50 pence for every tape sold in a special bank account and claim that if you can solve the puzzle and keep your sanity they will give you the entire contents of the account. If you do manage to crack the puzzle there is a section to fill in on the inlay beside the instructions of the game.

Basically though, Lojix is just a jigsaw puzzle and I would have thought that a company like Virgin would have come up with something a little more imaginative than this. If you are into puzzles like Mr Webb, you may find this enjoyable but if you prefer arcade-type games then I would not recommend it.

Lojix costs £5.95 and is available from Virgin Games, 61-63 Portobello Road, London W11.

ZX Draughts — CP Software

ZX Draughts should have been called 'Anthill' — it has more bugs in it than a termites nest! I hope this isn't their production model. I managed to load it with little trouble and a chess board appeared on the screen.

Moves are made by simple co-ordinates (a4-b5) as with a lot of chess games. This is where the trouble started, most of my legitimate moves were greeted with "move impossible". I fiddled about for ages and made a few moves and when I took one of the computer's pieces it took my piece off the board. The darned thing cheats as well!!!

CP Software is at 17 Oreland Lane, Prestwood, Great Missenden, Bucks.

Quicksoft

Clive Smith takes a look at a mixed bag of programs.

Wilfred the Hairy, Olaf the Hungry! — Microbyte

A strategy game for the 48K machines — very boring and full of bugs. I did manage to play part of the game until I hit the bugs.

The screen displays a crude map of the world and you, being Olaf, have to occupy as many continents as possible whilst your opponent, Wilf the computer, is trying to do the same. Your progress is mapped by a blue flag every time you make a move and, boy it's slow. Sorry Microbyte, I was not very impressed.

Microbyte can be found at 19 Worcester Close, Lichfield, Staffs.

Royal Birkdale — Hornby Software

As you can guess, Royal Birkdale is a golf game. This is one of a series of golf courses you can choose from with each one based on the real golfcourse with the same distances and bunkers. You have a choice of 1 or 2 players and after entering your handicap you then choose which hole you would like to play first.

The computer then goes on to draw the chosen hole from a birds eye view, graphically not very exciting. Under the hole is a scale telling you what sort of distance it is from your ball to the hole.

You have a full range of clubs to choose from, eight irons plus a sand wedge, five woods and a putter. Before you tee off you have to enter whether you want to use an iron or a wood, each club of course will give you different distances. Once you have chosen your weapon, it then asks you how hard you would like to hit the ball by feeding in a %. 100% will give a full power shot and 5% is a quick tap. You are then asked if you would like a straight shot or if you would like to hook or fade the ball and the direction in which you would like to hit the ball (it does help).

There is a 360 degree protractor on the screen to help you choose the correct angle, once this is entered the ball is struck and a tracer shows

where the ball travels. If you happen to end up in the heather an irate man jumps up and down, I think you must have hit him on the head!

If you are an all-action 'shoot 'em up' video game player then this is not for you. If you are a golf player and if the golf course is covered in snow or you have a broken leg then perhaps this may keep you amused.

Hornby Software is at 21 Pinford Hill, Leeds.

River Rescue — Thorn EMI

This is one of the most addictive games I've played in a long time. Written in machine code, it has nice, smooth, rolling graphics. It can be played by one or two players and each is given five boats.

The aim of the game is to drive a speed boat up a river dodging the crocs and islands or your boat will break up and sink. The boat is armed with a machine gun which shoots the crocs or logs that are in your way. At various stages along your route you have to land the boat alongside a jetty and rescue a little man. There's one man per jetty and once you have a boat load you have to sail upstream to the next jetty. The boat can be made to move either side to side or up and down the river. There are five keys to use, Q, A, O, P and O to fire the gun although it is also joystick compatible.

Just when you think you are doing well an aeroplane flies over and drops mines in your way, if you don't shoot them in time you are blown up. I have to confess that I have yet to rescue all the men. It looks so easy but it's not and it keeps me occupied for hours. Graphically it's not very exciting but it is produced well.

One thing I appreciated with this game was the speed in which a new game is set up, unlike some where you get the software company's name flashing on and off the screen and a two minute song to go with it.

The game has a scoring system and points can be gained by shooting the crocs or logs. Definitely worth a trip to your local stockist to get yourself a copy.

River Rescue is priced at £6.95 and is available from all leading software stockists.

Can you meet Laserwarp's infinite Challenge?

Be a real game lord – imagine the quest for the ultimate high score!

At last – a real challenge for the arcade ace: Laserwarp, the most exciting arcade-style game around, in full, high-res graphics. It's got everything – fight your way through the ramships, space mines, homing droids, hyperspace chickens, interstellar pogos, and more, till you challenge the Master. Can you beat him? Can anybody beat him? Comes complete with Hall of Fame, coded verifiable high score – send yours in and see if you can win the £100 Mikro-Gen are offering every month (full details in instructions)

High scorers names will be published in a Hall of Fame in the computer press – and they will be invited to join in a Battle of the Champions.

NB – If you have the earlier version of Laserwarp, Mikro-Gen will replace it with the new version – FREE!

THE FIRST IN DYNAMIC PACKAGES FROM PROCOM

WHAT IT IS

Whether you are a beginner or an experienced programmer it will make no difference with the DYNAMIC GRAPHICS package from Procom. You will be able to program professional looking graphics on your Spectrum. DYNAMIC GRAPHICS comes in two cassettes at the price you would normally pay for one. But do not let the low price put you off. DYNAMIC GRAPHICS is by far the most unique and much needed software aid on the market today.

TAPE 1

This is a character designer with a difference ★ Full screen animation of sprites ★ 27 functions including sprite handling 96 characters which can be saved on tape to use in your own programs ★ Easy methods of including character designs in your own basic programs ★ No knowledge of machine code needed ★ Screen saving ★ Sprites may be treated as super large characters (4x4). The list is endless. You will be able to design literally thousands of different characters from Pac Men to space men or space ships to battleships.

TAPE 2

This is the ultimate utility for composing hi-res graphics on your Spectrum. As well as essential hand draw cursor controls (or joystick) there are many advanced features, such as fast fill and rescale.

There are in all over 50 commands. A constantly updated status display.

Generated prompts are fully displayed. Now you can design screens as good as the software companies.

Competition

Have some fun and write a pun! Win a beautiful cabinet in this competition for all the family!

There comes a time when the family telly is being used just as much for the computer as for the broadcast programs. Kneeling in front of the coffee table with leads around your feet and Mum/Dad/brother/sister/son/daughter/wife/husband/dog/cat moaning about the program they're missing, you realise that the time has come to get a television set specially for the computer.

Once you have the set, your problem then becomes where to keep it! Continually setting it up and taking it apart, as well as being irritating, adds to the wear and tear on your equipment.

So, in our ceaseless fight against domestic disharmony,

this issue we are offering as a prize a beautiful computer cabinet from Marcol Cabinets which will keep all your equipment tidy and safe. These cabinets are solid but attractive pieces of furniture, 91.5cm wide, 42.5 cm deep and 82.5 cm high (36 by 16.75 by 32.5 inches). A sliding shelf locks in position and slides away after use and a storage shelf provides space for cassettes, books and other essential articles.

Inspiration

The idea of this competition came from I Heath of Merseyside, who suggests the following revamped titles to well known songs and films:

Software OVER the Spectrum	Judy Garland
BRIGHT Is	Art Garfunkel
INK O is ink O	Rolling Stones
You need AND s	Max Bygraves
The NEXT time: MOVE it: The 12th of PAUSE O	Cliff
A LISTful of D\$	a favourite of the golden SCREEN\$.

To enter, all we want is your version of a computer age song, film or television program sent on the back of a sealed envelope or postcard with your name and address.

As humour, especially puns, varies from person to person the winner will be the one which appeals most to the Editor (that's me). A surprise parcel is on its way to Mr I Heath as appreciation of his idea for this competition.

Marcol Cabinets are to be found at PO Box 69, High Street, Southampton SO9 7EQ.

The rules

- This competition is open to all UK and Northern Ireland readers of ZX Computing except employees of Argus Specialist Publications Ltd, their printers and distributors and employees of Marcol Cabinets. This restriction also applies to employee's families

and agents of the companies, or anyone else associated with the competition.

- As long as the correct coupon is used for each entry, there is no limit to the number of entries from each individual.

- All entries must be postmarked before May 31 1984. The first prize will be awarded to the first correct entry picked at random.

- The winner will be picked by the Editor of ZX Computing. No correspondence will be entered into with regard to the results, and it is a condition of entry that the Editor's decision is accepted as final.

- The winner will be notified by post and the results of the competition will be published in a future issue of ZX Computing.

Address your entries to:

ZX Computing, Write a Pun
1 Golden Square
London W1R 3AB.

Results

Many thanks for all the entries we received to the Wordsquare competition in the Dec/Jan issue of ZX Computing. We had literally thousands of entries and most of them were correct. The answer to the puzzle was 17 software titles, including that well known text and graphic adventure game, the Horbit!

Congratulations to Robert Stobie of Bolton, M Gell of Clacton-on-Sea, M Radley of St Andrews, Jeremy Howden of Worcester, B Hobson of Huddersfield and Stephen Moran of Carterton who were the first six correct entries picked from the hat. Each of the lucky winners will receive a unique ZX Computing and Visions Software Factory T-shirt and seven super Visions software packages for the ZX Spectrum.

Thank you to everyone who entered the competition — better luck next time!

THE INTERNATIONAL VIDEO GAME OF THE YEAR COMPETITION
HERALDS THE "NEW AGE" IN VIDEO/COMPUTER GAMES

\$175,000 TO BE WON

International
Video
Game
of the
Year

Create a brilliant, new video game and you could be on your way to becoming a millionaire. This fantastic competition, organised by I.R.P. (The International Register of Independent Computer Programmers Ltd) and the famous Mark McCormack International Management Group, offers programmers and inventors the opportunity of a life time. There are huge, immediate cash prizes and the on-going revenue of 10% of the sales of all games to distributors throughout the world, plus the chance to appear on an international TV show. Your skill and imagination could bring you fame and fortune!

\$100,000 FIRST PRIZE! **PLUS** **FIVE \$15,000 RUNNER-UP PRIZES!**

Devise a totally original new video game in one of these categories: SPORTS, SIMULATORS, ARCADE, STRATEGY, ADVENTURE/FANTASY or a special section which covers programmes that are not necessarily games but have outstanding Educational or Entertainment merit. We'll also be announcing a number of 'MERIT' awards which will be entitled to carry the message 'An International Video Game of the Year MERIT AWARD' on their retail packaging. It's a great challenge. And the rewards, both financially and in terms of prestige, are tremendous. This is the most exciting competition ever for creative computer and video enthusiasts.

YOU'RE A TV STAR TOO!

All six winning games and their inventors will be featured on an internationally distributed, spectacular TV special. That's going to make your name!

HOW TO ENTER

Just send in your game, or games, programmed on cassette for any popular home computer. Use the coupon, today, and we'll send you all the facts you need.

CLOSING DATE FOR ENTRIES IS
31st MAY 1984

To: IRP Limited, Pinewood
Film Studios, Iwer, Bucks,
England.

ZXC1

A NEW, IMPROVED ZX81 KEYBOARD AT THE SAME OLD PRICE. £9.95.

There's only one thing wrong with the ZX81. Its keyboard.

Or rather its lack of one.

Since it's flat your fingers don't feel as if there's any response to the pressure put on the keys.

ZX81 KEYS

FILESIXTY KEYS

In other words, you're not quite sure which keys you've pressed until the screen actually tells you.

Our new, improved push button keyboard changes all that.

It matches the ZX81 perfectly. And the keys give a real calculator-type feel.

To set it up all you have to do is peel off the adhesive backing and stick it on top of the ZX81 touchpad.

Because no tampering or soldering is involved the guarantee is not affected. And it will last for up to 3½ million operations.

Filesixty Ltd., 25 Chippenham Mews, London W9 2AN, England. Tel: 01-289 3059. Telex: 268 048 EXTLDN G 4087.

But our keyboard doesn't just come loaded with features. With it comes a separate overlay and a set of coloured stick-on labels to make game playing easier.

It's yours for the original price of £9.95.

Whichever way you look at it, we think you'll agree that it's a keyboard that's quite outstanding.

Orders to Filesixty Ltd., FREEPOST, London W9 2BR.
Cheques/PO made payable to Filesixty Ltd.
Please send me _____ (qty.) Keyboards at £9.95 each
(including VAT and P&P).

Maniac

**A fruit munching menace from
Suffolk programmer,
M Parrish.**

OK pardners, down here in Suffolk we have a problem with a weird little rat-like beastie who eats our fruit and is pretty fatal to touch. Our solution is simple, shoot the varmints! But, could you live here?

Well there's only one way to find out, type in this program and try for yourself. We give you four lives to start and you will lose one if you collide with a muncher or if a muncher scores 1000. You score 10 points for each muncher you destroy and 10 points for each fruit you shoot. On clearing a complete stage you are awarded a bonus of 60 points.

The muncher's task is much more difficult, at least in the early stages, so he gets 50 points for each fruit eaten, 50 point for getting past you and 100 points if he touches you.

Can you survive all four stages? Each is more difficult than the last and every 1000 you score will restart the sequence. To move your man use keys 6 and 7 for down and up and 0 to fire.

Program construction

Here follows a guide to the construction of Maniac Munchers.

- 4-48 GO SUB for graphics/GO TO intro and initialise variables.
- 49-881 Main loop.
- 882-900 Bitten! Lose a life, check for end of game.
- 901-915 Muncher gets past man.
- 969-1200 Graphics DATA.
- 1292-1294 Turns CAPS SHIFT on.
- 1290-1450 Intro, set variables and screen.
- 1499-1535 Resets variables and stage after scoring 1000.
- 1980-2114 Sets up four random fruits and updates screen.
- 2499-3600 Increase difficulty by reducing time to aim gun.
- 4199-4240 End game routine.
- 4885-5010 Shoot muncher routine.
- 8888-9030 Check for hit on fruit or muncher.

The Key to Spectrum Machine Code Success.

Picturesque's MACHINE CODE SYSTEM is used and recommended by professional software writers, yet the excellent documentation and the friendly, easy-to-use programs have been highly recommended for beginners.

You will only buy one Machine Code System, so buy the best, the one the professionals use.

NEW IMPROVED PROGRAMS — MICRODRIVE COMPATIBLE

ASSEMBLER

Completely self-contained with its own line editor, giving an easy-to-read 40 column tabulated listing. Auto line numbering, line renumbering and auto tabulation make this one of the fastest and easiest Assemblers to use. 5-character label names. Decimal, Hex or ASCII constants. SAVE/LOAD/VERIFY both the listing and Machine Code to cassette/MICRODRIVE/NETWORK.

Assemble from cassette or Microdrive into memory for very large programs. Customise to most Centronics printer Interfaces, or RS232 (with Interface 1) for 80 column printout. FAST ASSEMBLY — 1k of code in 7 seconds. Assembler Directives:— ORG, END, DEFB, DEFW, DEFB, EQU, DEFL. (Microdrive and Centronics facilities only operate with 48K machines.)

£8.50

INCL. VAT & P&P

Programs supplied on cassette with option to Save onto Microdrive (cartridge not supplied)

Existing owners can obtain the new programs by returning the cassette only to Picturesque, along with a cheque/PO for £1.50 per program (inc. VAT & P&P). New cassettes will be supplied by return of post.

Available from the "SPECTRUM" chain of stores, branches of John Menzies and all good computer shops, or by mail order by sending cheque/PO to:

PICTURESQUE, 6 Corkscrew Hill, West Wickham, Kent, BR4 9BB. Send SAE for details.

MONITOR

The ideal tool to help the beginner get started, yet it contains all the commands for the experienced programmer to run and de-bug machine code programs. Inspect and alter memory contents in Hex or ASCII. Breakpoints and full Register display. NOW WITH SINGLE STEPPING through RAM or ROM. Disassemble any part of memory, RAM or ROM. Dec-Hex-Dec number converter. Printer output to ZX

printer or via RS232 (with Interface 1) or customise to most Centronics printer Interfaces. General memory management commands include Hex dump, Insert, Delete, Fill and Move. Can reside in memory with the Assembler (48K machines only) to give a complete Machine Code programming system.

£7.50

INCL. VAT & P&P

It's easy
to complain about
an advertisement.
Once you know how.

One of the ways we keep a check on the advertising that appears in the press, on posters and in the cinema is by responding to consumers' complaints.

Any complaint sent to us is considered carefully and, if there's a case to answer, a full investigation is made.

If you think you've got good reason to complain about an advertisement, send off for a copy of our free leaflet.

It will tell you all you need to know to help us process your complaint as quickly as possible.

The Advertising Standards Authority. ✓
If an advertisement is wrong, we're here to put it right.

ORDER:
MACRO
CONSTRUCTION
& ANIMATION CASSETTE MCA

- **SPECIAL MACRO-PROGRAMMING TECHNIQUE** allow you to:
 - Call up any member of cast, including UFO, Helicopter and a host of 'Personnel' in a choice of nearly 30 'Calls'! Make each any colour - large ones can be in two colours!
 - They walk, run, climb and fly.
 - Build houses, churches etc. in a flash - & erase them.
 - Up to 15 mins. per 'film', or more if you're a good director.
 - Make characters 'speak' using annotations as in strips.
 - Full computer-prompting to save you making errors.
 - Instant playback, editing and deleting as you go along!
 - Most commands are a single key-stroke without 'enter'.
 - Compose your own tunes using the special three-octave chromatic music composer, which allows you to listen, correct and edit at each note... if you need to!
 - Store up to nine 99-note tunes to 'call-up' at any time in a story... computer gives each a number in memory.
 - Change tunes at any time, even whilst making a 'film'.
 - You can even add perspective to buildings, roads etc.
 - No special skills or computer knowledge needed... Just imagination!

All change

Undergo a character change with the aid of Paul Matthews of Avon.

There are many occasions when an alternative set of characters is a very useful option — professional titles and Gothic style lettering for home programmed adventure games to name but two!

This program will allow you to redefine the entire character set and User Defined Graphics and to look at any RAM or ROM character at eight times the normal size. A simple machine code routine is used from within the program to copy the ROM character set into RAM. Notice that the pro-

gram takes into account the memory size and makes appropriate RAMTOP changes with the CLEAR command.

Paul has made use of REM statements to explain the various sections of the program, you may leave these out of course, especially if working with 16K, but they are valuable when trying to debug any typing errors.

This is a good example of careful programming (although no doubt someone will find a way to crash it if they try) and Paul has taken great care to

make it as idiot proof as possible. Should you accidentally (or otherwise) break the program, it is quite safe to RUN it to restart and you will not lose your redefined characters. When you are using the program be careful not to press '1' from the main menu in error, as this will wipe out all your special characters.

One very useful feature is that when using these redefined characters, SCREEN\$ will recognise them. If you use some as UDGs then, unlike the normal character system,

SCREEN\$ can be used to detect collisions etc.

Variables used

r,q	Start of RAM character set.
i\$	INKEY\$ check.
q\$	Titles.
a\$	INPUT check.
x,y,z	Used in enlarging characters.
a	Value of input, etc.
w,c	Data for drawing/inputting characters.
f,b,g	FOR-NEXT variables.

The 1K Corral

1K wonders to amuse
and confuse!

We continue with our policy of providing something for everyone with this selection of 1K programs. Although memory limitation prevents sophisticated error trapping and user friendliness, these programs show what can be achieved in 1K using BASIC.

For the programmer with more RAM at his disposal they provide skeleton programs for development and they are good for the beginner as exercises, usually involving efficient, tight programming in order to RUN in 1K.

Teletext D Wishart

This is a routine which is intended to be incorporated into a larger program, but it will run on its own. It gives a printout similar to that of a teletext printer and can be used to animate instructions or information. The amount of memory used depends on the length of Z\$ but, for a rough guide, the printed program will just fit into 1K without the REM statements.

The principles it works on is quite simple. It prints out the characters of the string Z\$ one by one, unless the character is a

dollar sign, in which case the screen is SCROLLED twice, and a new line is started. When typing in your own Z\$, you must remember to finish each line with a dollar sign or the program will terminate with error code 5.

You can rename the string and change the character which ends the line. If performing the latter, you must change the 13 in line 20 to the code of the new character.

Unfortunately, after SCROLLING the screen it takes a long time to clear, so it is advisable to go into fast before executing a CLS. Note that after the word 'enhance' in line 5, there are two spaces.

```

1 REM TELETEXT
5 LET Z$="          TELETE
XT$$ THIS IS A ROUTINE WHICH GI
VES A$ PRINTOUT SIMILAR TO TEL
ETEXT.IT$CAN BE USED TO ENHANCE
THE LOOKS$ OF INSTRUCTIONS E.
T.C."
6 LET Z$=Z$+"$$          T
HE END$$"
10 SCROLL
15 FOR I=1 TO LEN Z$
20 IF CODE Z$(I)=13 THEN GOTO
50
25 PRINT Z$(I);
30 NEXT I
35 STOP
50 SCROLL
55 SCROLL
60 NEXT I
70 REM BY D. WISHART

```

Air strike Barry Curtis

Scramble, scramble, you are in the suicidal position of piloting your missile into the helicopters

(black squares). Using auto control keys 6 to go down and 7 to go up you have one minute in which to succeed. Good luck Biggles!

Homeward bound G Rigby

A very simple but irritatingly difficult game in which the object is to guide the multiplication sign (*) left and right as it travels up the screen so that it arrives home on the addition sign (+).

The "*" moves up the screen automatically and you use keys Z and M to guide it left and right. The "+" is positioned

randomly at the top of the screen and the "*" is positioned at the bottom and starts moving immediately.

If you manage to reach the "+" then a message is displayed and your score increased, to continue press any key. If you fail then your score is displayed and you will have to re-run the program for another game.

Fox and hounds David Glover

A two player game in which one player is the fox (O) and the other the hounds (*). The hounds start and moves are made by entering the position of the piece to be moved and the position to which you wish to move. This is entered as a four character input: eg 1A2B will move the piece on square 1A to square 2B. Each player gets one move only per turn, and moves should be on the white squares.

The aim of the game is to be the first player to reach the opposite side of the board. Jumping is not allowed and the fox may move back or forward whilst the hounds can only move forward. All the four

hounds must be at the edge of the board for them to win.

Tactical hint: If you are the hounds, try and keep in an unbroken line so forcing the fox to retreat until all your hounds can reach the side of the board. If you are the fox, try and force the hounds to leave a space where you can slip through.

Apple catcher A Murray

Apples are abundant this year! You don't have to pick them, just catch them as they fall from the trees. However, life is never that simple and every now and then a carelessly rolled barrel passes your way over which you will have to jump.

Key 1 moves you left and key A moves right, to jump press key

P. The best way to jump is to hold P down until the barrel passes; should you find yourself suspended in mid air press P once more to descend. You cannot catch apples while jumping.

You score one point for each apple caught and the game ends when you miss three apples or you are hit by a barrel. Who said "an apple a day..."

Graph it!

A valuable program to impress your teacher from Paul Bates of Walsall.

This program will plot graphs from given information in one of several styles and can be reused without reentering the data in each of the plotting modes. It is Menu driven and simplicity itself to use. Graph it! can be used to display results from any type of data gathering exercise.

The program itself occupies about 5K and is entirely in BASIC. The Menu has six options:

- 1) Enter data
- 2) Choose dot character
- 3) Choose plot type
- 4) Draw graph
- 5) Regression analysis
- 6) Quit program

OPTION 1 On selecting this option you will first be asked to enter the number of data pairs. The data pairs are then entered with the screen displaying the data pair to be entered next. After data entry you will be asked to give:

- 1) A graph title (Maximum 10 characters)
- 2) An X axis title
- 3) A Y axis title

You will then be asked for data to define the axes (this could have been done automatically using a bubble sort of data, but I prefer to define my own values to give a neat result). Enter X min, X max Y min, Y max as prompted. The screen

will then be cleared and you will be asked to define the X and Y tic mark intervals.

For example:

X data ranges from

1 to 7.6

Y data ranges from

0 to 0.5

Xmin = 0 Xmax = 8

X tic mark = 2

Y min = 0 Y max = 0.5

Y tic mark = 0.1

Beware of setting too small a value for tic mark interval, eg 0.5 for X axis - this would leave the X axis looking rather crowded. After data entry you will be offered a print out of the data pairs entered.

OPTION 2 Gives the choice of . * or + to portray the data points on the graph (see print out).

OPTION 3 Gives you the choice of a point only plot or having the points joined by straight lines (see print out).

OPTION 4 Draws the graph and can be used as many times as necessary after entering data (eg to change options 2 or 3).

(NOTE If options 2 and 3 are not set the default values give a point only print out, using a full stop to denote data position.)

You will now be asked if you want a copy after which you will return to the Menu.

OPTION 5 Produces a table giving linear regression equation. This gives the equation of a straight line which best fits the data points entered. (This works over all the data points entered.) The regression coefficient r indicates the goodness of fit.

$r=0$ data does not follow a

linear relationship
 $r=1$ perfectly fits equation determined

r values above 0.7 can be said to be a good indication of linear behaviour.

OPTION 6 Escapes from program giving a STOP report.

A few words . . .

Here is a breakdown of some of the more important lines in the program:

20-140	Sets up Menu
1000-1600	Enter data option
2000-2140	Character option
3000-3080	Plot option
4000-4040	Draws axes
4040-4320	Plots tic marks and numbers axes
4330-4420	Plots Y axis title vertically
4420-4520	Plots points
4700-4760	Routine to join points by straight lines
4800-4830	Asks if copy wanted
5000-5300	Linear regression

Variables

The main variables used are:

A	Menu option	A\$	Graph title
B	Number of data points	B\$	X axis title
C	X min	C\$	Y axis label
D	X max	D\$	Copy of data ?
E	Y min	E\$	Copy of graph ?
F	Y max		
G	Dot character value	X(I)	X value Data pair
H	Plot choice	Y(I)	Y value
O	Y values for plotting		
P	X values for plotting		
Y	X tic mark interval		
Z	Y tic mark interval

The Petron Trichord — a sound choice?

Colin Christmas has a close encounter of the noisy kind with this ZX81/Spectrum unit.

Petron Electronics have produced a music and sound peripheral for use with the ZX81 and the Spectrum. The Trichord can be bought with or without a built in amplifier and speaker and plugs straight into the edge connector or port at the rear of the computer. The basic unit will drive most audio amplifiers, but for playing music it's best if linked up with a stereo hi-fi amplifier. A short lead and connector plug are supplied for this purpose and a programming manual and software cassette also come as part of the package. Four programs are provided on the cassette: "S" for the Trichord's own programmed sound effects, "D" and "G" for producing and utilising User Sound Effects and on the other side of the tape, the Music Program, "M". A demonstration cassette with sound effects and music produced by the Trichord is also available.

If you use the unit with the ZX81, then a 16K RAM pack is necessary to play the music. In its own, you will only be able to use the pre-programmed sound effects in the Trichord's

memory. One initial criticism is that as the RAM pack plugs into another edge connector at the rear of the Trichord, the old nightmare of crashing programs caused by the 'Wobblies' is back with a vengeance. Users who don't spend time, money or ingenuity getting the three units firmly linked up and 'bolted down' will find themselves close to tears on more than one occasion in the early stages of getting to know the Trichord. As only the most enthusiastic and more seriously minded micro-user is likely to be interested in the Trichord, it can mean unnecessary frustration and time wasting.

The little black box

The pre-programmed PROM inside the Trichord contains the data for many sound effects.

The next step may be to add any of the sounds you have now heard to one of your own programs — no problems here either. Load "S" and without altering line 1 of the program, start to type in your program. Two lines (quite familiar by this time) together with the number of the effect you want (see manual) are inserted with line numbers every time a sound effect is required. Suddenly you enter a new dimension, sound!! The end of a simple game has a comic air of finality when accompanied with a rattle of machine gun fire. All that's needed to get the most out of this program is a little imagination — the time taken to expand programs to the new dimension is well spent.

Clever stuff

But even that's hardly getting one's money's worth and of course, the Trichord is designed to go a lot further. Programs "D" and "G" on the software cassette enables the imaginative, creative and simply curious user to devise and then use their own sound effects. "D" is used, with the manual, to explain how the Trichord's sounds are generated. It's fairly technical stuff and surely really intended for more advanced micro-users who are used to converting from binary code to decimal while brushing their teeth in the mornings!

However, unless you are one such a person and therefore already know how internal envelope generators work in units like the Trichord, then it is important to work through this section and this program — if only because you need to know how the 14 registers in the PSG affect the production of sounds if you're going to devise your own effects. That surely is one of the reasons for buying the Trichord in the first place.

Having produced sounds guaranteed to arouse the

Program "S" enables you to use one POKE instruction and one USR instruction (both clearly laid out in the manual) to select a huge variety of 'blips', 'bongs', 'pings', 'bangs', 'crashes', 'chugs', 'whistles', 'chatters', 'chitters', 'hisses', 'hoots', 'explosions' and so on! In fact, the POKE instruction selects the sound to be generated and the USR instruction triggers the sound. The manual gives a general guide to the range and variation possible over the 250 or so numbered sounds. It's both intriguing and entertaining just to sit down with this program and find out for oneself what is already contained in the 'little black box'. Thus far, no programming skills at all are needed — so far, so good. But there's more, a LOT more.

curiosity of the most woozy Arcade addict and the occupants of any passing UFOs, you will be ready to decide which of your 'created effects' you want to use and perhaps keep for posterity. Again, it's straightforward enough. The List function is used to display the data for each register. Write it down and when it's time to type in your own program, load "G" from the Software cassette. The computer asks for the necessary data and one by one, for each newly created sound, this data is entered. Follow the manual carefully and it's not too difficult. Finally, of course, the program, with those original and amazing sound effects (yours, naturally) can be saved on tape.

Music micro please!

The Music Program, "M" really is something else! With the Spectrum, 16K will give a maximum of 674 chords, while 48K will give 6,134 chords. The 16K ZX81 program gives a maximum of 833 chords and there is space for 833 lines of music.

The manual states that the user doesn't have to be able to read music to use the program. This is only true in the strictest, most literal sense. To get the most out of the Trichord Music Program or even get close to getting the most, you need a fair level of music theory and practice behind you. The first question the computer asks after loading is 'SHARPS?' followed by 'FLATS?'. These are necessary to establish which key signature the user wishes to use for a piece of music. As the program progresses it is also necessary to know something about octaves, also about minims, crotchets, quavers, semi-quavers, demi-semi-quavers (though not necessarily by these names) because, when copying music into the computer, longer notes have to be converted to the equivalent multiple of the shortest note in order to find out how many computer lines there are in each bar.

The speed at which the music is played can be varied from approximately 10 chords per second with no effective maximum chord length. On the Spectrum, music can actually

be played manually by setting the speed to 0. Chords of up to three notes can be played and when typing music in, these are entered one note to each of three channels. Each channel has a separate volume control which you set before the music is played — the computer asks for a number between 0 (silence) and 15 (the loudest). Variation in the stress or volume of individual notes can thus be achieved by changing the notes around between the three channels, if each channel is given a different volume.

Play it again, Sam

At various places in the program there are functions for editing, playback and for listing of music already entered. The Trichord will play back music from any line you choose and list from any line chosen. As with the sounds programs, provided you follow, check, recheck and familiarise yourself with the manual, it's not too difficult. (Assuming that is, that your knowledge of music is adequate.)

Once again, knowledge of the layout of written music is

necessary to be able to use the table of notes supplied in the manual not to mention some familiarity with the piano keyboard itself. Anyone who can play the piano but who only has a limited knowledge and experience of computers, will not find this music program easy to use. On the other hand, an experienced computer user with little or no formal knowledge of music will also find the program difficult to use. But, put the two ingredients together, Mr Computer and Mr Music, and the results are very impressive indeed. Go one step further and use professional studio recording equipment and the results, though sounding somewhat 'electronic' are nevertheless remarkable.

The music of course can be saved or printed out if linked to a printer or transferred to a music cassette. Overall, it's an impressive piece of equipment and one can envisage its use, for example in schools where children already have access to computers, showing great potential. However, it's a bit beyond more than a few of us who reckon we're 'quite musical' — perhaps for us it's back to the synthesisers...

MICRODOT SOFTWARE

30 Hazlemere Court, 26 Palace Road, London SW2 3NH
Tel: 01-674 7795

If you are using a ZX SPECTRUM with any full width printer, don't look further, as our

Relocatable Printline Utility £6.95 incl.
as reviewed in April/May ZX Computing, superior to most existing interface driver programs, it fits anywhere in memory. Consisting of two programs: one of which extends the LPRINT/LLIST commands (335 bytes) the other (343 bytes) copies the screen with a USR call, so all your existing programs can give you a professional print-out without any or very little modification.

Interfaces: COBRA, Morex, Kempston or COBRA, Morex, PSGIO — one on each side of the tape

If you are hard pressed for memory space, why not try our

Phantom Utility unique — coming soon £6.95 incl.
just like the one above, except for not being relocatable it fits into the Spectrum's printer-buffer, thus not using any program space at all. Comes complete with REM routine to copy the screen line by line or character by character anywhere on the paper with up to 16 times magnification. The interface is selected through the BASIC loader, which inserts the chosen routine into PHANTOM.

Interfaces: COBRA, Morex, Kempston, 8910 PSGIO.

Household Package £7.50 incl.
Side A is a Personal Cheque-book with 400 entries per file on tape, standing orders and ZX or 80 column print-out.
Side B is a shopping list program that gives a hard copy of intended purchases with price and total

Available through mail-order from us or through many good Computer and Software shops.

TRADE ENQUIRIES WELCOME

Wizard Software

NEW

BUGS £5.95

A 100% machine code, multiple screen, arcade game presented in high resolution graphics. Direct BUGS to mend the printed circuit board inside a computer. Watch out for the demon hardware bugs or they will fry you.

SPECTRUM CRICKET £5.45

Play either test match or limited over cricket. Select your teams from the 6 available or choose your own players. Enjoy all the features of a real game of cricket including three types of bowler delivering a variety of balls, batsmen running between the wickets, umpires making appropriate signals and many more. 72 field positions available. Score board continually updated during game. Good moving graphics.

TIME PORT 1 £6.95

The first in a series of five adult strategy adventure games. Direct your robot and acquire the object that the Keeper will ask for and bring it safely back to the Time Port.

EVICTOR £5.95

An original Arcade game with machine code for extra zip. Evict the aliens from their self re-generating and defended base. Features bombs, lasers, phasors and alien spacecraft. 5 skill levels.

FRUITA £5.45

A de-lux fruit machine featuring: 4 drums, Spin, Respin, Hold, Gamble, Collect, Nudge, Bounce, Blind, Cancel and Jackpot. New drums manufactured for each game.

All prices inclusive, mail order, cheque or postal orders to:

Wizard Software, Dept ZX, PO Box 23, Dunfermline, Fife, KY11 5RW.

Also available from software retailers world wide. Send large SAE (7in. x 5in.) for full program catalogue. Royalties paid for machine code Spectrum software.

RICHARD SHEPHERD SOFTWARE

A HOME BUDGETING & BANKING SYSTEM THAT REALLY MAKES YOUR 48K SPECTRUM WORK!

A professional style multi function Cash Controller program that can load and make an entry in just **90 SECONDS** ... thanks to its **ZX MICRODRIVE COMPATIBILITY**. If you're not ready to upgrade to Microdrive yet, this easy to use cassette program can handle up to 400 transactions with your Spectrum, almost filling the 48K memory of your computer.

BANK ACCOUNT

- Statements on demand from any date to date.
- Holds up to 400 transactions.
- Standing order facility.
- All transactions can be automatically coded to allocate up to 16 budget headings.
- Search facility for any single item by description or amount.

HOME BUDGETING

- 16 budget headings, e.g. Gas, Rates, Car, Tax - you can choose the headings
- Highlights under/over spending
- Full budget expenditure breakdown
- Budget "re-think" facility

LOAN/MORTGAGE CALCULATOR

All you ever wanted to know but didn't like to ask! Calculates:

- Interest rates
- Payback periods
- Capital sum
- Period of loan

REMEMBER THIS CASSETTE CAN ALSO BE USED WITH ZX MICRODRIVE

● PRINTOUT FACILITY USING ZX PRINTER

● FULL SECURITY WITH PERSONAL PASSWORD

● FULL SAVE PROGRAM ONTO CASSETTE OR MICRODRIVE

Available from good computer stores or direct by mail order... **at a price that won't upset the Bank Manager!**

FIRST FOR MICRODRIVE

3D Monster Chase — Romik Software

The idea of 3D Monster Chase is not to chase a monster, as the name rather implies, but to collect seven keys which are hidden in a three level maze. Unfortunately, there are complications: key one has to be found first, you then return to base. Once you have made it back, a bomb is triggered. If you do not find the bomb before it explodes, a life is lost. If the bomb is found in time, it must be taken back to the start. Here the sequence starts all over again but this time both keys one and two must be found, and in that order only.

Just to make it that bit more difficult, as if it needs it, at least one monster is always likely to be following you. Obviously, their sole aim in life is to end your life!

All this goes on in a 3D maze, and although the monsters themselves do get bigger as they approach, they are still flat. There are five levels of play, even on the lowest level I have yet to find the second key. At the top of the screen is a radar, showing your position and those of the monsters and you have a small supply of grenades which are used to destroy monsters at the correct range.

Verdict: The game is fast, though inherently jerky due to the nature of the maze. Finding the keys is no easy matter, let alone disposing of the bomb. Killing monsters is a matter of luck to start with as you are told that the grenades work at the correct range, but what is the correct range?! The chance of finishing the game, even on level one seem pretty small. Personally, I feel the game should have been made a little easier on level one so as to stop the novice giving up in despair. On the whole I felt that 3D Monster Maze is a

good game, but not particularly original.

Star Warriors — Visions

For some strange reason you are sitting in space with various coloured aliens moving towards you down the screen. The aim of this part of the game is to kill off all these alien ships without you yourself being hit by one of their swarms of bombs. Once this has been accomplished, your ship is placed at the top of the screen and you slowly start to drift

downwards through a meteor storm. Unfortunately, it is impossible to blow up the meteors, rather, it is necessary to avoid them.

Once you have guided your ship to the bottom of the screen, you find yourself on the outside of a small 2D maze. A little man (you presumably) jumps out of your ship, and he/she/it must be guided to the other side to where a crystal lies and then back out again. Progress is hindered by a sort of alien blob, which wishes to shoot you, though he is unharmable. In fact, this particular alien can make life very difficult, simply by sitting next to the entrance to the maze. As soon as you make it back to your ship the game restarts, but with different shaped and more ferocious alien beings.

Verdict: Action is reasonably fast and smooth but yet again the game is rather repetitive. The three different basic concepts do make the game more fun than the straight 'Space Invaders' type scenario from which the first stage is taken. The graphics themselves are quite good but nothing particularly exciting by today's standards. One asset it does possess above some of the flashier games is that it is addictive and fun to play and that counts for quite a lot.

Starclash — Micromega

Apparently, you have been deserted in space by your escort whilst test flying a new starship. Confronted by an Imperial Strike Force, the starship is incapable of out-running the enemy; all that can be done is to stand and fight until your almost inevitable destruction. The Imperial mothership is protected by four types of defence fighter. These must all be destroyed before it is possible to attack the mothership herself. To make it more difficult you are only supplied with three shields and a limited amount of laserbolt energy.

Verdict: Little can be said about Starclash, except that it is only one step up from Space Invaders. Undeniably, the game is addictive but hardly original. Action is too slow to start, and your laserbolts travel painfully slowly. Action is reasonably smooth, the graphics are quite good, and the sound is about as good as can be expected from the Spectrum, fairly poor.

Shark Attack — Romik Software

The idea of this game is to sur

round the octopus or octopi with a net so as to protect them from the sharks, whilst at the same time filling the screen with your net. Each time the required amount of the screen has been filled, the higher level will be selected. As might be expected, every so often one shark, usually one in particular, decides to eat his way through the netting, which does rather undermine the point of the game. Lives are lost from an initial quota of three, either by colliding with a shark or an octopus. This is as far as the game goes, there is nothing left to add, except that it is a success.

Verdict: Simple though it is, the game is fun and exciting and the uncluttered concept is ideal for any age. Unfortunately, its simplicity could be a disadvantage in as much as it may become boring rather rapidly.

Jumbly — DK'Tronics

Jumbly is based on the old fashioned slider puzzle game in which a sequence of numbers, letters or a picture must be rearranged correctly. In this rather advanced, computerised ver-

sion, a number of specially designed pictures are divided into twenty blocks. The computer jumbles the picture by removing a block and sliding the remaining nineteen about in a random manner. The odd block is then replaced once the puzzle has been completed. You then must rearrange the blocks into the correct order using keyboard or joystick.

A target number of moves for each picture is provided; If this target is exceeded, the picture will have to be attempted again. If on the other hand the target is either met or beaten, then the option of going on to the next puzzle is provided. Titles are given to each puzzle, the next one only being given on the completion of the present one. Fortunately, the first three titles are given beforehand, so giving you a headstart.

Some pictures jumble with wrap-around, ie a block can jump off the end of the puzzle board and reappear on the other side so adding another dimension to the game. Another added extra is the cleverly written tune which plays with each puzzle (and can of course be turned off). If and when you complete all the puzzles, there is an opportunity to win £150 by designing your own picture.

Verdict: The pictures are stunning, the graphics are excellent and the sound is fantastic. An old idea has been put to work very neatly and efficiently, whilst also expanding

upon it. The game is surprisingly addictive and often frustrating. The graphics are smooth and a pleasure to watch and the game is a delight from a player's point of view as well as the programmer's.

Computaword Vol 1 — Work Force

Computaword Vol 1 is a digest of ten crosswords to be solved with the aid of a number of rather advanced functions provided by the computer. To start with, a grid is drawn up and each clue can then be attempted. It may display all up or all down clues, or just one clue at the bottom of the screen.

As you battle your way through, the puzzles get harder and harder. The first couple are reasonably easy, whilst the latter ones are more of the Einstein variety. Each attempted solution may be checked without giving away the answer but each puzzle may be simply and easily saved to tape or copied to printer. The signal to give up will cause the display of grid plus all the answers.

Verdict: Computaword has

been reasonably well put together, utilizing a number of ways in which a computer can improve upon the basic crossword puzzle. Unfortunately, I feel rather more could have been done to put it out as a real challenger to the orthodox crossword puzzle. The program does its job in producing a computer crossword puzzle but a lot of potential has been left unharnessed. All things considered though, it is still worth thinking about.

Rapedes — Visions

Rapedes, or the Centipedes Revenge, is a copy of the age old arcade game, Centipedes. The scenario is as follows: a centipede is moving across the screen one side to the other getting closer to you all the time. The screen is scattered with mushroom type objects through which the centipede cannot go so it has to come a step closer to you instead. These mushrooms can be shot at and destroyed by your laser if required.

The aim of the game is to shoot every segment of the centipede. As a segment is destroyed, it turns into a mushroom whilst the other segments move towards you independently. Once a centipede is totally destroyed, a new and more vicious one will appear. The scenario is good, as seen by the success of the arcade version, but is it not rather outdated?

Verdict: The graphics are nice but every movement is so painfully slow. If and when a spider appears to wreak havoc, it is so slow and predictable that it is hardly worth worrying about. The explosions are little better and in some cases far worse. An old theme has been copied poorly with obvious programming short-cuts which highlight a less than brilliant game. The potential is there, as can be seen from Artic's version of Centipedes, a version which is fast, furious and very exciting. What a shame this one is not.

Spectrum

JUMBL

Wild West Hero — Timescape

A wild west hero (you, of course) must destroy gang after gang of extremely nasty bandits, whilst avoiding the glowing cacti or any other objects, and most importantly, stay alive!

At the start of the game, the hero is given three lives with which to carry out his task. Armed with an automatic, he must accumulate the highest score possible (surprise, surprise). For the first 20,000 points scored, a bonus life is awarded and for every 10,000 points after that. It is playable with one or two people (or aliens I suppose!) and is compatible with the Kempston joystick interface. There are only four controls — up, down, left, and right. Firing is done by moving in the desired direction.

Verdict: Wild West Hero is definitely fast and furious, at times rather too fast and not a game for the faint hearted! The graphics are fast and reasonably smooth. The only main criticism of the game itself is the lack of further screens or alterations. Apart from that, it is thoroughly enjoyable if not 100% original and very good value indeed. An excellent pub/party-type game.

Dimension Destructors — Artic

Dimension Destructors was written by the author of Tank Battle, a 3D Tanks game, which rather suffered from a severe lack of speed. These 3D techniques have been harnessed in a more adventurous project in Dimension Destructors. Apparently, you are in the lonely but peaceful reaches of the vast unexplored regions of outer space. Suddenly, a dot appears on the scanner screen of your flight craft. As you thrust forward the dot grows until it is a 3D space craft. With nowhere to run and some unexplained reason for believing that the occupant wishes to destroy you, you can either move to avoid it or attempt to hit it with your laser. These alien ships are reasonably tame — they only try to collide with you head-on. As time goes on, more vicious

aliens which actually fire at you join in the fight.

Dimension Destructors is compatible with Sinclair, Kempston and Fuller joysticks which is a definite bonus as a joystick greatly enhances the game. Why it is called Dimension Destructors I do not know — where are you destroying time or any other dimension? Nowhere in the instructions/story does it say why the aliens want to exterminate you: aliens do seem to get a very rough deal as far as computer games are concerned! If we are not careful someone will start an ALF, Alien Liberation Front and go around letting all those poor green monsters out of Space Invaders machines!

Verdict: The 3D graphics are some of the best I've seen (bar those of Rommels Revenge and QS's new Tank Battle game). They are fast and reasonably smooth and the whole game is definitely hectic. Though easy to play at the outset, it gets harder and harder as your ability increases. The concept of the game is simple and slightly similar to one or two of the Atari games but overall it is excellent. Dimension Destructors is highly addictive — a game which must be played "just one more time" and very good value.

UPGRADE YOUR ZX SPECTRUM NOW!

The "CHEETAH" 32K Rampack simply plugs into the user port at the rear of your computer and increases the memory instantly to 48K.

- Fully compatible with all accessories via rear edge connector.
- No need to open computer and invalidate guarantee.
- Why send your computer away and wait weeks for upgrade.
- Fully cased, tested and guaranteed.

ONLY **£39.95** inc. VAT and p&p

NOW MAKE YOUR SPECTRUM AND ZX81 TALK!

The CHEETAH "Sweet Talker" just plugs into the back of the computer using the existing power supply. Based on an allophone system you can easily program any word, sentence or phrase. Fully cased, tested, guaranteed and **compatible with all accessories via rear edge connector**. Complete with demonstration cassette and full instructions. No more lonely nights!

Simply incredible at **£29.75**

Please quote when ordering whether **Spectrum** or **ZX81** owner

Also available:

Martian

off

**A ZX81 game
that is just
out of this
world from
Andrew
Turner
in Hull.**

Although this game is nearly a full 16K and a lot of typing is needed, it will provide many hours of play due to the use of random factors.

You have been transported to Mars by the mysterious Professor and have to find and kill the ubiquitous dragon who inhabits the planet. Unfortunately, he is guarded by a fierce character who cannot be killed — your only chance is to collect six lots of gold (6000) with which to bribe him to let you past.

Once you have destroyed the dragon then you only have to find your way back to the entrance on level one to win. Easy? There are three levels, each consisting of 28 caves, ie a total of 84 locations. On level one you can find a magic ring that will make you invisible which is a great help, because you'll certainly need it!

Such old favourites as Balrogs, Goblins, Serpents and Trolls have to be dealt with, not forgetting the Martians

```

5 REM "HOM"

20 PRINT AT 10,0;"DO YOU WANT
THE STORY (Y OR N?)"

```

themselves. Contents of the caves on each level are rearranged by the inhabitants as you change level, a peculiar Martian trait caused by the ZX81's memory limitations.

When you start the game you will probably not be able to move immediately as the cave you have been transported to may contain something...

A note of warning

To help you play the game, full instructions are included in the listing but this listing was not printed on a Sinclair printer and graphic characters have been replace by a simple code. This consists of a number (no

number means only one character) which is the number of characters needed, followed by "g" to indicate graphics mode, and finally a letter or number which is the key of the character. The code "is" means inverse space, ie "■".

These codes are combined with a "+" as a separator, so the code "2is+2ga"

means two inverse spaces and two characters obtained by graphics mode shift/key A. Lower case messages are to be typed in inverse mode.

I hope you will find this easy to enter, I know it is less than simple, but I think that you will agree with me that it makes the rest of the program easier to read. Now play on...

Biorhythms

Under the weather? Check up on your biorhythms with Patrick Garfield of Bedford.

This program uses the high resolution plotting capabilities of the Spectrum to enable you to chart your biorhythms — the biological rhythms of life which are said to help to determine your day to day physical, emotional and intellectual performance. If you have a printer, you can produce a hard copy of your results and when this becomes known you are likely to find the

services of your Spectrum heavily in demand to produce printouts for friends, relations and colleagues who have previously shown little interest in microcomputing!

You may well be familiar with the basic theory of biorhythms but a little background data would probably not go amiss. Around the turn of the century a German doctor, Wilhelm Fleiss

and an Austrian psychologist, Professor Herman Swoboda, working independently, discovered that certain physical and emotional problems which they observed in their patients seemed to come and go according to a regular pattern. The variation in physical symptoms was found to follow a 23 day cycle whilst the emotional cycle spanned 28 days. After trying out theories on large numbers of patients they became convinced that man's physical and emotional potential varies regularly day by day according to fixed natural cycles which commence at the time of birth.

Ups and downs

In the 1920s their theories were taken up by Dr Alfred Telscher, working with students at Innsbruck. He examined their intellectual performance over a period of time and when he collated his results he found that the declines and improvements in each student's scores followed a predictable pattern not of 23 or 28 but of 33 days. Shortly after their discovery these natural cycles were put to use both in Switzerland and in Japan to help in devising accident

prevention programmes for which considerable success has been claimed. Despite this widespread public interest in their use, biorhythms were not really seen until the 1970s when further scientific investigation confirmed their existence and tables to assist in their calculation became available.

The procedure for computation is not really a difficult one. If we accept that fixed patterns of potential are set up at birth which continue throughout life, we should be able to work out a man's physical, emotional and intellectual potential for any given day thereafter. All we need to do is to find out how many days have passed since the day of birth and then use a little fairly simple mathematics to ascertain his current position in each of the cycles. This process forms the basis of the Biorhythms program.

Choose a number

Having coped with the arithmetic involved, the program allows you to present the biorhythm information in one of three ways. Options 1 and 2 produce high resolution graphs

highs and lows				
date	int	emot	phys	sig
4 -3-83	81	97	73	3
5 -3-83	90	90	88	6
6 -3-83	97	78	97	5
7 -3-83	99	62	99	5
18-3-83	-46	-98	-100	-2
19-3-83	-62	-91	-98	-3
20-3-83	-76	-79	-89	-2
20-7-83	86	97	73	4
21-7-83	75	100	88	5
22-7-83	61	97	97	4
1 -8-83	-95	-79	-82	-3
2 -8-83	-99	-91	-95	-8
3 -8-83	-100	-98	-100	-10
4 -8-83	-95	-100	-95	-9
5 -8-83	-91	-95	-89	-7
6 -8-83	-82	-91	-74	-2
15-8-83	69	78	99	20
16-8-83	81	90	94	5
17-8-83	90	97	81	5
18-8-83	97	100	63	4

Table 3

select option

- 1) intellectual emotional and physical cycles shown on separate graphs
- 2) all cycles shown together on one graph
- 3) a list of high and low points for a twelve month period

Table 4

of your biorhythms for any month of any year you nominate, with the option to obtain a hard copy if required. Option 2 (see Table 1) displays the intellectual, emotional and physical cycles together on one graph, allowing immediate comparison whereas Option 1, (see Table 2) presents a separate graph for each of the cycles making it easier to study in detail

the particular cycle in which you may be interested.

Option 3 is a fascinating, if slow moving, routine which checks your biorhythms for a whole year from the chosen date and prints out a list of those dates when all three cycles are high at the same time or when they all hit a low-point together. You will see from Table 3 that the display shows the date,

followed by an indication of the height of each of the cycles on that day (where 100 is the maximum possible and -100 the minimum). The final column indicates the level of significance of each particular date. For example, a significance of 10 means that all the cycles are peaking more or less together and emotional, physical and intellectual energy available should be at a maximum (a good day for climbing Everest!) A value of 2 would indicate that all the cycles are on the high side but much less emphatic. A score of -10 shows that all the cycles are hitting rock bottom together (you might be well advised to stay in bed!)

be prompted to enter your date of birth starting with the day of the month, then the number of the month, then the year. Next you will be asked to enter the month to be considered followed by the year. Options 1 and 2 begin to draw graphs on the screen, while Option 3 will start to print out its list. In this case, as it can sometimes take it a couple of minutes to wade through a whole year's calculations, the Spectrum kindly displays a little message at the end of the list to tell you which month it is thinking about so that you will know that it is alive and can follow its progress through the year. All three options offer the choice of entering "p" if you wish to dump to the printer, or just pressing ENTER if you don't.

Typing and loading

When you have typed up the program you should save it by entering GOTO 9999 unless you have a favourite save routine of your own. On loading, the program self-runs and offers the three options outlined above (see Table 4). When you have entered your selection, you will

see from Table 5 that the structure of the program is fairly straightforward, however, it seems to be amazingly difficult to get a computer to understand when it has to count 29 days for February with the result that some of the program lines get a bit complex.

program structure

- 100 subroutine to draw graph axes
- 300 subroutine used in calculating number of days since date of birth
- 400} subroutines used in adding
- 500} titles to graphs
- 1000 introductory routine
- 2000 option 2 routine
- 3000 option 1 routine
- 4000 option 3 routine

DENIS THROUGH THE DRINKING GLASS

Why did Denis Thatcher visit the Pope wearing a truss and a parachute and carrying a lawn mower?
What use is the cherry blossom?
Who is that strange tramp in the woods?

Only you can discover, but first you must deal with Ken Livingstone, Norman Tebbit and lots of other characters in this zany political adventure.

Written in humorous verse. 100% machine code — using the Quill from Gilsoft.
Losing is often funnier than succeeding — don't play it, play with it. — 48K Spectrum £5.50 incl. p&p.

ARCHIMEDES' MAGIC SCREW

Probably the most complex logic problem you will ever play. 48K Spectrum £5.50 incl. P&P.

Fresh from inventing the camel-driven date stoner, Archimedes is up to his neck in hot water again. Help him make new discoveries — help him discover the secret of the universe — help him find the soap.

Masterfile

YES - Microdrive compatible!

NEW!
with MYRMIDONS
Micro-Print 42/51
up to 51 columns!

Spectrum 48K

Acclaimed as the definitive filing system for the 48K Spectrum — MASTERFILE'S machine coded flexibility gives you 32K (max) per file — 26 fields per record — up to 128 characters per field — multiple level searches for numeric or character comparisons — data presentation in any one of 36 user-defined displays which may be sequenced by any field — USER-BASIC for tailored processing. "... the most comprehensive of the data-bases ..."

Sinclair User June 1983

With example file and detailed manual £15.00

Drawmaster

Spectrum 48K

DRAWMASTER is the ultimate DRAW AND PAINT utility for the Spectrum — compose your own HI-RES pictures with 8 direction 2 speed hand draw keys — fast fill — enlarge/reduce facility for all or part of the screen plus all the Spectrum colours and attributes — over 50 commands in all.

With detailed instructions £6.95

DLAN DISPLAY LANGUAGE

Spectrum 16/48K

DLAN ('dee-lan') DISPLAY LANGUAGE is a powerful machine coded interpreter for generating DYNAMIC TEXTUAL DISPLAYS for advertising and education — all commands are single letter or symbol — with 4-way scroll of 11 type-faces through user-defined windows.

With detailed manual £7.95

All programs mailed 1st class by return.
Prices include VAT and postage within Europe.

*"Run more than
ten tasks on a
ZX81-FORTH ROM?"*

Sure! More than 10 tasks simultaneously and, in some cases, up to 300 times faster! That's what replacing the basic ROM with the new FORTH does for the ZX81 — and more!

The brains behind the breakthrough belong to David Husband, and he's building Skywave Software on the strength of it. Already orders are flooding in and it's easy to see why.

The ZX81-FORTH ROM gives you a totally new system. In addition to multi-tasking and split screen window capability, you can also edit a program while three or four others are executing, schedule tasks to run from 50 times a second to once a year, and with a further modification switch between FORTH and BASIC whenever you like.

The ZX81-FORTH ROM gives you a normal keyboard with a 64 character buffer and repeat, it supports the 16k, 32k, 64k RAM packs, it is fig-FORTH compatible and it supports the ZX printer.

The price, too, is almost unbelievable. As a "fit it yourself Eprom", complete with manual, it's just £25+VAT.

Add £2 p+p UK (£5 Europe, £10 outside Europe) and send your order to the address below.

Is this a Quantum Leap?

ZX Computing was at the QL launch in January and a very enlightening occasion it was too. Simon Rockman has taken a quick look at the latest machine to be unveiled by Sinclair.

As Sir Clive pointed out, Sinclair Research has a larger share of its homemarket than any other manufacturer in the world and that market has the greatest number of home computers per capita. This is an excellent base from which to be ambitious, and the QL certainly is that. Based on one of the most powerful CUP (Central Processing Unit) chips around, the name Quantum Leap may not be modest but it is certainly justified.

Like all Sinclair machines, the QL is small — 47 by 14 cm and 5 cm deep (19" by 6" by 2") and light, just over 1 kg (3lbs). It has a proper, full 65 key QWERTY keyboard with a good feel and the L shaped ENTER key is much larger than the others. For the first time Sinclair have done away with the single key entry system. To the left of the main keyboard are 5 function keys and to the right are two of the new QL microdrives.

Currently these are the only available way of storing data — Sinclair argue that a cassette interface is out of place on a machine of this power.

However, the tape cartridges are expensive and will bump up the price of games. A prototype hard disc has been developed but is a long way from being ready for production and will certainly be expensive. The new microdrives are a development of the ZX version and although they take the same cartridges, they are not compatible with the Spectrum. QL microdrives are supposed to be more reliable, guaranteeing 100K as opposed to the 85K from ZX microdrives.

This improvement has been achieved at the expense of speed and by using an improved design involving new, custom chips. Up to six extra microdrives can be added but even this 800K of storage is a bit feeble for a machine which will be expandable to 640K when the promised 1/2 Mb rampack becomes available. The other option open to software houses is to use cartridge ROMs, which although they look the same, are also not ZX compatible. On a large scale, these may be cheaper to produce but the initial cost is much higher and they only hold 32K.

Initially the QL looks as though it will be VERY fast: it has a clock speed of 7 1/2 Mhz and 32 bit internal registers. The 68008 only has an 8 bit data bus, which although slower

because it has to do two accesses for each operation, allows the cost of the other chips to be kept down. This is part of the secret of the QLs low price. The 68008 has an extremely powerful instruction set including multiplication, division and string handling. It can also detect some errors itself rather than crashing.

At the launch it was said that as yet no games had been written for the QL but when people get down to it there should be some very spectacular games produced. The graphics resolution is 512 by 256 with 4 colours or 256 by 256 with 8 colours: the manual points out that this resolution allows colours to be mixed and with the stipple effect and flashing option you can have quite a variety.

The machine itself is stunning value but given that it comes with exceptionally good software, comprising a wordprocessor (QL Quill),

database (QL Archive), spreadsheet (QL Abacus) and graphics package (QL Easel). These alone would cost at least £400 as a set so they go to make the QL a positive bargain as well as practical.

At the time of writing (late January) we have not yet had a machine for review, indeed as far as we know, the BASIC (a very powerful implementation called Super BASIC) is not yet finished. So we have no means of coming to a totally accurate conclusion. But with a 68008 plus a second 8049 processor to handle sound and various housekeeping jobs it should be good. If the flat screen TVs are anything to go by, Sinclair are getting better at keeping delivery promises but a letter dated 13th February stated that delivery could be delayed until the end of April so they're still far from punctual. I've ordered two, one at the start of the launch. Does that make me the first individual to order one? Roll on delivery.

More software from Sinclair

Two interesting packages have recently arrived from the Sinclair stable, called "Beyond Basic" and "Musicmaster" both written by Incentive Software Ltd. Both programs were packaged in an eye-catching box with a slim instruction booklet.

Beyond Basic is designed to teach and explain the workings of your micro and simple machine code programming. The manual is brief and is obviously intended to be that way to encourage the user to work through the program.

One fascinating feature is

the experimental stage which lets you write your own Z80 assembler programs and then displays the effects on screen.

The concepts are simple and, as the manual says, the aim of the program is to make learning easy. I let an associate try it out in a school and he said that it was an excellent introduction to the subject for his computer studies class.

Musicmaster also has a piano key and operating key overlay for the keyboard. The program is designed to enable you to create your own tunes, but gives you two options:

CREATE A TUNE

a b c d e f g A B C D E F G

Next: Quaver

For next note, press: R rest
a-g, A-G for required note
↑ longer note; ↓ shorter note
S sharp; L flat; N natural
X delete LAST note; K end tune
P print screen;

In Brief

● Picturesque who sell the widely acclaimed Spectrum Editor/Assembler and Monitor, have re-written both programs and they now contain commands making full use of the microdrives, network and RS232 facilities.

The new version will work with both tape and Microdrive systems and the price remains the same, £8.50 for the Assembler and £7.50 for the Monitor.

If you already own these programs and want to upgrade to the new versions, then Picturesque will replace them for £1.50 each if you send the earlier versions back to 6 Corscrew Hill, West Wickham, Kent BR4 9BB.

● Elephant Software, well known for their range of mind-stretching puzzle and strategy programs, have ventured into the world of arcade style graphics. However, their new program, 'Kosmik Pirate' is predominantly a strategic enactment game.

With your on-board computer flushing out space craft in the outer orbits of earth, you try to wreak havoc among the other space travellers. Many and varied are your problems, including a mutinous alien crew.

Kosmik Pirate can be trapped at 41 Haymill Road, Burnham, Berks SL1 6NE for £5.65.

● Moon Buggy, Sci File and 1994 (Ten Years After) are the latest Spectrum offerings from Visions, a company which has gained a large following in a short time.

Sci-File is an interesting looking program for the serious programmer and is described by Visions as a program generator that will teach you how to program and then help you apply it to any project you wish — from home computing to meal planning.

At £24.95 for Sci-file you've got to be serious!

● Hello and welcome to W D Software who have produced their first offering, 'Tradewind' for the 48K Spectrum. This is described as a graphic adventure trading game and is available from Hilltop, St Mary, Jersey, Channel Islands for £5.00.

Although a new company, the writer, owner/proprietor, Mr C C Wilton-Davies has already marketed a program through Workforce called 'Do Not Pass Go'.

● Hot on the heels of Vampire Village and Space Island, Terminal Software have released 'City', another in their series which they describe as "exciting real time adventures".

● Shakin' Stevens' latest cassette LP, "The Bop Won't Stop" contains a Spectrum program at the end. Despite the publicity, I wouldn't recommend buying it just for the game — a variation of the old "Dodge 'em" game of which many mags (including ZXC) have published versions.

True, the game is in m/c and at the hardest level is impossibly fast, but just consider it a bonus if you are already a Shakey fan. (Modesty forbids me to mention that I used to know Shakey in the "Sunsets" days!)

either directly from the simulated keyboard or by entering the notes by name.

The music thus created can then be heard, altered, added to or saved. Saved music can be reloaded for further modification or for listening to.

This is a very comprehensive package which has all the features a budding musician could want. I am interested in the musical side of the Spectrum and up to now have found that the major problems with the music programs on the market were that they replayed the music too slowly,

editing was virtually impossible and a stave printout was not feasible.

Well, Musicmaster has solved ALL these problems and I admit to being very impressed. This probably pushes the musical side of the machine as far as it will go without recourse to extra hardware.

My only complaint is that some of the operating procedures could have been better explained with more detail given in the manual. The tutorial section is well written and very useful.

Building on success

It seems that Sir Clive isn't just concerned with making successful computers, even his buildings are winning awards these days! Sinclair's new £750,000 computer centre in Cambridge has recently been awarded a major commendation from the Business and Industry Panel for Environmental Award 1984.

The centre was purpose-planned for Sinclair and combines Cambridge traditions with innovations in architectural design, interior furnishing and environmental control systems. As can be seen, traditional brickwork is combined with stainless steel and glass to give the centre a very modern look. The yard, bet-

ween the building and the outhouses, has been transformed into an enclosed atrium.

One of the most interesting features of the building is the integrated control system which is based on an original well. This, together with a second borehole, supplies water at a constant 12°C all year round. Supported by a solar energy facility in the central court, the whole microprocessor controlled system automatically selects the most effective and energy efficient heating method, switching between electric heat machine/thermal store and gas boiler. This system also controls all lighting.

Alchemist drives you Stonkers!

Releases from Imagine are events worth noting and two eye-catching packages arrived recently in the ZX office. Both are for the 48K Spectrum and are priced at £5.50. I ran both programs through my machine briefly and that was enough to see that they are both superb

games which will need a lot of playing before being mastered.

Stonkers is a war strategy game which uses graphics and an element of arcade action. It is probably the closest implementation so far on the traditional wargames theme. Written by John Gibson

(ZZOOM and Molar Maul) the scene is a map of a coastline with two opposing forces of equal strength on either side of a river mouth.

Deployment of your forces amidst mountains, plains and marshland in an effort to capture the enemy (the computer) port and HQ while defending your own, is a complex task with thousands of variations. Not a five minute zap game but one which I found fascinating and hard to tear myself away from to write this item!

Alchemist is Imagine's version of an arcade adventure game. Many companies have attempted this with varying degrees of success: The Hobbit was a superb text game with graphic pictures, Valhalla animated the graphics, Halls of the Things and Lunar Jetman were arcade games with a quest. The first class graphics make this an outstanding game and, remembering that I only had time for a quick look, the theme and locations appear involved enough to ensure a lot of playing.

The plot puts you in control of the alchemist who has to search for four pieces of a hidden scroll which will unlock his powers to slay his enemy, the warlock. The Alchemist has the power to transform himself into an eagle and fly — impressive stuff from Ian Weatherburn (Zip Zap).

I will get our regular reviewer to look at these in more detail but meanwhile check them out at your nearest stockist!

In Brief

● Microsphere have sent us their latest game, 'Wheelie' to review. Selling at £5.95, it is a drive-your-bike-avoiding-and-jumping-over-hazards type game.

What makes it special is the impressive motorcycle graphics, especially the variety of crash sequences. My family loved this one and it is this month's Editor's family favourite.

● Two new programs have arrived from Incentive Software: 'Mountains of Ket' is the first in a three part series of traditional text adventure games. I wandered round the opening scenes but met my demise soon after, another one for adventure fans to check out.

The other is 1984, fancy being Mrs Thatcher? (I'm sure there's a joke in there somewhere!) This simulation game gives you the chance to rule the country, a sophisticated version of the old 'Kingdoms' game. Both games cost £5.50 from 54 London Street, Reading RG1 4SQ.

● Probably the most unusual program to arrive is 'Diabetes', the first in a series for the Spectrum entitled 'The Positive Health Programs' from Dunitz software.

Intended to help diabetics understand all about the subject and how to keep it under control, one side is for insulin users and the other side for those who are not.

Using graphics and a question-and-answer technique, this is a really helpful program which could have a use in schools for health education.

● Superleague is a program released by Cross Software of 37 Langford Crescent, Barnet, Herts EN4 9EH for £6.50.

The company claims that it is the most sophisticated simulation of its type, containing a full 22 team league and 42 match season . . .

● Fawkes Computing is another new company which we welcome to the fold. Their first release is Gamestape 1 for the 16K ZX81 and contains four games for £4.95. I have sent this tape on to our reviewer for a proper assessment in the next issue.

Booked!

Puffin publishing company have launched an interesting series of books accompanied by tapes with Spectrum programs. The programs complement the science fiction stories which are of the fast-action adventure type. Three books/tapes form a series called 'The Korth Trilogy' written by PK McBride, another ex-teacher seduced by the lure of the micro.

Involvement is the name of the game as you journey beyond the outer limits to join the members of Interplanetary Patrol in their fierce and ingenious battle against the mighty Korth empire. Each pack contains an illustrated book and cassette with three individual programs apiece.

The titles are 'Escape from Arkaron', 'Besieged' and 'Into the Empire' and are reasonably priced at £4.95 each. 'The Warlock of Firetop Mountain' is the fourth title, a number

one children's bestseller which has already sold a quarter of a million copies. This book was a good attempt to emulate the cult role-playing game of Dungeons and Dragons where

the reader turns to different pages depending on a choice of actions he can make.

The tape admirably complements the book, being a variation on the program voted by James Walsh as his favourite 1983 game, Halls of the Things by Crystal Computing. The game involves negotiating a maze in real time,

finding the hidden keys and defeating the multitude of fiendish monsters.

This is sold as a book/tape pack for £6.95 or as a tape only for £5.50. I am wholeheartedly in favour of encouraging the art of reading and recommend you look these packs out and see for yourselves!

In Brief

● ZX81 owners are also remembered by Software Farm, Freepost (BS3658)A, Bristol BS8 2YY who have produced a hi-res graphics game to run on the standard 16K ZX81, no hardware needed.

With a screen resolution the same as that of the Spectrum, Forty Niner is a challenging 'Miner' type game and costs £4.95.

● A set of computer related mystery adventure story books have been marketed by Armada. This is an unusual venture which features two boys (wot no girls!) who solve mysteries with the aid of a computer.

The gimmick is that programs are given which the reader can enter on his own machine (they are compatible with most popular computers) to solve it himself.

At £1.25 each this could be a useful bait with which teachers can encourage reluctant readers in their thankless battle against illiteracy. The name? 'The Bytes Brothers', what else!

● Another well established name, Quicksilver, recently launched a new range of games. Four of these are for the Spectrum and include the titles, Dragonsbane, Fred, Lazerzone and in complete contrast, The Snowman, based on episodes from Raymond Briggs' best-selling book. (I wonder what the chances are of ever seeing Fungus the Bogeyman on our television screens?)

First of a series?

As one company collapses, another rises. Soft Shop, who have opened their first shop at 55 St Peters Court, Chalfont St Peter in Buckinghamshire, are rising.

The shop will stock in excess of 1,000 popular computer programs for the major computers, together with books, blank data tapes, leads, joysticks and a host of other accessories. It will also provide opportunity for shoppers to get 'hands on' experience.

Stuart Kitchie, the managing director, said "there is a desperate need for specialisation of this kind, computer hardware outlets do not have the experience of fast moving consumer goods".

But why Chalfont St Peter? "We chose it as a launch pad because our research shows a

high percentage of home computer owners in the surrounding areas. People are prepared to travel quite some distance to get what they want."

Stuart has a lot of experience in retailing and actually encourages customers to try out programs before buying. His staff for this (and all other branches to be opened) will be chosen from the locality in which the shop is set and they will be computer enthusiasts who will be trained in a very special way to meet the need of a Soft Shop.

We look forward with interest to finding out the locality of the next shop in this chain. Will it become a chain store rival to Marks & Spencer?

A twosome from Hewson

Hewson Consultants have not forgotten that many Spectrum owners are using 16K and their latest releases are Nightflight II and 3D Seiddab Attack (I wonder if the fact that Seiddab spelt backwards is Baddies has any significance!).

In my usual curious way I tried both games and, as is to be expected from a company with the experience and reputation of Hewson, was impressed with both of them. (Believe it or not, I do actually dislike some games, it's just that the standard seems to be very high recently.).

Nightflight II is an enhanced version of their previous game Nightflight (surprise, surprise). This improved version contains a shifting perspective which shows the correct view of runway lights and surrounding hamlets from whichever direc-

tion the airfield is approached, and the engine sound is more realistic, varying with the engine speed.

A printer copy of your performance rating is also available after each flight. Mike Male, the author, is a keen pilot and is an air traffic controller by profession!

3D Seiddab Attack is a very impressive 'shoot the aliens game', the graphics are excellent and the 3D effect is obtained by use of perspective. You are a tank driver moving through city streets trying to destroy alien craft which swoop and attack you. Great screen display and I found it very addictive; two more for our lucky reviewer!

Nightflight II and 3D Seiddab Attack run on any Spectrum and cost £7.95 and £5.95 respectively.

A quest is over

Adventure games have a following which is so strong that a magazine dedicated solely to them has been marketed. If you are a bit like me, get so far then get stuck and somehow never seem to be able to find the time to go back to it, it is heartening to hear that someone manages to complete a game!

Hewson Consultants' adventure, 'Quest' has been cracked by Frazer Hubbard, a fifteen year old from Godhurst in Kent. Andrew Hewson, head of the company and microcomputer expert, was amazed that it only took him about six weeks to complete. "We expected that it would take someone at least six months to unravel Quest, so we were very surprised when Frazer rang the office and proved he had completed it by revealing the ending".

Frazer spent many hours involved in the game during the school holidays and his concentration on the game probably meant that he made

fewer mistakes than might be expected. He bought his Spectrum with some of the money from a compensation award he received because of an accident last year when he was knocked off his bicycle. Frazer is at present studying for his O levels, one of which being Computer Studies and hopes to start a career in computer programming.

Frazer's family are all interested in computers, but he has run ahead of the rest of the family and become the household expert. He prefers to play adventure games, finding them "better and more interesting than arcade games" and says that he is looking forward to the launch of the next Hewson adventure game, Fantasia.

Although Frazer admits that he had a little help from the Hewson office, the majority of the game and the final stages were solved by himself. His verdict: "Quest is hard, but not too difficult to make you give up, you have to use the

TV or not TV

Sony is one of the few to acknowledge the existence of the computer with the production of their KV1430 Trinitron 14" Colour TV. It is designed with a special RF computer connection socket at the front of the set which is pre-tuned to a special button.

The styling of the set is also better for computists as it has

a vertical screen which is raised a few inches from the base to allow the computer or games console to sit in front without obscuring the screen.

Well worth considering when the pressure between computer and family TV is too great, although the price of £249.00 seems a little expensive for a second set.

clues you're given and look for the simple solution instead of complicated answers. Quest has a lot of red herrings."

Finally, a quick tip: "Keep the ring, but pick up and drop the golden chalices".

In Brief

● Two of the speech units on the market are likely to lose their voices. Timedata's speech units ZXM and ZXS are being discontinued. When asked by yours truly "why?" Timedata replied "No reason . . ."

The other unit likely to disappear is the Computer Add Ons' SS1 Speech Synthesiser, the manufacturing company is no longer producing them. An Add Ons' spokesman said that they were "considering alternatives."

● The ZX LPRINT Centronics printer interface for the Spectrum from Euroelectronics is now being supplied compatible with the Sinclair Interface 1 and Microdrives. Don't despair if you already have the ZX LPRINT Mk1 or Mk2, they will supply you with a conversion kit to ensure compatibility.

This conversion consists of a miniature switch in one of the connections which you can fit yourself for £1.90, or, if you're like me, get fitted for £3.25 by Euroelectronics at 26 Clarence Square, Cheltenham, Gloucester GL50 2JP.

● Ceran Software, producers of the ZX81 monitor have announced the arrival of a monitor for Spectrum owners. Further details can be obtained from Ceran at 9 Parliament Road, Thame, Oxon.

● Ed's Tip: Keep an eye open for Morex peripherals, I hear a rumour that they are developing a 5.25" disc drive package for the Spectrum priced around £220.00.

The key to success?

Transform Ltd, well known for their range of business software, have ventured into the field of Spectrum add ons with the launch of their professional keyboard. Up until now you had a choice of keyboard with a copy of the Sinclair keys and a numeric keypad (DK'Tronics) or a keyboard modified to simulate a typewriter key layout with a full sized space bar (Fuller).

Transform have combined the two and produced a

keyboard which they claim is suitable for everyone's need; home, accountancy and word processing.

The keyboard has been designed to incorporate the micro-drive, a centronics interface and the power supply. It has 59 keys including the full sized space bar, a large ENTER key and a numeric keypad. "E" mode can be accessed by a special single key and a decimal point key is supplied on both the numeric and the

normal keypads.

One very useful feature is an on/off switch with a LED attached. Installation is supposed to be easy, no soldering is required. I phoned Transform and was told that they have had a good response to their adverts so far. Their output is a modest 100 per month, but they already have plans to in-

crease this.

When we receive a model for review we will give you more details, but meanwhile you can get one from Transform Ltd, 41 Keats House, Porchester Mead, Kent. A little more costly than its rivals, the keyboard will set you back £69.95 plus £2.00 postage and packaging.

A Byte in time

Fed up with waiting for the Microdrives to become available in the shops? Need fast access, mass storage? Perhaps the new Byte Drive 500 units might be worth a look. These are floppy disc drives using single sided, double density 3" CF Compact Floppy Discs with a formatted capacity of 220K per side in 11 sectors. This gives a total of 440K and typical access time to files is 3ms.

The unit is housed in a tidy case measuring 73.5mm high, 152mm long and 124mm wide. Double sided drives and extending the capacity to 1M are planned developments during the year.

The system, developed by ITL and Tyrell Systems, is unusual in that the conventional and cumbersome interface card which would normally connect the computer to the disc has been eliminated and has actually been built into the cable itself.

This cable contains all the disc control hardware and incorporates a 1.5"x2" plastic block moulded to a 34 way IDC connector. The company writes; "The moulded block encapsulates a custom hybrid on a ceramic substrate, which embodies all the control circuitry needed for the Disc Operating System", so now you know: my head aches!

Furthermore, the main components are a ULA, 16K ROM and a Disc Controller Chip. A power supply unit is supplied in a matching case, and a manual is available. Upgrading to 5.25" drives is also planned for the future. Initially produced for the Oric, cables for the BBC and the Spectrum followed and should be available now.

Oh, just one minor thing, it will cost you £260 + VAT for the complete package of Hybrid cable, drive, power unit, DOS Disc, Manual and power supply cable.

A strategic win

It seems to be the season of winners and personalities! The winner of the 1983 Cambridge Award was Mark Lucas, a commercial analyst from IBM. This award is sponsored by software houses, Cases Computer Simulation and Sinclair User magazine and is intended to encourage intellectually stimulating games programs for the Sinclair computers.

Mark won £1000 for his

original strategic wargame for the Spectrum, 'Battle 1917' which is now marketed by CCS. Second and third prizes for the Spectrum section were won by M Wheeler and N Holgate for their programs, 'War 70' and 'Oligopoly'. The second and third prizes in the ZX81 category were the graphic adventures 'Broodslayer' and 'Barrows Quest'.

Chat up your Spectrum

Orion Data Limited, a Brighton based company, have made a development which they claim could be, "as significant as the advent of home computers themselves". Headly stuff! So what is it?

Enough of the suspense, it's a low cost Speech Recognition Unit which they reckon is probably the first of its kind in the world. I wonder what William Stuart Systems Ltd will have to say about that, as they have had a similar unit on the market for the last year or so at £49.00!

But back to the Orion unit, called the "Micro Command". It transmits commands spoken into a microphone into signals instantly obeyed by the computer. A voice print is taken of

each new operator so that it doesn't matter what accent, vocal pitch or pronunciation you use, the unit will recognise it. This also means that you can control it in any language so it has international appeal.

Orion suggests that it is initially best to use the Micro Command to replace manual keyboard or joystick control in computer games, especially the more strategic types.

The price is £49.95 for the complete set of Speech Recognition Unit, instruction leaflet, microphone and cassette which includes a free game. The whole lot is supplied in a 'gift' type box from Orion Data Ltd, 3 Cavendish Street, Brighton, East Sussex.

Put everything you need on the keyboard with a Custom Keypanel Kit.

Everything you need
IS on the keyboard with
CUSTOM KEYPANELS.

These precision die-cut plastic panels fit perfectly
over your keyboard and provide an instant and
individual reference to all of your software.

Each Kit comes in a clear plastic storage wallet and
contains: 10 Matt-black Keypanels plus sheets
containing over 140 self adhesive Command labels
pre-printed with words, symbols and arrows, plus a
sheet of blanks for your own designs.

SPECTRUM KEYPANELS are 96x224mm and the
labels are printed in 'Spectrum' bright red. A MUST
for flight-simulation and all multi-key games and
applications.

The **FIRST** add-on for your Spectrum.

ORIC KEYPANELS are 105x275mm and the labels
are 'ORIC' blue. Master those CTRL and ESC key
combinations.

An **INSTANT** reference to all ORIC's keyboard
functions.

NOW IN 'SUPER M.L. PLASTIC'!

Post today to **Softtech Limited**, 25 College Road, Reading,
Berkshire, RG6 1QE.

Please send me:

..... Spectrum Keypanel Kits at £3.95 + 35p p&p each
(overseas should add 25% for additional surface mail)

..... ORIC Keypanel Kits at £4.95 + 35p p&p each
(overseas should add 25% for additional surface mail)

I enclose a total remittance of £..... cheques/postal
orders payable to **Softtech Limited**.

Christopher Columbus would have had an easier life with Eric Hutchinson's program.

This program was designed by Eric as a specialist program for yacht sailors to practice their navigation, but it impressed me as being of great educational use and also makes a fascinating simulation.

If you fancy your hand at round the world sailing, try this program first! I'll let Eric tell you about it.

This is a navigation program designed for use by small yachts.

It is menu driven and has the following facilities:

- 1 Course and distance from a choice of present position, last fix or estimated position.
- 2 Estimated position from course and speed entered in response to prompts.
- 3 Fix from horizontal sextant angles.
- 4 Keeps a constant record of the destination which may be changed at any time.

In use, the program works as follows:

The landmarks or beacons are entered into the array in response to prompts. The program is then saved to tape. On reloading the program the beacons are available for position fixing. First, a course is asked for and the present position and destination entered. A course and distance is then produced. This is used by the program to find the estimated position at any time. When a fix is required the beacons to be used are entered from left to right. The program will then ask for the left hand side horizontal angle and then the right hand side. The program then displays the position by bearing and distance from the centre beacon and as Latitude and Longitude. It will also update the arrays.

To use the program

On any spare evening set up your ZX81 and load the program. Get out the charts of your cruising area and pick out suitable landmarks for taking bearings. Write down the latitude and longitude of each, numbering them from 1 as you go. For convenience, the numbers could also be written alongside the landmarks on the chart.

Follow the instruction for entering beacons (as I call all landmarks) and when you have finished, list the beacons and check all have been entered correctly. If all are correct place a new, good quality cassette in the cassette recorder. Plug the connecting wire into the sockets marked Mic, in the cassette recorder and in the ZX81, and follow instructions to save to tape. This cassette now holds the fixing system and all the beacons you have entered.

Before the cruise

Set up the ZX81 and load your new cassette program. During the cruise pick three suitable

beacons and enter their numbers from left to right as seen from seaward. Enter your horizontal angles and remember to press NEWLINE after each entry. The screen will show your present position as a bearing and distance from your centre beacon and as a Latitude and Longitude.

If at any time you see a mark you can use, which is not on your list, simply go to (E to enter beacons) and enter lat and long remembering to keep a note of the number, write it alongside the mark, then list the beacons and check that the number is correct. If you have entered extra beacons during a cruise then follow the instructions to save to tape before switching off.

A few comments

One or two points may be of interest:

1 The program was designed for the yachtsman to use rather than the computer hob-

biyst. To this end, as far as possible, I have tried to ensure that there are no breaks in the program.

2 In order to disable the break key all entries are strings backed by error catching routines.

3 Lines 5 to 40 check that the entry is a number, and reject anything else except a decimal point.

4 The PEEK in line 615 uses an unused variable to direct the course and distance routine to prompt for initial position. It is POKED on first loading the program.

5 In line 841 code T\$ is used as I found that . . . if T\$ = . . . does not work if the T\$ (array) is empty.

6 Lines 1200 to 1210 change the mathematical angle which is measured from the X axis anticlockwise to a true bearing which is measured from the Y axis clockwise.

7 The PEEK in line 3130 checks the number of lines left in the display file and goes to the subroutine which allows the screen to be cleared and the listing continue without displaying an error code.

8 In lines 386 and 526 I found that in some circumstances the result could be > 1 thus giving an error code as no angle has a cosine > 1 , hence these corrections.

Naturally, there is a great deal more that could be done but I feel that, in BASIC, the pro-

gram is reasonably complete.

To develop the idea further, I am currently working on a machine code program which will take data direct from various sources and produce a continuous estimated position taking into account set and rate and leeway as well as poor steering.

Shipping lines?

Here follows a breakdown of the structure of the program:

5-40	Subroutine to check input is a number or decimal point.
900-940	Program starts at line 900 which sets up the arrays to hold the navigational information, both as strings for printing and as values for calculation.
600-660	Input \$ then jumps to relevant parts of the program.
	Input "S"
4000-4040	Simply the save routine from within the program thus making it self running on loading.
	Input "A"
2000-2170	Exchanges variables V and Y and then jumps to beacon entry routine at line 102.
	Input "B"
3000-3120	The routine for listing beacons already entered.
	Input "C"
950-967	Gives choice between three possible start positions for course and distance.
125-255	Entry subroutine for lat and long with error checking.
	Input "D"
800-815	Prints current status of position, course and speed and estimated position if any.
	Input "F"
300-550	Position fixing routine. This works by finding bearing and distance between beacons whose numbers are entered left to right, and, using an almost exact trigonometric version of the geometrical construction used for horizontal sextant angle position fixing, finds the vessel's position.
100-1235	Updates the current position in the arrays and, if a fix or entered position, clears the estimated position string array by GOSUB 1350.
1236-1294	The routine which clears the estimated position string array.
1350-1360	Works out estimated position from time elapsed and course and speed.
840-879	This routine is also used if a course from an estimated position is asked for. The program, working out the estimated position, then asking for the destination and, finally, jumping to the course the distance finding routine at line 694, after entering the estimated position in the appropriate string at line 1236.
	Input "E"
100-110	The beacon entry and consecutive numbering routine.

Variables used

Y	Keeps count of the last beacon entered.
V	Used to hold the value of Y when altering an existing beacon.
L ()	Latitude.
G ()	Longitude.
T ()	Time.
C ()	Both course and speed.
VAR	Used to differentiate between fixes and estimated positions for data storage.
POS	Used similarly for GOTO instructions.

HEARING IS BELIEVING Tele Sound SPECTRUM BEEP BOOSTER

TELESOUND is ready built and tested so that you can get the full sound of your Spectrum through any unmodified television set, black and white or colour. The unit is easy to fit in minutes without any previous experience as full fitting instructions are provided.

TELESOUND has been designed using the very latest ultra miniature components so it's size is an incredible 2 x 1.3 x 1 cm. and fits neatly inside the Spectrum. Three easy push-on connections are made to the Spectrum. The connections are clearly shown in a diagram that comes with full fitting instructions.

TELESOUND FEATURES

- SOUND AND VISION TOGETHER FOR ADDED REALISM.
- BEEP VOLUME CONTROLLABLE FROM A WHISPER TO A ROAR.
- KEYBOARD CLICK CLEARLY HEARD TO ASSIST PROGRAM ENTRY.
- PROGRAMS CAN BE HEARD WHEN BEING LOADED • NO SOLDERING OR CASE CUTTING REQUIRED.
- ADDITIONAL AMPLIFIER NOT NECESSARY • SEPARATE POWER SUPPLY NOT REQUIRED.
- USES NO MEMORY SO WORKS WITH ALL PROGRAMS • COMPATIBLE WITH ALL OTHER ADD-ONS INCLUDING MICRODRIVE

TELESOUND comes complete with easy to follow fitting instructions and costs £9.95 inclusive of post, packing etc. Please state your computer when ordering.

LIBRARY OF ADVANCED MATH/STAT/ECON FOR SINCLAIR ZX81 AND SPECTRUM

TAPE 1: MATRIX OPERATIONS (*), (+) £9.95

SIDE A: Inversion, multiplication, addition, subtraction, scalar multiplication and determinants of matrices and vectors within one single program. Any output can in turn be used as the input of the next operation without re-typing. Capacities: 16K ZX81: 25x25, 16K Spectrum: 15x15, 48K Spectrum: 48x48.
SIDE B: Determinants of square matrices.

TAPE 2: POLYNOMIALS (+) £8.95

SIDE A: Includes quadratic equations (as degree 2 polynomials) and Newton-Raphson and half-interval search methods for higher degree polynomials. Computes the real roots with 8 digits of precision. SIDE B: Plot of polynomials in any interval, values of real roots, extremum points.

TAPE 3: INTEGRATION (+) £6.95

SIDE A: Simultaneous integration of two functions by Simpson's and trapezoidal rules. Also computes the area enclosed between the two functions. SIDE B: Plot of two functions in any interval. Integrated area shaded.

TAPE 4: SUPER-REGRESSION (*) £14.95

SIDE A: A highly developed multivariate regression program with log/ln option on each variable, allowing for exponential and geometric regressions. Displays estimated coefficients, standard errors, t-statistics, R^2 , corrected R^2 , F-statistic, degrees of freedom, Durbin-Watson statistic, variance-covariance matrix, matrix of correlation coefficients, INTERPOLATION and PLOT of residuals. Capacity examples (var.xobs.): 16K ZX81: 2x400, 5x200, 10x100, 16K Spectrum: 2x75, 5x30, 48K Spectrum: 2x1650, 5x900, 10x500. SIDE B: Plot of bivariate regressions, slope, intercept, R^2 , standard deviation.

TAPE 5: PROFESSIONAL LINEAR PROGRAMMING (*) £14.95

SIDE A: A user friendly optimisation program capable of handling all sorts of linear programming problems (any combination of $<=>$ constraints and $X_i > 0$, $X_i < 0$, $-a < X_i < a$ sign constraints). Displays the canonical equivalent of the primal, values of slack variables, dual problem and its solution. Capacity examples (var.xcons.): 16K ZX81: 10x21, 15x18, 20x13, 16K Spectrum: 8x8, 48K Spectrum: 10x45, 25x35, 50x25. SIDE B: Solutions of simultaneous equations.

TAPE 6: STATISTICS (*), (+) £14.95

SIDE A: STATISTICAL TESTS AND DISTRIBUTIONS. Chi-square, Students t-, F-, Mann-Whitney U, Wilcoxon's Signed Rank tests and Chi-square, Students t-, F-, Binomial, Poisson and Normal distributions. Data on many samples can be entered at once, sorted and basic statistics displayed. Capacity examples (samp.xobs.): 16K ZX81: 1x230, 2x110, 5x45, 16K Spectrum: not available, 48K Spectrum: 2x1300, 10x250, 20x125.

SIDE B: DESCRIPTIVE STATISTICS. Analysis of ungrouped or grouped data. Ungrouped data sorted and grouped. Output includes mean, mean deviation, standard error, skewness, kurtosis, moments, Pearson's coefficient, etc. A comprehensive histogram with up to 30 class intervals, class frequencies, midpoint values. Capacities: ZX81: 450, 16K Spectrum: 200, 48K Spectrum: 2000.

TAPE 7: BIBLIOFILE £9.95

An academic indexing program to keep record of books and articles. Loading and saving of files, printing and listing of up to 150 records in a file, searching for an entry and sorting records into alphabetical order. It is possible to modify, delete and add a record.

EDUCATIONAL SERIES

INTRODUCTION TO ECONOMICS SET (48K Spectrum only): Basic concepts are introduced by extensive use of graphics, examples and exercises.

MICROECONOMICS I (+) £9.95

SIDE A: Demand and supply analysis, demand theory, cost-benefit analysis. SIDE B: Budget line analysis, indifference curves, decision making in a market economy.

MICROECONOMICS II (+) £9.95

SIDE A: Cobb-Douglas production function, linear programming and exercises on linear programming. SIDE B: Theory of the firm, elasticity of demand, CES production function.

MACROECONOMICS (+) £9.95

IS/LM curves, national income determination, aggregate demand and supply analysis, multipliers.

ECONOMIC GEOGRAPHY (+) £9.95

SIDE A: Von Thunen's model of agricultural land use. Locational rent and principle of diminishing returns. SIDE B: Models of agricultural and urban land use.

(*) Programs with INPUT, CHANGE, LPRINT and SAVE-DATA facilities. Spectrum versions of tapes 4 and 6 also embody MERGE/READ DATA facilities. A common data file can be used with these programs.

(+) Recommended for "A" Level, first year university and poly students.

PLEASE SEND A5 SIZE S.A.E. FOR INFORMATION ON MICRODRIVE-BASED PACKAGES.

Tapes 1-6: £60. Introduction to economics set: £35.

All inclusive prices for the U.K. For overseas orders add 50p per cassette. Dealers enquiries welcome.

Cheques payable to: **UNIVERSITY SOFTWARE, 29 St. Peter's Street, London N1 8JP. Telephone: 01-359 0978**

LOW COST BUSINESS SOFTWARE

ZX81 16K

ACCOUNTS PREPARATION

Produces printouts of all prime entries, nominal ledger, profit and loss account and balance sheet. Has 31 nominal ledger accounts.

Sole Trader — £17.50 Limited Company — £17.50
(Combined Price — £25.00)

SALES AND PURCHASE LEDGERS

Produces day book, sales/purchases and VAT analyses, debtors/creditors listings and statements. 50 accounts and 200 monthly transactions.

Sales — £20.00 Purchases — £20.00
(Combined Price — £25.00)

SPECTRUM 48K

ACCOUNTS PREPARATION

Produces printouts of all prime entries, nominal ledger, trial balance, profit and loss account and balance sheet with supporting schedules. Has 73 nominal ledger accounts and automatically calculates VAT.

Sole Trader/Partnership (up to 4) — £25.00
Limited Company — £25.00
(Combined Price — £35.00)

SALES AND PURCHASE LEDGERS

Produces day book, sales/purchases and VAT analyses, debtors/creditors listings and statements, 250 accounts and 1000 monthly transactions. Automatically calculates VAT.
£25.00

All programs have been professionally developed and are being used by practising accountants and small businesses. Supplied on cassette with operating instructions.

SPECTRUM GAME

Danger, magic, monsters and gold await you in Hugh Walker's super Spectrum game.

In the Aug/Sept issue of *ZX Computing* we printed a program called *House of Horror* for the ZX81 by Chris Cox. Hugh Walker has modified it for the Spectrum and added many new items which turn it into a totally different program!

One of the problems with adventure games is that you

can often complete the game from the knowledge gained by entering it. Hugh has adopted two methods to prevent this from spoiling your pleasure. Firstly he has not REMmed the listing and has laid it out in an illogical way, and secondly he has used random elements to provide surprises without losing too much player skill.

You are a 'novice-hero' whose task is to raid the Warlock's mansion and find all his gold, using the keys which you find to unlock any doors and fighting off his pet monsters with your sword and shield. Each key may be used once only, but not all the doors are locked.

The questionable ethics of a young hero turning thief are satisfied by the fact that the Warlock's treasure has been extorted from the oppressed peasants in his locality. Should you be successful, you will, no doubt, restore the gold to its rightful owners. The hero-rating which you acquire directly reflects the amount of gold you have found, and no one, except the Warlock, can take this from you. (Indeed, it is possible that, in some future program, you will return as a wiser, stronger hero to deal with the Warlock permanently!)

To find the treasure and the keys you must open doors, explore hallways and defeat monsters whenever the opportunity arises. However, you may not find anything and be given an opportunity to rest and build up your strength. This strength is limited and it is reduced by fighting, so the opportunity to rest is useful. The Warlock is away at the start of the game, but he may return and catch you. If he does he will either fight you, proving difficult to chase away, or he will use his magic to turn you into a small creature, robbing you of your hero status (hero-rating).

When you have collected all the treasure you will be con-

gratulated and told to find your way out "... if you can!" The way out is through a door on level 0 so you are also told which level you are on. You then have to make your way to level 0, open the door (which may be locked) and leave, triumphantly.

Whenever you are confronted by a monster or the Warlock himself in a fighting mood, you will be given the option to "hit it (him)" or to "run away". You cannot kill the monsters (you are only a young hero) but you can chase them away. However, some are difficult to defeat and each blow you deliver uses up some of your strength. If you use up all your strength, then you have lost! Nevertheless, if you choose to run away you will be called a COWARD and lose some of your HQ (hero-quotient), and you MAY lose some treasure... or, you MAY be trapped by the monster. Your HQ is a factor in calculating your 'Hero-rating'... so your honour is at stake! If your attempt to hit the monster, or Warlock, fails to chase it away or your attempt to run away has been unsuccessful, you will be given the option to 'hit it' or 'run away' again.

As you move around the mansion you will find one of three locations: 'Door', 'Hallway' and 'Stairway'.

Oh! By the way, only the computer knows what the total amount of treasure to be found is and it won't tell you until you have reached that amount (it will be between 1500 and 2500 coins). Good luck!

1. Door :(may be locked) :you have two options : 'Open' or 'Leave'.
If you open the door, you may find a reward... or a monster... or nothing, and have to leave. If the door is locked and you have no key, then you have to leave... each time you leave a location, whether by choice or not, you risk meeting a monster, which may result in loss of treasure.
2. Hallway : three options : 'Move', 'Explore', or 'Status'.
Move: moving backwards or sideways may result in a bump on the head from a low beam, causing some loss of strength; moving forwards is safe because you would see the low beam in front of you!
Explore: you may find treasure, a key, a rest, a monster or another location or nothing and have to leave... with the same risk as above.
Status: Lists your possessions, what level you are on and returns you to the options 'Move, Explore or Status' when you are ready.
3. Stairway :three options : 'Up', 'Down' or 'Leave'.
You will not know if the stairway goes up or down until you try. If you make the wrong choice you will have to leave.

Variables

- The following are DIMensioned arrays, READ from DATA.
 m\$(9,9) : The name of each monster (and Warlock).
 a\$(3,9) : The three locations found (door, hallway, stairway).
 k\$(3,6) : The three small creatures into which the Warlock may turn you.
 m(9) : The resistance of each monster to your blows.
 n(9) : The endurance of each monster to withstand successful blows.
 g(9) : The value by which your Hero-quotient is in-

creased when you beat each monster and the length of each monster's name (for tabulation in lines 3090 and 3110).

- z(11) : The length of the BEEPs in line 4000.
 y(11) : The pitch of the BEEPs in line 4000.

2 The following are 'single' variables.

- hi : High Score, carried forward to successive games ('hi' = 'hr').
 *hr : Hero-rating, ie overall score in each game.
 hq : Hero-quotient, increased by defeating monsters (by a randomly-adjusted value of 'g').
 ded : The number of monsters beaten.
 ht : The force of your blow when you hit a monster (randomly selected).
 blo : The value by which a successful blow reduces the monster's endurance.
 mn : Random value (1 to 9) to select monster from m\$(array), and associated values of 'm', 'n', and 'g'.
 str : Your strength, initially 500: reduced by fighting or bumping your head: increased by resting.
 wl : The value by which 'str' is reduced when you bump your head (randomly selected).
 tres : The maximum amount of treasure to find (between 1500 and 2500; randomly selected).
 tr : A logic variable to change course of program when 'tres' has been reached. It prevents more treasure being found and allows you to leave from line 1630 if you are on level 0.
 csh : The amount of treasure you possess.
 cn : The amount of treasure found each time.
 ky : The number of keys in your possession.
 wy : Random value (1 to 3) to select a\$ and direct GO SUB in line 140.
 fl : The level (floor) which you are on.
 bp : Used in lines 400 to 460; 'bp' = +1 'Up' and bp = -1 for 'Down': it alters 'fl' and the pitch of the BEEP routine (line 460).

(*Your hero-rating is calculated by adding 'csh' + ('ky' * 5) + 'hq' and is updated each time you change your location). In the course of the program 'f', 'i' and 'h' are used as FOR-NEXT variables for various purposes.

Please note: 1 Unlabelled Random-values are used to direct some of the 'GO TO's'.
 2 INKEY\$ is used for your responses to the various options offered you. This allows single-key entries to speed up operation of the game. However, PAUSEs and BEEP's have to be used to slow down the display.

Program description

- Line 20 : Initialise High Score for successive games.
 Lines 50 to 60 : Initialise each game (routine completed by calling subroutine 5000 to 5500).
 Lines 100 to 150 : 'Core-routine' to which all other routines return. Selects and PRINTs locations and directs GO SUB for each.

Location: (lines 200 to 460)

- Lines 200 to 220 : 'Hallway' PRINTs and acts on options, using 'GO TO' : 500, 600, or 700.

- Lines 300 to 330 : 'Door' PRINTs and acts on options using 'GOTO' : 800 or 8200.

- Lines 400 to 460 : 'Stairway' PRINTs and acts on options, routine complete.

Response to 'Hallway' routine (lines 500 to 780)

- Lines 500 to 520 : Move selected by INKEYs "1" in line 220; PRINT's etc options (complete).

Line 600 : 'Explore' selected by INKEYs "2" in line 220; uses 'GO TO' line 1650.
 Lines 700 to 780 : 'Status' selected by INKEYs "3" in line 220, PRINTs possession, score, what level you are on and returns to line 200 when you are ready.

Response to 'Door' routine

Line 800 : 'Open' selected by INKEYs "1" in line 320.
 Random chance of: (GO TO 1500 door locked) or (GO TO 1600 door open).

Responses to 'Explore' and 'Door opens' (lines 1000 to 1460)

Lines 1000 to 1800 : 'Meet Monster' routine; Selects monster, PRINTs and acts on options to fight (GO TO line 3000) or run away (GO TO line 8500) or random chance of monster stealing gold instead of fighting and if Warlock is met, random chance of Warlock using magic (GO TO line 1700).

Lines 1100 to 1150 : 'Find gold' routine, from line 1650 (also from line 3130).
 If maximum amount has not been found, calculates amount of each find (amount reduces in proportion to total already found), PRINTs amount found and increments gold score, then checks gold score against maximum.

Lines 1200 to 1220 : 'Find key' routine from line 1650 (also from line 3130).
 Random chance of finding a key, or another location. If a key is found, PRINTs and increments one key to key score.

Line 1300 : 'Find nothing' routine; uses lines (from 1650) 8000 to 8210 to complete routine.
 Lines 1400 to 1460 : 'Find rest' routine; random chance of finding rest or another location. If rest, then PRINTs, BEEPs and increments strength score.

Continuation of 'Door' routine: (lines 1500 to 1650) from line 800

Lines 1500 to 1550 : 'Door locked' routine; checks if you have a key (if not then GO TO 6500). If you have a key, then asks if you want to use it? (if "No" GO TO 6500). If "Yes" then decrements one from key-score and carries on to line 1600.

Lines 1600 to 1650 : 'Door opens' routine; (from line 1550 or line 800).
 PRINTs, uses 4100 for BEEPs, checks if you have finished and randomly selects 'GO TO' : lines 1000, or 1100 or 1200 or 1300 or 1400.

END routines : (Lines 1700 to 2050)

Lines 1700 to 1770 : 'Bitter End' routine; (Warlock 'uses magic') from line 1030.
 PRINTs, selecting k\$ from array, uses line 1900 to 1950 to complete.

Lines 1800 to 1880 : 'Successful End' routine; from line 1630.
 PRINTs scores and uses 1900 to 1950 to complete.

Lines 1900 to 1950 : 'Hi score' and 'Play again' routines; from lines 1770, 1880 or 2050.
 Increments High Score and asks if you want to try again. If "Yes" then goes to line 50; if "No" then STOPS.

Lines 2000 to 2050 : 'Out of Strength' routine; from line 3010.
 PRINTs and uses lines 1850 to 1950 to complete.

Lines 2500 to 2570 : 'All treasure found' routine; from line 1140.
 PRINTs, sets logic variable tr to 1, returns to 'core-routine' (L 100).

Fight Routine (lines 3000 to 3130), from line 1080.

Lines 3000 to 3040 : Calculates the force of your blow, decrements strength, checks to see if you injured the monster, if you did, then 'GO TO' line 3050, if you did not, then goes to line 1050 for another try.

Lines 3050 to 3130 : Calculates how badly you hurt the monster, decrements monster's endurance; if monster is still fit to right, then returns to line 1050, if monster is not fit to continue then PRINTs, increments 'hero-quotient', uses 'GO TO': 1100 or 1200 for reward.

Line 3500 : 'Title' subroutine: PRINTs title, used by various parts of program to which it returns.

Lines 4000 to 4500 : BEEP routines (subroutines). Returns to 'core-routine' if 'GO TO 4000' etc is used.

Lines 5000 to 5190 : 'Initialise routine' subroutine called by line 60.
 DIMs arrays, READs arrays from DATA (lines 7500 to 7800), PRINTs instructions and initialises variables, uses line 5500 to continue.

Line 5500 : 'CONTINUE' routine; from various parts of program, returns to 'Core-routine' (1200)

Lines 6000 to 6050 : 'Monster steals gold' routine; from line 1040.
 PRINTs, decrements gold-score, PRINTs new gold-score, checks if new gold score is below maximum and resets tr if necessary.

Line 6500 : "No!" routine from lines 1510, 1540; uses GO TO 8000 to continue.

Line 8000 : 'Leave routine' from lines: 320, 430, 1300, 1460 and 6500 — carries on to L 8200.

Lines 8200 to 8210 : Random chance of meeting another monster. From lines 330, 420 and 8000.

Lines 8500 to 8530 : 'Run away' routine; from lines 1070.
 PRINTs "Coward" and decrements 'hero-quotient' then random chance of:

Line 8520 : (a) Dropping gold uses GO TO 6010 to decrement gold-score and return to 'core-routine'.

Line 8540 : (b) being trapped; returns to line 1050 for another try.

Lines 9000 to 9050 : 'SAVE' routine; accessed by 'BREAK', 'GO TO 9000'.

Further developments

1. A lateral dimension could be added to this program so that the 'Move' routine translates sideways, forwards or backwards; within a 2-dimensional array from a fixed entry point to a fixed exit point, maintaining the vertical dimension ('fl') requirements to qualify for successful exit at line 1630. This exit point could be randomly generated in each game and added to the exit requirements at line 1630.
2. A random value could be generated (say between 0 and 10) as the vertical dimension which 'fl' would have to equal to qualify for successful exit at line 1630.

Bookshelf

Patrick Cain once more puts on his thinking cap, stokes the log fire and settles down with three new books.

The Joy of Computers — Peter Laurie

Don't push off to fetch your Kleenex please, but I must admit that the life of a reviewer can be a dull and arduous one. Long before these witty, well-penned testimonials ever reach the page there are periods of intense self denial and solitude to be gone through, sifting and sorting wearily through page after page of 'INKEYS' memory addresses and almost illegible program listings. Of course it really is all fun and I love it; but sometimes I love it more than others and reading 'The Joy of Computers' was one of those times. Published by Hutchinson and written by Peter Laurie, an editor of Practical Computing, the 200 pages, many of them with superb colour illustrations, are themselves a joy to read.

A VDU screen on the cover shows a picture of a window opening to a country scene with green fields and trees and a golden sun setting between two mountains (maybe the book should have been called 'The Joy of Landscapes'). Opening the cover and turning to the introduction on page seven gives a clue to the strange cover subject. Peter Laurie speaking of the limitation of his book says "I can only open windows into a multitude of fascinating gardens: I hope my readers will think it worth while to go out into them!" His treatment of those gardens on the pages inside the book is as effective as the garden picture on the glossy hardbound cover is pretty.

The publishers have aimed 'The Joy of Computing' at anyone who has just bought or is about to buy their first computer. It is my belief that

its appeal will be broader than this. The text is not pertinent to any particular computer; rather, it introduces, in non-technical language how computers work, how they can and are being used and attempts to explore the future that they are already making reality. Throughout the text is enlarged by brilliant colour illustrations.

Subdivided into four sections; the readers can read from start to finish or flit from section to section as takes his fancy. No previous knowledge of computers is required.

Section 1: 'The Computer' looks at the micro, delving below the keyboard to identify the working bits — memory and processor, transistors, chips, gates and busses: offering easy to understand descriptions of the detail. It then moves to those parts above the keyboard screens, printers and plotters and magnetic memory and gives an equally effective description of their workings and uses. The picture of the micro is completed by a discussion on software, home software games, files and operating systems. I found the text steering a difficult path well; that of being comprehensible to non-computer people and yet interesting to those of us who like to think we know a bit about such things. I'm not too shy to say that the theory and the many examples of applications filled in a large piece of background for me.

Charged with this new knowledge I hesitantly turned to Section 2, 'Programming'. The idea that I might discover inadequacies in my programming knowledge was not a comforting one. Part 2 deals with programming from a basic discussion through to fractals — the study of irregular shaped objects, covering on the way, 'BASIC', 'Structured Programming', 'Machine Code', 'Zipf's Law' and some other things I had never heard of. I felt quite uncomfortable. Again the discussion was informative and yet not technical; I felt I had been introduced to some new ideas and new programmers should find plenty of useful direction.

The world of 'Professional Computing' is put under the microscope in Section Three. Even amongst those who work in commercial computing there are a few with such a

wide overview. Of course computer technology is put to such widespread uses that any detailed study would be beyond the scope of any one volume; but Mr Laurie's success has been to select suitable applications that help put the state of the art into perspective. The background

is broad and bulging with interesting information. 'Business Software', 'Database Managers', 'Image Processing', 'Talking Computers', 'Robots', 'Androids' and 'The Electronic Office' are only a few of the topics looked at.

The structure, uses and applications of computers

today and a look at the implications of computer technology in the future are all covered in the final section called 'Progress'. This section examines the 'Revolution in Thinking' that is taking place, 'Current Trends', 'Hardware Advances' and asks 'What Next?' and 'Where will it End?'. On the last two questions Peter Laurie has been wise enough to outline the likely shape, but not attempt to colour these particular gardens.

'The Joy of Computers' may be aimed at those who already have or are about to buy a home computer but to my mind it is a book for anyone who has an interest in today's world. Peter Laurie has opened the windows onto a number of computer gardens so successfully that most readers are likely to be encouraged to do further digging themselves.

'The Joy of Computers' by Peter Laurie is published by Hutchinsons and is a gift worth treating yourself to at £9.99. ISBN 0 09 153 0105

20 Programs for the ZX Spectrum and 16K ZX81 — S Daly

I have often in the past raved on these pages about the quality of books published by Babini Publishing. The books are economical and although small are filled with advice and instruction of good quality that is logically laid out and written with the reader in mind. '20 Programs for the ZX Spectrum and 16K ZX 81' certainly does not suggest a novel approach to computer books: how then does this Babini Publication, written by S. Daly, stand up against the many similar titles available?

Often such books aimed at more than one machine appear to consider only one and look at others as an afterthought. I was grateful to find that here this was not so. All the programs contained could be readily loaded onto other systems, precluding the use of PEEK/POKE, machine code routines and various graphic symbols that are peculiar to particular machines.

As the author points out, most of the programs are accompanied by flow charts detailing the logic of each program and enabling conver-

sion to coding forms for other machines. Flow charts too are helpful to less experienced programmers giving guidance on program development and structure while more experienced users can clearly follow the logic in order and can modify or improve the program as desired — rather like clearing away the trees to expose the wood. Each program is further supported by a short but precise descriptive text. Many other books lay greater emphasis on these texts, including in them an almost line by line description of the program offering detail of all but the kitchen sink. This is not Mr. Daly's style. I found the texts to be at times a little too brief and often wished for further description of the listings; but for the most part they were adequate.

Of the programs: it may well be that the author didn't have to say too much about them anyway. Not because the flow charts were sufficient but because in most cases the program didn't require them. There were six sections of programs; two games sections e.g. 'Bragg', 'Pontoon', 'Solitaire', 'Battleships'; a section on filing systems; some mathematical programs and a section of statistics. There was also a chapter on sorting containing one 'Alpha Sort' program. Unfortunately, like the title, few of the programs were novel. 'Binary to Decimal' or 'Decimal to Binary' programs are ten a penny but to be fair, the examples included here were of a high quality and represent a good allocation of basic programs for the new user.

Throughout this book the author has taken pains to ensure that the programs are bug free and as is typical of Babini books all listings were dumped from print to ensure their accuracy. Experienced users are unlikely to find too much of real benefit in this well compiled little volume but to the host of new users who should have recently joined us, the twenty programs included should prove to be worthwhile and act as useful guides to developing and improving their own programming ability.

'20 Programs for the ZX Spectrum and the 16K ZX81' is written by S. Daly, published by Babini publishing and at £1.95 for over 110 pages, represents good value. ISBN 0-85934-103-8

Self-Instruct BASIC A practical guide — Antony & James Clark

It's said that first impressions go a long way: my first impression of this book certainly didn't take it any further than the floor. As I opened the cover I thought 'Self Destruct Basic' might have been more appropriate! For some reason the publishers, Pitman, have bound this volume in a fashion similar to a secretary's shorthand pad. Opening it for a second time, with a bit more care, I began to form second impressions of the novel binding and the contents.

Once mastered, the cover proved to be a great success. This book, by father and son

authors Antony and James Clark, is intended to be a step by step guide to beginners on both the ZX Spectrum and the BBC Micro Computer, and as a teaching aid the cover folds into a readily accessible support for the inner texts. Having many times in the past all but lost concentration trying to type a listing into the computer while being continually frustrated by losing my place on the page, I found this simple and effective solution most convenient.

But let's not judge a book by the cover alone, what of the text that is so adequately supported? The book is aimed at beginners and assumes little more than that the reader has successfully set up the computer and glanced over the manual. I should dispute, however, that it is suitable for users as young as nine years, if for no other reason than that

they at such an age are likely to lose interest very quickly in such a factual treatment of the problem. Readers who can sustain interest are intended, on completion, to be familiar with a full range of programming instructions and to be aware of their usefulness. The topics covered are strings, string arrays, input and assignment statements randomize, FOR NEXT loops, screen formatting and all commands necessary for their implementation. Also included are examples and hints on program writing and programming style.

New users will find that there is no shortage of books with similar material, so other than the novel binding, what have Messrs. Clark included to make their book worthy of any note? The strength of 'Self Instruct Basic' is not the content, which is no more than might be expected in an elementary book, but the method of presentation. From what I can remember of the hours I have spent close to sleep at the back of a lecture hall as a student teacher, the technique has much merit.

In each section there is an introduction to the topic, an example of its use and a short discussion to highlight and reinforce the principle. Further, there are suggestions for putting the newly discovered technique to use and questions to ensure that the theory has been properly learned. In the main though, this is a book to be used when sitting in front of the computer. Any computer user worth his 'chips' knows that hands on experience is the only way to develop skill — this book is intended to be used as a companion and guide while gaining that experience. It is a well structured course in basic programming and should be followed, as suggested, in the order laid out. To gain all the book has to offer the reader should be prepared to be a good student following that course and investigating the projects suggested. All that it has to offer is a good grounding in BASIC for both Spectrum and BBC users but that is no small task.

On first impressions 'Self Instruct Basic' may seem flimsy; but as a guide to new users it has my 'backing'.

'Self Instruct Basic a Practical Guide' is written by Antony and James Clark, published by Pitman and costs £4.95. ISBN 0 273 02020X

Problem page

Our regular 'agony uncle', Peter Shaw, answers some more of your programming queries!

Thank you once again for your correspondence. I am always glad to help any readers with computer problems, although I am sure you understand that I cannot deal with every letter I receive. To start with, I have had about two dozen letters asking for the address of Fountain Computers Limited. I mentioned in a previous issue that Fountain produced a sheet called 'Improving the Spectrum Display' for £1. The sheet explains how to 'fine tune' your Spectrum to your television for the maximum colour output, but the minimum dot crawl. The method is not compatible with issue 3 machines. Fountain's address is; Darvill Road, Ropley, Alresford, Hants SO24 0BW.

Dear Peter

I am writing to ask you what the error report code H means. For after typing in a program on my ZX81 which included machine code this was displayed and it quite baffled me for it is not detailed in the ZX81 manual. Please could you enlighten me.

Darren Crook
Velindre
Wales

Darren

This is what's known as a crash. Usually with the average ZX81, crash looks much more hi-res-and-modern-art-mode, but this crash has somehow called the error report routine, and the report H has been thrown out because the report subroutine has been

called in a non-standard way. What you must do is check the program listing with the machine code you already have in your computer. This is probably where the problem lies.

Dear Peter

I would be pleased if you could print a copy of the "Conversion Table", for converting ZX81 PEEK values to that of the Spectrum.

In various books I have seen such tables to convert ZX80 PEEK values to the ZX81, but I have not yet seen one for the ZX81 to Spectrum.

Although I have both the Spectrum and ZX81, I much prefer the ZX81 with 16K memory, as the programs devised for it are both short and sweet, not as long-winded and bug-ridden as Spectrum programs. Thus, the Spectrum lies neglected until I convert PEEK values from better programs for it.

J T Clench
Hall Green
Birmingham

Mr Clench

I took your letter as a challenge and sat down and worked out the necessary conversions. Here they are for the first time, as you and I believe, in print at last!

Dear Peter

I read today about Sinclair's new computer, the QL, in another publication. There are a few points which seem a little unclear, and I would be most grateful if you could clear up these problems for me.

I am told that the machine has 128K of memory; how much is available to the user? There is an 'industry standard' monitor output. What type of monitor output is it, and how is it wired up? I have ZX Microdrives, can I plug them

onto the QL? Finally, I have heard no mention of a cassette interface, and I cannot see one on the picture I have of the QL. Is there a cassette interface, and if so at what BAUD rate does it work?

Thank you for your help.

David Pryce
Heald Green
Manchester

David

The QL does indeed have 128K of memory, when you are in the high resolution mode you have 96K left. This is what I am told, but not something I have checked for myself. The monitor output is an RGB interface, which is wired up as follows;

- 1 RED
- 2 GREEN
- 3 BLUE
- 4 VSYNC
- 5 CSYNC
- 6 VIDEO (COMPOSITE MONOCHROME VIDEO)
- 7
- 8 GROUND

This should be compatible with most RGB monitors on the market providing you have the right cable.

Your ZX Microdrives, however, are not compatible with the QL. Sinclair have produced a slightly improved version of the microdrive especially for the QL. As for your last question, no, the QL doesn't have a cassette interface. Sinclair feels that as it already has two drives built in you won't need cassettes. Not good news for the independent software houses.

AGF

PROGRAMMABLE JOYSTICK INTERFACE for Spectrum or ZX81

MICRODRIVE
COMPATIBLE

ONLY
26.95
+£1.00 P&P

AGF PROGRAMMABLE INTERFACE

Recognised as the only true Hardware Programmed joystick interface this product offers all the features associated with such a design.

You can use *any* Atari-compatible joystick controller with *any* software for your Sinclair Spectrum or ZX81, not just those with a joystick option.

Movement of the joystick is recognised by the computer *exactly* the same as pressing the appropriate control keys, and can therefore give the most immediate response to that movement. The hardware programmed design works with *all* possible key-reading methods, both BASIC and Machine Code.

Eight directional movement, with or without the fire button being pressed, can be achieved by only programming the left, right, up, down and fire keys required by the game.

Programming is achieved by a two-digit code, which is looked up on the Programming Chart supplied, for each direction and firing button. These two numbers are then selected on a pair of leads which are clipped onto appropriately numbered strips on the interface.

Once configured this can be marked onto a Quick Reference Programming Card for storing with the game. As the programming is *not* power dependent the interface can be immediately used when next switched on.

The keyboard remains fully functional and can be used simultaneously with the joystick.

An integral rear expansion connector means there is no need to remove the interface to connect other peripherals.

NB. A recent design improvement now means that the AGF Programmable Interface works with the new Quickshot II rapid "Auto Fire" feature.

KEY FEATURES

- ★ Programmable design gives TOTAL software support.
- ★ Accepts Atari, Competition Pro, Wico, Starfighter, Quick Shot, Le Stick etc.
- ★ Rear extension connector for all other add-ons.
- ★ Free demo program and instructions.

PACKAGE CONTENTS SUPPLIED

- Programmable Interface Module as illustrated, complete with clip-on programming leads.
- Self adhesive programming chart detailing how to define which key is simulated by UP, DOWN, LEFT, RIGHT, and FIRE.

- One pack of ten Quick Reference Programming Cards for at-a-glance setting to your games requirements.

- 12 months guarantee and full written instructions.

Conversion tips

A guide to ZX81 / Spectrum program conversions from David Nowotnik.

The versions of BASIC offered by the two ZX computers are so similar that many programs for one can be used by the other. The ZX81 has only two commands which are not present on the Spectrum, SCROLL and UNPLOT, and these should cause you few problems when converting ZX81 programs to the Spec-

trum (see Table 1).

There are quite a lot of commands and functions on the Spectrum which are not available on the ZX81. A list of these appears in Table 4. The stars indicate those commands and functions for which there is no simple translation to ZX81 BASIC. Those for colour and sound can be omitted;

but you will have to find some alternative for the high resolution and file I/O commands.

The command PLOT appears on both computers, but the effect is quite different, so beware! Another tip: PEEK and POKE should be used with caution. In conversion, addresses will almost certainly have to be changed. Some of those

changes appear in the tables. A command such as POKE USR "a" on the Spectrum indicates User Defined Graphics; ZX81 users don't have this facility, so you'll have to omit this and use a standard character instead.

ZX81	Spectrum	Comments
SCROLL	RANDOMISE USR 3582 or LET t=USR 3582	If the program uses random numbers, they could become rather predictable with the first option. If so, use the second, using a variable (in this case t) which is otherwise not used.
PLOT Y,X	PRINT AT 21-Y/2,X/2;	Print the appropriate quarter square graphics character.
UNPLOT Y,X	PRINT AT 21-Y/2,X/2;	Print a space, or the appropriate quarter square graphics character.

Table 1 ZX81 to Spectrum conversions.

Spectrum	ZX81	Comments
BIN eg LET y=BIN 10010101	LET y=(decimal no.) Conversion to decimal: 10010101=149 128 64 32 16 8 4 2 1 Add these numbers together when a 1 appears at the appropriate position in binary.	BIN allows the representation of a number in binary. On the ZX81 use the decimal equivalent, but beware; BIN is often used with User Defined Graphics, which are not available on the ZX81.
READ/DATA eg READ x,y DATA 50,60	LET LET X=50 LET Y=60	READ and DATA are used to store a lot of information in a program. Use LET instead.
DEF FN and FN eg DEF a(x)=SQR x LET t=FN a(i)	LET X\$="SQR X" LET X=I LET T=VAL X\$	The defined function can appear in a string. Use the keyword for built-in functions (eg SQR). The equivalent of FN may need 2 lines, as shown.
PLOT	no equivalent	
SCREEN\$ eg LET a=SCREEN\$ x,y	LET A=PEEK(PEEK 16396 +256*PEEK 16397+1+Y+33*X)	Used in interactive games to detect characters in the display file. Note — this formula only works when a RAM pack is fitted.

Table 2 Spectrum to ZX81 conversions.

ZX81

1 FRAMES
POKE 16436,255
POKE 16437,255

LET T=(65535-PEEK
16436-256*PEEK 16437)
/50

2 Line number zero

POKE 16510,0

3 RAMTOP

POKE 16388,X-256*INT
(X/256)

Spectrum

POKE 23672,0:POKE 23673,0

LET t=(PEEK 23672+256*
PEEK 23673)/50

For times greater than 10
minutes, you can use byte
23674 as well.

POKE 23756,0

(As the start of BASIC can
move, eg with microdrives)
use with caution.

CLEAR x

POKE 16389, INT (X/256)

Comments

Both computers have a counter
which accurately varies by 50
every second. In the example,
use the first line to start the
'clock'. The variable T will
have the time in seconds after
the start. The counter can
only be used for 10 minutes.

Converts the first line of a
program to line number zero.
which cannot be edited, and
so is protected.

Creates a safe area at the
top of RAM starting at address
x, for storing data, machine
code etc.

Table 3 General interconversion hints.

DO IT WITH TRANS-EXPRESS

Would you like to transfer your Spectrum programs from

- 1) TAPE TO MICRODRIVE
- 2) TAPE TO TAPE
- 3) MICRODRIVE TO TAPE
- 4) MICRODRIVE TO MICRODRIVE

Then do it with the **TRANS-EXPRESS**

TRANS-EXPRESS will enable you to transfer any
Spectrum program of any size up to the full 480K. It is user-friendly,
reliable and efficient. It goes beyond where similar programs fail.

Just load the **TRANS-EXPRESS** and then follow
simple screen instructions. No matter how many parts your program
has, whether they are headerless or with header, written in BASIC
or m/c, etc, it will transfer them all in one go. You can then verify,
save again or load your next program(s).

For only **£5.50** you could transfer all of your software, provided
you do not infringe copyright.

TAPE TO TAPE

Please send me _____ copies of **TRANS-EXPRESS** at £5.50 each

MACHINE SPECIFICATIONS

ZX80

Dimensions

Width 174mm (6.85 in)
Depth 218mm (8.58 in)
Height 38 mm (1.5 in)
Weight 300g (10.5oz)

Microprocessor/Memory

Z80A 3.25 MHz clock
ROM: 4K bytes containing BASIC
RAM: 1K bytes internal, externally expandable to 16K bytes.

Display

Requires an ordinary domestic black and white colour TV. The lead supplied connects between the ZX80 and your TV's aerial socket. The display organisation is 24 lines of 32 characters per line showing black characters on a white screen. The ZX80 does not connect to a printer.

Programming

Programs can be entered on the keyboard or loaded from cassette. The ZX80 has automatic "wrap round" so lines of program can be any length but not multi-statement lines.

Syntax check

The syntax of the entered line is checked character by character. A syntax error cursor marks the first place the syntax breaks down if there is an error. Once any errors have been edited out the syntax error cursor disappears. Only syntax error-free lines of code are accepted by the ZX80.

Graphics

Total of 22 graphics symbols giving 48 x 64 pixels resolution consisting of 10 symbols plus space and inverses. Includes symbols for drawing bar charts. Under control of your BASIC program any character can be printed in reverse field.

Editing

The line edit allows you to edit any line of program or input including statement numbers. The edit and cursor control keys are EDIT, RUBOUT, HOME.

Arithmetic

Arithmetic operators +, -, x, ÷ exponentiate. Relational operators <, >, =, yielding 0 or -1. Logical operators AND OR NOT yielding boolean result. Relational operators also apply to strings. ZX80 BASIC uses 16 bit two's complement arithmetic (± 32767).

Variables

Numeric variable names may be any length, must begin with a letter and consist of alphanumerics. Every character in the name is compared thus an infinity of unique names is available.

String variables may be assigned to or from, shortened but not concatenated. String variable names are A\$ - Z\$. Strings do not require a dimension statement and can be any length.

Arrays have a maximum dimension of 255 (256 elements) each.

Array names consist of a single letter A-Z.

Control variable names in FOR...NEXT loops consist of a single letter A-Z.

Expression evaluator

The full expression evaluator is called whenever a constant or variable is encountered during program execution. This allows you to use expressions in place of constants especially useful in GOTOs, GOSUBs, FOR...NEXT etc.

Immediate mode

The ZX80 will function in the "calculator mode" by immediately executing a statement if it is not preceded with a line number.

Cassette interface

Works with most domestic cassette recorders. The transfer rate is 250 baud using a unique tape-recording format. Other systems are not compatible with the ZX80's. The ZX80 also SAVES the variables as well as the program on cassette. Therefore you can save the data for updating next time the program is executed. The ZX80 does not support separate data files. The lead supplied with the ZX80 is fitted with 3.5mm jack plugs.

Expansion bus

At the rear has 8 data, 16 address, 13 control lines from the processor and 0v, 5v, 9-11v, \bar{Q} and internal memory control line. These signals enable you to interface the ZX80 to your own electronics, PIO, CTC, SIO if you want I/O ports etc.

Power supply

The ZX80 requires approximately 400mA from 7-11v DC. It has its own internal 5v regulator.

TV standard

The ZX80 is designed to work with UHF TVs (channel 36) and is the version required for use in the United Kingdom. The ZX80 USA is designed to work with a VHF TV (American channel 2. European channel 3) and is the version required for the American TV system, also for countries without UHF.

ZX81

Dimensions

Width 167mm (6.32 in)
Depth 175mm (6.80 in)
Height 40 mm (1.57 in)
Weight 350 gms (12.15 oz)

Microprocessor/Memory

Z80A 3.25 MHz clock
ROM: Containing 8K BASIC interpreter
RAM: 1K bytes internal, externally expandable to 16K bytes.

Keyboard

40 key touch-sensitive membrane. Using function mode and single press key-word system, this gives the equivalent of 91 keys and also graphics mode allows an additional 20 graphical and 54 inverse video characters to be entered directly.

Display

Requires an ordinary domestic black and white or colour TV. The aerial lead supplied connects the ZX81 to the TV aerial socket. The display is organised as 24 lines of 32 characters with black characters on a white background.

Two mode speeds

The ZX81 can operate in two software-selectable modes - FAST and NORMAL. FAST is ideal for really high-speed computing. In NORMAL mode however the ZX81 allows continuously moving, flicker-free animated displays.

Printer

The 8K ROM will permit instructions (LPRINT, LLIST and COPY) to drive the Sinclair ZX Printer.

Programming

Programs can be entered via the keyboard or loaded from cassette. Programs and data can be saved onto cassette so that they

are not lost when the ZX81 is turned off.

Syntax check

The syntax of a line of program is checked on entry. A syntax error cursor marks the first place the syntax breaks down if there is an error. The syntax error cursor disappears when errors have been corrected. Only lines free from syntax errors will be entered into the program.

Graphics

Apart from the 20 graphics characters, space and its inverse, the display may also be divided into 64 x 44 pixels, each of which may be 'blackened' in or 'whited' out under program control.

Editing

A line editor allows you to edit any line of program or input, including program line numbers. Lines may be deleted, increased or decreased in size.

Arithmetic

Arithmetic operators +, -, x, /, exponentiate. Relational operators =, <, >, <=, >=, may compare string and arithmetic variables to yield 0 (False) or 1 (True). Logical operators AND, OR, NOT yield boolean results.

Floating-point numbers

Numbers are stored in 5 bytes in floating-point binary form giving a range of $\pm 3 \times 10^{-32}$ to $\pm 7 \times 10^{32}$ accurate to 9% decimal digits.

Scientific functions

Natural logs/antilogs; SIN, COS, TAN and their inverses; SQR; ex.

Variables

Numerical:

any letter followed by alphanumerics

String:

A\$ to Z\$

FOR-NEXT loops:

A-Z (loops may be nested to any depth).

Numerical arrays:

A-Z

String arrays:

A\$ to Z\$

Arrays

Arrays may be multi-dimensional with subscripts starting at 1.

Expression evaluator

The full expression evaluator is called whenever an expression, constant or variable is encountered during program execution. This powerful feature allows use of expressions in place of constants and is especially useful in GOTO, GOSUB etc.

Command mode

The ZX81 will execute statements immediately, enabling it to perform like a calculator.

Cassette interface

Works using domestic cassette recorders. The transfer rate is 250 baud and uses a unique recording format not compatible with other systems. The ZX81 will save the data as well as the program to avoid the need to re-enter the data when the program is next loaded.

ZX81 will search through a tape for the required program).

The cassette leads supplied have 3.5 mm jack plugs.

Expansion port

At the rear, this has the full data, address and control buses from the Z80A CPU as well as OV, +5V, +9V, 0 and the memory select lines. These signals enable you to interface the ZX81 to the Sinclair 16K RAM pack and ZX printer.

Power supply

The ZX81 requires approximately 420mA at 7-11V DC. It has its own internal 5V regulator. The ready assembled ZX81 comes complete with a power supply. The ZX81 kit does not include a power supply.

TV standard

The ZX81 is designed to work with UHF TVs (channel 36) 625 lines.

ZX SPECTRUM

Dimensions

Width 233 mm

Depth 144 mm

Height 30 mm

CPU/Memory

Z80A microprocessor running at 3.5 MHz. 16K-byte ROM containing BASIC interpreter and operating system.

16K-byte RAM (plus optional 32K-byte RAM on internal expansion board) or 48K-byte RAM.

Keyboard

40-key keyboard with upper and lower case with capitals lock feature. All BASIC words obtained by single keys, plus 16 graphics characters, 22 colour control codes and 21 user-definable graphics characters. All keys have auto repeat.

Display

Memory-mapped display of 256 pixels x 192 pixels; plus one attributes byte per character square, defining one of eight foreground colours, one of eight background colours, normal or extra brightness and flashing or steady. Screen border colour also settable to one of eight colours. Will drive a PAL UHF colour TV set, or black and white set (which will give a scale of grey), on channel 36.

Sound

Internal loudspeaker can be operated over more than 10 octaves (actually 130 semitones) via basic BEEP command. Jack sockets at the rear of computer allow connections to external amplifier/speaker.

Graphics

Point, line, circle and arc drawing commands in high-resolution graphics.

16 pre-defined graphics characters plus 21 user-definable

graphics characters. Also functions to yield character at a given position, attribute at a given position (colours, brightness and flash) and whether a given pixel is set. Text may be written on the screen on 24 lines of 32 characters. Text and graphics may be freely mixed.

Colours

Foreground and background colours, brightness and flashing are set by BASIC INK, PAPER, BRIGHT and FLASH commands. OVER may also be set, which performs an exclusive — or operation to overwrite any printing or plotting that is already on the screen. INVERSE will give inverse video printing. These six commands may be set globally to cover all further PRINT, PLOT, DRAW or CIRCLE commands, or locally within these commands to cover only the results of that command. They may also be set locally to cover text printed by an INPUT statement. Colour-control codes, which may be accessed from the keyboard, may be inserted into text or program listing, and when displayed will override the globally set colours until another control code is encountered. Brightness and flashing codes may be inserted into program or text, similarly. Colour-control codes in a program listing have no effect on its execution. Border colour is set by a BORDER command. The eight colours available are black, blue, red, magenta, green, cyan, yellow and white. All eight colours may be present on the screen at once, with some areas flashing and others steady, and any area may be highlighted extra bright.

Screen

The screen is divided into two sections. The top section — normally the first 22 lines — displays the program listing or the results of program or command execution. The bottom section — normally the last 2 lines — shows the command or program line currently being entered, or the program line currently being edited. It also shows the report messages. Full editing facilities of cursor left, cursor right, insert and delete (with auto-repeat facility) are available over this line. The bottom section will expand to accept a current line of up to 22 lines.

Mathematical Operations And Functions

Arithmetic operations of +, -, ×, ÷, and raise to a power. Mathematical functions of sine, cosine, tangent and their inverses; natural logs and exponentials; sign function, absolute value function, and integer function; square root function, random number generation, and pi.

Numbers are stored as five bytes of floating point binary — giving a range of $+3 \times 10^{-39}$ to $+7 \times 10^{38}$ accurate to $9\frac{1}{2}$ decimal digits. Binary numbers may be entered directly with the BIN function. =, >, <, >=, <= and <> may be used to compare string or arithmetic values or variables to yield 0 (false) or 1 (true). Logical operators AND, OR and NOT yield boolean results but will accept 0 (false) and any number (true).

User-definable functions are defined using DEF FN, and called using FN. They may take up to 26 numeric and 26 string arguments, and may yield string or numeric results.

There is a full DATA mechanism, using the commands READ, DATA and RESTORE.

A real-time clock is obtainable.

String Operations And Functions

Strings can be concatenated with +. String variables or values may be compared with =, >, <, >=, <=, <> to give boolean results. String functions are VAL, VAL\$, STR\$ and LEN. CHR\$ and CODE convert numbers to characters and vice versa, using the ASCII code. A string slicing mechanism exists, using the form a\$(x TO y).

Variable Names

Numeric — any string starting with a letter (upper and lower case are not distinguished between, and spaces are ignored). String — A\$ to Z\$.

FOR-NEXT loops — A-Z.

Numeric arrays — A-Z.

String arrays — A\$ to Z\$.

Simple variables and arrays with the same name are allowed and distinguished between.

Arrays

Arrays may be multi-dimensional, with subscripts starting at 1. String arrays, technically character arrays, may have their last subscript omitted, yielding a string.

Expression Evaluator

A full expression evaluator is called during program execution whenever an expression, constant or variable is encountered. This allows the use of expressions as arguments to GOTO, GOSUB, etc.

It also operates on commands allowing the ZX Spectrum to operate as a calculator.

Cassette Interface

A tone leader is recorded before the information to overcome the automatic recording level fluctuations of some tape recorders, and a Schmitt trigger is used to remove noise on playback.

All saved information is started with a header containing information as to its type, title, length and address information. Program, screens, blocks of memory, string and character arrays may all be saved separately.

Programs, blocks of memory and arrays may be verified after saving.

Programs and arrays may be merged from tape to combine them with the existing contents of memory. Where two line numbers or variables names coincide, the old one is overwritten.

Programs may be saved with a line number, where execution will start immediately on loading.

The cassette interface runs at 1500 baud, through two 3.5 mm jack plugs.

Expansion Port

This has the full data, address and control busses from the Z80A, and is used to interface to the ZX Printer, the RS232 and NET interfaces and the ZX Microdrives. IN and OUT commands give the I/O port equivalents of PEEK and POKE.

ZX81 Compatibility

ZX81 BASIC is essentially a subset of ZX Spectrum BASIC. The differences are as follows.

FAST and SLOW: the ZX Spectrum operates at the speed of the ZX81 in FAST mode with the steady display of SLOW mode, and does not include these commands.

SCROLL: the ZX Spectrum scrolls automatically, asking the operator "scroll?" every time a screen is filled.

UNPLOT: the ZX Spectrum can unplot a pixel using PLOT OVER, and thus achieves unplot.

Character set: the ZX Spectrum uses the ASCII character set, as opposed to the ZX81 non-standard set.

ZX COMPUTING

Lineage: 40p per word.

Semi display: £9.00 per single column centimetre. Ring for information on series bookings/discounts.

SOFTWARE MISCELLANEOUS

SPECTRUM MIC CODERS!

**DON'T READ THIS IF ALL YOUR
PROGRAMS WORK FIRST TIME**

However, the rest of us do make mistakes. But now, you can dramatically reduce debugging time. DIMON is a purpose built monitor that harnesses your M.C. code program. DIMON constantly displays diagnostic information about your program, and allows you to stop, examine, change, and resume processing. Thus you run and debug simultaneously. DIMON features:

- Break key and/or Break points
- Step one instruction at a time, or run continuously
- Change registers/storage at any time
- Keep selected registers/storage on the screen continuously
- DIMON is load address independent (i.e. LOAD's almost anywhere)
- Complete use of DIMON ideal for 16K Spectrum
- Simple to use menu panels (no need to keep flicking through a lengthy manual)
- Slow down/Stop/Trace ROM (See exactly how those ROM routines actually work in action)
- Hex or Decimal input/display
- Diagnoses to any part of screen, or printer
- Switch DIMON on/off at will, jump back to BASIC, & more

All inclusive price of only £9.95
(16K or 48K Spectrum only).
