COMPUTER CHAIN STORES RAPPED

Sales staff are giving misleading advice on computers to customers in some chain stores, it is claimed.

And complaints led Nigel Backhurst, secretary of the Computer Trade Association, to tour 40 stores posing as a customer.

He said most of the 30-40 letters and phone calls to the CTA talked of salespeople who claim-

ed home computers could do more than was possible

But two big groups told Home Computing weekly of their extensive training courses.

Mr Backhurst said: "I was told I could run 5,000 business records on a 16K Spectrum with VU-file

"In another store I was told the computer worked in a

language called English, which will be a surprise to Clvie Sinclair. And they said I could get Prestel and Teletext without add-ons.

"I told one salesman I wanted to run the Wordstar word processing program and he said it would work on a VIC-20 with an expansion memory pack. Now Wordstar needs the CP/M operating system and far more memory than the VIC-20 can run.

"I've had about 40 complaints and about 70 per cent of them have been along these lines."

However, some domestic appliance shops had given helpful service. And in a branch of Wigfalls, where he asked if the ZX81 would help his daughter's education, he was advised to discuss his choice with the girl's school. A junior salesman in Curry's had also been very helpful.

Mr Backhurst said: "The problem seems to be that the industry has grown so fast that training has not been able to keep up."

Now Mr Backhurst is asking for comments from the CTA's 40

It's not so easy, says TV's computer man

Home computers are not as easy to use as the makers claim, says the presenter of the BBC television micro series Ian McNaught-Davis.

In fact, he said: "Micros are bloody hard to use.

"The QWERTY keyboard isn't user-friendly for a start. Look at how long it takes to learn

Nigel Backhurst — touring stores member companies — which includes software houses and retailers — and from shoppers.

He was very concerned about the complaints and said: "It's not causing much damage at the moment but it could eventually do major harm to the computer trade."

"The high street chains are going to have to make a deliberate effort to make sure there are well trained specialist staff on hand."

He would like the association to offer sales training along with a training pack for sales staff.

A spokesman for W.H. Smith said: "What you have just told me is particularly disturbing."

"We have specialist courses at our training centre in Milton Hill, Oxfordshire. And staff don't go just once, but everytime there is a new advance."

"They are like language laboratories — everyone has a computer and there is an expert with them."

"They have to go on the courses before they are let loose on the public. We take these things very seriously."

"The nice thing is that the courses are over subscribed. Girls working in different parts of the stores have asked to go on the courses. One woman in her 40s in now one of our computer experts. Our staff love working on computers."

So far this year 200 people had taken courses and another 200 would take them in the next two-three months. And staff

working in Smith's computer "shops within shops" had a compulsory fortnight of training.

The spokeswoman said: "I can put my hand on my heart and say we offer the best training, to my knowledge."

A boots spokesman said his company's training courses were run by an outside firm. And for highly technical questions, each store had a list of telephone numbers to call for Commodore, Sinclair, Dragon and other companies where an expert was immediately available.

He said: "If anyone has cause for dissatisfaction or complaint then we would wish them to get to the branch or write to us at Nottingham."

VIC-20 package deal saves £110

New VIC-20 package offer, saving £110, announced by Commodore as part of big promotion.

Designed for first-time buyers, limited edition boxed sets, at £139.99 from June 1, contain VIC-20, cassette deck BASIC tutorial and four games. Usual price, if sold separately: £249.99.

Deal prices VIC-20 at £88, although dealers not allowed to split package. Spokesman said promotion, planned for several months, includes £¼m advert campaign.

to type. And as far as programming in BASIC is concerned, when has that been user friendly?

"There is no transportability of programs, except for the most trivial.

"The producer of the series once said to me: 'Mac, do you ever wake up at night and think of people who find a computer in their store-room and say to themselves: What did I do with that?'"

People had to be aware of the hype surrounding computers — "my micro is better than the next one."

He compared the advertisements with those for language courses and said: "Everyone knows it's extremely hard — except for a very few people — to learn a language and it takes a hell of a long time.

"I would compare that with computer programming. But that doesn't mean that you shouldn't try a few words of French or Italian and enjoy your holiday more.

"I suspect that many people buy computers and don't do much with them. They try learning to program and are overwhelmed or just play a few games. Gradually the thrill wears off and they end up on a shelf.

"I suspect that happens to a large proportion of computers."

Mr McNaught-Davis was speaking after addressing the London branch of the British Computer Society.

Commenting on the term "easy to use" he said: "You should translate this as very hard to use, but easier to use than the extremely hard to use micro that preceded to so-called friendly one you were looking at."

He compared most micro manuals with the Bible: "If you started at Genesis and read to the end it's bloody hard to work out the code unless someone explains it to you."

One problem, he said afterwards, which led to disappointments was: "Most of the salesmen can only sell the hardware and not the software.

"To some extent it's like buying a car. You don't say to the salesman: 'Where should I go in this?' 'He would say: 'It's nothing to do with me, cock. Buy a map, go and visit your auntie.' It's the chicken and egg again."

But didn't the TV series make computing seem easy?

Mr McNaught-Davis said:

"Only in the sense that every TV series is misleading — people are not always well-dressed, well-spoken and clean shaven.

"Everybody makes mistakes. Getting it wrong is normal. It is normal to have road accidents and there's nothing you can do to stop them, except make sure people wear seat belts and make the cars as safe as possible.

"It's important to understand what computers can do and how they do it. The best way is to buy a micro and find out."

Mr McNaught-Davis said he was looking forward to the live BBC-1 computer programme he is to present on October 2: "The whole object is that if anything goes wrong you will see it going wrong."

Mr McNaught-Davis is managing director of Comshare, a large computer services company specialising in financial software for big companies.

He stressed that in businesses — from the one-man firm to the largest corporation — computers were becoming "absolutely essential."

However, he said only 10 per cent of his company's programs actually solved problems. The remaining 90 per cent was used to interface with the outside world.

Turning out turtle

Summit Software says its newly-launched version of the LOGO language for the 32K BBC micro, costing £8.50, includes turtle geometry, procedures with parameters, recursion, structured statements and parallel programming.

Summit Software, 96 Toftwood Road, Sheffield S10 1SL

Race by post

Microsonic, a new mail order software house, has produced its first program — Grand Prix for the TI-99/4A at £3.95.

What's new from across the Atlantic

Three items of interest for owners of the Tandy Colour Computer, Atari 400 and 800, VIC-20, and Commodore 64. The first is called *The Color Accountant*, a complete financial package including 10 menu driven features: chequebook maintenance, chart of accounts, cheque search, income/expense statement, net worth statement, colour graph design, home budget analysis, colour payments calendar, mailing list, and decision maker. It comes with a 60-page booklet, and costs \$74.95.

The second item is called *The Magnetic Magazine*. Each issue is said to contain four to seven programs, fully usable and listable. Each issue also contains programming hints and techniques as well as a line-by-line examination of the feature program.

With the eighth issue, a series will start on machine language programming, a database, and so forth. This is only available for 16K Tandy and Atari machines, although a sampler is available for the VIC-20. A year's subscription of 10 issues costs \$50.00 for cassette, \$75.00 for disc. Half-year for \$30 and \$45 respectively. A sample issue is available for \$10 on cassette and \$15 for disc.

The last item is *The Learning Center*. These are programs designed to introduce three- to nine-year-olds to the ease of computer learning through the use of shapes, colours, numbers, and letters. Each program is designed to promote a single skill with rewards being given by the display of a happy face accompanied by music.

These programs will run on all the above machines as well as the Sinclair ZX81 and TI-99/4A. *The Learning Center* costs \$34.95.

A range of educational programs is also available for pre-schoolers and children in the lower grades.

The above packages are available from Programmer's Institute, c/o Future House Dept. D, P.O. Box 3470, Chapel Hill, North Carolina 27514, (6919) 9670861. a catalogue is \$2, plus postage (about \$4).

Interested in locating good hardware and software houses on this side of the Atlantic? If so, send the following folks a letter for more information, and a catalogue: ITM Software Division, attn: Stevan Clouttree, 936 Dewing Ave, Suite E, Lafayette CA 94549-4292, (415) 284-7540.

The company has been running major ads offering all software at one-third off list price. It offers more than 2,000 programs from stock, as well as giving information on what they feel is the best program for your needs. Any program that is not for entertainment is sold on a 30-day risk-free trial basis. They do not have a minimum order, either. Sounds like a very legitimate company for most software needs.

If you are looking for an excellent source of hardware, try Computer Discount of America, 15 Marshall Hill Road, West Milford Mall, West Milford New Jersey 07480-2198. Although it has very good prices on hardware, they also carry a fair bit of software at reasonable prices. Drop them a line for their catalog.

Another excellent hardware house is Priority 1 Electronics, 9161 Deering Avenue, Chatsworth CA 91311.

More from Stateside next week....

Fairfield, California

Trouble over Sinclair ads

Sinclair Research has run into trouble with advertising watchdogs for claiming that the 48K Spectrum is more powerful than the BBC micro.

The Advertising Standards Authority upheld a three-point complaint about a specialist press advertisement from a Co Durham reader.

It featured same-scale pictures of the BBC model A micro and the Spectrum, saying the Spectrum "uses just 14 chips to provide more power and more user-available RAM."

The authority considered the comparison unfair since the small size of the Spectrum had been attained at the expense of many facilities and expansion possibilities available on the BBC computer.

An independent consultant was brought in by the authority to help judge the claim that the Spectrum had more power.

And the ASA decided that, although maximum RAM on the Spectrum was 48K and on the BBC it was 32K, the range and sophistication of commands and speed should be taken into account and the BBC micro scored here.

On the final point, the advertisers pointed out to the ASA that in high-resolution mode the Spectrum had 9K of RAM available to the user and that in the same mode the BBC machine had 3K which was useable.

But the authority said the BBC micro worked with equal ease in four modes and that in mode seven, users had 11.75K of RAM available.

The ASA concluded that the

comparisons conferred an unfair advantage on the Spectrum and noted that there was no plan to repeat the claims.

Two more complaints about advertisements for Sinclair products have been upheld:

- Three people said that, although a leaflet promised delivery within 28 days, they had difficulty getting software. The ASA asked for an assurance that "stringent" efforts would be made to stop this happening again.

- Microdrive storage devices were advertised as "available later this year, for around £50," but two readers said although these advertisements appeared throughout 1982 they had not been able to get them. The advertisers said the claim was made when production was expected in October/November. When the launch was postponed, and magazines notified, it was impossible to amend the remaining advertisements. The ASA also got an agreement that future advertisements would make it clear that a £30 interface unit was required.

- Four other companies are also rapped in the authority's latest report:

- The ZX81 was offered at a "special price" of £49.99 in a national paper advertisement for H. Wigfall & Son, of Sheffield, yet a Bolton reader said the computer was usually priced at below £50.

- A Rank Xerox advertisement offered a free Space Raiders cassette with the ZX81, but when a reader called at the Liverpool branch he found the tape needed a 16K RAM pack to run and that,

Bob Hamilton (with beard) and Paul Dyer — Quest partners

in any case, the game was not in stock. The second complaint was not upheld after the ASA heard that the advertisers thought they had ample stocks, based on their annual forecast. Demand had been far greater than expected.

- The authority's consultant was brought in to help adjudicate on a two-part complaint about an advertisement for the ZX Autocoder by Control Technology, of Hyde, Cheshire, but no longer marketed. In his view it failed to give enough information for anyone to ascertain the nature of the Autocoder. The reader said it provided only mnemonics and not machine code and that it accepted not Sinclair's BASIC and Tiny BASIC. The advertisers said they thought the complainant had considered the program to a compiler — quite different from the product advertised.

- Four people complained about advertisements which described BASIC as "essentially...plain English." The advertisers accepted BASIC commands were not the same as English commands, but said that the adverts pointed out that BASIC was a "simple" computer language and that standard commands were based on English. The ASA considered the description unfounded.

Advertising Standards Authority, Brook House, Torrington Place, London WC1E 7HN

Running into a Black Hole

You can tell when Bob Hamilton, a bearded 27 year old, is dreaming up ideas for new computer games.

It's when he is running across the Welsh mountains or on a hill near his Cheltenham home.

Bob and Paul Dyer, 23, set up Quest Micro Software in February and have just brought out their first cassette, a £5.50 game for the Spectrum called *The Black Hole*.

Paul said: "Bob gets all his inspiration from his running."

And Bob, who wrote *The black Hole* in eight weeks, said: "It's good inspiration to run through the mountains."

"You forget about everything and it enables you to concentrate; it clears the mind."

In Bob's last job he was writing in assembler for defence systems. Paul was a hardware man for the same company.

The idea of forming Quest came after Bob bought a 48K Spectrum as a Christmas gift for his two brothers, Ian, 16, and 14-year-old Darren.

Bob said: "I bought some software and I wasn't very impressed so I started writing some myself. We decided to go into it ourselves. And we've got a very enthusiastic bank manager."

Quest Micro Software, 119 The Promenade, Cheltenham

SPECTRUM/ORIC SOUND BOOSTER

Telesound 84 outputs the computer sound direct through your unmodified TV set. Sound effects then can be controlled from a whisper to a roar. Three easy snap-on connections eliminate soldering.

Telesound 84 measures 2½x2x1½ cm and requires no separate power supply. This unique device (patent pending) uses some of the very latest ultra miniature components and costs only £9.95 inclusive of post, packing, etc.

Full instructions with connection diagrams are supplied so that the unit can be fitted in minutes without any previous experience.

Kenneth's micro voice

Owners of the BBC micro will soon be able to give their computer the voice of newscaster Kenneth Kendall.

He will be heard speaking a vocabulary of 165 items, including the letters and numbers of the keyboard as well as keyboard-related words such as stop, start, correct and incorrect.

Acorn Computers, makers of the BBC micro, are aiming the package at blind and dyslexic computer users, as well as at young children using computers.

According to Acorn's David Bell, whose young son is mildly dyslexic, there is a small but growing market for such applications. He said: "We envisage all sorts of slightly unusual applications developing for the chips".

The package, consisting of a standard speech synthesiser chip and a PHROM (Phrase Read-Only Memory) containing digitised samples of Kenneth Kendall's voice, will cost £55 and will be fitted only by Acorn dealers.

Kenneth Kendall

At the same time as fitting the two speech chips, dealers will — if necessary — add the 1.2 operating system required for the speech system, as well as two sockets to the left of the BBC's keyboard to allow program cartridges to be plugged in. The whole operation should take less than an hour, said Mr Bell.

The digitised sounds stored in the PHROM are converted into audible form by the speech processor chip. Speech will use an extra sound channel added to the BBC's existing four channels, and known as channel - 1.

It will be accessed via the SOUND command in the normal way.

Additions to the speech system will be available on cartridge. Mr Bell said: "It's just a question of when. I suspect it won't be until early next year."

By the fourth quarter of this year, though, a range of games and educational programs on cartridge will be available from Acornsoft.

● First review — see page 20

Acorn Computers, Fulbourn Road, Cherry Hinton, Cambridge

Fresh from America

A big American software wholesaler has opened a warehouse near Heathrow Airport with the promise of 1,800 titles from 150 companies for sale to UK dealers.

And shoppers will benefit from the company's guarantee on all products, said New Yorker Herb Blumstein, managing director of Softsel Computer Products.

Among the titles he had in stock were 50 for the Commodore 64, more than 100 for the VIC-20 and 400 — on cassette, cartridge and disc — for the Atari 400 and 800.

He said: "We are bringing in lines which have not been seen here in any quantity. Now they will be available easily."

Mr Blumstein said he was now looking for titles for computers like the Spectrum and the Dragon to distribute to dealers.

Softsel Computer Products, Central Way, North Feltham Trading Estate, Middlex TW14 0XQ

Put it on paper

A company called Beebprint is offering a mail-order print-out service to BBC micro users. An average listing, from a 1,200 baud cassette, costs £1.95.

Beebprint, 19 Orchard Way, Hurstpierpoint, West Sussex BN6 9UB

K-tel moves into software

K-tel, best known for heavily-advertised record albums, is planning to market computer software.

Financial director Steve Deasey has contacted dozens of software houses. He said: "There has been a fantastic response — I think there's a crying need for an efficient distribution service."

"It's a job that needs doing and we are ideally suited to it."

"At present software distribution is disorganized and fairly inefficient."

"We are prepared to offer a complete or partial deal — we will tailor our service. We will, if required, do everything starting with the master tape and including duplicating, distribution and TV advertising, if it's appropriate."

K-tel, an American company which set up in London 12 years ago, started by marketing

small household goods and moved into albums eight years ago.

The company licenses recordings, packages them, advertises them heavily on television and markets them store by store, saying it can restock within 24 to 48 hours. It supplies chains like Boots, W.H. Smith and Woolworths.

Would K-tel market software under its own name, too?

Mr Deasey said: "Probably not at this stage — but in the foreseeable future. And it would not be on a single product basis, like records. We are not going to hire programmers. If a programmer comes to us ... well, that's completely open."

As a world-wide company, Mr Deasey said, K-tel could simplify software exporting. He said: "I've been in touch with our Australian company and the market there is a pirate's paradise."

K-tel, 62 Western Avenue, London W3 0TU

You could be on our pages

We welcome programs articles and tips from our readers.

PROGRAMS should, if possible, be computer printed to a width of 48 characters (use a new ribbon) and/or sent on cassette. Check carefully that they are bug-free. Include details of what your program does, how it works, variables you have used and hints on conversion.

ARTICLES on using home computers should be no longer than 2,000 words. Don't worry about your writing ability — just try to keep to the style in HCW. Articles most likely to be published will help our readers make better use of their micros by giving useful ideas, possibly with programming examples. We will convert any sketched illustrations into finished artwork.

TIPS are short articles, and brief programming routines which we can put together with others. Your hints can aid other computer users.

Competitive — rates are paid.

Keep a copy of your submissions and include an SAE if you want them returned. Label everything clearly and give a daytime and home phone number if you can.

Paul Liptrot, Home Computing Weekly, 145 Charing Cross Road, London WC2H 0EE

You'll find a complete spectrum of software at W.H. Smith.

The range of software available for the Sinclair Spectrum is to say the least, extensive.

So every month at W. H. Smith, we review the range with particular reference to presentation, challenge, excitement and value for money. And because we're quite severe it's a difficult job finally to arrive at a Top Ten. But as you can see, not impossible.

You don't have to take our word for it.

At W. H. Smith we stock the widest selection of Spectrum Software, so you can judge for yourself.

Spectrum joins Micronet 800

Spectrum owners can join Micronet 800 from July 1. And the two-month delay will have been worthwhile, said managing director Richard Hease.

Instead of plugging the phone handset into the rubber cups of an acoustic coupler, there will be a more reliable modem with a cable leading to the phone's wall socket.

Reached through Prestel, Micronet plans to offer Spectrum users 100 free programs — from games to utilities bulletin boards, buyers' guides, prize games, news, user group information and electronic mail.

Commercial software can be bought off the screen at about one-third off. And all of Prestel's pages can be called up.

The first 10,000 subscribers pay £54, or £49 if they use BBC micros. But since there are soon likely to be 17,500 BBC Micronet users and a Spectrum waiting list, the reduced price offer will be available to about 6,000 more subscribers.

After that the initial cost will be £89.50.

This buys the modem, with the Telesoftware in ROM, lead, instructions, and directory and registration by Prestel which will supply a password.

The quarterly £13 fee for home use — £8 to Micronet and £5 to Prestel — is added to the phone bill. But there is no computer charge between 6pm and 8am on weekdays and all day at weekends. Outside these hours the charge is 5p a minute.

Mr Hease said the modem, with its Texas Instruments ROM chip, would fit neatly under the Spectrum, being the same width and depth. It was an inch high at the back and sloped forward.

The plug fitted into the Spectrum's user port and then cables connected to the TV, power supply and phone socket. British Telecom will fit new-style sockets in homes with older wiring.

Micronet had planned to bring out the hard-wired modem later but, said Mr Hease: "We thought we would move straight to the chip, which is a lot more reliable."

"It's better than the BBC acoustic coupler in my opinion. You can download the screen on-

Richard Hease

to the ZX Printer and by having the telesoftware in ROM you are not interfering with the memory. So when you download you don't wipe any memory."

Micronet's editorial manager David Babsky said an earlier version of the operating software gave background colours and flashing which the company was not happy with. Now they were satisfied with the screen quality.

The Spectrum modem also gives the screen 40 columns with full Prestel graphics instead of the computer's usual 32 columns. And pages for transmission using the mailbox feature can be written with Micronet disconnected.

Mr Hease said the price of the modem meant business people could have fully-fledged Prestel terminals on their desks for less than £190, with the 16K Spectrum at £99.95, which would become even more useful after September when the Telex facility was due to start.

The modems would go on sale in retailers from August 1 and a first order was for a batch of 5,000.

Micronet was set up by a publishing group, British Telecom's Prestel staff and high street distributors Prism Microproducts and has signed a seven-year extendable deal with Prestel.

As well as the BBC micro, the other computers which can now use Micronet are the Commodore 3000, 4000 and 8000 series, TRS-80 models I and III and the Research Machines 380Z, which is used mainly in schools, with Apple due at the end of this month.

Siicon, the BP subsidiary which wrote the Spectrum telesoftware, is now working on a similar project to allow the Dragon to use Micronet.

Micronet 800, 8 Herbal Hill, London EC1R 5JB

Why do women write off the micro?

On first seeing a column entitled One Man's View, I immediately wondered: why assume that a column about computing is written by a man? No doubt this makes me sound like a rabid feminist — I'm not. It does seem to be a fact that on average, women don't like computers.

Why this should be is a mystery to me. The things are, after all, useful; they play an increasingly important role in our lives; and above all (as any kid with a pile of software cassettes will tell you) they are fun.

I bought a ZX81 from W. H. Smith's shortly after they began to sell them. While chatting to the (male) assistant, I found that I was one of the very few women who had shown an interest in the machine. Practically all the other buyers had been men, and certainly the demonstration machine in the shop was always surrounded by a jostling group of small boys.

Later on I took my son to one of the ZX Microfairs in London. Again, it was obvious that the bulk of the crowd was made up of young boys accompanied by their fathers. Hardly a girl in sight. I think I read somewhere that someone did a rough survey of the figures and found that there were around six hundred boys to each girl. Why?

Most schools now have micros for pupils to use, and presumably both boys and girls have equal access to them. But how many of the programs submitted to computing magazines are written by girls? Even my son seems to take it for granted that girls aren't interested in computers.

Why should this be? Are most women inherently incapable of understanding or enjoying an interest in computers? I find this hard to believe. So does society condition women to think that the subject is either beyond their capabilities, or should not be one of their interests? Atlas, it seems that this may be so. Here are some of the replies I got from my female friends when I questioned them on this topic:

"The maths teaching I received was inadequate, so I don't understand the language involved. I feel threatened by something I don't understand". Apart from the fact that no great maths skills are needed to understand or use a computer, I'm sure many people use artifacts such as TV, cars, telephones etc without fully understanding how they work: does this make them feel threatened too?

"I don't like sophisticated gadgets: they seem unnatural. We should try to keep things simple." This seems to imply that women are basically more "natural" than men. But does a subtle or sophisticated mind — which can belong to either sex — mean that its owner lacks humanity?

"I don't like computers because I don't like things that can do something I can't." So does a nutcracker, if you think that's important.

All of which leaves me still with a singular lack of understanding about why, on the subject of computers, there should be such a difference between the sexes. I don't believe that women are inherently less capable than men in intellectual pursuits, so is it a matter of conditioning? Fashion? Or the kind of publicity given to computing? Why don't men say they dislike computers for the same reasons?

THE NEW AND UNIQUE C.A.D.* PROGRAM FOR THE BBC MICRO (32K)

* COMPUTER AIDED DESIGN (Available on Cassette or Disc)

AT A VERY AFFORDABLE PRICE

Ideal for teachers, designers, artists, technical drawing and numerous other applications including your own form and stationery design etc.

This program must be seen to be appreciated – your imagination is the only factor to limit its individual applications.

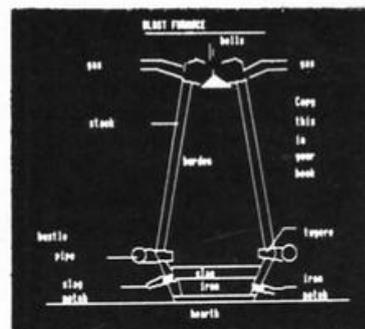

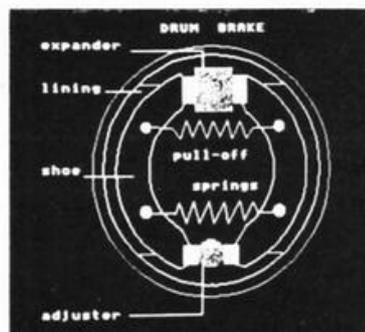

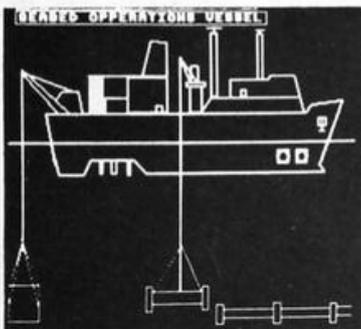

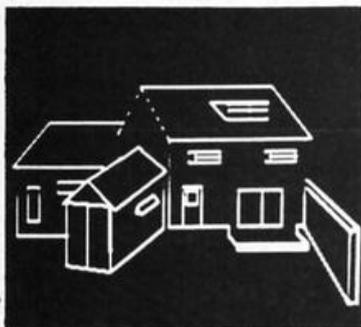

- Modes 0,1,2,4,5 (can be changed when program is running).
- Multiple display of arrays enables infinite complexity.
- **FUNCTIONS:** Line, rectangle, triangle, circle, text (upper and lower case) and colour pallet (8 colours and flashing).
- **DRAWING AIDS:** Alignment grid, circle copy, delete, free memory, purge memory, variable cursor speed, clear screen and redraw.
- Shapes can be filled or outlined (no need for Fill Routines).
- Save and load to tape in about 20 seconds, or to disc in 2 seconds.
- **SPECIAL FACILITY** – Rubber band mode – A very flexible and variable line drawing facility – must be seen.
- Free "redraw" routine to enable the pictures created to be displayed in your own programs.
- The disc version allows screen saves, which take approx. 3 seconds.

Recommended by BBC Micro User.

- Future developments will include processing packs which will provide additional features such as arcs, ellipses, air-brush, printer dump and many more. Cassette users may purchase an additional cassette containing these features, but disc users will be able to return their disc which will be upgraded to the latest specification, and the user will only be charged the difference between the two versions.
 - GRAFSTIK (joystick cassette version) **£7.95**
 - GRAFKEY (keyboard cassette version) **£7.95**
 - GRAFDISC (combines both on one disc) **£12.95**
- (the examples shown are all unretouched off-screen photographs of some of the program's capabilities).

Virgin: We don't poach

Some programmers have deserted their software companies to sign with newly-launched Virgin Games, soon to release its first eight titles.

Nick Alexander, boss of the new company, said: "I was very surprised when they approached us because we don't poach — we don't see the need to. It's not necessary or desirable."

"We have not gone out to drag people away."

"We are not offering massive royalty rates. People have come to us because they feel we will offer a better job and will sell more."

"The software houses do not seem to bear us any ill will, which I'm very pleased about. I'm not getting threatening phone calls."

Mr Alexander, 27, said only a few of his freelance programmers had been with other companies; most were new talent.

Mr Alexander was recruited from Thorn EMI Video Programmes to set up the new company three months ago and given a £1m budget by millionaire Richard Branson, head of the Virgin empire.

It was started as a discount record store 10 years ago and now the group includes 30 stores — several of which are franchises — recording studios, book publishing and video cassettes.

Virgin Games' first eight titles have a provisional release date of June 14, followed by more in September and October.

Mr. Alexander said: "I'd expect we would have 30 by the end of the year. But as time goes by the shelf life of games will shorten so it won't be a cumulative catalogue."

Sales are being headed by Lawrence Kaye, who has just left Virgin Records where he dealt with retail sales in the West End of London. Will the same marketing techniques be used for software?

Mr Alexander said: "It would be a mistake to treat them exactly as records, but there's a lot to be learned from that sort of marketing."

The eight June releases are for the Spectrum, BBC micro model B and the VIC-20. The Spectrum four are an arcade game, a sports simulator, a space adventure with graphics, and what Mr Alexander describes as "a new sort of game which might appeal to people who are fed up with 'zap-em' games."

There will be one arcade game for the VIC-20 and three games for the BBC micro: an arcade game, a space adventure with graphics and an action adventure.

Virgin Games, 61/63 Portobello Road, London W11 3DD

Spectrum of sound

You don't need to be a musician to compose music, says David Gordon, of Bellflower Software which has launched Music Maker, a £5.75 tape for the 48K Spectrum.

It uses the computer's BEEP command to make sounds and shows it in usual music notation.

The program will play and print melodies in 11 different keys, each with a choice of 12 time signatures and 10 speeds.

Tunes typed in from sheet music or composed straight onto the screen can, said Mr Gordon, be SAVED on cassette and LOADED replayed at any speed.

Bellflower Software, 6 Rosewood Avenue, Greenford, Middx

Micros netted

Six Oric-Is, two Colour Genies and an Apple, total value £2,600 with software, have been stolen from Harran Computers, of Bury St Edmunds.

Tapes for toddlers

A big magazine company is to bring out software tapes for toddlers.

Dr Linda Deer, who has been appointed to head the project, said the accent would be on enjoyment for children of three to six: "It should be a fun experience or the child would not get anything out of it."

"Our software will be for those people who think there's more to life than Space Invaders."

Dr Deer, an American in her thirties, was the editor of 30-Hour BASIC by the National Extension College before she joined the National Magazine Company, publishers of magazines which include Good Housekeeping, Cosmopolitan, Company and She.

She expects the first six in the series to be out in the autumn, probably for the Spectrum and BBC micros, both of which are bought by schools with cash aid from the Government.

The aims will be to complement school work and prepare pre-school children for school.

She expected that would also give parents more confidence with computers.

Dr Deer said two teams were

working on the project — one a group of programmers and the other formed of teachers.

National Magazine Company, National Magazine House, 72 Broadwick Street, London W1V 2BP

TI joysticks

Owners of the TI-99/4A computer can now use joysticks by Atari — and a range of other makers — with a £12 adaptor, says supplier Graham Micro Accessories. An adaptor for two joysticks costs £16.

Grahame Micro Accessories, 3rd floor, 11-13 Long Street, London E2 8HJ

Spectrums 'to double'

Sinclair managing director Nigel Searle believes 600,000 Spectrums will be sold world-wide in the next 12 months — double the sales in its first year.

He was speaking after his company cut the prices of both Spectrums to £99.95 for the 16K model and £129.95 for the 48K version and brought the price of the ZX Printer down from £59.95 to £39.95.

Sinclair Research, Stanhope Road, Camberley, Surrey

NewBrain prices cut

Prices of the NewBrain micro have been slashed by £25 to keep up demand until the CP/M operating system — used mainly for business software — goes on sale.

And maker Grundy Business Systems is also including a free income tax guide on tape, worth £18.40, as well as its beginners guide and £7.95 demonstration tape.

Until the end of the month the NewBrain A costs £244 and the AD model, which has a liquid crystal display, is £274.

Sales boss Keith Beverton explained the reason for the price-cutting: "We geared up our production because of the demand for CP/M — but it's not available yet."

"We have mistimed it slightly. It's six weeks out of phase, but to get within six weeks is not bad."

Most of the CP/M operating system will be on ROM in a floppy disc controller due in June/July at £120. The remaining 20 per cent will be loaded from disc, costing £29 with the manual and licence.

At the same time Grundy will be offering a 5¼in floppy disc drive at £195 and made by TEAC. It will give double density storage of 200K on one side of the disc.

The power supply, to run computer, drive and controller will cost £50.

Soon afterwards a double-sided double density drive with 800K of storage will be available, costing £355 and also made by TEAC.

NewBrains have 32K of RAM — or 29K if using high resolution — and Grundy is launching a plug-in module giving an extra 64K, pageable under CP/M, plus adding a parallel printer port to the serial port already installed.

It will cost £200 and, said Mr Beverton, will mean that with CP/M the entire range of Peachtree software would run on NewBrains.

He described the NewBrain as "the thinking man's micro" and said Grundy was bringing out a series of fairly intellectual games.

He believed users were serious hobbyists and business or professional people who used the

NewBrain at home to gain experience of BASIC and graphics and it then went to the office to become the heart of a business system. And this would be heightened now CP/M was to be available soon.

Grundy was expecting to have 47,000 users within the next 12 months.

Grundy Business Systems, Elmtree Road, off Standley Road, Teddington, Middlesex TW11 8TD

16K Oric's . . . at last

Long-awaited 16K Oric-1s should now be ready for despatch to customers who ordered them by post, said Oric Products. And the company has also brought out the first five of a series of specially commissioned programs.

Mail order customers who ordered the 16K model were sent the 48K version on loan because of problems with the cheaper version.

Now they are being told they can either keep the 48K model for £127.50, a discount of 25 per cent, or return it for replacement with the 16K version.

Oric Products is no longer selling its computers by post, although Tangerine still runs mail order. Oric sales director Peter Harding said after the remaining mail order commitment had been met most available 16K Oric would be shipped overseas to meet the "enormous demand."

This meant 16K models would not be in the shops until July. Prices were still being discussed.

The five software titles, all for the 48K Oric, are Oric Multigames, five games on one cassette, Oric Flight, simulating an aircraft landing, and Zodiac, an adventure game, all at £7.95, and Oric Chess and Oric Bases, a data management program, both at £9.99.

All five are available from dealers, said Oric.

And the promised FORTH language tape will be available "shortly" at £17.95, including manual.

Oric Products International, Coworth Park, London Road, Ascot, Berks SL5 7SE

Fore! But Mr Spectrum just can't play the game

It's no fun being a caddie when Mr Spectrum plays golf. You'll find out why when you type in Ranjan Bhattacharya's game

You have been employed as a caddie to Mr Spectrum. The trouble is that Mr Spectrum is a terrible player, but he just won't give up trying.

His shots are usually so bad that the ball nearly always ends up on the opposite side of a busy road.

And, as caddie, you have got the job of crossing the road to retrieve the stray golf ball and return it to him.

You are given 500 points for picking up the golf ball and a further 1,000 points for returning it to Mr Spectrum.

He is, however, rather mean. He has warned you that if you manage to get run over he will not be bothered to take you to hospital more than five times.

How it works

Most of the game is in sub-routines which are called when needed. These are the main blocks of the program:

- 10-78 initialise variables, check for key input and update score accordingly
- 80-85 set up bottom half of screen
- 90 checks for collision between caddie and car
- 100-499 scrolls cars left and right checks whether ball has been picked up or returned
- 550 sound for collision with car
- 7000-7090 prints top half of screen
- 8000-8990 initialise strings to hold traffic
- 9000-9095 set up all the user defined graphics
- 9500-9797 general messages and prompts displayed at various stages in the game
- 9900-9920 introduction
- 9950-9999 instructions

What a pity — Kim Mills, 21, will not be joining you on the golf course

Hints on conversion

To convert Caddie to run on most other computers all that is really needed is to alter lines 110 and 120 using LEFTS and RIGHTS so that AS and BS are moved one place to the left or right.

All lines using INKEY\$, particularly lines 60 and 70, should be modified using the GETS command.

The colour commands BORDER, INK and PAPER and the commands INVERSE, FLASH and BRIGHT can be omitted or replaced by equivalent commands depending on your machine.

BEEP should also be omitted or replaced with a similar sound command. SCREEN\$ should be replaced by a small sub-routine which will do the same job.

You move around the screen by pressing:

- 5 to move left
- 8 to move right
- 6 to move down
- 7 to move up

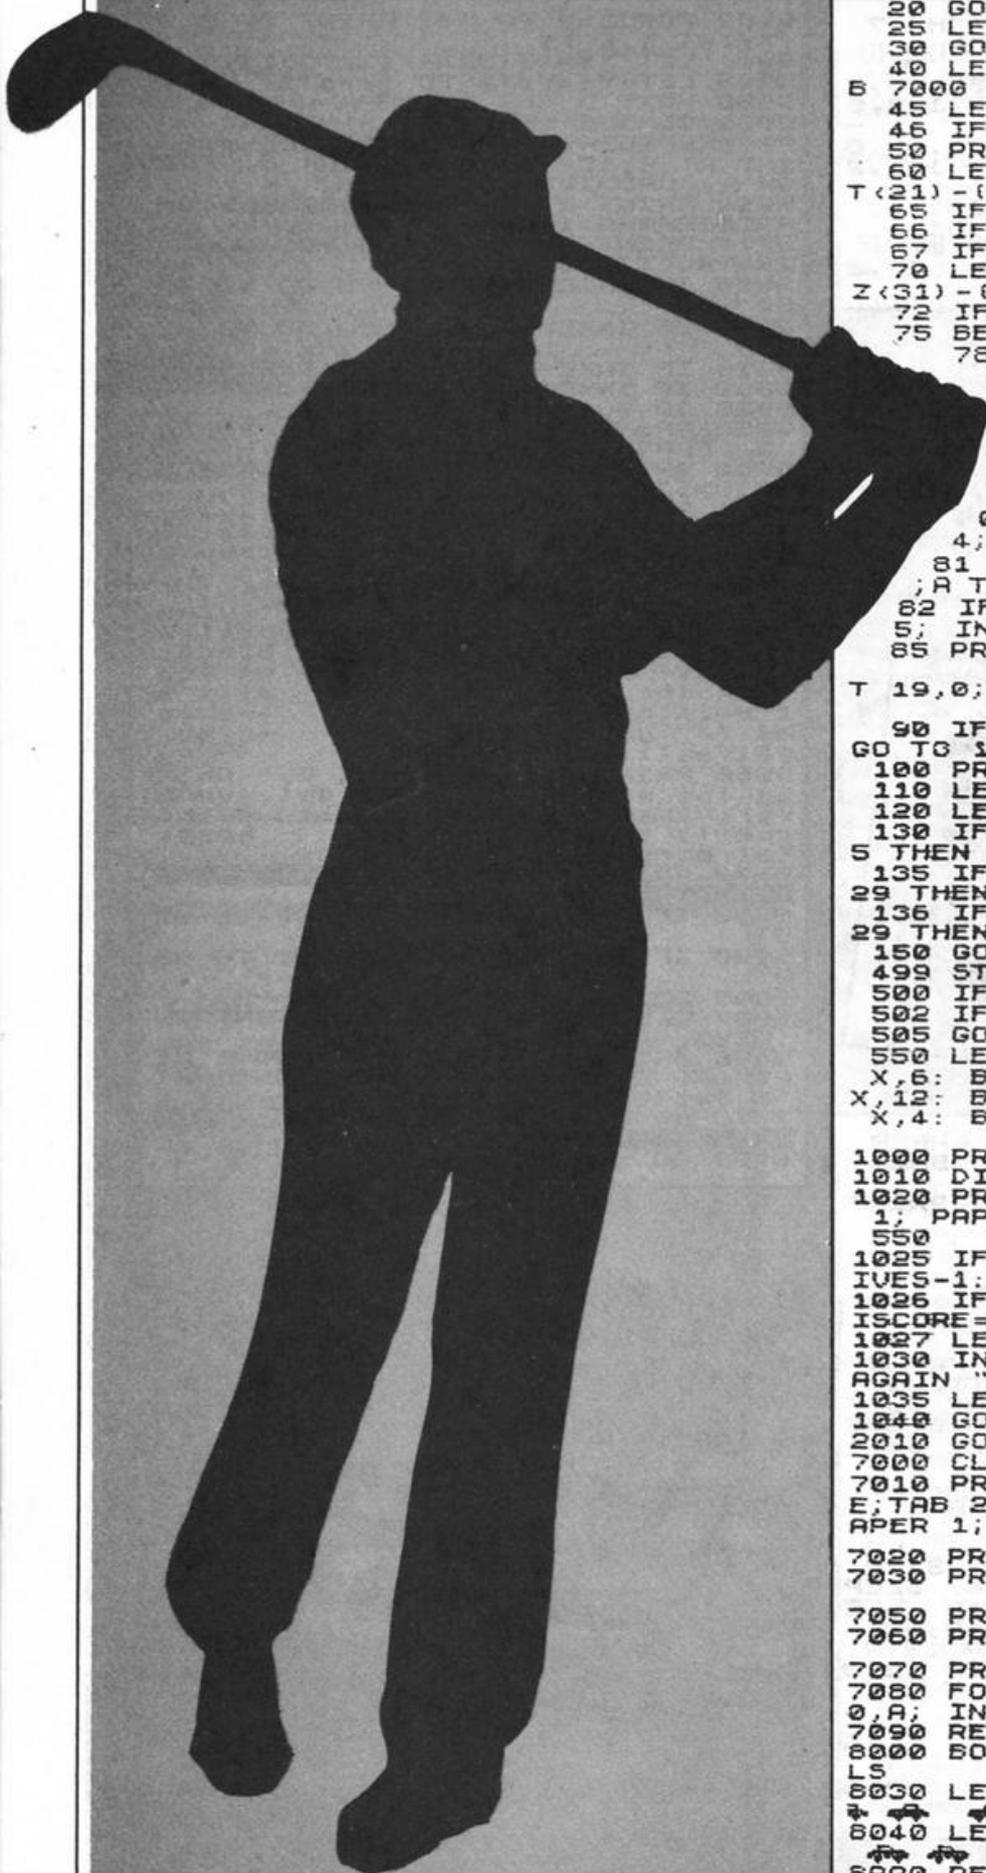

The difficult to read inverse words in the last part of the program are "CADDIE", "PRESS C TO CONTINUE" AND "PRESS S TO START."

Variables

- VT vertical co-ordinate of caddie
 - HZ horizontal co-ordinate of caddie
 - BALL checks whether golf ball has been picked up and also prevents cheating
 - SCORE score
 - HIScore highest score
 - CS array used to check whether caddie collided with car
 - LIVES lives left
 - AS/BS strings to store cars
- Some other minor variables are also used.

Line 110 moves whatever is stored in BS one place to the right and line 120 moves whatever is in AS one place to the left. I have used this technique both for the cars and again in lines 9900-9920 to move the word CADDIE left and right across the screen at the beginning of the game.

PROGRAMS FOR THE DRAGON 32

MONSTER MINE By W.E. MacGowan

Escape from the mine with as much money as you can, but don't get closed in or caught by the prowling monsters. An addictive machine code game, with superb graphics and save facility.
Price£7.95

GOLF by Pete Allen

Over 20K of Basic giving you full 18 hole golf course with handicaps, choice of clubs. Golfing weakness must be specified. Full colour graphics and sound, including score card
Price£7.95

SPACE MISSION by W.E. MacGowan

Launch from lunar base, fight your way through the asteroid belt to do battle with the enemy fleet. Multi-level space combat game, sets new standards in graphic excellence and attention to detail
Price£7.95

CHARACTER GENERATOR by John Line

A program for the programmer, allowing creation and saving of character sets/shape tables and subsequent inclusion into users basic program. Demonstration program and full ASCII character set included.
Price£9.95

GAMES PACK I

SPACE WARS by John Line A game for two scout ship pilots
SHEEPDOG by Erik Pattison Pen the wayward sheep, if you can!
TORPEDO by Erik Pattison Sink the enemy fleet
SNAKE by Chris Hunt Eat the food but not your self
Price£7.95

GAMES PACK II

LANDING by Peter Chase A 3-Part flight simulator
HANGMAN by Chris Hunt The old favourite, with lots of words
SPEEDBOAT by Peter Chase Hit the markers, but not the bank!
BATTLESHIPS by C. Castle A classic game, with a difference
Price£7.95

GAMES PACK III

REVERSI Pit your wits against the Dragon with this easy to learn yet extremely demanding game. Five skill levels from novice to grand master.
PONTOON An excellent implementation of a favourite card game in full colour with sound. Dragon is a mean Banker.

ORDER NOW!

New Super JRS Software Competition!

for DRAGON 32, VIC-20, and BBC programs — ENTER NOW and

WIN £250 PLUS

A 14" COLOUR T.V.

Second prize of £150, 3 Third Prizes of £50 each.

As an added bonus, JRS Limited may offer you a substantial cash payment for the distribution rights to your program, even if you do not win a prize. To be eligible, you must own the copyright to the entry, and it must not be already marketed in the U.K. or Overseas. Entries are restricted to U.K. residents only, and must be received by **31st July, 1983.**

All programs submitted must be accompanied by an official entry form available from JRS Software Limited, which contains full details of the rules and conditions of the competition.

Fill in the coupon below to JRS Limited Summer Competition, and post it today and enclose a large stamped addressed envelope.

ZX SOFTWARE COMPETITION RESULTS:-

1st Prize — K. D. Pridmore, Ilkeston, Derby.
2nd Prize — D. A. Elliott, Ulverston, Cumbria.
3rd Prizes — N. Beer, Longdown, Exeter; K. R. Browne, Wakefield, West Yorkshire; W. I. Cooksey, Harlton, Cambridge.

Please send me an entry form for the Super JRS Summer Competition.

Here is the BBC micro news . . . with a digitised Kenneth Kendall

Speech was a goal of the computer scientist long before "micro" became a household word.

Acorn's latest expansion for the BBC micro has in no uncertain way achieved that goal and brings science fact one fairly substantial step closer to science fiction for the BBC micro user.

To make the micro speak, a minor operation is required to install the necessary vocal cords. This can be carried out at an authorised Acorn dealer for £55.

Included in the price is the addition of the cartridge ROM facility. Although the most important part of the upgrade only entails plugging two integrated circuits into sockets on the main printed board, the BBC user will not be able to carry out this upgrade himself as slight modification of the PCB is required on earlier versions.

The other part of the expansion entails fitting two sockets and modification of the keyboard PCB. The large hole in the case to the left of the keyboard will be opened up and a proper cover fitted to gain access to the new sockets below.

This will allow cartridge ROMs containing programs or extra vocabulary for the speech synthesis unit to be plugged in when they become available.

The speech synthesis and cartridge ROM upgrade will only function correctly with operating system 1.2 and this, if not already fitted, will be provided at no extra cost by the dealer.

Having only heard the tinny American computer voices before, I was impressed by the clarity of the BBC Micro's new voice with a digitised Kenneth Kendall lending it a most acceptable English accent.

The secret behind the clarity and tone of this new voice lies in the two chips fitted during the upgrade.

The first is a Texas TMS 5220 Speech Processor, almost a microprocessor in its own right, and the 16K PHROM (PHrase Read Only Memory) containing

In another first for Home Computing Weekly, reviewer John Waterhouse fitted and tested the new speech chips in his BBC micro. This is what he thinks of the result

all the data for the speech processor to work on.

The PHROM, the first of 16 that will eventually be available, stores enough information to reconstitute 165 words or word-parts. These words have been created from original recordings made by Kenneth Kendall, the BBC newsreader.

There are three ways to access the speech synthesis unit but the easiest is from BASIC using an extension of the SOUND command, for example, SOUND-1,179,0,0 speaks "computer".

The -1 identifies which PHROM is to be read, the 179 selects the word or word-part from within the PHROM and the two trailing zeroes maintain the syntax of the SOUND command.

It is also possible to use ASCII codes within the SOUND command.

SOUND-1,ASC E,0,0

speaks E (ee)

SOUND-1,ASC e,0,0

speaks -ED (ed)

A great deal of thought has gone into the content of the first PHROM (PHROM A) and I par-

ticularly like the logic behind the attributing of certain words to ASCII codes, for example says "small", says "large", a full stop says "point", and there are many others.

All the ASCII codes from 32 to 126 speak associated words or sounds and this may be clearly demonstrated by my very simple program 1.

This speaks as each key on the keyboard is pressed.

Although there are only 165 separate words or word-parts in the PHROM, with a little ingenuity a far greater range may be created.

The voice synthesis unit may be equally as well controlled from within assembly language programs by use of the OSWORD and OSBYTE calls.

OSWORD with A=&07 gives the equivalent of the BASIC SOUND command. The OSBYTE calls on the other hand allow the advanced machine code programmer to read and write directly to the speech processor.

Both of these methods rely on information stored in the PHROM but the system allows the user to create his own words and sounds in RAM and then put the speech processor to work on these.

This, though, may not be a particularly practical idea, as to store even a short word such as "zero" requires 144 data items to be stored in RAM.

Cartridge software will no doubt soon become available but this will only be of use if the speech synthesis upgrade has been fitted as the speech processor will be needed to translate data in PHROM into code useable by the computer.

Finally, to demonstrate just how easy it is to use the new expansion, my program 2 is the first piece of published software for the BBC Micro to speak for itself! It is a short PROCEDURE that may be added to most games programs to speak the score.

NO. 1 FOR THE DRAGON

DRAGONWARE CATALOGUE

The Dungeon stocks the widest range of Dragon 32 software in the U.K.

Send for our 30-page Dragonware Catalogue (50., refundable on first order — free to Club members) *Latest games:* 'Donkey King' £8.00, 'Colorpede' £8.00, 'Talking Android Attack' £8.00, 'Missile Defender' (Tiger Software) £5.75, 'Strategic Command' £9.99. *Latest Books:* 'Dragon Extravaganza' £5.50, 'Making the Most of your Dragon' £5.95, 'Advanced BASIC for the Dragon' £6.95.

Latest Utilities: DASM Assembler £18.95, Hi-Res Machine Code Cartridge (51 x 24 screen, 10 character sets, hi-res text, sprites, etc.) £25.30, Dragon FORTH AND Tutorial £18.95, Telewriter £49.95, Dragon Doodles & Demos £5.00.

DRAGON STICKS!

Top quality double potentiometer joysticks for the Dragon owner who demands arcade action. Ultra-sensitive, but tough and reliable, Dragon Sticks will keep on zapping when others fail! £19.95 per pair inclusive VAT and postage.

DRAGON OWNERS CLUB

The Dungeon is also the home of the largest Dragon Owners Club in the U.K. (or, since members are scattered through Europe to Africa and the Middle East, should we say "the world"!)

The Club magazine, "Dragon's Teeth", is published monthly and includes news, reviews, advice and information exchange for dedicated Dragon-bashers. Free members' adverts, monthly offers (some members have already saved the cost of their subscription), competitions and, for extrovert Dragonards, badges and bomber jackets!

Annual Membership: £6.00 (£8.00 overseas). Six-month Trial Sub. £3.25 (£4.25 overseas.)

HCW10

Spectre

48 K SPECTRUM

ELECTRONICS

£6.95

Ever built a digital electronic circuit that didn't work? Now you can draw your circuits on the T.V. screen using standard symbols. (57 defined graphics are used). Wires may be interconnected or crossed and individual components may be rotated as required. Addition of earth and power symbols allows the computer to activate your circuit to display voltage levels throughout. Design may be activated, modified, re-activated, printed or saved on tape.

NUMERIC

£6.95

Solves any equation with single unknown and/or plots its graph. This may be rotated through 90 degrees and the axes subsequently varied to suit. Solves right-angle triangles, simultaneous and quadratic equations. Produces standard deviation, arithmetic mean and coefficient of correlation of lists plus deviation curves. All displays can be sent to the printer.

SHARES

£6.95

Stores daily prices of up to 20 shares/investments for a year. Displays graphs of performance over last year, 200 days or 12 days plus written data such as holdings, original and latest prices, percentage variation and equivalent annual variation. Holdings can be manipulated, bought and sold at will.

NUTRION

£6.95

Far more than a diet book. Builds up a profile based on your physique and lifestyle then monitors your food intake. It will advise, not only on calorie intake and ideal weight, but your personal requirements and any tendency to become deficient in vitamins, minerals etc. Offers advice on foods to correct the balance. Detailed information on all foods held in memory can be accessed at will. Operates in metric and imperial units.

These programs are exceptionally user friendly and have all been written in consultation with professionals in their respective fields. They all have comprehensive written instructions and are fully guaranteed. Dealer enquiries welcomed.

Let's get serious

SOFTWARE REVIEWS

Our panel takes a look at three programs designed to let your micro do a useful job. Find out whether they're invaluable or dispensable

Listfile Spectrum £10

G&J Bobker, 29 Chadderton Drive, Unsworth, Bury, Lancs

Listfile is a utility data filing program offering storage of about 50 records with 16K RAM, or 600 with 48K. Its most attractive feature is a machine code search routine which can locate records very quickly. But beyond that, there is little to recommend the program.

Despite misleading load instructions, the program loaded everytime with LOAD "". Also misleading is the terminology used; records are called 'blocks' and fields, 'lines'.

The program is inflexible; each block has a fixed number of eight lines. There is no way of labelling lines, nor are they numbered, so it's easy to enter data in the wrong order.

There is an extra line called 'infoline' which will appear on the screen, but not on the printer when a hard copy is requested.

Each line has a maximum of 26 characters. Enter more, and the line is rejected, and the screen display disrupted!

Blocks can be added or deleted, but not edited. So if you make a mistake on entry, or wish to modify later, the block has to be deleted and re-entered. While the search option is fast, it only operates on certain lines.

The 16K and 48K versions differ slightly. Both are provided on the same cassette. Files from one version cannot readily be transferred to the other.

The machine code 'search' adds a little sparkle to an otherwise mediocre filing program.

Dungeons Of Intrigue 48K ORIC-1 £5.50

A.S.L. Software, 66 Fford Llywelyn, Little Acton, Wrexham, Clwyd

Dungeons Of Intrigue is, as the name suggests, yet another reworking of the Dungeons and Dragons concept. As such you would expect a game that both entertains and offers some original ideas. Unfortunately this game does neither.

You start off by choosing and equipping your character in the usual manner. The scenario is similarly predictable: you must find a long-lost Magical Rod which is somewhere in a monster-ridden dungeon.

The display consists of a 5X5 block showing you and your immediate surroundings. All commands are abbreviated to a single letter, which certainly speeds up the game, but the twelve options offered are not enough to make things interesting.

On the presentation side the game is very sloppy. Much of the text is badly spaced, and some messages vanish or scroll off the screen before you can read them.

All in all, this game appears to have been very hastily written, with almost no attention to detail.

Grafdisk, Grafkey, Grafstik BBC B cassette £7.95 disc £12.95

Clares, 222 Townfield Road, Winsford, Cheshire CW7 4AX

These programs are described as a cheap entry into computer aided design. This is quite a task and how well did they fare?

First, an outline of the series. Grafkey is a keyboard-driven graphic generator program. It allows you to draw lines, rectangles, triangles and circles on screen. These can be lined or filled in up to eight colours plus eight flashing colours.

The resultant pictures can be saved to tape quite quickly, in about 20 seconds.

One nice facility is the Rubber Banding mode, in which up to four points can be stretched about the screen.

Grafstik is similar in function to Grafkey, but is driven by a joystick.

Grafdisk combines both programs, and has the advantage of faster save and load facilities — about two seconds faster!

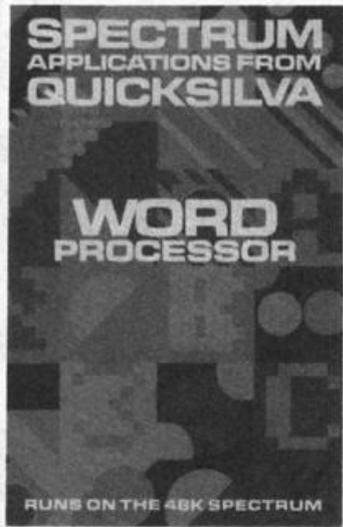

The instructions supplied were quite detailed and easy to follow. The programs all failed however to exploit the full capability of the BBC graphic commands, though with the disc program, Clares promise an upgradable on-going development.

My main criticism is that you can't dump a screen to a printer; this sort of program is of little use without that ability.

Secondly, hitting the Break key by accident was always fatal, as "olding" resulting in "bad program" and a loss of hours of work!

J.H.

instructions	75%

Word Processor 48K Spectrum £5.95

Quicksilva, 13 Palmerston Road, Southampton SO1 1LL

There is a very healthy industry devoted to supplying word processors for the world of commerce, and many home computer owners could make use of word-processing facilities too. Writing job applications, repeated letters of complaint to computer companies, perfecting that software review — the possibilities are endless.

But to use this type of program, you do of course need a printer, and the Sinclair printer is not, to say the least, ideal. I'll leave it as an exercise in economics for you to work out whether or not this program is for you.

That said, it does work. It is menu-driven, and at every option the prompt asks you to make sure that you really want to do what you are requesting, so it would be very difficult to make a mistake and erase hours of work by accident.

But there are so many different things to remember that I would have appreciated a leaflet or small booklet to refer to, rather than constantly going back to the instructions.

Games are getting better

I feel that some defence of the games software industry is necessary after Aldo Rabaioni's claim that games software is killing the micro market.

Firstly, Mr Rabaioni has made the mistake of lumping the games player seeking entertainment and the true enthusiast into the same category.

To many people, the purchase of a computer as an entertainment to rival television and replace arcade games is an end in itself. They do not buy games machines such as the Atari VCS because, compared to many computers, this machine has limited capabilities, poor quality American software which is relatively expensive — compare the price of Silversoft's Orbiter or Artic's Galaxians to the Atari equivalents.

It must be realised that perhaps 75 per cent of micro sales are people who have neither the desire nor the ability to program.

Games software has grown up to supply a need, and it is prospering as the need rises. High software sales mean that micro sales must also be high. Demand for games machines is surely sustaining an infant industry and supplying money for research and development.

Mr Rabaioni's remarks about programs written in BASIC or Forth not being up to arcade standards are perfectly true. On the other hand, programs not written in machine code are now the exception rather than the rule, and standards are improving almost weekly.

Finally, comparing the second-hand micro market to that of the second-hand car is a farce. With leaps in hardware technology taking place all the time, providing new products at lower prices, who would buy, say, a second-hand Acorn Atom when they could get a new Oric-1 instead?

I foresee a continuing prosperous market for both the micro and games software.

David Anderson, Saltcoats, Ayrshire

★ This letter wins £5 of software

Send your letters to Letters, Home Computing Weekly, 145 Charing Cross Road, London WC2 0EE, Don't forget to name your computer — the best letter could win £5-worth of software. Queries cannot be answered on this page

New is not always better

Home Computing Weekly is one of the few magazines to cater for TI-994/A computer, which I believe to be a much underrated machine. This may be due to the fact that there are not as many of them as of other popular machines. But the quality and reliability is second to none.

It does seem today that it is accepted new is better, even though for good money waits of four months or more are tolerated, faulty machines that have already been modified arriving complete with built-in bugs.

Besides a TI-994/A I have a TI59 with printer. Because of the reasons above, I believe that they are exceptional value for money. The only complaint that I have is the high cost of software and accessories.

R.A. Chapman, Milford Haven, Dyfed

Seeing orange on your Dragon

In issue 7 of HCW, the reviewer of Eduguiz for the Dragon asks: "How did they get it to print black text on orange?"

This can be achieved very simply by using the SCREEN command. SCREEN 0,1 gives black text on an orange background.

However, every time a PRINT or INPUT statement is used, the Dragon reverts to black text on a green background, so SCREEN 0,1 is only of use at the end of a screenful of text.

The following program shows how to get black text on an orange background by using SCREEN 0,1:

```
10 REM * USE OF SCREEN
    COMMAND *
```

```
20 REM * WITH THE TEXT
    SCREEN *
```

```
30 CLS
```

```
40 PRINT @ 32*8+6,
    "BLACK TEXT ON
    GREEN"
```

```
50 FOR T = 1 TO 2000: NEXT
    T
```

```
60 CLS
```

```
70 PRINT @ 32 * 8 + 6,
    "BLACK TEXT ON
    ORANGE"
```

```
80 SCREEN 0,1
```

```
90 FOR T = 1 TO 2000: NEXT
    T
```

```
100 GOTO 30
```

J. Austin, Manchester

Don't knock the Oric

I think it is about time someone spoke up for the poor old Oric-1. I have been very pleased with mine. On January 20 I sent off my order and shortly afterwards I received a letter telling me that it was due to be delivered during the second week of February. It arrived on February 17, and I have had absolutely no problem with it.

Your letters pages are always crammed with letters complaining about the Oric. I'm sure I can't be the only one who has been satisfied. So come on, give it a rest. And a message to all those waiting for an Oric — it's worth waiting for!

Liz Goddard, Sevenoaks, Kent

IVC owner fights back . . .

After reading N. P. Batram's letter comparing the VIC-20 and the TI-99/4A in your 19-25 April issue, I felt that I must protest strongly.

Mr Batram says that a 16K RAM pack for the VIC costs £70.

Audio-Computers sells a 16K RAM pack for £34.95, and this can be extended to 32K for a further £11.95.

Mr Batram states that Texas cartridges are of a "better quality" than VIC cartridges. This is simply not true. Both cartridges are of similar quality.

The VIC has a lot more software support than the TI-99/4A, has 16 colours of which any nine can be on the screen at once, and has four sound channels, three for making music and one for special effects.

The VIC has a user-defined graphics capability which can change all or any of its four character sets.

In addition, the VIC has high-resolution graphics, a proper keyboard, and a whole range of expansion sockets.

In short, I think the VIC is very good value for money at around £130 — only £5 more than the ZX Spectrum. So Mr Batram, I think that you've got your facts wrong. The VIC is overall a much better computer.

David Williams, Pordinorwic, Gwynedd

. . . And what about the Atari?

In reply to N. P. Batram's letter claiming that the TI-99/4A was the best home computer for under £200, this letter is to say that I think this claim is unfounded. I agree that the TI-99/4A is better than the VIC-20, but to say that it is better than an Atari 400 is an insult to all Atari owners.

The TI-99/4A's highest resolution is 192 by 256. The Atari's is 191 by 319. The TI has a weird sound system with three simultaneous tones plus a noise generator. The Atari has four sound channels that can be used together or separately.

The TI is, in my opinion, not very attractively made, with a cartridge slot in an unattractive place. The Atari is attractively made with a well-concealed cartridge slot, and the keyboard will not wear out as push-button keyboards do.

I feel it is up to Atari and other computer owners to voice their views.

P. Wadsworth, Northfleet, Kent

Soft Joe's

Software

Sniper – for the Dragon 32

Are you fast? ... are you good? ... can you shoot straight? ... Here's your chance to prove it. Not just another shoot 'em up game, but the ultimate in hit 'em fast, and hit 'em hard games – but this is no game ... your life is at stake!

Fast action machine code game, which calls for a steady trigger, and nerves of steel. 10 levels of difficulty, joystick controlled gunsight, high res graphics and sound. "Smart" targets!!
Game design and dragonware: R. Lowry

Cosmic Defender – for the BBC model B

"I thought I could do it ... now I'm not so sure, 'Hang on to 'em at all costs' were the orders from star command, it could cost me more than I bargained for! Even with the best star fighter in the galaxy!! I've got to hang on ... keep going ... must fight ... but for how long?..."

Defend the federation Plasmaton fuel dumps from the mindless suicide pilots of the alien battlefleet. Use your cosmic starfighters weaponry and hyperspace to destroy the evil enemy ... but watch your fuel, bonus points and fuel cost blood!!! How long can YOU hold out in this fast action game by Anthony Rafferty.

THE MISSING LINK

Acnean Mutoids – for the BBC model B

"Where am I?.. A reasonable question, but the shock answer is only the first in a series of catastrophes that might lie ahead ... A bolt of lightning stabs your eyes as the monitor awakes you from stasi-sleep, only to tell you the worst!

Your interstellar cruiser has been invaded by the evil race known as the acneans – even worse, you are alone!!

In a micro-instant you realise the task that faces you is one of spine-tingling terror – you must risk all to save earth from a horrific destiny. Can you avoid the blood dripping, plasma curdling mutoids and activate the ship's self destruct computer – do you have the courage? Can you save mother earth??, can you save yourself??? the answer is surely ... how??? Superlative graphics and sound make this game by Phil Woodrow, the ultimate challenge!

All of these superb games £6.50 each, inc first class post, packing and VAT.
All orders despatched within 24 hrs of receipt.

Available from all good software outlets or direct from Soft Joe's.

Dealership enquiries to:
Soft Joe's Software, Business Centre, Claughton Road, Birkenhead, Merseyside.

Coming soon – games for VIC 20, Commodore 64, ORIC, Spectrum and Atari. (Ref HCW)

Bandit – for the Dragon 32

Ruthless ... that's the only way to describe it, try your luck against the meanest fruit machine in the universe. 1,000 credits and you break the bank. It's not easy, but then, you wouldn't expect it to be would you???

You can almost feel your pocket getting lighter in this full feature fruit machine game. Based on a real 20 symbol per reel machine, this superb simulation displays excellent high res colour graphics and realistic sound: random hold and nudge facilities, with the meanest, most vicious gamble feature in the west! without doubt, the most compulsive addictive fruit machine on the market. Specifically for people with deep pockets and money to burn.

**Ocean Trader
16K ZX81
£3.95**

Quicksilva, 13 Palmerston Road, Southampton, SO1 1LL

This is a very enjoyable game, and if you are not careful you could find yourself becoming quite an addict! You are the captain and owner of a 19th century vessel, trading between five British ports; your aim, of course, is to end up showing a profit, but this is easier said than done.

You have the option of dealing in five different types of cargo — general, arms, coal, whiskey and bullion; as you go from port to port you will find the current prices for each of these varying in an unpredictable manner.

To help matters you may borrow money from a finance company in your home port, but beware — the interest mounts up alarmingly! And, of course, there are all sorts of hazards which may beset your seafaring expeditions — pirates, storms and fogs to name three.

Maybe you will overcome these; if not, you may lose some or all of your cargo and end up without a penny to your name. And if you take a chance and ship an illegal cargo, watch out for the pitfalls...

All the details you need to have at hand are displayed on screen, for example, your bank balance; how much you owe the finance company; how many units of each cargo you have, etc.

Options are displayed below (Do you want to buy or sell? What type of goods? Which destination do you choose for your next voyage?) and it is quite alarming to find out how easy it is to lose everything. Of course, it is possible to make a bundle quickly, with luck, but you will have to play the game to find out how!

The instructions are loaded first from the tape (as they are quite involved, they are not printed on the cassette insert,) and are accompanied by attractive graphics. After you have studied them you can load the main programme.

I had no trouble at all loading and running this game, and found it clear and well-produced. Unlike some games, this one really makes you think

**Calling all

**Champions
Dragon 32
£5.95**

Peaksoft, 7 Hawthorn Crescent, Burton-on-Trent, Staffs

This is a textual adventure game, and the challenge is to become a top football club manager and get to the top of the division within a season of twenty games.

Promotion is then assured, and, ultimately, if you top the 1st division you are entered in the European Cup. Don't ask — I've only got to the second division!

You start by giving your club its name and, given a pool of money, you're on your own buying and selling players. Players have a skill rating which affects their price and your chance of success. On pressing the P key your match result is displayed followed by the league table and then the news — some good, some bad.

It sounds dull unless you have a burning ambition to be involved with all the routine of management. But this is what it is — a management simulation.

At least a couple of hours is needed to play this game and it's a pity that there is no game save facility.

You switch off and you're back in the

fourth division.

I'm sure there's a lot of interest in football management and it certainly entertained a few of my friends. To maintain that interest these games would have to transcend the specialist barrier

and initially 'Champions' does. It is fast moving, clear in its display of information and witty too.

I enjoyed the news flashes — "Brian Clough says you're rubbish, morale soars" — which gives some credibility to the character you imagine yourself to be. Unfortunately, for me, the novelty soon wore off and the routine of management made it hard to persist. **M.P.**

instructions 90%
playability 80%
graphics 0%
value for money 75%

**Velnors Lair
48K Spectrum**

Neptune Computing, 98 Howe Street, Gateshead. Tyne & Wear NE8 3PP

This is a Dungeon & Dragon-type adventure game. Right at the beginning you choose which class you want to be: a wizard, a warrior or a priest, with each character having different powers.

Whichever you choose I can guarantee a lot of midnight oil burning. Like a good book, you don't want to put it down — fortunately there is a save game facility.

The lack of graphics doesn't matter a bit; in fact, I got so engrossed in the game I could visualise the scenes. To give you any description of the action would only spoil it for you; besides, the cassette inlay says it all.

If you are a D & D person, then this game is a must for your collection. I don't go in much for predictions, but I have a feeling that this game will get high in the top ten, and stay there.

No problems with loading, and as I only got about 25% of the game completed I couldn't say whether or not there are bugs (of the program variety, that is). Even if there were, I think I would have ignored them! By the way, that 25% represents a lot of playing. I must dash now, I have a spell to cast!

From pottery to programs in two years

The idea of writing programs for younger children grew out of the need to teach Katy and Simon how to use the Apple.

Tina said: "You can either say no, don't touch, or teach them how to use it. We decided to teach them how to use it". First they wrote, "very slowly", an alphabet program for Simon.

Tina said: "Now the computer is left on all day, and they come and play with it whenever they want. Sometimes it's just for a few minutes, sometimes for three-quarters of an hour".

It was Mike and Tina's friends who pointed out to them the gap in the market for children's programs. Recalls Tina: "It all started because lots of our friends said that if our programs were available commercially, they'd buy them."

Around the same time, the headmistress of a local school asked Tina if she could come and give some impartial advice, as the school was considering buying a computer. The result was that Tina was invited to take the programs and computers into the school to try them out on a class of five- and six-year-olds.

She now goes in regularly one morning a week. The kids enjoy "playing computers", and Tina gets ideas for new programs — and ideas about any potential trouble-spots in the old ones.

By now, the Detheridges feel they are getting a pretty good idea of what makes an effective program for children. "First of all, they need to be entertaining — good graphics, sound and colour.

"You need to cater for a flexible ability range. Children vary a lot, and they grow up very quickly. It's difficult to tell before you buy a program how well your child is going to cope with it.

"The skills needed to operate the program have to be simple. I saw one program where the skills needed to operate it were far higher than the skills the program was supposed to be teaching. Most of our programs can be operated with just two keypresses."

The four tapes in the Widgit range, all selling at around £5.25, are Shape Sorter, Counting, Adding and Subtracting and

Widgit Software started as an evening hobby and turned into a range of bright programs for the under-eights. Candice Goodwin met Tina and Mike Detheridge — and program testers Katy and Simon — of Widgit

Tina and Mike Detheridge — kept the computer in the kitchen

Alphabet. They all make use of bright colours and lively graphics to make learning more like fun than work.

In Shape Sorter, for example, the child has to pick out which of a row of houses is the odd one out by moving a car in front of the appropriate house, gets into the car and drives away. To teach addition and subtraction, a crane loads boxes on to a boat.

Widgit Software is not yet a familiar name in the home software market — but the signs are that it soon will be. Widgit is Tina and Mike Detheridge, who have just produced their first four cassettes for the Spectrum: a range of educational games for the under-eights.

It's early days and, as Tina

says, software for the very young is still a very new area.

Software as a commercial venture was the last thing on the Detheridge's minds when they bought their first home computer. Mike, a maths and physics teacher, had hankered after a computer for some time, and the birth of Simon, now four, was the pretext he needed. Tina recalls: "Mike said he thought it would be a good idea to have a computer, so Simon could learn about them".

Four years ago cheap home computers had not yet been invented, so the Detheridges bought an Apple, which was installed along with the TV in the kitchen at 48 Durham Road, in East Finchley, North London.

Mike, who had previously

used an Apple for administration at school, started programming first. Tina got the computer bug soon after Katy, now nearly three, was born: "I used to read the manual while I was feeding her, and in the evenings after they were both in bed, I set myself a project — to write a squash program".

Tina used to be an art teacher, and computer graphics are her main interest; she is now responsible for the effective and colourful graphics which make Widgit's programs so attractive to young children.

Mike, on the other hand, is better at organising the overall structure of the programs. Says Tina: "We complement each other quite well. But I think his is the harder job." "Well, I think yours is", says Mike.

The programs are written mainly in BASIC, with just a few machine code routines to provide smooth action where needed. "We don't need to use a lot of machine code, because we don't want things to whizz about on the screen", Mike said. "We have to keep tabs on a lot of things happening on screen, too, and that's harder to machine code".

Why did they finally decide to write for the Spectrum? Tina said: "It seemed to be selling an awful lot, and we felt home owners and first time users would buy it. That's the sort of market we're aiming at. We don't want our stuff to just be used in schools". All four programs have been converted for the Spectrum since November last year.

The Detheridges reckon that each program currently takes about a month to write, followed by "a lot of tidying up".

Tina said: "We have to make them quite crashproof — it's no good having an error message come up if a child's going to use the program. They have to do either nothing or what is required."

For young children, though, the Spectrum's keys aren't ideal, and Tina and Mike would like to diversify on to other machines later. "If there's a lot of demand, we'll write the programs for the BBC Micro too. But first we'll have

to sell enough Spectrum programs to buy a BBC machine!"

Since completing their first four commercial programs, Tina and Mike have not been idle. They are now working on some programs for slightly older children, to teach reading and writing. These will, they reckon, involve a new programming challenge: "for older kids, programs need to be more interactive."

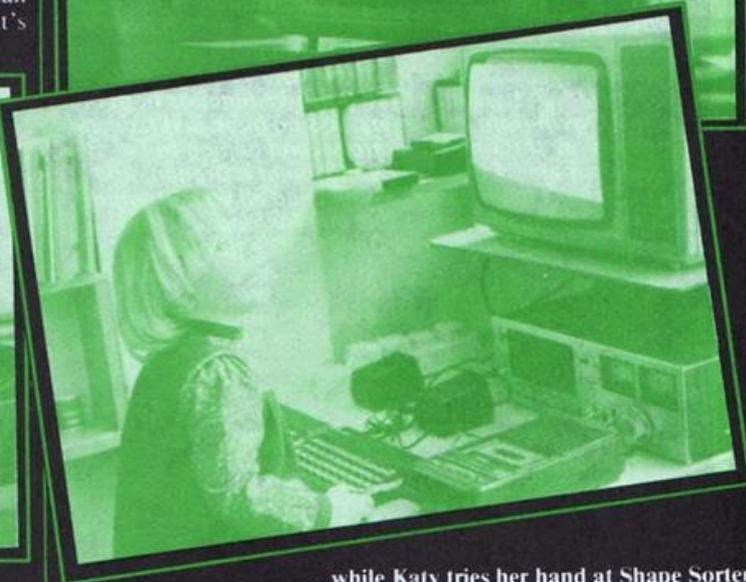

They are also planning

some games for young children — simple mazes, like a scaled-down version of Pacman.

Widgit Software involves Tina in program-writing most nights of the week. How does she feel about slaving over a hot program after a hard day looking after the children? "Working in the evening is nothing new for me, because I'm also a potter — we have a small business selling pottery. That's called Widgits too."

Simon demonstrates a counting program . . .

. . . while Katy tries her hand at Shape Sorter

ZX Spectrum FROGGY 16K or 48K

Spectrum version of
 Arcade Game with Full
 Arcade Features:-

- * Fabulous Hi-Res Colour Graphics
- * Authentic Sound Effects + 3 Tunes
- * 3-D Logs, Swimming & Diving Turtles
- * 3 Lanes of Multi-coloured vehicles
- * On-screen Score, Hi-Score, Time-bar
- * Snake, Alligators and Baby Frog
- * 'Top 5' High-Score initials table
- * Demonstration Game routine

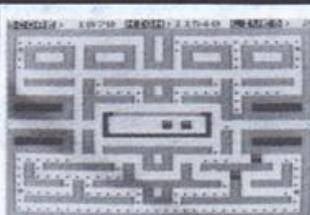

Your home-sick frog must leap across a busy main road, then onto logs and turtles in the river to reach safety of the river-bank frog-homes. THIS MACHINE-CODE GAME MUST BE SEEN TO BE BELIEVED!!
 ONLY £5.95 INC. P&P

ZUCKMAN

ZX81 (16K)

- * ALL MACHINE CODE (10K)
 - * FOUR INDEPENDENT GHOSTS
 - * HIGH-SCORE 'HALL OF FAME'
 - * AUTHENTIC ARCADE ACTION
 - * TITLE/DISPLAY MODE
- ONLY £5.95 INC. P&P

FROGGY

ZX81 (16K)

- * MOVING CARS, LOGS, TURTLES
 - * ALLIGATORS, DIVING TURTLES
 - * FOUR 'SCREENS' OF ACTION
 - * ALL ARCADE FEATURES
 - * ENTIRELY MACHINE CODE
- ONLY £5.95 INC. P&P

Push your Sinclair to the limit

ZX81/SPECTRUM ARCADE GAMES

NEW

ZX INVASION FORCE (ZX81)

Use your skill to fire through the energy band to destroy the menacing alien ship — **£3.95**

NEW

SPEC INVADERS SPEC GOBBLEMAN

These exciting high-speed classic games incorporate hi-resolution graphics and sound to bring you the best in arcade action at only **£4.95** each (16/48K)

NEW

SPEC FROG 5/SHOWDOWN (16/48K)

Hop across the dangerous road avoiding the lethal cars, then lorries. Go back to the wild west for a gunfight battle amongst cacti and wagons. Features include western music. **£4.95**

NEW

NAMTIR RAIDERS (ZX81)

High speed, quick action arcade game with four separate groups of attackers. **£3.95**

Gobbleman also available for ZX81 at **£3.95**

UTILITIES

TOOLKIT

Nine powerful new functions for your ZX81 (including re-number lines (goto, gosub), program merge, string finding and replacement. **£5.95**

SPEC BUG

A30 in 1 machine code tool and disassembler for your ZX Spectrum. **£6.95**

ZX BUG

A30 in 1 machine code tool and disassembler for your ZX81. **£6.95**

Improve your machine code programs with this new 48K Spectrum Assembler

Just released by Artic, this new professional quality assembler is also available for 16K ZX81 and features:—

- Word-processor-like text editor. • High-speed, versatile two-pass mnemonic assembler with labels and detailed error-trapping. Will assemble to any address.
- Essential support facilities such as memory-edit, register inspect/modify and search for de-bugging. • Full output to ZX-printer. • Memory-status report and comprehensive user-manual.

ONLY £9.95

ZX81 & SPECTRUM

NEW LOW PRICE

ADVENTURE GAMES

ONLY £5.95 for ZX81 and £6.95 for SPECTRUM

INCA CURSE (Adventure B)

In a jungle clearing you come across an ancient Inca temple. Your mission to enter, collect the treasure and escape alive. But beware! Includes a cassette save routine.

SHIP OF DOOM (Adventure C)

You are unavoidably drawn to an alien cruiser. Can you reach the control room and free yourself? Or will they get you first? Includes a cassette save routine.

ESPIONAGE ISLAND (Adventure D)

While on a reconnaissance mission your plane loses control and you are forced to land. Can you survive and escape with the island's hidden secret?

PLANET OF DEATH (Adventure A) 16/48K

You find yourself stranded on an inhabited alien planet. Can you reach your ship and escape?

also available for SPECTRUM

ZX FORTH

Supplied on cassette with editor cassette, user manuals and keyboard overlay. ZX Forth combines the simplicity of basic with the speed of machine code **now £14.95**

THE ULTIMATE ADVENTURE FOR THE SPECTRUM/ZX81 for only **£9.95**

AND THE CHANCE TO WIN £10,000 or more IF YOU KRAKIT™

RULES AVAILABLE FROM ARTIC

Your eccentric father has left you £10,000 in his will. In order to claim your windfall you must solve twelve clues and gain access to a bank account in which the money has actually been deposited. Be the first to crack the puzzle and the prize is yours! Plus you will win two tickets to the city of the secret KRAKIT™ vault location. The Prize money is increased weekly. A telephone number will be supplied so you have the opportunity to find out just how much you could win.

DON'T MISS YOUR CHANCE TO WIN A FORTUNE!

SPECTRUM MICRO CHESS

The only Chess program for a 16K or 48K Spectrum. Allows all legal moves, castling; en-passant and pawn promotion. Options to play black/or white. Sets board in any position. Full colour and graphics display.

ONLY £6.95

new releases for 16K & 48K SPECTRUM

SPECTRUM INVASION FORCE

A popular arcade game for 16K or 48K Spectrum. Fires through the force field to destroy the menacing alien ship. Sounds easy?? Two levels of play — normal or suicidal. Full colour. Sound and hi-res. graphics.

NOW ONLY £4.95

A GREAT CHESS GAME FOR YOUR ZX81 OR SPECTRUM™

*SPECTRUM CHESS 48K

ZX CHESS I

Very popular machine code program, with six levels of play and an analysis option. Available for ZX81. **£6.50**

ZX CHESS II

A new improved version, with a faster response time, seven levels of play, analysis option and in addition a recommended move option. **£9.95**

ZX 1K CHESS

An incredible game in 1K for only **£2.95**

As featured on TV

SPECTRUM VOICE CHESS

This incredible program talks you through your game. It tells you its move, recommends a move, and contains a range of facetious comments. The game is based on the highly successful ZX Chess II and is offered at the Christmas offer price of **£9.95**.

SPECTRUM CHESS now only £9.45

Into the arena for the power . . . or the glory

Fight for your life against the ZX81 in an amphitheatre with a difference. David Ryan's game needs a 16K memory expansion

You are cast as a gladiator fight for your life in a modern-day Roman amphitheatre.

In my modern-day version you face not human opponents, but a maladjusted ZX81 whose only ambition in life is to fry you to a crisp on an electrified piece of ground.

Your only hope is to dodge these pieces of earth for as long as possible. Invisible mines are another hazard at higher skill levels.

Who knows, maybe the computer will eventually tire of this sport and release you. But then again . . .

How it works

1-30 set up variables, start game
40-200 main game routine

40 prints man on screen
50-100 prints patches of electrified ground
110-111 pause — very short at higher skill levels
120-160 registers desired movement
170-180 checks for patch of electrified ground where man is about to move. If so control is passed to line 205, else back to start of routine with man in new position
190 adds one to score each time man is moved
195 chackes man has not waled onto an invisible mine
105-250 end routine, prints score and asks if another game is wanted

1000-1030 handles input of skill level. Note: CHR\$ (L + 156) prints level chosen in inverse characters
1060-1130 prints arena. Note: edges are made up of CHR\$ 8 to stop man moving off edge of screen
1500-1530 ask if instructions are wanted
2000-2110 print instructions with pause for time to read them
3000-3020 choose position for invisible mine
4000-4010 auto start when loaded routine

Variables

S stores score, set to zero at start
L stores chosen level

J K variables which hold position of invisible mine
A B hold position of your man
C D use to hold, test and then print a patch of electrified ground along with its position on screen

Hints on conversion

Lines 170 and 180 are used to test the new position for your man. The two addresses hold the address of the new position. This is in turn PEEKed. If it contains a CHR\$ 8 then control is passed to line 205. This could probably be implemented on the Spectrum using SCREEN 5.

The ZX81 does not have a standard character set. If converting to other machines the figures after the CHR\$ commands will need to be changed.

25 great programmes on one pack:— Star Wars, Gambling Machine, Breakout, Trap It, Population Simulation, Corridors of Doom, Housebreak, Towers of Hanoi, Butterfly Chase, The Vault, Yahtzee, Maths, Calendar, Amazing 3D Mazes, 3D Noughts & Crosses, Jackpot Bandit, Hangman — musical, bible, history & sport, Mastermind, spelling, Diary, Records File and Time Warrior.

We only have room here to fully describe one programme, please don't hesitate however, to phone or write for full details of all the programmes.

HOUSEBREAK:— You have entered a house at night in an attempt to rob it of Money and any Gold and Silver items you can find. It is very dark and your must avoid bumping into the furniture. After a period of time an alarm will sound and soon after this the lights will be turned on. A vicious dog is then released. You have to use all your skill and cunning to avoid getting bitten as the dog chases you around the house; any injury caused by the dog will slow down your escape. The game is played in 'real time' and has excellent graphics. A different house is generated each time the game is played.

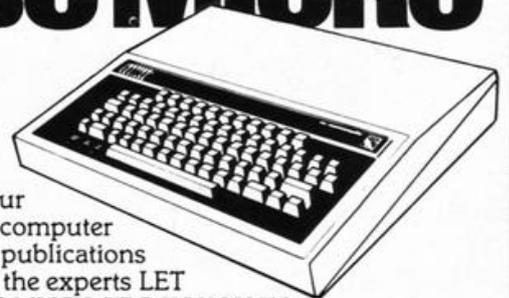

The full cassette of 25 programmes is sent to you for only £8.95!

Trade enquiries welcomed.

New ideas for your micro

A selection of games which you won't find in your local arcade, tested for you by our panel of reviewers

Attack of the Mutant Camels Commodore 64 plus Joystick £8.50

Llamasoft, 49 Mount Pleasant, Tadley, Hants RG26 6BN

"Earth has been invaded by 90-ft high, laser spitting, neutronium shielded death camels." This is the awesome enemy you must battle with in this fast-moving, colourful game in which you pilot a small jet and attempt to wear down

the camels' shields and "destabilise" them.

On loading, there appears an impressive animated introduction offering various skill options including a two-player game. Pressing the fire button transports you to a desert landscape on a starry background, where large camels clump noisily towards you rather like the Landwalkers in The Empire Strikes Back.

You have to hit the camels with a repeating missile gun while dodging the squealing bombs from their mouths. As you score more hits on a camel, it will turn various dazzling colours before pulsing into oblivion.

Should you succeed in destroying a wave of the beasts,

you then enter Trans-sector Hyperwarp, and you must dodge white spiralling rockets as the landscape flashes past at incredible speed. If however the camels reach your end of the sector, you lose the game.

Quite simply a very good game. Sound and graphics are excellent, documentation and instructions are clear, and the action is fast and furious. To play it is to appreciate it. The only criticism could be that it is perhaps a little too difficult!

Wordfit ZX81 £5

Ram Writer, 3 Vumba House, 2 Cedar Gardens, Sutton SM2 5DB

I found this program a bit of a mystery — is it a game, or is it a utility? The manufacturer sees it as a game, but it could I suppose be used as an aid to crossword compilation too.

All it really does is generate a random crossword-style cell pattern, which you must then fill with any words you choose.

But you cannot use the same word twice, and only letters will be accepted.

You can choose between four different sizes of grid, the larger ones obviously presenting more of a challenge, and to make things more difficult still the program will if required fill in random vowels too.

Once the grid is full, though, the program does not stop. The cursor goes moving on, and you can alter the words you have already inserted indefinitely until you have had enough.

On screen you are shown how many words of a given length are still needed to fill the grid, and how many you have

already inserted. But there is no score, as you might expect from a Scrabble-type game; if this is to be marketed as a game, then a score facility might be a good idea.

On the whole, I don't think Wordfit makes the most of the ZX81's capabilities. It might appeal if you are a great crossword fan, or want to compile your own crosswords, but most of what it does could be done just as well with a good old low-technology pencil and paper.

The Exterminator Colour Genie £7.95

Algray, Algray House, 33 Bradbury Street, Barnsley, S Yorks S70 6AQ

Oh dear, what is this? Based on a fairly weak idea, Exterminator is one of those 'zap-zap' games, apparently written by someone with little imagination in about 10 minutes.

The game is split into two phases. In the first phase your spaceship whizzes about the

screen at breakneck speed, as you vainly try to zap little flapping aliens. This in itself is a fairly impossible task as the aliens have guided missiles on their side which fly at you leaving you little chance to get out of the way.

The second phase, however, is a slight improvement. Your craft is now in a safe area at the top of the screen where the alien eggs can be destroyed. Your ship must fly out of this safe area, dodge the mines and guardians, and return to the safe area to destroy the eggs.

The controls are very difficult to master and the ship really goes too fast to be controlled successfully. In order to fire, the space bar must be pressed

together with the appropriate direction key, which is very difficult indeed. This makes the game awkward to play, and it will soon lose its appeal, if you feel it ever had any.

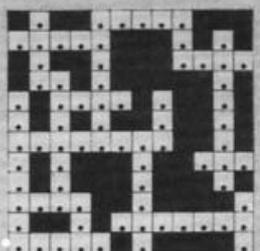

Really a bit of a disappointment when compared with some of Algray's other offerings. The game is vastly overpriced and is the sort of game that one might like to tap in from a listing in a magazine on a wet winter's night.

A touch of machine code can add realistic sound. Ian Beynon shows you how

Make your Spectrum programs sound better

Many people have been quick to point out the limitations of the Spectrum's sound abilities, yet with a little knowledge of machine code realistic sound effects can be produced to enhance even the dullest program.

Start by entering Program 1, taking particular care when entering the line of data.

When you run the program you will first of all hear a series of ascending notes which was written using the BASIC BEEP command. Now press any key and the computer will execute the machine code version.

The difference in quality is plain to hear and, if you wish, you can add the following extra line: 50 POKE 30004,0 (Enter and Run)

This line effectively speeds the machine code up a further 10 times.

The nuts and bolts of such a machine code routine are not however, as complex as you might imagine. In fact, to generate a BEEP in machine code only three instructions are required, plus a RET instruction to ensure a safe return to BASIC.

They are:

- 1 Load the DE register pair with a value relating to the duration.

- 2 Load the HL register pair with a value relating to the pitch

- 3 Call the routine starting at address 949 in the ROM to perform the BEEP.

For those who have never before programmed in machine code, a register can be thought of like a BASIC variable, although it can only hold integers in the range 0 to 255.

Unfortunately, such a range is restricting so the designers of the Z80A CPU inside your Spectrum provided us with the facility to combine two registers to form what is commonly known as a register pair.

This is analogous to combining two digits in the range 0 to 9 to represent a number between 0 and 99. Such a facility enables us to assign register pairs with values in the range 0 to 65535.

Program 2 will generate a single BEEP. Try running it and altering the values of HL and DE by changing the appropriate elements of data with reference to the disassembly provided.

You should find after a bit of experimenting that increasing the value of HL increases the pitch of the note.

In fact, all sounds generated on the Spectrum are nothing more than a series of clicks with various

30009 RET 201

```

length pauses in between. The shorter the pause the higher the note will sound. It is possible to make each individual click becomes audible.

In other words, you are technically loading DE with the number of clicks to be sent to the speaker and HL with the pause between each click.

Program 3 consists of two routines which are called using the commands RANDOMIZE USR 23760 and RANDOMIZE USR 23788. Line 1 is used to store the

machine code and must consist of at least 53 characters.

I suggest you enter the program, run it, and then delete all the lines except for line 1. You could then save the remaining line and MERGE it into your own programs. A disassembly of the two routines is provided for those of you who wish to try altering some of the values to produce different sounds.

Finally, I have included a mystery program for you to enter and run which should "ring a bell" with you.

Spaced-out games for your micro

Frenzy Spectrum £4.95

Quicksilva, 13 Palmerston Road, Southampton SO11 1LL

For years I have been a SF fan, but one book seems to have eluded me; the book of the Faluvian Empire. I became so engrossed with the excerpt from the book on the cassette inlay that I quite forgot it was the program on the cassette that I was reviewing. However I came back to earth, and loaded the program with no difficulty.

All the instructions you need appears on the screen, and the key overlay provided ensures that you have the essential commands at your fingertips... literally.

When you press start, a maze appears on the screen. This represents the corridors of a space fort, populated with five kinds of robots, who, together with evil Orville, are bent on your destruction. A record of the highest score is kept for reference.

The action is very smooth, and once you have got used to the controls the game is a lot of fun. It would be even better using joysticks.

value for money	100%

Space Rescue VIC-20 £6.95

Sumlock, Royal London House, 198 Deansgate, Manchester M3 3NE

Space Rescue is an interesting and unusual game which stands out from the standard arcade games around at the moment.

You have to negotiate an asteroid field, land on one of several landing pads and rescue the poor creatures who are trapped on the planet's surface, battle back through the asteroids and finally dock with the mother ship.

In its early stages the game looks almost too easy, but this quickly changes as the asteroids become more tightly packed calling for greater and greater dexterity to pass through them. As well as controlling over the horizontal movement of the ship, you also have a limited supply of ammunition with which you can destroy some of the asteroids.

There seems to be a bug in the program which occasionally lets an asteroid scroll from right to left through the surface of the planet. While being somewhat disconcerting, this caused no problems in the running of the game. All in all, a good tape, but slightly overpriced.

If you want to be a space adventurer, then these new games may catch your eye. But first, find out what our reviewers thought of them

Cosmic Guerilla 16K ZX81 £3.95

Quicksilva, 13 Palmerston Road, Southampton, SO1 1LL

Cosmic Guerilla could be said to be a cousin of Space Invaders, in that you control a moving gun at the base of the screen which zooms to and fro as you attempt to destroy the aliens.

However, the scenario is quite different; the alien 'guerillas' sneak in from both sides of the screen at once, trying to reach the centre where they steal a supply of 'pod' which they then

have to take back the way they came.

Thus you have irregular groups of aliens moving independently in different directions at the same time; their movement is in erratic bursts so that it can be difficult to judge when any individual will take his next 'step'. A randomly generated saucer passes periodically across the top of the screen, à la Space Invaders; you get a higher score for successfully hitting this.

Your job is to shoot the guerillas before they return home with their stolen goods. If you hit one on its return journey, its 'pod' will be abandoned there until another alien comes to fetch it; as these black blobs block the energy

pulses from your gun the game becomes more difficult as more of them are left lying around.

The aliens can also destroy you with their own bombs (you have three 'lives'). You have shields against these, but as the bombs do not come often and the shields tend to get in your own way, I found that it was a good plicy to blast them out of existence at the beginning of each game.

You have a choice of three speeds, and score is displayed on screen. High scorers can enter their names in a 'hall of fame' at the end of the game.

Having played other games of the same type, I did not find that it held my interest for long; but the sneaky way that the aliens

move and their tendency to attack in bunches is a novelty.

The game is well produced, loads easily and runs smoothly; I found that the controls respond almost too quickly — you need a very light touch to position your gun where you want it. Instructions are minimal, but the only controls necessary are Right, Left and Fire. The program can be used with the QS Sound and Characters board, if available.

Cosmic Raiders Spectrum £5.95

Mikro-Gen, 24 Agar Crescent, Bracknell, Berks.

A top quality professional product is what I've come to expect from Mikro-Gen, and Cosmic Raiders did not disappoint me.

You have to navigate your spacecraft over an alien terrain of sky scrapers and mountains whilst defending yourself against the deadly attentions of sundry Grubbers, Escorts and Interceptors.

Your aim is to rescue abducted humanoids and destroy the aliens' Mastership. Destruction of this latter target automatically moves you to a higher level.

The screen display is split, with an inset at screen top showing a panoramic view of your and the aliens positions whilst the colourful main screen display shows a smaller area of the battlefield.

Control is via '4' and '2' keys for up and down, 'S' for thrust and '0' for rocket firing. The left hand bottom row keys reverse your direction and the right hand bottom row keys operate a 'Smart Bomb'.

Instructions are concise but adequate and loading is straightforward and reliable.

High-quality graphics, and the game is fast and great fun to play. Highly recommended.

Cosmic Raiders
FOR 16K or 48K SPECTRUM

BLACK STAR ZX-81 GAMES FROM QUICKSILVA

Black Star 16K ZX81 £4.95

Quicksilva, Palmerston Park House, Palmerston Road, Southampton

Funny how rarely ambitious graphics and an exciting game seem to get together. All the Quicksilva games I've played offer either one or the other — which is a lot better than neither, but not as good as they could achieve.

This game has graphics which are always interesting and sometimes dazzling (literally), but it's mostly frills; the game itself is a letdown.

You control a space ship flying down a tunnel which unfolds in 3D before you. The object is to bomb "energy ducts" (stripy bands running round the circumference of the tunnel) to

gain the maximum points before you run out of time. And that's really all there is to it. Like falling off a log.

Unless something was very much amiss with the tape I got, a lot of wishful thinking went into writing the blurb on the cassette insert. The "pursuing aliens" — As which appear at the bottom of the screen, and which you can dodge by moving from side to side — aren't much of a thrill. You can easily avoid them by speeding up slightly, and as far as I can tell they don't do you any harm even if you just ignore them.

"Eight instrument displays"...yes, well, the only display you need to worry about is the one that tells you how many bombs you've got left. The rest are very pretty, but really just trimmings.

I don't know about the "seventeen levels" and "progressive difficulty". At no point was I offered the option of selecting a different skill level, so maybe this just means that you can speed the ship up as you get better. You'll get bored extremely quickly if you don't.

Effortless loading, responsive controls, nice effects, and a high-score table, but all this can't compensate for lack of excitement. Must try harder.

C.G.

Astro Blaster Spectrum £4.95

Quicksilva, 13 Palmerston Road, Southampton SO11 1LL

Yet another excerpt from the book of the Faluvian Empire was on the inlay card...I really must get that book.

This time we have an old familiar theme. Remember the old Space Invaders? Well, this is a game of that ilk, but with differences that make all the difference if you see what I mean.

There are five attack

waves, fifteen levels of difficulty, meteor storms plus other bad goodies...or do I mean good baddies?

You can play this game with a joystick if you have one, and I would strongly advise that you do.

This game, together with Frenzy (a sort of sister tape) will make compulsive playing for the space/action addict.

Martian Raider VIC-20 £9.99

Romik, 24 Church St, Slough SL1 1PT

This is one of those "fly your space ship over the surface of a planet and kill everything you see" games.

In essence, as you fly your space ship from left to right over a constantly changing landscape, you are assailed by one of three forms of enemy.

These are either missiles launched from the surface, UFOs or meteorites.

The surface of the planet is littered with cities, missiles and fuel dumps. Bombing or lasering any of these items earns you points.

You have three ships, each with a limited life span (time left is indicated by a horizontal bar at the top of the screen) and can gain extra time by bombing the fuel dumps. The ships can be controlled by either a joystick or the keyboard.

Overall I felt that the quality of the game was a little shoddy. The animation tended to be jerky and the display of information minimal.

Each time a bomb hit the surface, a square chunk (obviously a missing character) was removed. Whilst this didn't effect the play at all, it indicated a lack of attention to detail by the author. In today's cut-throat software market, such details matter.

The pace of play was fast and life could become rather difficult, especially in the UFO phase. But I felt that the incentive to win was lacking and the game really amounted to a test of endurance. Not a bad game — but not a great game.

FROGLET

FROGLET

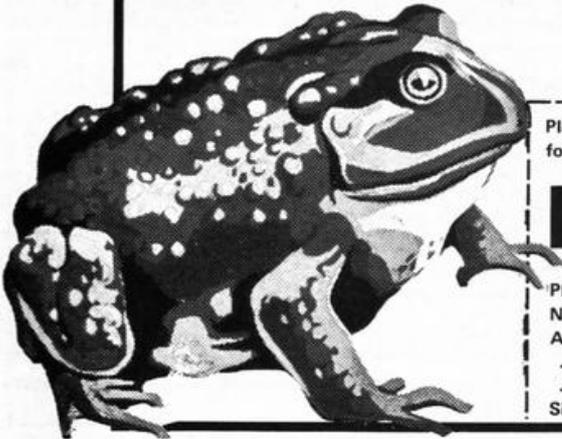

Have you hopped, jumped or swum across the river yet?

No, then where on earth were you last month? You missed our unbelievable Froglet game for the BBC Micro and it's probably too late to get a copy from your newsagent! Despair not, we have the program ready and waiting on tape to save your fingers the chore of typing in all that incredibly complex code so, even if you did see the game in our April issue and were daunted by the task there's absolutely no excuse for not getting a copy now.

The program follows the style of that arcade favourite, Frogger and you must negotiate your green coloured friend across first a road populated with fast moving cars and lorries and then over the river by means of turtles and logs. Frogs may be able to swim but if your turtle decides to sink you'll be swept away by the current. Once across with three out of your four frogs you'll be able to score bonus points by catching the flies that appear over the river but, take care that you don't run out of time!

All in all it's a great, fast moving game that any number of people can play and, just to add to the spirit of the thing the program stores the top ten players' names so you can measure your performance. How much are we charging for this minor masterpiece? Just £5.99 all inclusive!

To order simply fill in the coupon and send it with your remittance to:
ASP Software, ASP Ltd, 145 Charing Cross Road, London WC2H 0EE

RECRUITMENT

Electrical Engineer with C & G full Tech

for a challenging role in Product/Technical Support Services

Landis & Gyr, a highly successful UK company, is Europe's largest manufacturer of sophisticated HVAC controls for industrial and domestic use. We have recently gained additional contracts and now seek a Product Engineer to provide an effective technical support service to our HVAC sales force and their customers.

Based at our UK headquarters in North Acton, your prime tasks will be to resolve customer enquires/problems; investigate new applications for controls and micro-computer based equipment; and also monitor operational performance and quality. It is a challenging post offering opportunities for site visits and a willingness to spend time away from home is essential.

Candidates, qualified to minimum C & G Full Tech, should have at least 2-3 years electrical engineering experience, gained in applications, sales/technical and support, service or R & D. Controls and/or computer systems experience would be an advantage. The ability to communicate effectively, both orally and in writing, is essential.

We offer a competitive salary and large company benefits. We are located opposite North Acton tube station. For an application form, please contact Louise Stevenson, Personnel Assistant, Landis & Gyr Limited, Victoria Road, North Acton, London W3 6XS. Tel: 01-992 5311, ext. 3226.

the measure of success

LANDIS & GYR

"Original games sought for all the popular micros. 33 1/3% royalties paid on all games accepted. Send to BCG systems, 119 Great Mistley, Basildon, Essex."

A word of advise to BASIC/Machine code programmers.

Are you wasting carefully thought out programs on companies who fail to realize their market potential? we at

Dial Grove Ltd., are seeking good quality, original, debugged games, utility, educational and business programs for the ZX81 (1K/16K) and Spectrum (16K/4f8K) BBC Micro (16K). We are offering an attractive remuneration package for the right programs.

Write to us at **Dial Grove Ltd, 10A St. James St., Covent Garden, London WC2.**

You will be pleasantly surprised by our approach.

OSARIS COMPUTERS SOFTWARE/HARDWARE

We want programs all languages top money paid. Send tapes, print-outs etc, or get in touch with us. Osaris Software, 77 The Mall, Southgate, London N14.

TIRED OF YOUR COMPUTER? WHY NOT SELL IT AND BUY A NEW ONE WITH A MINIMAL AMOUNT OF EFFORT USING ONE INDEX FINGER. RING 01-437 1002 EXT 213. AND SELL THE WEEK AFTER.

MAIL ORDER PROTECTION SCHEME

If you order goods from Mail Order Advertisers in this magazine and pay by post in advance of delivery, this publication will consider you for compensation if the advertiser should become insolvent or bankrupt, provided:

1. You have not received the goods or had your money returned; and
2. You write to the publisher of this publication explaining the position not earlier than 28 days from the day you sent your order and not later than 2 months from that day.

Please do not wait until the last moment to inform us. When you write, we will tell you how to make your claim and what evidence of payment is required.

We guarantee to meet claims from readers made in accordance with the above procedure as soon as possible after the advertiser has been declared bankrupt or insolvent to a limit of £1,800 per annum for any one advertiser, so affected, and up to £5,400 p.a. in respect of all insolvent advertisers. Claims may be paid for higher amounts, or when the above procedures have not been complied with, at the discretion of this publication, but we do not guarantee to do so in view of the need to set some limit to this commitment and to learn quickly of reader's difficulties.

This guarantee covers only advance payment sent in direct response to an advertisement in this magazine (not, for example, payments made in response to catalogues, etc, received as a result of answering such advertisements):

100 FREE PROGRAMS

FROM SILICA SHOP — WITH EVERY PURCHASE OF AN

ATARI 400

800

ATARI PRICES REDUCED!

We at Silica Shop are pleased to announce some fantastic reductions in the prices of the Atari 400/800 personal computers. We believe that the Atari at its new price will become the U.K.'s most popular personal computer and have therefore set up the Silica Atari Users Club. This club already has a library of over 500 programs and with your purchase of a 400 or 800 computer we will give you the first 100 free of charge. There are also over 350 professionally written games and utility programs, some are listed below. Complete the reply coupon and we'll send you full details. Alternatively give us a ring on 01-301 1111 or 01-309 1111.

ATARI 400 with 16K **£159**

ATARI 400 with 48K **£228**

ATARI 800 with 48K **£349**

400/800 SOFTWARE & PERIPHERALS

Don't buy a T.V. game! Buy an Atari 400 personal computer and a game cartridge and that's all you'll need. Later on you can buy the Basic Programming cartridge (£35) and try your hand at programming using the easy to learn BASIC language. Or if you are interested in business applications, you can buy the Atari 800 + Disk Drive + Printer together with a selection of business packages.

Silica Shop have put together a full catalogue and price list giving details of all the peripherals as well as the extensive range of software that is now available for the Atari 400/800. The Atari is now one of the best supported personal computers. Send NOW for Silica Shop's catalogue and price list as well as details on our users club.
