

## THE DATABASE

Please note the following specification changes:-

**L command** - line print. Prints the current line as shown by the cursor. (This is identical to the old **Q** command, which it replaces).

**& command** - finds multiple occurrences of target characters. Use in conjunction with **find (F)** and **find and replace (R)** commands.

### Tape operations

Saving or loading a normal-size file can take as long as three minutes.

If you make program alterations (see page 12) and wish to save your customised version to tape, follow the procedure: **\$** command to save current file if required, then **CLEAR**, followed by **SAVE "..."** LINE 1.
