## Adventure Plus

## Woolies, the new giant in micros

Woolies will soon be the country's biggest retailers of home computers and software with stocks in nearly 500 stores.

Shipments are going out now and before Christmas five computers and two games players will be on the shelves with tapes and cartridges alongside.

Until now W.H. Smith has had the most outlets for these products, with 250 stores, including six shops-within-shops.

Bob Egerton, buying manager for F.W. Woolworth, said the chain had sold some computers last Christmas and explained: "We are branching out now the market is settling down and maturing."

The larger stores, including the

## BBC goes to the USA

Acorn Computers is gearing up to launch a major attack on the American educational computing market.

Hong Kong company Wong Electronics has been commissioned to produce 50,000 BBC micros specially for the US market over the next 12 months.

The machines are being produced in Hong Kong partly because there isn't enough production capacity in the UK, and partly because Hong Kong is handier for export to the US.

**Briefly**

Shards Software is releasing five new programs, four for the Dragon and one for the BBC B. The Dragon tapes are Puzzler, a jigsaw puzzle generator (£6.95, Junior Pack (£3.95) and Fun to Learn (£6.95), two educational tapes, and Pettigrews Diary (£7.95), a three-part adventure taking up 90K in all. For the BBC, there's Monster Maths, costing £6.95.  
*Shards Software, 189 Eton Road, Ilford, Essex IG1 2UQ.*

Dixons Software Express is a new mail order service from the Dixons chain, which offers over 400 home computer and TV games from a range of well-known names. Machines covered include the Atari 400/800, Commodore 64, VIC, Dragon, TI-99/4A and Oric. Dixons Software Express catalogue is available free from all Dixons branches, and you can place your orders direct through a branch, or by post or phone. Orders are said to be despatched within 24 hours.

*Dixons, Prinz House, 54-58 High Street, Edgware, Middlesex*

Ocean Software has been given a licence to produce Century Electronics' Hunchback arcade game for home computers. Hunchback, a version of Kong based on the story of the Hunchback of Notre Dame, will be available soon from Ocean for the Spectrum, Commodore 64, Oric, Dragon and Electron. Superior Software will be producing a BBC version.

*Ocean, Ground Floor, Ralli Buildings, Stanley Street, Manchester*

If you're worried that your micro will break down, Astronics is offering an extended warranty scheme which will extend the maker's guarantee for three or five years. The scheme covers most popular home micros, plus some peripheral equipment such as printers or disc drives. Warranties are available not just for new equipment, but for items where the maker's guarantee has expired too.

*Astronics, Unit 2, Eastern Industrial Estate, Jackson Close, Cosham, Portsmouth, Hants PO6 1QW*

## NEW!! SPECTRUM BRIDGE PLAYER

At last you can play Bridge against your Spectrum! Uses the Acol bidding system with Stayman and Blackwood conventions. With scoring and inquest/replay facilities. The ideal complement to our Bridge Tutor programs.  
48K Spectrum - £8.95

## SUPERCHESS II For Sinclair 48K SPECTRUM THE BEST AT £7.95

● 7 levels of play ● Plays a variety of openings e.g. French Defense, Sicilian Defense, Ruy Lopez, Queen's Gambit etc. ● Self play mode ● Analyse mode ● Enhanced end-game play ● Recommended move option.

## ORIGINAL SUPERCHESS

10 levels of play, plus many features  
16k ZX81 £4.95 48k Spectrum £4.95

## ZX DRAUGHTS For 48K Spectrum - £5.95 16K Jupiter Ace - £6.95

## 16k SUPERCHESS £6.95

The best 16k Spectrum Chess program. 3 levels of play with playing strength similar to the 48k version's first three levels. Analyse mode, plays several openings e.g. Queen's Gambit, Ruy Lopez, plus more features. Runs on 16k and 48k Spectrum.

## SUPERCHESS II

With most of the features of the Spectrum version now available for Lynx - £8.95  
16k Jupiter Ace - £8.95

## SPECTRUM BRIDGE TUTOR

Improve your Bridge with Spectrum Bridge Tutor. Uses the Acol bidding system including Blackwood and Stayman conventions. Each of the 40 hands illustrates a particular aspect(s) of the bidding and play. Following the card play is an explanation of those aspects highlighted in the hand. The correct bid and play must be made in order to progress but a help feature is included.

For 16k and 48k Spectrum -

Beginners (40 hands) £5.95  
Advanced (40 hands) £5.95

## COLOSSAL CAVES

(Adventure 1 by Abersoft)

Enter the Colossal Cave, discover the treasure left by the wizard. On your travels you will meet dragons, snakes, trolls and other denizens of the underworld. Be warned, this adventure can be addictive. Includes a save facility so that the adventure can be continued from the point reached when saved.  
48K Spectrum £6.95

## BACKGAMMON Very popular 48k Spectrum £5.95

## SUPERCODE

The ultimate Machine Code Tool Kit for the Spectrum with 60 plus routines. Both 16K and 48K versions on each cassette.  
16K and 48K Spectrum - £7.95

## Speech from the Spectrum

48k  
SOFTALK I 'Multiwords' 70 plus words  
£5.95  
SOFTALK II 'Spacegames' 80 plus words  
£5.95

8th  
ZX MICROFAIR  
ALEXANDRA PALACE  
SATURDAY 20th AUGUST 1983

## SNAIL LOGO

An advanced implementation to the Logo turtle type graphics. Uses the original style Logo instructions to control the movements of a graphical Snail around the screen instead of a mechanical turtle. Includes the following features: ● Full operating system and Editor ● Comprehensive user guide with sample programs ● Multi-level Hierarchic Procedures ● Procedures with Parameters ● Recursive Procedures ● Nestable repeat loops ● Variables ● Colour and wall bouncing controls ● 25 Language Instructions, over 20 warning and error messages ● Commands to control the optional ZEAKEr turtle.  
48K Spectrum £9.95

ZEAKEr TURTLE: with Pen and obstruction sensors. Can be used with our Spectrum Snail Logo. The ZEAKEr can be used with both the Spectrum and ZX81 or other micros with suitable parts.

ZEAKEr in Kit Form - £52 P.O.A.  
ZEAKEr Ready Assembled - £69.50  
ZX81 Interface £13  
Spectrum Interface if required £18.50  
add £3 for P&P and 15% VAT

UK Prices include post & packing. Despatch within 48 hours of receipt of order. Send SAE for catalogue (For orders outside UK add 80p for postage).

## Woolies

From front page

Woolco hypermarkets, will take the full range of computers: 16K and 48K Spectrum, Commodore 64, VIC-20, Atari 600XL and 2600XL and the Colecovision and Philips games players.

As the size of the stores drops fewer of the range will be stocked, so 493 will have Spectrums on sale and 160 will stock the Atari 600XL.

Software is being distributed to the stores by Multiple Sound Distributors, best-known for its Warwick, Chevron and Tempo record and tape labels.

In a short time the larger Woolworth stores would be stocking the top 50 computer titles, said Multiple's sales and marketing director Ben Godbolt.

At first the software would be largely from the computer makers, but titles from Ocean, Rabbit, Quicksilver and others are due to go on the shelves.

Mr Godbolt said: "It will take time to acquire a share of the market because the range will be smaller to start with. But we will be stocking all the currently popular titles."

"We are running it like a record department with a sales force calling on the stores regularly, a catalogue and telephone sales."

"If someone calls in and the title is in our catalogue but not in stock we can supply it in 24-48 hours under normal circumstances."

Speaking of software houses, he said: "There are 300 of them in the UK and I've tried to find ways of reaching them without talking to each one individually."

● W.H. Smith has brought its number of computer shops-within-shops up to six by opening one each in Kensington High Street, Cardiff and Exeter last week.

F.W. Woolworth & Co, 242-246 Marylebone Road, London NW1

## BBC in US

From front page

According to Acorn, the micros Wong produces will be "beefed up", full-specification models complete with interfaces for disk drive, voice synthesis and connection to the Econet network.

They will come with two sets of teacher training notes, and will be priced at \$995.

In addition, Acorn is setting up a panel of American education experts to keep an eye on all educational software being written for the BBC micro in the US.

## LATE NEWS

## Sinclair launches interface 2

Sinclair's new Interface 2 — now, cartridge software and joystick ports for the Spectrum

## Imagine seeks 30

Imagine, the Liverpool-based software house, is seeking 30 more programmers, says operations director Bruce Everiss. Depending on experience they would earn, he said, £6,000-£10,000 a year for programming in machine code for the Z80, 6502 and 6809 processors. Bonuses could increase their earnings by 50 per cent.

Imagine Software, 5 Sir Thomas Street, Liverpool

## Key to the keys

Keyboard overlays designed to make programming easier have been produced for the VIC-20, Commodore 64, Dragon and BBC computers.

They cost £8.95-£9.95 and, said Peter Tucker, joint managing director of Microguides, "to a large extent they can free users from the handbook."

Microguides, St James House, 105-113 The Broadway, Ealing W13 9BL

The panel will promote the best programs, and encourage companies to write software to fill perceived gaps in the market.

The first micro will be shipped from Hong Kong to the US this month. They will be aimed mainly at schools, but an Acorn spokesman said "We're obviously hoping they will be bought for home use, too."

Like Sinclair, Acorn is also looking into the possibilities of selling the BBC micro in China.

Wong Electronics is negotiating on Acorn's behalf with the Chinese government, which currently has a number of BBC machines for evaluation.

ently-launched Interface 1. It enables Spectrum owners to use cartridge-based software, which plugs into a slot on the top of the Interface.

There are also two joystick ports, which will accept standard 9-way D plugs.

A separate expansion port for the ZX printer is also provided.

The Interface 2 costs £19.95.

Launched along with the Interface 2 were ten cartridge games, costing £14.95 each.

Six of these — Space Raiders, Planetoids, Hungry Horace, Horace and the Spiders, Chess and Backgammon — are already sold by Sinclair in cassette form.

The other four are Psst, Jet Pac, Cookie and Tranz Am, from Ultimate Play the Game.

Sinclair Research, Stanhope Road, Camberley, Surrey GU15 3PS

Sinclair's Interface 2 for the Spectrum made its first public appearance last week at the Personal Computer World show.

The Interface 2 can be plugged either directly into the Spectrum's rear expansion port or into the rec-

# You could be on our pages

We welcome programs articles and tips from our readers.

**PROGRAMS** should, if possible, be computer printed to a width of 48 characters (use a new ribbon) and/or sent on cassette. Check carefully that they are bug-free. Include details of what your program does, how it works, variables you have used and hints on conversion.

**ARTICLES** on using home computers should be no longer than 2,000 words. Don't worry about your writing ability — just try to keep to the style in HCW. Articles most likely to be published will help our readers make better use of their micros by giving useful ideas, possibly with programming examples. We will convert any sketched illustrations into finished artwork.

**TIPS** are short articles, and brief programming routines which we can put together with others. Your hints can aid other computer users.

Competitive rates are paid.

Keep a copy of your submissions and include an SAE if you want them returned. Label everything clearly and give a daytime and home phone number if you can.

Paul Liptrot, Home Computing Weekly, 145 Charing Cross Road, London WC2H 0EE

## Everyone's a winner

Congratulations to the 25 winners of our competition in issue No. 27. Each will receive a package of tapes, worth about £40, from CRL.

We asked you to find a number of words scattered throughout the magazine and make them into a sentence.

There were nine words — counting the hyphen as a space — and the sentence was: "BASIC stands for Beginners' All-purpose Symbolic Instruction Code."

Most entrants got the right answer, but it was the first 25 we drew out of the large box that will get the prizes.

The winners' prizes will arrive from CRL within 28 days. They are:

John Himbury, of London SE7; S. Harris, of Seaham, Co. Durham; Mike Piddlesden, of Steyning, West Sussex; Andrew R. McGoldrick of Christchurch, Dorset; Stephen Smallwood, of Bedworth, Warks; William J. McCaul, of Paisley, Renfrewshire;

B. M. Woodman, of Redditch, Worcs; C. Holland, of Stourport-on-Severn, Worcs; Alan McKee, of Bishopton, Renfrewshire; C. Bartlett, of Warwick, Warks; Adrian Carey, of Plymouth; Kevin Grantham, of Hull; Nicholas Nettleton, of Hull; Mr and Mrs J. Greydanus, of Portlethen, Scotland; Stephen Holland of Market Drayton, Shropshire; A. Whitlock, of Rubery, Birmingham; B. Harvey, of Barking, Essex;

## Software that switches?

Computers must be designed so software will work on most home micros, says the Computer Trade Association in a message to Whitehall.

The CTA is setting up a committee to decide on formats, but thinks about six would be needed to cover micros from home machines to bigger systems used in businesses. One would be based on the 6502 processor for home and educational use.

Mr Backhurst said the CTA would also like to see the BBC's standards placed in the public domain so they would become an industry standard.

He said: "We have got to get something going fast before the Japanese MSX standard takes off."

Computer Trade Association, 108 Margaret Street, Coalville, Leics LE6 2LX

Trevor Harvey, of Fleet, Hants; Kevin Sharkey, of Stanley, Co. Durham; Mrs S. Stonnell, of Flitwick, Beds; David Webster, of London SE25; Miss L. Knight, of Sittingbourne, Kent; R. Finch, of Walsall; Wendy Lyons, of Reigate; A. A. Ayland, of Southampton.

## Ants, fleas and turtles from Quicksilver

A Scottish sculptor and a pair of Spaniards are among the authors of 10 new programs from Quicksilver.

There are four for the Spectrum, two for the BBC model B micro and four — Quicksilver's first — for the Commodore 64.

Sculptor Sandy White, who lives in Edinburgh, wrote Ant Attack in what QS has called "soft solid 3D". It features a walled city peopled by giant ants which have to be destroyed so boys and girls can be rescued.

According to QS director Mark Eyles, Mr White's technique means the player can choose from four camera angles to view the scene, giving a realistic playing area.

The Spanish program was written by two people calling themselves Paco and Paco, from Spain's Indescomp software company. It is called Bugaboo (The Flea).

QS has a deal with Salamander to market Spectrum conversions of games written by Jeff Minter, of Llamasoft. The first are Trax and the well-known Gridrunner, with more to follow.

All four Spectrum titles cost £6.95.

The four Commodore 64 games — released simultaneously in America — are Purple Turtles, in which a little man has to cross a river; Aquaplane, a speedboat game converted from the Spectrum; Quintic Warrior, a space zap 'em up game; and an adventure called Ring of Power in which the player has a choice of graphics or text at any point in the game. Three cost £7.95 and Ring of Power is £9.95.

For the BBC model B Quicksilver is launching Mined Out, converted from the Spectrum, and The Generator, a character generator by Dave Mendes, author of Beebart. One of the demonstration pages features a company called Baconsoft. Both programs cost £6.95.

Mr Eyles said QS plans to produce software for the Electron, the "cut down" BBC computer. Quicksilver, 13 Palmerston Road, Southampton, Hants SO11 1LL

# Why micros in schools could do better

*As microcomputers advance swiftly into the classroom, the lack of a common approach to computer education becomes more and more apparent.*

*There seems to be no recognised program of activities that an inexperienced teacher, finding a new computer donated to his or her department, can refer to.*

*The main source of any aid is through the local or county resource centres, but these are woefully undermanned and are largely ineffective. Who, then, can blame the teacher for leaving the computer unsupervised and open to just games?*

*There is nothing wrong with an element of games playing — it all helps to create and retain enthusiasm and interest. But when after-school clubs and even lessons become little more than a arena to play and swap the latest arcade game, then there is something seriously wrong.*

*What is needed is a much more co-ordinated approach to the special problems that educational computing brings. The government under its various schemes — the most widely-publicised being the Department of Industry's 'Pound for a Pound' — is seeking to increase computer awareness and knowledge in schools.*

*Whether you agree or disagree with the methods that they are using, the sentiment has to be applauded. Surely some of the massive sum that has been allocated could be spent on providing an instructive guide to the teacher?*

*I would like to see a national grouping formed consisting of teachers, educationalists, major software houses and interested parents.*

*Backed by state funding, these interested parties could discuss the special problem and come up with some concrete proposals that could be acted upon, and not just end up with another shelved government report.*

*I would particularly like to make a special plea to the software houses. The range of educational software for many, if not most, micros is very disappointing.*

*Much of the material is of a low standard, of little practical use and grossly overpriced. Many of the larger software houses have not even bothered to write and sell a single program for the educational sector.*

*The one main exception is the BBC Micro, which due to governmental insistence, is found in many schools and is well-provided with the sort of thoughtful, balanced material that other computers desperately need.*

*It seems that this sort of software is not as commercially viable as the multitude of games software that is available for all computers. As it is not profitable enough, it is not considered.*

*Come on now, you big companies sitting in your ivory towers counting your profits, why not invest even a small amount into educational software?*

# THE BEST SOFTWARE ON EARTH COMES FROM PSION.

Psion is the source for the best software programs you'll ever see on a Sinclair Spectrum.

Our range runs rings round other software. In short, it's faster, livelier and more colourful.

Why?

Ideas. At Psion, they're bigger and more ambitious.

We combined a 12,000-word dictionary with complex logic – and the result is spectacular: our Computer SCRABBLE® program. Then there's the 'Horace' series...

It's all down to programming skill. Flight Simulation – a 'real-time' program – is a special breakthrough in this field. Few other programs make such full use of your Spectrum's capabilities.

In all, there are 12 challenging titles, published exclusively under the Sinclair label. (Not counting the free 'Horizons' cassette that introduced you to your computer.)

Psion programs for the Spectrum:

- |                           |                          |
|---------------------------|--------------------------|
| • Flight Simulation (48K) | • Hungry Horace          |
| • Chess (48K)             | • Horace and The Spiders |
| • Space Raiders           | • Horace goes Skiing     |
| • Planetoids              | • Backgammon             |
| • VU-CALC                 | • Computer               |
| • VU-FILE                 | • SCRABBLE® (48K)        |
| • VU-3D (48K)             |                          |

'Horace' series produced in conjunction with Melbourne House. SCRABBLE® trademark and copyright licenced by Scrabble Schutzzrechte und Handels GmbH – a J. W. Spear and Sons PLC subsidiary.

Unbelievable? A recent W H Smith chart of best-selling Spectrum programs speaks for itself. No less than 7 of the top 12 cassettes are by Psion. And there's more to come. Watch out for our very latest program, 'Chequered Flag.'

In fact, if you're choosing software for your Spectrum, there's just one way to find the best...

Look for the Psion symbol on the cover of the cassettes.

**PSION** 

## Just scrolling Spectrum

Tim Boone mentioned in his tip about scrolling letters, that he did not understand why POKEing 23606 with a number other than 0 scrolled letters.

It works because 23606 and 23607 are the low byte and high byte respectively of the starting address of the character set in the Spectrum (15616) and when converted give values of 0 and 60.

Each character is made up of a set of eight bytes; the first and last of which in each character has the value 0, ie. a blank line at top and bottom.

When 23606 is POKEd with a value greater than 0, say 1, then the start address of the character set then becomes 15617 instead of 15616. Consequently, all the letters printed on the screen lose the top blank line, which then appears on the letter alphabetically before it, ie. the blank line at the top of the letter 'B' appears at the bottom of the letter 'A' moving A up the screen one line and so on through the whole character set.

This also explains why you are able to use a redefined character set in RAM, putting it wherever you need it. The new values for 23607 and 23606 are calculated by:

```
for 23607: LET HIGH = (INT
(ADDRESS/256))
for 23606: LET LOW = (INT
(ADDRESS-256*HIGH))
```

These two values will then indicate the point at which the new character set is in memory.

A. MacLennan

## Talking program

As a newcomer to computing (Atari 800), am I alone as a one-fingered typist? When following a program in a magazine with one hand how do you press two keys together, i.e. SHIFT and CLEAR etc? A big hand span? Or lose your place in the program?

If several lines are similar it's easy to go back to the wrong line. I think I may have a solution which may help others.

I use a small portable cassette recorder with a built in mike and read out programs aloud. This has several advantages:

- Two hands to type with (read as two fingers).
- Familiarising oneself with the program layout.

**Among these discoveries and suggestions could be just what you were seeking. Why not share your tips? Send them to: Tips, Home Computing Weekly, 145 Charing Cross Road, London WC2H 0EE**

- Fewer typing errors.

If the program does not work then it can be a long and tedious job checking through it, but with a quick rewind of the tape you can listen to yourself while checking the screen.

I must admit it took a little while to get my speech down to a speed that I could type at but there is always a pause button or a short rewind.

J. R. Styth

## Tuning up the Oric

Here is a routine for playing music using the three channels of the Oric:

TS holds the numbers for the tune.

```
10 TS = "14321432141414321"
20 FOR I = 1 TO LEN(TS)
30 N = ASC(MID$(TS,I,1))-47
40 PLAY 7,0,5,2500
50 MUSIC 1,1,N,10
60 MUSIC 2,2,N,10
70 MUSIC 3,3,N,10
80 WAIT 15
90 NEXT
100 PLAY 0,0,0,0
```

B. Wilkinson

## Defined characters on your 16K VIC

To convert a 16K + VIC to use defined characters, POKE the following.

```
POKE 648,30:POKE 642,32:
SYS 64824 (Return)
```

Enter as a direct command, as this clears the VIC as though you had just switched on and reserves memory below the screen, which is now back at 7680, for defined characters.

But take out any 51,52,53,54,55,56s, as these are no longer needed in a program!

David Shepherdson

## Garbage collecting TI-99/4A

One of your reviewers recently mentioned the TI-99/4A pausing while a program was running.

This is the garbage collector. If you EDIT a program line, there is a pause before the cursor reappears: the computer is removing an old line, moving the others up and adding the new line to the stack.

In a running program it is more efficient to do this only when memory becomes full: in the meantime "dead" variable values are stored. Only when memory is full of redundant values does the computer take time out to throw out the dross. While it does this, everything stops for a short while (even the sprites in Extended Basic).

Garbage collection takes place more frequently the longer the program. There is no way of preventing it, short of avoiding use of the stack (very difficult!).

Stephen Shaw

## Keeping TAB Oric

If you fear your Oric may be faulty because the TAB doesn't work, relax — this is perfectly normal. Use SPC is place of TAB and you will find absolutely no difference, as long as you've got a PRINT statement before it.

You can also use EDIT on the Oric, though you won't find it in the user manual anywhere. Perhaps the manual needs editing?

Ian Scott

## Private lines Spectrum

Just a simple tip for Spectrum owners who want to make a private program inaccessible to anyone except themselves.

Before SAVEing put in as a direct command:

LET s\$ = "(some secret word, figure, graphic, what have you)"

SAVE from a program line with an auto-run:

7000 SAVE "Private" LINE 5

And use these lines:

```
5 FOR c = 1 TO 3: CLS: PRINT
"Access-word, please?": IN-
PUT
```

```
LINE X$: IF X$ = s$ THEN GO
TO 15
```

```
10 NEXT C: NEW
```

```
15 CLS (and go on with the pro-
gram)
```

The use of LINE in line 5 makes it impossible to use BREAK or STOP so you cannot LIST, and without the access-word you cannot go on. Try three times and you lose the lot!

After using the program it is as well to change the word by LET s\$ = "(a new word)" and then to SAVE again.

Do remember the word yourself or you've had it!

Andrew Turek

## Make a message Oric-1

This subroutine for the 48K Oric-1 allows the user to display messages on the top line of the display (normally reserved for the Oric's messages). This could be useful for displaying scores etc in games, because this line does not scroll with the rest of the page.

```
100 REM ROUTINE TO
PRINT ON TOP LINE
```

```
100 M$ = "TEXT TO BE PUT
ON TOP LINE"
```

```
120 FOR C = #BB83 TO #
BB83 + 36: POKE C,32:
NEXT C
```

```
130 FOR C = 1 TO LEN(M$):
POKE #BB83 + C, ASC
(MID$(M$,C,1)): NEXT C
```

```
140 RETURN
```

The text can be made flash by adding:

```
125 M$ = CHR$(#C) + M$
```

If any reader has a 16K Oric then 8000 HEX must be subtracted from all addresses used.

Colin Failes

## Testing, testing TI-99/4A

Most of the assembly language games on TI-99/4A modules have a test mode. Return to the game title screen using BACK, then quickly press keys \*#\* (eg hold SHIFT down and press 8 3 8). Then respond to the screen prompts quickly.

Stephen Shaw

## Dragon goes out to play

**Adventures, flight simulation and card and driving games — all put through their paces by our review panel**

### Adventure Plus £7.95

Premier Microsystems, 208 Croydon Road, Anerley, London

A mismatch between cover and content. My packaging had a hooded figure mounted astride a green monster overlooking a castle.

The reality is a wander through a garden via the greenhouse, shed and into a house.

Yes, there is more but it becomes apparent that the setting is quite ordinary.

However, once the program is judged on its own merits one discovers an interesting adventure of medium difficulty.

Although very little assistance is given in terms of vocabulary this presents few problems. A lot

### Sir Lancelot £6.45

Alton, 21 Crossbanks, Shipley, W.Yorks BD18 3RW

As Sir Lancelot your job is to explore the evil Lord's castle in order to see if it is safe and empty.

This is another text adventure allowing you to roam about discovering hazards, treasures and monsters. There is a vocabulary of 30 verbs and a magic ruby to help you on your way.

The program is written in BASIC and takes almost three minutes to load. Instructions are quite clear although provided on a plain piece of paper — no concession to commercialisation!

In fact, there was a definite amateur feel to the whole presentation, highlighted by the odd spelling mistake and a syntax error in line 1850!

Once this is adjusted (I haven't come across any others yet) the program runs smoothly at different skill levels. Commands are entered one word at a time in the usual verb-noun and the responses are fast enough.

I managed to accomplish a fair amount with little difficulty at the easiest level and it certainly seems ideally suited to those who, struggling with more complex adventures, get frustrated easily.

No SAVE feature, unfortunately, and therefore one has the tedious business of going through all the motions repeatedly. **M.P.**

### Dragonfly £6.95

Hewson Consultants, 60A St Mary's Street, Wallingford, Oxfordshire OX1 0EL

A flight simulator program written in BASIC. You are the pilot of a light aircraft. You have been cleared for take off and can either fly a circuit to land back at the same airfield or fly to another airport to land. A radio beacon will guide you on either flight.

At the start you can opt to use a joystick but I found that this was not beneficial. You also choose the wind strength which varies from zero to hurricane. You must also decide how much fuel you wish to carry. At the beginning you can look at a map which shows relative positions.

Written instructions are included and the main ones,

together with some extras, are given on screen.

One of the first things to do is to increase the power to 3,000 rpm. I very nearly abandoned this program at this stage because after 10 minutes I had failed to increase revs at all. I had switched on the engine but the specified key failed to produce the desired results.

Never one to give up easily I decided to try various other keys and discovered that the full stop was the correct key. To decrease revs had a similar problem.

I discovered it was fairly easy to take off but even easier to crash which I did with monotonous regularity every time I tried to land. **J.M.**

of HELP is given at different stages of the game.

The fun, of course, is in the discovery of objects and treasure. This is an all-text adventure which runs smoothly and responds quickly enough on entering of commands.

A nice touch is the score which can be obtained at any stage and a final comment on how well you rate as a treasure hunter.

Recommended if you want a reasonable start to this type of game but once it's completed there are no surprises. **M.P.**

### Morocco Grand Prix (joystick) £8

Microdeal, 41 Truro Road, St Austell, Cornwall PL25 5JE

Drive 100 miles competing in this race, avoid crashing into the barriers and the other competitors. Once loaded, achieved easily, the program asks for the background colour — buff, a pleasant option; green, bright and a bit hard on the eyes; or black, which is best for a black and white TV and was my preference, even on a colour screen.

A brief display of the joystick controls and away. The controls are left and right with up for fast and down for slow. Your car is at the bottom of the screen and the track and other cars scroll down towards you.

The colourful insert contains

brief instructions — it fails to explain that travelling fast scores twice the points.

On completion of the course your score is kept on a chart, if high enough, but not your name. Graphics are good but the sound is a trifle raucous side.

Often simple games are effective.

However, this game is too simple, the difficulty level does not increase and, once mastered, its interest wanes.

In fact, my interest waned after a few plays.

It was too slow for my tastes, even though it is in machine code, and provided no real challenge. **R.E.**

instructions	70%
playability	40%
graphics	59%
value for money	35%

### Baccarat £8.75

Cable Software, distributed by PSL Marketing, 52 Limbury Road, Luton, Beds. LU3 2PL

The first thing that hits you about this program is the suave packaging. It comes in a neat presentation box similar to that used for some video tapes. The cover features a very impressive playboy character who appears

to be a mix of 007 and The Saint. In fact, when the program is loading you are informed that the game Baccarat was played in the James Bond film, Casin Royale.

The cover states: "Baccarat is card game normally played by the rich and famous in the elegant atmosphere of the most exclusive casinos of the world." So it may be, but not being either rich or famous, I cannot verify that.

The game is a variation of the game 21 but here the target score is only nine. Picture cards count as zero.

It proved very difficult to load and some human intervention was needed, loading each section of BASIC and machine code one at a time. Excellent graphics and an attempt at speech. When a bet is accepted the Dragon calls "Banco" in a quite convincing voice.

I will not go into the rules of

the game here, but it's very much a game of chance and does leave you feeling like a spectator with very little choice and almost no skill involved.

**D.W.J.**

# THE

# MEGA RUN

... is coming

# Think carefully — you may lose your computer

Micro Checkers is a game of strategy for two players. The object is to capture and destroy your opponent's microcomputer.

You have seven chips to do battle with. These must not only be used for attacking your enemy's micro, but also for defending your own. Players may move any of their pieces (including their micro), one square diagonally in any direction, on each of their turns.

You select which player to move, and where to move it to, by pressing the appropriate letter keys as prompted on the screen.

To capture an opponent's piece, including their micro, you simply move to the square that

750-800 game loop  
810-1050 move routine  
820-840 select old square  
850-880 situation check  
890-900 clear old position  
910-930 swap variables  
940-960 select new square  
970-1000 situation check  
1010-1040 display new player  
1060-1190 select square  
1070-1100 select row  
1110-1120 delay loop  
1130-1160 select column  
1170 is square on board  
1180 look at new position  
1200-1540 what happened  
1210-1240 bad square  
1250-1280 bad player  
1290-1320 destroyed own micro  
1330-1370 plays music  
1380-1540 winner  
1550-1670 displays messages  
1680-1760 play again?

piece is occupying. Be careful where you move — you might destroy one of your own pieces or leave yourself open to attack.

If you make an illegal move or don't follow instructions or try to move on of your opponent's pieces than you will be disqualified and will lose the game.

This program was written for the standard TI-99/4A but should be convertible for use on any computer with user-defined characters.

```

1660 NEXT J
1670 RETURN
1680 REM PLAY AGAIN
1690 M#="WANT TO PLAY AGAIN?(Y OR N)"
1700 FOR J#1 TO LEN(M#)
1710 CALL HCHAR(23,1+J,ASC(SEG$(M#,J,1)))
1720 NEXT J
1730 CALL KEY(3,K,S)
1740 IF S#0 THEN 1750
1750 IF K#0 THEN 1760
1760 IF K#7 THEN 1730
1770 END

```

Here's part three of my Hallowe'en adventure for the VIC-20, with 3K expansion. It's similar in structure to part two — again you have 10 rooms and you have to find more stairs.

I have written the program so that you can use it even if you missed parts one and two in last week's Home Computing Weekly.

And, like last week, part three is independent of part four, so you can play the game without waiting for the final part next week.

As I mentioned in the first article, it is a good idea to get a friend to type in lines 800-900. These are the lines which tell you how to do it and it will spoil the game for you if you read them.

You have several commands to use:

Examine  
Look  
Go  
N,S,E and W  
Shoot  
Get  
Drop

This is the way the screen presents the information:

HALLOWEEN

You are in a  
dusty room

VISIBLE EXITS: N E

You can see:  
TIN  
PAINTING

What now  
?

You would then enter your command, such as EXAMINE TIN or, if you want to go north, type N.

#### Variables

I, J and R FOR loops  
RS N,E,S and W DATA  
AS all inputs  
NMS your command  
QS and ES temporary stores  
F(1 to 10) flags  
C(1 to 10) what you are carrying  
I(1 to 20) where things are  
IS(1 to 20) what things are  
NO number of items  
RO room you are in

# Which way will you turn now?

**Our Hallowe'en adventure is being published over three issues, but each week you can play the game without the other parts. Alan Blackham, who wrote the program for the VIC-20 plus 3K of extra RAM, explains . . .**

## HOME COMPUTING WEEKLY 4 October 1983 Page 15

## COMPETITION

# £1,000-worth of Rabbit software must be won

Spot the differences and you could add some great Rabbit games to your software collection.

We've got £1,000-worth to give away to owners of VIC-20, Spectrum and Commodore 64 computers.

That's about £40-worth of Rabbit tapes for every one of our 25 winners.

And, as you would expect from Home Computing Weekly, the competition is free, fun to do and easy to enter.

### The prizes

Rabbit Software will choose a selection of tapes worth about £40 for each of the 25 winners.

VIC-20 owners will get a package chosen from the following:

Lunar Lander	Myriad
Paratroopers	English Invaders
The Catch	Critters
Escape MCP	Cyclons
Anti-Matter Splatter	Race Fun
Skramble	Centropods
Quackers	Frogger

If you've got a Spectrum your prizes will be from this list:

The Birds	Potty Painter in the Jungle
Lancer Lords	Paratroopers
Escape MCP	Race Fun
Centropods	Quackers
Frogger	

And users of the Commodore 64 will receive a selection of these titles:

Murder	Graphics Editor
Paratroopers	Escape MCP
Cyclons	Annihilator
Centropods	

### How to enter

Look carefully at the two cartoons below, drawn for us by Chris Adam-Smith.

There are a number of differences between the two. Circle the differences on the right-hand cartoon and then fill in your name, full address and the make of your computer.

Then cut around the broken lines, seal the drawing with coupon attached in an envelope — and write clearly on the back of the envelope the number of differences you found.

Post your entry to Rabbit Competition, Home Computing Weekly, 145 Charing Cross Road, London WC2H 0EE.

Entries close at first post on October 21. The winners will be the first 25 correct entries opened, regardless of computer, at noon on that day.

Copies of the coupon will not be accepted. The solution and the names of the winners will be published in the news columns of Home Computing Weekly and the prizes will arrive from Rabbit within 28 days of the publication date of that issue.

### The small print

The first 25 correct entries drawn at noon Friday October 21, 1983, will win the prizes. Coupons which are not fully completed and envelopes without the number of differences found on the back will not be considered.

Entries will not be accepted from employees of Argus Specialist Publications, Rabbit Software and Alabaster Passmore & Sons. This restriction also applies to employees' families and agents of the companies.

The winners' names and the solution will appear in Home Computing Weekly. The editor's decision is final and no correspondence will be entered into.

25 chances to win. send off your entry today

## Jumping Jack £5.50

Imagine, Masons Buildings, Exchange St, East Liverpool

Many reviews tell you that certain games are addictive, but I'd given up all hope of finding one, until I met Jumping Jack!

Eight moving platforms stretch across the screen at various levels. As the levels move, they reveal large gaps, through which Jack can jump, to reach the top of the screen, or fall, and lie with stars circling his head.

If you try jumping when there isn't a gap, the result is much the same.

Each time you reach the top, you start on a new screen of platforms, but not only are there more gaps, you are chased by an amazing assortment of animated objects, trains, axes and a flying witch to name but three!

Each time you complete a screen, you are also rewarded with two lines of a poem, which according to the blurb, is forty lines long, so there's plenty to keep you at it.

The program is very well executed with genuinely animated graphics, including Jack himself. He falls, jumps, runs and lies stunned with great realism. And it's very amusing to watch him run across the screen pursued by a train (though it won't do much for your score)!

Perhaps the addictive element is that the game appears to be so simple, you feel just one more go will give you that ace unbeatable score.

## Ant Attack 48K £4.95

Macronics, 26 Spiers Close, Knowle, Solihull B93 9ES

Macronics were the people who brought moving graphics to the ZX80 so we have come to expect good things from them. This

program boasts another first — voice controlled firing.

The voice command really works very well provided you follow the instructions; in fact firing occurred if anything was said, even across the room.

You are dreaming of the ants you have destroyed today in the garden, but in your nightmare you are reduced to their size and must fight the battle anew.

chosen and the response quick, or you can use the A.G.F. or Fuller joysticks. The graphics are smooth but uninspiring.

Galactic Jailbreak is accompanied by "Snake" in which yes you've guessed it you are in control of a gradually extending snake and must avoid turning back on yourself or bumping into the surround.

Points are gained by running into diamond-shaped blobs that appear and degenerate rapidly, and you must avoid the other obstacles.

Although Snake becomes challenging on the harder levels I didn't enjoy it much. Galactic Jailbreak is more interesting but below the standard set by some other Spectrum games. S.E.

## Galactic Jailbreak £4.90

Apocalypse Software, 5-7 Stert Street, Abingdon, Oxon

Galactic Jailbreak is a worthy attempt at dragging new life from the Space Invaders concept. As in Invaders, you must shoot down the aliens whilst avoiding their fire, but the similarities end there.

The aliens fly along the screen towards a centrally placed jail where three of their compatriots are captured. They then remove the blocks that make up the prison, and when a route has been cleared a captive can be liberated, in which case you lose a life.

Although the game is not particularly fast, except when only a few aliens remain, it is surprisingly difficult. The keys are well

# This week's Spectrum of games...

... includes some of and new ideas in software. Are they good ideas? This is what our reviewers thought

Swarms of magenta ants race down the screen. You must dodge around the green obstacles and destroy the ants before they destroy you (you have three lives). If hit, the ants become obstacles themselves.

The game is rapid and staged, and there are some surprises — so watch out.

Sound is reminiscent of bird song, but at least it's not tedious. Use of colour is fair.

Potting ants is not as fun as

hitting bigger things, and it may be that the brilliance of this program has been applied to the wrong format. Even so it is well set up and good fun.

## Gun Law £5.95

Vortex, 280 Brooklands Road, Manchester M23 9HD

Relive the excitement of the Wild West in this slick-action game!

You're a Marshall aiming to send those mean gunslingers, the James Gang, to Boot Hill. As you stalk the outlaws in the dusty street, you can swing left or right to fire at shady figures in doorways and windows. You have to draw fast — they won't give you a second chance. Kill a bad guy and you collect a fistful of dollars; plug an innocent man and you've wasted a precious bullet.

I found some of the instructions rather confusing and the control keys a bit awkward at

first. Since the game demands lightning reflexes, it's better played with a joystick.

The screen display is generally imaginative and helps conjure the right atmosphere, as does the sound. At times the graphics are rather indistinct; for example, the gun sight is difficult to see on some backgrounds.

Gun Law is an absorbing game and there's a high-bounty feature to make it more compelling. Next time you mosey on down to the software store, give Gun Law a spin.

## Alien Insects 48K £4.95

Macronics, 26 Spiers Close, Knowle, Solihull B93 9ES

Macronics are doing their best to rid our world of micro-pests — first ants, now invading insects. The outstanding feature in this game is the sound, which exploits the Spectrum's ability very fully. The graphics aren't bad, either.

You must jet about space with your back pack and laser gun doing away with the advancing insects. They must be hit in the head to disintegrate. They come in increasing numbers and ever faster. If you are very successful a box-like terror appears that is most difficult to evade.

The presentation is excellent — there are one or two new variations in the use of colour, particularly in the Hall of Fame

and instruction sequences. In the latter the rippling colour is actually a nuisance but you can stop it if you like. This is a good game.

## Can you bomb your way to safety?

As the building of the city beneath you loom ever nearer, your fuel gauge shows that there's no time to lose. If you don't bring your plane in to land soon, you'll come down to earth with a fatal crash as your fuel runs out.

Your only hope is to fly across the city, using your bombs to clear a runway to land on. Key 1 takes you up, 2 takes you down, and 0 drops a bomb. Off you go — and don't delay.

This version of the ever-popular Bomber game, for any Spectrum, is presented by Timothy Lowe

### How it works

10-320 set up UDG characters  
330-410 set up screen display  
430 check for crash  
440-490 check keyboard for entries  
500 reset plane position  
510-520 fuel variable examined  
530-680 bomb drop routine  
750-780 decrease fuel meter  
790-1030 end game routines

### Variables

a,b height and position  
c,d bomb position  
f fuel meter  
r sets height of buildings

# Revealed: the hidden mode for more colourful programs

The Commodore 64 has four text modes of operation. According to the Commodore manual there is only one that the BASIC and operating system will support.

This is not so. With one simple POKE the Commodore 64 is put into "Extended Background Mode".

This allows four different background colours instead of the original one. The instruction to enable extended background mode is:

POKE 53265, (PEEK(53265) OR 2) ↑ 6)

And to get back to normal text mode:

POKE 53265, PEEK (53265) AND (255-(2 ↑ 6))

There is (of course) one small snag. Only 64 characters may be displayed and they are the ones with POKE codes of 0 to 63 on pages 132 and 133 of the Commodore 64 user manual.

This is because the normal character set is based on eight bits, so there are 256 different characters. For an explanation of bits etc. look in the user manual from page 76 onwards.

So the new character set has six bits for the character and two bits for the background colour. This means there are 64 characters available and four different colours.

## How it works

110 set extended background colour mode  
130 set background colour 0  
140 set background colour 1  
150 set background colour 2  
160 set background colour 3  
190-220 display character set on screen in 16 colours  
230-260 increment the four colour registers  
280 delay loop  
290 loop round to cycle through colours

Each of the four colours can be any of the 16 available normally to the ordinary mode. Foreground colours are not affected.

The new character set is composed of four blocks of the same 64 characters and each block has a different background colour, so to print an A with background colour 0 you would just PRINT a normal A, to print an A in background colour 1 you would PRINT a shift A, to print an A in

**Just one simple POKE and the Commodore 64 allows four background colours, not one. Mike Roberts explains and asks: Why didn't Commodore mention it?**

```
100 POKE53265,PEEK(53265)OR216:REM SET BIT 6 OF VIC MODE REGISTER
110 REM AS THIS ENABLES EXTENDED BACKGROUND MODE
120 REM THE NEXT SECTION SETS THE 4 DIFFERENT BACKGROUND COLOURS
130 POKE53281,0:REM SET BACKGROUND COLOUR 0 FOR CHARACTERS 0 TO 63
140 POKE53282,1:REM SET BACKGROUND COLOUR 1 FOR CHARACTERS 64 TO 127
150 POKE53283,2:REM SET BACKGROUND COLOUR 2 FOR CHARACTERS 128 TO 191
160 POKE53284,3:REM SET BACKGROUND COLOUR 3 FOR CHARACTERS 192 TO 255
170 REM THE NEXT SECTION WILL DISPLAY THE 64 DISPLAYABLE CHARACTERS
180 REM IN THEIR FOUR DIFFERENT BACKGROUND COLOURS AND 16 FOREGROUND COLOURS
190 PRINTCHR$(147):FORI=0TO999:REM CLEAR SCREEN AND START LOOP
200 POKEI/64+1,I:AND255:REM POKE FOREGROUND COLOURS
210 POKE53296+I,I:AND15:REM POKE BACKGROUND COLOURS
220 NEXT I:REM COMPLETE LOOP
230 POKE53281,(PEEK(53281)+1):REM INCREMENT THE BACKGROUND COLOURS
240 POKE53282,(PEEK(53282)+1)
250 POKE53283,(PEEK(53283)+1)
260 POKE53284,(PEEK(53284)+1)
270 FORI=0TO100:NEXT:REM DELAY LOOP
280 GOTO230:REM LOOP ROUND FOR INFINITY
```

background colour 2 you would PRINT a reverse field A, and to print an A in background colour 3 you would PRINT a shifted reverse field A, and this applies to all of the first 64 characters in the character set.

The colour of each of the background colours is set by POKEing one of four registers, one for each background colour. These POKE locations are given below:

background colour 0

POKE 53281, X

background colour 1

POKE 53282, X

background colour 2

POKE 53283, X

background colour 3

POKE 53284, X

X would be any number between 0 and 15 to define a colour in the normal way.

The program demonstrates the use of this technique, and will cycle through all the colours and background colours.

Overall the advantage of this mode is its similarity to the normal mode of the Commodore 64 at start up and programs can still be listed, edited and written, and the mode really comes into operation when something is being printed on the screen under program control.

Have fun with this mode, but ask yourself: Why didn't Commodore tell anyone about it!

WRITE YOUR OWN MACHINE CODE ADVENTURES WITH

# THE QUILL

The Quill is a major new utility written in machine code which allows even the novice programmer to produce high speed machine code adventures of superior quality to many available at the moment without any knowledge of machine code whatsoever.

Using a menu selection system you may create well over 200 locations, describe them and connect routes between them. You may then fill them with objects and problems of your choice. Having tested your adventure you may alter and experiment with any section with the greatest of ease. A part formed adventure may be saved to tape for later completion. When you have done so The Quill will allow you to produce a copy of your adventure which will run independently of the main Quill editor, so that you may give copies away to your friends. The Quill is provided with a detailed tutorial manual which covers every aspect of its use in writing adventures. It is impossible to describe all the features of this amazing program in such a small space, so we have produced a demonstration cassette which gives further information and an example of its use. This cassette is available at £2.00 and The Quill itself is £14.95.

FOR THE 48K SPECTRUM AT £14.95

Our Software is now available from many computer shops nationwide, or direct from us by post or phone. SAE for details. Dealer enquiries welcome.

## The Last Jedi 48K Spectrum £4

Amazing Games, 39 Maple Drive, Burgess Hill, West Sussex RH15 8EX

A 48K text adventure, complete with six-page manual for only £4 has to be a good buy! I had some problems loading the title page; the recording seems to have a peculiar gap between the header and program. Access to the loader allowed loading to continue, and revealed the program to be in BASIC.

The graphic design of the title page and instructions are super, though accompanied by an excruciatingly out of tune rendition of the Star Wars theme.

As the last Jedi, your mission is to seek out and kill the Emperor in the caverns of the Sith Lords armed only with psi-

Power and your light sabre, when you can find it!

Not only can you take, open and kill things, but, using psi-Power you can will people to sleep. Very handy when you encounter the odd stormtrooper or two, blocking your way!

The game responds quickly to your typed commands and must be complicated enough for the most dedicated adventure fanatic. (I can't even find the light sabre!)

Excellent value, with hours of intrigue; just two things mar this product, the loading problem and some rather quaint spelling mistakes.

## Rocket Raiders Spectrum £5.59

C-Tech Computer Software, 184 Market Street, Hyde, Cheshire

Rocket Raiders is a familiar type of game for one or two players,

You visit a rugged planet to destroy the hostile mutants.

Their ship has three fighters with rockets and bombs, and limited fuel which can be replenished from the surface.

The mutants have rockets, drifting space mines and the mountainous terrain to protect them.

The cassette loaded first time,

with brief but adequate instructions. The well-chosen key controls are also listed on the insert.

The display shows an elevation of a section of the planet surface, with all the targets and hazards visible.

At the top a larger area is shown, with fuel and fighters remaining.

Response is immediate and realistic, but the lack of difficul-

ty levels means the game could soon become dull. A competent but not outstanding game. H.C.

## Alien Dropout BBC Model B £7.95

Superior Software, 69 Leeds Road, Bramhope, Leeds

Computer aliens come in all shapes and sizes, usually more nastier than the last, in this game they are very pretty — but deadly.

A large moth flutters top centre screen dropping vertical bombs. Each side of it are five boxes which gradually fill with small moths, when full, a moth is released to dive and bomb your laser which you control by Z and X with "copy" to fire.

If you destroy 200 of these then mummy moth, usually indestructible, attacks and also becomes vulnerable. For arcade addicts, this is a version of Zygon, very fast and true to the original.

Instructions are supplied on screen, if required, with an option to start at any of the six difficulty levels.

The cassette is simply printed — this company does not go for glossy, exaggerated advertising either — yet this game is as good as any on the market.

The Beeb's features are all well used — graphics, colour and sound — in fact these moths are decidedly noisy.

I tried my idiot act (easy for me!) but failed to crash it or discover any bugs — apart from the moths. A hall of fame chart is included for the highest scores, also a joystick option.

## Arena III TI-99/4A (Extended BASIC) £8

Lizard Games, 14 Bridgwood, Brookside, Telford, Shropshire, TF3 1LX

Arena III is three games in one. All are set in outer space with action that mimics the arcade favourites. The top of the screen throughout displays totals for shots used, lives lost and score.

The first game is set in deep space. Using the keyboard to rotate your spacecraft and fire, you attempt to zap as many of the meandering alien ships that cross your path before one ultimately crashes into you, hence starting the next game.

This time you control a rocket which passes over the hilly terrain of a planet where, by dropp-

ing bombs, a landing strip must be cleared. Each time you crash into hillside one life is lost and your rocket thrust up to a safer bombing distance. Once a safe touch down is achieved the final game begins.

To the right of the screen appears a spaceship from which descends an astronaut. He must be guided down to the planet surface, where he plants a flag, then back up to the ship, avoiding passing asteroids on his way. If he collides a life is lost and you start the descent again.

At the end of a run the title screen reappears. No reminder of your progress is given or a "best so far".

## Kamizaze Spectrum 48K £6.90

A & F Software, 830 Hyde Road, Manchester M18 7JD

This multi-wave invaders/galaxians derivative in which you control a laser base to shoot down the swooping nasties (sound familiar?) has a glaring defect.

Symbol shift is used as the fire

button, and yet if you accidentally hit the space key (adjacent to the symbol shift) the game terminates and you are presented with the operating instructions.

I felt like putting my foot through the screen when this first happened and unfortunately it happened quite frequently with other players too.

This mars an otherwise excellent game, with good playing rhythm and lots of excitement. However, it should be relatively

simple to correct.

Apart from the keyboard problem, this offering compares favourably with any game you would find in an amusement arcade.

## GOLD RUSH

### HOWDE DO PARDNERS

This here's Prospector Jake, I sure am havin' one helluva time tryin' to peg ma claim with those damned Injuns a hootin' an' a hollerin' all over this territory. Ma job gets harder as I move from one Gold Field to another. I know, that is me an' ma stubborn hornery ol' Mule here know of 24 rich an' I mean rich seams of pure Gold. All it needs to make this here ol' critter happy is that you help me peg every doggone last one of them claims.

Can YOU help Jake become rich, help him peg his claim, dodge the arrows, avoid the tomahawks, and plant the Dynamite in just the right place? . . . YOU CAN!!!

YIPPEE . . . Git yer Picks an' Shovels and join the CALIFORNIA GOLD RUSH . . . NOW

Amazing Arcade Action . . . Stunning Sound and Graphics  
Available NOW for Commodore 64, Spectrum 48, and Dragon

**£ 7.95** including P&P

# Can you escape from the alien trap?

It was too late. Zipplie could not longer stop the computer from blowing the ship to hell in a few minutes. Escape to the shuttle was the only answer but past the alien?

As the engines cycled towards a fusion reaction, she dashed from room to room through the madly opening and closing doors. Her spacesuit held air enough to make it to the shuttle hatchway — she hoped. And always, lurking somewhere, was the alien, searching for its final victim.

In this game, you play Zipplie, attempting to reach the safety of the shuttle. You begin in the top left corner of the room-grid. By moving through the doors when they open, you must reach the bottom right corner where the escape hatch is located.

The alien begins at the hatch and will attempt to intercept you. If it enters your current room, you die.

You also die if your air runs out — it is shown by a bar at the bottom of the screen. The escape hatch acts like any other door, and thus may trap you at the last.

The alien is logical in its approach, and the risks of running close and fast, or staying far and cautious must be carefully weighed.

The SOUND option allows for an audible 'tracer' to be attached to both Zipplie and the alien. It will generate a different note according to which room each is in. I found the game was harder without the tracers, as it is difficult to watch both the alien and the doors simultaneously.

The difficulty option varies the number of doors opened/closed at one time. A higher difficulty means fewer doors and this loses precious time and air.

**The ship's about to blow up and your air's running out and there's a hostile alien breathing down your neck — now get out of that, in Marc Freebury's frantic game for either Atari**

## Hints on conversion

It is possible with a little work to convert this game for most micros.

In general, if you don't have a command shown here, leave it out. Some must be replaced with your own equivalents:

**SOUND** replace or leave out  
**LOCATE** return colour value of co-ordinate X,Y in variable Z  
**COLOR** color 0 is background. COLOR 1,2,3 should be replaced

**STICK,STRIG** STICK returns the current joystick position. This can easily be converted to keyboard. STRIG returns 1 if the joystick button is pressed, 0 if not

**SETCOLOR** determines the actual colours represented by COLOR 1,2,3. This should be left out

**GRAPHICS** 0 indicates normal text screen — a sort of CLS. The one on line 390 is a 4 colour graphics mode, 80 horizontal by 48 vertical, with the origin in the top left corner  
**PLOT, DRAWTO** PLOT is plot the current COLOR at X,Y. DRAWTO is plot a line from the last co-ordinates plotted to X,Y in the current colour

## How it works

100-280 front page routines  
290-380 options page. Uses the three Atari keys OP-TION,SELECT,START  
390-470 draw the board  
480-510 initialise all variables  
520-570 move player  
580-650 move alien  
660-740 open and close doors  
750-860 end of game  
870-1000 'successful run' routine  
1010-1020 data to write big letters on front page

## LOOKING FOR SPARE TIME EARNINGS?

Then why not sell software to your friends and workmates.

There are probably hundreds of micro users in your area looking for software who are wary of mail order and cannot find a local dealer. You can become that local dealer.

We are looking for agents in all areas to sell software for the Spectrum, ZX81, VIC-20, CBM 64, BBC, Dragon, Atari, Oric 1 and Lynx. All the latest titles in stock. Write now for full details or telephone if you prefer.

Joysticks, joystick interfaces and Spectrum sound boosters along with CBM 64, Spectrum and Lynx 48K Computers also available.

If you are interested in becoming a Bytewell agent in time for the predicted boom in sales this Xmas then write or telephone now.

**BYTEWELL, 203, COURT ROAD,  
BARRY, S. GLAMORGAN, CF6 7EW  
Telephone (0446) 742491**

# Guns at the ready — the bombers are coming

Towering out of the North Sea, the Echo oil rig is a prime target for sneak attacks by enemy bombers.

In this game, your job is to fight the bombers off by controlling a shore-based battery of anti-aircraft guns.

The enemy bombers attack individually at varying heights. They have the ability to detect your fire and take avoiding action, but have only a limited flight duration.

If you manage to prevent Echo from being completely destroyed

## How it works

- 10-50 screen titles, press a key, and speed-up poke
- 60 clears screen and goes to routine which introduces start of game
- 70 clears screen, sets timer, shots and hits and score to zero and prints the sea along the bottom of screen
- 80-90 pokes Echo oil rig on to screen and prints cloud base
- 100 randomises start position of enemy aircraft
- 110 pokes guns onto screen, defines bombing position, pokes "Ack-ack" on to screen
- 120 pokes aircraft on to screen and moves to left one square at a time. Decreases time by one unit
- 130-170 gosub drop bombs routines
- 180 randomises position of aircraft before it runs into cloud base
- 190-210 defines fire guns buttons and gosubs to fire guns routines
- 220-240 prints out remaining screen details and goes to end of game if out of time
- 250-300 start of game subroutine referred to in 60
- 310-480 fire guns, detect hits, manoeuvre aircraft away from shells, increment shots and hits totals. If a hit, repositions aircraft to the right of screen in any of the eight places
- 490-830 (five subroutines). Drops bombs, pokes explosion when bombs hit target, prevents aircraft crashing into oil rigs, keeps decrementing time, moves aircraft, resets positions of bombs, detects if oil rig is completely destroyed and if so goes to end of game routine
- 840-910 end of game routines

**Note:** It may be necessary to delete line 30 if your machine will not accept the speed-up poke.  
Poke 337,191 enables two keys to function at the same time.

## Vital oil supplies are at stake in A. E. Standing's action game for the Dragon-32. Your job: to save the oil rig from the enemy

## Variables

B aircraft  
V,W,X,Y,Z bombs  
A,C,D anti-aircraft shells  
S shots  
H hits  
TI time

in the allotted time, the game is over and you are asked if you wish to play again.

A running total is displayed of shots fired, actual hits and time remaining.

The instructions are included in the titles, and are self-explanatory.

## Hints on conversion

In text mode, the Dragon screen consists of 32 columns by 16 rows, ie 512 positions. Poking to the text screen starts at the top left hand corner, address 1024 and extends to address 1535 (bottom right hand corner).

CLS clears the screen in text mode, the number following it (0 to 8) indicates the background colour.

Locations 338-345 are keyboard buffers. At locations 341-344 a value of 223 indicates that one of the arrow (cursor) keys is depressed.

The Dragon does not require the use of LET or GOTO after THEN.

Screen 0,1 after a PRINT AT or in a peek line causes the screen background to change to an orange colour (in the former case) and flash orange in the latter.

The codes used to represent the characters are a modified version of the standard ASCII codes. There are no lower case characters — you choose between inverted and non-inverted text.

## Titre 48K Spectrum £8.50

Cloud 9 Software, 4 Dolvin Road, Tavistock, Devon PL19 9EA

Titration is a means of determining the properties of one chemical by observing the change brought about by the addition of another, known solution. Of

course, this program is likely to be of interest to chemistry students.

I was a bit doubtful while loading the program. A cassette insert of flimsy paper with the title on it and a self adhesive label on the cassette itself, do not give a tremendous impression, but when it loaded, I was pleasantly surprised.

The instructions are very scant and I think this cassette is best used alongside a text book.

ferred skill levels at the start (from "beginner's" to "know-it-all") and all of them adjusted the level of difficulty as you went along.

However, you did have to wait a long time before any result showed (having to complete 50 sums!) which I found a little daunting.

A good feature in the division game was the multiple choice format which enhances the skill of approximation. A poor aspect of the multiplication game was the low-res blocks which you had to count up; occasionally these were joined and proved hard to define.

instructions	50%
playability	40%
graphics	20%
value for money	30%

## Maths Games Dragon £9.95

Premier Microsystems, 208 Croydon Road, Anerley, London SE20 7YX

This cassette contains four games which sharpen up the basic skills in addition, subtraction, multiplication and division. Each of the sections has a title indicating the popular view of mathematics as a tortuous occupation: "sadistic subtraction", "murderous multiplication" or "diabolical division".

As games I didn't find them particularly entertaining or addictive. The whole exercise was carried out in a laborious way with nothing but the sound effects to reward or correct the student.

The responses to the answers were fast and the initial layout was good. Some of the games of-

asymptotic values; and the second enables the user to design and draw graphs of polar equations.

The screen display will only support one-colour cartesian graphs but the user can select the graphics colour.

Both programs are useful for demonstration and interactive learning because the user has an immediate visual feedback of the effects any parameter change has on the shape of the graph. The

There are details of 10 indicators that you can use in the simulated titration and the whole thing is totally menu driven. There is also a worksheet which gives you six questions or things to do using the program and claims that these are A-level questions. All I can say is that I must be brighter than even I thought I was.

A good tape and a good idea that could, and should be taken much further.

value for money	70%

## Hidden Letters Spectrum £5

Poppy Programs, Richmond House, Ingletton, Carnforth, Lancs.

The leaflet with Hidden Letters describes it as an educational game to improve spelling and comprehension, and gives full details.

Loading is quite quick, giving more instructions and a choice of nine difficulty levels. You can choose a text provided in the program, or enter up to 12 lines of your own. This requires some care, as the cursor keys do not work, so you must delete back to any errors made, and retype.

The chosen text is then displayed on the screen, with some letters obscured by black squares — nearly all of them at difficulty level nine. A blue square is then moved with the

cursors to cover a blanked letter and its identity guessed by pressing the appropriate key.

If correct the letter appears, with some coloured stars at the bottom of the screen as a score. Wrong guesses produce a polite bleep, and the zero key the correct answer but no score. When complete, the total score and an invitation to repeat appear.

This is quite an ingenious program, well thought out and presented, though I would have liked to see more use of colour to brighten up the mostly black on white displays. I doubt it will do much for spelling skills.

instructions	90%
ease of use	70%
display	80%
value for money	70%

## Mathematical Graphics BBC B £5.95

Village Software, 69 Gomer Lane, Alverstoke, Gosport

This package consists of two main programs, the first a fairly sophisticated program for drawing cartesian graphs of mathematical functions with parametric option and entry of

asymptotic values; and the second enables the user to design and draw graphs of polar equations.

The screen display will only support one-colour cartesian graphs but the user can select the graphics colour.

Both programs are useful for demonstration and interactive learning because the user has an immediate visual feedback of the effects any parameter change has on the shape of the graph. The

screen display is easy to set up and the screen instructions clear but more thought should be given to the booklet.

During the graph drawing a continuous X-Y coordinate readout along with information regarding axes range and functions are shown on the screen. Text may be placed anywhere on the screen and displays may be dumped to a printer.

There were a number of program errors which prevented me

from using the circle drawing option and I could not change any of the functions in the polar plotting option until I delved into the listing.

## Marathon/ Maths for Fun Atari £14.95

English Software, 50 Newton Street, Piccadilly, Manchester

This double bill is one of the first educational cassettes from this company. Both attempt to teach mental arithmetic while providing entertainment. One succeeds admirably and one is a tragic failure.

Firstly, Marathon. This is a thoroughly enjoyable program which allows the user to test his or her speed of mental arithmetic.

It offers questions on the common arithmetic functions i.e. add, subtract, divide and multiply along with an unusual mode called multiples.

To answer, you move the joystick assigned by the computer to the specific answer in a

grid displayed on the screen and hit the fire button. If you are correct your colour of runner at the top of the screen moves forward towards the winning post, if wrong the other runner moves. The game is over when one runner reaches the end of the track.

The program appears to be totally bug-free although there is a rather long pause after RUN is typed before the computer responds, otherwise this is very well put together which meets its aim admirably.

Overall this is a poor shadow of a program compared to the masterpiece of Marathon.

"We sometimes describe ourselves as the neo-punk movement of the computer world, but we are under a great deal of pressure to conform", said Tom Myles, one of the partners in Soft Joe's software house, as we crossed the river Mersey on the Birkenhead ferry.

"We are trying to give people good programs at the right prices, but to do so we have to cut all the glossy presentation and flashy advertising."

"Charging £10 for a game is robbery and it isn't even necessary. Computer programs are in danger of becoming like Easter eggs, bug attractive packs but with very little content. We are trying to stand against this style and give our customers true value for money."

Tom started the business with his partner Gary Metcalfe in April this year after five months of planning and research. Both wanted to start their own businesses and "we knew more about computing than shopkeeping", said Tom.

Finding a name was a struggle. They liked the idea of Micromania, but saw someone else using that.

Then one day in a pub, Gary remarked that someone "had more money than Soft Joe", which is a scouse expression for being rich. That just clicked, and the name stuck.

To get the catalogue started, they placed local advertisements for programmers and ended up "talking to a lot of dads", said Tom, "as all the programmers seemed to be young lads!"

From this, they contracted several programmers and released four programs for the Dragon and BBC micros. "We were advised that we couldn't lose if we started by mail order, but it didn't turn out that way at all. Mail order is good if you have a big name in software, but if you are just starting then we found it to be very slow and not up to our expectations."

For this reason, Gary is now on the road, direct-selling the company products to dealers. "We find that once we demonstrate a game to a dealer they are very impressed and we get repeat orders. Our games don't have flashy coloured inserts or adverts but they are great value at our price of £5.50."

"We are being pressurised to do full colour inserts, though. One company said that they would only take our products if they were re-packaged in colour, and we went so far as to get the artwork prepared for one program before we decided that wasn't for us."

Paul Clansey, chief programmer for the company, agrees with

# Why Soft Joe's won't conform

**Liverpool-based Soft Joe's is holding out against the flashy presentation that pushes up prices, as Dave Carlos discovered when he met partners Tom Myles and Gary Metcalfe on a ferry across the Mersey**

their approach. "I find the current state of the business distressing," he said. "Packaging may be a good thing if it is informative, but I don't see the point in reading a long story about a program if the game itself is rubbish. After all, it really is the egg that matters, you know."

Unusual also is the company's refusal to copy arcade games. "We prefer to leave that to everybody else. If an arcade copy is not entirely accurate, the public are disappointed, and they deserve more than that", said Tom.

"All our games are fusions of many styles and ideas. We believe it's the idea that matters, and the programming is only a route to the realisation of the idea itself. Therefore all our games are difficult to categorise — they don't fit into the usual pigeonholes. Our best selling game Trax appeals to a wide range of and to both sexes alike." Paul particularly pleased about this as he would like to see more women taking an active interest in computing.

The company currently has 10 titles in its catalogue, and doesn't

see the number increasing greatly in the near future despite plans for new releases.

"We have several new programs ready for release, but we prefer to give each game its time and then withdraw it ready to promote another one and concentrate on that for a period", said Tom.

They do however plan to cover more machines; in fact, they aim to support the six top-selling machines, and expect to have a catalogue of two programs per machine.

"We have recently converted Trax for the Commodore 64 and that is now available. Another game we hope to release before Christmas is for the Dragon. It has taken over six months to write and has 38 different screens to play."

"It is an original arcade-style game written in machine code for compactness and speed. We aren't sure yet whether it will load in one block or have to be loaded in more than one but, it will be a real winner, and unique too."

"We see this business as being like the record and video markets. It is only really possible to concentrate on a certain number of titles at any one time, and that's what we will do. We don't want to be pressurised into putting out more and more titles just to be like everyone else; our aim is always to give good value to our customers." It will be interesting to see if the company can stick to its good intentions in the computing jungle we live in today.

Soft Joe's, Cloughton Road, Birkenhead, Merseyside L41 6EF

Tom Myles (left) and Gary Metcalfe — on a ferry boat, not a gravy train

A random maze is constructed and the object is to find the way out of the maze without being gobbled up by the Maze Monster who is also roaming the maze.

The character is moved using the keys: W (up), A (left), D (right), and X (down). There are three sizes of maze to choose from and there is an option for fast or slow movement.

### Variables

S delay factor for slow speed

T maze size

**HM** horizontal dimension of maze

**VM** vertical dimension of maze

**P** location of character (C)

**B location of monster (M)**

## HO maze exit

EE maze start  
T(T) increment for direction of  
maze path

**T(G)** monster movement increment

A character movement increment **POKE 10167,1** removes the PEEK protect on the MZ-80K to allow the use of

**PEEK(17878)** which returns the ASCII code for any key that is held down (useful for continuous movement).

**POKE 4514** and **POKE 4513** are for sound effects which are called by **USR(68)** and silenced by **USR(71)**.

**USR(62) sounds a bleep.**

MZ-80K screen map is from 53248 to 54247.

# Find the way out . . . or you'll be munched

**Here's a new version of an old favourite. Enjoy playing Maze Monster, written by Frank Rooney for the Sharp MZ-80K**

## How it works

### 100-140 initialisation

170-220 five seconds countdown giving a chance to familiarise the maze before game commences

**230-240** actual game-movement routines for character and monster

**440-530 success routine**

**540-600** gobbled up routine

**610-760 option for new game**

**770-990** constructs the maze

**1000-1100** selection of size of maze and speed of movement

1110-1300 title, sound effect,  
option for instructions

**1310-1380 display instructions**

### Hints on conversion

Conversion to the Sharp MZ-80A is fairly straightforward. POKE10167,1 should be deleted from line 100. Line 370 should be changed to GETKS:IFK\$="" THENA=0:RETURN, and line 380 omitted. The movement keys should be changed to 8,4,6 & 2, and lines 390-420 changed, e.g. 390 IFK\$="" THENA=40: RETURN, etc.

The instructions should also be changed accordingly. The monster symbol and character symbol cannot be printed but only POKED onto the screen on the MZ-80A, and so POKES must be used to underline the title (or use a different symbol) and in the instructions. Also, a different symbol should be used for Z\$ in lines 460 & 590.

I suggest that owners of other machines should consult the program notes before attempting to convert the program. It may be best to use the idea for working out a program of your own as all the POKEs for your computer would take some time.

# FOR FIRST TIME USERS...

A new series of books which introduce newcomers to the most widely used micros in the marketplace.

The books assume absolutely no knowledge about computers and the reader is shown even the most fundamental operations such as "switching on" and "loading a program". The books lead the reader through simple programming and then onto graphics, with several programs which show how to achieve pictures and even animation. The books contain a number of specially written programs which show the full potential of these machines.

"The text is liberally supported by all manner of useful diagrams and illustrations (including many black and white photographs of the screen). The overall presentation is excellent. The printing, setting out and listings are clear and positively invite the reader to have a go."

## Gamespack 48K Oric £7

Sector 7 Software, P.O. Box 8,  
Newton Abbot, Devon, England

This is a standard BASIC gamespack, which we can always expect soon after a new machine is launched.

It consists of seven 'games' including Laser Station, similar to Missile Command, but much slower; Obstruction, a standard game of surround; Mazatronic, explore a 3D maze; Demolition, play Blitz on an abandoned planet; Noughts & Crosses (not again!); Milliblox, another chase type game; and Maths-Test (do I really need to explain this one?).

None of the programs really stand out, indeed you would probably do better buying seven different copies of HCW with Oric programs in them!

The instructions were very clear, but then the programs weren't that complicated. The cassette contained a fast and slow saving of each program.

I only experienced loading difficulties with the programs on side B of the tape, but at least I managed to get them in eventually — more than I can say for some tapes.

There were a few small programming bugs in some of the programs, but on the whole they were quite well written, even though the ideas behind the games were not all that fantastic.

P.S.

instructions	80%
playability	40%
graphics	50%
value for money	20%

## Venture Spectrum £5.95

Protek, Clydesdale Bank  
Building, Edinburgh

A set of seven small games linked by a money-scoring theme. To allow compatibility with the 16K

Spectrum the games are loaded in two passes, a second load being performed after the first four games have been played.

The first game invites you to back one of three ducks which will race across the screen. The second is a fruit machine simulation, the third is a treasure hunt, and the fourth is a version of Mastermind. If you succeed,

eat and sleep form a fundamental part of play as bargaining may come to an abrupt end should you die though lack of either.

In Play Your Cards you must guess against the computer whether the next in a series of cards is higher or lower in denomination than the previous one. Not a particularly involved or interesting game.

Snooker is a mainly text version of the Waddington dice game for two players. You have options to nominate which colour you will attempt to pot, try for a snooker or resign. Trying to pot a ball out of sequence results in a foul stroke.

J.W.

## Biorhythms /Farmer/Play Your Cards/Snooker TI-99/4A £7

Stainless Software, 10 Alstone  
Road, Stockport, Cheshire SK4  
5AH

Whether you take it seriously or not Biorhythms is certainly fun to try out. Calculations are made to show your good, bad or critical days. Your compatibility with someone may also be tested, a match being rated as percentages.

Poor error trapping, however, gives results for impossible days of the month, dates before you were born and the program sometimes crashed completely.

Farmer is a text only game, the object being to make money by trading livestock. Commands to

## Pot-Pourri Spectrum £4.95

JRS, 19 Wayside Avenue, Wor-  
thing, Sussex BN13 3JU

This, as the name implies, is a mixture of games and utilities, two of each.

The first of the games, called Track and Attack, invites you to shoot down a total of 10

helicopters. Using the cursor control keys you have to manoeuvre a noisy flashing asterisk, or laser weapon, directly over the helicopter, which is on a random flight path.

Occasionally you find that you have shot down your own helicopter whereupon you are suitably chastised. The scenario for the battle is a screen string which of course will disappear if you stop and restart the game.

The second game is Blackjack,

or Pontoon, with you playing the computer. Straight away the odds are against you — the computer has £1,000 and you have only £100. A well-worn theme for a computer game with nothing special to endear you to it.

Called Superscript, the first of the two utilities enables you to have super sized writing on the screen should you do desire. Char-Wallah (I always thought that meant tea boy), is the second

of the utilities. Someone has taken the trouble to create 50 characters which may come in handy for games.

Along with the demonstration of simple animation, that's all there is to it.

B.B.

playability	60%
graphics	50%
value for money	50%

# Packing in the programs

**All these tapes have at least four programs, and some have as many as seven. But do they mean more for your money? See what our reviewers think**

your money increases, if you fail it is halved.

The first game after the second load invites you to crash more than 100 cars in a stock-car race simulation, the next is a fairly good version of 'Bomber', in which you try to clear away tall buildings before your plane descends far enough to crash into them, and the last game is an off-beat hunt for gold in a small maze.

The graphics are very good in-

deed, and there are some amusing comments here and there. The whole thing, in fact, is a little tongue-in-cheek, poking legitimate fun at some of the less polished offerings.

D.T.

value for money	90%

## Gamestape 1 16K ZX81 £5

A. E. Stubbs and N. Sheard, As-  
tle Farm East, Chelford, Nr  
Macclesfield, Cheshire

Six machine code arcade games on a good quality C60 cassette. The packaging is cheap, but adequate for the mail order market, where it's the programs that count.

The recordings are good, loading first time, and the programs run automatically. The only minus is a very short gap between programs, making them difficult to locate by fast winding.

The tape starts with an introduction that more than makes up for the external presentation. It explains each game briefly, and gives a guarantee that any bugged programs or bad tapes will be replaced free of charge.

The six games are Centipede, Haunted House (Pacman), Berserk, Nasties (prevent the Nasties from reaching your nuclear pods by using your laser bolts), Kong and Kermit (Frogger).

My favourite was Kong, a very good version with excellent graphics. There are four stages of skyscraper to descent, with rolling barrels, falling rivets, holes and conveyor belts.

Haunted House was also exceptionally good. Kermit has good graphics, but seems to have been written in a hurry — key response is poor, and one of the landing bays is physically impossible to reach!

# MR. CHIP SOFTWARE

## VIC 20 GAMES AND UTILITIES

### JACKPOT

This is it, the ultimate Fruit Machine for the VIC with nudge, hold and respin 100% machine code. "Overall Jackpot is a beautifully written simulation giving superb graphics, animation and use of colour. In fact, this program makes Commodore's Fruit Machine cartridge look unbelievably cheap & nasty." Home Computing Weekly No. 20 19/7/83. £5.50

### KWAZY KWAKS

Accuracy and speed are required for this Shooting Gallery, superb use of colour & graphics in this new and challenging game from the author of **Jackpot**. 100% machine code, joystick or keyboard control. £5.50

### PACMANIA

Choose your own game from the following options — difficulty 1-2, speed 1-3, size of maze 1-3, visible or invisible maze, still or moving power pills, define your own key controls, any combination, if this is your type of game, then this is the one for you, for the 3K expanded VIC only, (available Now) £5.50

### SNAKE BYTE

Guide your ever hungry snake round the screen, eating the flies and wasps, to stay alive you must avoid the deadly mushrooms, quick reactions are required for this biting game, keyboard control, for the unexpanded VIC, (available NOW) £5.50

### BUGSY (Joystick Only)

This is a Minefield with a difference as you step on the stones whilst collecting purple boxes which give you both time and points, they disappear from beneath your feet. DO NOT DESPAIR! "BUGSY" will randomly replace the stones but avoid bumping into him or its sudden death! An original compulsive and challenging game £5.50

### MINI-ROULETTE — PONTOON — HI-LOW

Three great games of chance for the VIC, try to beat the computer, hours of fun, full colour, sound effects and tunes £5.50

**DATABASE** — create your own files and records on tape. £7.50

**SUPER BANK MANAGER** — A full feature version any memory size, but needs 3K expansion £7.50

## COMMODORE 64 GAMES AND UTILITIES

### WESTMINSTER

A game for up to four players, can you lead the party of your choice and win the general election, you tour the 60 constituencies (seats) buying votes, when you can, (just like the real thing), this must be one of the first board type games specifically written for the computer. Why play on your own, have fun with your family and friends playing WESTMINSTER £5.50 (available from the 15th Sept)

### LUNAR RESCUE

Our new version, avoid the asteroid belt, to rescue the stranded scientists, then fight your way back to the mother ship, fast reactions are required to safely land and dock your lunar module £5.50 (available now)

**PONTOON — ROULETTE — ACE'S HIGH** — More powerful versions, that make three great games of chance for the 64 £5.50

**M/C SOFT 64** — Assembler and Disassembler, with decimal to hex converter, everything our program for the VIC will do and more £7.50

**BANK MANAGER** — As our Super Bank Manager, but for the 64 £7.50 Now available on disc with added facilities £10.00

Full documentations with all utility programs.

Other software available for the VIC and Commodore 64, send for free brochure, including **RABBIT SOFTWARE** at £5.99 each.

Addictive Games

for **SPECTRUM 48K  
AND ZX81 16K**

➡ This superb game is **now available** from branches of  
**W.H. SMITH \* and BOOTS.**

Manage your own team in this exciting game of skill which  
vividly captures the drama and excitement of real football.

#### FEATURES INCLUDE:

- \* 4 DIVISIONS \* F.A. CUP \* PROMOTION & RELEGATION \*
- \* TRANSFER MARKET \* TEAM SELECTION \*
- \* SAVE GAME FACILITY \*\*\* AND MUCH MORE! \*\*\*

#### WHAT THE PRESS SAY ABOUT IT:—

➡ **IF YOU** have always wanted to manage a football team, **FOOTBALL MANAGER**, from Addictive Games, is for you — The game is ideal for a football fanatic but the most interesting thing for us was the 3-D graphics used to create the goalmouth action — the game is a winner.  
SINCLAIR USER FEBRUARY 1983

➡ Although I'm no great football fan, I really enjoyed playing this game — excellent use is made of colour and user-defined graphics. The game is very logically put together, so that the development of strategy and tactics has a real effect. For example, one of my teams got through to the fourth round of the F.A. Cup where it was beaten by a second division side. This upset morale and meant that our promotion bid failed. Perhaps I should have given up the F.A. Cup run and held some good players back — the possibilities are endless. Brian Clough had better watch out!  
\* SPECTRUM VERSION ONLY.

## COMX 35 PROGRAM

# Use your joystick and get munching

**Our first program for the COMX 35 is from Deborah Horne, aged 13, and shows how to program the computer's joystick and have fun too**

Happy Eater is a simple program to show owners of the COMX 35 how to program using the built-in joystick — something the manual does not cover.

The aim is to eat as many blocks in the time set, using the TIMEOUT facility.

I have found that the error messages are not always correct as the COMX sometimes gives the wrong line number when debugging a program.

**Note:** There is one space between the quotation marks in lines 230-236.

## COMPUSOUND TELESOUND 84

"THE ONLY ONE OF ITS KIND TO  
FIT INSIDE THE SPECTRUM"

Probably the worlds smallest modulator!

**TELESOUND 84** is ready built and tested to get full Spectrum sound through your unmodified television set, black/white or colour. The unit can be fitted in minutes without any previous experience. Telesound 84 has been developed using the very latest ultra miniature components so that the size is kept to an absolute minimum.

### TELESOUND 84 FEATURES

- Sound and vision together for added realism
- Beep volume controllable from a whisper to a roar
- Keyboard prompt click, clearly heard to assist program entry
- Programs can be heard with loaded
- Compatible with all other ZX add ons
- No soldering or case cutting required
- Additional amplifier not necessary
- Separate power supply not required

**TELESOUND 84** comes with full fitting instructions and costs **£9.95** inclusive of post, packing etc. Please state your computer when ordering.

**COMPUSOUND** dept HCW

### MAIL ORDER PROTECTION SCHEME

If you order goods from Mail Order Advertisers in this magazine and pay by post in advance of delivery, this publication will consider you for compensation if the advertiser should become insolvent or bankrupt, provided:

1. You have not received the goods or had your money returned; and
2. You write to the publisher of this publication explaining the position not earlier than 28 days from the day you sent your order and not later than 2 months from that day.

Please do not wait until the last moment to inform us. When you write, we will tell you how to make your claim and what evidence of payment is required.

We guarantee to meet claims from readers made in accordance with the above procedure as soon as possible after the advertiser has been declared bankrupt or insolvent to a limit of £1,800 per annum for any one advertiser, so affected, and up to £5,400 p.a. in respect of all insolvent advertisers. Claims may be paid for higher amounts, or when the above procedures have not been complied with, at the discretion of this publication, but we do not guarantee to do so in view of the need to set some limit to this commitment and to learn quickly of reader's difficulties.

This guarantee covers only advance payment sent in direct response to an advertisement in this magazine (not, for example, payments made in response to catalogues, etc, received as a result of answering such advertisements).

**CLASSIFIED ADVERTISEMENTS ARE EXCLUDED.**

# Crashproof your ZX81

As your programs become more complex, and start to include several different options, you'll find that much of your program is concerned with checking inputs, often converting them to a numerical value.

My friends take a great delight in trying to crash my programs, and so my search for an idiot-proof INPUT or INKEY \$ began.

INPUT A was useless — a non-numerical input often crashed. INPUT AS was better, but needs checking before using VAL AS as, again, an alphabetical character causes a crash.

One method for doing a check of an INPUT string consists of putting valid keys into a string then calling an input subroutine as follows:

```
100 LET CS = "123E"
110 GOSUB 9000
9000 LET IS = INKEY$
9010 IF IS = "" THEN GOTO 9000
9020 FOR X = 1 TO LEN CS
9030 IF IS = CS (X) THEN
  RETURN
9040 NEXT X
9050 GOTO 9000
```

The main problem with this is the delay caused when CS is lengthy, but the value of X represents the positional value of the key pressed. In the above example, if 1, 2 or 3 were pressed, X would also equal 1, 2 or 3. If E was pressed, X would equal 4.

Getting a string of characters was also a complex job with this system, and of course if BREAK was pressed accidentally (or otherwise)...

What I wanted was a set of machine code routines to allow these three input variations: press a single, valid key; press a single, valid key within a time limit; accept a sequence of valid characters (string).

The first problem is being able to find the check string — CS — easily from within the machine code. We must also be able to redefine it during a program run.

The answer is to DIMension it at the first line (except for the machine code REM) of the program, then it will always be six bytes in from the start of the variables area. Our program must start with:

```
10 DIM CS (n)
```

Where n is the maximum number of valid keys to be checked at any input plus two. The extra elements are to hold "end of valid keys" markers so that the ZX81 knows to stop checking.

I use a \* for this marker. It must be included in CS each time it is redefined, eg:

```
70 LET CS = "ABC*"
```

or else the program will crash.

We will now enter the machine code. I have not explained its operation, but only how to enter and use it. We will store it in a

## Are you troubled by crashing programs? The answer is to check your input, says Ray Elder

Address	Code	BB	02	44	4D	51
16514	CD					
16520	14	3E	00	28	F5	CD
16526	BD	07	7E	C9		

(b) Wait for a correct key:

16530	21	8C	40	36	F5	CD
16536	82	40	01	06	00	2A
16542	10	40	09	0E	01	BE
16548	C8	57	3E	17	BE	7A
16554	28	EB	23	03	18	F3

(c) Timed INKEY\$:

16560	21	8C	40	36	04	11
16566	00	10	D5	CD	82	40
16572	01	06	00	2A	10	40
16578	09	0E	01	BE	28	0D
16584	57	3E	17	BE	7A	28
16590	04	23	03	18	F2	0E
16596	00	D1	78	B1	C0	1B
16602	7A	B3	20	DA	C9	

(d) String input (including print):

16607	21	FE	40	01	01	00
16613	E5	C5	CD	92	40	C1
16619	E1	77	23	FE	76	C8
16625	03	D7	E5	C5	CD	BB
16631	02	2C	20	FA	18	EA

REM line, so first enter 1 REM . . . (160 dots) . . .

It is important that at least 160 dots follow the REM. Now enter program 1, which consists of two sections: a program to POKE the code into position and a program to PEEK at the code for checking.

RUN your program and enter the following code. You can enter as many codes as you wish, but do not put spaces between them. I suggest you enter each line (six codes or 12 characters) at a time.

The code is split into sections for information only. You can enter each section straight after the last — there is no need to stop and restart.

(a) Check for key pressed subroutine:

Save your program, because if you have made a mistake you could lose the lot.

Now try the following tests, and if any fail, reload and check by typing RUN 9200. BREAK when you discover an error.

RUN, enter the address at the beginning of the error line (s) and re-enter that code.

**Test 1; routine (a)**

Type RAND USR 16514 newline. The screen should go blank until you press a key. Use instead of 123 IF INKEY\$ = "" THEN GOTO 123

**Test 2; Routine (b)**

Enter:

10 DIM CS (38) or number of valid keys + 2

20 LET CS = "ABCDEFGH\*" or valid keys + a \*

30 LET X = USR 16530

40 PRINT X

When RUN the screen will again be blank, but this time the program will only continue when a key held in CS is pressed.

**Test 3; Routine (c)**

Replace line 30 with

LET X = USR 16560

When RUN this time the program will continue immediately a valid key is pressed and also after about 7-10 seconds if no valid key was pressed, but X is given the value 0. A line like

IF X = 0 THEN GOTO

can be used.

The length of delay can be altered by POKEing address 16567 with a value between 1 and

255, ie POKE 16567,1, slight pause or POKE 16567,255, very long wait.

**Test 4; Routine (d)**

Replace existing lines (with the same numbers) with

```
30 LET CS/ (7) = CHR$ 118
  NEWLINE code, to allow user to
  press newline when finished. One
  character before the CS * leave a
  space for it.
40 LET AS = ""
50 FOR I = 1 TO USR 16607 - 1
60 LET AS = AS + CHR$ (PEEK
  (16637 + I))
70 NEXT I
80 PRINT AT 21,0;AS
```

As you will see, when you press a valid key it will be printed at the present PRINT position, so a line PRINT "WHAT IS YOUR NAME"; will allow the characters to be entered after the message.

Pressing NEWLINE terminates the message and line 60 retrieves it and stores it in AS. If CS consisted of numerical characters, then VAL AS can be used to retrieve the value.

A word of warning — the characters inputted by routine (d) are stored in the spare bytes at the end of the REM. As it is, a maximum of 32 characters may be used — any more, and the whole program will be destroyed.

You can of course allow for extra by increasing the size of the REM at the start. A REM of 834 characters will allow you to type in a whole screenfull, though this isn't very practical.

Once all the routines are working, it is worth deleting all lines except for 1 REM and 10 DIM CS (N), perhaps adding a few genuine REMS such as 2 REM USR 16514 = any key etc, and save it a few times.

When you next program, load this first and you have a set of input routines pre-programmed for use.

**Program 1**

```
9000 PRINT "ADDRESS TO
  START?";
```

```
9010 INPUT A
```

```
9020 PRINT A
```

```
9030 LET AS = ""
```

```
9040 LET X = 0
```

```
9050 IF AS = "" THEN INPUT
  AS
```

```
9060 IF AS = "S" THEN STOP
```

```
9070 IF X = 0 THEN SCROLL
```

```
9080 IF X = 0 THEN PRINT A;
```

```
  " ";
```

```
9090 PRINT AS(2 TO 20); " ";
```

```
9100 POKE A,16*CODE AS +
  CODE AS(2) - 476
```

```
9110 LET A = A + 1
```

```

```

```
9130 LET X = X + 1
```

```
9140 IF X = 6 THEN GOTO 9040
```

```
9150 GOTO 9050
```

```
9200 PRINT "START ADD-
```

```
  RESS?";
```

```
9210 INPUT A
```

```
9220 FOR I = 0 TO 21
```

```

9230 SCROLL
9240 PRINT A;";";
9250 FOR J=0 TO 5
9260 LET P=PEEK A
9270 LET N=INT (P/16)
9280 PRINT CHR$ (N+28);
      CHR$ (P-16*N+28);";";
9290 LET A=A+1
9300 NEXT J
9310 NEXT I
9320 IF CODE INKEY$ THEN GOTO 9320
9330 GOTO 9220
    
```

## POOLS PREDICTION

### "POOLSWINNER"

The most sophisticated Pools Prediction Aid available. Gives probabilities of score draws, draws, homes or aways, based on two databases holding over 20,000 matches (databases included with program).

The databases are automatically updated as results are entered.

Can be used in simple mode, or with parameter adjustments to develop your own unique forecast method.

Fully documented, available now for Apple II, IIE, Spectrum (48K), Dragon, ZX81 (16K), BBC 'B' and Commodore 64 (others — please enquire).

£15.00 (discs/tapes)

### "POOLS DATA"

Complete record of all English Football League matches 1978-83. Teams, scores and dates of 10,000 matches held in simple format, ready for your analysis. Starter analysis programs and full documentation included. Available for Apple, Spectrum, ZX81, BBC, Dragon, Commodore series.

Discs (5 year) £15.00

Tapes (5 year) £12.50

Tapes (2 year) £6.70

## ENJOY MATHS 48K Spectrum £8.00

A suite of 4 programs most suited for the 8-14 year age range and ideal for use in the classroom. Imaginative use of colour and optional sound motivate interest and learning.

- i) Tables Multiplication or division. The computer questions on a mixture up to the 12 times table, or on one table as specified up to the 99 times table.
- ii) Findx Introduces the solving of equations, with 9 levels of difficulty.
- iii) Polygon Illustrates the common polygons and provides brief notes - special attention being given to triangles and quadrilaterals. Pupils are then tested on their understanding.
- iv) Area Teaches how to find the areas of irregular shapes, rectangles, parallelograms and triangles and tests pupils' understanding.

Where appropriate, results are stored for later evaluation. Results and other important screen displays can be printed if required.

## TOWNTEST BBC/B £6.50

A very useful aid for teaching Geography in primary schools, this program tests pupils' knowledge of the locations of major towns and cities in England, Scotland and Wales. Well presented, with a high-resolution map.

## BIOLOGY BBC/B £12.50

A suite of programs using text, animated diagrams, examples, and questions to assist in the understanding of Biology to CSE, 'O' and 'A' Level standards. Most suited to individual use by students, these programs also contain material teachers can extract for classroom demonstration. Topics covered include the Eye, Ear, Heart, Blood and Circulation, Skeleton, Female reproduction, Genetics, Biochemistry and the Central Nervous System.

ALL PRICES INCLUDE POST & PACKING & VAT

## SOFTWARE BLAST IT

### \* TI99/4A PRODUCTS \*

As reviewed in H.C.W. Disarm Bombs in order with a wire guided Robot, Time Limit, Hall of Fame, 5 levels of play etc.

## CODE BREAK / 3D MAZE

Code Break only reviewed in H.C.W. A master mind (game) like programme 3D maze added for extra value.

## CORE

Under review in H.C.W. Fly past Birds and Planes to arrive at the caves and on to the maze and colour full ending.  
All @ £3.50 each (£2.00 refund against further purchase if returned within 21 days).

# Our jury returns its verdicts

**In the dock are five Spectrum games. The evidence has been considered... and now it's time for the decisions**

## Base Invaders/Scramble/High Noon £6.50

Work Force, 140 Wilsden Avenue, Luton, Beds

Work Force aimed to produce an "L.P." of Spectrum games for the new user. From other sources, these games would cost

more than £15 if brought separately.

Base Invaders is a version of Space Invaders, Scramble resembles Orbiter/Penetrator and High Noon is a western shoot-out game complete with cactus and a chuck wagon.

There is, however, a catch.

Although each of the games is written in machine code and therefore fast, graphics, animation and sound are fairly crude

## Splat £5.50

Incentive Software, 54 London Street, Reading, Berks

This is a rather different development of the general ideas of the Pacman games.

You are in a maze, which moves about the screen, carrying you with it. If you are carried to the edge, you are splatted, and have to try again. Meanwhile, you need to pick up points by collecting grass and other things.

There are seven levels to explore, and you can opt for four different control formats. The maze is well defined, but a little cramped, and sometimes offers no possibility of escape as it carries you towards the surrounding brick wall. The grass is nicely done.

If this sounds like limited enthusiasm, it is not entirely fair.

But it must be suspected that games of this sort have a limited durability, in the sense that they will emerge from their boxes after increasingly longer intervals, especially as their owners find more interesting things to do with their computers.

Nevertheless, the game is well done, with some very good graphics, and for those who have pride in the flexibility of their fingers it will present a useful challenge.

There was no loading problems, though the process took rather a long time, and this must be partly due to the creation of a rather fancy display while loading proceeded.

## The Detective 48K £5.50

Arcade Software, 32 Chislehurst Road, Orpington, Kent

The presentation of this game is a trifle misleading. It seemed to suggest a sort of real-time adventure, but the first stage looked more like a variant on Space Invaders.

At the bottom of the screen stands a little man, while col-

oured shapes rain down on him diagonally. He must avoid contact with these, and can shoot some — but not all — of them down.

He can also walk, briskly and realistically, to right or left. This is very well done, though there are times when you wish he could walk a little faster.

The first impression is that there should be no difficulty in avoiding the threats from above, but it is harder than it

looks, especially when a little dog appears to snap at the man's heels. If the dog catches up, all points disappear, so some priority must be given to escaping from him. Fortunately, when the man trots off the side of the screen and reappears on the far side, the dog is missing.

It appears that there are 25 levels to the game, but it was not possible to check that.

The graphics detail was exceptionally good, a lesson to some

of the more casual programmers, but even that was not enough to make up for the disappointment after the hopes raised by the presentation.

## Last Sunset for Lattica 48K £5.50

Arcade Software, Technology House, 32 Chislehurst Road, Orpington, Kent

The authors of this game describe it as a "true graphical adventure". It is an attempt to mix an arcade type game with an adventure.

This has been achieved by certain sacrifices to the concepts to both, and I doubt if it will satisfy the fans of either type.

The object is to work your way along a maze to a control core, where a bomb is set to destroy the planet. More than 600 androids patrol the maze and shoot at random.

As it is a real time game, you have to balance the advantages of earning points destroying androids in the maze with the speed

at which you try to get to the core and defuse the bomb.

As in adventure games, you can pick up things along the way; keys get to a higher level, and power pills give you extra lives (you start with four). Only a small section of the maze is shown on the screen at once, but after a few games, you should know the best route to take.

There are some bugs — androids occasionally fail to die when hit, and your gun jams when it should fire. Androids walk through you (which the instructions say will happen), but occasionally destroy you as they do (which should not happen).

D.N.

instructions	50%
playability	40%
graphics	60%
value for money	50%

when compared with the latest offering from Ultimate, Megadodo or Imagine. Similarly, title pages and character sets are very unsophisticated.

It looks as if Work Force has repackaged three of its early Spectrum programs as an incentive to new users.

As such this is a very worthwhile effort. Having spent £100 or so on a computer,

another £15 seems a lot just for games. This beginners' pack at just £6.50 eases the pain and gives you a great deal for your money.

## Wonderworm 48K £5.50

Havensoft, 85 Scotch Street, Whitehaven, Cumbria

Some considerable effort went into the production of this adventure game, where the player assumes the role of a poor little wriggly worm who must find his way through unimaginable worm threatening hazards, to his uncle's Worms-day party.

It was so difficult to crack this one, in order to review it before Christmas, I had to cheat by listing the whole program.

I then proceeded to test every branch of the tree and found some interesting graphics and convolutions of the plot in the process.

I was particularly impressed by

the effort that went into the input string handling which is flexible enough to accept variation on a theme and not hung up for the lack of a full stop etc.

On my voyage of discovery, my poor little wormlike body was pecked to death by crows, mashed by cars and whatever you do, and this is the only tip I'll give you, don't drink the clear liquid. Sulphuric acid does not taste nice!

All in all, a good adventure game which, although not pushing back the frontiers, is worth the money.

## Your micro in the kitchen

Are you ready for the kitchen computer? Apparently not a lot of other folk are either, but this type of thing is rapidly taking hold.

Micro Cookbook is a novel software package. The program list for \$40 with an add-on option at \$12 and an advanced function package at \$30. The basic program is a recipe manager which allows ease in modification for quantities served, meal planning, and so forth. The add-ons option provides for more recipes in certain areas such as desserts or Korean food.

The advanced system option allows for file merging, an archival retrieval system, and advanced meal planning, as well as being able to drive a printer to generate hard copy.

Other kitchen-related software includes such titles as Weight Control and Nutrition, from Texas Instruments; Dietician from Diet Ware, of Texas; The Coupon Manager, from Timex/Sinclair; Nutri-Calc from PCD Systems, of Penn Yan New York; Key Shoppe from Universal Instrumentation, of Huntington Beach, California; Micro Barmaid (no doubt for those in the liquid lunch set) from Virtual Combinatics, Rockport, Massachusetts; In Shape from DEG Software, in Houston, Texas; Diet Calc from Savant Software, Houston; Grocery Mart by Commodore; Dinner's On from Briley Software, Livermore, California; and Diet Analysis from Apple Computer.

If you don't have a micro, don't worry. Mattel makes a \$50 hand-held computer called Diet Trac that holds calorie information on the basic four food groups. It also holds the U.S. Recommended Daily Requirement of vitamins and sodium. It is designed to keep running daily totals of caloric and sodium intake in order to help curb both. According to Mattel, diet related software is currently being developed for the Aquarius.

Softsmith Software, of Union City, California, feels that software which enhances a person's lifestyle is part of the wave of the future. Toward this end, it offers five packages related to the kitchen.

There are Drinks On A Disk, Dinner On A Disk, Micro Cookbook, and Micro Barmaid, with prices starting at around \$15. Most of these are database management types of programs which provide recipes, count the calories, help plan meals based on ingredients the user selects, and can even generate shopping lists.

It would seem that many people would find it hard to resist buying a program that could tell you what meals you could cook and/or what drinks you could mix based on what you already have in stock.

It is interesting to observe that program whose main function is to generate a shopping list have not done well. Most of these do not work for one of two main reasons. Either the program is not flexible enough, and will not print the list tailored to either product categories or store layout, or the potential buyer is an impulse buyer and does not like to shop in such a structured manner (even though shopping from a list will keep impulse buys to a minimum and can drastically reduce costs). Such programs tend to appeal more to single men whose main interest is in pre-planning and in shopping rapidly. Dinner's On is especially useful in this regard as it allows pre-planning for up to 25 meals and will generate a comprehensive shopping list for these.

Most of this type of software is selling fairly well through mail order outlets, but not as well over the counter. As more and better programs come out, and the marketing of such gets more creative, this may turn out to be a rather large market. Who knows, it may even contribute to reducing the weight of the average American (which is typically 40 pounds more than optimum).

Out of room again. See you next week.

**Bud Izen**  
Fairfield, California

## My Micronet experiences

I have been using Micronet on my TRS-80 Model III for a few weeks now and thought that my experiences may be of help to others unsure whether to take the plunge.

At the moment the service is available to BBC, Pet, Spectrum and TRS-80 models I & III owners. As well as a microcomputer and access to a telephone, users need communication software and a suitable modem. These are supplied via Micronet 800 at a very competitive price. For the TRS-80 Model I they cost £59.95. Model III users have to pay £64.95 but their software is on disk and requires 48K of memory. Both users will need the RS-232C circuit board installed.

Whether the system is good value for money really depends on how much you're going to use it. For example, Micronet boasts a "mailbox" service whereby a member can leave messages for other members by utilising their machines. The disadvantage is that messages can be left unseen for days at a time if you don't dial into Micronet.

A facility that is likely to have many advantages in the future is purchasing products over the telephone line. A number of companies have pages in Prestel that offer this service, and they usually ask for a credit card number to be keyed in as well as your choice of product.

There are at least 100 free programs that can be directly loaded into your machine. These programs do, in the main, load successfully but are of the quality that you would find in most computer magazines. There are also free educational programs, utilities and business programs.

Around 80% of the Prestel pages do not incur any cost in addition to the telephone charges, providing you use the system in "off-peak" times. Most of these are datapages containing such things as local events by area, train times and costs (have you ever sat waiting for British Rail to answer a telephone call for a train time?)

Subscribers are sent a Prestel directory every three months and the current issue has 20 pages of entries (classified by subject).

Using Micronet is fairly simple. First you must connect the modem to a power point and to the RS232C port on your computer. Then, after loading the software that is provided, the user is presented with a series of menus. One of these takes you to the sub-menu that allows you to dial into (log-

**Send your letter to Letters, Home Computing Weekly, 145 Charing Cross Road, London WC2H 0EE. Don't forget to name your computer — the best letter could win £5-worth of software. Queries cannot be answered on this page**

on), and terminate access to Prestel (log-off).

Selecting automatic log-on from the menu allows you to dial the local Prestel number. When a continuous tone is heard, you place the handset in the modem and if all is OK a Prestel welcome page is displayed on the video screen. Enter your password, and away you go!

I have experienced one or two problems with the system. There was a minor bug in the software provided. This was a pre-release copy and will, I am sure, be corrected before the main batch is released.

Occasionally you do experience a bad telephone connection and obtain "garbage" on the screen. In this case just log off, replace the telephone and start again.

The other problem is telephone charges. I have yet to receive my first bill since using Micronet, but it is bound to be higher.

Keeping an eye on the clock gives you a good idea of the telephone bill that you are incurring — one way you can do this on the TRS-80 Model III is to turn on the system's clock display.

David M. Bell, Telford, Shrops

## I've got computeritis

What's so unusual about a female of the species owning and using a computer?

You'd think, after reading the magazines, that it was an exclusively male occupation.

Look at the majority of pre-recorded tapes available — Space Invaders, Frogger, Pacman, and what about all those adventure games? Not a hint of a female — unless she's a damsel in distress, and needs rescuing by our hero.

Don't get me wrong, I enjoy a game of Space Invaders or Frogger — playing Frogger in the same room as my husband made him realise how extensive my vocabulary is. He now leaves the room when I play.

I'm not the world's greatest programmer — yet I'm working on it. Give me a

year or two and I might surprise you. Admittedly, my programs at the moment are short, but they run — much to the surprise of various male friends. I get a lot of pleasure out of typing other people's programs and then debugging them. What's wrong with that?

I bought a ZX81 six months ago, on impulse, and I've had a lot of fun, and frustration with it, especially with some of the adventure games. Would someone mind telling me what the significance of the native woman in the guarded clearing is? Or is she just there to add local colour?

I've now bought a 48K Spectrum, and boy, doesn't it show up the '81 graphics? Must get a colour TV sometime. My ten-year-old daughter now uses the '81, altogether I still use it to try out programs and play games on.

Where is all this leading to? I'd just like to point out that ladies also use computers, so why is the software available so male-orientated? I've a feeling the only answer is to get stuck in, and write my own.

Computers can change your life — be warned! Ever thought of a computer as a dieting aid? Well, mine is. I get so involved with what I'm doing that I tend to forget the time, and the little things like making meals, and baking.

Does my figure a power of good, but every so often my husband comes in, and requests nourishment. My reply to him to go and see what he can find doesn't go down too well, and when I do cook, I have to remember to set the timer on the over. Burnt offerings have now become the order of the day.

Work is necessary evil, to support my computer in the style to which it has become accustomed. Do you think I've got computeritis?

Oh, well. Back to the Spectrum!  
Patricia Bates, North Walsham, Norfolk

## Coded appeal

I am interested in machine code programming but my information is very limited so if any of your readers know anything about M/C programming on the VIC-20 would they please write in so HCW could publish it. I would like to congratulate Simon Scott for his excellent Munch Maze program in issue 7.

R. Bates  
Worsley, Manchester

# 'NOW WIN THE POOLS'

THIS IS MEANT FOR YOU — ESPECIALLY IF YOU USE A SINCLAIR ZX81 or SINCLAIR SPECTRUM COMPUTER, or even ANY COMPUTER.

HAVE YOU EVER HAD THAT DREAM OR EVER WISHED THAT YOU HAD "WON ON THE POOLS" — AT LAST YOU CAN TURN IT INTO REALITY.

THERE IS A SECRET OF "HOW TO WIN ON THE FOOTBALL POOLS" — **IT CAN BE DONE.** I DISCOVERED THE SECRET A LONG TIME AGO — NOW, **FOR THE FIRST TIME** I'M PREPARED TO SHARE IT WITH YOU.

HOW DOES THIS INTEREST YOU — I HAVE DOCUMENTARY EVIDENCE BY WAY OF POOLS WINNINGS DIVIDEND SLIPS/ CANCELLED CHEQUES, etc, SHOWING MY PRESENT WINS ON THE POOLS AS FOLLOWS:—

First Dividends	Second Dividends	Third Dividends	Fourth Dividends	Fifth Dividends	Sixth Dividends
765	1,818	2,942	1,952	631	93

A GRAND TOTAL OF 8,201 (EIGHT THOUSAND, TWO HUNDRED AND ONE DIVIDENDS — so far).

## I HOLD THE UNCHALLENGED WORLD'S RECORD FOR POOLS WINS

**I AM MAKING THIS VERY SPECIAL, REDUCED PRICE OFFER TO READERS OF HOME COMPUTING WEEKLY FOR A LIMITED PERIOD ONLY.**

Do not let anyone tell you that it is impossible to "WIN ON THE POOLS" — since I perfected my method, **I HAVE WON REGULARLY** for over **TWENTY-FIVE YEARS** — proof that it is no 'flash-in-the-pan'.

I have **CHALLENGED THE WORLD** with my record of wins and with all the evidence that I possess — **NO ONE** has ever been able to accept the Challenge — **I KNOW NO ONE EVER WILL.**

**MY SECRET IS NOW PLACED ONTO COMPUTER CASSETTE FOR YOU.**

THE METHOD IS THE GREATEST TREBLE CHANCE WINNER IN THE HISTORY OF FOOTBALL POOLS — IT WILL LAST FOREVER — BOTH FOR ENGLISH AND AUSTRALIAN FOOTBALL POOLS, WITH EQUAL SUCCESS.

I now intend to give a limited number of people the opportunity of making use of my method — perfected over 25 years and proving itself on **EVERY ONE OF THOSE TWENTY-FIVE YEARS.**

You will have noted details of my personal achievements so far, as given to you above.

A GRAND TOTAL OF 8,201, yes 8,201 POOLS DIVIDENDS, including **765 FIRST DIVIDENDS.**

My Pools Winnings Dividend slips now number so many, that they fill a very large suitcase and will stand as my evidence of all claims in **ANY COURT OF LAW IN THE WHOLE WORLD.**

Taking just the past 25 years into consideration, I have won **ON AVERAGE** over 328, (THREE HUNDRED AND TWENTY-EIGHT) Pools Dividends **EVERY YEAR** — or — **AN AVERAGE** of over **SIX DIVIDENDS EVERY WEEK** for **TWENTY-FIVE YEARS.**

You have my absolute Guarantee of the complete authenticity of every claim, cheque, document, letter, etc, contained herein.

Don't take my word for it, read what people write about me and my method:—

*I won on Zettors last weekend. It was not a big sum, but all the same it was a very nice surprise for me.*  
J.C., Lancs.

*I appreciate the straightforward method you adopt, which is such a contrast to the rubbish of misrepresentation which is so common in the Betting World, by unscrupulous and self-opinionated charlatans.*  
C.H., Devon

*Winnings cheque received today, sincere thanks.*

*I congratulate you on your achievement.*

*I should like to thank you for a most exciting season and look forward to hearing from you again.*  
J.C., Hants.

*I would like to acknowledge cheque and say how much I appreciate your integrity.*  
J.M., Scotland

*Many thanks for your system, it is all you say and more.*  
J.C., Lancs.

*Your wonderful system won me £3,527. I intend to visit London soon and will be able to come and see you personally.*  
(Overseas Client). P.M., Kampala.

*Many thanks for trying so hard to please us all, your brother should be thanked also. One of our daughters, WHOSE HUSBAND YOU HELPED ENORMOUSLY, has just phoned, the four of them have just spent a lovely holiday in Spain.*  
K.R., Isle of Man.

I do have losing weeks, but ON AVERAGE my winnings show over **SIX DIVIDENDS EVERY WEEK** for the past 25 years.

I know that you are now utterly flabbergasted, it always happens to everyone with whom I come into contact. Please just sit back and **imagine** for a moment my **FIRST DIVIDEND** wins alone — they now number 765 (seven hundred and sixty-five) and will probably be even more by the time this advertisement appears in print.

**I AM NUMBER ONE IN THE WORLD AND NO ONE DISPUTES IT.**

For as long as I continue to enter the Football Pools my wins will continue. I have already said, they apply, with equal success to both English and Australian Football Seasons.

I intend to release a **STRICTLY LIMITED** NUMBER of copies of my cassette, (either for Sinclair ZX81 or Sinclair Spectrum) — **DO NOT DELAY AND FIND YOU ARE TOO LATE**, in which case I would have to refund your money.

I am so confident of **YOUR** success that if do **not** win at least **THREE FIRST TREBLE CHANCE** DIVIDENDS in the first 20 weeks of entering, I will completely cancel the balance of the purchase price and you do not have to pay me another penny, at any time, no matter how vast your winnings.

I only wish that space would allow me to give you photographs of my winnings slips, cancelled cheques, etc, but it is of course impossible — they now number 8,201 dividends. I have however given **JUST A FEW EXTRACTS** from ORIGINAL LETTERS I hold from my small Clientele.

I am the Inventor and Sole Proprietor of my method, Registered as **EUREKA** — ('I have found it'). I am known as The Professor in Pools Circles — I am of the Highest Rank in Forecasting — this is beyond dispute. I am marketing a limited number of Computer Cassettes, under my Registered Company — **FOOTBALL ENTERPRISES.**

My initial charge for a copy was £75, but for this **SPECIAL REDUCED PRICE OFFER** I will send you a copy, (for ZX81 or Spectrum) for £20, (twenty pounds) **ONLY**, plus your Promise to pay me the balance of £55 — **ONLY IF YOU WIN AT LEAST THREE FIRST TREBLE CHANCE DIVIDENDS** IN YOUR FIRST 20 WEEKS OF ENTERING — otherwise you owe me **NOTHING FURTHER.**

This is surely proof absolute of my supreme and utter confidence in my own abilities and in the capabilities of my discovery. I could easily **CHARGE** £2,000 per cassette on the evidence I possess, but that would not be fair to everyone, which is what I want to do.

My method is **WORLD COPYRIGHT**, any infringement and immediate proceedings will be taken, without prior warning. It is truly ingenious and has stood the test of time.

My cassette is simplicity itself to operate and you'll be given **FULL DETAILS** for weekly calculating. Your entry need not involve you in any large weekly stakes, you can enter for as little as 25p, if you wish.

I charge **NO COMMISSION** on any of your wins — no matter how **BIG** they may be.

I realised a long time ago, that it was no good sitting down and **dreaming** about winning the pools, so I burnt the candle at both ends, working late into the night, occasionally **RIGHT THROUGH THE NIGHT**, I **KNEW** there was a way, eventually it all paid off and has been doing so ever since.

I am unable to vary my offer to anyone, so please do not request it, as I shall very easily dispose of the cassettes I have prepared and am making available.

**IMMEDIATELY** I perfected my method I commenced winning right away, (first with just a little £163, the first week I used it), I **HAVE NEVER LOOKED BACK SINCE**, amongst all those dividends was one for over **EIGHT THOUSAND POUNDS** for just **one eighth of a penny stake.**

I will release a copy on cassette, to you, on receipt of the completed order form and your Signature thereon, confirming you will treat it in the **STRICTEST CONFIDENCE** between us and retain it for your **OWN USE ONLY.**

### PLEASE NOTE:

If you happen to be the proud owner of a Computer, **other than a Sinclair ZX81 or Sinclair Spectrum**, you can still purchase a copy of my method, for the same price and program it **YOURSELF** on to **YOUR OWN COMPUTER.**

*I sent in my FIRST entry last week and won 2nd and 3rd dividends, as you will see from the enclosed certificate. One more and I would have collected over £400 for FIRST dividend. Once I've won a fair amount I shall be staking from winnings and at 2p per line, A FIRST DIVIDEND last week at this would have been over £3,000.*  
C.A., Yorks.

I am very interested indeed and enclose £20 herewith. I agree to pay you the balance of £55 **ONLY** if I win at least **THREE FIRST TREBLE CHANCE** DIVIDENDS in my first 20 weeks of entering — otherwise I owe you **NOTHING FURTHER** at any time — no matter how much money I win. My Signature below is my Undertaking to retain complete and absolute confidence about the method.

# INTRODUCING 16/48. THE NEW MONTHLY COMPUTER MAGAZINE WE'VE GOT TAPED.

Forget about listings, copy typing, crashed programs and misprints. Move into a new era with the machine readable monthly.

Every month you get News, Reviews, Games and Educational programs. Month by month you can build a library of useful machine code routines to give your software that professional finish.

There are help features for programmers and for adventurers and every month great prizes to be won in our exciting competition.

## ESPECIALLY COMPILED FOR YOUR SINCLAIR ZX SPECTRUM

16/48 will run on 16K and 48K machines. In fact the magazine knows which machine you are using and automatically uses the appropriate addresses.

## WIN A DIGITAL TRACER OR A LIGHT PEN

With the help of the machine code in our first competition, you will produce high speed animation you never thought possible. Combine a little skill with with lots of imagination and you could be our first winner.

### 16/48 CONTAINS ONLY ORIGINAL MATERIAL

#### This month's great features include...

**Copter** – shoot and then fly!

**Stroke 4** – High speed educational animation

**Soundfx** – a machine code noise library

**Dungeons and Green Men** – expert help for reluctant prisoners and goblin fodder.

**PLUS LOADS MORE TO LOAD**

### THE MONTHLY CASSETTE MAGAZINE FOR THE 16K & 48K ZX SPECTRUM

Published by Magnetic Magazines Ltd., PO Box 180,  
Kingston-upon-Thames, KT2 6AL. Surrey

AVAILABLE IN BRANCHES OF W.H. SMITH, JOHN MENZIES AND OTHER LEADING NEWSAGENTS. LOOK OUT FOR THE LAUNCH ISSUE ON 13th OCTOBER

# NEW HOME COMPUTER CABINET

**SPECIAL SHOW OFFER £79.95**

incl. VAT & Delivery

Especially designed for your home computer system, whilst also accommodating your video recorder.

Our cabinet has been custom designed after intensive consultation with P.C. users to provide maximum comfort and convenience during those long hours spent slaving over a hot micro.

The cabinet includes many features not previously available, and as well as combining the very best aspects of modern furniture design, it provides an ergonomic and practical layout for all the major components of your system.

In fact, we are proud to claim that your cabinet will look perfectly at home in your lounge, dining room, or even bedroom.

## JUST CHECK THESE STANDARD FEATURES

- 1 Smooth sliding shelf locks in position just where you require it — and neatly glides away after use.
- 2 The computer shelf has been designed to allow adequate 'Knee room' for you to sit comfortably, and will avoid 'programmers back-ache'.
- 3 Adequate room to position tape recorder, printer, disc-drives, etc, alongside computer for ease of use.
- 4 All cables neatly and safely out of sight, while allowing all units to be permanently connected if desired.
- 5 Lots of storage space for cassettes, cartridges, books, listing paper, joysticks, etc.
- 6 With shelves and doors closed, instantly becomes an elegant piece of furniture.
- 7 The lower shelf accommodates all makes of video recorders currently available.
- 8 Smart teak effect finish.
- 9 Supplied as a flat-pack. Very simple to assemble, using just a screwdriver. Full instructions supplied.

**TERMS OF OFFER** UK Mainland Customers only. Please allow up to 28 days for delivery. Cash with order or charge to one of the credit card accounts specified. Money back guarantee if not satisfied provided the goods are returned undamaged within 72 hrs of the customer taking receipt.
